CAPTAIN BETAGH'S OBSERVATIONS

ON THE

COUNTRY OF PERU, AND ITS INHABITANTS,

DURING HIS CAPTIVITY *.

T was in the beginning of the ever-memorable year 1720, and about the middle March, when Captain Shelvocke fent Hatley, and the reft of us, to feek fortunes in the ighter called the Mercury. Himfelf, in the Speedwell, went to plun the village of Pyta, where we might eafily have joined him, had he imparted his fign to us. Hovever, we had not cruifed long in fight of Cape Blanco, before we to a fmall bark, with a good parcel of chocolate and flour. There was an elderly 1: aboard, and a the old friar, whom we kept two or three days; and, after taking what we wanted we difcharged the bark, and them together. Soon after this, took the Pink, wich Shelvocke calls the rich prize. She had no jealoufy of our be an enemy, but lept her way, till feeing the Mercury flanding towards her, fhe be to fuspect us. About noon, she put the helm hard-a-weather, and crowded all the fhe could afore the wind; and being in her ballast, this was the best of her faili which also prove the greatest advantage they could give us; for, had she held wind, we, in our lat bottom, could never have come up. About ten at night, v rowing and hard uling, we got within thot of the chace, and brought her to, be pretty near the fhre. They were about feventy perfons aboard, thirty of whom v negroes. Hatley, upon going aboard, left myfelf and Preflick, with four more ha: in the Mercury, where we continued two or three days, till a heavy shower of rain spo

'VOL. XIV.

B

all our bread, and other dry provisions. It was then time for us to get aboard the prize; which we did, fending three hands to take care of the Mercury.

We flood off-and-on the faid cape feven or eight days, expessing to meet the Speedwell; and there we fet ashore the Spanish captain, the padre, and some gentlemen paffengers : at last we spied a fail plying to windward. Not doubting it was the Speedwell, or the Success, we flood towards her, whilst she edging towards us, about ten in the morning, we were got near enough to discover she was a ship of war, as she proved, though neither of these we wished for. The master of our prize had before informed us, that he met the Brilliant cruifing for our privateers, which till now, we entirely difregarded. Upon this Captain Hatley advising with me what to do, we concluded, that some advantage might be made of the information given us by the Spaniards; that, as the Brilliant had spoken so lately with the Pink, probably there would not be many queftions asked now: upon which Hatley and I dreffed ourfelves like Spaniards, and hoifted Spanish colours; we confined our prisoners in the great cabin, fuffering none of them but the Indians and negroes to appear upon deck, that the Pink might look as she did before : in which contrivance we had succeeded, but for the obstinacy of John Sprake, whom we could not keep off the deck. As the admira came up, he fired a gun to leeward : hereupon we lowered our top fail, making eafy ail till we got alongfide of him : their first question was, if we had heard any thing of the English privateer ? We answered, no: the next was, how it happened we weregot no farther in our way to Lima? We answered, by reason of the currents: they asked two or three more questions, which we still answered in Spanish. They seened thoroughly fatisfied, and were getting their tacks aboard in order to leave us, when Sprake, and two or three more of our men appeared on the main-deck; a Frenchnan aboard the admiral, looking out at the mast-head, cried out, feeing their long trovfers, Par Dieu, monfieur, ils font Anglois; they are Englishmen: upon this they imnediately fired a broadfide into us, with round and partridge shot, by one of which Haley was slightly wounded in the leg.

As foon as we itruck our flag, the enemy fent for all the English on board, and ordered two of their own officers into the prize. The Spanish admiral then bore directly down upon the Mercury, and fired into her five and tweity guns at leaft, which bored her fides through and through ; but fuch was the contruction of that extraordinary veffel, that though full of water, there was not weight erough to fink her, and the three men who were in her escaped unhurt. Don Pedo Midranda, the Spanish commander, ordered these three men into his own ship, in which he intended to fail to Payta: as for me, he gave directions that I fhould be fent orty miles up the country, to a place call Piura; and was fo kind as to leave Mr. Prelich, the furgeon, and my Serjeant Cobbs, to keep me company: as for Captain Hatey, and the reft. they were ordered to Lima by land, which was a journey of four hindred miles; for that poor gentleman had the misfortune to be doubly under their dibleafure; first, for returning into those feas after having been prisoner to long, and being to well ufed amore ft them; and next, for the Cape Frio bufinefs, I mean the fripping the Portuguefe captain, a good quantity of whofe moidores were found about hm. The defign of the admiral, in this, was, to have that affair fearched to the bottom, and the guilty feverely punished, without exposing the innocent to any danger. Here, therefore, I shall take my leave of Captain Hatley for the prefent, and proceed to the observations I made on the road, as the admiral was fo good as to fend me up into the country till his return from his cruize to Payta, when, as I shall inform the reader in its proper place, I again joined him.

BETAGH'S ACCOUNT OF PERU.

As the weather in this part of the world is much too hot to permit people to labo in the midft of the day, the cuftom is to travel from fix in the evening till eight the morning. My Indian guide fet me on the beft mule he had, which not caring follow company, I led my fellow-travellers the way till ten o'clock, while day-lig lasted. I observed the country one open plain, with Indian plantations, regular enough laid out on each fide of us. This champagne country is from thirty to o hundred miles broad, and extends three hundred miles along fhore; for I was movin to the fouthward, having the Cordelier mountains on the left hand, and the great oce: on the right. If this land was well watered, as the foil is pleafant and fertile, it mig be as fine a country as any in the world; but travellers are here obliged to car water for their mules, as well as themfelves. At the approach of night we we puzzled in the way; I often found myfelf ftopped by great hills of fand, and my mu as often endeavoured to pull the reins out of my hand; which proving troublefor the Indian advifed me to throw the reins on the mule's neck; and, as foon as th was done, the creature eafily hit the way. These fands are often shifted from pla to place, which I take to be occafioned by the ftrong eddies of wind reverberated fro the mountains. At night we refted a little at an old empty houfe in a coppice, abo half way, which the guide told us was built by the inhabitants of Piura, for the account modation of the prince St. Bueno, viceroy of Peru, when they met him at his entran on his government, and regaled him. At feven in the morning we arrived at Piur being an handfome regular town, fituated on the banks of the river Collan. T Indian conducted us to the houfe of an honeft Spanish gentleman, and his wife, w having received his charge, the guide returned to Pavta. In a quarter of an hou time, the town's people flocked in to fee the raree-flew; and, instead of being uf like prifoners at difcretion, we were entertained with refpect and civility, which were not fure to meet with. Our landlord, I fhould fay, keeper's name, was D Jeronimo Baldivielo: he had five daughters; upon the fight of whom, and their ber ficent way of receiving us, we hoped our time would flide eafily away, and our captiv prove no way difagreeable. I began now to be fenfible of the admiral's favour, ordering us to this place; for he had fuch intereft in all the kingdom of Peru, that for fake, we found very good treatment. After we had refreshed ourselves, according the cuftom of the place, with chocolate, bifcuit, and water, we were diverted with t found of a Welch harp in fome inner apartment : the artift had good command of i for I heard parts of feveral famous Italian as well as English compositions; and, up inquiring, found that all the honeft Spaniard's daughters had learned mufic, and fu or played upon fome inftrument or other. Though, at first, this feemed a little un countable to us, yet I afterwards found, that mufic was common in Peru; for t Italian party having a few years before prevailed at the court of Madrid, the 1 viceroy, prince St. Bueno, who was an Italian, had brought a great many muficians that country along with him, which has now fpread mufic everywhere; and it is as gc in Peru, as in Old Spain. I the rather take notice of this, becaufe by our being lov of mufic, and behaving peaceably and civilly to the inhabitants, we paffed our time ve quietly and cheerfully, being exposed only to one inconvenience, which lasted fo lo as we remained here: this was the daily affembling of the people to ftare at us, wh myfelf and my Serjeant Cobbs, bore pretty well; for, being ufed to exercife in pub we could turn to the right and left without being much incommoded : but our co panion Mr. Preffick, being a graver man, at first hung down his head, and was v melancholy; but, by degrees he grew better acquainted with the people, and for

TOL

reafon to like them fo well, that when we were to remove, we had much to do to make him change his quarters.

Almost all the commodities of Europe are distributed through the Spanish America, by a fort of pedlars or merchanis, on foot, who come from Panama to Payta by fea, and, in their road from the last-mentioned port, make Piura their first stage to Lima, difpofing of their goods, and leffening their burdens as they go along. Some take the road through Caxamarca, others through Truxillo, along fhore from Lima : they take their paffage back to Panama by fea, and perhaps carry a little cargo of brandy with them : at Panama they again flock themfelves with European goods, returning by fea to Payta, where they are put on there; there they hire mules, and load them, the Indians going with them, in order to bring them back ; and fo thefe traders keep in a continual rough, till they have got enough to live on. Their travelling expenses are next to nothing; for the Indians are brought under fuch inbjection, that they find lodging for them, and provender for their mules: this every white face may command, being a homage the poor Indians are long accuftomed to pay; and fome think they have an honour done into the bargain, except, out of generofity, they now and then meet with a finall recompence. In the British and French nations a pedlar is defpifed, and his employment looked upon as a mean thift to get a living; but it is otherwife here, where the quick return of money is a fullicient excufe for the manner of getting it; and there are many gentlemen in Old Spain, who, when their circumftances in life are declining, fend their fons to the Indies to retrieve their fortune this way : our lodging was in an outhouse purposely for these travelling merchants. According to the Spanish cuftom, we had our dinner fent to the table under cover, where Don Jeronimo and we eat together, while the good lady of the house, and her daughters, fat together in another room. This is the practice at all meals; and, if any firong liquors are drank, it is then. In all our conduct, I think the good Spaniard was never difobliged, except once, when he faw me drinking a dram with the doctor at a little victualling-houfe. As nothing is more difagreeable to the Spaniards than drunkennefs, I had much ado to make amends for this flep towards it; though they admit of gallantry in the utmost excess; fo that it is only changing one enormity for another. After we had passed about fix weeks at Piura, our Indian guide came again to conduct us to Payta, the man of war being returned. When we were upon the point of taking leave, our furgeon was milling, which retarded us a day longer. They had concealed him in the town, and defigned to keep him there, as he was a very useful man; and if he could have had a finall cheft of medicines, he might foon have made a handfome fortune. However, the next day we mounted our mules, and parted with great reluctance, efpecially with our kind hoft Don Jeronimo, and his family. We went aboard the Brilliant at Payta, which, having done nothing at fea, made a fort of cruifing voyage to Caluo, the port of Lima. The civility I received from the admiral or general of the South Seas, as he is there called, is what I have already mentioned. I shall here only add one circumitance to the honour of Monfieur de Grange, a captain under the general. As foon as we were taken by the Brilliant, as aforefaid, this gentleman, feeing the foldiers had ftripped us, being the conquerors usual perquifires in all these cases, he generously gave me an handfome fuit of cloaths, two pair of filk flockings, a hat, wig, fhirts, and every thing according; to that inflead of fuffering, I was in reality a gainer by this accident.

Our voyage to Lima tock up about five weeks; and, as foon as we arrived there, we were immediately fent to the fame prifon in which the fhip's company were confined, who were fent hither before us, Mr. Hatley only excepted; who, for the reafons be-

fore

BETAGH'S ACCOUNT OF PERU.

fore-mentioned, was confined by himfelf, and very roughly treated. In a fort tim after our arrival, commiffioners were appointed to hear our caufe, and to determine whether we should be treated as criminals or as prisoners of war. The reason of the was, the charge brought against us for piracy, not for what we had done in the Sout Seas, or at leaft, not for that only, but upon a fuppolition, that we plundered th Spaniards there, becaufe none but Spaniards were to be met with, having ufed the lik violence, as their charge fet forth, against other nations, before our arrival in these seas which would have flewn a piratical difficient through our whole conduct. And o this they thought they had probable proof, fince by the moldores found upon Hatley it appears they were taken from the fubjects of a prince in perfect arrivy with the crown of England : but it was happy for us that the vicerov, Don Diego Morfilio, who we an archbishop, and in the decline of life, was pleated coolly to difcriminate the affair and finding really but one of us guilty, would not fign any order for fliedding innocen blood: as for Hatley, fome were for fending him to the mines for life, others for hang ing him; but the feveral accounts of Captain Shelvocke's vile proceedings contributed to his deliverance, the truth of which here were enough of our people at Lima to wit nefs; for, befides Lieutenant Serjeuntfon, and his men, who were brought hither, came the men who Shelvocke fent with Hopkins to fhift for themfelves in a poor empty bark who, for want of fultenance, was forced to furrender to the Indians; fo that the cour believing Shelvocke more a principal in that piratical act than Hatley, and fuppofing we had been plagued enough before we came hither, they though fit to let us all gc by degrees : Hatley indeed was kept in irons about a twelvemonth, and then was allowed to return to England. I was much more happy in this refpect, fince my imprifonment lasted but a fortnight; which was owing to the interposition of Captair Fitzgerald, a gentleman born in France, who had a great interest with the viceroy, and who, upon his becoming fecurity for me, permitted me to have the liberty of the city provided I was always forthcoming when I was called for. As I was now pretty much at eafe, I began to look about me, and to inform myfelf of what was paffing in this part of the world.

Among the first of my inquiries, was that after the condition of other English prifoners in the place; and, upon afking for Mr. Serjeantfon, and his men, who were here before us, I underftood that most of them had taken up the religion of the country, had been chriftened, and were difperfed among the convents in the city. The first that I faw had got his new catechifm in one hand, and a pair of large beads dangling in the other. I smiled, and asked the fellow, how he liked it. He faid very well; for having his religion to chufe, he thought theirs better than none, fince it brought him good meat and drink, and a quiet life. Many of Shelvocke's men followed this example; and I may venture to fay, this was as good a reafon as most of our people could give for their oc cafional conformity. It is here reckoned very meritorious to make a convert, and many arguments were used for that end; yet was there no rigour shown to bring any of us over. Those who thought fit to be baptized, had generally fome of the merchants of Lima for their padrons or godfathers, who never failed giving their godehildren a fui of cloaths, and fome money, to drink their healths. About this time, four or five o Clipperton's men, and as many of Shelvocke's, got leave from their convents to mee together at a public houfe kept by one John Bell, an Englishman, who had a negre wife, that, for fome fervices or other, had got her freedom. The defign of this meeting was to confirm their new baptifm with a bowl of punch: the confequence of which was they all got drunk, and quarrelled; and, forgetting they were true catholics, miftool an image of fome honeft faint, that flood in a corner, for one of their own company knocker

knocked him down, and demolished him. I, missing the fellows for a few days, inquired at John's house what was become of them; he told me the story, and faid, they were all put in the Inquifition, for the thing having taken air, he was obliged to complain of it, or go thither himfelf; but promifed, that, underhand, he would endeavour to get them released; which, I found afterwards, was done in five days, fo that they had time to repent, and be fober. Bell faid, if the men had ftill remained heretics, this drunken bout had not come within the verge of the ecclefiaftical power; but, being novices, and just admitted into the church, they were the easier pardoned, as their outrage upon the faint was no proof of their relapse into error, or an affront to the catholic faith, fince done when they were all difordered in liquor. At length, about a dozen men in both our ships, being well instructed, were difcharged from the cloifters, and fent to Calao, to help to careen and fit out the Flying-fifh, then defigned for Europe. Here they entered into a project to run away with the Margarita, a pretty failing ship, that lay in the harbour, and go upon the account for themselves, which differs nothing from piracy; but, not knowing what to do for ammunition, and a compafs, they applied to Mr. Serjeantfon, telling him, they had a defign to fteal away by land to Panama, where, being an English factory, they might have a chance to get home; that they had got half a dozen firelocks, with which they might kill wild hogs, or get fome game, as they went along, if he would be fo kind as to help them to a little powder and shot, and a compass to steer their way through the woods. The fellows, by begging, and making catholic figns to the good people at Lima, that they were poor English newly baptized, had got together fome dollars, which they defired Serjeantson to lay out, who, not mistrusting the plot, took their money, and bought them what they wanted. Thus furnished, one of them came to me at Lima, and faid, there was an opportunity offered to make my fortune, by running away with the Margarita at Calao, if I would embrace it; whereupon he told me the ftory, and that Sprake was to have the command, as being the only artift among them. I anfwered, that it was a bold defign; but as Captain Fitzgerald had engaged for my honour, I was obliged not to meddle with it. In a few days the plot was difcovered, their lodgings were fearched, their arms taken away, and they put in prifon. The government was greatly provoked, and had near determined their execution, when an order came to releafe all but Sprake, who, being the projector, was kept in irons two or three months, and then fet at liberty. If this fhews the reftlefs enterprifing temper of our feamen, it proves, at the fame time, that the Spaniards in Peru are by no means fo cruel, either in religious or frate profecutions as in Europe; though I am inclined to think, that the conversion of these people, such as it was, operated greatly in their favour; it may be alfo, that they were some way influenced by fear, fince the English privateers were still upon the coaft, and in cafe they had received intelligence of these people being severely dealt with, might have revenged it on fome of their prisoners. But it is to little purpofe to employ one's thoughts in attempting to difcover the motives of an act of Spanish policy, fince, whatever those motives were, the act in itself was compassionate and good.

The dominions which the Spaniards poffefs in America are fo large, and fo valuable, that there is no doubt, if they were properly governed, they might render that monarchy equally formidable in Europe, and the Indies. The long ftay I made in Peru, the prefent ftate of which there are few opportunities of knowing in this part of the world, afforded me the means of examining with leifure and attention their manner of living, the form of their government, the nature of their amufements and diverfions, which, in this country, take place of bufinefs, and furnished me with many opportunities nities of inquiring into those things very minutely, which did not fall immediately under my obfervation as an eye-witnefs; and of these I shall endeavour to give the reader as clear, as diffinct, and as accurate an account, as is in my power, with the greatest regard to truth, and conftantly diffinguifhing between what fell immediately under my knowledge, and what was derived to me by the information of others. This was certainly the beft use I could make of that leifure I enjoyed, while a prifoner in the hands of the Spaniards; and may poffibly contribute more to the fervice of my country, than if I had employed myfelf in privateering on the coaft. I shall begin with the description of the place where I fpent most part of my time, and which, as it is the centre of the Spanish government in these parts, enabled me to gain a greater insight into their affairs, than if I had paffed my days in any of their ports, or in an inland city, lefs frequented. The liberty I was allowed, and the kind ufage I received, made this ftill the more eafy; and therefore it may be depended upon, that what I offer the world is a fair and genuine reprefentation of matters of fact, and not a fine-fpun ftory, framed from conjecture and hearfay. If, after all, the wide difference between the manners of these people and those in the northern part of Europe, should give it an air of extravagance, I must defire the reader to reflect, that this is not owing to me, but to the fubject. A man, who undertakes to defcribe things he has feen, must defcribe them as they are, without regard to the appearance they may make in the eyes of others. But to come to the point : The great and rich city of Lima is the metropolis of Peru, and the feat of an archbishop. It is a regular-built city, the streets all strait and spacious; fo that you go through it any way, without turning a corner. It is composed of little fquares, like St. Iago, the capital of Chili; which was copied from this. It ftands in an open vale, having only a gentle ftream to water it, and which divides it, as the Thames does London from Southwark, allowing for the great difproportion. The port of Lima is at Calao, feven miles below it. The houfes are only one flory high, of twelve or fourteen feet, becaufe of the frequent earthquakes in that country. There are about eight parifhes, three colleges for fludents, twenty-eight monafteries of friars, and thirteen monasteries of nuns; fo that the religious take up a fourth part of the city. However, by the quick flow of money, and the vaft fums bequeathed, being the effects of celibacy, they are all well endowed and fupported; befides which, there are two hofpitals for the fick, poor, and difabled, and where feveral of our men were kindly looked after. The length of the city, from north to fouth, is two miles, the breadth one and an half; the wall, with the river, making a circumference of fix miles. On the east part of the stream lies the other part of the city, being joined by a very handfome ftone bridge of feven arches. I computed that there were 6_{\circ} or 70,000 perfons in Lima, all forts and colours included; and I do not wonder at any multiplication in a city, which is the centre of fo much affluence and pleafure; for, befides the natural increase of the inhabitants, all ships that trade that way, whether private or public, generally leave fome deferters, who chufe to flay behind, from the encouragement all white faces meet with. Of all parts of the world, the people here are most expensive in their habit. The men drefs as they do in England, their coats being either of filk, or fine English cloth, and hair camlets, embroidered, or laced with gold and filver; and their waiftcoats commonly the beft brocades. The women never wear hoops or flays, only a flitched holland jacket next their flifts. They generally throw over their fhoulders a fquare piece of fwan-fkin flannel, entirely covered with Flanders lace; befides the filver or gold lace round the petticoat. When they walk out, the Creolian women are veiled, but not the Mulatto; and, till the age of thirty or forty, they wear no head-cloaths, their hair being tied behind with fine ribbands. ribbands. But the pride of the fex appears chiefly in Mechlin and Bruffels lace, with which they trim their linea in a most extravagant manner, not omitting their sheets and pillows, besides the outward covering of the mantle aforefaid. Their linen is doubly bordered with it, top and bottom, with ruffles of four or five furbelows hanging down to the knee. Then, as to pearls and precious stones, which they wear in rings, and bracelets for the neek and arms, they are very extravagant, though the value is hardly equal to the shew they make.

The viceroy has an handfome palace in the great quadrangle of the city, which I take to be near as large as Lincoln's-inn-Fields, London. His falary is ten thousand pounds a year; and his perquifites double that fum: And though his government expires at three, four, or five years' end, as the king pleafes, yet, it is fuppofed, he makes a good fortune for life; for he has all places in his gift, both in the government and army, throughout Peru, except particular perfons are fent or nominated by the king. The judicial court confifts of twelve judges, not to mention the inferior officers, counfel, and folicitors. Here all caufes fhould come to be decided, but they are too often determined beforehand in favour of the party who gives most money; and though thefe vaft dominions abound in riches, yet there is not abundance of work for the lawyers, becaufe the statutes are few and plain, which is certainly happier than a multitude of laws explaining one another, till they are fo intricate, that the iffue of a caufe depends more upon the craft of a folicitor and advocate, than the truth of the cafe. Befides all this, a multiplication of laws begets an infinity of attornies and counfellors, who live high and great upon the diffrences of other people, and as often argue a man out of his right as into it. These hardships are past retrieving; because every magistrate knows his reign to be but short, and if he don't make a fortune he is laughed at; fo that they wink one at another; and the great diftance between Peru and Spain, is a reafon the king's orders are feldom regarded, being two years going backward and forward ; whence arife many clandeftine doings; for, according to law, the king fhould have a twentieth part of the gold, and a fifth part of all filver; but there are vast quantities that never pay duty, carried privately over the continent the north way, as well as the fouth, by trading fhips; and though there are prodigious fums allowed for the militia, garrifons. and repairs of fortifications, yet it is not onehalf applied: from all which it is easy to imagine, what immense revenues would come to the treafury at Madrid, if his Catholic Majelty was but faithfully ferved.

The country in Peru is naturally fubject to earthquakes; at Lima they had two great ones about fifty years ago, which overturned houses, churches, and convents; and, in the reign of Charles II. the late king of Spain, there was an earthquake near the equinoctial line, that lifted up whole fields, and carried them several miles off. Small fhocks are often felt without doing any harm; and I have been two or three times called out of bed when such a thing has happened, though we have heard no more of it; but, upon these occasions, the bells always toll to prayers. Notwithstanding this country, elpecially n.ga the coast, has suffered much by earthquakes, yet their churches are lofty enough, and nearly built : that part of their architecture, which requires most ftrength, is generally finished with burnt bricks; but their houses are all built with bambo, canes, and bricks, dried only by the weather, which are durable enough, becaufe it never rains : the covering is a matting with afhes upon it, to keep out the dews, which is all the wet they have. The fmall river of Lima is mostly fnow-water, defcending from the neighbouring mountains, which are covered all the year with fnow, but partly diffolved in the fummer feafon, which is from September to March. One would expect it much hotter thereabouts than it is, there being no proportion between

the heat of this climate in America, and the fame degree of latitude in Africa: for which there are two reafons; the one is the cool temper of the air, proceeding from the congealed fnow on the mountains, which diffufes itfelf every way; the other is the humidity of the vapours, which hang over the plains, and which are fo frequent, that, when I came first to Lima, I often expected it would rain. These vapours are not for coarfe, low, and gloomy as our fogs; nor feparated above, like our fummer clouds; but an exhalation between both, being fpread all round, as when we fay the day is overcast : fo that fometimes a fine dew is felt upon the outward garments, and difcerned by the eye upon the knap of the cloth. This is an happy convenience at Lima, the people being thus fcreened one half of the day from the fun; and though the afternoon be fun-fhine, 'tis very tolerable, being mixed with the fea breezes, and not near fo hot as at Lifbon, and fome parts of Spain in Europe, which are thirty degrees further from the equator. The want of rain in this part of the continent obliged the poor Indians, before the conquest, to make drains and canals, for bringing down water from among the diftant mountains; which they have done with fuch great labour and fkill, that the vallies are properly refreshed, producing grafs, corn, and variety of fruits, to which the aforefaid dews may also a little contribute; and therefore this fhews, that there is no judging from circumstances, whether a country be habitable or not, fince, in this refpect, nothing would feem more conclusive than the abfolute want of rain. A Spanish historian has given us the natural cause of this perpetual drought : he observes, that the south-west winds blow upon the Peruvian coast all the year round, and the ocean is therefore called Pacific, becaufe the winds never difturb the waters: thefe eafy gales always bear away the vapours from the plains, before they can rife and form a body fufficient to defcend in a fhower; but, when they are carried farther and higher, they grow more compact, and at length fall, by their own weight, into rain. They have plenty of cattle, fowl, and fifh, and all provision common with us, except butter, inftead of which they always use lard; they have oil, wine, and brandy enough, though not fo good as in Europe. They drink much of the Jefuits herb camini, brought from Paraguay by land; for all East India tea is forbid: they make a decoction of it, and fuck it through a pipe; it is generally here called mattea, being the name of the bowl out of which they drink it. Chocolate is their usual breakfast, and a grace-cup after dinner; fometimes they drink a glafs of brandy for digeftion, but fcarce any wine at all. In the kingdom of Chili they make a little butter, fuch as it is; and their way of doing it is remarkable : the cream is put into a fheep-fkin, and kept on purpole for that ufe; two women lay it on a table, and fhake it between them, till it comes.

The Spaniards are no friends to the bottle; yet gallantry and intrigue are here brought to perfection; for they devote fo much of their time to the fervice of the fair fex, that it is unmannerly not to have a miftrefs, and fcandalous not to keep her well. As for the women, they have many accomplifhments, both natural and acquired; their conversation is free and fprightly, their motion graceful, their looks winning, and their words engaging : they have all a delicate fhape, not injured with ftiff-bodied ftays, but left to the beauty of nature; fo that there is no fuch thing as a crooked body among them. Their eyes and teeth are particularly excellent; and their hair, being generally of a dark polifhed hue, is finely combed, and platted and tied behind with ribbands, but never difguiled with powder; for the brightness of their skins round the temples appears very well shaded through the hair, like light through a landscape. Though amours are universal at Lima, yet the men are careful enough to hide them; for no indecent word or action is allowed in public. They have two feafons for thefe entertainments; one is at the fiefta, or afternoon's nap, which is commonly with the VOL. XIV. miftrefs ; C

mistres; the other is in the evening, cross the water, in calashes, or at the great square in the town, where the calashes meet in great numbers towards the dusk; these are flung like our coaches, but fmaller, and many of them fit only for two, fitting oppofite: they are always drawn by one mule, with the negro driver upon his back; and it is ufual, among those calashes, to observe several of them with the windows close up, ftanding still for half an hour together. In these amufements, they have feveral customs peculiar to themselves : after evening prayers, the gentleman changes his drefs from a cloak into a montero, or jochey-coat, with a linen laced cap, and a handkerchief about his neck inflead of a wig: if he wears his buir, it must be tucked under a cap, and that flapt all down; fo that it is an universal fashion to be difguised fome way or other; for those who have no mistress are ashamed to be thought virtuous, and must be in fome mark or other to countenance the way of the world. But, as all this is nightwork, they have an effablished rule to prevent quarrels, which is, never to speak or take notice one of another, whether they are going in quest of, or visiting their ladies; fo that, in fhort, the forepart of the night is a mafquerade all the year round. Among the rank of people who do not keep calafhes, there are feveral points to be obferved, particularly when they take the evening air; one couple never walks clofe upon the heels of another; but, to prevent the publishing any fecret whispers, each couple walks at the diftance of twelve yards at least; and if any lady drops a fan, or any thing, by accident, a gentleman may civilly take it up, but he must not give it to the lady, but the gentleman who is with her, for the may be the fifter or wife of him that takes it ' up; and, as the women are all veiled, there wile laws are invented to prevent any impertinent difcoveries. A freedom of that kind is looked upon as the higheft affront in all gallantry, and merits a drawn fword through the liver. They are fo careful in thefe rules, that if any man fees his intimate friend any where with a woman, he muft in no wife take notice of him, or fpeak of it afterwards. Things of this nature are all done with the greatest gravity imaginable, and the practice of gallantry becomes, by this means, decent, foft, and eafy : but notwithstanding the commerce of love is here fo regularly fettled, yet there are jealoufies now and then fubfitting, which fometimes have ended fatally. There was a flory of this fort pretty fresh when I was at Lima :- a young lady had for fome time, as the thought, been the fole fovereign of her lover's heart; but, by chance, the found him in the company of another woman; and, as our inimitable Shakespeare has it, "Trifles, light as air, are, to the jealous, confirma-" tions ftrong ;" fhe waited therefore no further proof of his infidelity, nor expected any excufe for the wrong done her, but fuddenly drew his dagger, and difpatched him. She was foon brought to trial; and when every one expected fhe would pay the forfeit of her life, her judges gave it this turn, that it was not malice, but excels of love, that prompted her to the rafh deed; fhe was therefore acquitted : but fome nice cafuifts licught fhe should, in honour, have hanged herfelf. How agreeable foever these reactices are to the Creole Spaniards, yet they cause an inconvenience to fociety; for the men are fo ferioufly taken up with these forts of matters, that the women engross most of their time, and spoil public conversation. For this reason, there are no taverns or coffee houfes; to that the men are only to be met with at their offices, or at church. The fame inconvenience, in a greater or lefs degree, attends this propenfity to gallantry, wherever it prevails; and may be justly confidered as the bane of industry, corrupting the minds of both fexes, and inftilling the bafeft principles of indolence and debauchery.

It is chiefly owing to this effeminate difposition, that all manly exercises, all useful knowledge, and that noble emulation, which infpirits virtue, and keeps alive refpect

to

BETAGH'S ACCOUNT OF PERU.

to the public good, are unthought of here: for, as there is naturally a great mixtu of phlegm and flubbornnefs in Spanish conflictutions, fo whatever fettles amongst the into a cuftom, obtains the force of an inviolable law; and, however abfurd, however contrary to religion or virtue, however noxious to fociety, or fatal to private peace, not to be rooted out by art or force. The amufements, therefore, that ferve to relithe labours of the industrious in other countries, and yet keep alive the vigour an activity of body, and of mind, are never known in Peru; and whoever should attem to introduce them, would be confidered as an innevator, which, among Spaniards, a frightful thing: nor would they fuffer themfelves to be convinced, that martial exe cifes, or literary conferences, are preferable to intrigues. They have, however, a fc of playhouse, where the young gentlemen and students divert themfelves after the fashion; for what performances they have in the dramatical way are fo mean, that the are hardly worth mentioning, being for prive ftories interwoven with romances, an which is still worfe, with obscenity.

It was at this theatre, that two Englishmen, of Monsieur Martinet's squadron, foug a prize a little before I came to Lima: they first obtained leave of the viceroy to exe cife at the usual weapons; and, after the shew-day was fixed, most of the time w taken up with preparatory ceremonies, to bring, as we phrafe it, an houfe; precede by beat of drum, in their Holland shirts and ribbands, faluting the spectators at the windows with a flourish of the fword; fo that, by the extraordinary gallant manner. the thing, the whole city came to fee the trial of fkill: fome gave gold, but very fe lefs than a dollar : when the company, male and female, were clofe packed togethe the masters mounted the stage; and, after the usual compliment, peculiar to the En lifh nation, of fhaking hands before they fight, they retired in great order, and ftoc upon their guard. Several bouts were played without much wrath or damage; but the defign of this meeting being more to get money than cuts or credit, one of the mafte had the feafonable fortune to receive a small hurt on the breast, which, having blood his fhirt, began to make the combat look terrible; upon which the company fearin from fuch a dreadful beginning, that the zeal of the champions might grow too warr and conceiving, till they were reconciled, no man in the houfe was fafe, unanimouf cried out Bafta, Bafta, which fignifies Enough, Enough; and fo the houfe broke u The failors, finding this a better prize than any they ever met with at fea, humbly b fought his Excellency to grant them a licence for another trial of fkill; but the vicero and all the people, were against it, from a religious objection that could never be g over; and that was, left the fellows fhould kill one another, and die without abfolutio One cannot help obferving, when fo fair an opportunity offers, that the public dive fions of any place always flew the temper of a people; whence appears the danger (introducing, under the notion of elegance, the amusements of a dejected or an effem nate nation, becaufe, in time, they every where produce the fame effects; that is to fa they mould those, amongst whom they are introduced, into the fame temper with the from whom they are derived; and I dare fay, if gailantry prevailed here as much as : Peru, we fhould foon grow as much out of love with prize-fighting, and with whateve elfe had any affinity with labour or danger, as they: fo natural it is, for the love . pleafure to daftardize the very bravell people.

A further inftance we have of this deficiency of fpirit in the Spaniards, from the careleffnefs with refpect to those countries and islands yet undifcovered, in the neigh bourhood of their vast dominions in America; notwithstanding the affurances they hav had, that fome of these countries are richer, and of much greater confequence, the those they have already conquered or fettled. The first Spanish governors of Mexic

C 2

ar

and Peru were not of this indolent and unafpiring temper; but bestowed great care and pains in endeavouring to obtain the most perfect knowledge possible of the places bordering upon those under their respective governments; but now that generous thirst of fame is abfolutely extinguished, and the Spanish governors, instead of aiming at new discoveries, content themselves with plundering their fellow-subjects, that are settled in the old. The regions which lie north of the kingdom of Mexico, are known to abound with filver, precious stones, and other rich commodities; yet the Spaniards not only decline their conquest on that fide, but discourage, as much as they can, the reports spread of the wealth and value of those countries. Upon the same principles, they give no fort of encouragement to attempt penetrating into the heart of South America, whence the best part of the riches of Peru is known to come; the mountains, which are at the back of the country, being extremely rich in gold; and the regions on the other fide, towards the North Seas, known to be inhabited by nations that have abundance of that valuable metal; though, for fear of being oppreffed by the Europeans, they conceal it as much as poffible. If this proceeded from a maxim of true policy, viz that of being content when they have enough, and applying themfelves to govern well what they already poffers, it would be extremely commendable, and would certainly contribute to the fafety, peace, and continuance of their empire in those parts. But while it appears plainly, from the conduct of their viceroys and other officers, that they have nothing in view but accumulating wealth, at the expence of those they should protect, it is natural for the people to with, that they would apply themfelves to difcoveries, which would afford the governors means of making their fortunes, without diftreffing fuch as are already fubjects to the crown of Spain.

But, of all the difcoveries that have ever been talked of amongft the Spaniards, that which has made the most noife, is the Island or Islands of Solomon. These are supposed to be the fame with those discovered by the famous Ferdinand de Quiros : he reported them to be exceffively rich, as well as extremely populous; and defired, by repeated memorials, that he might be authorized, by the Crown of Spain, to proceed in, and finish that difcovery; but, as all his instances were neglected, in the space of a few years it became a queftion, whether there really were any fuch islands or not; and the treating this matter as a romance, was, for fome time, a political maxim with the viceroys of Peru; and perhaps, by degrees, the very wifeft people in America would have been brought over to this opinion; but it fo happened, that, towards the latter end of the last century, such discoveries were made as to the reality of these islands, that Don Alvaro de Miranda was fent in the year 1695, upon difcovering them, in which he milcarried; but, in the fearch, met with four islands, between 7 and 10° of fouth latitude, wonderfully rich and pleafant; the inhabitants of which were a better looking people, and far more civilized, than any of the Indians upon the continent. This occafioned a good deal of difcourfe at that time; but the difturbances that followed foon after, took up people's thoughts to fuch a degree, that all hopes of finding, or even endeavouring to find, thefe happy islands, were intirely laid afide.

Yet, while I was in Peru, this attempt was rsnewed again, though to very little purpofe, by an odd accident. Before I enter upon this, I muft be obliged to fay fomething of the perfon employed in the difcovery: among the reft of the French traders or interlopers, that were deftroyed by Martinet's fquadron, there was one Mr. Thaylet, with whom I was well acquainted at Lima, who loft all his effects: but even this hard ufage could not drive him out of Peru; he came thither to make a fortune, and he did not, by any means, care to return home a beggar. He had formerly commanded feveral good fhips, and was an expert artift. He offered his fervice to the Government,

۱2

and

and this offer of his was very kindly received. The first affair of importance in which he was employed, was an expedition to the Island of Juan Fernandez, in order to find there the bottle, with the inftructions, which Captain Clipperton left behind him for Captain Shelvocke, when, in purfuance of his instructions, he touched at that island, and cruifed in its neighbourhood for a month. Of this the viceroy was informed by one of Clipperton's men, that was taken prifoner; which information immediately produced a refolution to fend for those instructions, in order to prevent the English privateers from joining; and a more proper man for fuch an expedition could not have been found than Mr. Thaylet, who, in point of ingenuity and practice, was a much more capable man than most in the Spanish fervice. This circumstance of fending for the bottle is the molt authentic testimony that can possibly be expected to the truth of Thaylet's journal, and the hiftory already given of Clipperton's proceedings. I might add, that it is as direct a refutation of all that Captain Shelvocke has advanced upon this fubject; fo that it is impossible for any man, who confiders it, to believe what he charges Captain Clipperton with to be true; or to dream, that it ever was the intention of Clipperton to defert Shelvocke. It might also be observed, that the latter does not fo much as pretend to have left any inftructions for Clipperton, in cafe he should come to any of the places where Shelvocke had touched; the inference from which is very eafy.

While Mr. Thaylet was gone upon his cruife, a Spanish ship arrived at Calao, the master of which reported, that, being driven out of his course, he had made the Islands of Solomon. This occafioned much difcourfe on that fubject, and the comparing all the different accounts that had been given of thefe iflands, and their inhabitants, which appeared to clear, fo probable, and well connected, as fcarce to leave any doubt of the veracity of fuch as pretended to have made this difcovery. In the midft of the difcourfes raifed by this accident, another fhip arrived, with the like account, attended with circumftances, which rendered it evident, that there could not be any fraud or collution in the cafe; but that both had, by pure accident, been driven upon the fame island. This was very lucky for Mr. Thaylet, fince, while he was employed in one expedition. another was thus unexpectedly provided for him. On his return with the inftructions. and the two men who deferted there, the viceroy, willing to encourage him, thought of this fhort expedition for him in the fame veffel, being an English ketch of about fixty tons, and in which he had ferved Captain Martinet as a tender; for the intelligence he had received of Solomon's Island made his Excellency curious to purfue the difcovery. He therefore ordered the ketch to be fitted out for two months, under Thaylet's command; who accordingly failed into 10° fouth, in which latitude the ifland was faid to lie. He cruifed thereabouts till his provision was very nigh expended, and returned, without fuccefs. However, as the fame account came by two different flips, who touched there, the Spaniards verily believe there is fuch a place; for the men reported, that the natives, as to their perfons and behaviour, were much like the Indians on the continent; that they had gold and filver things among them; but that their language was strange and unintelligible. The reason why Mr. Thaylet could not meet with Solomon's Ifland, might be from the uncertainty of the latitude, and his inability of making further fearch, being provided only for two months; for I have been informed in London, that the faid ifland or iflands lie more foutherly in the Pacific Ocean, than where they are laid down in the Dutch maps; and the two Spaniards, who had been there, were only fmall trading veffels, carried thither by irregular currents; and could give no certain account of the latitude, becaufe they kept no reckoning. And thus ended all thoughts of profecuting this difcovery at that time.

As the riches of Peru confift chiefly in their filver mines, I shall endeavour to treat of thefe, not only from my own experience, but from the best lights 1 have been able to derive from the strictest inquiry I had it in my power to make from others. There are two forts of filver mines; the one, where filver is found fcattered about in fmall quantities; the other, where it runs in a vein between two rocks; the one exceffively hard; and the other much fofter: and it is thefe laft, which beft deferve, and are generally diftinguished by, the name of filver mines. This precious metal, which is, in other countries, the standard or measure of riches, is, in Peru, the riches of the country, confidered in another light, I mean that of a natural commodity; for, throughout the whole of that vaft country, there are almost every where filver mines to be met with, of more or lefs value, according as the ore produces more or lefs filver, and can be wrought at a greater or lefs expence. There are fome, but not a great many, mines to the northward of Lima; but, to the fouth, they are very numerous. On the back of the Ander, there lies a nation of Indians, called los Plateros, or the Plate-men, from the vaft quantities they poffefs of filver; but the Spaniards have very little communication with them. The best part of the mine countries are to the fouth of Cusco, from thence to Potofi, and fo to the frontiers of Chili; and where, for the fpace of 300 miles, there is a continued fucceffion of mines, fome being difcovered, and others deferted, every day.

It is a common thing for the people here, as well as elfewhere, to complain of the prefent times, and commend the paft, as if heretofore there were infinitely greater quantities of filver dug out of the mines than at prefent : and, perhaps, with regard to particular mines it may be fo; but, upon the whole, doubtlefs the quantities of filver that are annually obtained in the Spanish West Indies abundantly exceed what were formerly exported from thence. As to the names of those, which have been most remarkable, or are so at present, in the country of Peru, they are these; viz. the mines of Loxa and Camora, Cuenca, Puerto Veio, St. Juan del Oro: thefe are wrought at prefent. Those of Oruro and Titiri are neglected. Those of Porco and Plata filled up. At Potofi there are a great number of mines. And those of Tomina, Chocaia, Atacuma, Xuxui, the Calchaques, Guafco, Iquique, &c. are all wrought with more or lefs profit; and this according to the skill of their proprietors, or of such as have the direction of thefe works. It is generally believed, and there feems to be fome reafon for it, that experience has taught the Creolians here a perfect acquaintance with minerals, and the art of treating them, fo as to obtain the largest profit. But, however, when one confiders their ignorance in other arts, their going on conftantly in the fame beaten track in this, together with their vast waste of quickfilver, one is almost tempted to believe, that our European miners might manage their works to ftill greater advantages. This feems the more probable, when one reflects, that this knowledge of theirs is not at all founded upon principles, but is, properly fpeaking, an art built upon accidental discoveries, in which there is little of accuracy, and abundance of uncertainty; which will be more evident to the reader, when he has perused and confidered the following account of the manner in which the filver is extracted from the ore at the mines.

The most perfect filver that comes from thence, is in that form which the Spaniards call Pinnas, which is a lump of filver extremely porous, because it is the remainder of a paste, made of filver-dust and mercury; and the latter being exhaled, leaves this remainder of the mass spongy, full of holes, and light. It is this kind of filver that is put into different forms by the merchants, in order to cheat the king of his duty, though that is but very moderate; and therefore all filver in this condition, if found any where

on the road, or on board any fhip, is looked upon as contraband goods, and is liable to feizure. In regard to the art of refining, therefore, I am to fhew the progrefs o the ore from the mine to this kind of mafs or cake : after having broken the ftone taker out of the vein of ore, they grind it in their mills with grind ftones, or in the Ingenios Raales, or royal engines, which confift of hammers or pounders, like the French plafter-mills. They have generally a wheel of about twenty-five or thirty feet diameter, whofe long axle-tree is fet with fmooth triangles, which, as they turn, hook or lay hold of the iron hammers, lift them up to a certain height, from whence they drop at once at every turn; they generally weigh about 200 weight, and fall fo violently, that they crufh and reduce the hardeft ftones to powder by their weight alone. They afterwards fift that powder through iron or copper fieves, to take away the fineft, and return the reft to the mill. When the ore happens to be mixed with fome metals, which obftruct its falling to powder, as copper, then they calcine that in an oven, and pound it over again.

In the little mines, where they use none but mills with grind-ftones, they, for the most part, grind the ore with water, which makes a liquid mud, that runs into a receiver; whereas, when it is ground dry, it must be afterwards steeped, and well moulded together with the feet for a long time. To this purpole they make a court or floor, where they dispose that mud in square parcels about a foot thick, each of them containing half a caxon or cheft, that is, twenty-five quintals, or 100 weight of ore; and these they call Cuerpos, that is, bodies. On each of them they throw about 200 weight of fea or common falt, more or lefs, according to the nature of the ore, which they mould, and incorporate with the earth for two or three days. Then they add to it a certain quantity of quickfilver, fqueezing a purfe made of a fkin, into which they put it, to make it fall in drops, with which they fprinkle the body or mais equally, according to the nature and quality of the ore. They allow to each mais ten, fifteen, or twenty pounds; for, the richer it is, the more mercury it requires to draw to it the filver it contains: fo that they know not the quantity, but by long experience. An Indian is employed to mould one of these square parcels eight times a day, to the end that the mercury may incorporate with the filver. To that effect they often mix lime with it, when the ore happens to be greafy, where caution is to be used; for they fay, it fometimes grows to hot, that they neither find mercury nor filver in it; which feems incredible. Sometimes they also free among it fome lead or tin-ore, to facilitate the operation of the mercury, which is flower in very cold weather, than when it is temperate; for which reason at Potofi and Lipes, they are often obliged to mould the ore during a whole month, or a month and an half: but, in more temperate climates, the amalgama is made in eight or ten days.

To facilitate the operation of the mercury, they in fome places, as at Puno and elfewhere, make their builterons or floors on arches, under which they keep fires, to heat the powder of the ore, for twenty-four hours, on a pavement of bricks. When it is thought, that the mercury has attracted all the filver, the affayer takes a little ore from each parcel apart, which he wafhes in a little earthen plate, or wooden bowl; and, by the colour of the mercury found at the bottom of the bowl, knows whether it has had its effect: for, when it is blackifh, the ore is too much heated; and then they add more falt, or fome other drug. They fay, that then the mercury difpara, that is, fhoots or flies away. If the mercury is white, they put a drop under the thumb, and, preffing it haftily, the filver there is amongft it remains flicking to the thumb; and the mercury flips away in little drops. In conclution, when they perceive, that all the filver is gathered, they carry the ore to a bafon, into which a little ftream of water runs, to waff wash it, much in the fame nature as I shall shew they wash the gold, excepting that this being only a mud without stones, instead of an hook to fir it, an Indian stirs it with his feet, to diffolve it. From the first bason it falls into a fecond, where another Indian is, who stirs it again, to diffolve it thoroughly, and loofen the filver. From the second it passes into a third, where the same is repeated, to the end that what has not funk to the bottom of the first and second, may not escape the third.

When all has been washed, and the water runs clear, they find at the bottom of the bafons, which are lined with leather, the mercury incorporated with the filver; which they call lapella. It is put into a woollen bag, hanging up, for fome of the quickfilver to drain through. They bind, beat and preis it as much as they can, laying a weight upon it, with flat pieces of wood; and, when they have got out as much as they can, they put the paste into a mould of wooden planks, which, being bound together, generally form the figure of an octagon pyramid, cut fhort, the bottom whereof is a copperplate, full of little holes. There they stir, in order to fasten it; and, when they defign to make many Pinnas, as they call them, that is, lumps of various weights, they divide them with little beds or layers of earth, which hinder their coming together. To that end the pella or mais must be weighed, deducting two-thirds for the mercury that is in it; and they know, within a fmall matter, what nett filver there is. They then take off the mould, and place the pinna or mafs, with its copper bafe, on a trivet, or fuch-like instrument, standing over a great earthen vessel full of water, and cover it with an earthen cap or covering, which they again cover with lighted coals; which fire they feed for some hours, that the mass may grow violent hot, and the mercury that is in it evaporate in fmoke; but that fmoke having no passage out, it circulates in the hollow that is between the mafs and cap, or covering, till, coming down to the water that is underneath, it condenfes, and finks to the bottom again, converted into quickfilver. Thus, little of it is loft; and the fame ferves feveral times : but the quantity must be increased, because it grows weak. However, they formerly confumed at Potofi 6 or 7000 quintals or hundred weight of quickfilver every year, as Acosta writes; by which a judgment may be made of the filver they got.

When the mercury is evaporated, there remains nothing, but a fpongy lump of contiguous grains of filver, very light, and almost mouldering, which the Spaniards call la Pinna; and is, as I obferved, a contraband commodity from the mines, becaufe, by the laws of the kingdom, they are obliged to carry it to the king's receipt, or to the mint, to pay the fifth to his Majefty there. Those masses are cast into ingots, on which the arms of the crown are stamped, as also that of the place where they were cast, their weight and quality, with the fineness of the filver to answer the measure of all things, according to an antient philosopher. It is always certain, that the ingots, which have paid the fifth, have no fraud in them; but it is not fo with the pinnas or maffes not caft. Those who make them, often convey into the middle of them, iron, fand, and other things to increase the weight; fo that, in prudence, they ought to be opened, and made red-hot at the fire, for the more certainty; for if falfified, the fire will either turn it black, or yellow, or melt it more eafily. This trial is also to extract a moilture they contract in places where they are laid on purpose to make them the heavier. In thort, their weight may be increased one-third by dipping them in water when they are red-hot. as also by feparating the mercury, with which the bottom of the mass is always more impregnated than the top. It alfo fometimes happens, that the fame mais is of different finenels. The stones taken from the mines, the ore, or, to speak in the language of Peru, the mineray, from which the filver is extracted, is not always of the fame nature, confiftence, or colour. There are fome white and grey, mixed with red or bluih fpots, which is called plata blanca, or white filver. The mines of Lipes are most of them of this fort. For the most part there appear fome little grains of filver, and very often finall branches extending along the layers of the ftone. There are fome, on the other hand, as black as the drofs of iron, in which the filver does not appear, called negrillo, that is, blackish. Sometimes it is black with lead, for which reason it is called plomo ronco, that is coarfe lead, in which the filver appears as if fcratched with fomething that is harsh; and it is generally the richest, and got with least charge, because, instead of moulding it with quickfilver, it is melted in furnaces, where the lead evaporates by dint of fire, and leaves the filver pure and clean.

From that fort of mines the Indians drew their filver, becaufe, having no use of mercury, as the Europeans have, they only wrought those whose ore would melt; and, having but little wood, they heated their furnaces with ylo, and the dung of llamas, or fheep, and other beafts, exposing them on the mountains, that the wind might keep the fire fierce. This is all the fecret the hiftorians of Peru speak of, as of fomething wonderful. There is another fort of ore like this, as black, and in which the filver does not appear at all; on the contrary, if it be wetted, and rubbed against iron, it turns red; for which reafon it is called roficler, fignifying the ruddinefs of the dawn of the day. This is very rich, and affords the fineft filver. There is fome that glitters like talc or ifinglafs; this is generally naught, and yields little filver; the name of it is Zoroche; the peel, which is of a yellowish red, is very foft, and broken in bits, but feldom rich; and the mines of it are wrought on account of the eafinefs of getting the ore: there is fome green, not much harder than the laft, called cobriffo, or copperish; it is very rare: however, though the filver generally appears in it, and it is almost mouldering, it is the hardeft to be managed, that is, to have the filver extracted from it; fometimes, after being ground, it must be burnt in the fire, and feveral other methods used to feparate it; doubtlefs, because it is mixed with copper. Lastly, there is another fort of very rare ore, which has been found at Potofi, only in the mine of Cotamifo, being threads of pure filver, intangled or wound up together like burnt lace, fo fine, that they call it arana, fpider, from its refemblance to a cobweb.

The veins of mines, of what fort foever they be, are generally richer in the middle. than towards the edges; and, when two veins happen to crofs one another, the place where they meet is always very rich. It is alfo observed, that those which lie north and fouth, are richer than those which lie any other way. Those which are near places where mills can be erected, and that are more commodioufly wrought, are often preferable to the richer, that require more expence; which is the reafon, that, at Lipes, and at Potofi, a cheft of ore must yield ten marks, of eight ounces each mark, of filver, to pay the prime charges : and, at those of the province of Tarama, five pay them. When they are rich, and fink downwards, they are fubject to be flooded; and then they must have recourfe to pumps and machines, or elfe drain them by those they call cocabones, being paffages made in the fide of the mountain for the water to run out at; which often ruin the owners, by the exceffive expence they infenfibly draw them into. There are other ways of feparating the filver from the ftones that confine it, and from the other metals that are mixed with it, by fire, or firong feparating waters, made use of at fome mines, where other means fail, and where they make a fort of ingots, which they call bollos; but the most general and useful method is to make pinnas or maffes, above mentioned, which are preferred to other forms, on account of their eafinefs in making, and that they fave fire, and other ingredients; which is a thing of great confequence in works of this nature, where, to fave in the expence, has the fame effect as finding the mine.

VOL. XIV.

It is very natural to fuppofe, that, in mines, as well as other things, there happen great variations in their products, and in the value of the product. The mines which very lately yielded most filver, are those of Oruro, a little town eighty leagues from Arica. In the year 1712, one fo rich was found at Ollachea, near Cufco, that it yielded 2500 marks, of eight ounces each, out of every cheft, that is almost one-fifth part of the ore; but it has declined much, and is now reckoned but among the ordinary fort. Next to these are those at Lipes, which have had the fame fate. Lastly, those at Potofi yield but little, and cause a vast expence by reason of their great depth. But, notwithstanding the mines here are far diminished in their product, yet the quantity of ore that has been already wrought, and lain many years upon the furface, is thought capable to yield a fecond crop; and, when I was at Lima, they were actually turning it up, and new-milling it, with great fuccefs; which is a proof, that these minerals generate in the earth like all other inanimate things; and it is likewife certain, from all accounts of the Spaniards, that gold and filver, as well as other metals, are continually growing and forming themselves in the earth. This opinion is verified by experience in the mountain of Potofi, where feveral mines have fallen in, and buried the workmen, with their tools; after fome years, they have dug the fame place, and difcovered many bones, and pieces of wood, with veins of filver actually running through them. Thefe mines belong to him who first difcovers them : he immediately prefents a petition to the magistrates to have fuch a piece of earth for his own; which is no fooner done than granted : they measure eighty Spanish yards in length, and forty over, which is about 1200 foot in length, and 100 in breadth, and yield it to the difcoverer, who chufes what fpace he thinks fit, and does what he pleafes with it. Then they measure just the fame quantity for the king, which is fold to the beft bidder, there being many who are willing to purchase a treasure which may prove ineftimable. If any other perfon has a mind to work part of the mine himfelf, he bargains with the proprietor for a particular vein. All that fuch an one digs out is his own, paying the king's duty, which is for gold a 20th part, and for filver a 5th; and fome landlords find fuch an account in letting out their ground, and their mills, that they live upon the profit.

At Copiapo there are gold mines just beyond the town, and all about the country likewife, which have brought many purchasers and workmen thither, to the great damage of the Indians; for the Spanish magistrates take away not only their lands, but their horfes, which they fell to the new proprietors, under pretence of ferving the king, and improving the fettlements: there is alfo a great deal of magnet and lapis lazuli, which the Indians know not the value of : and, fome leagues in the country, there is plenty of falt and faltpetre, which often lies an inch thick on the ground. About an hundred miles east, upon the Cordelier mountains, there is a vein of fulphur two feet wide, fo fine and pure, that it needs no cleaning. This part of the country is full of all forts of mines; but, in other refpects, is fo barren, that the natives fetch all their fubfistence from Coquimbo, and that way, being a mere defert for 300 miles together; and the earth abounds fo much with falt and fulphur, that the mules often perifh for want of grafs and fweet water. There is but one river in 200 miles, which the Indians call Ancalulae, or Hypocrite, becaufe it runs only from fun-rife to fun-fet: this is occasioned from the great quantity of fnow melted from the Cordeliers in the day-time, which freezes again at night, where the cold is often fo great the people's features are quite diftorted. Hence Chili takes its name, Chile fignifying cold in the Indian language; and we are certainly informed by the Spanish historians, that fome of their countrymen, and others, who first traded this way, died stiff with cold upon their mules; for which reason the road is now always lower towards the coast.

The mine countries are all fo cold and barren, that the inhabitants get most of their provision from the coast; this is caufed by the falts and fulphurs exhaled from the earth which deftroy the feed of all vegetables. The Spaniards who live thereabout, find them fo ftifling, that they drink often of the mattea, to moiften their mouths. The mules, that trip it nimbly over the mountains, are forced to walk gently about the mines, and ftop often, to fetch breath. If thefe vapours are fo ftrong without, wha must they be within the mine itself, where if a fresh man goes, he is fuddenly benumber with pain? And this is the cafe of many an one; but this diftemper feldom lafts above a day, and they are not fo affected a fecond time; but vapours have often burft out fe furioufly, that workmen have been killed on the fpot, fo that one way or other multi tudes of Indians die in their calling. An obfervation occurs here to my memory, tha upon the road to Piura, at night, when we lay down to fleep, our mules went eager to fearch for a certain root, not unlike a parfnip, though much bigger, which afford a great deal of juice, and, in fuch a fandy plain, often ferves inftead of water: bu when the mules are very thirsty, and they cannot easily rake up the root with thei feet, they will fland over it and bray, till the Indians come to their affiftance. On would wonder, that, throughout all this part of the world, that portion of the countr fhould be beft inhabited which is most barren and unwholfome, while those spots, the feem to vie with Paradife itfelf for beauty and fertility, are but thinly peopled. Yei when one confiders, that it is not the love of eafe, but the thirst of wealth, that draw people hither, the difficulty is very eafily refolved; and we fee at once, how much th hopes of living rich, gets the better of the hopes of living; as if the fole end, for whic a man was created, was to acquire wealth, at the expence of health and happinefs.

It is generally understood, that filver is the peculiar wealth of Peru; and the Spi niards ufually talk, as to gold mines, of those that are to be found in Chili; but, no withftanding this, there are one or two washing-places for gold in the fouth part (Peru, near the frontiers of Chili. About the year 1709, there were two furprifin large lumps of virgin gold found in one of these places, one of which weighed thirt two pounds complete, and was purchased by the Count de Monclod, then viceroy Peru, and prefented to the king of Spain; the other was fhaped fomewhat like an ox heart; it weighed twenty-two pounds and an half, and was bought by the corregidor (Arica. To find these lavadores, or washing-places, they dig in the corners of a litt brook, where, by certain tokens, they judge the grains of gold to lie. To affift carrying away the mud, they let a fresh stream into it, and keep turning it up, that the current may fend it along. When they are come to the golden fand, they turn off th ftream another way, and dig with mattocks; and this earth they carry upon mules certain basons, joined together by small channels; into these they let a smart stream (water, to loofen the earth, and carry all the grofs part away. The Indians flanding the basons, and throwing out all the stones, the gold at bottom is still mixed with black fand, and hardly to be feen, till it be farther cleared and feparated, which eafily done. But thefe washing-places differ; for, in some, there are gold grains as b as bird-shot; and in one, belonging to the priests near Valparaiso, some were foun from two or three ounces to a pound and an half weight. This way of getting gold much better than from the mines; here is no need of iron crows, mills, or quickfilves fo that both the trouble and expence are much lefs. The Creolians are not fo curio in washing their gold, as the people in Europe; but great plenty makes them carele in that and many other articles.

It would be needless to attempt in this place a description of the large kingdom Chili, becaufe it has been already done by many authors: all that is defigned here,

to give such a representation of it, as may enable the reader to comprehend the nature of its trade, the manner in which it is connected with the general commerce of Peru, by which the wealth drawn from it is transmitted to Europe. It is in length, from north to fouth, about 1200 miles, the breadth of it very uncertain; the air is very temperate and wholelome, unless rendered otherwife by pestilential exhalations, that are most common after earthquakes, to which this country is very fubject. The winter rains, during the months of May, June, July, and August, are excessively heavy; but then, for eight months together, they have, generally fpeaking, fine weather. The foil is prodigiously fertile, where it admits of cultivation; fuch fruit trees as are carried thither from Europe, come to the greatest perfection; fo that the fruit is coming forward all the year; and it is common to fee apple-trees in that fituation, which we fo much admire in orange-trees; that is to fay, with bloffoms, apples just formed, green apples, and ripe fruit all at the fame time. The valleys, wherever they have any moifture, wear a perpetual verdure; and the hills are covered with odoriterous herbs, very useful in physic. There are trees of all forts, and fit for every kind of use; infomuch that, independent of its gold mines, Chili might be well accounted one of the richest and finest countries in the universe. And, indeed, there are fome places in it, which are as beautiful as any thing the warmeft imagination can paint : for inftance, the town of Coquimbo, in lat. 30° fouth, a fhort mile from the fea, standing on a green rifing ground, about ten yards high, which nature has regularly formed like a terrace, north and fouth, in a direct line, of more than half a mile, turning at each fide to the eaftward. The first fireet makes a delightful walk, having the prospect of the country round it, and the bay before it; all this is fweetly placed in a valley ever green, and watered with a river; which, taking its rife from among the mountains, flows through the vales and meadows, in a winding ftream, to the fea.

But notwithftanding all these advantages, this vast country is very thinly inhabited; infomuch that, through its whole extent, there are fcarce five towns that deferve that appellation, and but one city, which is that of St. Iago; throughout all the reft there are only farms, which they call Estancias, fo remote from one another, that the whole country, as I have been informed from good hands, cannot raife 20,000 whites fit to bear arms, and particularly St. Iago 2,000; the reft are all meftizos, mulattos, and Indians, whofe number may be three times as great, without including the friendly Indians beyond the river Bio-bio, who are reckoned to amount to 15,000, whole fidelity, however, is not much to be depended on. The trade of this country is chiefly carried on by fea, and is at prefent rather in a declining than flourishing condition. The port of Baldivia was formerly very famous, on account of the very rich mines of gold that were in its neighbourhood, which are now, in a great measure, disused; fo that it is only kept as a garrifon, and ferves in this respect to Peru, as the fortreffes on the Barbary coast do to Spain, viz. to receive malefactors, who are fent thither to ferve against the Indians. All the trade of that town confists in fending ten or twelve ships a-year to Peru, laden with hides, tanned leather, falt meat, corn, and other provisions, which are to be had here in great plenty.

The port of Conception is more confiderable, by reafon of their commerce with the Indians, which are not fubject to the Crown of Spain. Thefe Indians are of a copper colour, have large limbs, broad faces, and coarfe lank hair. The nation of the Puelches differ fomewhat from the reft, becaufe amongft them there are fome pretty white, and who have a little colour in their cheeks, which is fuppofed to be owing to their having fome European blood in their veins, ever fince the natives of this country revolted from the Spaniards, and cut off moft of their garrifons. They preferved the women, and efpecially

especially the nuns, with whom they cohabited, and had many children, who have a fort of natural affection for their mothers country; and, though they are too proud to fubmit to the Spaniards, yet they are not willing to hurt them. These people inhabit that ridge of the mountains which the Spaniards call La Cordilera; and, as the manner of trading with them is very fingular, it may not be amifs to give an account of it.

When the Spanish pedlar, or walking merchant, makes a tour into this country, he goes directly to the cacique, or chief, and prefents himfelf before him without fpeaking a word: the cacique breaks filence first; and fays to the merchant, Are you come? Then he answering, I am come. What have you brought me? replies the cacique. I bring you, rejoins the Spaniard, wine (a neceffary article!) and fuch a thing. Whereupon the cacique fails not to fay, You are welcome. He appoints him a lodging near his own cottage, where his wives and children, bidding him welcome, each of them alfo demand a prefent, which he gives, though never fo fmall: at the fame time the cacique, with the horn-trumpet which he has by him, gives notice to his fcattered fubjects of the arrival of a merchant, with whom they may trade : they come and fee the commodities, which are knives and axes, combs, needles, thread, looking-glaffes, ribbands, &c. The best of all would be wine, were it not dangerous to fupply them therewith, to make them drunk; for then they are not fafe among them, becaufe they are apt to kill one another. When they have agreed upon the barter, they carry the things home without paying; fo that the merchant delivers all without knowing to whom, or feeing any of his debtors: in fhort, when he defigns to go away, the cacique orders payment by founding the horn again; then every man honeftly brings the cattle he owes; and, becaufe these confist of mules, goats, and especially oxen and cows, he commands a fufficient number of men to conduct them to the Spanish frontiers. By what has been faid may be obferved, that as much civility and honefty is to be found among thefe people, whom we call favages, as among the most polite and well-governed nations.

That great number of bullocks and cows, which are confumed in Chili, where abundance are flaughtered every year, comes from the plains of Paraguay, which are covered with them. The Puelches bring them through the plain of Tapapapa, inhabited by the Pteheingues, or unconquered Indians, being the best pass to cross the mountains, becaufe divided into two hills, of lefs difficult access than the others, which are almost impaffable for mules. There is another, eighty leagues from La Conception, at the burning mountain, called Silla Velluda, which now and then cafts out fire, and fometimes with fo great a noife, that it is heard in the city; that way the journey is very much fhortened, and they go in fix weeks to Buenos Ayres. By these communications, they generally make good all the herds of beeves and goats, which they flaughter in Chili by thousands, for tallow and lard, made by trying up the fat and the marrow of the bones, which, throughout all South America ferves inftead of butter or oil, not ufed by them in their fauces : the flesh they either dry in the fun, or in the fmoke, to preferve it inftead of falting as is used in France. These flaughters also afford the hides, and efpecially the goats-fkins, which they drefs like Morocco leather, by them called Cordovanes, and fent to Peru to make fhoes, or for other uses. Befides the trade of hides. tallow, and falt meat, the inhabitants of La Conception deal in corn, with which they, every year, lade eight or ten ships, of forty or fifty tons burden, for the port of Calao; befides the meal and bifcuit they fupply the French fhips with, that take in provisions there to proceed to Peru, and to return to France. All this would be inconfiderable for fo fine a country, fince, if the land were well improved, it is fo extraordinary fertile, and fo eafy to till, that they only fcratch it with the plough for the most part, made ot of one fingle crooked branch of a tree, drawn by two oxen; and, though the grain is fcarce covered, it feldom produces lefs than an hundredfold: nor do they take any more pains in procuring their vines to have good wine; but, as they know not how to glaze the jars they put it into, they are fain to pitch them, which, together with the taste of the goats-skins, in which they carry it about, gives it a bitterness like treacle, and a fcent, to which it is hard for ftrangers to accustom themfelves. The fruit grows after the fame manner, without any industry, on their part, in grafting : apples and pears grow naturally in the woods; and, confidering the quantity there is of them, it is hard to comprehend how these trees, fince the conquest, could multiply, and be diffused into fo many parts, if it is true there were none before, as they affirm. The mines of Quilogoya and Quilacura lie within four leagues of this port, and afford vast quantities of gold; and the Estancia de Rel, or King's Farm, which is also at no great distance, is by very far the most plentiful Lavadero, or washing-place, in all Chili, where there are sometimes found lumps of pure gold of a prodigious fize. The mountains of La Cordillera are reported to be a continual chain of mines, for many hundred miles together; which is fo much the more probable, becaufe, hitnerto, fcarce any of these mountains have been opened, but vast quantities of metals have been found in them, particularly copper, remarkably fine, of which all the artillery in the Spanish West Indies, or at least in the South Seas, are cast.

There is another confiderable port in Chili, and indeed, the most confiderable of them all, which is that of Valparaifo, which is efteemed one of the beft harbours in the South Seas. It lies upon a river, fifteen leagues below St. Iago, the capital of Chili. To this port all the riches of the gold mines behind it, and on every fide, are brought, particularly from those of Tiltil, which are immenfely rich, and lie between this port and the city of St. Iago. The gold here is found in a very hard ftone, fome of which fparkles, and betrays the inclosed treasure to the eye; but most of it has not the least fign of gold, but appears to be an hard harfh kind of ftone, of very different colours, fome white, fome red, fome black. This ore, broken to pieces, is ground in a mill, by the help of water, into a groß powder, with which quickfilver is afterwards mixed : to this paste they let in a sharp stream of water; which having reduced it to a kind of mud, the earthy particles are carried off by the current, and the gold and quickfilver precipitated, by their own weight, to the bottom : when this mud has fettled a little into a fort of paste, they put it into a linen bag; strain it very hard, by which operation the mercury is driven out, or at least the greatest part of it; and the remainder they evaporate by the help of fire; fo that they have all the gold together in a little wedge, like a pine-apple, and thence it derives its name of Pinna. In order to clear the gold from the filver it is first impregnated with, the lump must be run; and then they know the exact weight, and the true fineness; it is not done any otherwise there. The weightiness of the gold, and the facility of its making amalgama, or paste, with the mercury, make the drofs immediately part from it : this is an advantage the goldminers have over those of filver; they every day know what they get; whereas the others fometimes do not know it till two months after, as has been faid in another place. According to the nature of the mines, and the richnefs of the veins, every caxon, or fifty quintals, that is, hundred weight, yields four, five, or fix ounces : when it yields but two, the miner does not make good his charge, which often happens; but he has also fometimes good amends made him, when he meets with good veins; for the gold mines are, of all mines, those which produce metals the most unequally. They follow a vein, which grows wider, then narrower, and fometimes feems to be loft in a small space of ground. This sport of nature makes the miners live in hopes of finding what

what they call the purfe, being the ends of veins, fo rich, that they have fometimes made a man wealthy at once: and this fame inequality fometimes ruins them; which is the reafon, that it is more rare to fee a gold-miner rich than a filver-miner, or of any other metal, though there be lefs expence in drawing it from the mineral as fhall be faid hereafter. For this reafon, alfo, the miners have particular privileges; for they cannot be fued to execution on civil accounts; and gold pays only a twentieth part to the king, which is call Covo, from the name of a private perfon, to whom the king made the grant, becaufe they ufed before to pay the fifth, as they do of filver.

On the defcent of this mountain, there runs, during the winter, or rather during the rainy feafon, a pretty brifk ftream of water, which, paffing through the gold ore, washes away abundance of that rich metal, as it ripens and breaks from its bed : and therefore, for about four months in the year, this is accounted one of the richeft lavaderos in Chili; and very well it may, fince there are fometimes found pellets of pure gold, of the weight of an ounce. At Palma, which is but four leagues from Valparaifo, there is another rich lavadero; and every where throughout the country, the fall of a brook, or rivulet, is attended more or lefs with these kind of golden showers, the richeft of which fall into the laps of the Jefuits, who farm or purchase abundance of mines and lavaderos, which are wrought for their benefit by their fervants. The foil about this port is exceflive rich and fruitful; fo that forty thips a year go from hence to Lima, laden with corn; and, notwithstanding their prodigious exportation, that commodity is fo cheap here, where money at the fame time is fo plenty, that an English bushel may be bought for less than three shillings; and it would be much cheaper ftill, if all the country could be cultivated; but, as they have dry weather for eight months together, this is impoffible, except where there are brooks or little rills running from the mountains through the vales.

But before we clofe this fubject, it may not be amifs to obferve, that there is a great trade carried on through all Chili, from the North Seas, by the way of Buenos Ayres, by which they receive fome European goods, and a very large balance of filver in return for their commodities. This is, perhaps, the greatest inland commerce in the world; for the road, from Buenos Ayres to Potofi, is 1500 miles; and, though the diftance from Valparaifo be not above 160 leagues more, yet it is croffed with greater difficulty than all the reft; becaufe they are obliged to pass that chain of mountains fo often mentioned, called by the Spaniards La Cordillera, which paffage can be attempted only during the three first months in the year, when the passages are open, and the merchants come from Mendoza, which is an inland town, about 300 leagues from Buenos Ayres to the city of St. Iago, which lies at the opening of the paffes from the **Cordilleras.** This journey through the mountains takes up fix or feven days, though not above fixty leagues; and the paffengers are obliged to carry with them not only provisions for themfelves and their attendants, but provender likewife for their mules, the whole road being a continual track of rocks and precipices, and the country round about fo exceffively barren, and withal fo exposed to fnows in the winter, that there is no living in it. The journey, however, from St. Iago to the mines, and from thence to Valparaifo, is equally fafe and pleafant; and the merchants have nothing to trouble them, but the fear of flaying too long, and lofing their paffage home through the mountains; in cafe of which they must be obliged to stay at least nine months longer than they intended. The reader will observe, that this journey, from Buenos Ayres to Valparaifo, is directly athwart the whole continent of South America; which is a clear

clear proof of the mighty extent of the Spanish empire, which reaches here from sea to fea. On the whole, though a very great part of the country be abfolutely defert; and, in fome places where it is inhabited, the people do not acquire great fortunes: yet, unquestionably, the Spaniards settled in Chili acquire annually immense riches : fince, as we observed before, the country is very thinly peopled, and all the gold that is drawn from the mines, or lavadores, must be divided amongst them.

Yet it is agreed, that a great part of the inhabitants do not feem to abound in wealth; which, however, may be very well accounted for, if we confider, that fuch as deal in cattle, corn, and the other product of the country, acquire but moderate fortunes; and fuch as are concerned in mines are frequently ruined, by launching into too great expences about them. But, after all, fuch as are eafy in their circumstances, and, in confequence of that eafe, retire to St. Iago, live in fuch a manner, as fufficiently demonstrates the riches of Chili, fince all their utenfils, even those that are most common, are of pure gold; and it is believed that the wealth of that city alone cannot fall fhort of 20,000,000. Add to this, that the gold mines are continually increasing, and it is only for want of hands that they are not wrought to infinitely more advantage, those already difcovered, and neglected, being fufficient to employ 40,000 men. It may be likewife obferved, that the frauds practifed for deceiving the King increase daily; and, as they measure the riches of the Spanish West Indies by the standard of the King's revenue, this must necessarily make them appear poorer than they really are. We have an inftance of this in the mines of Potofi, which are faid to yield lefs filver than they did formerly; yet, on a computation for fifty years, the King's annual revenue from those mines has amounted to 220,000 pelos of thirteen rials and a quarter each; which fhews that the annual produce of these mines, for which the legal duty is paid, amounts nearly to 2,000,000 pieces of eight per annum; and we may boldly affert, that the King does not receive above half of what is due: and from this example we may judge of the reft.

As the policy of the Spaniards confifts chiefly in endeavouring, by all ways and means possible, to restrain the vast riches of those extensive dominions from passing into other hands, fo the knowledge that other nations have of the mighty wealth of these countries, on the one hand, and of the great demand for European manufactures among their inhabitants, on the other, has excited almost ever nation in Europe to practife all methods possible, in order to gain a share in them; and this with so good effect, that it is very doubtful, whether any confiderable part of the riches in the Weft Indies centers among the inhabitants of Old Spain. This will appear very plainly to the reader, if he confiders that, in the first place, the very trade carried on from Spain is of much greater confequence to foreigners, than to the Spaniards themfelves; for, as there are few commodities, and scarce any manufactures in that country, the Spanish merchants at Cadiz make up their cargoes out of what they purchase from other countries; or rather, the merchants at Cadiz are barely factors for the English, French, and Dutch, whole goods they fend to America, and pay them out of the returns made by the plate fleets. We are likewife to confider, that Spain itfelf is a country very ill provided with fome of the neceffaries and most of the conveniences, of life; fo that prodigious fums of money are annually exported to obtain thefe.

But, befides fuch drawbacks as those we have mentioned, to which the Spaniards would willingly fubmit, there are many others, which they are forced to endure: for instance, all the negroes they employ in their plantations, where every kind of labour is done by these fort of people, all these negroes, I fay, are purchased from foreigners,

particularly

particularly the English and Dutch, at a very large expense every year. Add to this, that, under pretence of furnishing them with negroes, there is a clandestine trade continually carried on from one end to the other of their coast, upon the North Sea.

But, in the South Seas, they were pretty fafe from every thing, but the depredations of pirates, till the laft general war on account of the fucceffion to the crown of Spain; which created a new kind of contraband trade, unknown to former times, I mean, that of the French interlopers, who carried vaft quantities of goods directly from Europe, into the South Seas, which, till then, fearce any other nation had attempted. This was always looked upon with an evil eye by the court of Madrid, as being directly repug nant to the intereft of Spain, and the maxims of their government; but, as there were many circumftances at that time which rendered this a kind of neceffary evil, the Spaniards were forced to fubmit to it, I mean by Spaniards the inhabitants of Old Spain; for, as to the Creolians, if they had European goods, and at a cheaper rate, it would not give them much concern who took their money for them. The hiftory of these French interlopers is, in itfelf, fo important as well as curious, and is, at the fame time, fo very little known in England, that there is good reafon to believe it will prove acceptable, and be well received; the rather becaufe it is composed of fuch remarks, as fell immediately within my own sphere of observation, and as to the truth of which I am myself a competent witnefs: fo that every thing may be taken for certain, that I advance. I may have leave alfo to put the reader in mind, that, having a great intimacy with most of the officers I mention, this enabled me to come at many particulars, which another man, in my fituation, would have been abfolutely unacquainted with. But to come to matters of fact:

The town of St. Malo has always been noted for good privateers : they annoyed the Englifh and Dutch very much in their trade during the whole reign of KingWilliam, and part of Queen Anne; and though fome religious headed people fancy, that money got by privateering will not profper, yet I may venture to fay, the St. Malo men are as rich and flourishing as any people in France. It has thriven fo well with them, that all their South Sea trade is owing to their privateering; and, in the late war, they were fo generous, that they made feveral free gifts to Lewis XIV. And though our English admiralty always kept a flout fquadron cruifing in the Atlantic Ocean, yet we never took one of their South Sea-men: and my reafon for it is this; they kept their fhips extremely clean, having ports to careen at, which we did not think of; for, in the year 1709, when I belonged to Her Majesty's ship the Loo, being one of the convoys that year to Newfoundland, we faw upon the coaft a fifty-gun flip, which we challed, and foon difcovered fine was French built; but fhe crowded fail, and left us in a very little time. She had just been cleaned at Placentia: and we might well wonder to find fuch a thip in that part of the world; but were afterwards informed by the French prifoners, that the was a Frenchman, and bound to St. Malo, with two or three millions of dollars aboard; and was then fo trim, that fhe trufted to her heels, and valued nobody. By their going to far to weftward, and northward withal, they had the advantage of westerly winds, which feldom failed of fending them into foundings at one spirt, if not quite home. But fince Placentia has been yielded to Great Britain, they now make use of St. Catherina, the island Grande on the coast of Brasil, and Martinico in the Weft Indies.

This trade fucceeded fo well, that they all fell into it, fending every year to the number of twenty fail of thips. I faw myfelf eleven fail together on the coaft of Chili in the year 1721, among which were feveral of fifty guns, and one that could mount feventy, called the Flower-de-Luce, formerly a man of war. This being contrary VOL. XIV. to the Affiento treaty between Spain and Great Britain, memorials were frequently presented at Madrid; and the king of Spain, willing to keep his engagements with England, refolved to gratify the British court, by destroying the French trade to the South Sea. His Catholic Majefty knew there was no way to do this, but by a fquadron of men of war; he knew alfo, that few of his own fubjects were acquainted with the navigation of Cape Horn, or could bear the extreme rigour of the climate; therefore was obliged to make use of foreigners for this expedition; and three of the four ships that he fent, were not only manned with, but commanded by Frenchmen. The first was the Gloucester, of fifty guns and 400 men, formerly an English man of war; the fecond was the Ruby, fifty guns, 350 men, another English ship; the third was a frigate of forty guns, and 200 men; the fourth was the Leon Franco, a Spanish man of war, of fixty guns, and 450 men, all Spaniards. Monfieur Martinet, a French gentleman, was commodore of this fquadron, and commanded the Pembroke; M. le Jonquiere had the Ruby; the reft I do not recollect. The French performed their navigation well enough, and got round the Cape, though it was in the middle of winter; but the last of the four, manned by the Spaniards, after feveral attempts, could not weather Cape Horn, but was forced back to the river of Plate, where, at laft, the fhip was unfortunately caft away. It looks as if, by this expedition, an experiment was made to fee if the Spaniards were hardy enough to go through this terrible navigation; but, as they have little or no trade into any cold climates, and unufed to hard work, it is no wonder they failed in that point. The Bifcaneers, indeed, are robust fellows enough; and, if the Leon Franco had been manned with them, the had certainly doubled the Cape with the other three fhips; but the Spaniards in general, ever fince acquiring their poffetlions in America, are grown to delicate and indolent, that it would be hard to find an intire thip's company able to perform that navigation.

The prodigious advantage of the trade of Chili this way is fo manifest, that his Catholic Majefty is obliged by treaties to fhut out all nations, as well as the English, though he makes nothing of it himfelf; and it is very rare that a Spanish ship has gone by Cape Horn: from hence arifes the extraordinary price all European goods fetch at Chill and Peru. I have been told at Lima, that they are often fold at 400 per cent. profit; and, I may fay, the goods that are carried from France by Cape Horn, are in themselves 50 per cent. better than those that go in the flota of Cales to Carthagena or La Vera Cruz; becaule the former are delivered fresh and undamaged in fix months, whereas the other are generally eighteen months before they can come to Chili; fo that the French, during the importing time, made their markets, furnished themselves with provision, and got home again in twelve or fourteen months time. When Martinet arrived at Chili in the year 1717, with the king of Spain's commission to take or destroy all his countrymen that were trading clandestincly, he foon found employment for his three thips, the fourth being loft, as I have observed; and of fourteen fail of St. Malo men, there was but one cleaped him, she being land locked in a little creek, where she lay hid, till fhe was got to leeward; after which the weighed, and came away with half her cargo unfold. Though all this was to execute the orders of his Catholic Majesty, and doing a fensible pleasure to the British South Sea Company, yet the Creole Spaniards, especially the trading part of them, found themselves almost ruined by it, because it hindered the circulation of money, and spoiled business, so that they could not bear the fight of the French men of war, though they liked the French merchantmen well enough. On the other hand, the French, imagining they had done the Spaniards effectual fervice, expected, no doubt, civil treatment in return, while they staid among them. But, as foon as Martinet brought his prizes into Calao, and the Frenchmen

Frenchmen had received their proper shares, they, forgetting the old antipathy of the Spanish to the French nation, gave themselves extravagant airs ashore, by dancing and drinking; and this still incenfed the Creolians more against them, who called them cavachos and renegados, for falling foul on their own countrymen. From one thing or other, their mutual quarrels grew fo high, that the Frenchmen were forced to go in parties about Lima and Calao, the better to avoid public outrages and affronts. At laft, a young gentleman, who was enfign on board the Ruby, and nephew to Captain Jonquiere, was fhot from a window, and the malefactor took refuge in the great church at Calao. Martinet, Jonquiere, and the other captains, joined in a petition to the viceroy, that the murderer might be delivered to juffice; but the viceroy, being an archbifhop, would by no means violate the rights of the church to humour any body; upon which they ordered all their men on board by public beat of drum, and brought their three fhips, with their broadfides, to bear on the town of Calao, threatening to demolifh the houfes and fortifications, unlefs the affaffin was delivered up or executed. All this bluftering could not prevail with the viceroy to give them any fatisfaction, though they had feveral other men killed befides that gentleman.

At last, Jonquiere, unwilling to use extremities, and no longer able to bear the place where his nephew was murdered, obtained of his commodore Martinet, that he might make the best of his way home. About this time, many fathers, and many rich paffengers, were got together at the town of Conception, intending, when this fquadron came by, to take their paffage to Europe; for they knew, that all fhips bound to Cape Horn must touch at Conception, or thereabouts, for provision : herein Jonquiere got ftart of his commodore, having now the advantage of fo many good paffengers in his thip; for, as the king of Spain has no officers at Conception to register the money fhipped there, fo it is unknown what vaft fums those paffengers and miffioniaries put on board the Ruby. By this opportunity, the padres and others gained two great advantages; first, they were spared the trouble of a voyage to Panama or Acapulco. and thence traverfing the continent to Porto Bello, or La Vera Cruz, where they muft have had their coffers vifited, to fee if the indulto to his Majefty was fairly accounted for; and then they faved every fhilling of that indulto, or duty, becaufe the Ruby touched first in France, where no cognizance at all was to be taken of the affair; fo that as they faved one moiety of the duty payable in America, they likewife got clear of the other payable in Spain; becaufe the ship arrived in France, where they put all the money on fhore. There was on board the Ruby, befides these passengers money, a confiderable fum arifing to his Catholic Majefty for the confifcation of the thirteen interlopers taken by this fquadron; all which together, I was well informed, amounted to four millions of dollars aboard that thip: what a fine booty then we miffed through Shelvocke's obstinate conduct? For, when this fame ship the Ruby found us in the harbour of St. Catherine's, Jonquiere's company, as I faid before, were to infirm, that he had not more than fixty found men out of four hundred, fo that he really was afraid of us, and would not even fend his boat afhore to the watering-place, where we kept guard, and our coopers and failmakers were at work, till he had first asked our cap-tain leave; nor is this at all strange, for understanding we had a confort, he was really in pain all the time he was there, left the Success should come in.

After Captain Martinet had cleared the coaft of Peru and Chili of his countrymen, he fent express with the news to Madrid, his brother-in-law Monfieur de Grange, who came by way of Porto Bello, Jamaica, and London. Upon delivering his meffage, the king asked him what he should do for him: De Grange humbly begged, that his Majesty would please to give him the command of a ship to go round Cape Horn again.

E 2

He accordingly had the Zelerin of fifty guns: he came first to Calais, where the ship was getting ready; but was furprifed to find a cold reception from the French merchants, and other gentlemen of his acquaintance refiding there; for, as there were merchants of feveral nations interested in the ships taken and confiscated as aforefaid, they unanimoufly looked upon him, and all the French aboard that fouadron, as falfe brethren, for ferving a foreign power to the prejudice of their own countrymen; and, while he expected a valuable cargo configned to him, being what he aimed at, he found himfelf quite diffepointed; for no man would fhip the value of a dollar with him-Captain Fitzgerald, who was then at Cales, feeing this, made him a confiderable propofal, for the privilege of going his next officer, and to take aboard what goods he could produce in his own name. De Grange, being a little embarrafied, accepted the offer, and obtained at Court a Commiffion for him as fecond captain. Accordingly, they manned the Zelerin chiefly with French and fome English feamen; and got very well round the Cape, when our two privateers, Succefs and Speedwell, were known to be in the South Sea, this fame thip Zelerin was one of those thips commissioned by the Viceroy of Peru to cruife for us. Fitzgerald fold his goods at Lima to great advantage, where he continued, while De Grange ferved as captain under the admiral Don Pedro Miranda, who took myfelf, and the reft of us, prifoners. The St. Malo merchants, though great fufferers by fo many confifcations, were not much difcouraged; for, in the year 1720, we found the Solomon of St. Malo, carrying forty guns, and 150 men, at Hilo, on the coaft of Chili, with feveral finall Spanish barks at her stern. She fold her cargo in fix weeks time, got a fresh supply of provision, and left the coast without interruption; for by this time Martinet's fquadron was all come away.

The Solomon's good fuccefs gave fuch encouragement, that they immediately fitted out fourteen fail together; all which arrived in the South Sea in the beginning of the year 1721, three of whofe commanders, having the best acquaintance among the Creolians, quickly fold their cargoes, and returned home. About this time the people. of Lima judged the English privateers were gone off the coast, at least that no more hostilities would be committed, because of the truce made between the two crowns; whereupon the three Spanish men of war, fitted out to cruise on us, were ordered against those fresh interlopers. I was on board the advice-boat, called the Flying-fish, in company of the faid three men of war, when they came up with the eleven fail of St. Malo all together, on the coast of Chili; and, instead of firing upon them, the Spaniards joined them like friends. The French, expecting to be attacked, kept altogether in a line, and dared the men of war to begin. This to me feemed new, that three fuch ships, purposely fitted for this cruife, should, on their own coast, decline doing their duty; for, had they proved too weak, they had ports of their own under their lee. In thort, the men of war contented themfelves to watch the others motion, keeping them always in fight; and, when any of the French ships steered to the shore, the Spaniards fent their pinnace, or long boat, with the Spanish flag hoisted, the fight of which effectually deterred the Creoles from treating or trading with the French. Thus they made shift to hinder all these ships disposing of their goods, except they were met by chance at fea, and fold fome clandeflinely. At length, being tired out, the Frenchmen got leave to take in provision, and went home with at least half their goods unfold. Notwithstanding all this, and the fevere edicts against it in France, I know they still continue the trade, though privately; nor is it probable they will ever leave off so lucrative a commerce, except some other power prevents it.

I shall now return to my own affairs, and the manner of my return from that part of the world; a plain relation of which will be a sufficient resultation of what Captain Shelvocke

Shelvocke has been pleafed to deliver to the world in his book upon this fubject. I have acknowledged the kind reception I met with from the admiral of the South Seas, and the reafon of his treating us fo civilly. In eleven months time that I continued at Lima, I think it is but justice to mention the feveral favours I received, particularly from Don Juan Baptista Palacio, a native of Biscay, and knight of the order of St. James, who came weekly to the prifon while we were there, and gave money to all of us, according to our feveral degrees. Captain Nicolas Fitzgerald procured my enlargement by becoming fecurity for me, gave me money, and furnished me with necelfaries thenceforward to the time of my departure; and gave not only me, but twenty more, a paffage to Cadiz in a Spanish advice-boat, called the Flying-fifh : Mr. Preffick, our furgeon's mate, acted as furgeon in her, receiving wages; and fo did all our men, being releafed from prifon to affift in navigating the veffel home. For my part, as I was well treated, I would not eat the bread of idlenefs, but kept my watches, as other officers; and, pray, where is the harm of all this? Though Shelvocke had the flupidity to call it treafon; and it must appear a very malicious charge, as well as an ignorant one, that, after a man has been driven amongst the enemy, he must be called a traitor for being used kindly, and accepting his paffage back again; that, because I was not murdered there, I ought to be executed at home! This is Shelvocke's great christianity and good confcience! But, to return to what I was faying :-- On my arrival at Cadiz, Captain John Evers, of the Britannia, gave me his table, and my paffage to London; where, upon my arrival, and the reprefentation of my hardfhips, the following perfons of honour and diffinction were pleafed to express their concern for my fufferings, by making me a prefent each of ten guineas; viz. Edward Hughs, William Sloper, and Alexander Strahan, Efquires; Samuel Winder, Beak Winder, Henry Neal, and John Barnes, merchants; Humphry Thayer, and Thomas Stratfield, druggifts. This afforded me the fatisfaction of feeing, that fuch as were the beft judges, had a proper idea of the miferies I had fuftained, and approved of the manner in which I behaved, the only confolation which I could receive in the circumstances in which that unfortunate voyage left me. The fair account I have given of facts, the detail of my proceedings in the Spanish West Indies, and the account of what I observed worthy of notice during my ftay in those parts, will, I hope, acquit me in the opinion of every candid and impartial reader, from the afperfions thrown upon me in Shelvocke's book; and acquire me, what every man would wish to have, the approbation of him to whom, of his own free choice, he fubmits the cenfure of his actions.

HISTORICAL RELATION OF THE KINGDOM OF CHILE,

BY ALONSO DE OVALLE,

OF THE COMPANY OF JESUS,

A NATIVE OF ST. JAGO OF CHILE, AND PROCURATOR AT ROME FOR THAT PLACE.

Printed at Rome by Francisco Cavallo, 1649, with Licence of his Superiors.

TRANSLATED OUT OF SPANISH INTO ENGLISH *.

The Translator's Preface.

WHEN the translation of the history of Chile was first undertaken, it was more out of confideration of making that part of the world, fo remote from ours, better known, as to the geographical part, the natural history, and the first fettlements of the Spaniards, than to enter into a diffinct narrative of the events of that invasion, which contain little instruction, being between a people of great arts and abilities on one fide, and another of great natural courage, and no culture of the mind or body, on the other. The cafe was fo extravagantly unequal between them, when the odds of guns, armour, horfes, and difcipline, are weighed against nakednefs, anarchy, panick terrors, and fimplicity, that it feems a kind of prodigy that the love of liberty and a flock of natural unpolified bravery, fhould hold a contest with armed avarice, fpirited by fuperfiticus zeal, for almost a whole century.

The natural hiftory of Chile is fo admirably performed, that it may be a model for moft relations of that kind; for there are exact defcriptions of all the beafts, birds, fifhes, plants, minerals, coafts, rivers, bays, and inhabitants of the country, that can be wifhed for. There is, befides, an excellent account of the climate, the feafons, the winds, the manner of living both of the Indians and the Spaniards. The defcription of the great Cordillera, or chain of mountains, which runs for almost a thousand leagues in a parallel line with the South Sea, and divides Chile from the *ultra* mountain provinces, is fo accurate, that nothing of that kind can be more fo: the narrative of the manner of travelling through those vast plains of Cuyo and Tucuman, as far as Buenos Ayres, and the river of Plata; the topographical defcription of the ftreights of Magellan, with all its bays, ports, and its whole navigation, are of great instruction, as well as very entertaining.

* From Churchill's Collection, vol. iii. third edition 1745. The importance of the countries has been more attended to than flrict chronology.

In all this the jefuit, who was the author of this hiftory, muft be confeffed to have deferved the character of a candid inquifitive philofopher; and in what he has performed befides, about the fettlements of the Spaniards, he is very particular, efpecially in his defeription of the city of St. Jago de Chile; where any one may fee the progrefs of priefteraft in that new world, by the vaft riches of the convents, monafteries, and nunneries: but above all the inftructive chapters of this treatife, there is one about the methods of driving a trade between Europe and Chile to and from the Philippines and Eaft Indies, which contains fecrets of commerce and navigation, which I wonder how they were publifhed, and it is poffible may, ere it be long, be practifed by the Spaniards and other nations, if the navigation of the Mexican Gulph becomes fo troublefome, as it is like to be made by the naval powers of Europe, who feem to have chofe those feas for the feene of all their maritime power to exert itfelf in.

There is a digreffion about the first discovery of the islands and Continent of America by Columbus, and a progreffive narration of all the other discoveries, as they were made, and by whom, which is very curious; but as it is borrowed from other writers, the author can challenge no other merit than that of a judicious compiler.

All that needs to be added to this preface, is, to let the world know that the tranflation was first encouraged by the Royal Society, of which the translator has the honour to be a member; and that it was two fummer's work, that it might be the less subject to errors; and to prevent them, that worthy encourager of all natural knowledge, as well as of his own profession, in which he excels, Dr. Hans Sloane, has contributed very obligingly fome of his care and attention.

The Author's Preface.

BEING come from the kingdom of Chile into Europe, I observed that there was fo little known of the parts I came from, that in many places the very name of Chile had not been heard of. This made me think myfelf obliged to fatisfy, in fome measure, the defire of many curious perfons, who preffed me to communicate to the world a thing fo worthy of its knowledge. But I found myfelf in great difficulty how to comply with their preffing inftances, being deftitute of all the materials requifite for fuch a work, and at fuch a diffance from the place that could furnish them, that I defpaired of giving a juft fatisfaction : however, in obedience to those whose commands I cannot but refpect, I refolved to write this account, more to comply with my duty, and give fome information of those remote regions, than to pretend to a perfect and exact hillory, which this relation, in all its parts, (I confels,) comes very flort of. The reader, then, being thus prepared, will, I hope, have a regard to the little help I could have in this work, at fuch a diftance as Rome and Chile are from one another; and by his prudence and goodnefs, excufe any thing that may feem lefs finished in this work ; particularly fince there is hopes of a general hiftory of Chile, which cannot be long before it is finished.

In the mean time, the first and fecond books of this relation will frew the natural flate of the bingdom of Chile, both as to its climate and product; the third will deferibe the qualities of its first inhabitants; the fourth and fifth will deferibe the first entrance of the Spatiards into it, and the conquest of it by them; the fixth will contain the various events of the war, caused by the noble refistance made by the Araucauos; the feventh will shew the first means of peace attempted by father Lewis de Valdivia, of the company of Jefus, in order to facilitate the preaching of the holy Gospel, and the glorious death of his holy companions; the last book, which is also the largest of all, will will contain the first means of planting the Christian faith, and its propagation among the Indians, which was particularly compassed, and is still carried on, by the missions and ministry of our company; all which endeavours of theirs I explain and distinguish under fix heads, shewing the necessity of the spiritual help that those new Christians lie under, both as to preaching, and informing them of matters of the Christian faith.

I must give here five advertisements : the first, that in what I have feen myself, I have not departed from the truth in any thing I have writ : as to what I relate by hearfay, or by authority from other writers, I report it with the fame candour as I heard and read it, without adding or diminishing any thing of the truth; and though all those I cite in this work are worthy to be believed, yet the least to be fuspected of partiality, are fuch foreign writers who extol and commend this kingdom of Chile with fuch repeated encomiums. My fecond advertifement is, that confidering the kingdom of Chile was the last part of South America that was difcovered, and the nearest to the Antartick Pole, I could not treat of its difcovery with good grounds, without touching a little upon the neighbouring kingdoms of Peru and Mexico, which were as a paffage to it : and if I have enlarged now and then on the praifes and defcription of those parts, it was because I thought it might not be disagreeable to the reader; in which, if I am miltaken, he has only to skip fome chapters of the fourth book, and go directly to those which treat of the first entrance of Don Diego de Almagro into Chile. Thirdly, I must take notice, that though I do fometimes, in speaking of the land of Chile, report fome particularities which feem trifles, and not fo proper for hiftory, I do not relate them as fingular and proper to that country alone, but rather to fhew the uniformity both of nature and cuftoms, as to life and religion, in all those parts; and fome things are mentioned to encourage those new countries to drive on the advancement of religion, politenefs, learning, and good morals.

Fourthly, I must take notice, that fince I do not here make a general history of Chile, I have not had occafion to mention all the illustrious men, and noble commanders and foldiers who have flourished in those parts from the beginning of the conquest : I only, therefore, take notice of fuch as I find named in the authors whom 1 cite; and they too not making it their bufinefs to write a diffinct hiftory of Chile, but only to relate fome particular event, and formation only fome part of the government of fome governors, or their wars, cannot be exact in the account of all those who have in different times and occasions acted in those wars; and by this falvo I cover the honour of all our gallant commanders and foldiers of Chile, whofe actions I omit, though they are worthy to be graven in marble or bronze, only for this reafon. And though I own, that I am not ignorant of many who have flourished in my time, and before it, yet I have not fo diffinct an information as would be neceffary to give them their due commendations, and fet their actions in that light which their valour deferves; therefore the general history of Chile will perform that part. Perhaps, even before that, this work of mine may excite fomebody to employ their talent in making a particular book of their eulogiums and praifes, which cannot fail of being well received in the world, fince fo many noble and illustrious families of Europe will be concerned in it.

Laftly, I advertife, that though the principal motive of my writing this relation, was to publish the spiritual ministry of our company in the conversion of souls in this kingdom of Chile, yet I could not but treat first of the land and inhabitants, as being the object and subject of their endeavours; and I have been forced to be more

5

diffule

diffufe in it, than I would have been about a place already known to the world by any hiftory or relations made of it. For this reafon, I have employed fix books in the defcription of the land, and the valorous fierce difpolition of its inhabitants, that the force and efficacy of the divine grace might fhine out the more in the beginnings of the conversions of that untractable nation, mentioned in my two last books, which are almost as comprehensive as my fix first, which were divided into fo many, only to answer the diversity of matter which they contain.

Thus I have informed my reader of this work, in which he will find variety of entertainment. Some things will answer the curiofity of those who delight in knowing natural caufes; others will be moved and incited to valiant actions by the examples of those performed here. Those likewife, who love historical relations, will be pleafed. fince here is an epitome of the difcovery of the beft part of the Indies, according to the order of times, and perfons concerned in the conquefts and difcoveries of fo many kingdoms; and, laftly, the pious difposition of devout minds will be elevated to praife God for the fignal favours, which the queen of heaven has beftowed on the kingdom of Chile in particular; and adore the Lord of all things, for having in little more than one century made his name known, and his worfhip introduced among fo many heather. nations, even to bring the untamed and powerful Araucanos upon their knees to him. after fo many years flubborn refifting the entrance of the Gofpel. I cannot defire my reader to express any acknowledgments for this work of mine, because I do not judge it deferves fo great a reward; but I hope he may, with indulgence, excufe its faults. and make me fome allowance for the little helps I have had in writing. I have endeavoured to pleafe all; but, particularly, to fnew how the kingdom of Chrift may be advanced in that new world, if the apoftolical zeal of the evangelical workmen will employ itfelf in this great harvest of fo extended a gentilism and new Christianity.

TO THE READER.

THE first fix books being the only ones that contain the historical and natural accounts, they alone are translated; and some chapters even out of them omitted, for their tedious superstitious narratives.

BOOK I.

OF THE NATURE AND PROPERTIES OF THE KINGDOM OF CHILE.

CHAP. I. - Of the Situation, Climate, and Division of the Kingdom of Chile.

THE kingdom of Chile, which is the uttermost bounds of South America, and has the kingdom of Peru to the north, begins at the 25th degree of fouth latitude, towards the antarctick pole, and is extended in length five hundred leagues, as far as the ftraights of Magellan, and its opposite land, called La Tierra d I Fuego, which reaches to the 59th degree. The breadth of Chile is various; for it may be faid to extend itself one hundred and fifty leagues east and west, because though that which is properly called Chile, is not in many places above twenty or thirty leagues broad, which vol. XIV. is generally its extent from the fea to the famous Cordillera Nevada, or chain of mountains covered with fnow (of which we fhall fpeak in its proper place,) yet in the divifion of the bounds of the feveral governments of America, the king added to Chile thofe vaft plains of Cuyo, which run in length as far as Chile does, and are above twice as broad.

The oppofite part of the world to this kingdom, is the meridian that paffes between the ifland Taprobana of the ancients, which is Zeilon, and Cape Comorin, beginning at twenty-fix degrees north of the equinoctial line. The inhabitants are properly antipodes to those of Chile; and those who inhabit the countries that reach from thirtyfeven degrees to forty-four of the most westerly parts of New Guinea, would be also diametrically antipodes to the inhabitants of Castille; but it is yet uncertain, whether that part of the world is land or water; but this is certain, that it falls out in the division of Castille, and is opposite to it, and is west from Chile one thousand feven hundred leagues.

This kingdom is comprehended in the third, fourth, and fifth climate: in that part of it which is in the third climate, the longeft day is thirteen hours; and in the fifth climate, the day at longeft is about fourteen hours, and fomething more, quite contrary to Europe, as being opposite to it, but not diametrically; for the longest day in Chile is St. Lucia's, and the shortest St. Barnaby's; the sum is always there towards the north, and the shows to the fouth.

This is the fituation of the kingdom of Chile, which borders upon the north with the province of Aracama, and the rich mines of filver of Potofi, where the kingdom of Peru begins; and on the fouth it has the great fea to the pole, and the iflands difcovered in it. Abraham Ortelius was of opinion, that there was on this fouth fide of the kingdom of Chile, a land which was contiguous with New Guinea; and this opinion lafted till we were undeceived by those who having paffed by the ftraight of St. Vincent, otherwife called the ftraight of Le Maire, went round that fouth land called the Tierra del Fuego, and returned to the north fea by the ftraights of Magellan; proving evidently the faid land to be an ifland, entirely feparated from any other land; as I fhall fhew further in its proper place.

Chile has on the eaft Tucuman and Buenos Ayres, and to the north-east Paraguay and Brafil; to the weft it has the South-Sea, which, according to the opinion of Antonio de Herrera, is all that is comprehended between Chile and China, and begins at the Golden Cherfonefus, or the island of Sumatra; and that fea is in breadth, east and west, two thousand feven hundred leagues.

According to what has been faid, we may divide this kingdom into three parts: the first and principal is that which is comprehended between the Cordillera Nevada and the South-Sea, which is properly called Chile. The fecond contains the islands which are fowed up and down upon its coast as far as the straights of Magellan. The third contains the province of Cuyo, which is on the other fide of the straights, and in breadth extends to the confines of Tucuman.

To begin then with that part which is most properly called Chile: I confess I had rather the defcription of it had fallen to the lot of fome ftranger who had feen it; for then the danger of paffing for too partial for one's own country, (to which are exposed all those who write of it) would have been more easily avoided, and fuch an one might with lefs apprehension enlarge upon the excellent properties which God has been pleased to endow it with. The common opinion of all those who have come from Europe to it, is, that its foil and its climate exceed all others they have feen; though, perhaps, in

34

that

that they only make a return for the kind welcome they all meet with in those parts. As for my part, all I can fay, is, that though it be like Europe in every thing, except in the opposition of the feasons, which are transposed, it being fpring and fummer in the one, when it is autumn and winter in the other, yet it has fome properties which do really fingularize it, and deferve the praises given it by travellers; for, first, neither the heat nor the cold are fo excessive as in Europe, particularly as far as the 45th degree of latitude, for from thence to the pole the rigorous and excessive cold begins.

The accidental fituation of the land of Chile, muft be the caufe of this temperature of the air; for being covered on the eaft by the high mountains of the Cordillera, which are all fo prodigioufly elevated, it receives the frefh and cooling breezes from the fea; and the tides which penetrate as far as the foot of the mountains, joining with the coolnefs of the fnow, with which they are covered, refrefh the air fo, that about four o'clock in the afternoon the heat is no ways troublefome. Nay, if one is in the fhade, one may fay, that in no hour of the day the fun is infupportable, efpecially from thirtyfix degrees, or thereabouts, neither day nor night the heat can be complained of; which is the caufe, that at the town of the Conception, which is in that fituation, the covering for beds is the fame winter and fummer, neither of those feasons being any ways troublefome.

Another good quality of this country is, to be free from lightning; for though fometimes thunder is heard, it is at a great diffance up in the mountain. Neither does there fall any hail in the fpring or fummer; or are those florms of thunder and lightning feen here, which in other parts make the bells be rung out, and the clouds to be exorcized; neither are there fo many cloudy days in winter as in other parts; but most commonly after the rain has lasted two or three days, the heavens clear up, and look as if the fky had been washed, without the least cloud, in a very short time after the rain; for as foon as ever the north wind, which brings the cloudy weather, ceases, the fouth succeeds, and in a few hours drives away the rain; or if it be in the night-time, the dew falls, and the fun rifes brighter than ever.

This country is yet to be valued upon another propriety of it, which is, that it is free from poilonous creatures, fuch as vipers and fnakes, fcorpions or toads; fo that one may venture to fit under a tree, or lie down and roll on the ground, without fear of being bit by them. Neither are there tygers, panthers, or any other mifchievous animals, except fome lions of a fmall kind, which fometimes do harm to the flocks of fheep or goats, but never to men, whom they fly from; and this is not only in the cultivated land, where men are frequent, but in the woods and folitude, and in the thickeft groves, of which there are fome fo clofe with trees, that one can hardly break through them afoot. I heard a friar of ours, who was an excellent builder, fay, that having gone for three months together in woods, where there was no fign of any one's having paffed before, to find out trees proper for the timber of the church of St. Jago, he had never met with the leaft poifonous creature that could either caufe a naufeous idea, or a dangerous effect.

There is another most wonderful fingularity of this fame country, which is, that not only it does not breed, but will not fuffer any punaizes, or bugs, to live in it; which is the more to be admired, that on the other fide the mountains they fwarm. I never faw one in it alive, for fometimes there are fome in the goods and furniture of people who come from the province of Cuyo; but as foon as they feel the air of Chile they die. The experience that was made of this, by one that was either curious or malicious enough, was wonderful; for coming from Cuyo to Chile, he brought fome of those creatures with him, well put up in a box, and fuch food provided for them as to keep them alive; but no fooner were they come to the valley of Aconcagua, which is the first valley coming down from the mountains, but they all died, not fo much as one remaining alive.

I do not fay any thing here of the mines of gold, nor of those excellent waters which running from them, are cordial and healthy; nor of the abundance of provisions for life, nor of the physical plants, nor of many other rare qualities in which this country exceeds others, as well to avoid confusion, as because those things will be better shewed when we come to treat of each of them in particular in their proper place.

In all other things the land of Chile is fo like Europe, both in climate and foil, that there is very fmall or no difference; and it is very remarkable, that in fuch variety of difcoveries made in America, none is fo conformable in every thing with the European confitution, as this tract of Chile; for in most of the places between the tropicks, as Brafil, Cartagena, Panama, Portobello, and those coafts in that fituation, the heats are violent, and continual all the year; and in fome other places, fuch as Potofi, and the mountains of Peru, the cold is as exceflive; in fome they have a winter without rain, and have their rain in fummer, when their heat is highest; others there are, where they have neither wine, oil, nor wheat of their own product; and though in fome they may have these productions, yet the other fruits of Europe do not take with them; but Chile has, just as Europe, its four feasons, of fpring, fummer, autumn, and winter; it does not rain in fummer, but in winter; and all the product of Europe agrees with their foil.

One thing is much to be admired, and that is, that the land of Cuyo, that of Tucuman, and Buenos Ayres, being all in the fame latitude with Chile, are neverthelefs fo different in climate from it and from Europe; for though in thole parts it freezes exceedingly, fo as to freeze water within doors, and that their cattle, if left abroad, die with cold, yet there does not fall a drop of rain all the winter, and the fun fhines out fo bright and clear, that not a cloud is to be feen: but in the fpring they have fuch abundance of rain, that it would drown the whole country, if the fhowers lafted as long as in Europe or in Chile; for when the rain lafts but an hour and a half, the ftreets are full of ftreams in the towns, and the carts are up to their axle-trees, though they are very high in thofe parts, and all the country is as it were a fea: there fall likewife at that time thunder-ftones, and hail as big as a hen's egg, nay, as geefe eggs, and fometimes as big as oftriches; as I myfelf have feen.

All these florms and varieties of weather form themselves in the high mountains, that are a kind of wall to the kingdom of Chile; and they never come to far down as to invade its territories, but flop at them like a barricado; for in Chile the weather is always fleady and conftant, without fudden changes, all the fpring, fummer, and autumn; in winter, indeed, there are degrees of heat and cold, as there is a difference in the length and fhortness of the days, according to the degrees of the latitude, and course of the fun, which causes the fame variation as in Europe, though in oppofite months.

From hence it follows, as authors do obferve, and experience teaches, that there muft be, and is, a great refemblance between the animals and other productions of Chile and those of Europe. As a proof of this, I have feen feveral gentlemen that came to Chile from other parts of America, either as commanders, or for other employments, which are in the king's difpofal, incredibly overjoyed at this conformity with Europe; for they think themfelves, as it were, in their native country, the air and the provisions of both fo like in their qualities: the meats are more nourishing than in hotter climates; and when those who have been either born or bred in those hot countries come to Chile, they are forced to abstain, and keep a watch upon their appetites, till their stomachs are used by little and little to the strength of the food of that country, and can digest it.

CHAP. 11.—Of the four Seafons of the Year, and particularly of the Winter and Spring : with a Defcription of fome Flowers and medicinal Plants.

THE four feafons of the year which are in Europe, the fpring, the fummer, the autumn, and the winter, are with the fame duration of time enjoyed in Chile, though not exactly under the fame names, at the fame time; for the fpring begins about the middle of the European August, and lasts to the middle of November; then begins the fummer, which holds to the middle of February; which is followed by the autumn, which lafts to the middle of May; and then the winter enters, and makes all the trees bare of their leaves, and the earth covered with white frofts, (which neverthelefs diffolve about two hours after fun-rife, except in fome cloudy days, that the ificles laft from one day to another;) the winter ends again about the middle of August. It is very feldom that the fnow falls in the valleys or low grounds, though fo great a quantity is upon the mountains, that it fills up fometimes all the hollow places to the height of feveral pikes, and there remains, as it were, in wells and refervatories, to provide, as it does in due time, fo many fprings and rivers with water, fo fertilizing the valleys and plains, that they produce infinite crops of all forts in the autumn, and enrich the kingdom. But notwithstanding that it feldom fnows in the valleys and plains, yet it is fo cold in them, that few parts in Europe are colder; which proceeds not only from the degree of elevation this land is in, but alfo from its neighbourhood to those vaft mountains called the Cordillera, which fend out fuch fharp and piercing winds, that fometimes they are infupportable; therefore the fea-coast is much more temperate and warm; but in return much more exposed to vehement tempests of winds, than the inland parts, where these storms are in some measure spent before they reach them, and fo cannot whip them and torment them as they do the fea-coafts.

For fome protection against these fharp cold winds, God Almighty has placed feveral great clufters of thorn-buffnes, which thrive fo well, that it is the ordinary fewel of all the countries about the town of St. Jago, and the valleys near it. It is a plant not unlike an oak, though more durable; the heart of the wood is red, and incorruptible; of it they make coals for the furnace, and other fhop uses. In other parts the true oak ferves for the fame purpose; as the territory of the city of Conception, where there are very large woods of them, which are fo thick, that though they have already ferved for the uses of the natives fo many years, yet when they are entered, they can hardly be passed in the middle; and this within half a league of the city; for further up in the country there are forefts, where no man every fet his foot.

Though thefe oaks, as also the fruit-trees, lofe their leaves in winter, yet there are wild trees which do not, though all covered with ice and fnow; and the cold is fo far from injuring them, that when the fun melts the froft, they look brighter and more beautiful. As foon as the first rains come, the fields begin to be clothed in green, and the earth is covered in twenty or thirty days with grafs; amongst which nature produces a fort of yellow flower in fuch abundance, that the plains and valleys look like carpets of green and yellow.

1 I

These first rains seem to prepare the earth for its ornamental dress of flowers with the fpring, which begins about the middle of August; and they last till December, that the heats come in, and that with fuch variety and abundance of fo many kinds, that the fields look as if they had been painted, producing a most delightful object. T remember once, as I was travelling, I faw fo great a diverfity of thefe flowers, fome fcarlet, others blue, yellow, red, ftraw-colour, purple, &c. that I was moved to tell them, and I told in a fhort time two and forty forts, fo admirable was their variety : and yet I do not reckon among these the cultivated ones in gardens, nor those that were brought from Europe, fuch as carnations, roles, flock gilly-flowers, orange, lillies, poppies, lupins, &c. I only fpeak of those that grow wild, which are fo odoriferous and fweet-fcented, that it is out of them they diftil a water called aqua d'angeles, or, angel's water. The fmell of these flowers is perceived sweetest at the rifing and fetting of the fun; which, mingled with the fcent emitted by the herbs, which are very aromatic, produce a most admirable perfume, and for that reason they put the fprouts and tops of them amongst the flowers which make the angel water.

It is fcarcely possible to express the force with which the earth puts forth these plants, which is fo great that in many places it is hard to diftinguish the cultivated from the uncultivated lands. One would think at first that all had been plowed and fowed alike; and with the continuance of the rains, the grass runs up fo ftrong, and grows fo intricate, that a horse can hardly break through it, it coming in most places to the faddle girts.

Muftard-feed, turnips, mint, fennel, trefoil, and other plants, which I fee are fowed and cultivated in Europe, for the juft efteem that is made of them, do all grow wild in Chile, without ferving to the use of life at all, otherwise than by the cattle's feeding on them, which they may do for feveral leagues together. The mustard-plant thrives fo mightily, that it is as big as one's arm, and fo high and thick, that it looks like a tree. I have travelled many leagues through mustard-groves, which were taller than horse and man; and the birds build their ness in them, as the gospel mentions in these words, *ita ut volucres cali veniant et habitent in ramis ejus*; fo that the birds of the air come and lodge in the branches thereof.

There are many plants of great virtue in phyfic, and known only to the Indians, called Machis, who are a race of men who are their doctors. These plants they conceal carefully, and particularly from the Spaniards, to whom if they communicate the knowledge of one or two, it is a great mark of their friendship; but the knowledge of the rest they referve, and it passes from father to fon. These Machis, or doctors, are not only esteemed by the Indians, but by the Spaniards themselves, who have recourse to them in the greatest extremities, when the disease presses most. They find wonderful effects from the application of these fimples, which they use in a lefter dose with the Spaniards than with the Indians, who are of a more robust nature, and stronger constitution.

I faw one of our order much troubled with the falling ficknefs and fwooning fits, fo as he was forced to have always fome body in his company, or elfe he might have fallen down ftairs, or otherwife killed himfelf: he had ufed all the remedies that the learning of phyficians and the charity of religious men could fuggeft, but without any effect at all: nay, he was worfe and worfe every day. Our fathers learned at laft, that about twelve leagues off from that place there lived an Indian Machi: they fent for him; and being come, and having heard the relation of his diftemper, he gave him as much of a certain herb in wine as the bignefs of a nail; and it had fo great an effect, that it took away the diftemper, as if he had taken it away with his hand, the perfon being never troubled with it more, all the time I knew him.

I have feen many other cures performed by thefe Machis, particularly in cafes of poifon; for in that fort of diftemper they are very eminent. I fhall mention but one inftance, of a gentleman who had been pining away for feveral years, and often at death's door: once, being in extreme danger, he heard of a famous Machi who lived a great way off, but was a fhe-doctor, (for there are women amongft them eminent in the art:) he procured, by prefents, to have her fent for; and having promifed her a confiderable reward, befides what he gave her in hand, which he was well able to perform, being very rich and powerful, fhe began to apply her remedies, which were herbs; and one day, when fhe faw his body prepared to part with the poifon, fhe caufed a great filver voider to be fet in the middle of the room, and there, in the prefence of many people, the gentleman having firft been very fick in his ftomach, he caft up the poifon which had been given him many years before, wrapp'd up in hair, which came up with it; and he was perfectly well after this, as he himfelf related to me.

Though, as I have faid, the Indians are fo clofe in keeping fecret the herbs they ufe, yet many of them, perfuaded by reafon, and induced by friendship, do communicate fomething : and time and experience has discovered fo many more, that if I should mention them all, I should be forced to make a book on purpose of them; therefore I shall only mention three that I have more present in my memory, the effects of which are prodigious.

The first shall be a famous plant called Quinchamali, which rifes not a foot above the ground, and its branches spread like a nosegay, and end in little flowers at the points, which, both in colour and in shape, are not unlike the fassion called Romi. They pull up the herb, and boil it entire, with its roots, leaves, and flowers, in fair water, which is given to the patient to drink hot: amongst other effects it produces, one is to diffolve all coagulated blood in the body, and that very quickly; fo that an Indian feeling himself wounded, takes it immediately, to hinder the blood that could not come out at the wound from congealing inwardly, and so prevents all impossible mation, and the corruption of the rest.

There happened in our college of St. Jago an accident, which gave proof of this admirable herb; which was, that an Indian belonging to us being gone to the great place to fee the bull-feaft, a bull, to his great misfortune, catched him up, and toffed him in the air, and left him almoft dead on the fpot; he was brought to our houfe, and the phyfician, being called, faid he was a dead man, and nothing could fave him: but, however, he told the father that has care of the fick, that it would coft but little to give him the Q inchamali, wrap him up warm, and leave him alone fome hours. It was done accordingly; and after fome time, the father reforting to the place where they had laid him, to fee if he was dead, he was found not only alive, but out of danger, and the fheet all full of blood, which the herb had caufed him to void through the pores of his body, fo as he remained perfectly well in a little time.

The fecond herb is that which we Spaniards call Albaaquilla, and the Indians Culen, becaufe its leaves are like the leaves of fweet bafil: it grows in bufhes fo high, that they feem to be trees; the leaves are very fragrant, and fweet like honey: being bruifed, it is applied to the wound outwardly, and fome drops of its juice are to be poured alfo into the wound; after which, most admirable effects of its efficacy are feen.

I was told by Captain Sebaftian Garcia Carrero, the founder of our novitiat-houfe of Bucalemo, that as he was travelling with a dog in his company, which he loved extremely, tremely, fome wild monkeys that live in the mountains fell upon him, and fo worried him among them by biting him, fome on one fide and fome on the other, that they left him full of wounds, and particularly with one large one in his throat : his mafter came up at laft, and found him without fign of life; he was much troubled for the lofs of his dog, and lighted to fee what he could do for him. This Albaaquilla, is an herb that grows every where in the fields; and the gentleman, at a venture, gathering three or four handfuls of it, bruifed them between two ftones, and poured the juice into the dog's wounds, and into the great one of his throat he thruft a handful of it, and fo left him without hopes of life : but it fell out wonderfully, that after a few leagues travelling on, turning back to look at fomething, he faw his dog following at a diftance, who was fo well cured that he lived many years after.

The third herb, that I remember, is like a knot of fine hair, and which is not commonly met with: this is an admirable herb in fevers and pleurifies; it is boiled in water, and drank; it purifies and cleanfes the blood, expelling that which is bad, and fo the fick body remains perfectly cured; as I myfelf have had the experience of it.

There are feveral other plants, fome of which cure the pains of the liver; others diffolve the ftone in the bladder, and break it to pieces; fome are excellent for the fciatica and other infirmities; all which, if I were to relate in particular, I fhould make a new *Diofcorides*, or herbal, which is not my intention. We will therefore leave the flowers and herbs of the fpring, the harmony of the finging of birds, which fo rejoices the mornings, and the ferene and quiet days of this feason, to draw near the fummer; which will afford us matter of difcourfe.

CHAP. III.-Of the Summer and Autumn, and their Product.

THE fummer begins in the middle of November, and lafts to the middle of February, fo that the greateft heats are at Chriftmas; and we are forced to have recourfe to our faith, to confider the child God trembling with cold in the manger; for when we rife to fing matins, particularly in Cuyo and Tucuman, where the heats are exceffive, we are ready to melt with heat. In Chile the heats are not fo exceffive, becaufe the country is more temperate; but ftill the weather is not fo cold as it was in Bethlem. About this time the fruits begin to ripen, which are in great variety; and there are but few of those of Europe that are wanting; for as foon as any of them are brought, either in ftone, feed, or plant, they take, and it is wonderful to fee how they thrive. I remember about thirty years ago there were no cherries; there coming by chance a little tree from Spain, from which all the curious began to multiply them in their gardens, (it being both a rarity, and a valuable fruit;) in a fmall time they were fo increafed, that they were banished from the gardens to the fields, because they produced fo many young plants from their roots, that they took up all the ground about them.

Of the fruits of Peru, Mexico, and all the continent of America, not one will grow in Chile; and the reafon is, the oppofition of the climate of Chile; nay, though they bring either plant, feed, or fetting, they never thrive; for those countries are within the tropics, and Chile is out of them; for which reafon alfo the fruits of Europe take fo well in Chile, fuch as pears, apricots, figs, peaches, quinces, &c. which bear infinitely; and if there is not care taken to leffen their number when little, it is impoflible for the boughs to bear the weight of the fruit, fo that they are fain to prop them up with forks when they grow near ripe, The fruit that exceeds all the reft for bearing is the apple, of all kinds, of which there are prodigious orchards; and of thefe, though they leffen the number, yet the others increase to much in weight, that the trees are brought down to the ground; fo that there are many windfalls, filling all the ground about them, and the very rivers on which they fland, and flopping the course of the water.

All the crops of oats, wheat, maize, and all other garden product, begin to be cut in December, and fo on to March; and they feldom produce lefs than twenty or thirty for one, nay, fome a hundred for one, and the maize four hundred for one; and it is very feldom that there is any fcarcity of grain, but it is very cheap most commonly.

As for the fruit of the gardens, it is never or rarely fold, but any body may, without hinderance, ftep into a garden or orchard, and eat what they will; only the ftrawberries, which they call Frutilla, are fold; for though I have feen them grow wild for miles together, yet, being cultivated, they are fold very dear: they are very different from those I have feen here in Rome, as well in the tafte as in the fmell; and as for their fize, they grow to be as big as peers, most commonly red; but in the territory of the Conception, there are of them white and yellow.

About this time, alfo, the herbs that fatten the cattle grow ripe; and then they begin to kill them with great profit, it being the chiefeft riches of the country, by reafon of the tallow and hides which are fent for Peru. They kill thousands of cows, sheep, goats; and the flefth, being fo cheap that it is not worth faving, they throw it away into the fea or rivers, that it may not infect the air; only they falt the tongues and loins of the cows, which they fend for Peru as prefents for their friends; and they who are able, and understand it, fend likewife fome dried falt-flefth for the king's forces, or keep it to feed their own flaves or fervants.

Autumn begins about the middle of February; fo Lent proves the moft delicious time of the year; for befides lobfters, oyfters, crabs, and other forts of fhell-fifh and fea-fifh of all kinds, they fifh in the ponds and rivers for trouts, Vagres, Pejereges, and other very choice river-fifh of feveral kinds; and at the fame time there is a great plenty of legumes, and garden product, as gourds, all forts of fruit, particularly quinces, which are as big as one's head, and another kind called Lucumas, of which they make fo many difhes, that the mortification of fafting is hardly perceived.

In the end of autumn, they begin to gather the olives and the grapes; and this lafts the months of May and June. The wines are most noble and generous, and famed by the authors who write of this country: there is fuch plenty of them, that the plenty is a grievance, there being no vent for fuch quantities: it kills the Indians, becaufe when they drink, it is without measure, till they fall down; and it being very ftrong, it burns up their inward parts: the best kind is the Muscatel. I have feen fome that look like water; but their operation is very different in the stomach, which they warm like brandy.

There are white wines alfo very much valued; as those of the grape called Uba Torrontes, and Albilla: the red and deep-coloured are made of the ordinary red grape, and the grape called Mollar. The bunches of grapes are fo large, that they cause admiration; particularly I remember one, which, because of its monstrous bigness, was by its owner (a gentleman) offered to our lady's shrine: it was so big as to fill a basket, and to feed the whole convent of friars for that meal, and they are pretty numerous. The branches of the vines are by confequence very big, and the trunk or body of them is in some places as thick as a man's body; and no man can incompass with extended arms the heads of them, when they are in full bloom.

G

VOL. XIV.

CHAP.

OVALLE'S HISTORICAL RELATION OF CHILE.

CHAP. IV. - Of the natural Riches of the Kingdom of Chile; which are its Mines of Gold, and other Metals ; as also of the industrious Management of its other Product.

THE riches of Chile are of two forts : first, those which nature has bestowed on it, without the help of human industry; and, fecondly, those which have been produced and invented by the inhabitants, to improve and enjoy its fertility. To the first kind belongs its mines of gold, filver, copper, tin, quick-filver, and lead, with which heaven has enriched it. Of the copper of Chile are made all the great guns for Peru and the neighbouring kingdoms, in the garrifons of which there are always ftores, particularly on the coafts : all the bells of the churches, and utenfils for families, are of this metal; fo that fince the working of these mines, no copper has come from Spain; for the Indies are fufficiently fupplied by them with all they can want.

There is little lead worked, because there is little use of it; quickfilver less, because the mines are but newly difcovered; and as they were going to work them, the obstacle to those of Guancabilica in Peru was removed, and so there was no need of working those of Chile. Those of filver likewife lie unwrought, because the golden mines are of lefs charge, and fo every body has turned their industry towards them : they are fo many, and fo rich, that from the confines of Peru to the extremest parts of this kingdom, as far as the straights of Magellan, there is no part of the country but they difcover them; which made father Gregory of Leon, in his map of Chile, fay, that this country ought rather to have been called a plate of gold, than to go about to reckon up its golden mines, which are innumerable.

All the authors who have writ of this country, do mightily enlarge upon its riches; and the fame is done by all those who have navigated the straights of Magellan. Antonio de Herrera, in his general hiftory of the Indies, fays, that in all the Weft Indies, no gold is fo fine as that of Voldivia in Chile, except the famous mine of Carabava; and that when those mines were first worked, (which was before those Indians who are now at peace with us were at war,) an Indian among them did ufe to get from them every day 20 or 30 pelos of gold, which comes to near 500 reals of plate, and was a wonderful gain.

And the already-cited John and Theodore de Brye fay, that when the Nodales paffed the ftraights of St. Vincent, otherwife called ftraights of Le Maire, there came fome Indians from the country called La Tierra del Fuego, who exchanged with the Spaniards a piece of gold of a foot and a half long, and as broad, for fciffars, knives, needles, and other things of little value; for they do not value it as we do. Other authors fay, that most of the gold that was laid up in the Ineas treasure, was brought to him from Chile, though having never fubjected the Araucanos, he could not have that quantity which this rich country would elfe have afforded.

But what need I weary myself in citations of people abroad, when those who live in the country of Chile, and fee it every day, are the beft testimony of the great riches that the Spaniards have drawn from thefe mines; which was fo great, that I have heard the old men fay, that in their feafts and entertainments, they used to put gold-dust in their falt-fellers inftead of falt; and that when they fwept the houfe, the fervants would often find grains of gold in the fweepings, which they would wash out, for the Indians being the perfons that brought it to their lords, they would often let fome fall.

I have faid before, that it was much more eafy to get gold than filver out of the mines, becaufe this last costs much pains; first, to dig it from the hard rock, then to

10

beat

beat it in the mills to powder, which mills are chargeable, as is alfo the quickfilven neceffary to be used to make the filver unite, and all the reft of the operations requis fite to refine it; but the advantage of getting gold has no other trouble in it, than to carry the earth in which it is found to the water, and there wash it in mills on purpose with a stream which carries off the earth; and the gold, as being heavies, goes to the bottom.

It is true, that fometimes they follow the gold vein through rocks and hard places where it grows thinner and thinner, until at last the profit that arifes is very small yet they perfift to follow it, in hopes it will grow larger, and end at last in that which they call Bolfa, which is, when coming to a fofter and eafier part of the rock, the veir enlarges fo, that one of thefe hits is enough to enrich a family for all their lives There is now lefs gold found than formerly, by reafon of the war the Spaniards have had with the nation of Araucanos; but ftill fome is found, particularly in Coquimbo. where, in the winter, when it rains much, is the great harvest of gold; for, by the rain, the mountains are washed away, and the gold is easier to come at. There is likewife fome gold in the territories of the Conception; in which I was told, by a captain who entered into our fociety, that there was, not above half a league from the town, a pond, or ftanding-water, which is not deeper than half the height of a man; and that when the Indians have nothing to fpend, they fend their wives to this pond; and they going in, feel out with their toes the grains of gold; and as foon as they have found them, they ftoop and take them up. They do this until they have got to the value of two or three pefos of gold; and then they feek no longer, but go home, and do not return for any more as long as that lafts; for they are not a covetous people, but are content to enjoy, without laying up.

I brought with me to Italy one of thefe grains thus found, of a pretty reafonable bignefs; and fending it to Seville to be touched, without either putting it in the fire, or ufing other proofs, it was allowed to be of twenty-three carats, which is a very remarkable thing. Now the peace is made, and the warlike Indians quiet, the Spaniards may return to fearch for the gold of Valdivia, and other mines thereabouts, which will extremely increafe the riches of the country.

As for the product made by the induftry of the inhabitants, it confifts particularly in the breed of their cattle of all kinds, as I have obferved above; fending the tallow, hides, and dried flefh, for Lima; where, having first retained the neceffary proportion for themfelves, which is about twenty thousand quintals of tallow every year for that city, and hides accordingly, they diffribute the reft all over Peru: the hides, particularly, are carried up to Potofi, and all that inland tract of mines, where most of their clothing comes from Chile; they are also carried to Panama, Carthagena, and the reft of that continent; fome of this trade extends itself likewife to Tucuman and Buenos Ayres, and from thence to Brafil.

The fecond product is the cordage and tackling, with which all the fhips of the South Seas are furnished from Chile; as also the match for fire-arms, with which all the king's garrifons along the coast are provided from those parts; for the hemp, which makes the first material of all these provisions, grows no where in the West Indies but in Chile: there is also packthread exported, and other smaller cordage.

The third product is mules, which are fent to Potofi, through the defart of Arcama.

The fourth product is the cocoa-nuts, which are the fruit of the palm-trees; and do not, indeed, proceed from industry, but grow wild in the mountains, without any cultivation, fo thick, that I have feen feveral leagues of this tree. Almonds likewife, and the product of gardens, which do not grow in Peru, are carried thither with great

profit, fo as to be able to fet up a young beginner. When I came to Lima, I obferved that the annifeed, which had been bought at Chile for two pieces of eight, was fold there for twenty; and the cummin feed, bought at twenty, was fold for fourfcore; which makes merchants very willing to trade to those parts, as hoping to grow rich in a fmall time; and this increases the riches of Chile, by drawing every day thither menwith good flocks. The gains made this way are fo confiderable, that a man who has about forty thousand crowns to employ in land, flocks, and flaves, to take care of them, may every year have a revenue of ten or twelve thousand crowns, which is a gain of twenty-five per cent. very lawful, and without any trouble to one's confcience, or fubjection to the dangers of the feas; for those who will run the hazards of that element gain much more; for the merchants, by many commodities, get a hundred, and two hundred, nay, three hundred per cent. in a navigation of about three weeks. which is the time ufually employed from Chile to Lima, without any fear of pirates, all those feas being entirely the king of Spain's, and fo free from those robbers. Befides, it is very feldom that any ftorms are felt in that voyage, or, at leaft, not any that endanger the lofs of the fhips. The greatest danger proceeds from the covetouinefs of the owners and merchants, who trufting to the peaceablenefs of those feas, and that they fail all the way from Chile to Lima before the wind, they load up to the midmaft. It is no exaggeration; becaufe I have feen them go out of the port with provifions for the voyage, and other neceflaries, as high as the ropes that hold the mafts; and though the king's officers are prefent to hinder the fhips from being overloaded, yet generally they are fo deep in the water, that they are but just above it; and with all thefe, there are many goods left behind in the magazines of the port; for the land is fo productive of every thing, that the only misfortune of it, is to want a vent for its product, which is enough to fupply another Linia, or another Potofi, if there were one.

It is upon this foundation that it is affirmed generally, that no country in all America has a more folid eftablifhment than Chile; for, in proportion to the increafe of inhabitants in Peru, Chile muft increafe too in riches, fince it is able to fupply any great confumption, and yet have enough of its own in all the kinds of corn, wine, flefh, oil, falt, fruits, pulfe, wool, flax, hides, tallow, chamois, leather, ropes, wood, and timber, medicinal remedies, pitch, fifh of all kinds, metals of all forts, and amber. There wants filk; and it is to be wifhed that it may never get thither, but for ornament to the altars; for it is already the beggaring of the country, by reafon of the great expence in rich clothes; particularly by the women, who are not outdone in this, even by the braveft ladies of Madrid, or other parts; but yet the land is fo proper for filkworms, that if any one carries the feed of them there, I am perfuaded it will take with great abundance, the mulberry-trees being there already as full grown, and in as great beauty as in Spain.

The wax likewife comes from Europe, though there are bees which make both honey and wax. Pepper, and other Eaft India fpices, come from abroad, though there is a kind of fpice which fupplies the want of them very well; and the authors above cited fay, that in the ftraights of Magellan, there is good cinnamon; and that on those coafts there grow trees of a most fragrant fmell in their bark, and which have a tafte like pepper, but of a more quick favour, as it fhall be made out when we treat of that ftraight.

In the whole kingdom, the herbage and the fifting are in common; as alfo the hunting; and the woods for fuel and timber; and the fame is practifed as to the falt mines.

9

There

There is no imposition on trade through all the kingdom, every one being free to transport what goods he pleafes, either within or without the kingdom.

CHAP. V.-Of the famous Cordillera of Chile.

THE Cordillera, or high mountains of Chile, are a prodigy of nature, and without parallel in the world: it is a chain of high mountains, which run from north to fouth from the province of Quito, and the new kingdom of Granada, to Chile, above a thoufand Caftilian leagues, according to Antonio de Herrera, in his third tome, Decade 5., to which, adding the length of the kingdom of Chile to the ftreights of Magellan, it will make in all little lefs than 1,500 leagues. The remoteft part of Chile is not above twenty or thirty leagues from the fea. Thefe mountains are forty leagues broad; with many precipices, and intermediate valleys, which are habitable till one comes to the tropicks, but not beyond them, becaufe of the perpetual fnows with which they are always covered.

Antonio de Herrera, already cited, puts two chains of mountains; one much lower, covered with woods and handfome groves, becaufe the air is more temperate near it; the other much higher, which, by reafon of the intenfe cold, has not fo much as a bufh on it, the mountains being fo bare, that there is neither plant nor grafs on them; but he fays, that on both thefe forts of mountains there are feveral animals, which, becaufe of the fingularity of their kinds, I fhall here defcribe fome of them.

One of the moft remarkable is a fpecies of hogs, that have their navel in their back, upon the back-bone; they go in herds, and each herd has its leader, who is known from them all; becaufe when they march, none dares go before him, all the reft follow in great order. No hunter dares fall on thefe herds till he has killed this captain, or leader; for as long as they fee him, they will keep together, and fhew fo much courage in their own defence, that they appear invincible; but as foon as they fee him killed, they are broke, and run for it, giving up the day, till they chufe another captain.

Their way of eating is alfo admirable; they divide themfelves into two bodies; one half of them goes to certain trees which are in a country called Los Quixos, in the province of Quito, and are like the cinnamon-trees; thefe they fhake to bring down the flowers, which the other half feeds on; and when they have eat enough, they go and relieve the other half of the flock, and make the flowers fall for them; and fo return the fervice to their companions that they have received from them.

There are many forts of monkeys, which differ mightily in their fhapes, colour, and bignefs, and other properties; fome are merry; fome melancholy and fad; thefe whiftle, the others chatter; fome are nimble, others lazy; fome cowards, others flout and courageous; but yet when one threatens them, they get away as faft as they can. Their food is fruit and birds-eggs, and any game they can catch in the mountains: they are very much afraid of water, and if they happen to wet or dirty themfelves, they grow dejected and fad. There are alfo great variety of parrots.

The wild goats are numerous; they are called Vicunnas, and have fo fine hair, that it feems as foft as filk to the touch; this is ufed to make the fine hats fo much valued in Europe. There are likewife a fort of fheep of that country, they call Quanacos, which are like camels, but a good deal lefs, of whofe wool they make waiftcoats, which are woven in Peru, and are more valued than if they were of filk, for their foftnefs, and the finenefs of their colours. The fame author fays, moreover, that through this chain of mountains there went two highways, in which the Ingas fhewed their great power; one of them goes by the mountain all paved for nine hundred leagues, from Pofto to Chile: it was five and twenty feet broad, and at every four leagues were noble buildings; and to this day there are the places called Tambos, which anfwer our inns, where every thing neceffary is to be found by travellers; and that which was most admirable, at each half league there were couriers and posts, who were defigned for the conveniency of paffengers, that they might fend their letters and advices where they were requisite. The other way, which was also of twenty-five feet broad, went by the plain at the foot of the mountains, with the fame proportion and beauty of inns and palaces at every four leagues, which were inclosed with high walls; as also ftreams and rivulets running through this way, brought thither by art, for the refreshment and recreation of travellers.

This is what Antonio de Herrera, and other authors, who treat of the Indies, do tell us about this famous Cordillera. Now I shall relate what I myself have seen, and do know about it.

And first, I must suppose, that though these two highways run separate and distinct through all Peru and Quito, yet they must grow nearer each other as they rife higher in the mountain; for when they come to Chile, they are no longer two, but one. This is clearly found, by experience, in those who cross the Cordillera, to go from Chile to Cuyo, as I have done feveral times, that I have paffed this mountain, and never could fee this division, but always continual and perpetual mountains, which ferve for walls and fortifications on each fide to one which rifes in the middle infinitely higher than the reft, and is that which most properly is called the Cordillera. I am allo perfuaded, that the two ways above-mentioned came but to the boundaries of Chile, and ended in those of Peru. I have, indeed, in paffing the Cordillera, met with great old walls of ftone on the top of it, which they call the Ingas; which, they fay, were encampments, (though not his, for he never came to Chile) but of his generals and armies fent to conquer the country; and it is not impossible but the faid two ways might be continued on to these buildings; but it was not practicable, that it could be with that perfection, as in that part of the mountain contained within the tropicks; where, becaufe the hills are more tractable, fuch ways might be made as they defcribe; but not in the mountains of Chile, which are one upon another fo thick, that it is with great difficulty that a fingle mule can go in the paths of it : and the Corderilla grows rougher and rougher, the more it draws near the pole, fo that it appears to be above the compass of human power to open a way through it, so curiously and finely contrived as it is reprefented. It was not neceffary that the Inga should use fo much art and industry, to make admirable that which is already fo much fo, as this mountain is in its whole courfe through the kingdom of Chile, as it shall be shewed when we difcourfe in particular of its feveral parts and properties. For first, supposing what we have faid, of its running fifteen hundred leagues in length, and forty in diameter, its wonderful height makes it altonishing : the afcent is fo prodigious, that we employ three or four days in arriving to the top of it, and as many more in the descent, that is, fpeaking properly, and only of the mountain, for otherwife it may be affirmed, that one begins to mount even from the fea-fide, becaufe all the way, which is about forty leagues, is nothing but an extended shelving coast; for which reason the rivers run with fuch force, that their ftreams are like mill-ftreams, efpecially near their heads.

When we come to afcend the higheft point of the mountain, we feel an air fo piercing and fubtile, that it is with much difficulty we can breathe, which obliges us to fetch

our

our breath quick and ftrong, and to open our mouths wider than ordinary, applying to them likewife our handkerchiefs to condenfe our breath, and break the extreme coldnefs of the air, and fo make it more proportionable to the temperament which the heart requires, not to be fuffocated: this I have experienced every time that I have paffed this mighty mountain.

Don Antonio de Herrera fays, that those who pass it in Peru, fuffer great reachings and vomitings; because no one thing produces so great an alteration at once, as a fudden change of air; and that of the mountain being so unproportioned to common respiration, produces in those who pass over it those admirable and painful effects. He fays moreover, that those who have endeavoured to dive into the causes of them, do find, that as that mountain is one of the highest in the world, the air of it is so extremely subtile and fine, that it discomposes the temperament of the animal, as has been faid. It is true, that in that part of the Cordillera in Peru, which they call Pariacaca, there may be a concurrence of other causes and disposition of the climate, to which may be attributed fome of these effects; for if they were to be attributed only to the height of the mountain, we that pass it in Chile ought to find those inconveniencies as much, or more, because the mountain is highest without comparison; and yet I never endured those reachings or vomitings, nor have seen any of those motions in others, but only the difficulty of breathing, which I have mentioned.

Others experience other effects, which I have often heard them relate; for the exhalations, and other meteors, (which from the earth feem fo high in the air, that fometimes we take them for ftars,) are there under the feet of the mules, frighting them, and buzzing about their ears. We go through the mountains, treading, as it were, upon clouds; fometimes we fee the earth without any opposition to our fight, and when we look up, we cannot fee the heavens for clouds; but when we are afcended to the higheft of the mountain, we can no longer fee the earth for the clouds below, but the heavens are clear and bright, and the fun bright and fhining out, without any impediment to hinder us from feeing its light and beauty.

The Iris, or rain-bow, which upon the earth we fee croffing the heavens, we fee it from this height extended under our feet; whereas those on the lower parts fee it over their heads; nor is it a lefs wonder, that while we travel over those hills which are dry and free from wet, we may fee, as I have done often, the clouds discharge themselves, and overflow the earth with great force; and at the fame time that I was contemplating, at a distance, tempest and storms falling in the valleys and deep places, as I listed up my eyes to heaven, I could not but admire the ferenity over my head, there being not fo much as a cloud to be feen, to trouble or discompose that beautiful prospect.

The fecond thing which makes this mountain admirable, is the prodigious fnow which falls upon it in winter, which is fo great, that though thefe mountains are fo high and broad, there is no part of them uncovered with fnow, being in many places feveral pikes deep. I am not informed how it is in the higheft part of all, which is most properly called the Cordillera, becaufe this being fo very high, that it is thought to furpafs the middle region of the air, its point alone may perhaps be uncovered; at least when I paffed it, which has been fometimes in the beginning of winter, I have not feen a crum of fnow; when a little below, both at the coming up and going down, it was fo thick, as our mules funk in without being able to go forward.

But that which I have obferved, is, that after a glut of rain, which has lafted two or three days, and the mountain appears clear, (for all the time it rains it is covered with clouds,) it seems white from top to bottom, and is a most beautiful fight; for the air is fo ferene in those parts, that when a florm is over, the heavens are fo bright, even in the midft of winter, that there is not a cloud to be feen in them for many days; then the fun fhining upon that prodigious quantity of fnow, and those coafts and white fhelvings all covered with extended woods, produces a prospect, which even we that are born there, and fee it every year, cannot forbear admiring, and draws from us praifes to the great Creator for the wonderful beauty of his works.

CHAP. VI.—Of the vulcanoes, and the mines of gold and filver of the Cordillera.

THERE are in this Cordillera, or chain of mountains, fixteen vulcanoes which at feveral times have broke out, and caufed effects no lefs admirable than terrible and aftonifhing to all the country; amongft the reft, that which happened in the year 1640 is worthy to be remembered. It broke out in the enemies country, in the territory of the Cacique Aliante, burning with fo much force, that the mountain cleaving in two, fent forth pieces of rock all on fire, with fo horrible a noife, that it was heard many leagues off, juft like the going off of cannon. In all that territory the women mifcarried for fear, as fhall be related more particularly in its proper place, in the account I fhall give of the fubjection of all that country to our Catholic king, being moved thereunto by this and other prodigies.

The first of these vulcances is called the vulcance of Copiago, and is in about twentyfix degrees altitude of the pole, about the confines of Chile and Peru; in thirty degrees is that of Coquinbo; in thirty-one and a half that of La Ligua; in thirty-five that of Peteroa; in thirty-fix and an half that of Chilau; in thirty-feven and a quarter that of Antoco: this is followed by that of Notuce in thirty-eight and a half; that of Villarica is in thirty-nine and three quarters; near this is another whofe name I know not, in forty and a quarter; and in forty-one is that of Oforno; and near that in lefs than quarter of a degree, that of Guanahuca; and in a little more than forty-two degrees that of Quehucabi; and last of all are two more; one without a name, in fortyfour; and that of St. Clement, which is forty-five and a half.

Thefe are the known vulcanoes of Chile: we have no knowledge of others, which may be as far as the Terra del fuego, becaufe till this time our difcoveries have not gone fo far; but there is no doubt but there are fome, as they are to be found before one comes to Chile, in the kingdoms of Peru and Quito. Diego Ordonnes de Salvos, in the third book and eighteenth chapter of his "Voyage through the whole world," mentions among the reft, one that is near the fall of the river, in the valley of Cola; it is on a mountain in the form of a fugar-loaf, like that of La Plata in Potofi; and that in winter it throws out fo much fmoke and afhes, that it burns up all the grafs within two leagues round about it.

He likewife mentions another in the entrance of the province of Los Quixos, near the town of Mafpa; and fpeaks of another, which broke out near Quito, in a mountain called the Pinta: and he affirms, that the afhes fly two leagues and a half from the mountain; and he has feen them lie on the houfes about four feet deep in the nearest places to the mountain.

Laftly, he tells of that of Ariquipa, which buried the vineyards, and had almost overwhelmed the city. To this day there are feen the effects of that defolation, which ruined many families, by deftroying their houfes and poffeffions. At the fame time he obferves, that the earthquakes which before were frequent, ceafed from that time; and this perhaps may be the reafon why the earthquakes in Chile have always been confiderably lefs than those of Peru, because Chile has more breathing holes for the vapours to exhale by. There is no room for doubting of the immenfe riches which thefe mountains inclofe in their bowels; for it is a certain argument, and proof it, to fee only the mineral riches of Chile, which are, as it were, indexes of what may be contained in those rocks, as the rivers which fertilize the country are a proof of the unexhausted fountains contained in the rocks and precipices.

I think there may be two caufes affigned, why thefe riches do not manifelt themfelves nor appear more: the first is, that general state-reason, and inviolable maxim among the Indians, to conceal and not discover them to any other nation. This they observe so punctually, that it is among them a capital crime, puniss with death, to break filence in this matter, which they make facred and indispensible; and if any one among them, either out of interest, negligence, or any other motive of conveniency, discovers any thing of this kind, his death is infallible, and no power on earth can fave him.

I remember on this fubject, that fome gentlemen having, by prefents, infinuations, and flatteries, come to the knowledge of fome treafure by the means of an Indian, and prevailed with him at laft to guide them to fome very rich mines in a remote mountain, he begged earneftly of them to be fecret, or otherwife he was a dead man, let them take never fo much care of him. They promifed him accordingly, and fo they fet out, and he brought them through horrid rocks and precipices, where it looked as if never man had fet his foot, nor fcarce any living animal. Every day they met with certain marks, which the Indian had told them of beforehand : first, after fo many days they difcovered a red mountain; and then at a certain diffance from that a black one on the left hand; then a valley, which began from a monstrous high mountain or rock; then at fo many leagues a mountain of chalk. All which figns the guide went shewing them, verifying thereby the relation he had given them beforehand, and comforting them up to endure the hardship, by the hopes of fulfilling at last their expectation, and feeing their labour rewarded.

Their provisions failed them, and they were forced to come back to provide more, to purfue their enterprife. The Indian was always in fear of being difcovered, knowing that he run in that no lefs a hazard than that of his life. They returned then to a town; and to fecure their Indian from his fright of being difcovered, they locked him up in a room very fafe; but the night before they were to fet out again, without ever being able to difcover how it was done, (for there was no figns by the door of any body's going in that way,) as they went to call the Indian in the morning, they found him ftrangled; by which means, being deprived of their intent, and having loft the hopes of fatisfying their defire, they returned to their own homes, though with a refolution to try again, being encouraged by fo much they had already difcovered.

The other reafon to be affigned for not feeking after thefe mines, is the great plenty of every thing neceffary for life; fo that hunger, which is the prompter of covetous defires, being wanting, there are few that care to run a hazard, and lofe their conveniences at home, to go through impracticable deferts upon fearch after hidden treafure; particularly finding already fo much in the valleys, bottoms, rivers, and fountains; nay, even thefe mines in the low countries are not wrought, becaufe the profit of other products is eafier. It is probable that people will increase; for every day there is a new addition; and there then being more confumers, the product of the land will be dearer; and provisions not being to cheap as now, men will be more ingenious and industrious to feek for fustenance under-ground, by the mines and treasfures hid there by providence.

н

VOL. XIV.

Thefe

These few years last past have given beginning to a difcovery of some golden mines, and filver ones, on each fide of the Cordillera: for as I passed over it once, I remember that the fight discovers a black mountain at a distance, whose top fhines as if it were covered with filver; and it is a common tradition that it contains it, and great treasures besides, in its bowels; but they are at prefent useless, for the reasons alledged; and because one half of the year the mountain is covered with fnow, and fo not only uninhabitable, but impenetrable.

They write me word, that on the fide of the province of Cuyo, they have begun to difcover other very rich mines, which being below the rougheft part of the mountain, may be wrought all the year round, and with great conveniency of the miners, and other neceffary workmen, becaufe carts may come to the very fituation of the mine, which is of confideration for the price of the metal. They fpeak of it with great expectation, by reafon of the good proofs they have already had in the affaying of it in fmall quantities.

Befides the mines of gold, and filver, and brafs, and lead, which are worked in Coquimbo, and thofe of quickfilver, which have been difcovered within thefe few years in Lamache, which is a valley in Chile, I do not know of any others of any other fort in this Cordillera. I am verily perfuaded there are fome of chryftal; for, confidering the nature of the place, I cannot think there is one any where more proper. Being in the valley of Rancagua, I heard one of our nation tell an Indian, that upwards in the mountain he had found a great deal of chryftal: he hearing this, out of curiofity went up to fee what it was; and I heard him tell, that after having gone over feveral rocks, he faw on the top of a precipice a great opening, and that drawing near to it, he faw a profound cave, and in the bottom of it a great plank or table of chryftal, which appeared to him of the fineft fort; but wanting help and inftruments to get it out, he returned with only this information, and fome little pieces of a chryftal ftone which he found on the top.

CHAP. VII. - Of the Fountains, Rivers, and Brooks, of the Cordillera.

'THAT which contributes not a little to the admiration we have for this great chain of mountains, is the vaft number of fountains, fprings, brooks, and rivers, which we meet with ever and anon, when we go over it : they are fo numerous, that it is a thing rather to be feen than related, though the travellers reap but little benefit by the curious obfervation of them; for by them the ways are the most broken and troublefome that it is poffible to imagine : they last about eight days journey. One must suppose too, that the fummer is pretty well entered; for in winter they are abfolutely impaffable, and in the fpring not without evident danger of one's life; becaufe one travels all the way on a path fo narrow, that there is but just room for a mule's feet. On one fide are prodigious precipices, which have at the bottom a furious and profound river; and on the other hand huge rocks, and fome part of them ftanding out fo, that if the mule's loading, (as it often happens, and I have feen it,) touches part of them, it throws down the mule headlong, and fends her rolling down till fhe comes to the river at the bottom, which carries her away to the fea without ftopping, except it happen upon fome turning of the river to get it on the fhore; where, though the lading may be faved, yet not the mule's life, becaufe it is impossible almost to get her up again.

In many places one is forced to light; and even a man on foot is not very fafe, becaufe fome of the coafts are fo ftraight and flippery, that it frights one to walk on them.

50

The afcents and defcents of the hills are fo fteep, that when from below one looks at those who are above, they look like figures; and for my part I thought it a temerity, if not an impoffibility, to venture to get up to them.

The brooks and rivers which crofs the ways every ftep are fo violent, that there is no head fo ftrong, but it turns to look on their current; which is fo fwift, that if it comes up to the mule's faddle, there is no paffing without evident danger of one's life; for thefe ftreams coming from on high, have the ftrength of a mill-ftream, carrying along with them loofe ftones, which overturn a loaded mule as it were a chicken; fo that it is neceffary fometimes to ftay two or three days till the fun does not fhine; for then thefe brooks are lower, becaufe there is lefs fnow melted : and for this reafon it is always beft to pafs early in the morning, they having had all the night to run lower.

It was neceffary for an allay of the dangers and irkfomenefs of thefe ways, that God fhould temper the rigour of the fufferings, by the variety and diversion which fo many waters give in their rife and courfe : fome are to be feen breaking out from almost an imperceptible height, and meeting with no intermediate object, the whole mass of water, which is usually very great, diffolves itself by the way into fo many drops, which make a lovely prospect, like fo much pearl falling ; and being mingled by the force of the air, which drives them across one upon the other, it feems a chain hanging from its first iffue to the earth ; where, taking another shape, it becomes a running brook, and unites with the current of the chief river which runs in the middle.

I faw others, which before they got to the earth, divided into two branches, forming like a thick flower in the midft of the way, or atoms in the fun beams; but it is impoffible to paint all the variety of objects produced by these feveral motions and compositions of ftreams and fountains. I cannot leave them without mentioning one called the Eyes of Water, which is very remarkable; it is in the last mesa but one, at the foot of the mountain. I call it mesa, because providence has, for the relief of travellers, disposed, at some leagues distance, little valleys and agreeable plains, which ease the travellers in this most tedious and long ascent.

This valley is environed with a wall of most prodigious high rocks; it may be a mile or thereabouts in its diameter, and is all the year round full of greens, odoriferous plants and flowers, which make it a picture of paradife: in the midft of it fprings up this fountain, or fountains, because the fprings of water are many that rife from the ground all about, leaping with great force into the air, which in a little fpace all unite, and make two great bodies, each of them full of water, as clear as chrystal. These two heads begin a kind of combat a little below, and mingling in their course with one another, as if fome ingenious artist had ordered it, make a great many turnings and windings, fometimes far from one another, and fometimes united through the whole valley, till at the end of it, joining together, they fall into one canal, which empties itself into the principal river, composed by many of these rivulets.

One property of all these chrystal streams, is extreme coolness, which they never lose, no, not when the fun shines out most in the heat of the day; it is such, that no body can drink half a cup-full of it without resting, or taking breath-; and though all these springs have this quality, yet none in so intense a degree as this fountain of Los Ojos de Aqua; of which, though the weather be never so hot, it is not possible to drink above two or three sups; and one can hardly endure to hold the water in one's hand above a minute.

Behind one of those high mountains, which is to the east of this fountain, there is a great lake or pond, fo deep and clear, that it appears as if it were of azure; and there is a tradition, that the last of the Ingas, kings of Peru, caused vast quantities

of

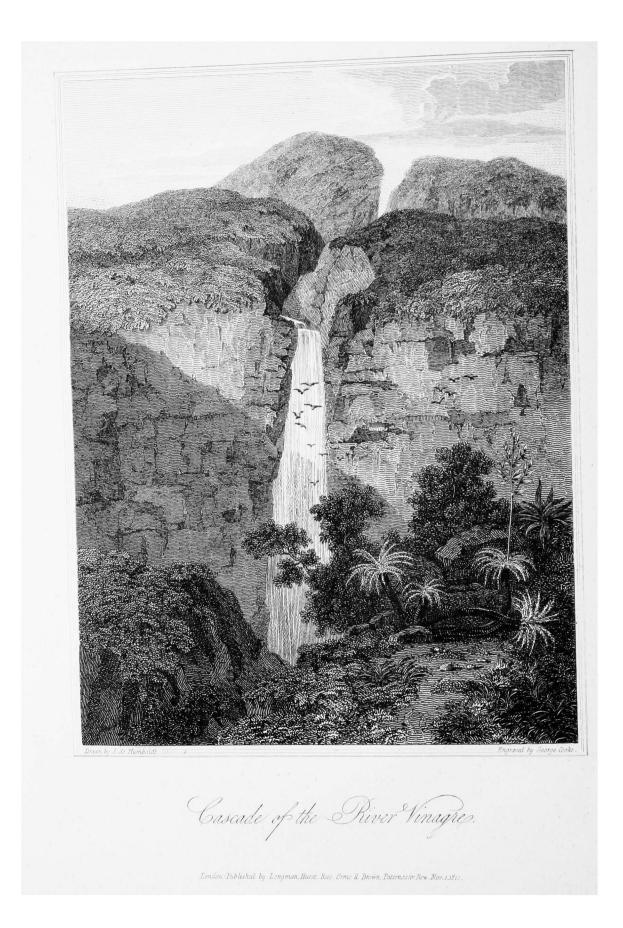

of treafure to be thrown into it, when he faw that he could not redeem himfelf, nor fave his life by them; though it feems hard to believe they fhould go fo far to do a thing they might have executed much nearer home. The waters of this lake have no iffue, being environed on all fides with very high rocks, and therefore it is thought that it comes under-ground to those fountains called the Ojos de Aqua, and empties itself by them.

I cannot pass over in filence another fountain which is at the foot of the Cordillera, on the other fide towards Cuyo. There is a river called the Rio de Mendoca, which comes down from the east, not inferior to that of Aconcaqua in Chile, which runs to the west into the South Sea. Into these two rivers are emptied most of the little ftreams of the mountain; that of Mendoca meeting in its way with a chalky mountain, bores it quite through, and leaves a bridge broad enough for three or four carts to pass a-breast. Under this bridge is a great table of rock, over which run five different streams of water, proceeding from fo many fountains; which water is extremely hot and very good for many diffempers. The ftones over which it runs are of a green like emerald. The vault of this bridge furpasses in beauty all that human heart can produce; for there hang down from it feveral ificles, in fhape of flowers, and pendants of ftone like falt; for the humidity which penetrates from above, makes it congeal like points of diamonds, and other figures, which adorn this vault; through which there falls perpetually a quantity of great drops, as big as peafe fome, and others as big as yolks of eggs; which, falling upon the ftone table I have mentioned, are turned into ftones of feveral fhapes and colours, of no finall value.

There is another bridge on the other fide, called the Inga's Bridge, either becaufe he caufed it to be built, or becaufe (as is most probable) his generals were the first difcoverers of it, and paffed over it; for it is not poffible that any human art could make fo bold an attempt as has been brought to pafs by the Author of nature in this place. This bridge is formed by a most prodigious high rock, which is cloven in two, as if it had been fawed down, only covered on the top; it is hollow to the very river, which is large and rapid, and yet the noife of it is no more heard on the top, than if it were a little brook; which is a ftrong argument of the great diftance there is between the top and bottom of the mountain; for the opening not being above eight feet over, it being eafy to leap from one fide to the other, it would be thought, that a great river being fo ftraightened as to go through it, fhould make a very great noife in paffing fuch a straight place with fo much force; and if the noise does not reach the ear, it is becaufe of the great diftance. I myfelf have gone to the fide of this bridge, and looked down, (though with great horror, for it strikes a shivering into one, to contemplate fuch a depth, than which I have not feen a more terrible one;) I not only did not hear any noife, but that great river appeared a little brook, hardly to be difcerned.

Thefe are the entertainments for the eye in paffing this part of the Cordillera. As for the many others which may be met with in fo vaft an extent, who can relate them? I believe there are those who know much more than what I have here described, which is only what I have seen; but from so little it is easy to infer more; for if only the rife of two rivers have afforded such matter of admiration, what may not be produced in the birth and course of so many others, as we shall describe in the following chapter?

CHAP.

CHAP. VIII.—Of the vast number of Rivers which take their Rife in this Mountain, and empty themselves into the Sea.

THE great Author of nature has founded the beft part of the beauty and fecundity of the fields of Chile in this range of mountains called the Cordillera, in which, as in a bank that can never break, he has deposited its treasure and riches, by affuring the annual tribute of fo many brooks and ample rivers which are to fertilize the earth; for neither can the country maintain its fertility without fuch moifture, nor fuch a moifture maintain itfelf all the year without fuch quantities of fnow, as are laid up in the deep hollows of it in the winter, to feed in the fummer the many rivers that are derived from it.

Who can demonstrate the number of them at their rife? But one may guess at the prodigious quantity of fnow which fupplies them; for though it cannot be feen all in a mass, because its refervatories are impenetrable, yet its effects do manifest it; for befides the feeding of innumerable rivers which run to the east, and empty themselves into the north fea, and supplying prodigious lakes in the province of Cuyo, those which run to the west, and enter the South-Sea, (not reckoning what may be by the straights of Magellan, and the Tierra del Fuego,) are above fifty, which may be well multiplied by four apiece more which they receive, and so make two hundred; which arrive at the fea so full and deep, that so for them have water enough for the navigation of the galloons and so for the most burden; which is the more to be admired, because their course is fo short, the most extended of them not passing thirty leagues in length.

The first river of this kingdom, beginning from the confines of Peru about the 25th degree of latitude, is the river called the Salt River, which comes from the Cordillera, running through a deep valley : its waters are fo falt, that they cannot be drank; and when fometimes horfes, deceived by its pure clear colours, happen to drink of them, they are turned into falt by the heat of the fun, fo that the bodies feem of pearl, they beginning to petrify by the tail.

The next to this is the river of Copiapo, in 26 degrees; it runs 20 leagues from eaft to weft, and makes a bay at its entrance into the fea, which ferves for a harbour for fhips. In 28 degrees the river of Guafco does the fame, and forms a port.

After this comes the river of Coquimbo, in 30 degrees, whofe port is a noble bay, adorned on the fhore with fresh and beautiful myrtles, and other trees, which continue within land as far as the town, and make a noble and pleafant grove, which out-does all the contrivances of art. There are fished in this coast tunny-fish, Albucores, and many forts of excellent fish, as also offers and great variety of shell-fish.

The next to the river of Coquimbo are those of Tongoy and Limari, about 30 degrees and a half east; and then in 31 degrees the river of Chuapa empties itself into the sea. Upon that coast there is found a fort of delicate shell-fifth, which they call Jacas.

Between the one and thirtieth degree, and the two and thirtieth, the rivers Longotoma and La Liga enter the fea; and about thirty-three degrees that of Aconcagua which is the great river which comes down, as we have faid, by the way of the Cordillera. This is a very deep river; and though it runs through the large valleys of Curimon, Aconcagua, Quilota, and Concon, which being cultivated with all kinds of products, particularly wheat, flax, hemp, &c. and by confequence well watered, yet this river arrives at the fea as full and deep as if they had not drained it by the way to fertilize their fields.

53

About thirty-three and a half, follows the famous river Maypo, which I cannot tell whether it be more famous for its good qualities, or for the danger and difficulty of paffing it; many have been drowned in it, and every day mifcarrying by it. It is of fo rapid a current, and fometimes fwells fo high, that no bridge can refift its fury, but it is carried away by it; for which reafon, at this day it has no other but one of many cables joined together, and lying a-crofs from one fide to the other. Its waters are ordinarily thick; and it enters the fea with fo much force, that it makes its way in it diffinct for a good while; its waters are perfectly known from those of the fea by a circle they make : they are besides very cold, and yet it quenches thirst but ill, for it is brackish, which makes the flesh of the steep which feed near it, to be excellent in taste. There are fished here also most excellent fish, particularly trouts, esteemed all over the country.

There falls into this river, among others, that of St. Jago, otherwife called the river of Mapocho, which is divided into feveral ftreams, to water the diftrict of that city; and it does it fometimes more than we could wifh, when it overflows. Not far from the city, it hides itfelf under-ground, leaving a bridge of two or three leagues over it, while it maintains a filent courfe underneath; at the end of this fpace it comes out in bubbles among a grove of cherry trees, with its waters as clear and purified as chryftal; fo that though it feems to hide itfelf, and die, it is only to fpring up again more beautiful and ftately, being of a ftronger current, before it is again fpread and diffufed to fertilize the fields. At this place of its fecond birth, there ftands an ancient and illuftrious convent of St. Francis, which, becaufe it is within fight of a vaft foreft of trees, is called St. Francis of the Mountain, in which there have been, from time to time, moft holy men of the firft founders in that province, and who imploy themfelves in the worfhip of God, and help of their neighbours, with great zeal and reputation of their order.

The river of Poangue, which falls likewife into Maypo, runs alfo many leagues under-ground: this cannot rife with more advantages than at its first fountain; for its waters are, at the very fource, fo clear, delicate and fweet, that they cannot be mended; it has not its original like all the reft, from fnow-water, but from minerals of gold, through whofe veins it makes its way, as if it had an aqueduct of that precious metal : its courfe is bordered on each fide with most beautiful trees, which contribute to make its waters wholefome : they are indeed of themfelves a remedy ; for they help digeftion fo vifibly, that if any one has exceeded and eat more than his ftomach can well embrace, one draught of this water will relieve him, fo that he shall be hungry again in a little time. Neither is it useles under-ground; for while it is there, it communicates itself to the whole valley by fubterranean conduits: the effect of which is visible; for though in the fummer it does not rain a drop, and the valley has no other watering, yet it brings as feafonable a crop, and as relifning fruit, as any other that has the help of rain and other irrigations; neither have I feen any where larger or more delicious melons, nor more abounding and well-grown maize, than in this valley.

There are two other rivers which fall into Maypo, which are called De Colina and Lampa; which, uniting together about ten or twelve leagues from their first rife, make the famous lake of Cudaguel fo profound and deep, that great ships might first in it; this lake is about two leagues long, all bordered with delicate willow trees, and other greens, which keep their freshness and greenness all the year round; and, that nothing may be wanting to its agreeableness, it is full of excellent trouts and Vagres, which

9

iometimes

fometimes are fo plentiful, that they are eafily catched; and this ufes to be one of the greatest diversions of the citizens of the city of St. Jago. There are other lakes, as those of Aculco, which empty themselves into this river of Maypo, on the contrary fide to that of the clear river: there are also bred in it fmelts of above a foot long; the very name in Spanish declaring their excellency, it fignifying a royal fish: fome years there is fuch plenty of them, that the whole city may keep Lent with them alone, without buying any other fish from the fea; which, though it is very good, yet it never attains to the delicacy of the river-fish, which is fo fweet and healthy, that it is used to be given to the fick and convalescent.

After Maypo, is the river of Rapel, not at all inferior to the other; it enters the fea about the 34th degree, and as many minutes; about four or five leagues before the two famous rivers of Cachapoal and Tinguiritica join together, and are no lefs in debt to mankind for the many people they have fwallowed, than that of Maypo. Among others which increafe their rapid current, are the rivers Mallua and Chambaronigo: on the banks of this the order of the Redemption has a convent, for the inftruction and edification of all that country. The Jefuits have alfo a novitiate, who have for neighbours a monaftery of St. Dominick. The lands thereabouts are extreme fertile, have excellent paftures for the fattening of cattle, and are much valued all over the country. In thirty-four degrees and three quarters is the river Delora, which receives thofe of Teno, Peterroa, and Metaquito, whofe ftream is fo rapid, that many perifh in it. Thefe rivers water most rich lands, and a delicious country for the breeding and feeding of all forts of cattle; and indeed there is not a foot of ground unemployed in them.

The great Maule appears at thirty-five degrees; and it makes the limits of the archbishoprick and jurifdiction of the city of St. Jago: all that was inclosed between this and Rapel, Cachapoal, and Tinguiritica, was called by the natural Indians, Promocaes, that is, a place of dancing and delight, to express the pleafantness of that country. They were not out in this character at all: I remember once, that travelling in this country, when I came to a farm of any Spaniard, he would entertain me with nothing but the praifes of it, and that with fo many particulars, that I could not imagine it could be out-done by any in the world; but when I came to another farm, the mafter of it would relate to me fuch admirable properties of his, that the first feemed but ordinary to me. Thus I found every one fo in love with the fpot he lived on, that I could not but admire the whole, and have a great idea of the excellency and temperament of this land, as well as of its provisions. Partridge are abounding, and all manner of game; and as for fifh, there are fuch quantities of fmelts and trouts, that they take them when they will, being as fure almost to catch them, as if they had them in ponds at home. I have heard them often fay, that when they were fat down to table, if any one longed for a fresh trout, they had no more to do, than to fend and catch one, which they would have ready dreffed before they rife from the table. The river Maule receives the clear river, and that of Cauquenes; and though it be as deep again as either of them, yet it is lefs dangerous for paffengers, and fewer people are drowned in it; becaufe near the fea, by the yard for building of fhips, it fpreads itfelf, and makes a large paffage, where the king has a ferry for the conveniency of paffengers. The Auftin friars have alfo a convent here, and take care of the Spaniards, and their black and Indian fervants, who people all the banks of this river, and are numerous, living in feparate farms all along the country: thefe they call Eftancias.

Now we enter the jurifdiction of the city of the Conception, where the governor refides; and there is a garrifon of the militia. The bifhoprick of the city of Imperial begins begins also at this river, which has for next and immediate neighbour the peaceable and noble river of Itata, three times as large, and as deep as the Maule, and enters the fea at about thirty-fix degrees; its courfe is among rocks, and fo is lefs ufeful to the land, becaufe it cannot water it: they pass it upon rafts, and there are also fords in fome places. About the middle of its courfe, the furious torrent called Nuble joins it: this washes the walls of the city of St. Bartholomew of Chillan, an antient garrifon of the Spaniards, and a fingular proof of their bravery and fidelity.

Immediately next to this river is the fpacious and agreeable bay of the Conception, into which the flow and filent river of Andalien empties itfelf at thirty-fix degrees and three quarters. There is another fmall river which paffes through the middle of the city, having first precipitated itself from a high rock, and affording matter to the industry of the inhabitants, for all forts of water-works among pleafant groves of laurels, and myrtles, and other odoriferous plants which adorn its banks; and as it falls from fo high, it invites the industrious planters to contrive mills for the fustenance of the city; of which there are already a great many.

Two leagues further from this bay, in the thirty-feventh degree, the fo much celebrated Biobio enters the fea. It is the most powerful river of all Chile : it has at its entrance two or three miles in breadth, more or lefs, according as it fwells or fhrinks, which is a great deal, confidering its fhort courfe : but that is not the chief thing which makes it famous, and deferve fo much praife; it is its wholefome waters; for (befides the particular excellence they may acquire, by paffing through veins of gold, which nevertheless many other rivers of this country have too,) it has a fingular advantage, by a finall river which falls into it; which river, taking its rife and courfe among Sarzaparilla roots, communicates to the other its virtue and good qualities, and makes it a cure for many infirmities. There is a tradition, that at the fource of this river there were most rich mines, worked before ever the Spaniards came into these parts. Upon this information, Don Alonfo de Sottomayor, prefident of the country, fent a band of foldiers to view them, as they did; though as they came back, they were laid wait for by the Indians, our enemies, and had a fmart engagement with them, and had much ado to escape with their lives. This Indian people do always as much as they can to hide from the Europeans the treasures and riches of their country, as it has been faid already.

This river is the bounds which divides the Spaniards and our Indian friends from the Indian enemies: in winter the river overflows fo, that all the fords are unpaffable; and fo the foldiers may take fome repofe 'till the fpring, at which time they are to begin their inroads again. The enemy on his fide has no garrifon, nor place of ftrength; for they truft to their mountains, to which they can retire at any time: but the Spaniards have many garrifons all along the river, with which they bridle and keep in awe the potent rage of their proud enemy, who alone has given them more trouble than all the reft of America.

Their chief forts, befides the cities of the Conception and Chillan, are those of Arauco and St. Philip, in which there are generally about fixteen hundred natural Spaniards, befides the Indian allies, who are numerous. The first of these is upon the fea-fide, and the other nearer the Cordillera. There are others between on each fide of the river, and some pretty far into the enemy's country. I can name nine of these forts; which are, that of St. Angol, of the Nativity, of St. Anne, of St. Rosendo, of Good Hope, of Talmacahuida, of St. Peter, of Colcuta, and that of Levo. These are all provided with great guns, and a fufficient number of foldiers; and at such proportionable distances from each other, that they can foon receive notice of what is

12

neceffary to be known from the first to the last by the cannon-shot, according as it may have been concerted beforehand.

The company of Jefus has here two refidences, one in Arauco, and the other in the fort of Good Hope; from whence they also make their attempts, not against the bodies, but to fave the fouls of their enemies, engaging with hell itself, and obtaining over it daily and glorious victories, as it shall be told in its proper place; for now we must follow the description already begun of the rivers of Chile.

After Biobio follow four others much inferior to it : they are the rivers of Colcura, Arauco, Lavapie, and Levo, which empties itfelf near the thirty-eighth degree ; and a little further, that of Ralemo, which a little from its fource is called Coypo, in near thirty-nine degrees. The pleafant and peaceful river of the Imperial enters the fea, having firft incorporated with its ftream, the river called the Ladies River, becaufe of the delicacy of its waters and quiet current. More above, near its fource, it receives the two rivers of Curarava and Eyow, which, before they meet to enter the river Imperial, form the much celebrated lake of Puren, a most unconquerable fortrefs of the Indians, who are more fecure in it, than the Spaniards in any of theirs.

About half a degree beyond the river Cauren, which is the fame as the Imperial, the river Tolten pays its tribute to the fea, and is deep enough for great fhips. About eight leagues further, the river Queule does the fame; which, though fmall, yet receives barks in it, and is about nine leagues upon a north and fouth line from the famous river of Valdivia.

CHAP. IX.—Of the famous Port and River of Valdivia.

THE river and port of Valdivia, never enough commended by foreign writers, and no lefs admired by thofe who have feen it, had its name from Pedro de Valdivia, firft governor and conqueror of Chile. It is, as it were, in the centre of the whole kingdom, at almost forty degrees latitude fouth-weft from Seville in Spain; upon a plain map one thousand nine hundred and feventy leagues, measured by the heavens. The fun is five hours, and a third part of an hour, in going from the meridian of Seville to the meridian of Valdivia; fo that when it is noon at Seville, it is in Valdivia fix o'clock and forty minutes in the morning. Its longest day is of fourteen hours, or thereabouts.

This river has its opening to the north; and becaule of the depth of its waters, great fhips can go up to the very city, which is two or three leagues from the fea: when they are there, they can lie fo near the fhore, as with a plank to go in and out, and take in and unload their cargo, without the help of boats. There is just overagains the city, a fine island, called the Island of Constantine, with two little ones, one before, and the other behind the island. The river is navigable on both fides the island; but because the fouth branch has more depth, the great state of the the way, and the lefter by the north branch.

There are two high points of land, like rocks, which mark the entrance of this river; the biggeft is to the north, and is called Bonifacio's Hill; the fouth is leffer, and is called Gonçalo's Hill. When one is entered fome way up the river, there is another ftraighter paffage, which is the key of the port, or rather ports, becaufe there are many harbours within. This entrance has alfo two hills, which come fo near each other, that I have heard a captain, who was fent to found the river, relate, that in the middle he was within mufket-fhot of either hill; the fouth one is called Morro de los VOL. XIV. I Mançanos, Mançanos, and the oppofite Morro de Niera: fo that, according to this account, there might be an iron chain laid from the one to the other, with which, and two forts raifed on each fide, the entrance would be made impenetrable.

As foon as this ftraight is paffed, there is on the fouth fide a noble port; for though all the river may be called fo, for the quietness of its water, yet this is more advantageously fituated, by being covered with the mountains of the land: it is called the port of the Corral: it forms a bay capable of receiving great fleets. When you have paffed this port, there appears the first is wherefore the fhips take the north fide, and go between this isfland and the great one; and then follow their course up to the city, by the channel of the great island. The lefter vefiels may keep the other fide of the island.

Befides all thefe good qualities, this port has other advantages from the land, by the fertility of the country, which produces corn and fruits of all kinds, except grapes, which do not ripen here fo well as in other parts of Chile, from which wine is brought to thefe parts : but it has great plenty of beef and mutton, fowls and venifon. It has also wood for the building of fhipping ; and that which is above all, it has the richeft mines of the fineft gold in Chile ; and in all America there is none comes up to it, but the gold of Carabaya.

This is the account of Antonio de Herrera. He adds, that there was an Indian, who had every day a revenue of twenty-five or thirty pefos of gold; which being obferved by the governor Valdivia, he fent the Adelantado Hyeronimo de Alderate to Spain, to indom His Catholick Majefty of the great riches of the kingdom of Chile, that His Nejefty might make the more effeem of it; and to invite foreigners to come and people the country, and help him to conquer it, he fent fome Spaniards by land, whole flirrups, breaft-plates, and all that ufed to be iron about a horfe, were of fine gold; and that, not fatisfied with this, he had refolved to go in perfon, to inform His Majefty, and obtain from him the confirmation of his government: to which end he employed twenty thoufand Indians to bring him gold, defigning to embark and fail through the ftraights of Magellan, if death had not prevented him.

This city was founded by the governor Valdivia, in the year 1552, upon a high rifing, but plain fide of a hill, and above the reft of the country.

The famous Indian lady Recloma was very inftrumental in helping towards its conqueft and foundation. The flory was thus : the Spanish forces were come to this river, conquering the country all the way before them; but here the Indians not being willing to let foreigners fettle in their country, took up arms, and making the river ferve for their defence, hindered the progress of Valdivia, and gave him great trouble. But he being a man of great courage, was not daunted by this refistance, but endeavoured to pass the river to engage the enemy.

Upon this occafion, this brave Indian lady, either infpired by Heaven, or touched by compafion of fo much blood as muft be fhed on both fides in the recounter, offered the governor, that fhe alone would gain him the victory, without any other force, than that of her eloquence and courageous mind. "Stay here," faid fhe, " and go no farther; for I will put all this province into thy hands, and will make thee this day lord of all that thy eyes can difcover. Stay for my return here, and do not fuffer any of thy foldiers to pafs on a ftep further." The governor promifed to do fo; and, upon his word, and promife of good treatment to the Indians who fhould fubmit to his God and his king, fhe threw herfelf into the water, and, in the prefence of them all, fwam the river. When fhe was landed, fhe defired audience of the general of the Indians; to whom fhe delivered her meffage with fo much force of eloquence, that they fubmitted to her reafons, and promifed to accept of what terms fhould be given them. With this the famous Recloma returned to the Spaniards, finging victory, laying at their feet the richeft prize they could wifh; and fuch a one, as after much time, expence, and bloodfhed in the conqueft of it, they would have thought themfelves well paid to be mafters of fuch a country, whofe golden mines they prefently began to work : by which means the city increafed fo faft, that if the devil had not troubled the peace, and caufed the rebellion of the Indians, which ruined it, it had been one of the firft and beft cities of the Indies.

The Hollanders, our enemies, are well informed of the nature of the country, and the excellency of the port, and do all they can to get poffeffion of it; but our Saviour, who, by his grace, has hitherto preferved those countries free from herefy and its corruption, will not permit that this Hydra of hell shall infect that air with its venomous breath, nor bread a contagion in the purity of its faith, which is propagated fo fincere and true in the hearts of those new Christians.

This has been proved by the fuccefs of a fleet of theirs in the year 1643, when thefe rebellious pirates paffed the ftraights of Magellan, with a defign to fettle at Valdivia; for though in effect they did people the place, having first passed by the islands of Chiloe, where our company has fo many glorious missions, in which they threw down the altars and the croffes, and committed other enormities proper to their impiety and obstinacy, yet at last they came off no laughers, but had reason to lament rather. The fame befell another of their generals, called Antonio Sivastro, many of his fleet being taken prisoners, and thirty of them hung up by the feet, as is related by their own authors, John and Theodore de Brye.

But in this fecond occafion, they paid yet more feverely for their attempt; for in the very fame ifland where they had committed all thefe diforders, God took the life of the general, punifhing his unhappy foul with the due chaftifement of fuch an undertaking. They loft the fhip which carried their provisions, their ammunition, thirty pieces of artillery, all the brick and lime, and other materials for building three forts, which they had orders to raife in the river of Valdivia, and on the ifland of Conftantine in that river; and having afterwards got to Valdivia, and begun to people, their new general, whofe name was Elvis Aramans, was forced to flut up all his people in the ifland of Conftantine, becaufe they run from him continually, and forfook him; befides the prifoners made in the iflands of Chiloe, and others deftroyed by us, and the warlike Indians.

In fhort, God having efpoufed this caufe as his own, they were tormented with hunger; and before the Spaniards, who were on their way, could come up to them, their own difeafes and loffes obliged them to weigh anchor, and be gone. This was their wifeft courfe; for if they had ftaid till the fleet from Peru had come up to them, and the land forces from Chile had attacked them, they had not got off fo well; for the Marquis of Manfera being fo good a foldier himfelt, and fo zealous for God and his king, immediately, upon the first news of their arrival, had fet out ten fail, which he provided with powder and ammunition, and difpatched them to give advice along the coaft; then he prepared a navy, which was to be of 16 galloons and fhips, and 4000 Spaniards, refolving to go in perfon, or at leaft to fend his fon.

The governor of Chile, the Marquis of Baydes, with his accuftomed vigilancy and readinefs in things, where the iervice of God and the king are concerned, and as a captain of that valour and experience, which he fhewed in Flanders, was ready to enter by land, after having provided all the ports of the kingdom with the army kept on foot by His Majefty; fo that if the Hollander had had yet more force than he had,

being

being fo hard preffed both by fea and land, he must either have relinquished the port, or perished there for ever.

It has been feen on this occafion, that one man is as good as many in the defence of the caufe of God and their country, againft any invader whatfoever, every one defpifing all dangers on fuch an account; but particularly Colonel de Villa Nueva Soberal fignalized himfelf at this time; for being general of the kingdom, and governor of the country of Arauco, he ventured himfelf in a fmall bark in the midft of winter, to folicit at Lima the neceffary fuccours, and affift the viceroy for a more quick difpatch of all things.

He took with him father Domingo Lazaro, of the company of Jefus, that he might inform him as an eye-witnefs of all that had paffed, he being at that time employed in Chiloe in the apoftolical miffions, when the Hollanders landed : he, neverthelefs, with undaunted courage, embarked in the midft of the winter in a tempeftuous fea, as it is at that time; and without apprehenfion of all those dangers, and of being made a prifoner by the Hollanders, who lay in his way, and could fcarce be avoided, he arrived at the city of the Conception, where he gave an account of all that had happened; by which means the country was immediately prepared, and in arms for their defence.

There is another action which ought not to be concealed, as well becaufe it fnews the great prudence of the Marquis de Baydes, as the outrage of 20 Spanish foldiers. It being uncertain whether the enemy were still at Valdivia, or whether he had abandoned it, they offered to go in a boat up the river, as they did by the governor's command; and without being terrified by the manifest danger they exposed themselves to, they went as high as the town; and having difcovered the ill condition of the enemy, and his defign of leaving the place, they returned with that advice. This moved the general not to attack them, as was at first refolved ; but it did not hinder his intention of peopling the place, (as I believe was done by laft fummer;) for I have advice from Panama, that there is a garrifon of 600 Spaniards left there ; to which our Indian friends being joined, and the coaft Indians alfo, that poft will be henceforth inexpugnable, and by it the South Sea will be fecured; for it being already fo dangerous to fail through the ftraights, and fo eafy for us who are at home to defend this post of Valdivia, and having all the land our friends, we receive fuccours both from the Spaniards and Indians, who are fo friendly, that their caciques fent to offer their affiftance of their own accord against the Hollanders; I fay it will be very hard henceforward for any one to give us any disturbance.

CHAP. X. — A Continuation of the Description of the Rivers of Chile, and particularly those which run to the East; and of the Difference between the one and the other side of the great Cordillera.

THE river next to that of Valdivia is that which is called Chalbin; it is deep, and capable of great veffels. From this river, to a place called the Punta de Galera, it is about two leagues; and from this to Rio Bueno feven; into which fall five rivers more, and one which is beyond the bounds of Valdivia.

After this is the Kio Chico, which comes from a lake at the foot of the Cordillera; in which lake are baths to cure leprofy and other infirmities. Next to this is the Rio de la Ballena, which is clofe to the cape of that name, fo called becaufe of a whale of prodigious bignefs, which died upon that coaft. After this, you come to the Archi-

pelago

pelago of iflands, into which falls the river called De los Rabudos, becaufe of an Indian nation of that name, fo called, becaufe it is faid they are born with tails, as father Gregory of Leon defcribes them in his map. More on to the fouth is the river De los Coronados, named fo by the company of a fhip which put in there on the day of the Forty Martyrs fo called.

After these there are many rivers all along the coaft; the first is called De la Esperonfa, or of Hope, becaufe of the wifhes, that one day the light of the Golpel may reach to those parts by means of the ministers of it. The second is called Rio fin Fundo, or the river without a bottom, becaufe of the great depth of it. The third is called the Gallegos, from a Spaniard of that name who failed along those coasts, and, like another Icarus, gave his name to one of them, by being drowned in the fea by it, at a cape which has the fame name. Then follow the rivers De los Martyres, and De los Apostolos; and immediately after them two others. The first has no name, the fecond is called De los Gigantes, or of the Giants, becaufe here they were begun to be feen, and they reach all along the ftraights. The famous river called De la Campana, enters at a place named El Ancon fin Salida: this name was given to the river, becaufe its two arms feem to form the fhape of a bell. There are two rivers more before you come to the straights, to wit, that of De los Paxaros, or of birds, by reafon of the vaft quantity of them that were upon it, in that part which comes towards the ftraights; and the other of St. Victorian, called fo from the opening, to which the fame faint gives its name. As for the other rivers which run among the iflands, and those which empty themselves into the ftraights, they are many, and shall be described in their proper places.

Hitherto we have defcribed the rivers of most renown of this long extended kingdom, which run from east to west, and empty themselves into the South Sea; those which run from the opposite part of the Cordillera, towards the North Sea, are not fo well known, because those parts are less inhabited, at least, by fuch as can give us a good account of them. The most remarkable of them are those of St. John, and of Mendoga, which are very large rivers, and empty themselves into the famous lake of Guanacache.

The governor Hieronimo Lewis de Cabrera, a gentleman of great valour and merit, met with feveral great rivers in his paffage over thofe vaft plains called the Pampas, where, as at fea, people are fain to travel by the compafs, not to lofe themfelves : he was in queft of a nation called the Ceffates, of whom we fhall treat hereafter in its proper place. They were forced to pafs many great rivers, and, without doubt, there are many more as far as the Pole.

Neverthelefs I am perfuaded, that thefe rivers do not equal thofe which run oppofite, and enter the fea on the coaft of Chile; and this may be clearly gathered from the difference which may be obferved in paffing the Cordillera, between each fide of the mountain, which is fo great, that they feem two different worlds, the eaft and weft parts; and one would think Heaven had put thefe mountains to divide them as a wall, and keep off from the weft, all the ftorms and ill weather of the eaft, where are the provinces of Cuyo and Tucuman, not to diffurb the ferenity and tranquillity of Chile and the weftern parts. Any one that travels to the top of the high chain of mountains, may experience this clearly; for there he difcovers both horizons, and when he looks to the eaft, all is covered with groß vapours, which feem to hinder the light, and fhadow all the country ; and at the fame time looking weft, the heaven is fo chriftalline and bright, that it caufes pleafure and joy to look on it. The eaft fide is full of a cloudy thick air, which engenders ftorms and hail, with horrible thunders and lightnings, nings, which fright all the inhabitants: on the other fide, in the weft, there is not a cloud to be feen, but clear and bright, as if the heavens themfelves were fuch a partition as the Cordillera to divide the climates, as that upon earth does produce a difference in the trees, plants, and animals on each fide.

A curious obferver contemplating once, from this heighth, this fo remarkable difference, faid, that nature, in the fabrick of this part of the world, feemed to have turned her back upon the eaftern provinces, and looked with her face only upon Chile, giving bleffings with both hands to this laft, and leaving the other, as it were, difinherited, and grieving at the pre-eminences of its elder brother. In going down to the eastward there are fewer fountains and rivers, and those muddy, the face of the land melancholy, without fo much as one green tree to recreate the fight, nor any pleafant verdure; and when at last there is fome, as in the valley of Uspallata, the heats begin to be fo intolerable, that all things feem afflicting and unkind. On the other fide, when we go to the weft, it is quite contrary; for as foon as we begin to defcend, we meet with lovely fprings; the trees are green, the groves frequent and pleafant, and the little valleys, which are like fo many refting-places in that great flair-cafe, where paffengers take breath, and are refreshed with the verdure and flowers of them, the air ftill grows purer and purer; and the more they come down, the more they leave behind them all the inclemences of the climate of the other fide, enjoying the advantages of the temperate Chile; for from the very foot of the mountains one feels the mildnefs of the fea-air, and one is rejoiced with the harmony of the birds, and other delightful objects, fo as to forget the trouble and danger of the way one has paffed.

There is the fame difference in the very land at the foot of the mountains; for on the eaft fide there are a few fountains; the land is barren, and little cultivated; neither are there flocks of any kind either fed or bred, fo that the fields look like a ufelefs barren ground, except it be that the thinnefs of the people has not as yet given way to try the fertility of the earth; for the plains below thefe are extremely fertile, where they are cultivated; but at prefent there is nothing but thorns and barren drynefs in thofe parts.

It is not fo to the weft, where fountains break out continually, which in the winter are temperate, and in the fummer as cold as ice, and that fo much the more as the weather grows hotter and hotter. Thefe fprings do fo fertilize the fields at the foot of the mountains, that they keep the earth frefh and green all the year, though it be but a patch; for moft of the ground is woody, and there is fuch a variety of wild trees. that one would think they were arbors and groves planted by the hand of man : many of thefe are loaded with fruits of the country, of which the Indians make excellent drinks, and fome of them are very good to eat. The valleys are full of odoriferous beautiful flowers, brought forth by nature, without any human induftry : there are alfo among them moft extraordinary phyfical plants of a beautiful afpect. The little hills and plains afford excellent pafture for all forts of cattle and flocks : there are alfo admirable valleys for planting of olives and almond-trees, and all forts of fruit-trees. Ac the lower part, about a league in the plain, there are vineyards, of which are made excellent wines, particularly mofcatells, which are in great efteem.

There are likewife in this defcent of the mountain, admirable paftures, where great flocks are bred, and do increafe wonderfully; their flefh is extremely favory, and the milk of the goats is fo fat, that by only boiling and flirring it gently over the fire, I have feen it grow as thick as if flower had been put into it; and yet in other parts this milk is of its nature very thin. This may be faid particularly of the young flegoats; and the milk thus boiled has a fweetness and delicacy which passes ordinary milk even with the things that are put in to mend it; all which are arguments of the great fubftance and nourifhment of that land.

CHAP. XI. - Of the Effects produced by the great Snow of the Cordillera.

WITH the first rains of the winter, which are about the middle of May, the Cordillera begins to be covered with fnow, and to put on, as it were, a white armour, to hinder its being passed, not only by men, but even by animals and birds, which are fo driven out of it by the rigour of that feason, that there is not one remaining in it.

Even the Silguerillos, and Sorfales, birds which of their own nature are fo hot, that in the very beginning of the fummer they take to the mountain, as foon as they perceive that the winter draws near, come in flocks down to avoid its rigour in the mountains; and then it is that the taking of them is eafy, and that as foon as the cold pinches, the ground being almost covered with them, it proves the feafon of most pleafure for the youth of the country, who going out, take fo many of them, either with glue or nets, that they carry loads of them home, referving those of the fineft colours to put in cages, for their harmony is very fweet. The Cordillera is thut up five or fix months in the year; fo that till October or November, it cannot be paffed without manifelt danger of one's life; and in the midft of winter not at all, becaufe all the paths and ways are covered with fnow to the height of many yards; and if any one fhould be rafh enough to attempt it, he would, after a little going, fink in every where, fo that he would not be able to go a ftep forward or backward, as has happened to feveral, who either for fome very prefling concern and interest, or flying from a death which threatened them for their crimes, have found it in these defarts more certainly than perhaps they would have done in the prifons where they feared it.

These are buried, not in sepulchres whitened on the outfide, nor under cold marble, but in the very boson of frost and fnow, which preferves them without being embalmed, and yet keeps them as incorruptible and dry, for so they have been found after many years; for such is the cold of those mountains, that it drives up all the moisture that can cause corruption in dead bodies, and so preferves them.

This fo infuperable difficulty of paffing the Considera, is lefs at the entrance, than the end of the winter, becaufe the drifts of fnow are isst them fo violent as to flut up the ways entirely; for in those feafons fome do verture to take, though never but with great danger, and upon argent occasions; if fomeromes they are follucky as to get off well, becaufe they meet with a clear fky, yet at other times it costs them dear; and it is always with infinite labour that they get through.

I have feen others who efcaped with their lives by God's mercy, becaufe the form catched them before they were too far engaged in the mountain, and fo they could yet make a retreat to the low countries; others have been forced to open their mule's bellies that they ride on, and hide themfelves in them; and by that warmth, and other defence of clothes, they make a fhift to get over the florm of fnow, if it does not laft long; after which they gain the plains on foot, if they are not too far engaged, and fo avoid the danger, but not the long-fufferings which follow generally after fuch adventures.

In fhort, every body has fome ftory to tell of the mountain, and complain of it; for fome lofe their toes, others their fingers; and fome their fight; fome are benumbed and lamed, and fo remain all their life with great infirmities. And I do not wonder at all all this, becaufe though one fhould pafs without a ftorm, yet the cold is fo terrible, that it cannot but injure nature extremely in that feafon, fince even in the midft of fummer, when we pafs this mountain, and in the lower part of it fweat with heat, as foon as we come to pafs the top, we are forced to put on double cloathing, and prepare the ftomach with good warm things, to withftand the fharpnefs of the cold, and the fubtilenefs of the air, which penetrates the body through and through, if it be not well covered.

Among the feveral times that I have paffed this mountain, one was in the beginning of April, when autumn in those parts is at an end, and the winter begins to threaten, and I must own, that the cold was fo intense, that it feemed a different species of cold from all those I ever felt either in India or Europe; though even then it had not begun to fnow, the cold was fo fierce that it made one's hands cleave ; nay, it had an effect upon the very rocks, for I remember the fun was reflected by them as by a lookingglafs. When we come to treat of the first discovery of this kingdom, I shall relate what was endured by the Adelantado Don Diego de Almagro with his army, and by those who afterwards followed him, and paffed this mountain, in which they were fo ill-handled, that fome were ftruck blind, others lame; fome loft their fingers without feeling it, becaufe the exceffive cold took away all fenfe; fome were frozen to death, and with them fome horfes, whom fix months after fome other Spaniards found fo fresh and well preferved, that they eat of them; and to fecure themfelves from cold. made a defence of those dead bodies; nay, some got into them. About fix years after, others going that way, found a Negro, who at that time was frozen to death, leaning against the fide of a rock, with a led horfe, and the reins in his hand, though confumed with time. They who have a mind to know more particulars, let them read Don Antonio de Herrera, Decade 5. Book 10. Chap. 5. and alfo Gareilaffo de la Vega, in his first tome.

It is neceffary to understand, that it is of this cold of the mountain that authors speak, when they fay, that the cold of Chile is fo fevere, that the rivers are frozen up, and men frozen to death in the fields; for this is only true of those uninhabitable mountains, where I believe at that feason the rivers do not run, but are turned into chrystal; and if any springs do escape, they are very few, and that in the valleys most fecured and sheltered; that appears by the rivers which run in the plain country, which are almost dried up, in comparison of the quantity of water that they carry with them in the fummer.

And thus the truth of what hiftorians relate may be faved from contradiction; for they not knowing the country, make no diffinction between the mountain and the plains, in which there never was feen any fuch effect of cold in any part of them; for the fea air, which is thick and moift, tempers the fharpnefs of the blafts from the Cordillera; and for this reafon it is, that the colds of Pampas of Cuyo and Tucuman are fo infupportable; as alfo those of Buenos Ayres, which being at fuch a difftance from both feas, and not enjoying the warmth of its vapours, the air in fummer is intolerably fcorching, and in the winter fo cold, and for want of rain fo dry, that it is common for animals to be found dead in the fields, as well as the men too fometimes.

CHAP. XII. — Of the Fountains which rife in other Parts of Chile, befides the Cordillera.

BESIDES the rivers and fprings of the Cordillera, there are others which rife in the plains and valleys, which have admirable properties. I fhall mention fome, for it is impoffible to rehearfe them all, nor can I remember but a few. Firft, that which rifes at the foot of the high volcano of Villa Rica, fo famous in that kingdom for its terrible effects, for which God Almighty makes himfelf to be feared and refpected by mankind; rifes, I fay, at the foot of this mount with fuch force, that it fprings out of the earth in two fources, each as big as a man, and fufficient to form alone a good ftream, and runs into a lake which is made by its waters.

In another lake, out of which comes the river called Rio Chico, there rifes also a fountain of hot water, most efficacious for the cure of leprofies, and all contagious There is another fprings up in the Maguey, yet most admirable; for there infirmities. are two fources just by one another, the one of hot, the other of cold water; the hot one is fo hot, that no one can endure his hand in it; the cold one is let in to temper the bath which is made for the fick. The baths of Rancagua are alfo very famous, and like thefe; which, for being near St. Jago, and in the greatest intercoufe of the kingdom, are very uleful, and much frequented. There are others in other parts; but not remembering them diffinctly, I can fay little of them. Among the fountains, that of Ramon is very famous, as well for the goodnels, as abundance of its waters; which is fuch, that they alone are fufficient to water many fields: it is about two leagues eaftward of St. Jago, and in that diftrict. There are many others, among which, that of Caren is worth taking notice of: it fprings in a beautiful meadow, of about five or fix leagues in length, affording a delicious profpect; its water is very fweet, and enters into the meadow; the earth of which is fo porous, that whoever treads hard upon it, feels it fhake under him : it is all the year green ; and the grafs is a kind of fmall trefoil, called by the inhabitants Caren, and is pleafant to eat. Neither ought I to pafs over in filence another fountain between these two, very plentifully furnished with delicate fweet water, which is always fo much the cooler, as the weather is hotter; it is called the fountain of Mayten, by reafon of a tree of that name, which grows at the foot of a great fquare table of live rock, where people use to go and eat their collations, the tree fheltering them all the while from the heat; for it is a tree whofe leaves are green all the year, fomething like a myrtle, but much larger, and without difpute of a more beautiful green: by its foot runs this fountain, whole fource is a little higher in a valley, from whence it comes murmuring upon pebble ftones, and among pleafant groves full of beautiful herbs and flowers.

The trees, though wild, yet bear very favoury fruits of that foil; and in them are great variety of birds, who, with their harmony and fweet notes, make the entertainment more delightful for those that frequent the place. It is not the least part of their enjoyment, to discover at the end of these woods a prospect for many leagues over plains, which being of fo great extent, many of them lie uncultivated; fo that among the vineyards and plowed lands, the wild uncultivated part is fo beautiful, particularly in the fpring, that one would think art had helped nature. There are in one place great spots of yellow flowers, which cover the earth, fo that for a great spot face nothing elfe is to be feen; then you have white, blue, fillemot spots of the fame proportion; the green meadows mingle in this with the waters of the river Mapocho, which is feen from this distance fometimes entire in its bed, then divided into feveral vol. XIV. arms, and at laft drained into the fields of the neighbouring grounds, to fertilize them. The profpect is terminated with feveral farms, which are called Chacras, with their churches; and in the midft of all, the city of St. Jago, the capital of Chile, which being not above two leagues off, and the heavens fo ferene, the towers of it are eafily diftinguished, and the bells heard fometimes.

This diffrict is full of a many more fprings, all within the compass of a mile of each other; and their waters are excellent and healthy.

That which is to the north of the city of St. Jago, called Conchalli, is likewife highly commended; it fprings in a little valley, called the Salto, or Leap, becaufe of the fall of the river Mapocho. This river comes running in a plain to a certain place; where being divided (for it is the work of industry) into two branches, the greatest of which runs in its natural channel, the leffer is derived to water this valley; which towards the west is even; but towards the east the land is fo high, through which the river runs, that it is two or three miles from the bottom of the valley to the high grounds, from whence the river falls. It is precipitated with great noife, making lovely and various cafcades by the rencounter of the rocks and other obstacles, which by their ftrait paffages retard its courfe, till at laft it comes entire to the valley, and is divided into cuts and channels for the watering it; which is not ungrateful, to make a more than ordinary return to those who cultivate it, not only in corn, most excellent wine, and most favoury fruits of all kinds, but also it ripens them above a month before any other place thereabouts; and it is very remarkable, that in this valley, which is only half a league from the city of St. Jago, the figs use to be ripe in it, when in the gardens of the city, and all its neighbourhood, they fcarce begin to change colour : therefore, as well for this as for the game it affords, of partridges on the hills, and wild fowl in the waters and ponds of it, it is the greateft entertainment all those parts afford.

I fhall not dilate upon more of thefe fountains, which are fo frequent; for if I were to mention them all, I fhould never have done; for fince thofe alone of the Conception, Arauco, and the country of the limits upon the warlike Indians, would require a large treatife, befides thofe of the diffrict of St. Jago, what would it be then in the territories of the ancient cities, which are yet farther in the country? for it abounding extremely in rivers, it is to be prefumed that it muft be fo in fountains and fprings; all which proceeds from the abundance of moifture of the Cordillera.

Of these fprings, the most agreeable for their good waters are the farthest off from the Cordillera, because they are more purified by a long motion, and refined by the good qualities of the earth they run through, particularly the mineral impregnations are fingular: I cannot but mention one, which is in the novitiate of the company of the Jesuits of Bucalemo, whose waters are not to be matched, at least I never met with the like; for without drinking them, one may discover by the touch their nobleness, their softness being like that of new butter; and they do make the hands that are washed in them in a few days smooth, and thereby prove their vast difference from other waters.

This fountain fprings in a little valley, very pleafant, under fome hills, about a league from the fea; and it bubbles up between a white fand, in which there is gold, as if it had a fire under it to make it boil. It is wonderful to obferve, that if they throw any bough or flowers upon it, it feems to take it ill, and never is at reft till it has fwallowed it up, leaping up againft it feveral times, till it has made it his own, and hid it from our fight; and this it will do for a whole evening, if they continue throwing flowers or branches of trees into it, without any body's being able to tell what becomes of them all.

The

The effects that this water caufes in the ftomach are admirable: it helps to digeft the meat with more eafinefs; it deftroy scrudities, diffolves phlegms and grofs humours, and evidently prolongs life, efpecially to old men. This was most particularly made clear in the perfon of the famous Captain Sebastian Garcia Caretto Chumazero, the founder of that novitiate, who lived there many years, and came to be ninety years old in good health, and fo vigorous, that he did to the laft go on horfeback through the woods and mountains, as if he had been a young man. I heard him fay many times, that this fountain was his life; for as foon as he found himfelf any ways out of order, he fent immediately for the water of it, and drinking it fresh from the spring, he used to go to bed upon it; where falling afleep, he would after fome time awake well difpofed : this I have often been witnefs of. The old Indians thereabouts experienced the fame, and did attribute their good flate of health to this fpring, without using any other phyfick or remedies.

CHAP. XIII. — Of the Lakes of Chile, and the Salt that is gathered from them.

AFTER having treated of the fountains and rivers, it feems natural to treat of the lakes and ftanding waters formed out of them, and by fome inundations of the fea in winter, when it fills them, and leaves them provided for all the fummer. Those made by rivers come first in rank; and I wish my memory would ferve to place them here, with their feveral qualities. Omitting then to repeat what we have faid of those of Aculco and Pudaguel, which being near St. Jago, make the greatest diversion of its inhabitants, we will begin with the lake of Tagataguas, about fourteen leagues from that city, and which once was more in efteem; for the trouts catched there are of a large fize, and the game for wild fowl fo much more diverting, that there is no comparifon between these waters and others. I do not describe here particularly the variety of wild fowl, becaufe I intend to do it when I treat of the variety of birds of this country. The lakes of Villa Rica are of great renown, though I confess I know little of their properties.

The lake of Puren has been famous, having been an impregnable fortrefs for the warlike Indians our enemies, by reafon of the difpolition and qualities of its lituation; for from thence they have for many years maintained a war with whole armies of Spaniards, without being fubdued: their advantage lay in this; that upon any rout given them by us, they had here a most certain and fafe retreat, which, when once they had recovered, they were out of all danger; for none could hurt them either by fword or fire.

The fea lakes are also many, and of great profit to their owners; for the fisheries in them are much more certain than in the fea: for which reafon they furnish the best part of the lenten fare, though the fea affords a great deal too. Among the reft the lake of Rapel brings a great revenue : it runs in length above two leagues within the land. In the winter time the fea is joined to it; for by its ftorms it forces an entrance, but it leaves it full of all forts of fifh; which, with those that are bred there, furnish it for the whole year, and enable it to fupply all the neighbouring country; and that not only with fifh, but with falt too in abundance; for, about January, the communication ceafing between it and the fea, when the fun is at its hotteft in that climate, the water is congealed fo, that it has a cruft of a foot or more thick of a most excellent white falt. This, indeed, does not happen every year; for it requires an extreme heat to do it, the lake being deep, and the climate there more inclining to cold : but they provide K 2

themfelves in one, for many others; and the falt-pits made by hand feldom fail; for they not being of great extent, the water that is let into them turns to falt with lefs heat, the matter to be congealed being lefs in itfelf. And fince we are mentioning falt, I cannot omit to relate what I myfelf have feen in the valley of Lampa, which is about three leagues from St.Jago; and it is this, there grows there an herb, not unlike to Sweet Bafil, only its green is upon an afh-colour, and not fo gay; it rifes about a foot above ground : this plant, in the fummer, is covered over with fmall grains of falt, like pearl, which is congealed upon its leaves, either from the dew of heaven, or by fome vapour raifed by the fun from that earth ; or elfe the nature of the herb itfelf is fuch, as to fweat out this humidity, which being afterwards congealed by the heat of the fun, is turned into falt. Let the caufe be what it will, the effect is feen no where but in this valley, and upon that fpecies of herb ; which is therefore much valued by the Indians, the falt of it being more favoury, and of a finer flavour than any other.

I cannot tell whether Johannes de Laet means this in his defcription of the new world; for having mentioned the kingdom of Chile, to which he gives the preference for its excellent properties, he fays, that in that kingdom, in fome of its valleys, there falls, at certain times of the year, a dew fo thick upon the leaves of the plants, that it is like fugar, and ferves, being kept fome time, for the fame use as manna. Antonio de Herrera reports the fame thing, in his General Hiftory of the Weft-Indies; and, amongft other commendations he gives this noble kingdom, he relates the fame thing of this ftrange and admirable dew. I fay upon this, that I know not whether they allude to what I have reported of the valley of Lampa by my own fight, and have no knowledge of that other thing they mention; though one would think, fuch authors fhould diftinguish things fo different in their effects and favour, as falt and fugar. It is poffible God may have done both, having been fo wonderfully liberal to that country, where the fingularities are fo many and wonderful; and it would therefore be no wonder fome of them fhould not be known, efpecially confidering that we, who are there employed for the conversion of fouls, have not time to fearch after curiofities, and fecrets of nature.

CHAP. XIV. — Wherein is treated of the Sea of the Kingdom of Chile, and of the Etymology of its Name.

THE fountains, fprings, rivers and brooks, carry us along with them naturally to the fea, where their courfe ends, and where there is room for my pen to exercife itfelf, if the brevity of this narration did not confine my flight : I muft therefore be content to fay fomething of this element, that the nature of it may not be unknown as to this new world.

Beginning therefore with the etymology of its name: It is well known that all commonly call it the South-Sea, becaufe it is towards the antarctick pole, from whence generally the fouth wind blows, in opposition to the Tramontano, or north, which reigns in the ocean as far as the arctick pole. But leaving these disputes to the fchools, or rather to that abyfs of Divine Wisdom, *qui profert ventos de thefauris fuis*, it is a known truth, that the effects which the wind of the arctick pole caufes in its jurifdiction towards the opposite part, the fame is caufed by the fouth wind in its motions from the antarctick towards these parts.

In Chile we look upon the fouth wind as a favourable wind, as in Europe the north is in the fame effeem. The north with us covers the heavens with clouds, caufes tem-

pefts

pefts and ftorms at fea, and makes all the land dark and fad: the fouth, on the contrary, clears the fky, ferenes the air, and makes the fea as calm as milk: on the contrary, this fame fouth wind, in the north fea, is ftormy, and covers the heavens with clouds, and raifes those tempests, which do fo endanger ships; whereas the north, called there Tramontano, clears all again, and makes the fine days.

From hence proceeds, that in America the fouth wind reigns in fummer, when the fea is calm, and the north in winter, when it is tempeftuous: the north does most certainly bring with it the rains, particularly from thirty-fix degrees to the pole, and that fo fuddenly, that fometimes, in the moment the wind comes to the north, the rain falls, and most commonly it is within half an hour after its change; and when in those parts in winter the fun is clear, and the weather fair, it is when the fouth wind overpowers the north; for the fouth in those parts is cold and dry, and fo drives away the clouds, fo as it happens fometimes that the heavens are dark; and as foon as the clouds are difcharged, if the fouth appears a little the ftronger, it is an infallible fign of calm weather, which generally follows in a trice; for this wind drives all the clouds fo before it, that when it blows, it does not leave one in the fky.

The contrary of this is feen in Europe, where the fouth winds bring humidity, and the north drives it away: the fouth relaxes the body, and affects the head; but the north ftrengthens the body, purifies the air, and dries up fuperfluous humours. In fhort, thefe two winds caufe quite different effects in Europe and America, that we may call the Europeans fons of the north, and those of South America children of the fouth.

From this there follows another very notable and well-known difference, which is, that as to go from Europe to the Indies, the north is the proper wind, and carries us before it, and by confequence is contrary to our return; fo in the South-Sea, failing from the pole towards thefe parts, the fouth is the favourable wind, and contrary to our return : from whence it proceeds, that the voyage from Spain to Carthagena being by the North-Sea, and made in thirty, forty, and fifty days, the return to Spain ufes to last fourfcore, and a hundred, and more days. On the contrary, in the South-Sea, where the voyage from Chile to Lima is but of about a fortnight, and as much more to Panama, or thereabouts, the return only to Lima is of two months, and from thence to Chile forty days. The South-Sea is also called the Pacifick-Sea, to diftinguish it from the North-Sea, whole ftorms and tempests are fo frequent ; whereas in the South-Sea they are rare : but, in my opinion the difference is for another reafon, which I fhall alledge here.

The most frequent navigations of the South-Sea are from Peru to Panama, and from thence to New Spain and the Philippinas; and those from Peru to Chile are lefs used : by which it appears, that the beft part of the South-Sea navigations are between the tropicks; and fo the fun has fo much force, as to keep the winds from being furious, and making fuch lafting ftorms as those which are raifed without the tropicks, and in parts nearer the pole; for this reafon the failors, in thefe warm climates, where there never is any winter, called this fea the Pacifick-Sea, from the good effects they experienced in it. The contrary of this is in the North-Sea, where most of the navigations are out of the tropicks; where the fun having lefs force, the winter predominates, and raifes mighty ftorms. Now the Europeans who first navigated the South Sea, being fuch as were used to those dangers, to which the navigators of the northern parts are most commonly exposed, when they found to quiet a fea as that under the line, and in those which particularly are the feat of commerce with New Spain, Panama, and Peru, they gave it the name of the Pacifick, without examining any further the caufe of the difference

ference of the effects, which they experienced in both feas: but if they had tried that very South-Sea beyond the tropick of Capricorn, they would not fo eafily have named it Pacifick.

I know that this difcourfe will be approved by thofe who have had experience of the hardfhips which are fuffered by the navigators, from the twenty-fixth degree of latitude on the coaft of Chile, to fifty-three degrees; for there, as foon as the winter begins, the fea cannot be navigated without manifeft danger, the ftorms being no ways inferior to the greateft in the North-Sea; and though at that feafon it is not fo dangerous for fhips to fail from Chile to Lima, becaufe they every day get into a lefs latitude, and fo enjoy a quieter fea, yet from Peru to Chile it is extremely dangerous, not only becaufe they come into a greater latitude, and go out further to fea, to avoid the fouth wind's oppofition, but alfo becaufe the vapours of the fea and cold mifts of the earth do raife fuch fogs and dark clouds, that they cover the land fo, that when they make their port, they are in great danger of fplitting upon the rocks.

This, I fay, is only of those coalts of Chile which are in the least latitude; for from the city of the Conception, towards the pole, even in fummer, they are dangerous; and the ships which are bound for the islands of Chiloe have not above two or three months in the year to go in and out conveniently, or they neither go in nor out till the year following: this is understood as far as forty-four or forty-five degrees, in which this archipelago of islands is placed; for from thence to the straights of Magellan, those may relate the dangers who have experienced them, and passed those straights: all that I know of it is, that they all have matter enough to discourse of at their return.

So that we may fay, that the name of Pacifick does not abfolutely belong to the South-Sea, according to its whole extent, but only as to those parts of the greatest intercourfe, which, because they are within the tropicks, are the freest from storms; and yet it cannot be denied, but that the South-Sea has an advantage over the North-Sea, even within the tropicks, which is, that it is free from those great fands which are so common in the North-Sea, about Carthagena, La Havana, and other islands, nay, even in the canal of Bahama; which indeed are so many, that let a storm be but moderate, they make it still greater, and more dangerous, by shortening the fea-room, and force the failors to be always heaving the lead, or elfe to split upon the rocks, which may be clearly feen and diffinguished from the store the store.

I find likewife, that the South-Sea may be called Pacifick for another reafon, which is, becaufe of the extreme quiet it enjoys in its navigation, without difturbance from any of its enemies, who are fo frequent on all fhores of the North-Sea; for there being no other entrance into the South-Sea, but by the ftraights of Magellan and St. Vincent, which are at fuch diftance, and defended by nature itfelf, the enemies of our quiet do not care to engage in fo ufelefs and dangerous a defign, with fo manifest a deftruction, and fo little advantage, as hath happened already to fome hereticks who have attempted it; for having no fettlement, nor landing-place in all that vaft fea, they have been forced to fail to the Philippinas : therefore the fhips of the South-Sea are free from any fear of enemies, and go and come without any apprehenfion of danger on that fide. Antonio de Herrera, in the fifth decade of his General Hiftory, fol. 319, relates the motive that Magellan had to call this the Pacifick Sea, and that is, becaufe there is not in all that element a more fpacious career for the winds and tides; and becaufe there reigns between the tropicks fo fleady and ftrong a levant, that in many days the feamen need not hand their fails, nor the steersman his helm, failing through those vast feas as if it were in a canal or river. And the fame author adds, that this motion of this wind wind proceeds from the courfe of the first Mobile, which is proved by its perpetual invariability, and the increase of its vehemence, as it draws nearer the equinox. Some dispute, whether it ought to be called a wind, or an impulse which the air receives from superior orbs, communicated to them by the first sphere. So far this author.

CHAP. XV. - Of the Sea-coasts of Chile, and its Ports and Havens.

IT would be too great an excursion beyond my purpose, to mention all the ports and creeks along the coaft of Chile; for they are very numerous. George Spilberg, admiral of a fleet of fix fail, whofe names were, the New Sun, the New Moon, the Hunter, the Pole-star, Eolus, and Lucifer, fays, he obferved twenty-five ports in the ftraights of Magellan alone, before he entered the South Sea: he commends them mightily, but particularly he is much pleafed with the twenty-fifth; for he ftaid in it fome time, and gave it his own name : he calls it a noble port, by reafon of its fafenefs for fhipping, as alfo for the pleafantnefs of the fields, which, he fays, were all covered with fruit; which, I fuppofe, were ftrawberries, according to the defcription he makes of them. He found there likewife abundance of excellent oyfters, at the mouth of a river, which beautified that port extremely, it falling into it from high mountains. But this retreat did not ferve them long; for having feen fome very fine coloured birds, they purfued them on fhore, and hunted them; which they had no fooner begun to do, but they were affaulted by a troop of Indians, with clubs in their hands, and fome of them were killed, and the reft forced to retire to their fhips, and fet fail in hafte; which is a great mark of the valour with which those people engaged them; for though they had fire-arms, they could not withftand the charge.

The moft famous port in all the coaft, befides that of Valdivia, which we have defcribed already, is that of Coquimbo, mentioned in our feventh chapter; and it deferves all fort of commendation, as well for its lovely bay, where fhips ride as fafe as can be, as alfo for the pleafantnefs of the country about it; which is one of the moft delicious of all Chile. The products of the country are particularly gold and copper, which is carried from thence to Peru; for the making of artillery, cafting of bells, and other houfehold furniture.

The ports also of Copiapo and Guasco are esteemed, and more defervedly that of Pacudo, which is a private hidden bay, where the spin of Peru come to load with the hides and tallow of Chuapa; as also with tar and tackling for spin, which is made in that valley, and is whiter and better than any in Chile, by reason of the excellent waters they make use of in its making.

The next good port to thefe, is that of Quintero, where the general of the fix fhips above-named landed; and it being a place uninhabited, met with no oppofition, but refreshed his men with a large fishing which they made. They do so commend the place, that they cannot fufficiently (they fay) extol the pleafantness of the land, the sweetness of the water, the fecurity for ships, and, in short, all forts of conveniencies for human life; and after these many encomiums, the historian concludes thus, *portus bic nulli fecundus*, this port yields to none; and yet this port of Quintero is none of the famous ones of Chile; by which it may be inferred, that he was but little acquainted with the reft. He could not land in them; for he found them all guarded by the militia, who expected him; and though coming to Val Paraiso, he had begun to land fome men, yet, upon advice that the horse of St. Jago were at hand to hinder the defcent, he took them on board again; and, failing at midnight, cast anchor at Quintero, where they watered, and cut wood, the admiral himself landing with many

foldiers

foldiers to protect his men: there they drew up a trench, with a kind of half-moon, to fecure their retreat against the Spaniards, who began to appear upon the hills; but they did not ftay for them, but embarking again, followed their course towards Peru, not landing any where elfe; but they commend the land extremely.

After these follows the port of Coucon, or Quillota, which ferves to embark the product of those valleys; and hard by that, the port of Val Paraiso, where are landed all the goods brought for the city of St. Jago: from whence they are distributed all over its territory, and as far as Cuyo, and Tucuman: this port is every day more and more inhabited; and there is building a convent of Austin friars, which will be of great relief to the fouls of the inhabitants, and of all those who go and come, who are not a few; for this is the port of the greatest commerce with Peru: it is distant from St. Jago twenty four leagues, all plain and good way, fit for carriage; and so all the commodities of both kingdoms are conveyed and exchanged by it.

Near the port of Val Paraifo is that of St. Antonio, which is alfo very fafe and good, and is at the mouth of the river Maypo. There is a miftake in authors about this; for they place the port of Val Paraifo at the mouth of a river, which they make in their maps to come from St.Jago; which is a very great error, becaufe at Val Paraifo there is no river of any note, but only fprings and fountains, which rife out of the rocks clofe by the fea, which are most excellent waters. There are alfo others of a coarfer nature, with which the ships fill their provision, because they having more body, they result better at fea against corruption.

There are feveral other ports between that and the Conception, in the bays and mouths of rivers; but not much ufed, becaufe they are not neceffary; all thofe valleys from Maule to Quillota fending their commodities to Val Paraifo. I believe, in time, other ports will be employed, becaufe the products of that kingdom multiply apace, and fo people will be willing to feek out the neareft ports for embarking their goods. All the product from Maule upwards, is carried to the harbour of the Conception, which is the beft bay in all thofe coafts; and it being a very large one, Providence placed at its entrance the ifland of Quiriquina; under which, as under a mole, fhips are fecured in foul weather. At the largeft entrance of this bay is the port of La Herradura, or Horfe-fhoe, it being in that form; and oppofite to that is that of St. Vincent; and a little farther, that of Carnero, called fo for the refrefhment it afforded to one of the fhips of the bifhop of Palencia, who, by order of Charles V., paffed the ftraights of Magellan with fix fail, and having loft their Patache, were forced to the Moluccas.

Next to thefe are the ports of Tirva and Quedal, La Baia Chica, that of Puralla, the port of St. Cebrian, that of Sancta Clara, that of St. Domingo, St. Esteran, Los Reyes, that Baixas, that of the Innocents, and many others less confiderable, as far as the straights of Magellan.

Befides thefe ports which we have marked upon the Terra Firma, there are feveral others, well known in the iflands of Juan Fernandes, La Mocha, Sancta Maria, in the iflands of Chiloe, Alfie, where the most frequented are that of Carlemapo, and that called the English Port, because formerly an English ship landed there, and the men and ship, with all its artillery, were made prize. There are also several other ports in the Archipelago of Chiloe, which I forbear mentioning, because I have not a perfect account of them.

CHAP:

CHAP. XVI. - Of the Fertility of the whole Coaft of Chile.

THE abundance and fertility of this kingdom is not only perceived in its valleys and fields, but likewife in its whole coaft, even on the rocks, where the fea beats. It will be hard to make this appear by particulars, becaufe, though in other parts of the world the rocks produce shell-fish, yet I do not know that it is in fuch quantity, nor fo large any where as in Chile, nor of fo many different fpecies. First, I will speak of that which is most common and intelligible : there grows along the coast every where an herb not unlike to endive; they call it Luche, which they pull from the rocks: it is gathered in the fpring, when it is most grown; and being dried in the fun, it is made into loaves, which are looked upon as a great delicacy far from the fea, particularly in Peru, Cuyo, and Tucuman; for it ferves for many fauces. It grows upon the tops of rocks, fuch as are above the water. At the foot of the rocks are found certain roots, which bring forth a trunk as thick as one's wrift, called Ultecuefte : this they cut, and laying it before the fire, they pare it like a lettuce, or cardoon, or thiftle, but it has a much different tafte. From thefe, the trunks floot out certain long cords, of three or four yards long, and fome of about fix or eight fingers in breadth: thefe they call Coehauyo; and there are two forts of them, which, though they refemble one another, yet the Indians make a great difference between them, referving the good, which they cut and dry, and make provision of them for Lent; the others they leave to the fea, which heaps them up upon the fhore, where they lie in heaps very ufelefs. So much for the herbs. Now let us fpeak of the fea shell-fish. The best of this kind are oyfters, both great and fmall, fo much talked of by the Hollanders with great commendations: they found them in the ftraights of Magellan; but the greateft plenty of them is on the coaft of Coquimbo, where they are very large and delicious; the leffer fort they call Tacas, very much valued too, and taken all along that coaft. But those of greatest renown are the oysters of Chuapa; in the great ones are bred pearls, as the Dutch fay, and, according to John and Theodore de Brye, they bought fome of the Indians in the ftraights very finely wrought.

That which they call Choros is also a fine fort of fhell-fifh, and in its fhell, as Antonio de Herrera fays, there are pearl very white. That fort which I have feen is not fo big; but fince they are to be found every where, there may be of all forts of them; for they are caught in abundance, both little, middle fize, and large ones, fome as broad as my hand. The choicelt of them are those which have the fifh of a yellow colour, though the black ones are good too.

There is another fhell-fifh, called Manegues, which is in two round fhells, fuch as ferve for models in architecture; the fifh within is but coarfe meat, but of good fuftenance. In one kind of thefe, which is the little fort, in opening the fhell, which in the infide is like mother of pearl, when one takes out the meat, one may fee the imprefion on the fhell, of a purple colour, which reprefents the image of the most holy virgin, with her mantle, and her child in her arms, which caufes great devotion and comfort; and, though they all have this imprefion, yet fome have it fo perfect, that it is wonderful.

A fifh they call Locos may also be ranked among the fhell-fifh: they call them also Afs's Hoof, becaufe they are of that fhape: they are very favoury, but hard and indigeft; for which reason they are to be eaten fparingly, though in the dreffing of them they macerate them between two ftones, to fosten them. I should never have done, to go through all the kinds of shell-fifh; as likewife of fnails, which are also vol. XIV. good to eat, and are produced on the rocks. There are fome caft up by the fea, in fuch quantity, that fhip-loads may be had of them, of fuch variety of figures and colours, that I doubt not but the curious in Europe would value them, and our artifts would make curiofities of them; but they, for want of fuch artificers, are good for nothing in the Indies, but to make chalk of, by burning them in a furnace; yet they are in fuch vaft quantities, that the fhore is covered with them, and they make a fine fhew.

The fhell-fifh called Picos de Papagayos, are another kind much effeemed: they are fo called, becaufe for their fhape and bignefs they are just like parrots heads; and as thefe birds build their nefts on fhore, in fome hollow rocks and caves, fo this fifh breeds in a kind of ftone-work, hollow, like little cells, where it grows till it comes to be of the bignefs of those heads. They drefs them in those very nefts, which ferve for pots, and when they are enough, take them out. They are excellent meat.

Those which they call Kericos, though common in other parts, yet I never faw them fo large as in those parts; and being taken in the increase of the moon, they have very large tongues, fat, and of about two fingers breadth.

The Crabs, Apavicoras, and Praunes, are likewife very good, and of feveral forts and fizes. The Lobsters, and those of that kind, are likewife much effeemed; they breed under the rocks, and are fifhed for, as all the reit, not with nets, but only by the Indians going into the fea up to their middle, and knocking them from the rocks with flicks in their hands. So much for this kind of eatables. There are others which live a little more in the fea, which are of a beautiful form; fome they call fea-ftars; fome the fun; others the moon; becaufe they are of the form of those planets, as they are commonly painted. Thefe may be eaten too; but they have one very fingular property, which is, to cure the vice of drunkennefs, being reduced to powder, and given in wine to drink; this is of fo certain an effect, that those, who before they took it had no greater delight than drinking of wine, did afterwards fo abhor it, that they would not touch it, though they were hired. This is a healthy remedy, as well as fure; and therefore used by the Negroes to avoid taking another; which, though as certain, is very dangerous; which is, drinking the fweat of a horfe mingled with wine. They fay, this puts those who take it, in danger of losing fome of their lenfes; though I knew one, who being exceedingly given to drunkennefs, his wife gave him this remedy without his knowledge, and it did him no other hurt than to make him hate wine, fo that he could not bear the fmell of it; but, as I faid, the Negroes ufe the powder of the ftar-fifh; and though I have obferved, that with fome it is not fo efficacious, but they long for wine again after a little while, yet it is but to repeat the remedy as foon as that ill inclination prevails again; and this is commonly fo practifed upon the Negroes, who are much given to that vice.

CHAP. XVII. - Of the various Kinds of Fish which are fished on the Coast of Chile.

LET the whale appear first, fince by its bigness it is a kind of king of the fea; and if where the king is, the court is, we may give that title to the fea of Chile, where there is such store of whales, that I know not any place where they abound more; and they are accompanied by such a court of little fishes of all kinds, that those who have navigated those feas, cannot but mention it with admiration. Among the rest, William Seerten, who came with a flect through the straights, fays, that they met with so many whales near certain islands, that they were forced to fail with great care and attention to avoid them, they being fo many, that they were almost always in the ship's way, and endangered the lofs of them, being fo big that they looked like rocks: they are all along the coaft of Copiapo and Guafco, and are of no fmall profit, by the ambergris they caft on fhore. The journals of those who have paffed the ftraights do mention much of this amber floating on the fea, and therefore no doubt but a great deal of it is on fhore; but it is loft, for the Indians having no value for it, know it not; and it is but within thefe twelve years that the Araucana's minded it; by feeing fome Spanish foldiers look for it, they did fo too, and found a great deal, and very good, on the coaft. Of the grey fort, which is the beft, they found great pieces of an afh colour, with a nobler and more delicate fmell; the ordinary forts are yellow and black, and it has a quicker, though not fo fweet a fmell as the grey. I have heard the people of those parts fay commonly, that the difference is very accidental, and that it depends only upon being more or lefs prepared by the fun-beams; and experience feems to confirm this thought; for I have obferved that black does in time grow white, by being exposed to the fun in a box; but if it be laid open, fo as both fun and rain come upon it, the experiment will be more manifest; and as for the harfhness of the smell, it may be remedied by infufions in rofe-water, exposing it first to the dews for nine days, and then to the fire, by which means it grows perfect.

Though it is known that amber is a thing which the whales caft from them, there is diverfity of opinion about the manner, because fome think that this noble product is formed at the bottom of the fea, or upon fome rocks; and that the whales eat it for food, and not being able to endure it in their ftomachs, becaufe it is naturally extremely hot, they get to the fhore to caft it up; others fay, that it is the whales' excrements. It is not my bufinefs to decide this difpute. The other great advantage which the whales are of to the country, is the oil they afford after they are dead; and it is a great deal that one whale will yield; it ferves for various uses of life. We do not know that these fishes die of a violent death, because their vast bulk defends them both from men, and all other animals, that may be their enemies; but yet being fubject to pay the common debt of nature, when they find themfelves near death, they draw near the land, and are often caft on fhore by the fea, which will not bear any corruption in its waters; and it is ftrange to fee how they are thrown up in great numbers on those coafts. The oil is made by the heat of the fun, and when the weather has confumed the flefh, the ribs and other bones remain white; and the Indians make ufe of them for feats; much more conveniency and curiofity might be afforded by them to other workmen.

There is another fort of fifh which are found moft on the coaft of Coquimbo, which are not fo big as whales, but yet are very large, and a good fifh to eat, which are the tunny-fifh, and the Albacoras, which the Indians kill with great dexterity; they go into the fea a good way upon floats of feal-fkins, well fewed together, and blown up like a bladder; they carry with them a kind of trident with fharp tongues; this is faftened to a long, flender, but ftrong rope; the Indian guides his float near the fifh he choofes, and then darts it with his trident; the tunny, as foon as wounded, goes out to fea like lightning; the Indian gives him rope enough, and follows him the way that he runs, till the fifh has fpent itfelf by lofs of blood; and then the Indian draws his rope, and the fifh with it, either dead or dying, and lays it on his float, and he returns to port with his prey rejoicing. There are many other forts of fifhes; one of the moft extraordinary is the flying-fifh, which fly with wings, and follow a fhip like birds- The lion-fifh is alfo admirable: they are found in great quantities about the ftraights of Magellan, near a port called Port Defire: they are very good to eat, but very hard to take; for though they wound them with fhot in many places, yet if they do not hit them in the head, or the ftomach, they do not yield: they are as big as a colt, and have a lion's head, with a perfect mane; which the females of them have not, neither are they above half as big as the males, and have a thinner fkin. Thofe who have failed through the ftraights, talk much of thefe fea-lions, and do alfo mention many other forts of fifhes which they took there, fome of fixteen feet long, very favoury and good to eat. Antonio de Herrera fays, that there are fifhes taken in Santa Maria, out of whofe eyes they take a fort of coarfe pearl, which have a glofs like the true ones, and are worn by the women; and if, as they are foft, they were a little hard, they would be better than pearls.

The fea-wolves or feals, which are found on all the coafts, are innumerable. I have feen whole rocks covered with them, and they lay even upon one another, fo as fome of them rolled down into the fea again, there not being room for fo many: they are as big as calves, and make a noife like them.

Antonio de Herrera, in the voyage of Magellan, fays, that in the river of the Crofs, in the Straights, they took one fo large, that without his head, fkin and fat, he weighed nineteen Caftillan Arrobas. The Indians take them for their fkins, which are very hard and ftrong, and fome eat their flefh. As to the plenty of the ordinary fifh of thofe feas, the authors already cited fpeak very advantageoully of their kinds, particularly William Scowten, who coming with his fleet to the ifland of Juan Fernandes, in thirty-three degrees and forty-eight minutes, the quantity of fifh they met with was fo great, that in a very little time they catched a great quantity of Robalos, which is the beft and moft wholefome fifh of all thofe parts. They did not take them with nets, becaufe they had not time to land, but with hooks at fea, by the fhip's fide, and that as faft as they could throw in and pull up.

What I myfelf have feen, is in the great lake of Rapel, all the fides of it covered with Pejereges, by the vaft quantity of them which came upon the coaft, as the droves of pilchards by the bay of Conception, and in Chiloe, fo that they take them with blankets. I have feen the fame droves of tunny-fifh, which come leaping over one another's backs, as if there were not room for them; and indeed, that climate being fo favourable to multiplication in all animals on fhore, as fhall be fhewed in its proper place, it cannot well be otherwife as to the fifhes.

CHAP. XVIII. — Of the Birds of Chile.

THE birds and fifhes feem to be brothers of the fame Venter, the Author of nature having created them both out of the element of water; and therefore, to difpatch all the creatures of this country, having treated of the first, it feems that the chain of an orderly narration obliges us to fay fomething of the others. To fpeak generally, it may be truly faid of the air of that hemisphere, that it has a great advantage over the earth, though fo fertile, fo rich, and fo delicious, as we have represented it; for though it is true, that it now produces the animals and fruits of Europe, with fuch an increase as is wonderful, yet it cannot be denied, that before the Spaniards carried thither the feeds and animals which are now fo multiplied, (for they had them not in any fort, though perhaps others which supplied the want of them,) the air, without being at all enriched by the accession of foreigners, has maintained always such an abundance of the volatile kind, that it needed no supplies from Europe, but rather has many to make up any one defect. To begin with the king of them all, the eagle: there are there abundance of them; thofe which are called royal or imperial have been feen here only twice; firft, when the Spaniards firft entered that kingdom; and the fecond time in the year 1640, when the Araucanos fubmitted their untamed necks to their God and the king; they interpreting this as one of the figns of God Almighty's will to incline them to take that refolution which they then took. As for the ordinary eagles, which do not differ much from the others, they have always been and are ftill in the country very common. There are likewife bred falcons, fo large and ftrong, that for their beauty they have been carried from thence, though fo far, as a prefent to the king of Spain; and they are commonly carried to Peru, particularly that kind which are called Primas, or firft, though thofe called fecond are very large too. There are befides, all other birds of rapine and prey; and of the finging birds, there are linnets, bull-finches, nightingales, blackbirds, and many others, who form fome a bafs, and fome a tenor, with all the other parts of harmony, beyond belief, particularly in fummer under the fhades of trees.

The birds for game are herons, partridges, wild pigeons, thrushes, turtles, parrots, wild ducks of a thousand forts, fome of one colour, and fome of another, and all very good. The domestic tame fowls are hens, ducks, geese, turkeys; and that nothing may be wanting, fwallows in summer, which go away in winter, as they do in Europe, to warmer climates; foreech-owls, and other night-birds; as also bats.

These are the birds of the European kind, which are found in those parts, as well as I can remember; and there is hardly a bird here in Europe, that I observe in the fields, that I have not observed the like formewhere in Chile, with very little difference.

Who now can defcribe the variety of native birds of that climate? which are in fuch variety and abundance, that people are fain to guard their vineyards from them as foon as the grapes begin to ripen; and yet it is impoffible to hinder them from doing a great deal of mifchief, they being fo nimble, and having fo fecure a retreat, though all forts of inventions, fuch as guns, crofs-bows, flings, fcare-crows, are put in ufe; fo that if any are negligent, they may be fure to find their vintage made to their hand. And this mifchief is not only for their vineyards, but likewife for all feeds, which is fain to be watched after it is fowed, till it fprouts; and as foon as the wheat and maize begin to ripen, the guards muft be renewed; for there comes whole armies of birds to attack them, and do them as much mifchief as if they were Xerxes' armies.

In particular the parrots are fo voracious and greedy, and have a bill that cuts like a razor: they come in flocks of fuch an extent, that when they rife they cover the air, and fill it with fuch a confusion of cries, that I cannot find any thing to compare it to. This kind of birds is bred all over Chile, in the mountains and in the Cordillera; and it is wonderful to fee how exactly they come to an hour, as if they were called by a bell; or had fome notice where and when the fruits were ripe, and in feafon for them to enjoy them: they come down from the mountains in the evening; and the noife which they make in flying, though they fly high, is fuch, that one would think them clofe by: they have a fhrill clear voice, and they fly all fcreaming at once, fo that their noife is very loud: they are all green and yellow, and have a blue circle about their neck, and very good to eat, particularly the young ones.

Those years which are to prove rainy, as the natives observe, as foon as the weather grows cool, before the winter begins, one may see every evening, for many days, great quantities of crows come down from the Cordillera into the plains: they come about an hour before fun-fet in squadrons, forming a triangle or pyramid, the point of which is led by one so fingle one, before whom none dare go: the figure they

make

make is most regular, with great correspondency to each other, as if they were fixed in the air, and immoveable, fo equal and well-concerted is their flight.

There is likewife a bird which we call Taltales, or Galinafos; it is like a duck. but has bigger wings; they are either black or brown, and very voracious of carrion. In the time of flaughtering, which is every year in Chile of most beasts, there is a great deal of flefh loft; then thefe birds come, as if one had founded a charge to them. and fall upon the carrion with fo much greedinefs; that having eaten their fill, they cannot rife again, and are eafily knocked on the head with flicks; the bones of their legs are valued to make fciffars, and their quills, which are as thick as one's finger. ferve for harpficals, and other curiofities. Out of this flaughtering-time they die with hunger; but among all the ways they have of maintaining themfelves, their way of hunting young goats and lambs is admirable: they fit upon high trees, and from thence they fpy the flocks of fheep and goats, watching till any of the young ones ftray from the guard of its dam, as they often do, either ftaying behind to feed, or climbing fome rock : this the Taltale quickly feeing, and that the young-one is far from the defence either of the flepherd or old-one, it leaps upon it, and the first thing it does, is to peck out its eyes, and eat its brains; which it does fo quick, that though it cry, and the shepherd or mother comes to its relief, it is too late. Very like to thefe are another fort of bird, both as to bignefs, colour and fhape, and its difpofition to prey; they call them Peuques, only they are fomething lefs, and of a nicer diet, being pleafed with nothing but hens or chickens, which they take very dexteroufly; they are fo bold and nimble, as to get into a hen-rooft, and carry away their prey, even in prefence of the owners, without being ftopped or prevented.

CHAP. XIX. - The fame matter is purfued, and the flying of Hawks treated of.

AMONGST the great number of birds which are bred in the lakes and ponds, and on the fea-fide, which are of great variety, none are more remarkable than the birds called Flamencos; they are white and fcarlet, bigger than turkeys, but fo longlegged that they walk through a lake with great gravity, the water not touching their feathers by a foot or two: the Indians delight in making works of their white and fcarlet feathers, for their dances and their feafls.

There is another bird, called the Child-bird, becaufe it looks like a fwaddled child with its arms at liberty: I have not feen them any where but at fea: perhaps they are the fame, called Penguins, of which frequent mention is made by those who pass the straights of Magellan: they are generally painted in the maps; and they fay, there are abundance of them in those parts, and that they are good meat.

There are other birds which furnish the tufts of feathers, called Herons-feathers, which though fo narrow, yet are fo valued, that formerly every feather was worth two rials: those which grow under their wings are larger and better, though those on their heads, which they wear as aigrettes, are very fine. There are but few of this kind of birds; for they do not increase fo much as others. There are more of that kind called Garcolas, which ferve for foldiers' feathers, and other ornaments. There are many others of great variety of colours, of which the Indians use to make their ornaments, called Mallengues, which are made for the head like a garland of most fine colours of wool, and in that they flick a plume of feathers, for their dances and days of rejoicing.

78

The

The birds called by the Indians, Voycas, are very famous among them, in whofe notes, at certain times and places, they find great mysteries, prognofticating by them, either their own, or their children's, or their friend's death or fickness, or other miffortune; and they remain with great apprehension and fear. The Spaniards call thefe birds Pechicolorados, that is, marked on the breaft; becaufe there is no fcarlet deeper, nor brighter, than the red on their breaft: the other feathers of their wings and body are brown. There are other very little ones, called Pinguedas, whofe body is not much bigger than an almond: thefe live upon flowers; and that they may come at the honey of them, nature has given them a bill, which, when it is fhut, is like a needle to fow with; and for this reafon they feed flying, like bees, from flower to flower, without lighting but very feldom on a branch of it, and that very flightly. These birds are of the greatest beauty imaginable; for if they were made of polished gold, they could not thine brighter: they have a green mingled with this gold colour. The males are diffinguished from the females, in that they have on the head a lively orange colour, which is like fire. Those on the other fide of the Cordillera are yet more beautiful, becaufe their tail is also of the colour of their head; and though they have fo little a body, their tail is a foot long, and two inches broad.

There is likewife a very odd bird, to which the Spaniards have given the name of Wood-Pecker; becaufe, though they are but little, they have fo ftrong and fharp a bill, that they form their nefts with it in the trees, forming a hollow place fit for them as exactly as if they had an inftrument to do it. Of thefe I have feen but few; but there are great numbers of a kind of birds, called Condores, which are as white as ermine, and of their fkins they make muffs, it being of a very foft touch, and extremely warm; but the bellies of the buzzards are much more fo, being admirable to make ftomachers to cover the pit of the ftomach, and help digeftion.

I have not feen fuch variety of birds on the other fide of the Cordillera; and the caufe, I believe, is the drynefs of the land, and the want of that fhelter of woods and groves which are on Chile fide; but in those plains, called the Pampas, there are Francolins to be found, which are a fort of wild hens, and as big, but much better meat, and of a higher relift. There are likewife oftriches, which are a mighty bird, and very numerous there. They often find their nefts, and in them fuch a quantity of eggs, as one neft will feed a great company; one of them alone being beaten and fried, makes a pancake big enough to dine feveral people: their feathers are employed for umbrellas to keep off the fun, and other good ufes.

It is a pleafant fight to fee the taking of the Francolins: the Indian, with a ftring made at one end into a running knot or noofe, at the other, having a little piece of fharp cane faftened to it, goes out to find them, which, when he has done, he draws gently near, fo as not to fright his game; when he is at a due diffance, he begins to go round the bird, making with the cane feveral circles over his head. The Francolin is of its own nature a very fearful bird, and fimple, and dares not rife, becaufe he thinks he is encompaffed round, but goes into the middle of the circle; where the Indian leffening ftill his rounds, follows it, fo that at laft it fquats down upon the ground, and lets the Indian put the noofe over its head; which, when he has done, touching it on the wing with the fharp end of the cane, the bird flies up, and draws the noofe clofe, and fo is catched like the fifhes by an angling-rod.

It is not fo eafy to catch the offriches; for though they do not fly, yet they have fuch large wings, that though a greyhound be very fwift, if the bird has law of him, he will hardly overtake him; but if by chance he comes up with him by furprife, or otherwife, it is wonderful to fee the art the offrich ufes to avoid his teeth; for

when

when the dog is just going to feize, the oftrich lets down one of his wings, and fixes it to the ground, covering with it its whole body: the greyhound thinking he has him fure, takes hold with open mouth; but he fills it only with feathers, and is cheated; for immediately the oftrich, before the dog can clear his mouth, fets a running, and gets a good length before him; and often efcapes, if the greyhound does not make extraordinary hafte to overtake it.

This is a very diverting fport; but that which is ufed in Chile with falcons is much more fo: not to fly partridges, for that is a known fport every where; but with another fort of bird, which the Indians call Quulteu, from the found of its note when it fings, which founds fo. Thefe are as big as hens, and have very large wings, and upon their wings they have, in the joining place, provided by nature for their defence, certain fharp points. The Spaniards call thefe birds Friers, either becaufe they always go two and two, or three and three, or becaufe the colour and order of their feathers is fo, that one would really think they have a hood and a frock.

For this foort it is not enough to have one Falcon, but there must be two, and those very well taught, and dexterous to affift one another. There uses to be very good company to fee the engagement, as we may call it; for it is worth feeing. Coming then to the place thefe birds haunt, which is generally fome meadow or watery ground, (for that they never forfake, their laft defence being in the water, as foon as they are fprung) one at a time, the fportfman flies one falcon at them, who, as if he minded not his game, endeavours to get as high as he can, and get the wind of his prey, who, at the fame time, does the fame thing, and contends for place with his enemy; fo that they both get almost out of fight; but at last the falcon having the better wing prevails. When he has got advantage enough over him, he comes down upon him like lightning; but the Quulteu defends himfelf, either by avoiding the blow, or by oppofing the armed points of his wings; upon which often theun wary hawk is wounded in the breaft. When the fportfman fees the engagement laft too long, fearing his hawk may tire, or be balked before the victory declares for him, he loofes his other falcon to help the first, which being fresh, soon joins his companion, and both together fall upon the Quulteu, but not at the fame time, left they fhould hinder one another: one gives him a blow, and then the other another; and fo, though he make a good defence, he is forced to yield, which he does, by making away for the water, where he has his last retreat to defend his life : here he expects his enemies upon his back, with the points of his armed wings turned towards them : the Falcon despifing the danger, comes down with all his force, and feizing her with one foot, tears her to pieces; but it is not without receiving fometimes dangerous wounds. The victory does not always coft fo dear; for that is according to the ftrength of the contenders. I omit the fhooting of wild-fowl in the fens and waters, which is neverthelefs very entertaining, as are likewife the Indians' ways with nets, noofes, arrows, night-lights; nay, the manner of catching the Falcons themfelves is as diverting: it is done with fine nets, in which they involve them, that they may not hurt their wings.

This is fufficient about the birds; and fince we are in the region of the air, fo near heaven, let us fay fomething of it before we come down to the earth again.

CHAP. XX. — Of the Heaven, and Stars, which are proper to the Kingdom and Region of Chile.

IT is the common opinion of all those that have feen and dwelled in Chile, that its foil and heaven, if they have their equal, have not their fuperior in the world; and though fome fay the ftars of the artick pole are larger than those of the antarctick, yet as to their brightness and beauty, and the light they give, and as to their numbers, with the clearnels of the heavens where they are, there is none but must own the advantage on the fide of the antarctick. We may give, as a natural reafon of this, the temper of the climate, both as to the air and earth; for though there are in it fo many rivers, as we have obferved, yet they being rapid, and fwift in their courfe, do not caufe overmuch humidity by their ftay, but afford only what is neceffary for its fertility; and, of the two extremes, the country is rather dry than moift, particularly as far as thirty-four or thirty-five degrees, as is manifeftly made out by two experiments: first, by the facility with which all wounds are cured, which use to be much longer in wet countries; and, fecondly, it is proved from the habitations and houfes, where the best apartments are reputed to be on the first floor, they being looked upon in fummer for cooleft, and in winter for warmeft; and, though they are watered every day in the year, and the floors most commonly but of earth, not at all upon vaults, yet they are never unhealthy; and there is no need of board-flooring, or mats, let the winter be never fo fharp. This is a convincing argument, that the country inclines to drynefs rather than to humidity; from whence it follows, that the fun raifes fewer vapours; and therefore the air being clearer, the brightness of the stars is more conspicuous; and for this reason the fun fets and rifes fo glorious, cafting out resplendent beams of light, which is not fo on the other fide of the Cordillera; for there I have feen the fun pretty high, and its whole body vifible, and yet no ways dazzling, the vapours of the earth taking away the radiant beauty of its beams.

The experience of this is yet more admirable to thofe who fail from Peru for Chile; for though they keep out a great way from land, yet they know prefently by the horizon when they come to the height of Chile; for they begin to fee it all difengaged from clouds and ferene, gilded and glorious, and its beauty increasing upon them every day, as they gain more heighth towards the pole. On the contrary, when they fail for the line from Chile, the nearer they grow to the tropick, that light and fplendor grows duller and duller; fo that in my voyage for Panama, I faw all the horizon muddy, fad, and clouded, which continued till I got to the Havanna; where being in eighteen degrees north latitude, the horizon cleared up and grew every day better and better, till we got to Spain.

So much for the clearnefs and beauty of the heavens and ftars, which may be confirmed by all those who have feen the place; but it is not of the bignefs of the ftars. The aftrologers pretend, that the contemplation of them, and their measure, belongs entirely to their art, and understanding best the disposition of the celestial sphere; but, in my judgment, they who can best speak of this matter, are those who have seen both poles, as is well observed by John and Theodore de Bry, in the eighth and ninth part of their twelve curious books, where they relate variety of histories, observations, and voyages, which have been in the North and South America, as far as the straights of Magellan. They report then the opinions of learned men, who, in failing on the South-Sea, observed what I shall here produce, translated faithfully from their elegant Latin into our vulgar tongue, in the words:

VQL. XIV.

" The

"The learned of our nation, who have failed on the South-Sea, do relate to us many things of that fky, and its flars, as well of their number, as beauty and bignefs; and my opinion is, that the flars we fee here, are no ways preferable to the meridional ones; but rather do affirm, without difpute, that those flars which are near the antarctick pole are more in number, and brighter and bigger."

He adds, befides, speaking of the stars of the constellation of the Cruzero, that their splendors and beauty are extraordinary, and that the Via Lactea, or Milky-Way, is much brighter in these parts. This is all from those authors.

Peter Theodore, a most skilful pilot and astronomer, relates in particular the stars of that hemifphere, and the fourteen figures or conftellations they make. The first is the Cameleon, which contains ten ftars; the fecond is the Indian Afpick, made up of four ftars; the third is the Flying-Fifh, which is made up of feven; the fourth called the Fish Dorado, is composed of five; the fifth is called the Hydra, and is of fifteen; the bird Toncan. which is the fixth, has eight ftars; and the Phœnix, which is the feventh, has fourteen; the Crane has thirteen, which is the eighth; in Noah's Dove, which is the ninth, there appears eleven; the Indian Sagittary, which is the tenth, has twelve; the Peacock, which is the eleventh, is compofed of fixteen; the Bird of Paradife, otherwife called Maaucodiata, has twelve; the thirteenth is the Triangle, and contains five; and the laft is the Cruzero, in which are four, which make a crofs, with a little one clofe by it, which makes the foot of the crofs. And though this Cruzero is the guide of those who fail in the South-Sea, as the Cynofura is to those who navigate the North-Sea, yet it is not immediately at the pole, but thirty degrees from it; but there being no ftars of that bignefs near it, it is made ufe of for that effect, but not for the needle; for that in either fea, whether fouth or north latitude, always turns to the north, though when one is in the South-Sea, the whole globe of the earth, or the beft part of it, is between them and the north, according to the circle that the Cruzero makes. The fixed point of the pole feems to be between two, as it were, great clouds, though they are not fuch, but clufters of ftars, not well diftinguishable, fuch as compose the Via Lactea; and they are always fixt, without ftirring; and when the heavens are clear, they are brighter, and better feen. There are other ftars nearer thefe clouds than the Cruzero; but not being fo big, there is little notice taken of them, but only of the Cruzero stars, which are indeed very beautiful, and shine with great livelinefs.

CHAP. XXI. — Of the Animals, as well proper, as new comers to the Kingdom of Chile; and alfo of the Bezoar-ftones.

TILL the Spaniards came to thefe American parts, there never had been feen in them either cows, horfes, fheep, hogs, houfe-cats, nor rabbits tame or wild : nor dogs, except thofe called cur-dogs; but no hounds, greyhounds, nor other dogs for game, either by land or water; no maftiffs, nor little dogs, which we call lap-dogs; no goats, nor affes : but as foon as the Spaniards were fettled in Chile, and found the land fo proper for the breed of cattle and flocks, they have increafed them to a degree of fuperfluity; fo that there is not only enough for the fupport of human life; but alfo for thofe animals who are carnivorous; for, as we have feen above, in the flaughtering time, much flefh lies waite in the fields, fo that it is neceffary to burn it, and throw it into lakes and rivers, to hinder its corrupting the air. That which in other parts is called a calamity and defolation of the country, which is a murrain among cattle, in II Chile is thought a neceffary purge of the too great abundance of it. This may feem a paradox; but yet is founded upon experience, becaufe the cattle increafing as it does. and the land being fo good, that it fattens them to a wonderful degree, (there being often taken out of one cow an hundred and fifty pounds weight of tallow, each pound of fixteen ounces,) there is enough to do to get a vent for it. The fame may be faid of the hides; for though Peru, where the best part of the confumption is made, is fo great, yet fuch is the product of Chile, that it wants another Peru to confume it; for this reason it is a gain to lose the increase of the cattle, for then the profit is more, with lefs trouble and coft of fervants. In the beginning of the fettlement in Chile, Don Antonio de Herrera fays, that horfes were commonly fold for a thoufand pieces of eight a horfe; and Gareilaffo fays, that at first a horfe did not use to be fold in Peru at all, except upon the death of the owner, or upon his returning to Spain; and in that cafe they were fold for four, five, or fix thousand pieces of eight a horse. He fays, he himfelf knew a foldier who had an excellent horfe, and that a negro going one day by with him in his hand, a gentleman, who faw them, fent to offer the foldier ten thousand pieces of eight for the horse and negro, which he refused with contempt : but fince that time horfes have multiplied fo, that there being not people enough to feed and tend them, they are fallen extremely. The cows too have increafed fo as to cover the fields; and it is a wonderful thing to fee in those great plains of Tucuman and Buenos Ayres, vaft herds of them feeding, without any other mafter than the first that will take them if he can. I have feen in Chile, in the territory of St. Jago, horfes already dreffed for war, fold for two crowns a-piece, to fupply the army, and yet for fhape, courage, and good qualities, they yield to no Neapolitan horfe I ever faw; no, nor to the Andaluzes, from whom they are defcended; for they have had no reafon to degenerate in fo good a land. The cows too, which were at first out of all price, I have feen fold for a crown a piece, and the calves for half a crown : the fheep, fuch as I have feen bought in flocks for Cuyo and Tucuman, have been fold for threepence, or three-halfpence a piece.

Theodore, and John de Bry, do mention fome author who fays, that rats were likewife ftrangers to Chile, and were carried thither by an Antwerp fhip that paffed the ftraights of Magellan : they muft not mean the ordinary houfe-rats and mice, but thofe great ones which have a large tail, and are about a foot long : they are called Pericotes, and are very mifchievous. This fhip, without doubt, took port in fome of thofe of Chile, where it left thefe animals, fo prejudicial and hard to deftroy; for they refift the cats, and it is a ftout one that can kill them. But it is a wonderful thing to obferve, that though in fea-towns the magazines, fhops, and warehoufes, are full of them, yet they never go further into the land, which they might eafily do, by fo much carriage as the commerce of thofe parts requires. I believe the air of the Cordillera does not agree with them, and fo may have killed thofe which have been carried by chance with goods; for I do not remember I ever faw one in St. Jago, nor in any town far from the fea fide.

Among the animals that are proper to Chile, the first may be reckoned those which are called the sheep of that country: they are of the shape of camels, not so big, nor vast, and without the bunch that camels have: they are white, black, brown, and some are associated. The authors above cited fay, that anciently they ferved to plow the land in some parts, before there were oxen in it; nay, in the relation of George Spilberg and his fleet, it is faid, the Dutch passing by the island of Mocha, faw the Indians use them in that work.

They

They are made ufe of at this time in fome parts, for carriage of wine, wheat, maize, and other provifions; and I remember to have feen them about thirty years ago ferve to carry water at St.Jago from the river to the houfes, for the ufe of the family; but now they are not at all employed there in this kind of labour, there being fuch quantities of mules and affes for all that fervice. These fheep have their upper lip flit, with which they do, as it were, fpit at those who vex them; and the children, who ufe to do it, when they fee them ready to fpit, run away; for they know, and it is a common truth, that wherever their solution falls, it causes a scale ; and having a very long neck, about three feet long, they use these defensive arms the better. Their wool is extremely valued; for of it are woven cloaks or mantles fo fine, that they look like camblet: they govern them by a kind of bridle, which they put through holes in their ears, and fo by pulling the reigns, turn them which way they will: they kneel down to be loaded, and when the loading is well fitted and fastened, they rife and carry it very gravely.

There are likewife natural to that country a fort of little rabbits, called by the Indians Pegues, which they eat with much pleafure: they are wild. The taking of them is very good fport: for they carry water in great tubs to their holes; and though they are very deep, and have fecret iffues and correspondencies with each other under ground, to avoid being purfued by the hunters or their dogs, yet the water overcomes them; and while they fly from it, the Indians watch for them at their other holes, and with their dogs take them as they come out to avoid the water.

There are another fort of little rabbits, which are like thefe, but they are tame, and the Indians call them Cuyes, which are also very good meat: they are of pretty colours, and spotted: they are very common every where.

The fquirrels are not fo; and I do not know they are to be found any where in Chile, but in the valley of Guafco: they are grey or afh-coloured, and their fkins are mightily valued for furs, for their warmth and finenefs of the touch.

The animals called Guanacos, Chamois, or wild goats, are very like thefe country fheep, as well in their fhape as motions; but they are of a different colour; for they are red, of a clear colour: they never can be tamed, but go in flocks, feeding in the fields; and it is as much as a very fwift horfe can do to overtake them running; and if they have the leaft ftart of them, they feem to play with them; for by an eafy gallop, they make the horfe ftrain; in which they are much helped by their long legs, for by them they gain more ground at every reach: yet it is very eafy to catch the young ones, or thofe that are not ufed to be hunted; becaufe being fo tall, and their bones, becaufe of their youth, not well knit, they are eafily tired; fo that by following a flock of them on horfeback with dogs, (and they go three or four hundred in a flock,) the young ones are forced to lag behind, and fome are killed by the dogs, fome are knocked on the head with a flick by the hunter. I have feen them bring thus three or four dead at a time. And this is not only a pleafant, but a ufeful fport; for the flefh of thefe young ones is like kid's flefh, and is eaten frefh: but that of the old ones is not fo, but dried and fmoaked: it is the beft of that kind in the world.

Thefe creatures breed, in a bag they have under the belly, the bezoar-ftones, which are fo valued againft poifon, and malignant fevers, good to rejoice the heart, and other admirable effects. The matter out of which they are made, are herbs of great virtue, which thefe animals eat to cure themfelves of any thing they ail, and preferve themfelves from the poifon of any venomous creature, as ferpents, or poifonous plants, and other accidents.

Thefe

These ftones are found in the oldeft Guanacos; and the reason is, that their natural heat not being altogether fo ftrong as the heat of the young ones, they cannot convert into their substance all the humour of the herb they take to remedy their indisposition; and fo nature has provided, that what remains may be deposited in that bag, and be made a stone to cure in men the same infirmities: according to this notion one may observe, that the stone is composed of stores coats, fome thicker and some thinner, according to the quantity of matter that is gathered together at each time, just as a wax candle is made by feveral coats given it at feveral times to form its bigness.

It is likewife a thing well experienced, that in those countries, where there are most vipers and other poisonous animals, these stores are most plentiful; and the cause is manifest, because these animals, and the deer-kind, do beat so much ground for their livelihood, they are more exposed to venomous creatures, which, when trod upon, wound them forely, and they run naturally to their remedy in these herbs; and as they do this more frequently in those parts where they receive most damage, by consequence there are more of these stores engendered.

From hence it happens, that in those parts of Cuyo, there is a greater quantity of these bezoar-stones to be had, than in that which we call properly Chile; for there are many vipers and poisonous creatures, of which Chile is very free, as we have faid: and yet there are taken some stone shere, but the greatest part come from Cuyo; to which likewife it is of some confideration, that there are bred more Guanacos and stags than in Chile; for that country being not so populous, and having such vast plains, these animals have room enough for food and for increase: but it is not so towards the fea-fide of Chile, for that being very populous, and full of cattle and stocks, there is no room for the wild ones, except upon the edges of the Cordillera, from whence they come down into the plains fometimes.

The bignefs of thefe ftones is in proportion to the animal that breeds them; the moft certain rule is, that if they are little, there are many in the bag, and fewer if large; and fometimes, when very large, there is but one. I carried with me to Italy one that weighed thirty-two ounces; and yet that was not it which made it the moft valuable, but its virtues and fhape, for it was a perfect oval, as if it had been turned by a turner: the Indian who found it had feventy pieces of eight for it; becaufe when a great ftone is found, it is not fold by weight, but according to the effimation of the owner, and the bigger the dearer.

The virtue of these bezoar-stones is very well known and experienced; and people of quality take them, not only in the time of their fickness, but also in health, to preferve it : the way of using them is to put them whole into the vessel that holds either the wine or water, or into the glass out of which one drinks, and the longer they flay in, the more virtue they communicate. And if a person be not much indisposed, there is no need of using them any other way; but if any one statched by any distemper of consequence, and be fick at heart, or be affected with melancholy fits, it would have more virtue to grate a little of the stone to powder, and drink it; whatsoever way it is taken, it comforts the heart, purifies the blood; and the using of it is looked upon as a prefervative against all infirmities.

There are alfo bred in the Pampas, or the plains of Cuyo, many hares; and one fort, called Chirichinchos, whole fleich taftes like that of fucking pigs. But the greatest increasers are the Guanacos, and the deer. It has been faid already, that in Chile there are but few, for the reasons alledged; but there is great quantity of wild cows and wild mares, which came at first from fome which went astray, by the negligence of

the

owners; and being once in those mountains, they have increased fo wonderfully, that they are become a game, and many go to kill them, or take them for profit.

CHAP. XXII. - Of the Trees growing in Chile.

AMONGST other obligations which the land of America has to Spain, one is, the having enriched it with fo many noble plants, trees, and feeds, which it wanted; for before the Spaniards conquered it, there were not in all America either vines, fig-trees, olive-trees, apple-trees, melicotoons, peaches, auberges, quinces, pears, pomegranates, cherries, apricots, plumbs, oranges, lemons, citrons, nor almonds. As for feeds, there was neither wheat, barley, nor oats, anifeed, coriander-feed, cumin, nor oreganum, lintfeed, flax, peafe, beans, nor cabbage, lettice, raddifhes, cardoons, chicory, nor indive, berenguenas, gourels, melons, cucumbers, parsley, garlick, nor onion. But instead of these trees, fruits, and plants, the Author of nature had provided them with others of great use and good relish, such as maize, all over America : Frisoles, Las Papas el Madi, Los Capallos, and fome others, are proper only to Peru, and the land within the tropicks; the Camotes, Guayabas, Mammeyes, Plantanos, Zipitapotes, Anones, Nifperos, Aquacates, Pinnas, Guanabanas, Papayas, Pitabayas, and many others, which, though highly commended, do not generally come up to the relifh of the European fruits. And the bread and wine has been a fingular addition to them, fuch as the Indians value more than all their product, and particularly the wine, which is their chief delight; as for bread, they value it, but not fo much.

Though America is obliged to Europe for all this addition, yet Chile much more, as having the greateft advantage by it, and with more plenty than any other part of the new world; for though all that we have named of European plants are to be found fomewhere, yet not all every where; for in fome there grows corn, and not wine; in others, both thofe, and not oil; in others, neither corn, wine, nor oil, but other fruittrees. The fame thing may be faid of the animals to eat; fome have beef, others mutton, others pork, which on the continent is a delicacy, and is given to the fick; fo that running over all America, we may find that this communication of new creatures has reached fome parts for one thing, and fome for another. But as for the kingdom of Chile, it may be faid to have been totally obliged and enriched; for all the trees, feeds, plants, and all the animals, &c. of Europe, are to be found there, and that almoft in every part of it, for it is rare to fee any thing take in one place, and not in another; but if it does, they may eafily have it from their neighbours, if it be not fo good, or not at all with them.

In the third chapter of this book, we have already mentioned how all these European fruits and feeds take in Chile, but we can never enough dilate upon that fubject: it will hardly be believed by most people, particularly by those, who, never having been out of their own country, are so in love with it, as not to imagine there can be any equal to it, much less exceed it; and we relating things so diftant, of which we cannot bring ocular witneffes, we are the more liable to contradiction; but fince we are writing a history, we must speak the truth as we know it, and it really is.

Some trees do not exceed in bignefs thole of Europe of the fame kind, as cherrytrees, quince-trees, almond, peach, and pomegranate-trees, olive, orange, lemon, and citron-trees, melicotoons; which laft, in Tucuman, are neverthelefs very large, and to that degree, that three or four men fometimes cannot embrace the body of one of thole trees. I have feen fome apple-trees as big as elm-trees; the pear-trees are yet bigger, bigger, and much more the mulberry-trees, and walnut-trees; though as to their fruit, it is not fo large as that of Europe, the nuts having the shell as thick again, and by confequence lefs meat. This is as to the garden-trees brought from Europe.

As for the trees natural to that country, they are of two forts, the one is fruit-trees, the other not: of the first, I find only three kinds or species of those, which are likewise in Europe, which are the avellanos, or hasel-nut, the pine-tree, and the algarrabos, or cod-tree. Of those which are not properly fruit-trees, there are the laurel, the oak, the willow, the cypress, which are in great abundance, and very large; out of these they have boards very fit for boxes and trunks, which are no ways pieced, but of one plank; the doors and coverings of the churches are also of this cypresswood.

Thefe trees grow moft commonly in the precipices of the Cordillera, which being very deep, the cypreffes are extremely large and tall, for they fhoot up till their tops can be warmed by the fun-beams; fo that they are as ftraight as a wax-candle, and of fo fine a fmell and perfume, that though it be fo plentiful, it bears a good price, and a greater in Peru, to which it is carried, as well as the cedar, which does not fell fo well, becaufe there are more of them.

Thefe cedar-trees are without comparison bigger, and have larger heads than the cyprefs-trees, and of one of them are made feveral planks; but more of this when we come to fpeak of the ifland of Chiloe, for there they are larger than in any other part. The colour of the wood is red when it is first worked, but in time, and by degrees, it lofes that lively colour, and comes to be of a kind of walnut-tree colour; the planks are of the fashion of cedar planks, not fo subject to the worm, but more easy to work.

The oak alfo yields very large planks, for they thrive exceedingly, and grow very thick; fome of them are white, and the wood of them is corruptible; others are red, and incorruptible.

The planks from the Paragua-tree are the most in use, but less valuable. The tree is a handfome branching tree, keeping its leaves green all the year: they are like elms.

The moft common wood of all, and that of which there is moft plenty, which ferves for the covering of houfes and roofs, is the cinnamon-wood. Thefe are very large trees, of a beautiful afpect; they keep their leaves all the year, and are like that which in Italy they call the laurel-royal. The Guayac-tree is bred in the mountain or Cordillera, and from thence has its hardnefs and heavinefs, which is fuch, that it is like iron; and the balls made of it to play at billiard, are almoft as hard as the ivory ones; the tree is no large tree, and the heart of the wood is a yellow mixed with green; the decoction of it is good for many infirmities. The fandal-tree is very odoriferous; there are great quantities of them in the iflands which are named from Juan Fernandes; it is a prefervative againft the plague, and is ufed by the confeflors, and others, who are bound to approach infected people. There are other trees and fhrubs of admirable virtue, for feveral infirmities, of which the Indians have a particular knowledge, and perform admirable cures with them.

The fruit-trees bred in the mountains are many, and of great variety: let us first treat of that which indeed carries the palm, not only because of its name, but that its height, beauty, and abundance, and that of its most excellent fruit, challenges the first place among all the reft.

They grow generally upon the mountains, and in precipices, fo thick together, that feeing them at a diffance, one would think they were a clump fet by hand; they are very thick and high; all the body of the tree is naked till the top or first fprout; its nature is to lofe all its old branches as the new ones come out; by which means, the body of the tree rifing free, and difencumbered from fuch boughs as ufe in other trees to grow out of the fides of them, is totally employed in feeding the top; and the fruit which grows within it, being, as it were, a pyramid round it, to preferve it by the admirable texture of its leaves and branches which incompass it.

Thefe palm-trees have a wonderful property, and most certain, which is, that none of them give their fruit, except they are in fight of each other; and if it happens that one comes up alone, without a companion, though it thrive to a great largenefs, yet it never bears, except another be planted by it, and this they call the female; and as foon as the female is planted, though never fo little a one, yet the great ones bear, and the fecond in its time, when it is big enough: I have feen the experience of this; and it is a thing well known to all. The fruit of thefe trees is called Cocoas, and is like filberts, though bigger by half, and the meat within the fhell is not folid, but hollow, and is, round the edge, about the thicknefs of a crown-piece, and in the reft of the hollow is a kind of milk, or water, of an excellent relifh; and fo is the flefh of it, which is white, and ferves to preferve the liquor like a viol, which ftays in it till it be imbibed by the cocoa, which happens in fome months; and then they are not fo good to eat as when they are frefh; but then they are good to preferve, as almonds are, and other kernels of that nature.

Antonio de Herrera, and other authors, fay, that thefe cocoas are good againft poifon; and nature feems to fet a value upon it, by the many covers in which it is involved; firft, the kernel is covered with a fhell harder than that of the almond, then it has another cover of a green colour, and fometimes yellow, which is woven fo clofe about it, and fo ftrongly, that when it is green, it is eafier to break it than to peal it off. The fruit grows clofe to a ftalk, which fometimes will have above a thoufand on it; and this is environed by a great fhell, which grows bigger and bigger with that bunch it contains, till at laft the fruit makes it burft and open into two parts, which are like two boats, each above half a yard long, and two fpans diameter in the broadeft place, and the bunch within all of a fine yellow, very beautiful to look on. It hangs on the branches till it be ripe, and then falls to the ground, where it is gathered, and great provifion is made of it for Peru; for befides their being made a fweetmeat, the children rid the merchants of them for play-things, it being one of their greateft entertainments.

The palm-trees which bear dates do not feem to be natural to this country, but brought from abroad; for I never faw them, as others, wild in the fields, but only in gardens.

There are other fruit-trees wild, which come in the fields, and are called Pengue; they have a red fruit, fomething bigger and more oval than the filberts; thefe the Indians eat boiled with other ingredients. There are alfo trees called Magues, which are very beautiful and cooling; the leaves are admirable againft a burn; the fruit is black like a myrtle-berry; it is very well relifhed, having a *dulce-piquante* very agreeable; it blackens the mouth and hands when it is eaten, and, for that reafon, the more civilized people do not ufe it fo much. There are alfo fruits of which the Indians make their fermented liquors, whofe names and properties I cannot call to mind; only I know there is great variety of them; and I can remember one called Quelu: the fruit is very fweet and finall, between red and yellow; of this they make a drink extraordinarily fweet. They make another drink of that which they call Iluigan, and the Spaniards, Molle; it is of the fhape and colour like pepper; the tree on which they grow is but little, but a great bearer: this drink is very agreeable, and coveted even by the greateft greateft ladies. The most common drink of the Indians is made of maize, which is the ordinary bread and fustenance of the Indians.

Let us end with the tree called Murtilla; though, if we believe the authors who treat of it, it deferves to be ranked in the first place. Antonio de Herrera speaks so well of this tree in the ninth decade of his Hiftory of the Indies, Book IX., and folio 247, that I will relate only what he fays, and that in his own words, which are as follows :---" There is a kind of fruit of trees that grow on the mountains, which grow from thirty-feven degrees upwards, and in those countries it is a common food; the natives call it Uni, and the Castillans, Murtilla. It is red, and like a finall grape, fomething bigger than a fwollen pea; its fhape and colour is like the pomegranate grains, its fmell and tafte agreeable, and not unlike a grape. It has little grains like a fig, which are almost imperceptible to the tongue; its temperature is hot and dry: of this they make a wine, which exceeds all other liquors, even that of the East India cocoa, or palm-tree: neither cyder, mead, nor beer, nor all the other drinks defcribed by Andres de Laquuna, are to be preferred to it. This wine is clear, fine, warm, and very agreeable to the tafte, as well as profitable to the flomach. It confumes all vapours in the head, its heat warming the ears without going any further: it comforts and cherifhes the ftomach, increafes appetite, and never takes it away. It never offends the head, or makes it heavy, or burthens the ftomach; and it bears as much water again as wine will do. Those who have tasted it, commend its colour and flavour, as much as that of grapes. Its colour is golden, and mighty bright; and it is as fweet and good as the wine of Ciudad Real. There is little of it made, and fo it lasts but eight months; for which reafon, it is not known how many years it would keep. It takes up as much labour and care as wine, in the making : if it be left to itfelf, and without fire, it is forty days before it ferments. It cafts down a lee, and works out the frothy part at the top of the veffel; and, for that reafon, care is taken to fcum it as it boils, and then it is drawn off into another veffel. When it is turned to vinegar, its vinegar has a better tafte and colour than wine-vinegar; for it retains the colour of the fruit, which is very odoriferous and fweet." Thus far this author : from whence it may be inferred, that this land had good wine of its own; and it had alfo very good oil made of a feed called Madi; it is extremely well relifhed; but now it is not much in ufe, becaufe that of olives is fo common.

It is not poffible to defcribe particularly, one by one, all the various forts of trees that are bred in the woods and mountains of Chile; and it would take up a very large treatife, which is not my purpole; yet when we come to treat of the ftraights of Magellan, we will fpeak of the cinnamon-tree, which is to be found there, and of the barks of fome other trees of that foil, which have the fame tafte as the Eaft India pepper. All that I can fay at prefent, is, that there are few of thefe trees that lofe their leaves in winter, particularly thofe which grow wild in the woods, which are generally aromatick, and of a very fragrant fmell; and of them, all the fineft of this kind are bred in the territory of the Conception. I would not have believed it, if I had not feen it; for in travelling I met with lovely groves, which bordered the highways, and caft out fo rich a fmell from their leaves, that the flowers of jafmin did not appear fweeter. There are alfo abundance of myrtles and laurels, which grow in great groves naturally; and yet among them there are trees whofe leaves exceed them infinitely in the perfume of their fmell; infomuch that, paffing one's hand over them, one would think one had amber gloves on.

VOL. XIV.

BOOK

BOOK II.

TREATING OF THE SECOND AND THIRD PART OF THE KINGDOM OF CHILE.

CHAP. I. - Of the Islands of the Kingdom of Chile.

HAVING, for the better defcription of the kingdom of Chile, divided it into three parts, we have treated of the first and principal one, which is that which is properly called Chile, in which many things are faid which are common to all the three parts; therefore, in these two which remain, we shall take notice of that only which shall be peculiar to them, to avoid repetition.

We come now to the fecond part, which are the iflands which are fpread all along the coaft of the South-Sea, as far as the ftraights of Magellan; I fay, they are many in number, and fome of them very large ones; as that of Sancta Maria, La Mocha, Juan Fernandes, and, above all that of Chiloe, in which is founded the city of Caftro. Some make thefe iflands fifty, fome feventy leagues in length, and about fix or feven leagues in breadth. In the fame fea, or archipelago, there are many more, fome of ten leagues, and others lefs; and in all, reckoning those that are within the ftraights of Magellan, there are above two hundred difcovered.

Juft over-againft Coquimbo there are three, which are called Del Soboral, De Muxillones, and De los Paxaros, in thirty degrees latitude; two more in thirty-three and forty degrees: there are eight fmall ones juft over-againft Val Paraifo, which are called the iflands of Juan Fernandes; who dying, left them to the Jefuits. Then follows the ifland Quiriquina, which is in the bay of the Conception. Juft over-againft Arauco is the ifland of Sancta Maria, in the thirty-feventh degree; and in thirty-eight that of La Mocha. Hard by Valdivia, about forty-three degrees, comes the archipelago of Chiloe, which is composed of forty iflands; and hard by it is the province of Calbuco, in which there are twelve more. Those of Los Chonos are as many, in forty-five degrees; and in fifty degrees are the eighty iflands discovered by Pedro Sarmiento, as shall be related hereafter.

The iflands of Chiloe are reputed barren; but their foil is not really fo, only the exceflive rains choak the feed, and do not let the corn thrive; fo that they are without wheat, wine, or oil, or any other plants which need much fun. The nature of the climate of this archipelago is fuch, that it rains almost all the year, fo that only maize, or other fuch grains, can ripen, that do not want fo much fun. The nourifhment or diet of the natives, is mostly of a root called Papas, well known over all the West Indies, of a good nourifhment; and they grow there bigger than in any other place. They have befides fome maize, fome fifh, and particularly fhell-fifh, which is excellent in those feas. They have few steps but very good poultry, as well as hogs, and fome beef; with which, and what besides is brought to them from St.Jago, and the Conception, the Spaniards, both of the garrifon and city of Castro, make a good shift. This city is the capital of the chief island; in which, and in the rest, there is a great quantity of honey and wax made. And Herrera and other historians fay, there are mines of gold upon the fhore; and they remark it as an extraordinary thing, and hardly heard of in any other place.

The manufactures of thefe islands are the clothing for the Indians, who have a kind of yeft which they call Macun, and it is without fleeves, becaufe their arms are naked; and over this they put a garment called Choni, which ferves for a cloak, and is like that which painters give to the apoftles in their pictures. They have another commodity from their woods, particularly of the plank they make of a tree, which is a cedar, and of which they have valt woods, and in them trees of a prodigious fize; for Friar Gregory of Leon, of the order of St. Francis, in his map of Chile, which he dedicates to the prefident Don Louis Fernandes de Cordoua del Carpio, fays, that fome of these trees are so big that they cannot be hardly encompassed by a rope of fix yards long; and out of the wood of the boughs there has been made fix hundred planks, of twenty-five feet long, and two feet broad; and that which is confiderable, is, that this plank is not fawed, but cut with axes; in which there is much more lofs. This author deferves belief, as well from the experience of forty-two years that he lived in Chile, as from having been definitor of his order. And what I have heard from the mouth of a colonel, who was both born and bred in that country, will ferve to confirm this; which is, that if two men on horfe-back are on each fide of the tree, when it lies along, they cannot fee one another; for the body of the trunk hinders them. These planks are carried to Chile and Peru; and in exchange they bring back provisions to live on. The islands of Chono are yet poorer than these; becaufe, that being nearer the pole, their fummer is fhorter, and their rains more copious, infomuch that they drown the earth, and hinder it from producing.

We have little knowledge of any other islands befides those of Chiloe; because the continent being so large, and yet not thoroughly peopled, there has been little occafion of inhabiting any more than some few of these islands; by which means there is but some field of their qualities; though it is reasonable to think they refemble the land over-against which they lie.

As for the iflands of Juan Fernandes, I will relate what I find writ about them in Theodore and John de Bry, in their relation of the voyage of John Scutten: they fay then, that thefe two iflands are very high land: the leaft of the two, which is the wefternmoft, appeared to them barren, as being covered with wood, and very mountainous; though not landing on it, they could make no judgment of the infide of the ifland. The bigger ifland, which is the eafternmoft, is likewife mountainous, but has great variety of trees, and much grafs, with which are fed great herds of fwine and goats, bred from fome few which were put on fhore by John Fernandes, who began to cultivate thefe iflands as his own; but he dying, and the Spaniards finding greater advantages upon the continent, they forfook thofe iflands, which were out of all trade, leaving their flocks of cattle behind them, which now are infinitely multiplied.

They fay befides, that coming to this, which they call the Fine Ifland, they found a port very fafe for their fhips, having twenty or thirty fathom depth, the fhore all fandy and even, with a delicate valley full of trees of all forts, and wild boars, and other animals feeding in it; but they could not diftinguifh them, by reafon of the diftance they were at. They extol particularly a most beautiful fountain, which coming down from high rocks, rolls into the fea by different canals, which form a pleafant prospect, and its water is very fweet and agreeable. They faw also great flore of feals, and other fifh, which they caught in great plenty. In fhort, they were fo in love with this island, for the good qualities they discovered even at its entrance, that they were very unwilling to leave it though prefied in point of time.

I do not doubt, but this is a very pleafant fituation: for in its temperature, and other properties, it must be very like Val Paraifo and St. Jago, becaufe it is almost

N 2

in

in the fame degree weft; and without doubt thefe iflands will be peopled in time, when the continent grows populous, as it does every day; for then people will be feeking new habitations; but at prefent they only go thither fometimes to fifh, to fend it to Peru, where they have it not fo plentifully.

The fame authors, giving an account of the other Dutch fquadron under George Spilberg, fay, that they came to the Ifland of Mocha, and found the north fide of it plain and low, but the fouth full of rocks: they landed; and the good reception they found from the Indians, is an argument of the fertility of the place. Those Indians are a noble fort of people, and very good natured. When they had refreshed themfelves much at their ease, they made provision of great flore of sheep, which are very large, and in great plenty there, as likewise of hens, eggs, fruit, and other provisions. They treated the Indians on board, and shewed them their great guns, and their men in order for fighting: they prefented them also with European commodities, such as hats, clothes, axes, and things which they valued. After this, they fet them again on shore: and the Indians made figns to them to go back to their show, as they did.

But they were very differently received in the Island of Sancta Maria, where the vice-admiral landed with fome of his men, and were invited by the Indians to eat; but from the fhips they faw a great army coming down upon them, as they were going to fit down to table; whereupon they made figns to them to retreat to the port; which they did, and had just time to embark. But they likewife carried off about five hundred fheep, and other refreshments, having found the island very fertile and well provided, as well as very temperate, being about thirteen leagues fouth-west from the city of the Conception, about thirty-feven degrees, and not above three leagues from Arauco; which makes fome think, that formerly this island was fastened to the main land, and that the fea had in length of time made the division which now forms the bay of Arauco.

There is a little to be faid that is particular of all the other iflands to the ftraights of Magellan, fince it has not pleafed God to let them be peopled by Spaniards, and fo give an entrance to the gofpel; by which means the product and nature of them might be known, and many fouls faved which inhabit them.

All that we know now of them, is, that in the voyage of Pedro de Surmiento to Spain, being fent by the viceroy to chaftife Francis Drake, for his boldnefs for infefting those coafts; in his way, on this fide the ftraights of Magellan, he difcovered a great archipelago of islands, which they told to the number of eighty, which he named by feveral names, and took posseful of them in the name of his king. He alfo difcovered more islands in fifty-one degrees, to which he did the fame. It is known likewife, that in the ftraights themselves there are many islands, fome of which we fhall mention when we treat of the ftraights of Magellan.

CHAP. II. - Of the Land called Terra del Fuego.

THE land called Terra del Fuego, (fo famous in the relations and maps we have of the ftraights of Magellan,) has deceived many by its name, people believing that it had been given it for fome volcanoes, or burning mountains, or other fubterraneous fires; but it is not fo, for this name had no other occasion, than that the first navigators through the ftraights difcovered upon it many fires and great fmokes, made, as they fuppofed, by the numerous inhabitants of it; and fo they called it the Land of Fire. There arofe likewife another mistake from its great extent; for it was judged to be a great continent, of which in time the world was undeceived, as we fhall fee hereafter.

This

This land, called Terra del Fuego, is that which forms the fouth fide of the ftraights of Magellan, extending itfelf the whole length of the ftraights, eaft and weft, above one hundred and thirty leagues. Formerly, before the ftraights of St. Vincent, otherwife called the ftraights of Le Maire, were difcovered, this land was thought to be joined to fome other great continent of the Terra Auftralis, which was fuppofed to join to New Guinea, or the iflands of Solomon; and Ortelius, in his geography, is of this opinion; but upon the difcovery of the other ftraights of St. Vincent, that doubt has been cleared, feveral having gone through them to the South-Sea; and among the reft, two caravals fet out by the king's command, in the year 1618, on purpofe to view thefe ftraights, which it was faid had been difcovered by James Le Maire, which caravals were commanded by Don Juan de More.

These two veffels fet out from Lisbon in the month of October 1618, and being come to the east entrance of the straights of Magellan, they passed by it, and ran along all that coaft, without finding any entrance, till they came to that of Le Maire, which they went through, in lefs than one day's time; after which they turned to the fouth, and afterwards to the weft: they went round all the Terra del Fuego; and failing north, came to the weft entrance of the ftraights of Magellan, into which they entered, and failed through them to the North Sea. Having thus made a circle clear round the Terra del Fuego, they proved it demonstratively to be an island separate from all other land. The fame was done by Sir Richard Hawkins, an English gentleman, who having paffed the straight of Le Maire, failed for five and forty days to the fouth, without finding any land contiguous to the Terra del Fuego, but many iflands, as related by Antonio de Herrera, chap. 27, of the description of the West Indies. The fame has been confirmed by feveral, who being driven by ftorms from their intended courfe, have been forced to run towards the fouth pole; amongft the reft by Francis Drake, who having paffed the ftraights of Magellan the fixth of September, 1572, and being got on the feventh, a degree from the ftraights, was carried by a ftorm two hundred leagues to the fouth; and coming to an anchor in fome of those islands, he there found that the fun being eight degrees from the tropic of Capricorn, the days were fo long, that there was not above two hours night; from whence he inferred, that when the fun came to the tropic, there must be a perpetual day of twenty-four hours. The fame was experimented about two years ago, by the fleet of General Henry Brum; which having paffed the straights in April, were by the force of ill weather carried into feventy-two degrees, and caft anchor at the ifland of St. Bernard, to which they gave the name of Barnevelt; and it being about the entrance of winter, the days were not above three hours long, fo that they expected they would still shorten till June, when the fun being furtheft off from that hemisphere, would leave them in a total night; for this reafon, and becaufe of the hardinefs of the weather, which increafed every day, they durft not winter in that ifland, as they had a mind, but after a fortnight's ftay in it, weighed anchor, and failed for Chile. In which voyage they made but little advance, having always the wind a-head, infomuch that they were a whole month doubling one cape, and loft in the endeavour their Tender, in which was the beft part of their provision.

So much for the islands belonging to the coast of Chile; but having also mentioned the islands of Solomon and New Guinea, to which antiently it was thought that the land of Terra del Fuego was joined, it will be well to fay fomething of them.

The author who writes the best of them, is Antonio de Herrera, and from him is taken what John and Theodore de Bry fay of them; which is thus:

93

The iflands of New Guinea run from fomething more than one degree fouth of the pole antarctick, three hundred leagues eaft to the fifth or fixth degree; according to which reckoning, they fall about the weft of Payta. The iflands of Solomon fall to the weft of Peru, about eight hundred leagues from its coaft, and extend themfelves between the feventh and twelvth degree: they are diftant from Lima about fifteen hundred leagues: they are many, of a good fize: there are eighteen principal ones, which are, fome three hundred, fome two hundred, fome one hundred, fome fifty leagues, and lefs in compafs. Between them and Peru, inclining to the land of Chilethere, is another called the ifland of St. Paul, about the latitude of fifteen degrees, and about feven hundred leagues from the Terra Firma.

The fleet of William Scowten having run along the coaft of Chile in the year 1615 or 1616, from the straights of Magellan, took their course to the west, when they were about the latitude of eighteen degrees, to try to find out fome new ifland, and found one in fifteen degrees; which, according to their computation, was distant from the coafts of Peru about nine hundred leagues. After this they difcovered two more, which they called the Cocoa iflands, by reafon of the great plenty of that fruit that was there, that the inhabitants did use to drink the fweet liquor that was bred within the cocoas, but when it was at an end, they made a shift with falt water; to which, being accustomed from their youth, it did not hurt them. They fay more, that the inhabitants go naked, though not quite; and that their way of being civil and faluting, is to give themfelves blows upon the temples, which is the fame as with us the pulling off the hat or cap. At first they laughed at the fire-arms, till they faw one fall much wounded, which undeceived them, and convinced them that it was not only noife which proceeded from those arms. These islands are distant from Peru 1510 German leagues, which are longer than the Spanish leagues, though not fo long as the Indian ones. There were found alfo other iflands in the latitude of twenty-nine degrees, which perhaps were those which at first they called the islands of Solomon. Others fay, that there are others more to the west, opposite to Chile. Whofoever is curious enough to know the particulars of all those islands, their temperature, inhabitants, their good and ill qualities, may find them in the above-cited authors, who treat of them more at large; for my intention, it is enough to fay what I have reported.

CHAP. III. - Of the two Straights of Magellan and St. Vincent.

THE Straight of Magellan received its name from that man, who eternized his own, by being the firft who difcovered and paffed it. This was that famous Portuguele captain, Hernando de Magellanes, whofe intrepid foul going almost beyond the true limits of all ordinary valour, feems to have bordered upon temerity and rafhnefs, by engaging himfelf to difcover a paffage altogether unknown, and fo narrow, that it was very dangerous for ships, being besides in the fifty-fourth degree, which makes it very cold. This bold captain began to enter the straight by the North-Sea the twentyfeventh of November, in the year 1520, and in twenty days, which was a happy paffage, he entered the South-Sea; from thence he failed to the Philippine islands, where he was killed in one of those islands called Matan, to which he went from another called Pezebu, to fight against the king of the first, because he refused to subject himself to one of those kings who had turned Christian; engaging him with more courage than conduct, and so he perished by the great number of his adversaries. His death death was very much lamented, and he much miffed in the difcoveries of that new world; for, without doubt, if he had lived longer, he would have made great difcoveries in the Terra Firma and iflands.

To give a more certain account of this ftraight of Magellan, I will make use of the memoirs of those who have passed it, and left relations of it, who, as eye-witness were less fubject to mistake. And first I will give those fworn relations given in Castilla by those who fet fail from the Corunna, by the Emperor Charles the Fifth's order, in fix ships under the command of Fray Garcia Josre de Loaysa, a knight of Malta, and born at Civedad Real.

They fay in their report, that the faid ftraight is a hundred leagues in length, from the cape of Eleven Thoufand Virgins, which is at the entrance of the North-Sea to the cape of Defire, which is at the entrance of the South-Sea; and they fay more, that they found in the straight three great bays, of about feven leagues wide from land to land, but the entrances of them are not much more than half a league over; the first is about a league deep; the fecond about two leagues; the third, they fay, is encompafied with mountains of fuch a height, that they feem to be in competition with the ftars, and the fun does not enter within them in the whole year; which was the caufe of their enduring there an extreme cold; for it fnows almost continually, and the fnow never melting by the fun-beams, it looked with a kind of bluifh colour. They fay, moreover, that the nights were twenty hours long; they met with good water, and trees of feveral forts, among which many cinnamon-trees; and that the leaves and boughs of the trees, though they appeared green, yet burnt in the fire as if they were dry; that they found many good fifting-places, and faw many whales, (fome mermaids) many of the tunny-fish, sharks, cods, great store of pilchards and anchovies, very great oysters, and other shell-fish. That there were also very good harbours, with fifteen fathom water; and in the ftraights itfelf above five hundred fathom, and no where any fands or fhoals. They observed feveral pleafant rivers and ftreams, and faw that the tides of both feas came each of them above fifty leagues up the ftraight, and meet about the middle of it with a prodigious noife and formidable flock. Though a Portuguese captain, who had passed this straight, told me, that these tides were only fome high floods, which last a month, or thereabouts, as the winds blow; which makes the fea fometimes rife to a great height, and at other times fall as much, leaving the fhore dry for a great way; and the ebbing is fometimes fo faft, that fhips are left dry, as this captain's ship was, fo that he was forced to dig his way out to get into deeper water. They found feveral other entrances in this ftraight; but for want of provision they could not ftay to fearch them. They loft one fhip off the Virgins Cape ; and they had fcarce entered the ftraights when a ftorm blew them back to the river of St. Ildefonfo, and to the port of Sancta Croce, where they found ferpents of various colours, and ftones that were good for ftanching of blood; all this may be feen in Antonio de Herrera, in the fecond tome, dec. 3, and in the ninth book, fol. 335, and it does not difagree with the other relation of Magellan's voyage, though this makes the ftraighteft part yet lefs, allowing it not above a mulquet-fhot over, and from one entrance to another it reckons a hundred leagues, the land on both fides being very rich and beautiful.

This is, in fhort, the relation given in to the king. There are fome other authors who neither make the ftraight fo long, nor do they make the narroweft part fo ftraight; for fome allow but fourfcore and ten leagues, or lefs, to its length; but yet it is probable, that the first give the most credible account, because they examined it with fuch care and punctuality, in order to inform His Majesty. All agree in one thing, which which is, in the good qualities of the fea, land, and iflands of the ftraight, as well as of the fhore on both fides, and of the good parts that are in it, and of fome particularly fo fecure, that the fhips rid in them without being fastened, being as faste as if they had been in a box.

Among the reft the Hollanders celebrate much the twenty-fifth port, called the Famous; and it is fo much fo, that George Spilberg, their general, gave it that name, for the excellent reception they found there: they faw the whole earth about covered with various fruits of various colours, and of excellent tafte. To delight them the more, there was a fine brook of excellent water that fell from a high rock, and watered all the valley entering into the port; and befides thefe five and twenty ports or harbours, there were many others in the remaining part of the ftraight, which might be a third of it, all which were very remarkable.

There is a harbour called De la Pimienta, or the Pepper Harbour, for the fake of fome trees they found in it, whofe barks had a most aromatick smell, and a taste of pepper, fomething more burning and quick than that of the East-Indies. When the Nodales passed this way, they gathered a great deal of this bark; and authors fay, that when they brought it to Seville, it was so valued there, that it was fold for fixteen ryals, or two crowns a pound.

The fame authors report, that they found cinnamon-trees, which bore good cinnamon; and in the fecond narrow paffage fome others, that bear a fort of black fruit, of most excellent taste and favour. In other places they faw most beautiful woods and groves, pleafant plains, agreeable valleys, intervals of great beauty, with high mountains; fome covered with fnow, from whence there defcended lovely ftreams; others all cloathed with greens of various forts; and in them they defcried many animals going to and fro, fuch as deer, oftriches, and others, as alfo great variety of most beautiful birds of all colours; and among the rest they killed one fo large, that meafuring one of its wings, they found it above a yard long; and they were fo tame that they flew to the fhips, and fuffered themfelves to be handled : they found alfo another fort of large birds, which they called fea-geefe, every one of which, after they had been plumed and pulled, weighed eight pounds of Caftile; and they were fo numerous, that the ground was covered with them, fo that they killed what quantities they pleafed. They faw another fort of bird, much of the fhape of a pigeon, all white, only with red bills, and red feet; all which were a grand entertainment to them as they failed along. They commend alfo the harbour, which they call Most Beautiful, where the city of St. Philip was founded; there they faw the traces of feveral animals, which used to come to drink in those chrystal fountains. After the third ftraight place, there is to be feen a most excellent harbour, called the Shell-Harbour, by reason of the vast quantities of oysters and other shell-fish that they found there, which fufficed to feed the whole fleet feveral days, carrying away with them a good provision likewife for their voyage, all owning that they were better than those of Europe.

There are found in the great canal of the ftraight feveral islands, which are as estimable as the Terra Firma; they are generally in the widest part, where the fea is feven or eight leagues over; the chief are those of St. Lawrence and St. Stephen, otherwise called the island Barnevelt. Before they came to these, they found other islands, which they called the Pinguin Islands, for the great quantity of that fort of birds that are bred there. There is another, called the Holy King's Island, which is in a river, which enters into the straights, and they faw in it many feals. Others of these islands are named Sevaldo, from the name of him that discovered them, near which there

96

were ftore of the pinguin birds, and abundance of whales. After having paffed the fecond straight, there are still more islands, the first is called of the Angels, and is full of the birds we have mentioned. The fecond is named the island of the Patagoons, or giants, becaufe they faw there fome of them. Near the fhell-port there are other eight iflands; and a little before the entrance into the South-Sea, there are feveral other islands, which must be very little, for the straights are there very narrow. Some may defire to know, whether, befides this entrance of the ftraight of Magellan, there are any other, by which thips may fail from the North-Sea to the South. Touching which, the relation of George Spilberg fays, that there is one by the cape, which they called Prouvaert. Some English likewife, who have failed that way, are of the fame opinion; for which they cite father Acofta, of our fociety, in his Oriental Hiftory, translated by John Hugh Linfcot, chap. 10. in the end : as may be feen in the already cited John and Theodore de Brye, who add, that many other authors do agree in this opinion; and that those of Spilberg's fleet, before they came to the flraight, faw this opening on the north fide; but they did not dare to go into it, becaufe they had express orders to pass the straight of Magellan; and befides, that which added to this refolution, was the obfervation they made of the great force with which the waves met each other at this opening, infomuch that the fea feemed to boil.

This is all that I have met with in authors about this opinion, which even John and Theodore de Brye look upon as falle; becaufe neither the Spaniards nor Dutch ever faw this fecond canal; but rather that the whole land of Fuego is one great continued ifland, which they prove by the relation of the navigation made by the Nodales, who were fent to fearch for the ftraight of St. Vincent, and who went round the Tierra del Fuego, without finding any fuch opening, or any other than that of Magellan and St. Vincent; and yet I am of another opinion, and hold the first for certain; and this does not contradict the opinion of Spilberg, who does not fay, that the opening he faw was on the fouth, but on the north fide, towards the land of Chile; and fo, though the land of Fuego be an ifland, it does not follow that there may not be an entrance on the north fide. But let us leave that to time to make out, and fay fomething of the straight of St. Vincent, which is the fecond paffage from the North to the South-Sea.

CHAP. IV. — The fame Matter is continued, and the Usefulness of the Commerce between Chile and the Philippine Islands is made out.

IN the year 1619, the king fent, in the month of October, the two caravals which I mentioned above, to fearch the ftraight of St. Vincent, becaufe about that time it was reported in Spain, that James Le Maire had difcovered it. Thefe two fhips failed to the bay of St. Gregory, which is near the eaft entrance of the ftraight of Magellan; from whence they failed along all that coaft, where they faw and converfed with a fort of giants, who were at leaft the head higher than any of the Europeans; and they exchanged for fciffars, and other baubles, gold, which it feems, is the product of that country : after which they failed fouth-weft round the Tierra del Fuego, till they came to the mouth of this new ftraight, which they called the ftraight of St. Vincent ; and before they entered it, they failed along the fhore of this new difcovered land, keeping it always on the right hand, their courfe eaft-north-eaft, as it tends.

They failed about thirty leagues; and not having difcovered all that way, not as far as they could fee, any opening or inlet, they returned to the opening of the ftraight vol. xiv. 0 of of St. Vincent; and entering into it, went through it in lefs than one day, it not being above feven leagues in length; and being entered afterwards into the South-Sea, they followed the fame land to the east, and fouth-west thirty leagues more; and feeing it was one continued coaft, clofed up with mountains of great height, they durft not go any further, beginning to want provisions; and fo thinking that this land might reach as far as the Cape of Good Hope, they left it, and failed to the weft entrance of the ftraight of Magellan; which they entered, and went through to the North-Sea. returning that way to Spain, to give an account of what they had difcovered, having made a very fortunate voyage, and not loft one man, nor had any ficknefs, all that climate being very like that of Europe, and particularly to the cold part of it. This made the king give order for the fetting out of eight fail more, to carry this way to the Philippine islands all the relief neceffary, of foldiers, artillery, and tackling for fhips, refolving henceforward that they fhould always go this way, as being fhorter, eafier, and of lefs charge and danger. This was the opinion of Michael de Cardoel, and the other pilots chofen for this expedition, who obliged themfelves to fail to the Philippines (bating extraordinary accidents) in eight or nine months; for, having once paffed the ftraights, if they had the wind and currents favourable, they hoped to get to the Philippines in two months; becaufe from Chile to those islands, there is no reafon, as in other navigations, to wait for certain feafons and times of the year; for all that voyage being to be made within the tropicks, there is no danger of winter; but one may fail it at any time of the year.

The Dutch authors already cited, treating of this fubject, add thefe words :--- "In truth this is a great conveniency to mankind, to be able to go from Europe to thefe iflands in fo fhort a time, with all the health and fafety of the failors; it being otherwile in going by the Cape of Good Hope, where the diverfity of winds is to be obferved, fome of them being fo contrary, as to hinder abfolutely the voyage; fo that it lasts sometimes fifteen or fixteen months. Besides, this course is so fubject to diseases, that often they bury half their men in the fea, as happened to Girrard Reinft, who was fixteen months getting to Bantam, which is not above half way to the Philippines, and yet lost a quarter of his men : Adrian Wreuter was nineteen months getting to Bantam, and loft out of the fhip, called the Fleffingue, one hundred and fixty-three out of two hundred : the fame happened to the other three fhips of that fquadron." Thus far these Dutch authors; who add, that the ship Concordia, going the other way, arrived at the Moluccas without lofing a man. And if they fay true, and make out that it is better to fail this way to their Batavia, how much better is it for the Spaniards, who drive a trade with Peru and Chile, the diftance being much lefs, and having for friends all the ports of Chile, if they would not go fo high as Peru, which the Dutch have not? Neither would it be a fmall advantage to exchange in those ports the merchandizes of Europe with their product, which is fo wanting in the Philippine illands, and all those parts of the east. Every one may find their account in this trade; the Spaniards, without running the danger of fickness in those unhealthy climates of Carthagena, Panama, and Puerto Bello, might find as much vent for the European commodities; Chile and Peru would have all goods from Spain much cheaper than they have them now by the Terra Firma; the charges then would be three times lefs; and, at the fame time, they would help off the products of those parts; as from Peru they might load corn, wine, and oil; and if they did not care to go fo far, they might have the fame things from Chile, and cheaper, befides copper, hides, almonds, and other commodities proper to Europe : fo that it is clear this would be a very advantageous intercourfe for the Philippines, who want all thefe commodities fo much.

4 †

Neither

Neither would the trade of New Spain receive any damage at all from this; for those countries could not have them from Peru and Chile fo eafily as from Europe; and fo Spain would fend lefs, only fo much as is carried to the Philippines from New Spain, which cannot be much; for the charge of carrying those European commodities from Vera Cruz, to be embarked again for the Philippines, is very confiderable, it being at leaft one hundred and fixty leagues by land from the Vera Cruz to Acapulco, which is the port where they are to be embarked; after which, they have a navigation of three months; and then, there being not always conveniences of fhipping in Acapulco, those commodities are kept fo long that they are fpoiled; and it is feen by experience how little of this trade turns to account : but it would be otherwife, if thefe commodities were carried from Chile, fince in two or three months, always in a temperate climate, they might fail with a conftant fouth wind, which blows all the fummer infallibly, and fo bring the product of Chile in a good condition to the Philippines. This commerce, though it would accommodate all parties, yet it must be confessed, it would be most beneficial to Chile, which would thereby have more vent for its product, and acquire more people to cultivate its natural fertility.

There have been two obftacles to this project, which have hindered its taking: the first is, the difficulty of passing the straight of Magellan, because it being so much elevated towards the pole, it cannot be passed but in certain months of the year, which, if those who attempt it do not hit, they are in danger of perishing, as in effect it has happened to some squadrons of ships, as I shall relate in the next chapter; though others have passed it very luckily in its proper feason, the straight itself having, as we have seen, many good harbours and shelters for ships.

The fecond obliacle is the fame that keeps the port of Buenos Ayres from being frequented, (for elfe all the treafure of Peru might be fent that way;) and it is, that the courfe of trade is fettled the other way, notwithstanding the great charge the crown is at to have two fleets, the one in the South, and the other in the North-Sea, only to fecure this passage; and that with the loss of fo many Spaniards' lives, that in the hofpital of Panama only, there was buried, as they told me when I went that way in the year 1630, above fourteen thousand perfons; and what must we guess then in the ports of Carthagena and Puerto Bello, which have been the span the fepulchre of fo many Europeans?

Notwithstanding all these mischiefs, this way is continued to maintain those cities already founded in those parts; though it is most certain, that the fame end, of carrying the filver to Spain, might be attained by one only fleet, with less danger of the fea. By that course the galleons would fail always in deep water, and not run the hazards they do between Carthagena and the Havanna, between which places they are fain to found all the way, and keep the lead going, to avoid the many floals that are in those feas, and in the canal of Bahama afterwards: besides that, the dangers of fickness would be avoided; for the Spaniards find by experience, that at Buenos Ayres they are healthy, that being in the temperate climate corresponding to that of Europe.

And for the fame reafon the navigation between Chile and the Philippines is not put in ufe; becaufe the courfe of things being once fettled one way, it is very hard to change them, though to a better. I fhall not purfue this matter any further, becaufe it feems to touch the flate and government, which is not my defign : perhaps time will bring all things to pafs; and that those of Chile themfelves will venture to find out this vent for their product. All confifts in trying; for the advantages on both fides would be fo manifest, that the fweet of them would foon make the way easy, and that trade would wonderfully enrich Chile and Peru, fince they might bring back to those

0 2

kingdoms

kingdoms all the commodities of China and Japan; and that without carrying any gold or filver, which might be preferved all for Europe. Thus the greatest part of this new world being enriched by its own product, the king's revenues will be the greater, as well as the returns in gold and filver the greater; and all things thus well accommodated, the fervice of God, and the divine cult and worship would be better carried on.

CHAP. V. - Of the Fleets; fome of which have been lost, and fome have happily paffed the Straight of Magellan.

AMONG the fleets which have been loft in the ftraight of Magellan, the first was that of four fhips fet out by the bifhop of Placentia for the Molucca islands; which having got to the ftraight with good weather, and being entered into it about twenty leagues, there role from the welt a ftorm, which blowing directly a-head, forced three of the fhips afhore, they not having room to turn or run before it; but all the men were faved. The fourth had better fortune; for going before the ftorm, fhe got out of the ftraight; and when the foul weather was over, came into the ftraight again, where the other fhips were loft, and found the men, who had faved themfelves on fhore, who prefently made figns and cries to be taken on board; but they with hearts full of grief answered them. "What would you have? We cannot relieve you, for the provisions we have on board are not fufficient for us, and fo we may fear to perifh all of us together." They could not fay to them the other words of the Gofpel, "Go rather to those who fell," because they were in a defart country, where they had no remedy, but to fend fighs to heaven, accompanied with inconfolable tears and cries, capable of moving the stones themselves. Thus they left them, purfuing their voyage, much afflicted to be forced to forfake them, and not be able to do any thing for them; but thefe are accidents and hard cafes belonging to the fea-faring men.

It is not known to this day what has become of thefe men; only there is a tradition, that a great way within land, on the continent of Chile, near the ftraight, there is a nation called Ceffares, who were endeavoured to be difcovered by Don Hieronimo Luis de Cabrera, governor of Tucuman, about eight and twenty years ago, with a good army raifed at his own charge; but his diligence was in vain, as we have marked already, and told the caufe of his mifcarrying. It is thought, and it is very probable, these Ceffares may be descended from those Spaniards who were faved in this shipwreck ; becaufe it was poffible, that feeing themfelves without any other recourfe, they might go on into the Terra Firma, where, contracting alliance with fome Indian nation, they may have multiplied, and the fame of them may have reached the neighbouring nations, and fo on to others. This is certain, that this tradition is much kept up, that there is in those parts an European nation called Ceffares. Some fay, that there has been heard the found of bells, and they have founded cities where they live; but, in fine, there is no certainty of all this. A gentleman born in Chiloe, and who has been a colonel in those parts, gave me in writing a relation of feveral traditions and informations of great numbers of people that inhabit the land within, and who have much gold. There has been made feveral attempts to difcover them, though all have mifcarried for want of provisions, or by other accidents, which in time may be remedied when it pleafes God. And at this very time I have received letters, which acquaint me, that father Hieronimo de Montemayor, apostolical missionary of that archipelago of Chiloe, had entered into the Terra Firma in company of Captain Navarro, a man very

100

famous

famous in those parts; and that they discovered a nation, which it is thought are these Ceffares, becaufe they are a nation of white complexion, and fresh cherry cheeks, and who, in their fhape and difposition of body, feem to be men of mettle; and that they had brought fome of them along with them, to endeavour to inform themselves of that which they fo much defire. This is all the father wrote at that time, because the fhip could not flay, and there is but one fhip every year bound for those parts; fo he was forced to refer himfelf to the next conveniency, to inform me more particularly of the original and defcent of this nation; fo that this is all that at prefent we can fay of this nation of the Ceffares, which it is poffible may come from these shipwrecked men; or elfe they may defcend from fome Dutch, who may have been fhipwrecked in the fame place, or thereabouts; and their complexion feems to fortify this conjecture; befides, that they fpeak a language which no body then prefent could underftand; or there may be both Spaniards and Flemings. It is thought we fhall not be long without knowing the truth, and fo I continue my narration. The fecond fleet which mifcarried in the ftraight, was that which was fet out about two and twenty years ago, under general Ayala, a gentleman of high birth and valour; who going from Spain to Chile, dealt with His Majefty for a relief of men, which he was to carry through the ftraight of Magellan, without landing any where elfe; but juft as they were entering it, they were all caft away, fo as to this day there has not been any account of them, except of the vice-admiral's ship, under the command of Francisco de Mandujava; for, having loft fight of the admiral in the ftorm, fhe was carried before the wind to the port of Buenos Ayres, where he landed the men, and marched them over land to Chile. I heard fome of the men talk of this matter; and they used to blame the general very much, for having gone about to enter the ftraight when the time of the year was fo far advanced, particularly having been advifed in Brafil, where he touched, to winter there, which he refused to do, for fear his people should defert him, and fo he and they all perifhed.

These accidents feem to have made this paffage lefs practicable; but yet we know that many have paffed this ftraight with little danger, and fome with great felicity. Eight fleets are mentioned by John and Theodore de Bry, as well Spaniards as foreigners, who have paffed this ftraight; and though fome have had bad weather, yet there is no doubt but time and good observations may make it more feasible; particularly there being fo many good harbours and bays in this ftraight, where fhips may fhelter themfelves, and let the ftorms blow over.

CHAP. VI. - Of the Province of Cuyo.

AFTER having treated of the two first parts of the kingdom of Chile, we must fay fomething now of the third, which contains those large provinces of Cuyo, which are on the other fide of the Cordillera, towards the east. We have already defcribed their fituation and extent, let us treat now of the nature of them. And to begin with their ill qualities; it is a wonderful thing to confider that there being nothing between them and Chile, but the high mountains of the Cordillera, yet they are fo different in their qualities. We have already mentioned fome; but we may fay, that as to their temperature, they are in every thing entirely opposite; for first, the heats are exceffive and intolerable in fummer; and for that, as well as for the vast quantity of bugs or punaifes, which are there, fome very fmall, and others as big as bees, one can hardly fleep anights in the houses, and therefore the people all fleep in their gardens and court-yards^o There There are almost perpetual thunders and lightnings, and many poisonous reptiles and infects, though not fo many as in Tucuman and Paraguay. There are likewife a fpecies of mosquitos, or gnats, no bigger than the points of needles, and as fharp in their sting, though themselves are almost imperceptible; they get into the hair of one's beard, and one cannot be rid of them any other way, than by killing them.

Thefe are the evil qualities of the land of Cuyo; let us now mention the good ones. The land is fo fertile, that in many things it exceeds even the richeft foil of Chile; the crops are better, the fruits larger, and of better tafte, by reafon of the great heat, which ripens them more: there is good flore of corn, wine, flefh, all forts of fruits, roots, and herbs of Europe; as alfo great quantities of olive-yards and almond-grounds; fo that the only effential difference between it and Chile, is the many venomous animals, and the thunders and rains in fummer; though to make fome amends, if Chile exceeds in fummer, Cuyo has the advantage in winter; for though the cold is fharp, yet it is not with fuch clouds, nor fuch fnow and rains, as in Chile; but rather the weather is ferene, and the fun beautiful and clear, without any dark weather, which makes it very temperate.

There is no fea-fifh in this province, it being very far from any fea; but it has ponds, which are called the ponds of Guanacache, where they catch great quantities of trouts, as they call them, which are very big, like the Savalos of Seville, but much better without comparison; for they have no finall bones, and are of a higher relifh, and a very healthy food.

Befides the fruits of Europe, this country has feveral very good of its own. The first is called Chanales, which are like filberts or finall nuts; only the difference is, that that which is to be eaten is not within, but on the outfide of the fhell: the other is the Algaroba, of which they make bread fo fweet, that it naufeates those who are not used to it. All Tucuman, as far as Buenos Ayres and Paraguay, are provided from hence with figs, pomegranates, dried peaches, and dried grapes, apples, oil, and excellent wine, of which they have abundance, which they carry over those vast plains called the Pampas, (where for many leagues together there is not a tree, nor a flone to be found,) in large carts, fuch as they use here in Rome; and they are a caravan of them together, to defend themselves from certain Indians, who are enemies, and often attack them by the way.

Some years ago, they began to difcover here rich mines of filver, the fame of which drew people from Potofi when I left Chile, becaufe they were reputed to be richer, and of more profit than those of Potofi, all provisions being more abounding and cheaper too. These mines were alfo faid to be in a plain country, where carts might come eafily. They write me word likewife, that there have fince been difcovered gold mines of a prodigious richnes. It is true, indeed, that in this matter of mines, there is a great difference between the affaying them in little parcels, or in great ones; for often the ore that promifes much, yields but little, when the affay comes to be made in great. This is a common observation in mines; and if these of Cuyo do not prove extraordinary rich, there will hardly come any people from abroad to them, particularly from Chile, where they have already fo many and good ones, of fuch a known profit, and yet they do not work them, the people being more profitably employed in husbandry, which turns to greater account.

I will give here an extract of a letter which I received in Rome this year from father Juan del Poço of our company, a perfon of great piety, and worthy of credit, who is at prefent in the college of Mendoça, the chief of all those of the province of Cuyo, and it is thus:—" The greatest news here, is about the mines which are begun to be discovered, which if it holds as they relate, it will be the greatest thing in the world:

they

they are of gold, which is feen among the filver ore : there are come very underftand ing miners from Potofi, who cannot give over commending them. There come people from St. Jago to work them, and Captain Lorenço Soares is named for Alcalde Mayor of these mines."] There are others who write the fame thing; and there is no doubt to be made, but that if they can have people, that country will be one of the richeft of all the Indies; for its great fertility wants nothing but people to cultivate and confume its product. This will make the three cities of that province, which are that of Mendoça, that of St. Juan, and that of St. Luis of Loiola, increase mightily, which fince their first foundation have been at a ftand, by reafon of the neighbourhood of Chile, which has kept them down; many of the first inhabitants of Cuyo having left it to go to Chile, as being more temperate, and more abounding with the conveniences of life; for the fame reafon that we fee in other parts most people flock to the capitals of a kingdom, as is evident in Naples and other great cities. But if the Spanish inhabitants increase as they have done hitherto, there will be enough for all these parts; and already some of St. Jago have fettled, and married at St. Juan and Mendoça; neither can it be otherwife, for the people of Chile are beginning to be for ftraightened, that they cannot have all the conveniences of being at large, and fo are forced to feek them abroad.

And it is most certain, that the conveniencies of this province are very great; and their not appearing fo, is owing only to their neighbourhood to Chile, in comparison of which these countries appear a place of banishment, and is looked upon as the most rigorous that can be given any one in Chile; because to fay truth, the difference is very great, confidering the proprieties of each place; but if we confider Cuyo, without comparing it, it is not only a good place, but furpasses many others, where nevertheless the inhabitants think themselves very happy, though wanting the abundance of Cuyo, where the fless very fubstantial and favoury, and great abundance of game, as also of pork, turkeys, ducks, hens, and other tame fowl.

The wines are very generous, and of fo much ftrength, that though they be carried three or four hundred leagues over those plains, and the intolerable heat of the Pampas, and that by oxen, yet they come good to Buenos Ayres and other places, and are preferved with the fame facility, as long as one pleases, without spoiling; and they are in fuch quantity, that all the provinces round are supplied with them, nay, as far as Paraguay, which is three or four hundred leagues more. The bread is excellent, fo is the oil, and all forts of legumes and gardening; the fish better than the fea-fish; the flax and hemp as good as that of Chile; the materials for tanning very good; and, in short, it has all necessaries for life, with as much advantage as any other country.

This being thus, and even more than I relate, what is there wanting to this land, or what are its blots? punaifes, thunder, lightning, hail. And what other country has not fome of thefe? Shall we fay, becaufe God has exempted Chile by a fingular providence from thefe things, that therefore Cuyo is an ill country? No, for then we muft condemn moft countries where thefe afflicting circumftances are found. And though it muft be owned, that in the fummer the heats are great, yet they do not exceed thofe of Tucaman, Buenos Ayres, and Paraguay; and they are inferior to thofe of Brafil, and thofe of Carajas, Carthagena, Puerto Bello, and Panama, as I myfelf have experienced in fome of thofe places. And thefe parts of Cuyo have fome amends made them from the neighbourhood of the fnow; for the city of Mendoça is not above a league from the Cordillera, which is full of it; and likewife the good qualities of the air do fomething moderate the heat; for it is fo healthy, that it never hurts any body by being in it, it, which makes them fleep in their gardens abroad, without any apprehenfion, except it be of some sudden shower which does often happen in summer; for on a sudden, though the heavens be clear and bright, it grows cloudy, and falls a raining with great fury; but this may be eafily remedied; and likewife the thunders and thunderbolts might be avoided, which are the things which fright those of Chile most, they being fo little ufed to them; and therefore at the very name of Cuyo, they think the heavens are falling upon their heads, or that the punaifes, and other naufeous vermin are never to leave them; fo that no greater mortification can be proposed to an inhabitant of Chile, than to go to live in Cuyo. And befides all this, the vaft fnows which fall on the mountains, fhut up the paffes, and hinder all communication or intercourfe; fo that in five or fix months one cannot receive a letter, though those two provinces are not above thirty or forty leagues afunder, that is, the breadth of that chain of mountains called the Cordillera. This therefore is that which difcredits Cuyo; and if it had been further off from Chile, it would have had a better name; but it is with that, as with two loaves, which though both good, yet if one be whiter and better, no body will touch the other, the beft being always most pleafing.

CHAP. VII. — Of the Confines of the Province of Cuyo, and particularly of its Eafterly Bounds, the Pampas, and of the River of Plata.

THE confines of this province of Cuyo to the weft, are Chile; and to the eaft, the Pampas, or vast plains of the Rio de la Plata, and part of Tucuman; which reaching as far as those of Rioca, and the mountains of St. Michael, with all the rest as far as Salta and Jujuy, make the north fide of it; and to the fouth, it has the ftraights of Magellan. All this continent is called the Efcombradas, or plains without hindrance; for there is not fo much as any ftop to the eye; but it is like a fea, and the fun feems to rife and fet out of the earth; and at its rifing, it is fometime that it gives but little light; as alfo it lofes fome of its beams before it be quite out of fight when it fets. The way of travelling in those plains is with very high carts, which they cover over neatly with hoops, over which are cow-hides, with doors to go in and out; and thefe are drawn by oxen : there are alfo windows to give a free paffage to the air, and on the bottom one makes one's bed with fo much conveniency, that often travellers fleep out the whole journey, and feel not any of the inconveniences which attend it. Generally they fet out about two hours before fun-fet, and travel all night, till it be an hour or two after fun-rifing; fo that a traveller just wakes when he comes to the baiting-place. This must be owned to be a great conveniency; because one may also walk on foot fometimes, in the cool, before one lies down, and fo one comes merrily and eafily to one's journey's end.

There is alfo another entertainment which helps to pafs the time pleafantly, and that is hunting : and for this end fome carry horfes empty, and dogs on purpofe; and there is game enough both of hare and venifon : for there are herds of Guanacos, of two or three hundred. The dog follows them; and the young-ones, not able to follow, are left behind, which the hunter knocks on the head with a club he carries, without lighting from his horfe, and returns to the carts loaden with venifon, which ferve for provifion as well as entertainment. At other times they follow the partridges, france lins, or the bird called Quiriquincho. But to all this there are abatements and mixtures of trouble : the first is, the mighty heat in fummer; for which reafon, left the oxen fhould be ftifled with it, they travel in the night; and when they come to halt, halt, or bait in the day time, it is in places where there is not fo much as a tree, under whofe fhade one may reft: nor is there any other fhade than that of the cart, and fome coverlet upon it; for to go into it, is like going into an oven. But this is not all the way, there being fome pleafant running ftreams and rivers bordered with green willow-trees, which very much mitigates the fury of the heat. The greatest inconvenience that I perceived in that journey, was the want of water; which is fo great, that we were forced to provide ourfelves, when we arrived at any of thefe rivers, for many days journey; for there is no other, except fometimes fome plashes remaining of rain-water; and that is all green, and can ferve only for the oxen: and yet this is rare too; for thefe are often dried up to mud, and then one is forced to double the day's journey, and march as for again; fo that the cattle is almost dead with thirft. I have feen fometimes, on these occasions, the oxen take a run as if they were mad or poffeffed; for they know by inftinct, a league or two before they come at it, the places where it is, as if they fmelled it; fo there is no ftopping those that are loofe; and even those who are at the yoke, make what haste they can; and when they get to the water, they raife the mud fo by their hafte, that they drink as much mud as water.

When this happens, while there is any of the water left that was taken at the river, and carried in carts, the misfortune is the lefs; but when that water is already fpent, the people fuffer extremely: for though most commonly fome one man is fent before to take up fome water of the clearest, before the oxen trouble it, yet they make such haste, that that prevention most commonly miscarries; and then we are fain to stop our noses, and shut our eyes to drink, and divert even our imagination, if we can. And to all this there is no remedy, but from heaven, as it happened to me once, that it pleased God to fend us a shower in our greatest extremity, which filled several wells, and there was enough for us and our cattle, as also to carry away; for which we thanked the Divine Majesty, acknowledging his great mercy to us in so prefsing circumstances.

This fuffering would not be fo great, if there were any towns and villages in the way; for there are little lakes, by which they might fettle, which, though fome years they yield no water, yet it is to be come at by a little digging, and that not very deep; and if there were people in those defarts, wells might be made, or the rain-water gathered in cifterns, as it is practifed in feveral other places. But thefe plains are fo vaft, that they can hardly be peopled, being extended for feveral hundred leagues; and befides, there being no trade fettled of any importance in those parts, there cannot be inns nor places of fhelter fettled; and fo at prefent, whoever travels that way, muft carry every thing; for when once one is fet out, there is no addition to be made; and therefore all is to be provided, more or lefs, according to one's ability; and that must be at least a fortnight's allowance, and fometimes twenty or thirty days, till one comes to fome inhabited place. This is the manner of travelling in the plains of Cuyo, and Tucuman, and the Rio Plata, where in many leagues one does not fee a hill, nor a ftone, nor a tree, but continual plains; and if, to drefs your victuals, you have not the forefight to carry fome wood, all the remedy is to gather the cow-dung, which ferves the turn very ill. In fome places of this province of Cuyo, there are woods near the rivers, from whence may be had materials for building; and hard-by the Cordillera there is a fort of tree that breeds incenfe. I brought fome of it to Rome, and the druggifts told me, that it was finer than the ordinary, confumed in churches. There grows there also the herb called Xarilla, which is very hot, and a good medicine, as we have faid already. There are many others, of which I cannot give fo particular an

VOL. XIV.

P

account,

account, as not having made any ftay in those parts; neither am I in a place where I can advantage myself of those relations, that others might give me; and which may ferve for larger histories than mine, I pretending only to brevity. Therefore let this fuffice for an account of the fituation, foil, heavens, proprieties, trees, plants, fruits, metals, flocks, fountains, rivers, fea-fishes, and birds, in all the three parts or divisions of the kingdom of Chile. Let us now fay a word of its inhabitants, the old Indians, who have possed it all formerly.

BOOK III.

OF THE INHABITANTS OF THE KINGDOM OF CHILE.

CHAP. I. - Of the first that peopled America, and their Antiquity.

THE knowledge of the first inhabitants of the kingdom of Chile, depends necessarily upon that of the first inhabitants of America, which is not easy to be made out-If we fhould take the opinion of the Indian Guancas, near the valley of Xavia, they would certainly affirm, that which is a conftant tradition among the natives of Peru, and before they had any knowledge of our faith, and is, that many years before there were Ingas, who were the kings of those parts, the country being very populous, there was a great deluge : (thus far it is well.) But then they add, that in the hollow rocks of the highest mountains, there remained some alive, who returned and peopled the earth afresh; and the fame tradition is received by the Indians of Quito in Collao. If this were fo, the Indians of Chile might lay claim to the new peopling of America; for if any, their mountains were most capable of refisting the deluge, they being the higheft that are yet difcovered. There are other Indian mountaineers, who are lefs miltaken; for they affirm, that none could be faved in the mountains, becaufe they were all covered with water; but that fix were faved in a float they made. If they had faid eight, they would have hit upon the number which the apoftle St. Peter fays efcaped with Noah in the ark which he built.

Antonio de Herrera, in the third tome of the General Hiltory of the Indians, excufes thefe errors of the Indians, faying, it was probable there was fome particular deluge in those parts, to which they might allude, because all the nations of that world are agreed in this tradition. The true and natural excuse is, that these poor wretches have not had the good fortune to see the chapter of Exodus, where they would have been undeceived; for there it is faid, that "out of the ark of Noah there was not left any living thing upon the earth, and that the water was fifteen cubits over the tops of the highest mountains." The other Indians, who talk of the fix men faved on the float, may have had fome tradition from their forefathers, who were nearer the time of Noah, about the ark; and as they are a people who have no books, because they cannot read, whatsoever they might learn from their ancestors, and retain in their memories, might by degrees be lost, or diminisced; and so the descendants came to have the tale of the float and the fix perfons, not examining how it poffibly could be, that upon fo flight a contrivance, which can hardly laft three or four days in the water, those people should maintain themselves for so long as the deluge lasted. As for the manner and time, how and when the descendants of Noah paffed to people this new world, or how their generations have extended fo far, it is a most difficult thing to make out; for the Indians being without written records, as other nations have, there is no diving by their memories into their antiquities, which even when they are committed to writing, ufe to produce variety of opinions about the origin and beginning of things. Befides, there was in Europe, even among the most learned, fo great an ignorance of all that regarded America, that it was judged fcarce inhabitable, if it was at all; and fo they could give us no light of a thing they had no notion of, or which they thought impossible; but after the discovery of this new world, people began to reafon, and every one made his gueffes or reafonings as well as he could. Some have faid, with reference to what is hinted by Plato, in his Timæus, (as is related by our father Acosta, in his first book of the New World, in the twentyfecond chapter,) that people paffed from Europe and Africa, to certain iflands; and fo from one to another, till they came to the Terra Firma of America.

The fame author advances fomething more probable, in his nineteenth chapter; where he fays, that fuppofing we all came from the first man Adam, and that the propagation of the fpecies of mankind, after the deluge, was made by those only who were faved out of the ark of Noah, it is not improbable, that the first inhabitants of America came to those parts, not with defign, or by their own industry, becaufe of the little ufe of navigation that was in those days, and particularly through fo great a fea; but that they were caft by fome form on those coafts, as it happened fince in its first difcovery, as we shall fee hereafter in its proper place. He brings, to prove this, the example of feveral fhips, which, contrary to their courfe, have been driven to very remote fhores. This is every day's experience, and will not furprife those who know any thing of the ftrength of the winds and currents in those feas; and that which the fame father Acofta alledges of himfelf, that he had fuch a paffage, that in fourteen days he came within fight of the first islands of the gulph of Mexico, going from Spain.

This, though probable, has yet a ftrong objection against it, which is about the wild beafts, fuch as tigers, lions, wolves, and others of that nature, which could not be carried in fhips, becaufe they were of no ufe to mankind, but rather mifchievous : and though fome may answer with St. Austin, in his fixteenth book De Civitate Dei, chap. 7. when he folves the difficulty how these animals came into islands, and fays, that they might either fwim thither, or be carried by hunters, or that they might be created a-new by God Almighty, as they were in the beginning of the world; which is the beft folution, if it were as probable as it is eafy to fay. But first, there is against it the opinions of philosophers, who will not allow any great animals to be propagated any other way than by generation. And befides, if God, as without doubt he might, had created them a-new, what neceffity was there for him to command Noah to take fo many pairs of all living creatures, all male and female? which care feems fuperfluous, if God defigned to make a fecond creation of all those states the deluge. It is more probable, thefe creatures might arrive at the iflands fwimming, and the birds flying, particularly to the nearest islands; but this does not prove, that they could arrive at those remote parts of America, there being fuch a vaft ocean, that it is not poffible that either beafts or birds fhould have fo much ftrength as to fwim or fly over it; for this reafon he concludes in the end of the one and twentieth chapter, that the men, as well as animals, paffed either by land or water to America, near fome

fome part where it joins to the other parts of the world, either by the Terra de Bacalaos, or the ftraight of Magellan, that is not feparated but by ordinary little feparations of water and fea, which might be eafily paffed in finall veffels, fuch as were in ufe in those antient times.

This is the author's opinion; which, as to the Terra de Bacalaos, carries with it only the probability of an ingenious conjecture, becaufe as yet that part of the world has not been difcovered; but if in time it proves like the conjecture about the ftraights of Magellan, it is all without any grounds; for, as we have already related, it is now made plain, that America on that fide is entirely divided from the other parts of the world by a vaft fea. It is true, that to the eaft it is not known yet how far that land runs, which is over-against the Terra del Fuego, and is on the east fide of the straight of St. Vincent, otherwife called the ftraight of Le Maire; for fome think that it may run as far as the Cape of Good Hope, and fo be fo near that part of Africa, that men might pafs in fmall veffels from the one to the other. It is likewife uncertain, that the continent of America ever was nearer than it now is to any other continent, or that the fea has fince broke away part of either, to make the feparation wider, as we have observed it did in the island of Sancta Maria, which is supposed to have formerly been all of one continued piece with the firm land of Arauco; but thefe are all conjectures, and he alone knows the truth who created thefe men, and other animals of America, and by whole providence they paffed to thole parts, for the great ends of his hidden fecrets; to whom, with all veneration for his counfels, we must fubmit the enquiry, why he has been pleafed that that part of the world fhould remain undifcovered for fo many ages, without any communication with those parts where his divine light has appeared fooner. These are confiderations for the good to make use of with thanks, for having been admitted to it; and confusion of the wicked, who at noon-day are as much in the dark as if it had never dawned.

Peter Bertius, in his geography, as John and Theodore de Bry do relate, collects the antiquity of those nations of America, from their most antient kings and lords, and from the ruins of antient edifices, and other memorable things; for this argues the largenefs of time in which all this was done. Amongst other things he mentions the report of one of their gardens belonging to fome king, which must be of Peru, who were always the richeft,) in which all the herbs, and plants, and fhrubs, with their trunks, leaves, and flowers of their natural proportion, were of mafly gold; and in the houfes of recreation, there were all forts of animals made of precious ftones, and fome of feathers of various colours. They fay befides, that the Ingas, who were the emperors of Peru, were the richeft princes in the world : and that they had fo much gold, that not only the plate they eat in were of that metal, but all their houshold ftuff and furniture were of the fame, to their tables, benches, cupboards, nay, to the flatues themfelves; a great deal of which fell to the Spaniards' thare when they conquered those parts; but the best part was hid and concealed by the Indians, which to this day they keep undifcovered, being in that way of fecret intractable and extremely clofe. Neither is it any wonder that those princes should use fo much gold, fince they were masters of more of that metal than any others; being fo beloved by their fubjects, that whatever they had that was precious, they prefented it to them; and they were fo inclined to hoard it, that whoever fucceeded in monarchy made it a point of ftate not to touch, but rather to increase the treasure of his father; of which a great proof was the vaft fum which Atahualpa offered for his ranfom, and paid to the Spaniards for it, as we fhall fee hereafter.

10

Amongft

Amongft other precious pieces of gold work, authors make particular mention, and admire with reafon, that chain which the king Guaynacapa, the eleventh king of Peru, caufed to be made at the birth of his fon Guafcar., who was to inherit his crown, for each link of it was as big as the wrift of a man, (as is reported by Gareilaffo de la Vega, who had it from an uncle of his, an Inga alfo, who told him, when he afked the bignefs, as big as this, fhewing his wrift,) and as long as twice the length of the great place of Cufco, which in all might be about feven hundred feet long. And the condator, Auguftin de Varate, in his firft book, chap. 14. treating of the incredible riches of that Inga, fays thefe words: "Guaynacapa at the birth of his fon, caufed a great cable of gold to be made (as is attefted by feveral Indians now alive) of fo much weight, that two hundred Indians could but juft lift it up from the ground; for memory of which they gave the name of Guafcar Inga to the new-born prince; for Guafca fignifies a cable; and the firname of Inga was added, as that of Auguftus to the Roman emperors." Thus far this author: but this name, or word Guafca, not being fo decent in its fignification for a prince, they added the r to it, and neverthelefs eternized the memory of that rich chain.

The chiefeft motive the king had to order this chain to be made, was, that the dances which were to be made at his birth, might be more folemn and worthy of his royal perfon; becaufe the manner of dancing of the Indians, is to take one another by the hands, and make a circle: and fo moving two fteps forward, and one backward, draw clofer and clofer to the king, to make their obeifances; and the king caufed this chain to be made, for them to take hold of, inftead of taking hold of one another.

A great proof likewife of this antiquity of the empire of Peru, is those two highways mentioned by Herrera; for being of that vaft length, and worked with all those conveniences for travellers, they could not be made but by length of time, and with a long continued labour. This is what I find of the antiquity of the first inhabitants of America, in which we may comprehend the Indians of Chile.

CHAP. II. — Of the great Courage and Boldnefs of the Indians of Chile.

THE Indians of Chile are famed by all who have writ of them, for the boldeit and most valiant warriors of all the vast extent of the new world : it were to be wished by us, that this had not been confirmed by woful experience, for then the kingdom of Chile would have been one of the most flourishing kingdoms of the Indies, without the continual wars which it has maintained for about an hundred years, without ever ceafing, or laying down its arms. This is the more confiderable, if we reflect, that the Spaniards having fubjected, in fo little a time, those vaft empires of Mexico and Peru, have neverthelefs not been able, in fo great a time, to conquer the Indians of Chile, fons of the great Cordillera, from whofe rocks they feem to borrow their untameable ftrength and fiercenefs. Except we fhould fay with Friar Gregory of Leon, that this bravery comes from the fertility of the earth, which, as he fays, and is true, does not need any thing from abroad. To which he adds, the birth of thefe people, who all their life tread upon fo much gold, and drink the water which runs over thefe rich minerals, by which they participate of its good and generous qualities, as it is obferved of those who live at Potofi, near that vaft mountain of filver, who are fo ftout and haughty, as has appeared in the many revolutions that have happened there. Let this be as it will, all authors agree, that they are the top nation of America, though

though hitherto no one has treated purpofely of this matter. There are now two hiftories in the prefs, which will make out, by particulars, all that has been faid of this nation. Don Alonfo de Ereilla fays enough, in his famous poem called the Araucana; but becaufe it is in verfe, it feems to leffen fomething the real truth ; and yet abstracting from the hyperboles and enlargings of poetry, all the hiftorical part is very con-formable to truth, he being a gentleman of great quality, and an eye-witnefs of what he affirms; for what he wrote was not by hearfay, but upon the very fpot where the things happened; fo that he might have had as many contradictors as he had witneffes, who were prefent as well as he at what paffed.

He dedicated his book to the most Catholick King, his lord and master; and prefenting to him with his own hand, when he came from Chile to Spain, it is to be prefumed he would not have dared to fail in the exactness of truth, for fear of receiving a chaftifement, inftead of a reward, which he obtained for it. Let any read his prologue, in which, in a very good style, and in profe, he gives a noble account of the valour of the Indians, and concludes his preface with these words :--- " I have faid all this, as a proof and clear demonstration of the valour of these nations, worthy of all the encomiums I can give them in my verfes; and befides, there are now in Spain feveral perfons who were prefent at many of the actions which I here defcribe, and refer to them the defence of my work on that fide." Thus far this author, worthy of immortal praise for his incomparable book, which, though published above fifty years ago, and printed in Spain and Flanders, is yet continually reprinted; which shows the value the curious and the learned have for it. The Araucanos are indeed the chief fubject of it; and yet what is faid of them may be extended to all the Indians of Chile, as we fhall fee in its proper place, when we fhall treat of the wars they had with the Spaniards.

But before ever the Spaniards fet their feet on their ground, they had given fufficient proof of their bravery, which was invincible, to the Ingas, emperors of Peru, fince with all their power they could never conquer them, though they endeavoured it, as being extremely inclined to enlarge their dominions; and they defired it the more, for the fame of Chile, to which they fent a powerful army, and which made fome progrefs at first, subjecting fome nations to extraordinary tributes. But as they purfued their point, and came to the valley of Maule, they met with the Promocaes, to whofe fuccour the Chilenos, who inhabited more within the country, were come, and forced the army of the Ingas to retire in hafte. Garcilaffo de la Vega relating this more particularly, fays,

That the Inga yn Pangue, the tenth king of Peru, came to the confines of his own kingdom, to a place called Atacama, to be nearer at hand to attend the conqueft of Chile: and from thence first fent his fourts through the fourfcore leagues of uncultivated country, which was between his kingdom and Chile, with orders to difpatch a man, every two leagues, with an account of what they difcovered; which they did, one meffenger following another, and leaving in the way certain marks, whereby they that came last might guide themselves. He first fent ten thousand men, under the command of General Sinchiruca, and two other colonels of his own kindred, not being willing to commit to any other's care fo great an enterprife. They came within fight of the valley of Copiapo, which is the first inhabited valley of Chile; with the inhabitants of which, the Peruvians began to skirmish, because they had not admitted the embaffy which they fent them as from the Inga, to own him for their lord; and withal, having given notice of the refiftance they found to the Inga, he fent them ten thousand men more, with a new fummons, affuring them, that his defign was not to take their 12 country

110

country from them, but only that they fhould own him as fon of the fun, and lord of all that was warmed and enlightened by him. Those of Copiapo seeing this new relief to their enemies, and knowing that it would not be the last, because the Inga yn Pangue was preparing another fuccour, and being convinced that this acknowledgment would cost them less than the blood that must be spilt in a long resistance, they agreed to own the Inga as he defired.

This was the first entrance of the Peruvians as far as Maule, which is one of the rivers of Chile, as has been faid already. By this time, the army of the Peruvians was fifty thousand men, and defiring to profecute their conquest, they fent their ordinary embafiy to the nation of the Promocaes, who having already been informed of their invading their neighbours, were in arms to defend their country. The ambaffadors of the Inga delivered their accuftomed meffage, protefting, that their lord defigned nothing more, than to be acknowleded as fon of the fun, and honoured accordingly by their fubmiffion. The Promocaes, who were refolved to defend their liberties, made anfwer, " That the conquerors fhould be the lords and mafters;" and fo uniting all their forces, came on the fourth day, and prefented battle to the Peruvians. The Inga's generals, furprifed at fuch a courageous refolution, fent them a new fummons, defiring their friendship and peace, calling the fun and moon to witness, that they came not to fpoil them of their lands or goods, but only to oblige them to own the fun for their God, and the Inga for his fon and their lord. To which they received anfwer, that they came not to fpend time in talking, or vain difcourfes, but to fight manfully till they fhould conquer or die; adding, that they might prepare themfelves for battle the next day, as it happened; and the Promocaes overcame that powerful army of the Inga's, fo that they had no mind to try their fortune any more, but made their retreat, leaving the Promocaes in peace, and full pofferfion of their lands, which they had fo bravely defended. Antonio de Herrera, in his third tome, and fifth decade, treating of the reafon why those of Chile refused to fubmit to those monarchs the Ingas, fays, that it was because of the great reverence with which they made their subjects treat them, as if they were gods, and approach them as if they were another fpecies; which the Chilenians could not bear, their mind being too lofty and generous to fubmit to fuch a tyranny, which they conftantly oppofed ; infomuch, that though the Ingas had conquered the best part of that continent, yet the Chilenians never did yield to their power. Perhaps the nearest provinces to Peru, such as those of Gualco, Coquimbo, and Copiapo, did in fome meafure acknowledge their power, fince they paid a tribute in gold; and for that reason, these provinces alone in all the kingdom of Chile, do fpeak the common language of Peru, which is a very ftrong proof of what I here fay.

For the fame reafon that they refifted the Ingas, they did not care to have any king of their own nation, the love of their liberty prevailing against all the reafons of state, which might move them to have one monarch; neither did they fall into any popular form of government, or commonwealth; for their warlike temper did not afford patience enough for the phlegmatick debates, neceffary for the union of fo many minds. Thus every family chose one among them to govern them. From this arofe the Caciques, who are the fovereigns among them, and by degrees had that power hereditary, and their children after them enjoy it, with all its rights.

But though every one governs independently his own diffrict or jurifdiction, yet when the occasion offers, that the fafety of all is concerned, there is an affembly of the Caciques, and fome of the elders of the people, who are men of experience, and are furmoned after their way by particular meffengers. In these councils they refolve what they think most convenient; which, if it be a cafe of war, either defensive or offensive, they chufe the general, not one of the most noble of the Caciques, or the most powerful, but he who has the fame of the most valiant, and has best behaved himself on the like occafion against their enemies; and when he is justly chosen, all the other Caciques obey him punctually. It is after this manner that they have preferved themfelves fo many years against all the strength that has been brought against them. To make these affemblies, they chuse out some very pleafant place, field, or meadow; and thither they bring great flore of provision, and ftrong drink, called Chica, which is inftead of wine. Being all affembled, and well warmed with this liquor, and excited in their martial temper, there rifes up one of the most ancient, to whose lot it falls, to propose the bufinels of that meeting; who with great eloquence (for in that they are very famous) opens the matter, and brings all the reafons and motives of perfuasion that he can. All are obliged to yield to the majority of opinion; and when the refult is made, it is published with the found of drums and trumpets, and a mighty noife; but yet allowing every one the term of three days to reflect and confider on what has been refolved; after which, if they find no inconveniency, the execution is infallible, and they think of the means of bringing the bufinefs about by the most proper methods.

CHAP. III. — The fame Subject is purfued, and the Nobility of the Indians of Chile examined.

ANTONIO DE HERRERA, in the place already cited in the laft chapter, fays, that there are fome of the Indians reputed above the reft as gentlemen; and then he adds thefe words, "Of this fort have been, and ftill are, the Indians of Chile." In which he fays well; for if valour and the glory of arms make gentlemen, as may be feen in Andreas Tiraquello, in his book *De Nobilitate et Jure Primogenitorum*; and if many noble families do to this day derive themfelves from fome great captain or famous foldier, the Chilean Indians having fo often fignalized their valour in fights, they may very juftly be diftinguifhed from all the other Indians, and reputed more noble. In fhort, they are the untamed Cantabri of America, who, like thofe of Europe, defended themfelves, when all the reft of it was enflaved; and repulfed the conquering monarchs of Peru to the extreme confines of their provinces.

And there is one circumftance more particular than under the Cantabrians, becaufe they had the advantage of their mountains, and the barrennefs of their country, not fo inviting to a conqueror; but in Chile it was otherwife: the richnefs of its mines, and its foil full of delicious valleys, and a clear and rich territory, having been always well known, the only valour and bravery of its inhabitants was then the defence of the country: thefe were the fortreffes and walls of it; for without a bit of fortification of any fort, or fo much as one fire-arm, they obliged their powerful enemy to a fhameful retreat. Indeed, this is a thing worthy of great admiration; yet not fo much to thofe who know how thefe Indians value themfelves upon being good foldiers, ufing themfelves to arms, even from their childhood; of which, it will not be amifs to fpeak a little.

When a child is ftrong enough, they make it run up the rocky fide of a hill, giving him that does it beft, fome prize or reward: this makes them very nimble and light; and I have feen them, in their feafts and entertainments, run two and two for wages with wonderful fwiftnefs; and thofe who fhew little difposition to this exercise, are applied to follow day-labour, but the others they referve for war, not fuffering them

112

them to take any other employments, but mind their arms and their horfes, that they may be perfect in all their exercifes. To thefe they affign their poft upon occafion, according as each has behaved himfelf in thofe which he has been in before; and they have in this no confideration of gentility, interceffion of others, or other motives, but that alone of a good performance, and the many proofs given by them of their courage and conduct in war.

The arms they use are pikes, halberts, lances, hatchets, maces of arms, bars, darts, arrows, and clubs; as alfo ftrong noofes to throw upon a horfeman, and flings. Their horfe fight with lance and buckler, which they have learned from the Spaniards, and from them they have had their horfes; for before their time, they had neither horfe nor iron, but they have a hard wood, which grows yet harder by being turned in the fire, and is almost as ufeful as fteel. They have hard and ftrong corfelets, back and breast, and thighs, arms, bracelets, gauntlets, helmets, morions; all these of a hardened leather, so prepared when raw, that it becomes by drying as impenetrable as any steel; and they are fomething better, because more manageable, and do embarrafs the body lefs, as being lighter; and so the man is more at his easter, and better disposed in fight. Among them the pikeman may not be an archer; neither can any that uses the mace of arms, use other arms; fo every one bestirs himfelf with the arms he is used to.

In forming their battalions, every file is of above an hundred men, and between every pikeman an archer, who are defended by the pikemen, who clofe their fhoulders together; and if their first battalion is broken, the fecond relieves them with fo much readinefs, that there feems not that any have failed; and fo by the third and fourth following each other, like waves of the fea, without any interruption; and no man forfakes his rank but by death. They always endeavour to have fome bog or lake not far off for a retreat; for there they are more in fafety than in the ftrongeft caftle. Their volunteers go before the battalion, trailing their pikes with fo much flate, and are themfelves fo haughty, that, like Goliah, they challenge their enemy to meet them body to body; and they do the fame to the Spaniards, giving themfelves great airs of pride. They march to the found of their drums and trumpets, having their arms garnifhed with all variety of beautiful colours, and themfelves adorned with great plumes of rich feathers, fo that they appear very handfome and fightly.

When they make any forts for their defence, it is of great trees interwoven with each other, and leaving in the middle a place of arms; and formerly within this fort they ufed to make another of thick planks. Behind this, they make a great ditch, covered over with plants and flowers, but underneath them fharp flakes to lame the enemy's horfes; fome they make deeper, that the horfes may remain there flaked through.

Many of them are fubject to great fuperflitions and auguries, obferving the omens, both before and at the time of their undertaking; but many of them laugh at thofe obfervations, faying, there are no better omens than good blows, and ftout laying about them, without fear of either fteel, fire, or any fort of death; and it is certainly fo, that their firft encounter is terrible, and as if they feared no one thing in the world. When they are drawn up, and ready to engage, there is filence made, and the general raifing his voice, begins an harangue, fo full of fpirit, filled with fuch warm incitations, and fuch a lively action, that the cowardlieft among them become like lions and tygers againft their enemies. He lays before them the glory of victory, and the fhame of being overcome, and made captives and flaves to their adverfaries. "Take notice," fays he, "that there is now no medium between thofe two extremes : are not you the vol. XIV. Q fons and grand-children of those brave men, who have fought fo many battles, and ventured all to defend that country and liberty, for which we now fight? Shall we own that they exceed us in bravery, or that the enemies we encounter are fuperior to those whom they overcame? Had they less motives than we have? or do we hope for less glory? We must all die; and in the equality of that common fate, the only difference is dying nobly for our dear country, and the liberty of our wives and children; therefore rouze up that courage which you have inherited from your ancestors, who never could endure the thoughts of that infamous yoke of flavery upon their necks. Courage then, brave men, as brave as any the fun fees; courage, for in that lies victory."

With thefe, and other fuch words, and calling to mind fome of their victories, they grow fo warm, that raifing a cry of war, they drive away all fear, and express great defire of engaging their enemies; which they do with fo much fury and refolution, that a battalion that flands their first flock is a very firm one. But we will treat further of this when we shall speak of the battles they have had with the Spaniards, whose valour has fet theirs in its lustre, obliging them to give such proofs as are worthy to be recorded in history. Let us purfue now the account of their natural qualities, independently from the resistance which they have made to His Catholick Majesty's arms.

The warlike fpirit of this nation proceeds from their natural temper, which is cholerick and impatient, proud, arrogant, and fierce, very cruel in their revenge, cutting their enemies (when in their power) inhumanly to pieces, and wallowing in their blood. We fhall relate a cafe hereafter, in which fomething of this will be feen. They are ftrong and robuft of body, well proportioned, large fhoulders, high chefts, well fet in their members, nimble, active, vigorous, and nervous, courageous and undertaking, enduring hunger, thirft, heat, cold; defpifing all conveniencies of life, even their own fmall ones, having little value for their very lives, when it is neceffary to hazard them, either for glory or liberty; conftant in their refolutions, and perfifting in a thing once . begun with incredible fteadinefs.

They are excellent horfemen, and upon a fingle faddle-cloth, or without one, they are as firm as others in war-faddles: they will ride down the fide of a hill, or a precipice, as if they were goats, with their bodies as ftraight and as firm on horfeback, as if they were nailed to the horfe: they have no trouble with the baggage they want, for they carry but little with them; not but that when they march they have their little pack of flour of maize, a little falt, fome Pimientos, or Guinea pepper, and dried flefh; and this is enough to maintain them a good while. They need no other kitchen utenfils than a gourd or calabafh, with which, when they come to a river or fpring, they open their flour-bag, and wet a little with the water, and that ferves them for drink; and for meat, when they put more of it with a little falt and pepper, this they call Rubul; and fometimes they eat their meal dry, with flices of dried flefh.

The great numbers of people which that country has maintained, may be collected from the people that the Spaniards found there at their first coming, which was about 200,000, more or lefs, according to the greatness of the districts or territories, and their habitations, which never were in form of a city or town; for the Indians cannot endure any formal constraint, but love to live free in the fields; and every Cacique, or lord, governed his own vasses, who placed themselves according to their conveniencies, fome in one valley, and fome in another; fome at the foot of mountains, others on the fide of rivers; fome by the fea-fide, or on the top of moun-

114

tains; but all under no other form of government, than the will of their lord, the Cacique, to whom they yielded a ready and prompt obedience with joy. Their houfes are generally of wood, without any flories, not very large, nor all of a-piece, but each room framed by itfelf, fo that when they have a mind to remove and chufe another fituation, they carry away the houfe by pieces, or rooms, which ten or twenty men can eafily carry. When they take it up, they clear the ground about it, and then at one cry, lifting all together, they get it up, and carry it chearfully away, every one taking hold by its pillars; and when they are weary they reft awhile, and fo on again. Their doors are of the fame material, and they have neither hinges, locks nor keys, nor any thing under a lock or key, their fecurity confifting in each other's fidelity, which they obferve facredly towards one another.

Their furniture is very mean, they being a people that defpife all conveniencies and fuperfluities; infomuch that that which is their natural way of living, would be high penance with any European nations: for firft, as to their beds, they have neither quilts, nor fheets, nor pillows, much lefs do they need curtains, pavillions, or alcoves. The hard ground is their couch, upon which they lay fome poor fkins; and for bolfter, they lay a ftone, or a piece of wood, and double their cloaks to lay on it; and that is their higheft contrivance of eafe: they have one or two very coarfe coverlets, which they weave of a fort of thread as thick as one's little finger. People that ufe fo little about their perfons, may eafily be prefumed to have no hangings, nor other ornament to their walls; they have no utenfil of gold or filver, though they have fo much in their country; their plate is four or five difhes, and fome fpoons of wood, or a fhell from the fea-fide; a calabafh or gourd to drink in ; a leaf of a tree, or of maize, for a faltcellar. This is all the apparatus of their table, which is the ground, or at beft a little bench, without any cloth or napkins, but only a little broom, upon which they wipe their hands.

Their meats are the most fimple, and eafily dreft, without any incitements to gluttony, as in other nations; but yet they are tafteful enough, and fuch as many of our Europeans like very well. They eat little flefh; and before the Spaniards came among them, they had neither fheep, goats, nor cows, no, nor hens: they ufe thefe only at their great feafts. Their ordinary diet is of maize, variety of fruits and herbs, and most commonly gourds, or a fort of beans, which we call Frizoles. They did eat fifh; and the game they hunted, particularly a fort of fmall rabbits, which they call Degus; and fince the coming-in of the Spaniards, they eat beef and mutton. of which there is great abundance.

Inftead of wheat bread, which they had not before the Spaniards brought it, they eat maize boiled in water, just as rice in the East Indies. This maize is, and always has been the general nourifhment of the Indians of America; and is not only their meat, but their drink, which they make of the fame maize, toasted and steeped in water, and then boiled, and set by; and that is their Chicha, or wine, which they make also of the fruit of other trees.

Their way of making flour is very different from ours: they first toast their maize in great platters of earth; these they set upon the fire full of fand, which, when it is very hot, they take off; and putting the grains of maize to it, fir them about very fast with a kind of broom: it is soon toasted. When done, they take it out, and put in more, till they have done enough to make flour. This they grind between two stones, thus: they have a stone fixed in the ground, of about the store and bigness of a sheet of paper, and so hollowed, as another stone of an oval figure may play upon it: this the Indian woman takes with both hands, and being upon her knees, makes it play upon the other, putting, from time to time, with her left hand, the maize between the two ftones, fo as to fupply what falls away, and that the mill do not ftand ftill. The flour falls forward into a fort of box, as it does in our mills, and almost as fast, comparing the ftrength of a woman to that of a ftream of water. She can do enough at once for the maintenance of her family; and make a provision too for a journey or a voyage of her husband or fon to the wars. This is the proper business of the women; and it would be a fhame for a man to employ himself in it, or in any other household business.

CHAP. IV. - Of the fume Subject.

WHEN the Indians are fick, they change little of their ordinary way of living, and they never have a better bed. Their way of letting blood is fafer than ours; for it is not with a lancet, which may either fail to draw blood, or go too deep, and lame the arm, if the furgeon be not very fkilful; but with a fharp flint, fixed at the end of a little piece of wood, fo fast, that there is just enough left out to cut the vein, and no more: this they apply to the vein after they have made a bandage, as we do, and ftriking a little ftroke upon it, the blood never fails to come, in greater abundance than our bleedings are. This is all they need a furgeon or barber for, they themfelves having no beards to fhave, and the little hair they have, every one pulls out; and they take it for an affront to look hairy. They have pincers, which they make of cockle-fhells, and always have them about them, using them from time to time in converfation; they thinking it as honourable to be without that, which other people nourifh, comb, and take care of; which is a good conviction of the variety of opinions of mankind, about what is, and is not honourable. As for their hair, they let it grow just below their ears, and no lower, and fo need no barber to cut it, but do every one help the other to keep the ends of it even.

Their manner of cloathing themfelves, (though of various and very beautiful colours, which they give to the wool that they weave their cloaths of,) is very plain and fimple: they have no lining to any of their cloaths, neither do they wear one under another: their drawers come down to their knees, open and loofe, and it is upon their naked body, for they use no fhirts: they have a fort of waistcoat, which they call Macun, and it is made of about a yard and a half of fome woollen ftuff, which they leave open, fo as to put it over their heads, and then they gird it with a girdle: they have also a kind of cloak or mantle, which they call Chomi, which they put on when they go abroad: they have their arms and legs naked, and on their feet they have a fort of fhoe, which they call Ojota, and is like the rope-fhoes the Spaniards•wear: they wear nothing on their heads, but a kind of circle of wool, of various colours, with its fringes hanging down like a cap; which they fir or pull off in fhew of respect, as we do our hats.

In their feafts, balls, and rejoicings, though they do not change the form of their cloaths, yet they have a richer fort, of finer wool, and richer colours: they put about their necks fome chains of fhells, which they gather by the fea-fide; thefe they call Nancas: others put fnail-fhells, ftrung upon a ftring, about their necks; and those of the ftraights of Magellan have pearls very well wrought, and of great artifice, as is affirmed by the authors already cited; and on their heads they put a kind of garland,

116

not of Howers, but of wool, dyed of feveral beautiful colours, to which they hang fine little birds, which they efteem, and on each fide they have a plume of high feathers, either white, red, or blue, and about half a yard high.

Their way of dancing is with little jumps, and a ftep or two, not rifing much from ground, and without any capers, fuch as the Spaniards use : they dance all together in a ring, round a may-pole or ftandard, which one of them holds in the middle as an enfign; and near it are all the bottles of their wine, of which they take now and then a fup while they dance, drinking to one another; for it is a cuftom among them never to drink alone any thing that is given them: he that begins takes a fup, and then he that he drinks to pledges him, and gives the cup to another, and fo to a fourth, till it be empty; and yet one has not more than the other; for what this man does for that, that man does for this; and fo at laft they come to be fo equally fhared, that at the end of the entertainment, they are all alike drunk, and laid down; for they drink as long as they can fland. But this is not eafily brought to pass; for besides what they drink in the day-time, they will often pafs all night at it, without leaving off, finging and dancing to their drums and flutes. The women, as more bashful, do not enter into thefe dances, except fome one or two, when the wine has got into their heads, and then too they do not enter into the ring with the men, but dance by themfelves. Few of them get drunk, fo as to lofe their judgment; fo they are upon their guard more, to mind that the men do not quarrel, and hurt one another in their drink. Their flutes, which they play upon in thefe dances, are made of the bones of the Spaniards, and other enemies, whom they have overcome in war. This they do by way of triumph and glory for their victory: they make them likewife of bones of other animals; but the Indians of war dance only to thefe of their enemies.

Their way of finging is, all together raifing their voices upon the fame note, without any difference of parts or meafure; and at the end of every fong they play on their flutes, and a fort of trumpets, just as we do on our guittars in the Paffacalles. This they repeat fo often, and fo loud, that one may hear them at a great diftance; for in these feasts, they are very numerous. Those who are not engaged in dancing, fit together in feveral companies, talking together upon paft occurrences, and still warming themfelves with their wine; and then they begin to recollect the injuries they have received from one another, and fo refreshing the memory of old contests and enmities not revenged; and this makes them break out into new animofities, and fometimes kill one another upon little provocation.

The women as well as the men have their arms naked, but no other part about them; for though they go barefoot, yet their cloaths, which are very long, cover them from head to foot, though in fome places they wear them fhorter : this is a plain fort of mantle, close to their bodies, without any linen underneath; this they let fall to their feet, and having fastened it on their shoulders, gather it in plaits, and swathe themselves from their waift to the breafts with fome fine coloured woollen fcarf, of about four fingers broad, and fo long, that it takes fo many turns about their waift. as to keep their bodies as ftraight as any : this is all their drefs within doors.

The Indian women of the better fort, that live in towns among the Spaniards, have learned the use of fmocks and waiftcoats under their mantles, but of no other thing; and one cannot affront an Indian woman more, than to offer to put her on head-cloaths, or necklaces, or fleeves, or gloves, or any of those ornaments which the Spanish women use: and much more if they oblige them to put any paint upon their faces; nothing

12

ot

of this kind could ever prevail upon them, though born and bred among the Spanifh women; and to talk to them of it, even to thofe among them who love to be fine, would be like giving them a cut over the face, fo great a horror they have for any thing that is fo very contrary to their ancient cuftoms. They wear nothing on their heads, but their hair plaited behind their fhoulders, and divided handfomely upon their forehead over their eye-brows, and have locks which cover part of their cheeks; fo their face is handfomely and fimply adorned, without any artifice. When they go abroad, they put upon their fhoulders another half mantle, fquare, and faftened before with a bodkin, or crotchet, which anfwers the two others on the fhoulders; and thus they go abroad with their eyes fixed upon the ground; for they are naturally very modeft honeft women.

This manner of cloathing themfelves, with fo much funplicity and plainnefs, as well in the women as the men, with fo little pride and vanity in their houfes, does not much encourage artificers, who have little to do; and by that means there are the more men of war, which is the thing in which thefe men place their honour and felicity, as other nations do in the fumptuoufnefs of palaces and furniture, or in other riches and eminences, either of arts or learning : of all which thefe Indians never had any notion ; and yet they learn them eafily, when they are taught them, and to a great perfection. They can neither read nor write among themfelves; but as to their way of remembering and keeping account, they have their Quipoes, which is a fort of ftrings of different bignefs, in which they make knots of feveral colours, by which they remember, and can give an account of things committed to their charge. With thefe they will give an account of a great flock, and tell which have died of fickness, or other accidents, and which have been fpent in the family, and for the fhepherds; and they will tell every particular that happened in fuch and fuch occasions, and of what they did and faid. When they go to confefs, thefe Quipoes ferve them to remember their fins, and tell them with diffinction and clearnefs: they have befides excellent memories of their own, and do remember things of very ancient date, just as if they had happened but a little while before; and when they begin to talk them over, (which happens generally when they drink, and begin to be warmed with wine,) it is wonderful how they will repeat things past, with all their circumstances, and particularly affronts and injuries that have been done them, or their ancestors, refreshing the memory of things that feemed to be quite forgotten. For proof of the care they take to keep the memory of remarkable paffages, I muit relate here what I learned from Father Diego Torres Bollo, a very extraordinary man, both for holinefs of life, and fkill in government.

This great man returning from Rome (whither he had been fent as procurator of the province of Peru) to found the province of Quito, he faw in a place where four ways met, an Indian, who, to the found of a drum, was finging a great many things all alone in his own tongue : the father called one in his company, who underftood it, and afked him what that Indian meant by that action ; who told the father that that Indian was, as it were, the register of that country, who, to keep up the memory of what had paffed in it from the deluge to that time, was bound every holiday to repeat it by the found of a drum, and finging, as he was then doing. He was moreover obliged to inftruct others in the fame way, that there might be a fucceffion of men to do the fame thing after he was gone; and that which he at this time is finging is, that in fuch a year there had been there a white man called Thomas, who did great wonders, preaching a new law, which in time was loft and forgotten, &c. And thus we may fee the manner by which the Indians fupply the want of books and writing. The women of Chile are fo bold and manly in their courage, that when it is neceffary, and that there is want of men, they take arms, and behave themfelves as if they were men. They play likewife at a very active game called La Chueca, wherein the men fhew their greateft agility and nimblenefs, each fide ftriving to get a ball from the other, and carry it to the mark with crooked bandy flicks. They are about forty or fifty on a fide, who place themfelves in different pofts, fo as to be ufeful one to another, and drive away the ball from the other party; and when it happens that two of different fides are at it together, it is a pleafure to fee them run, the one to forward it with another ftroke, and the other to get before him and hinder him from ftriking it, that he may drive it back to his own fide. This is a fport much to be feen, and generally it has many fpectators to fee the end of the play, which often lafts a whole evening, and fometimes is forced to be put off to another day; fuch contention there is to win thefe prizes they play for.

The ftrength and boldnefs of the women comes from the little tendernefs they are bred with, for they avoid neither heat nor cold; and in the coldeft winters, when birds are killed with cold, they wafh their heads in cold water, and never dry their hair, but let it remain wet, and dry itfelf in the air; and as for their children, they wafh them in the rivers, when they are yet very young; and when they are brought to bed, in a very little time they are about the houfe, as if it were not they, but fome other woman that had lain in.

If the women behave themfelves thus, what may be expected from the men? It is a wonderful thing how little they fear weather, though in the midft of winter; and to fee an Indian, with that fimple habit we have defcribed, his head bare, without hat, or any other covering. I have feen them in this condition endure mighty flowers, which wet them all over, and came out at their breeches, and yet laugh and not value that which to others would have been infupportable.

I remember, upon this occafion, what was faid by a Spanish gentleman of a merry humour, to one newly come from Europe, who, with great charity, was pitying thefe poor Indians for their fufferings in winter, which in that country is very fevere. The gentleman asked the good father what he had to keep his face from the cold? To which he answered, nothing, because every body's face was used to the weather. To which the gentleman replied, these Indians are all face; for from their infancy they have no defence against the cold. Who is it that pities a trout, or other fish, for being in the water, becaufe they are bred in that element? the fame may be faid of thefe Indians, who are like fifnes, and are bred to all that hardfhip; and fo we need not wonder at it. By these means they are so hardened, that a wound which the bravest Spaniard would take his bed for, does give them fo little trouble, that I have feen them go about without minding it. I have known them have a broken head by accident at play, and all they do is to wafh it in cold water, never leaving their employment or bufinefs; and with this, and the application of their own herbs, which, indeed, are of great virtue, they are foon well; but the excellency of their own conftitution helps not a little to their cure in wounds, as well as all other diftempers, out of which they get well with a great deal lefs time and care than the Spaniards.

CHAP. V. - Of other Qualities proper to the Natives of Chile.

FROM this ftrong confliction comes the admirable patience of their minds, and the little fenfe they fhew of that which amongft us Europeans would be a great mortification. That which happened between an Indian and Father Lewis of Valdivia is admirable upon this fubject. The Indian came to confefs to the father; who, to make him enter into a penance for his fins, ordered him to wear a cilice, or hair-cloth, upon his fkin : it was a very hard one, and fuch as would have punifhed one of us feverely. The Indian put it on, and about a year after, there was a proceffion of the holy facrament, at which he danced, and feeing his confeffor in the church, he left his dancing, and came to him faying, "Look here how I have preferved what thou gaveft me a year ago," and fhewed it him upon his naked fkin. The father was aftonifhed to fee, that what he gave him to mortify him, was turned to an ornament; and afking him how long he had worn it, was anfwered by him, "I have never left it off one minute fince thou gaveft it me;" and fo returned to his dancing, fhewing his companions the prefent the father had made him, as pleafed with it, as if it had been a gold or filver brocade; and fo far he was from taking it for mortification, or feeling its roughnefs, that he wore it for a favour given him by his father confeffor.

Thefe Indians of Chile are the faireft complexioned and whiteft of all America; and those of the coldest countries are the whitest, as we see in Europe; but the very antipodes of Flanders never came to be fo white as the Flemings; and among all the Chilenians, I do not remember a red-haired one; for they all, both men and women, have black hair, and that very rough, and hard, and thick; infomuch that the meftitos, or mungrel breed of a Spanish man and Indian woman, are known and diffinguifhed by that from the children of a Spanish man and Spanish woman; and this will laft to the fecond and third generations before it foftens. There is little difference in any thing elfe, either of fhape, feature, or difpofition; nor in the manner of fpeaking, or found of the voice; and as for the language, not only the meftitos, but the Indians bred among the Spaniards, are as ready at the phrafe and turn of the Spanish tongue, as any Spaniard. I have made experience of this often in confeffing them; for the confessionary is so turned, as the father-confession cannot fee the woman that enters to confess. It happened to me often to have an Indian woman come in after a Spanish woman, and I could not find any difference, till she herfelf, finding I used her with that diffinction and civility due to Spanish ladies, would humbly tell me she was but an Indian.

The conflitution of thefe people is the caufe that time does not make fo ftrong an imprefion on them, as on us; and they bear their years mighty well, turning grey very late, at three fcore or thereabouts; and till then they look like young men. When they are over white, or have any baldnefs, you may guefs them at about an hundred: they all live long, and particularly the women; and when by age they lofe their judgment, they feldom falter in their memory, which lafts them to their dying day, even to remember all the particulars of their young days from their infancy. Their teeth and eyes are fo good, that they feldom lofe either; and, in fhort, all the infirmities of old men, which are the forerunners of death, come to them later than to the other nations. But yet, if they happen to go out of their own country, they lofe all their vigour, as we experience daily in our prifoners of war; who being fold to Peru, as foon as they feel the heat of the tropic, they fall fick, and moft of them die : and this is no more than what happens to the Spaniards, when they come from their their own climate to Porto Bello, or Panama; nay, the Spaniards born in Chile venture their lives that go to those countries that are between the tropics.

From this experience the Indians have of the hot countries, comes the great reluctancy they flew to go out of their own, and the refentment they express against those who carry or fend them abroad: and it is not to be imagined the strange and rash contrivances they have to make their escapes from Lima; for though they have above five hundred leagues to go to their own home from Peru, yet they undertake it, and most commonly compass it, through a vast number of dangers and inconveniences. For first, they are forced to go all along by the fea-fide, by which one may guess how much they go about, fince they fetch the compass of all the bays and nooks, and double all the capes.

The next inconvenience which they meet with, is want of food; for they dare not enter any town, or inhabited place; fo they are reduced to feed on cockles and other fhell-fifth on the fea-fide, which is no very good nourifhment. The third difficulty is the paffing of fo many and fuch fwift rivers.

The fourth inconvenience is the want of water to drink; for it is not poffible, that in fo great a journey they fhould not fometimes mifs of fresh water to quench their thirst. All these difficulties, and many others, which are obvious to travellers, are overcome by these Indians by length of time and patience; and they get at last to their own country, and are out of flavery, not by the means of gold and filver, but by the bravery of their minds.

The boldness of some other Indians was yet more remarkable : these were carried in a fhip to be fold as flaves at Lima; by a Portuguese gentleman of the Habit of Chrift, who was going about things belonging to war, at the time that I went the fame voyage: this navigation is made commonly in fight of the coaft, more or lefs, according as the winds ferve; but still they keep a good way out at fea, for fear of the rocks. Thefe Indians refolved among themfelves to throw themfelves into the fea, to avoid this flavery; and one day, when they found the fhip in a proportionable diftance to the fhore, fo as they durft venture to truft to their fwimming, they got loofe very dexteroufly from their fetters, and flid, without being perceived, down by the fhip's fide into the fea; and when they miffed them they were out of fight, and fo it was in vain to follow them. Among these prisoners there was an old man, who either becaufe he was not trufted by the others, or becaufe they had not the opportunity of acquainting him with the defign, he not being flut up with them, but having the liberty of the fhip as an old man, remained behind after they were gone. This Indian began to think of the thing, and to weigh with himfelf how his companions had undertaken and performed an extraordinary action; he reflected how they had arrived at their own land, and among their friends, who perhaps were inquiring about him, and that every body defpifed him as a coward, and a man of little spirit, fince he had not been able to overcome the adverse fortune which the others had conquered, but had fubmitted to it: he reprefented to himfelf the welcomes and joys which their friends expressed, and the feasts and entertainments made for their return, and the embraces and careffes which they received from their relations. All this, I fay, made fuch an imprefion on his mind, and raifed fuch an emulation, that he could not bear the reproaches he made himfelf, particularly feeing himfelf without a remedy. At laft, after much thought and penfiveness, he came to a resolution, which was, to do something which fhould be bolder than what his companions had performed, and that in the manner of doing it; for he refolved to do it by day, and in the fight of all the Spaniards; and for a beginning, he defigned to kill his mafter, not in the night, and VOL. XIV. R without

without witneffes, as he might eafily have done, but upon the deck, in the fight of all those in the ship, to get himself a greater name of bravery. To this end, he took one day, a great knife in his hand, and fell upon the captain; and having wounded him in feveral places, with as much precipitation as he could, leaped overboard with fo much fuddennefs, that he flipped away from those who endeavoured to feize him. It is to be imagined they were all wonderfully furprized at the refoluteness of the action: they immediately brought the ship to, and put out the boat in all the haste that could be to follow the Indian, who, fwimming like a fifh, was already almost out of fight; but they overtook him, and bid him yield himfelf a prifoner, fince he could not efcape; and finding him still endeavour to get away, they struck at him with their launces, but he dexteroufly avoided all their ftrokes with great prefence of mind, diving and appearing again where they least expected him. Upon this they fired upon him, and wounded him in feveral places; but neither then did he yield, nor would ever have had a thought of it, but the lofs of blood taking away his ftrength, had made him unable to get away, fo they brought him almost expiring to the ship, having more valued death with the reputation of a brave man, than life with the infamy of a coward, and the lofs of reputation among his own people. This fact does not only fhew the bravery of the nation, but likewife their great averfion to go out of their own country, and how heavy a yoke they think fubjection to be; and we fhall fee hereafter how much they have done to defend their beloved liberty.

Now let us fpeak of fome other cuftoms thefe Indians have. They folemnize their marriages their own way, and in a very contrary manner to that of the Europeans; for as to the portion, the woman does not provide it, but the man; and neither of them enjoy it, but it pafies to the propriety and use of the father of the young woman; fo that the husband has a charge upon him of maintaining his wife without any help; nay, rather with lefs ability, for he parts with fome of his fubftance to purchase her: fo that in this country it is no charge at all to have many daughters, but rather a part of their estate and fubftance.

They take many wives; and the greateft obftacle they have to be converted to our religion, is this vice of polygamy, which they embrace with great fenfuality, though it is chargeable, becaufe at the fame time it is a figure of power and riches. The first wife has fome pre-eminence over the others, and has the ordering of them, yet they all look upon themfelves as lawful wives, and their children as legitimate; yet the fon of the first inherits the eftate and the honour of Cacique, and has a power over his other brothers.

The fubjects obey their lord with great punctuality, love, and refpect; and for this reafon they have no ftrong places or prifons to hold them in; for their natural love and refpect they bear their Cacique, is a law inviolable in their hearts, and a reward of their obedience, which they flow in all regards that may pleafe him.

When a Cacique has a mind to make war, he need not make provision of money for pay, without which, amongst us, men will not fight, even for their king. He need only give out his orders, and they all come with arms and horfes, bearing their own charges during the enterprize; and this is the reason that they can asses their powerful an army in fo little time, they all looking upon the common cause as their own; and as they make the good of their country the motive of their arms, every one thinks himfelf sufficiently rewarded if they can defend that from their enemies. The found of the drum and trumpet is only to shew them the neceffity of their meeting in arms; at which they immediately leave wife and children, and all that is dear to them, with the hazard of never feeing them more, as it often happens.

In the diftribution of the booty and flaves taken in war, there is no other method, than that every one has what he can get, fo that the bravest and most diligent are the best provided, without any obligation of giving any part of it to their captains or general; for in this they are all equal, and valour alone makes the diftinction, which they show in an eminent degree, being very defirous to recover fome of our arms, fuch as guns, fwords, lances; for they have no iron of their own. When they return from war, and find what men they have loft, it is incredible what lamentations, cries, and tears, proceed from the widows and children of those who are dead; and though this be a common fentiment of humanity, practifed amongst all nations who value fociety and proximity of blood, which are the foundation of friendship, yet the Indian women feem to furpaís all others; for they do not cry in fecret, but fet up their notes, fo that when any one hears them at a diftance, it provokes more to laughter than moves to compassion. When a man dies at home, the manner of their expressing their forrow is more remarkable; for the women all get about the dead body, and the eldeft beginning, the others follow all in the fame tone; and thus they continue a great while, fo that they never give over as long as they can hold out; and this cuftom they preferve, even after they are baptized, and live among Christians; but not that which they had of opening the dead bodies, to know of what difeafe they died, and to put meat, and drink, and clothes in their grave with them, as alfo jewels and things of value; neither do they cover their graves with pyramids of ftones, nor use other ceremonies practifed by the gentiles of those parts.

CHAP. VI. - Of the Chilenian Indians, who inhabit the Islands of Chile.

WE divided the kingdom of Chile into three parts, and the Islands made one: thefe are very well peopled: those who live in the fertile islands, which are capable of producing corn, and feeding flocks, pass their lives as the Indians of Terra Firma do, eating flesh, and feveral fruits, the product of their islands. Those who inhabit the barren or less fertile islands, eat fish of the fea, and shell-fish, as also potatoes; and fome, who cannot have any wool, clothe themseves with the barks of trees. Some go stark naked, though their climate is mighty cold, and by custom do not feel the hardiness of the weather overmuch.

Others have a ftrange way of clothing themfelves, which is to gather a certain earth with roots about it, to give it a confiftency; and others clothe themfelves with feathers, as Brother Gregory of Leon reports in his map. They are all tall men, and in fome places there are giants, as the Dutch relate, who fay, they found fculls that would contain within them fome of their heads; for they ufed to put them on like helmets: they found alfo dead men's bones of ten and eleven feet long, whofe bodies, by confequence, must have been thirty feet high, which is a prodigious thing. Thofe whom they faw alive, were generally taller by the head and fhoulders than the Dutch. This appears by the relation of General Schewten; and from that of George Spilberg we learn, that when they were in the ftraights of Magellan, they came to an ifland, which they called the ifland of Patagoons, or giants, becaufe of fome they faw there, and on the Terra del Fuego. Among the reft, they faw one who was upon a rock, to fee the fhips go by, and they fay of him, that he was *immanis admodum*, *et horrendæ longitudinis*.

Likewife we know, from the fleet commanded by Don Fray Garcia, Jofre de Loaifa, a Knight of St. John's order, that at the cape of the Eleven Thousand Virgins they

R 2

found the footsteps of men of a large stature, and met two canoes of favages, whom. becaufe of their strength and stature, they called giants; they came near the ships, and feemed to threaten them; but those of the ship endeavouring to follow them. they could not come up with them, for they rowed fo fwiftly, they feemed to fly. It is probable that these canoes were made of the ribs of whales, which are there in abundance : and they found one before with the fides and fteerage of whale-bone.

In another voyage, made by Thomas Candifh, an English gentleman, they found in a port, (in a very inacceffible place,) a company of Indians, very lufty men, who, notwithstanding the prodigious cold of that country, lived in the woods like Satyrs, and fhewed fo much ftrength, that they would throw ftones of three or four pounds weight a great way. We read likewife in the relation of the voyage of Magellan, that as he wintered in the bay and river of St. John, there came to the ship fix Indians, fo tall, that the loweft of them was taller than the talleft Spaniard aboard; that having made a great kettle of the fweepings of the bifcuit for them, enough for twenty men, those fix eat it up entirely, without leaving a crumb of it. Magellan gave them a fort of coats of red wool, with which they were much pleafed, never having feen any before; their ordinary wear being deer-fkins. They learned from them, that in the fummer they used to come down to the fea-fide to live, but in the winter they withdrew more into the heart of the country. We know likewife by thefe fame authors, that the number of the Indians that inhabit those coafts, is confiderable, particularly in the port called the port of Shell-fifh; where as foon as they landed, great numbers of Indians, with their wives and children, came to them. and exchanged with them great quantities of pearl, ready wrought in points, like diamonds, very artfully, for fciffars, knives, and other baubles; as alfo for Spanish wine, which pleafed them extremely; but they came no more, for they were frighted with feeing the Spaniards fhoot fome game.

The fleet of George Spilberg found alfo great numbers of inhabitants in the land, on the other fide of the ftraight; and when the captains, called the Nodales, were, by the king's order, to view the straight of St. Vincent, they found, upon a point of land of that ftraight, great ftore of people. The fame is faid by the Saballas, and others who went from Peru to fearch the Terra del Fuego; and all thofe who have paffed the ftraights, have conftantly feen men and inhabitants on the fhore in feveral places; and at one place fome of Spilberg's men landing to purfue fome birds of a very fine colour, which they faw on shore, had scarce begun to shoot them, but they were environed with Indians, who attacked them fo furioufly with clubs, that happy was he that could make his escape to the ship; and many of them were knocked on the head.

The Nodales likewife faw in the bay of St. Gregory great numbers of inhabitants, with whom the feamen drove a trade, by exchanging fome Spanish trifles for gold. By all which it is apparent how well peopled all that coaft and the iflands are; yet we do not know what fort of people inhabit the fourfcore islands difcovered by Pedro Sarmiento, for nobody landed out of that fleet ; but we know that the islanders of Mocha are a peaceable civil nation, feveral ships having touched there, and at Sancta Maria. As for the nation called the Chonos, they are a poor people, but good-natured, as has been feen by the Chilenians, in whom the Spaniards have found great docility, and a good understanding.

In the iflands difcovered by Francis Drake, in about five and fifty degrees, of which we have already made mention, they met with canoes of men and women flark naked, which is the more remarkable, becaufe of the exceffive cold of those parts, where

II

there

there is a continual night, without any appearance of day, when the fun coming to the tropick of Cancer, makes our fummer; on the contrary, when he draws near the tropick of Capricorn, there is continual day, without any fhadow of night.

And now lately, in the year forty-three, the Dutch having fent a fleet under the command of Anthony Brun, which paffed the ftraights with a defign to fettle at Valdivia, as they endeavoured; they failed afterwards into feventy degrees, where they difcovered an ifland, which they called Barnevelt, in which they faw the footfteps of men of large flature, and obferved great fmoaks: this place was fo cold, that the Dutch could not endure the rigour of the weather, which was nothing but frost and fnow, it being then June or July, which is the depth of their winter, and a perpetual night, without feeing the fun one hour in a day. It is a wonder how thefe iflanders pafs their time in fo much cold and darknefs, without any thing to cover their nakednefs; for wanting commerce with Chile, or other parts in Europe, they have neither fheep nor goats, nor any thing that produces wool fit to make them garments. It must be owned, that men are quite other creatures than the nice imagination of fome effeminate nations takes them to be; and human nature, by cuftom, accommodates itfelf to the place where it is bred, fo that very often men will not leave that place for any other more full of conveniency. It is for this that these Indians show fuch an averfion to leave their country where they were born and bred; and though it be a miferable one, and those they go to more delicious, yet there is no fweetness in any one like that of their own country.

There is a report likewife, that in the ftraights of Magellan there are pigmies, but I know not upon what it is founded; for all the authors that relate the voyages made into those parts, fpeak always of giants, or men of a gigantick form, who exceed us in ftrength and ftature; and it is faid in one of these relations, that the fhip's men, in a certain place, beginning to fight with these Indians, they pulled up great trees by the roots, to use them as a retrenchment, as we may fee in a picture in Theodore and Jean de Bry; but I cannot imagine how this report of pigmies was invented; and it feems to me a jeft or irony, or, perhaps, among these giants there are fome dwarfs.

That which was feen by the vice-admiral of George Spilberg's fleet, was a body of about two feet and a half high, which was buried with another of an ordinary flature in a grave of very little depth, and covered after the Indian way, with a pyramid of ftones, in an ifland called the Great Ifland, about the fecond mouth of the flraights; and from hence, perhaps, or from having feen fome of that littlenefs alive, this report of pigmies took its rife.

This is all the account I can give of the inhabitants of the ftraights, and iflands about it. Time will, perhaps, enable us to be more particular, when by commerce we are better acquainted with them; and then, without doubt, there will not be wanting authors to write about them.

n

CHAP. VII. - Of the Indians of Cuyo, who are on the other Side of the Cordillera, to the East of Chile.

THE Indians of the province of Cuyo, though in many things they are like the inhabitants of Chile, yet in many others they are not fo. For first, they are not fo white, but more copper-coloured, which may be attributed to the great heat they endure in fummer. Secondly, they are not fo cleanly, nor do not build fuch neat houses to live in : but their habitations are wretched; nay fome, who live in the marshes, make make themfelves holes in the fand, into which they go like wild beafts. Thirdly, they are not fo laborious to cultivate their land, and fo have not fuch variety of product as those of Chile. Fourthly, they are not fo brave nor warlike as the Indians of Chile: their language is likewife different, and fo different, that I do not know one word of the one that is in the other; but yet the language of Chile being fo universal, that it is the fame all over kingdom, to the foot of the Cordillera; those of Cuyo learned it too, and that very perfectly; but I never observed that a Chile Indian sover the language of Cuyo, which shews the advantage that the language of Chile has over the other.

In return of thefe advantages which the Chilenians have, thofe at Cuyo have fome over them. And the first is in the stature, which is taller, but not fo ftrong and well fet as the Chilenians, but rather raw-boned, without flesh. I do not remember I ever faw a fat Cuyian among fo many as I have feen. They are likewife better workmen in fome things which require patience and length of time, fuch as basket-work of feveral figures, all of straw; and yet fo close worked, that they will hold water; for which reason they make their drinking vesses of them; and as they cannot break by a fall upon the ground, they are very lasting, and the curiosities of this kind, which they make, very much valued for their work and colours.

Likewife they prepare feveral furs of animals, which they hunt; and they are very foft and warm for winter: they hunt and catch offriches likewife, and make many works of their feathers, with which they adorn themfelves on their feftivals, mingled with the feathers of other birds. They likewife hunt the wild goats and deer, and are the mafters of all the Bezoar-ftones, which they fell to the Spaniards fo dear, that any one who fhould buy them to get by them, would make but a fmall profit in Europe.

These Cuyians are also more hairy, and have more beard than the Chilenians, though they pull their hair as the others do, but with more trouble; and they never look fo fmooth as those of Chile. They are all well-fhaped, and nimble, and have a good air: they have also good understandings. The women are tall and flender, and I do not know that I ever faw taller: they paint their faces green, which is fo well fettled in their fkin, that there is no getting it out: most commonly they paint only their nostrils, fome their whole faces, and the men their beards and lips. Their habit is decent in both fexes; the women let their hair grow as long as they can, but the men only below their ears, In all other things are like the Chilenians.

They are very nimble, and good travellers, without tiring. I have feen them run up the ftiffeft and ftraighteft hills of the great Cordillera, like fo many goats; and this the women will do as well as the men; nay, the little children too. The women will run with their children in a cradle fastened to their backs by a strap that comes over their forehead; and with all this weight they follow their husbands with fo much ease and agility, that it is wonderful.

For a proof of the admirable difpofition of thefe people, in walking and running, a corrigidor and captain-general of that province told me a flory about their hunting their venifon, which is very fingular; he told me, that as foon as they find their game out, they draw near them, and follow them upon an half trot, keeping them ftill in fight, without leaving them fo much as to eat; and in a day or two they begin to tire them fo as they can come up with them, and kill them, and return home loaded with them, where they feaft upon them, with their families, till they have made an end: for thefe Indians are fuch gluttons naturally, that a few of them will eat up a calf, or a young heifer in a meeting: but they are as good at fafting, when they have nothing to eat; for they will pafs feveral days with a little maize and fome roots roots, which grow wild: they are also very dexterous archers, and often kill with their arrows the game they fee.

I fhall not omit a particular favour beftowed on these Indians by God Almighty, which is a fingular inftinct of tracing and following any lost thing. Of which I shall give two examples which happened in the city of St. Jago.

Our college had a cart belonging to it, which flood at the gate of a garden, to which our Seminarifts did ufe to go to refresh themfelves; it was stole one night, and being mission in the morning by one of our lay-brothers, he immediately went to find out a Guarpe (for this is the name they give those finding Indians); he prefently fell upon the scent or pisse, and followed it, taking with him the lay-brother, till he came to a river, where it failed him: but he loss not the hopes of finding it; he croffed the river, and recroffed it again, once and twice, by so many different fords, (the man that stole it, as he fince confessed, had croffed fo many times to break the pisse to the follower.) After this he went four leagues outright, and there he found it, when the man that had it, believed himself most fafe from being discovered.

Another time, a certain perfon having loft a parcel of oranges, he employed a Guarpe, who having led him through many ftreets and turnings, brought him at laft to a houfe; where finding the door fhut, he bid him knock, and go in, For there, faid he, are thy oranges. He did fo, and found them. There are every day experiments of this kind made by them to admiration: they are likewife ftout workers, very ftrong and lafting in labour.

Next to thefe Indians of Cuyo, are the Indians Pampas, called fo becaufe they inhabit thofe vaft plains, which are extended for about four hundred leagues to the eaft, and reach to the North-Sea. Thofe of the point of Los Venados are the neareft the kingdom of Chile, and are much of the fame kind. Thefe Pampas have no houfes, in which they differ from all mankind; for the first thing men generally do, is to cover themfelves from the inclemency of the air: and this is the thing which thefe Pampas do the least care for; perhaps they are of opinion, that it is an injury to the to the Author of mankind, to look for more fhelter than he afforded men at first, which is the earth, with the heavens for vault or cover; and that to defend themfelves from rain, it was enough to make any little cover, which might be eafily taken away, and fet up in another place.

This they obferve; and look upon it as a fort of prifon or captivity, to be tied to one place: for this reafon they will neither have houfe, nor gardens, nor plantations, or poffeffions, which are like chains to hinder their removal to other places; for they judge that the greateft of all earthly felicities is to have the abfolute, entire, and independent ufe of their own free will; to live to-day in one place, to-morrow in another. Sometimes, fay they, I have a mind to enjoy the frefhnefs of the river-fide, and being weary of that I pafs to another. Otherwhile I have a mind to live in woods and folitudes; and when I am weary of their fhades, I go to the open air of plains and meadows. In one place I hunt, in another I fifh; here I enjoy the fruits of one territory; and when they fail, I feek out another, where they are beginning to ripen. In fhort, I go where I will, without leaving behind me any thing I regret or defire, which ufes to be the torment of thofe who are fixed. I fear no ill news, for I forfake nothing I can lofe; and with the company of my wife and children, which I always have, I want for nothing.

This is the account that these people give of themselves; and thus they pass a life without cares; here to-day, to-morrow in another place; making in an instant, with four little posts, a hut covered with boughs, or some hide of a beast. Their incomes are their bows and arrows, with which they provide them with flefh, with which they drink water; only fometimes they make their drink, called Chica, of fruits of the trees, as they do in Chile. Their clothes are fome leaves for decency, and a fkin, which is like a cloak to cover them in other parts. They make holes in their lips, and put fome glafs or brafs pendants in them, and fometimes filver ones. The men let their hair grow to their fhoulders, and the women as long as it will. There feems to be one thing wanting to this nation, which all other Indian nations have, which is the bread they make of maize, or wheat, or fome of rice: but yet they do not want a fupply of this kind; for becaufe they have not thefe grains, they make bread of the cods of a tree, which we in Spain call Algaroba,; and becaufe that does not laft long, they have invented a ftrange fort of bread made of locufts, (nay, I have heard of Mofquitos;) but the locufts ufed to be in fuch vaft quantities in thofe great plains called the Pampas, that as I travelled over them, I often faw the fun intercepted, and the air darkened with flights of them.

The Indians obferve where they light to reft; and those plains being here and there full of thickets, they reft in them, and chuse the highest for shelter. This the Indians know; and approaching fostly in the night, they fet fire to the thicket, which, with the high winds that reign in those plains, is soon reduced to assess and the locusts with them. Of these they make great heaps; and as they are ready roasted, they have nothing more to do, but to grind them to powder; of the flour of which they make a fort of bread, which maintains them. To the same end they use an herb called Cibil, which, either by pact with the devil, or by natural virtue, affords them a sufference for several days, only by keeping it in their mouths, where it makes a white foam, which appears upon their lips: it is a very disagreeable fight, and made me very fick to see it.

Though these people are not fo warlike as the Chile Indians, yet they are courageous, and have shewed it upon several occasions. They are very dexterous at their bows and arrows, with which they make incredible fhots. But befides thefe, they have a very extraordinary fort of a weapon of a new kind, which is made of two balls, the one bigger, and is a ftone perfectly well rounded, about the bignefs of an ordinary orange; the other is of a bladder or hard leather, which they fill with fome matter of lefs weight than the ftone: thefe two balls are tied ftrongly to each end of a ftrong whipcord, which they twift off a bull's pizzle: the Indian ftanding on a high ground, takes the leffer ball in his hand, and lets the other fly, holding it like a fling over his head to take aim, and hit his adverfary with the heavy ball, which they direct to the head, or legs of their enemy; and thus they entangle him fo, as to bring him to the ground, and then the Indian leaps from the height where he was, and without giving him time to difembarrafs himfelf, they kill him; and this inftrument is fo powerful in their hands, that it not only brings a man to the ground; but a horfe or a wild bull, which are very frequent in those parts, fince the coming of the Spaniards among them.

At this time they have no wars with any; for though they do not own a fubjection, yet they carry themfelves to the Spaniards very friendly; and the reafon is, becaufe they fee their towns fo populous and ftrong, that it would be in vain for them to ftir, or make any attempt againft them: they have the liberty of going in or out as they pleafe; and when they have taken a kindnefs for a Spaniard, there will come a troop of them in harveft time to help him to get it in, and when it is over, they return to their own way of living: but there are others who come in troops to the highway, and if the Spaniards are not well armed, attack them in their waggons; for which which reafon they feldom fet out but a great many together, and well provided for an encounter; but most commonly they are well pleafed with fome little prefent, which they ask very boldly, as if they were masters of all the goods in the waggons: they generally are content with a little bifcuit or wine; but if the travellers are too niggardly, they are in danger all the way, and must owe their fafety to their fire-arms.

BOOK IV.

OF THE FIRST ENTRANCE OF THE SPANIARDS INTO THE KINGDOM OF CHILE.

CHAP. I. — The Introduction to this Book.

HAVING hitherto treated of those three parts, into which at first we divided the kingdom of Chile; of its foil and climate; of its temperature and properties; of its inhabitants, and their antiquity, nobility, and customs; the order of this history requires we should now treat of the entrance of the Spaniards into their country; fince by that it has been changed much for the better in many things: and although what we have already mentioned about the flocks, fruit, bread, wine, oil, &c. of which they had no idea, before the Spaniards came among them; yet this is nothing in comparison with the advantages they received by the light of the gospel, which by the means of the fame Spaniards, was and is communicated to them. Upon this confideration, we may well excufe fome military exceffes of covetoufnefs in fome of the first discoverers and their foldiers, who as such, and men who are bred in disorder and confusion, and used to embrue their hands in blood where they find refistance. had lefs regard to the ftrict rules of juffice towards the Indians. But this was againft all the orders of Their Catholic Majefties, who from the beginning recommended most strictly the prefervation of the privileges of those poor people, charging all their governors, captains, conquerors, and royal minifters, that they fhould always have before their eyes, in the conquest of this new world, not fo much the dilatation of their royal power and monarchy, as the propagation of the gofpel, and the kind ufage of the Indians, their conversion being the principal motive of the undertaking, as we fhall fee in its proper place.

But how is it poffible, morally fpeaking, that human actions, though never fo well defigned upon high motives, fhould not have a mixture of the inconveniences which paffion, not overcome by reafon, produces? and fo it is no wonder, that in the beginning of those discoveries fome diforders should happen, though they never were fo exorbitant as fome authors make them; and particularly in Chile they were much lefs, becaufe the inhabitants of those parts made the Spaniards feel their valour at their very first entrance, where they found their progress opposed with greater vigour than they imagined.

But fince this kingdom is one of the confiderable parts of America, it will be neceffary first to fay fomething of the discovery of the new world; for this being the vol. XIV. s remotest remoteft part of it towards the fouth, it was neceffary to pafs all the reft before it could be difcovered; and therefore, though I have not a defign to make any relation but of the kingdom of Chile, I fhall neverthelefs touch upon the other difcoveries, and follow the fleps of the conquerors in order, as the hiftories of them do relate; fo the fubject of this book will be better underftood, by opening the manner of the finding them, and the order of time in which this progrefs was made; and fo place each kingdom according to its antiquity.

CHAP. 11. — Of America in general, and what light may be found of the it among antient Philosophers.

AMERICA, called otherwife the New World, becaufe of its late difcovery, is now as well known as it was formerly hid for fo many paffed ages, not only to the vulgar, but to those piercing wits among the pagans, Aristotle, Parmenides, Pliny; and among the christian philosophers, to St. Austin, Lactantius, and others, who judged all that climate to be inhabitable that lay between the tropics, founding their opinion upon a point of their philosophy, which was, that the prefervation of the animal demanded by its temper the just proportion of the first four qualities, which they supposed could not be found under the torrid zone; for fo they called it, because of the force of the fun upon it, it being all the year almost perpendicular to it; and having observed its effects on this fide the tropics, how it dries the earth in summer, confumes the fountains, thinking that if it did not withdraw to the other tropic, it would have entirely fired the earth, though refreshed by the nights, it is no wonder if they were perfuaded that where its beams were continual, there could be no habitation for man.

But experience, which is the touch-ftone of all philofophical difcourfes, has difcovered that not only there is a plain paffage, though troublefome, from one pole to the other, but alfo that those regions contained under the Zodiac have been, and are inhabited by innumerable nations; and that there are even under the equinoctial line, fome places, as that of Quito, fo temperate and healthy, that they are manifeftly preferable to feveral in the temperate zone. This new world has, by common confent, been called America unjustly enough, as Herrera complains in the first book of his fifth decade, by the crafty usurpation of this difcovery appropriated to Americo Vefpufio, instead of Columbus, who by this means is deprived of his true glory.

It is not eafy to make out what knowledge the antients have had of this new world: Marinco Siculo pretends, in his Spanifh Chronicles, that the Romans had known it, and made fome conquefts in it; and his foundation is, that in one of the gold mines of America, there was found a medal or antient coin, with the figure of Auguftus Cæfar; which, he fays, was fent to the pope by Joannes Rufo, archbifhop of Cozenfa; but this is refuted, as ridiculous, by Pedro Bercio in his geography; and it is not very probable, that that coin alone, and no other, flould have been found in all this length of time, fince the mines are working in the Weft-Indies. But, befides, if the Romans had been once in poffeffion of thofe parts, it would not have been eafy to have loft all commerce with them, confidering the great riches that communication produces; for the nations would have called in one another, as we fee they have done fince the difcovery made by Their Catholic Majefties, and their poffeffing of thofe parts, to which there goes every year fo much people from Europe.

As to the Roman coin, it is probable that fome who paffed from Europe with the first conquerors of the Indies, and out of a humour of spreading novelties, (which 10

though little worth, are generally applauded by the vulgar,) feigned he had found it in the mines; or it might fall from him, and be found by another, who carried it as a rarity to the bifhop, who is faid to have fent it to the pope. I am not ignorant that there are many arguments and conjectures, and those not contemptible, of fome knowledge that the antients had of this fo principal a part of our globe, which are related by Abraham Ortelius, Goropius, father Acofta of our company, in his first book of the Hiftory of the Indies, chap. 11, 12, and 13. Thomas Bofius, book XX. chap. 3. Malvenda, Friar Gregory Garcia, in the first book of the Origin of the Indians, taking their hints from Plato, Seneca, Lucian, Arrian, Clemens Romanus, Origen, St. Jerome, and others, who feem to have had fome knowledge of this new world. There may be feen in Father Pineda, of our fociety, in the fourth book about Solomon's Court, chap. 10. the words of Abraham Ortelius, which make very much to this purpofe.

CHAP. III. - What light may be had from Scripture about this new region.

THERE is another queftion which feems to be better founded than the first; and that is, what light may be had from fcripture about thefe remote regions? becaufe there are many authors, who from these words of the second of Chronicles, chap. iv. " The fervants of Hiram brought, with the fervants of Solomon, gold from Ophir, " infer, that the fcripture here fpeaks of the Weft-Indies, and interpret Ophir to be Peru, or all America; and as the moft famous Chriftopher Columbus was the first who difcovered it, fo he feems to have been the first that used that expression; for they fay, that when he was in the ifland of Hifpaniola, he often faid, that at laft he was come to the defired land of Ophir, as is related by Peter Martyr, in his first book of the Decade of the Ocean. But he who first fet out this opinion in form, was Francis Vatable, who upon the third book of Kings, in the ninth chapter, and fo on, makes Ophir to be the ifland of Hifpaniola, and the continents of Peru and Mexico. He was feconded in his opinion by Postel, Goropius, Arias Montano, Antonio Possevino, Rodrigo Yepes, Bofius, Manuel de Sa, and other authors, reported by Pineda, in his treatife De rebus Solomonis; which makes Father Martin del Rio, of the company of Jesus, fay, that this opinion is not without good grounds; but he who defends it most vigorously, is Father Gregory Garcia, of the order of St. Dominick, in his book De Indorum Occidentalium Origine, where he strives mightily to clear this opinion from all objections and oppofition.

The things faid by thefe authors are not of fmall weight, though those who would make an inference from the word Peru's having a nearness to Pharvim, which is used by the Septuagint in 2 Chron. iii. where, fpeaking of the gold with which Solomon adorned his temple, they fay, that it was of gold of Pharvim, which in the vulgate is translated Aurum probatiffimum, or most pure gold, have against them a powerful adversary, to wit, Garcilasso de la Vega, who affirms, that the name Peru is not the name of the land, but that the Spaniards, endeavouring to inform themfelves of the country, took an Indian, whofe name was Beru; and that alking him what country they were in, and he imagining they afked him his name, he answered Beru; and the Spaniards thought he had faid Peru, and that that was the name of the country, which ever after was called fo. That which, in my opinion, confirms most the belief of Ophir, is, that which Solomon fays of himfelf in the book of Wildom, that he "knew the difpofition of the earth;" with which it feems that ignorance was S 2

incompatible; and that he could not but be informed of that great and principal part of the world; fo that we may conclude he knew how to fend his fleets thither, and bring home the riches of those parts; and this may be more probable, if we confider the great defire he had of gathering together all the precious things from feveral parts of the earth, and the pureft gold, for the ornament of the temple and house of God; for the gold of Valdivia and Carabay being the pureft in the world, and the precious woods of odours that are in those kingdoms, and Paraguay and Brafil, the fines, it appears hard he should not use all diligence to have them, they making so much to his end, which was to gather treasure and precious things.

That he could do it, there feems no reafon to doubt, fince we know he had a great and powerful fleet; and if this fleet fpent always three years from the time of its fetting out in the Red-Sea, to the time of its return, as the interpreters of the fcripture all fay, in what could they fpend fo much time, but in going to the utmost bounds of the east and west? and, it is possible, went round the world, as the ship Victory did fince, in the fame time; in which the great Captain Magellan difcovered and paffed the ftraights of his name; and fince we know that the fleets of the Catholic kings do, in our days, penetrate to the utmost parts of the east and west in less than a year's time, why could not the fame be done by those of fo powerful and fo wife a king as Solomon, who may be supposed to have understood himself, and instructed his captains and pilots in the art of navigation? neither is it improbable, but he might know the use of the loadstone, and the sea-compass, as some authors do affirm he did. This is yet more confirmed by what we have observed already about the knowledge and conjectures which the antients had of this new world, of which he likewife could not be ignorant, but rather have a more particular infight into them, being himfelf fo perfect in the fciences of cosmography and geography, as well as hydrography: all which he had by infusion from God Almighty, that he might fee into the errors of those who believed there were no antipodes, nor that the torrid zone could be inhabited, denying the roundness of the earth, and other such mistakes.

Laftly, we know, that his fleets came to Syria, Phœnicia, Africa, and Europa; and to come to thole coafts, it is certain, that if they fet out at the Red-Sea, it was neceffary for them to fail fouthward to double the cape of Good Hope, and then north, and pafs the equinoctial line a fecond time, as the Portuguefe do now in their voyages from India to Portugal. This being fuppofed, and that Solomon had the knowledge of America, it is probable he was not unacquainted with the communication of the North and South-Seas, by the ftraights of Magellan and St. Vincent; for Solomon being fo powerful, both by fea and land; and fo well inftructed in all things, it is probable he caufed thole fhores to be fearched, to find the communication of both feas, as it was fince done by men much inferior to him in every thing, which were Magellan, and Jacob le Maire; or, it might be difcovered by fome fhips driven by ftorms into thole parts, as fome fay it befel the firft difcoverers of America.

This once fuppofed, those who understand any thing of navigation, and the art of the fea, cannot but know how much more easily a fleet, being placed at the Cape of Good Hope in thirty-fix, may fail fouth to the fifty-fourth degree, where the straights of Magellan lie, than to fail to the north above seventy-two degrees, which it must do from the Cape to Europe: From whence may be inferred what I fay, that if it was true that his fleet came to Africa and Europe, and entered the Mediterranean fea, it was much easier to go to Chile and Peru; for from the straights it might run before the wind all along that coast; and having taken in the gold, precious woods, filver, and other commodities, it might return by the same straights, as Pedro Sarmiento, and others, have done to the North-Sea, and fo to the Cape of Good Hope and the Red-Sea; or, the fleet being in the South-Sea, might fail weft to the Philippine iflands; and from thence coafting along those parts we call the East-Indies, it might take in all the eastern commodities; and fo having gone round the world, return laden with all the riches of east and west, with pearls, diamonds, rubies, and other fine stores, as also musc, ivory, and other valuable eastern commodities; and from the west, with gold, filver, odoriferous woods, pearls, emeralds, fine dyes, rich and fine wools, amber, and other riches, which were wanting to make up the opulency of Solomon.

Neither ought this to be thought impracticable, fince it is made out already in thefe books, how eafy the navigation would be from Chile to the Philippine iflands in two or three months: the conveniences of which navigation have been fet out in the fourth chapter of the fecond book; and we do know how the fhip Victory did return that way, and fo have many others fince; by all which the poffibility of Solomon's navigation is made out, and that within the compafs of the three years, in which they ufed to return to their port in the Red-Sea; and if it did not do this, it can hardly be imagined how it could employ fuch a fpace of time.

For thefe, and many more reafons of this nature, our most learned Pineda retracts the contrary opinion, which he had published in his commentaries on Job; becaufe, when he writ them, he had not fo well examined the grounds of the laft opinion, nor weighed all the authority and ftrength of conjectures that attend it ; and, indeed, fo far every prudent man would go, as not to defpife and contemn an opinion of which he believed the contrary, if it were maintained with probability, and by perfons worthy to be hearkened to. Though, to fay truth, if I must speak what I think, that one reafon which I gave above against the Romans having had knowledge of those parts, (which is, that it appears incredible, that having once made the difcovery, and enjoyed those mines, not only the communication with them, but the very memory of them fhould be loft,) feems, in my opinion, to be as ftrong an argument against Solomon's fleet; for if that did once overcome all the difficulties of that navigation, what caufe could interrupt that commerce in fuch a manner, as that the total remembrance of it fhould be abolifhed ? It is true, that as to the Jews, they were a people who did not care to live in foreign parts, nor fettle among other nations, nor inhabit the fea-coafts; for God Almighty was unwilling, that, by the communication with the Gentiles, they fhould contract any of their cuftoms; and therefore we do not know, that of all the race of their kings, any more than three went about any fuch thing, which were Solomon who compafied it, and Josophat and Ochofias, whose undertakings had no fuccefs. By which it may be infered, that when Solomon died, and the temple was finished, this navigation was neglected, till at last it was quite forgot; befides, that it appears from the Chronicles, and other places of fcripture, that in those times filver and gold were but little valued, the covetousness of mankind not being arrived to the height it is at now-a-days: they did not think it worth leaving their houfes to endure labour in the fearch of them, and run all those hazards which the voyagers to those parts do undergo. This therefore might take off the edge and defire which we fee in the Europeans, of continuing those voyages; neither would they defire to fettle in those parts; or if they did, the memory of them might be loft. See Padre Pineda, particularly in the fifth fection of the fixteenth chapter, where he anfwers the arguments of the negative opinion; to which he gives very handfome folutions; and in particular, to those who fay, that Solomon's fleet could bring nothing but gold and filver, as if this were nothing, or like ballaft; and that this were not motive enough for him to fend his fleets, for a thing of which it appears he made fuch use, both for the temple and his own palaces; fo that it does not feem feem poffible he could have it all from the eaft, but muft have had recourfe to the weft, where there was fuch a mass of it, as is made out by what we have faid of the mines of Chile, and those of the Inga, with those trees, fruits, and plants of mass gold, and statues of the fame metal in his gardens; besides what they call Guass, where to this day they keep concealed a vast store of those riches gathered together for the liberty of the Inga, when the Spaniards had him prisoner; all which may be feen in what has been faid already in feveral chapters.

CHAP. IV. — Of the Difcovery of America; and by what Means it was performed.

AMONG the hidden and wonderful fecrets of nature, we may reckon the fingular virtue of the loadftone, which has produced fuch wonderful effects, as they feem more the object of our eyes than of our faith, as men; for who, if they did not fee it, could believe the experiments made every day, which furpafs all imagination? See the curious and elaborate treatife of Father Athanafius Kirker, of our company, *De arte magnetica*; for there the moft afpiring mind after curiofities will find all he can wifh about this matter, as well what is ancient, as what is modern, the whole treated with fo much erudition and clearnefs, that the ftudy of it is not lefs delightful than profitable. The fame fubject is alfo treated of excellently by Father Nicholas Cabeo, of our company, in his book of Magnetical Philofophy.

Among all the virtues of this rare ftone, I think that its quality of taking up iron is not fo admirable as that which it has had of drawing gold and filver to Europe from India; the mafs of which has been fo great, that fome curious perfons having made a calculation in this matter, which they underftood very well, and reckoning the millions brought by the galleons and flotas, from the difcovery of the Indies to their time; and having alfo computed the diftance between Europe and those parts, have found that there might have been made, from the one to the other, of bars of filver, a bridge of a yard and a half wide; fo that if all that metal could be found now-a-days in any one place, it would make a mountain like that of Potofi, from which the greateft quantity has been fetched; and for that reafon it appears hollow, and bored through in fo many places. We may therefore fay of the loadftone, that gold has given it a virtue like that of faith, to transport mountains, not only from one place to another, but from one world to another, through those immense feas which feparate them.

Who the first man was that applied this virtue to facilitate navigation, it is hard to prove by authors; for though we know that this ftone was known to the Jews, and to the Egyptians, yet who first made use of the fea-needle and compass, is very hard to find out. Some fay it came from China to Europe: others, that it was found by the inhabitants of the Cape of Good Hope; and that Vafco de Gama, met with fome of their veffels, when he made the difcovery of the Cape, who ufed this inftrument : others give the glory of it to the Spaniards and Portuguefe; others to a man of the kingdom of Naples, called John Goyas, of the city of Amalfi, who was rather the man that perfected this invention, being himfelf an experienced leamen. But let every one have his opinion, it is not my bufinefs to decide; I only fay, that to this admirable virtue of the loadstone we owe the difcovery of America: for though fome authors fay, that Solomon's fleet failed by the observation of the stars, the winds, the flight of birds, and other figne, with which they fupplied the want of this useful invention, not then known according to the common opinion, (though the contrary is not altogether improbable,) yet it muft be

134

be owned that the use of this fea-needle has been the thing that has facilitated the navigation, fo as the first difcoverers, trusting to this, durst venture into vast feas, and pass the gulph which leads to that remote and unknown world, fo as to land in it; which was a performance worthy of immortal memory to the man who undertook and executed it.

This man was the moft famous Captain Don Chriftopher Columbus, a Genoefe, whom the Spaniards in their language call Colon, who, though he were not, as he was, nobly defeended, might have given by himfelf nobility and fame to his defeendants, and to his noble and illuftrious country; for if this commonwealth had had only this fon, it might draw fame enough from him alone, fince his generous and bold mind was capable of overcoming all the difficulties which he met with in the project and execution of this enterprize, the more to be effeemed by the great advantages procured by it to both worlds; to this, by that vaft increafe of riches, of which a great deal is confecrated upon the altars in churches, befides what is employed in the furniture of princes and great men: and to the other world, the benefit of the light of the gofpel, by which it is fo much more polifhed and meliorated in all fenfes.

Neither does that which Garcilaffo de la Vega, and others, do relate, any ways affect the glory of this great man, when they fay, that he undertook this defign upon the knowledge communicated to him by a man whom he entertained, and who died in his houfe as his gueft; for we must own that his chief praife does not come from what he knew of this new world before he undertook to find and conquer it, but from his generous mind and conftancy in purfuing his enterprize; and this is all his own, which puts justly the laurels upon his head, and makes his memory immortal in fpite of time and envy, though one would think no body fhould have any for the common benefactor of two worlds. That which thefe authors relate about this hiftory is, that a pilot, an inhabitant and native of the town of Guelva, in the county of Niebla, in Andalufia, called Alonfo Sanches de Hualva, or as others fay, Buxula, ufed to trade with a fmall veffel to the Canaries; and that one time, in his return to Spain, he met with a mighty ftrong Levant, which was fo powerful, that in twenty days he found himfelf in one of the iflands of the Weft Indies, one of those which we call the iflands of Barlovento, or the Windward Iflands, and it is judged it was Hifpaniola; from whence, fearing to perifh for want of provision, he returned to the island of Madeira, having endured to much, that almost all his company died, and himfelf came in fuch a condition, that though Columbus, who loved fea-faring men, and for that reafon had chofen that island to live in, received him into his house, and took great care of him, yet he died; but before he died, being willing to make fome return for the kindnefs received, he called Columbus to him, and left him, as an inheritance, the journal he had made, with the rhumbs of wind both going and coming, and all other his obfervations in the voyage, and about the place where he landed.

This is thus related by Garcilaffo de la Vega, and Father Jofeph d'Acofta, who fays, he does not know the name of this pilot who left this legacy to Columbus: and this he attributes to the particular providence of God, who would not have the honour of this difcovery be owing to any human induftry, but immediately and intirely to the Divine Majefty, to whofe difposition we ought to attribute fo much as appears contingent and cafual in this fhip's mifcarriage, from its courfe, and all the other accidents attending that florm, till the pilot was brought to die in the houfe of him whom God had chosen for a fecond caufe and chief inftrument of this enterprize; who being of himfelf a great philosopher and cosmographer, compared these notions which he had from from his dying gueft, with his own fpeculations which he had long had upon the fame fubject; and this made him refolve to undertake what he afterwards accomplified. In order to this he began to confider of those who were likeliest to affift him; and first of all he offered it to his own country, who took it for a dream; after this, to the Kings of Portugal, France, and England: and at last he addressed this rich offer to Their Catholick Majesties, for whom it was designed from the beginning, by Him who had resolved in his providence to amplify their monarchy by the addition of for many rich and powerful kingdoms, as they have acquired in this new world.

Ferdinand and Ifabella, who are worthy of immortal glory, having examined the grounds Columbuswent upon, and the honour that might be done to the crofs of Chrift, and to the preaching of his gofpel, if this enterprize fhould take effect, having ferioufly confidered of it for eight years together, they commanded all neceffary provisions to be made, without fparing any charge, or minding the contingency of a defign fo new, fo difficult, and fo much without example.

CHAP. V. — Don Christopher Columbus fails from Spain in Search of the New World.

IN the year of the birth of our Saviour 1492, upon the third of August, about half an hour before fun-rife, (the happiest day that ever shined upon our antipodes, as being the beginning of their greatest felicities,) Don Christopher Columbus, the most famous Genoele that ever was, failed from Spain, with the title which he had received from Ferdinand and Ifabella, of admiral of the Seas of all those countries he should difcover and conquer; fo leaving behind him the famous Herculean straights, as difdaining their Non-plus-ultra, and laughing at their pillars, he launched into the vaft ocean, and begun his navigation with no lefs confidence than admiration of those who faw him leave the fhore and fteer a courfe never before attempted, by new rhumbs of winds. Having touched at the ifland of Gran Canaria, he again failed from thence the first of September, with ninety in company and provisions for a year. After some days of navigation he began to find himfelf near the tropick of Cancer, and under the torrid zone; whereupon his men who had been bred in the temperate climates of Europe, being impatient of heats, which they never before had experienced, and wearied with feeing nothing but a valt ocean without land, began to enter, into diftrust of difcovering any. At first they murmured only between their teeth; but at last, fpeaking out boldly, they came to their Captain Columbus, and endeavoured by all means to diffuade him from purfuing his difcovery, as vain and without hopes of fuccefs; and that it would be much better to return back to Spain; but he with a generous mind being deaf to all their perfuafions, purfued his voyage with conftancy. His men perceiving still how he went further from Spain, and that they had almost worn out their eyes with looking out from the top-mast head of the ship, without finding any appearance of land, renewed their inftances and reafons; and that the more earnefily, by how much they perceived every day the confumption of their water and provisions; calling now that temerity, which before they faid might be constancy: for they alledged that the time was increased, their provisions leffened, the winds fcarce, and calms to be feared; no land in view, its distance not to be known nor gueffed at; that the danger was certain, and no avoiding to perifh, if they staid any longer; therefore, faid they, let us fecure our lives, except we intend to be a fable and laughingftock to all mankind, and looked upon as our own murderers.

To fay truth, it cannot be denied but this was an urgent danger, and greater perhaps than can be imagined by those who never were in the like trials; for when no lefs than life is at ftake, all dangers appear great, and particularly at fea: befides, thefe allegations were of themfelves of great confideration, and capable of fhaking the greateft conftancy and valour; yet the courage of the great Columbus was fuch, and fo fingular his prudence, that fometimes diffembling, and fometimes taking no notice of what he heard, but talking to this man and the other in private, and then comforting them all up in general, and giving them fome account of his well-grounded fpeculations, he for fed them with hopes and expectations, (he himfelf flewing no diffruit of his fucces,) that he brought at last his project to a happy iffue. They were following their voyage thus, through all the inconveniencies of heat, ready to fliffe them, when on a fudden a voice was heard crying, Land, Land: they all flew to the prow and fides of the fhip, and fixed their eyes on the horizon like fo many Argus's, to find out the land which feemed to appear like a cloud upon the fea. The defire of getting to it made fome doubt, if it were land or clouds; but others were more confident : fome affure it to be low land; others think they fee rocks, and a large extended fhore; and all was but guess, occasioned by the great distance they were at fea from any land; for in truth it was not land but clouds. And this was an invention of Columbus, their admiral, who feeing them almost ready to mutiny, made use of this artifice to prevent the ill effects of their defpair, caufing this voice to be heard to give them a fhort joy, and amufe them.

This fucceeded well for that time: he fteered his courfe towards this pretended land till night; and when they were afleep he fet his prow to the weft, in fearch of the true land: but in the morning when it was day, feeing those clouds, which they took for land, vanished as it often happens in long navigations, they began to afflict themfelves anew, and remonstrate to the admiral boldly to his face, which I do not wonder at; for besides the danger of perishing with hunger, they found themfelves in a climate fo fcorching and fiery, than in the third voyage that the admiral made, they being becalmed eight days, about the fame place, were afraid the fun would have fet fire to their so fter all his cafks flew under decks, the hoops fmoaking as if they had been fet on fire, and the wheat was all in a ferment; and the falt flesh was, as it were, boiled again, and stunk fo, that, to avoid infection, they were forced to throw it overboard.

The admiral was thus purfuing his voyage, in which patience was his moft neceffary habit, to endure the terrible perfecution of his own people; when on the 11th day of October of the fame year, it pleafed God to crown all his invincible fufferings, and the confidence he had in him, first, by manifest figns of land, which in fuch occasions do generally put a stop to all complaints and afflictions, and are the beginning of joy and content, which is followed with forgetting all past fufferings. The first thing they faw was the bough of a tree new cut, with its fruit on it, which though a kind of thorn, was a branch of olive to the inhabitants of this new ark; another had feen green fifh, and fome pieces of wood floating; all which were clear marks of land not far off, as to the navigators from India are the quantity of fea weeds which meet them about ten leagues from the coaft of Spain. The joys which failors and paffengers flew generally at the figns of land, the capers they cut, and embraces they make each other, with their congratulations to the pilot, their thanks to heaven, nay, the tears they fled, and devout prayers they make to God and the Virgin Mary, in acknowledgment of their protection; all thefe are VOL. XIV. 200

not fo much matter for my pen, as for fight and fenfe. All this happened to the admiral's company, which not only forgot their fufferings, and the hatred they bore to the author of them, but they run and threw themselves at his feet, as admiring and congratulating his conftancy, and begging his pardon for fo many hard thoughts, and as hard words, they had entertained, and let fly against him : he received them all with embraces and marks of benignity, affuring them that by the end of that day they should be within fight of land, and having faid this, he went upon the higheft part of the fhip's ftern, as being defirous to be the first, that should give them the good news of difcovering land.

There was a rent of ten thoufand Maravedies a year for the first discoverer, which made them all look out with great attention; fome on one fide, and fome on the other fide of the fhip, fixing their eyes where they thought it was most probable to find land; but it was about two hours before midnight, when Admiral Columbus difcovered a light, and calling to two officers, fhewed them; and prefently he perceived that the light changed place, for it was a light carried from one house to another, as was known afterwards when they landed : they failed on towards that light, and about two hours after midnight they difcovered land, which was at the fame time made by the other fhips in company, whereupon there were many claims for the Albricias; but at last they agreed that the Albricias belonged to the admiral, because he first discovered the light : this was confirmed by Ferdinand and Ifabella, King and Queen of Spain, and fettled upon the fhambles of Seville, as the best fund for the admiral.

Herrera, the chronologift, makes his reflections upon this light, and moralizes upon it, that it fignified the fpiritual light, which those nations wanted, and which was now brought to them from Europe by these difcoverers; as a proof likewife of the piety of the catholic Kings, who having made war upon the Moors for three hundred and twenty years, had hardly finished it; but they put their shoulders to this new conqueft, to fpread by their means the glory of the gofpel, and make the voice of it to be heard to the utmost limits of the earth, making out by this manifest proof, how firm fupports they were to the faith, fince they were conftantly employed in propagating of it. Thus far Herrera: to which I may add, that the light Columbus faw in the middle of the night, was the tacit working of reafon, which being buried in profound errors, did yet throw out fome fparks from under those afhes, and cry to heaven for the enlivening fpirit to deliver it, and by the means of Chrift revive it, fo as to enlighten that gentilifm, fo long overwhelmed in darknefs, and for fo many ages paft buried, as it were, in the fhadow of death.

Thus it was; and as foon as day broke they landed : the admiral carried with him the royal standard spread, the other captains having in theirs the banners of this conqueft, which were prepared, and had in them a green crofs crowned, and round about the names of Ferdinando and Ifabella, to fignify the hopes that those princes had entertained to make fubject, and lay at the feet of the crucified Jefus, the crowns and fceptres of those powerful monarchs of that new world; they themfelves having first submitted their own, that there might be no crown, command, nor lordship, but that of the exaltation of the crofs.

To this end, as foon as the admiral landed, kneeling down with all his company, he kiffed it once, and twice ; and lifting up his eyes to heaven, all in tears, he adored our Lord God of all things, who had brought him thither, thanking him for his favour, and doing homage to him in the name of those people, who were to be brought to his knowledge; in fign of all which, and the pofferfion he then took, he called that

ifland

fland Saint Salvador: he raifed alfo a most beautiful cross, which was a declaring war to hell, to make it renounce the possession of that land, which for so many ages it had tyrannized over.

The admiral being rofe up, they all approached, and not only embraced him, but carried him upon their fhoulders in triumph, as having performed the greateft work that ever man attempted, or brought to pafs. Immediately after this, the admiral, in prefence of a notary, took poffefiion of that land in the name of Their Catholic Majefties, and caufed himfelf to be owned as viceroy, and as fuch they began to own him, and obey him in all things.

This ifland, which we fhall call Saint Salvador, was about fifteen leagues in length, very woody, and having good water, with a lake of frefh water in the middle of it, and well inhabited by the Indians, who called it in their tongue Guanaani; and it is one of those which fince have been called the Lucaicks. It is nine hundred and fifty leagues from the Canaries.

CHAP. VI.

WHEN the Indians faw fuch great bulks in the fea, with great fails, and the whole unlike their canoes, and they were drawn near the flore, they remained aftonifhed and befide themfelves, becaufe, though by their motion they gueffed them to be living things, yet for their bignefs they took them for fome ftrange fea-monfters, never feen before on those coafts. The fhips came to an anchor close by the shore, and the admiration of the Indians increafed ftill fo much the more, feeing white men come out of them with beards and cloaths; yet they did not run away, but drew near without fear. the rather when they faw that the Spaniards began to prefent them with bells, needles, and other things of Europe, which pleafed them extremely, as being new to them : in return they gave the Spaniards gold, provisions, and other things of their country: they came fome in their canoes, and fome fwimming to the fhips, where it was wonderful to fee how they valued every thing, even to the bits of glazed difhes, or broken earthen ware, that lay about the fhips, which they gathered up as jewels which they had never feen. And to fay truth, most things borrow their value from their rarity; and for this reafon they had as little value for gold and pearls, which were things very common among them, they exchanging whole ftrings of pearls, and fome of them as big as peafe and fmall nuts, for needles and bells, as happened in the islands of the Margarita; fo great is the difference in the effimation of things common, or rare ones. The admiral having here got an account of fome other islands, went out to difcover them; and the fecond he found he named Santa Maria de la Conception, dedicating it to the queen of heaven : the third he called Fernandina, of the King Don Fernando : the fourth he named Ifabella, in confideration of his miftrefs Queen Ifabella. Of all these he took possession in the name of Their Majesties, by setting up their royal ftandard before a publick notary, with the fame folemnity and ceremonies obferved in the taking poffeffion of the first island.

On a Saturday, the 29th of October, they difcovered the famous island of Cuba, where the Havana is: there the Indians, frighted to fee the Spaniards, whom they thought defcended from heaven, went to them kiffing their hands and feet. The admiral's laft difcovery was of the island called Hifpaniola, where he met with a great deal of gold, and fome birds and fishes, like those of Castile. Here the Cacique

Gua.

Guacanagari received him with much humanity; and in his land he made the firft colony, or fettlement of Spaniards, which he named the city of the Nativity.

The Spaniards generally were received in thefe and other the Barlovento Iflands, and on the coafts of Terra Firma, with much love and kindnefs, very few of the Indians offering to refift them. On the contrary, they all were pleafed with their coming upon their lands, furnifhing them with all that the country afforded, and prefenting them with gold, pearls, parrots; contenting themfelves with a return of a very fmall value. Of the European things, those they feemed most to mind, were needles; and at first they could not imagine what they were good for; but being told they were to few, they answered they had nothing to few; but yet they kept them, because they had never feen any thing of iron or steel. They were much supering at the use of swords, and particularly when they experienced their starpes; for at first they used to take hold of them by the edge with great fimplicity.

The admiral, as viceroy of thofe new kingdoms, began to govern, as he difcovered them; and that he might regulate them the better, by confulting Their Majefties in his doubts and difficulties, he made two voyages backwards and forwards to Spain, ftill making in his returns difcovery of fome new iflands, and amplifying the monarchy, as hiftorians do relate at large, to whom I refer myfelf, not to engage in matters which are far from my fubject; but I cannot but make fome reflection upon what happened to this great man. Who would not have thought, confidering the happinefs with which he had executed all that he had defigned, in the moft difficult fubject in the world, that he was eternizing his felicity, and putting fortune under his feet? But that no one may ftrive to do it, but that all may know how conftant is her volubility, and how perpetual the motion of her wheel, and that there is no human power, nor ftar, can fix it, I will relate here briefly what befel him.

Let him who governs be undeceived once for all, and know, that to fit upon a throne, and take poffeffion of power, is to be a mark for the cenfure of the good and bad to aim at; it is juft putting himfelf into the hands of anatomifts, to be taken in pieces, and examined to the very bones, and very often envy oppreffes innocence by feigned accufations: this is not the place to examine that of the admiral; I only know that there were fo many complaints, and fuch appearances of mifdemeanors alleged at court againft him; as, that he did not advance the conversion of the Indians, but made them work to get gold, defiring more to make them flaves than Chriftians; and taking no care to maintain them, and fuch other imputations; as moved Their Catholic Majefties to fend the commander De Bobadilla to examine the truth of what was alleged, and to do justice in requisite cafes; writing at the fame time a kind letter to the admiral, that he fhould let the commander execute their orders.

But he exceeding his commission, and the intention of Their Majefties, took all he informations against the admiral and his brothers, and without hearing them, made himfelf be owned for judge and governor, giving rewards, and publishing that he came to relieve the opprefied, and to pay their falaries, and put all things in good order. This drew over to him all those who had any gradge to the admiral, and most of the common fort fided with him; fo he entered into the houses of the admiral and his brothers, feized their goods and their papers; all which he might fafely do, without ting irons upon their feet, and fo sway: he fent to feize him and his brothers, putthem away for Spain, to give an account of themselves.

When they came to put irons upon the admiral, there was none fo bold as to do it, out of the refpect that all had for him; and if he had not had in his family a rogue of

a cook,

a cook, who was villain enough to do it, they had not found any one to execute fo barbarous a command. When Columbus faw himfelf put in chains by his own fervant, it is faid, that fhaking his head, he pronounced thefe words, full of refentment for his ufage: "Thus the world rewards thofe who ferve it; this is the recompence that men give to thofe who truft in them. Have the utmost endeavours of my fervices ended in this? Have all my dangers and fufferings deferved no more? Let me be buried with thefe irons, to fhew that God alone knows how to reward and beftow favours, of which he does never repent; for the world pays in words and promifes, and at last deceives and lies."

Having faid this, the fhip fet fail; and as foon as he came to Spain, Their Majefties, when they were informed of the prilon of the admiral, were much concerned; for by no means had that been their intention. They fent for him to come before them; but his tears and fighs were fuch, that in a great while he could not fpeak; at laft he faid, affuring Their Majefties of his great zeal for Their royal fervice, which had always been his guide, that if he had failed in any thing, it was not out of malice, nor on purpofe, but becaufe he knew no better.

Their Majefties comforted him, and particularly the queen, who favoured him moft; and after fome time, in which the truth of the matter was made out, they ordered, that all that the commander Bobadilla had confifcated of the effate of the admiral and his brothers, fhould be reflored to them; as alfo, that the capitulation with them fhould be obferved, as to their privileges and exemptions. After this, the admiral returned a fourth time to the Indies, in an honourable way; and employing himfelf in new difcoveries, he arrived upon the coaft of Terra Firma of America, the fecond of November 1502, and coafting along by Cubija, arrived at the port; which, becaufe it appeared fo good a one, and the country fo beautiful, well cultivated, and full of houfes, that it looked like a garden, he called Puerto Bello, or the Fine Port, having difcovered other iflands in the way, and endured very bad ftorms. At laft, returning back by fome of thofe places which he had difcovered, taking, as it were, his leave of them, and returning to Spain, to order there a better fettlement of affairs, he died at Valladolid, where the court was, making a very Chriftian end, and giving great figns of his predefination.

CHAP. VII. — After the Death of Columbus, the Castilians pursue the Discovery and Conquest of the New World.

AMONG thofe who accompanied the admiral in his first difcovery, there was one Vincent Yanes Pinzon, who being a rich man, fet out four vefiels at his own charge. He, at his return to Spain, fet fail from the fame port of Balos upon new difcoveries : he first came to the island of St. Jago, which is one of the Cape Verd islands : he fet fail from thence the thirteenth of January in the year 1500, and was the first who paffed the equinoctial line, by the north fea, and difcovered Cape St. Augustin, which he called the Cape of Confolation, taking possible for the crown of Castile; from thence he found the river Maragnon, which is thirty leagues over, and fome fay more at its entrance, the fresh water running forty leagues into the fea; then coasting towards Paria, he found another river very large, though not fo broad as Maragnon : they took up fresh water out of it, twenty leagues at fea. He discovered in all a coast of fix hundred leagues to Paria, and lost two ships in a terrible form that he endured. We We have feen alfo in the laft chapter, that Columbus had difcovered the ifland of Cuba, though he could never fail round it, being hindered by the florms and ill weather; fo he died without knowing whether it was an ifland or no, for he judged it to be rather a point of fome continent; but it is a very large ifland, with many fair ports, and mountains full of precious odoriferous woods of cedar, ebony, and many others; and there are in it feveral cities of Spaniards, and among the reft the flrong fortrefs of the Havana, which is a Scala or rendezvous for the galleons and flotas, loaded with filver from the Weft-Indies: this is one of the beft fortifications the King of Spain has in all his dominions. But, in my opinion, that which makes this ifland moft valuable, is, the good nature and docility of thofe who are born in it; which was a product of that foil before ever the Spaniards trod it, as they flewed to Columbus, and thofe who came after him, receiving them with all kindnefs and humanity.

To further what the Admiral Columbus had begun, God raifed an inftrument in the perfon of Vafco Nunnes de Balboa, one of the first difcoverers of this new world: a man of good underftanding, as he fhewed upon the occafion which I fhall now relate. He was, with others, upon the difcovery with General Encifco, the governor: they came to a place called Uraba, and as they entered the port, by negligence of the fteerfman, the governor's fhip ftruck upon a fand, and was loft, nothing being faved out of her but the lives of the men, who got into the boats, but naked, and in danger of perifhing for want of provision. Vafco de Nunnes faid, that he remembered there was not far off a river, the banks of which were inhabited by much people: he guided them thither ; and the thing being found to be as he had faid, he gained great reputation among them all. They came thither, and found the Indians in arms against the Castilians, whose name was already become odious to those nations : they made a vow to our lady, to dedicate to her the first fettlement and church to the honour of her image, under the title of Sancta Maria la Antigua, or the Ancient St. Mary, which to this day is venerated in Seville; and to fend her many rich gifts of gold and filver, which one of them, as a pilgrim, fhould carry in the name of the reft. Being encouraged by this vow, they fell upon the Indians, and obtained the victory.

Prefently they made a fettlement, and built a town, dedicated to the virgin, calling it Sancta Maria el Antigua of Dairen, becaufe that was the name of that river. After this, to accomplifh their vow, they fent the promifed prefents to the devout image of the virgin.

The good opinion of Vafco de Nunnes increafing thus daily, and having cunningly ordered it fo, that Encifco refigned his government, they chofe Vafco Nunnes in his room : at first with an affociate ; but he found means in time to be alone, as it was neceffary he fhould, in point of command, being to overcome fuch difficulties as were to be met with at every turn: and, indeed, he knew how to make himfelf be both feared and beloved, having a very good fpirit of government. In the new difcoveries he undertook, he came first to the lands of the Cacique Ponea, and not finding him at home, he destroyed them : he passed on to the lands of the Cacique Careta, who not caring to enter into war, received him peacefully, and treated him as a friend. This Cacique Careta had a kinfman, who was a lord, that lived further in the country, and his name was Suran; who perfuaded another neighbouring prince, called Comagre, to make a friendship with the Castilians : this prince had a very fine palace, which astonifhed them; and particularly when they faw, in a kind of chapel or oratory, fome dead bodies lying, covered with rich mantles, and many jewels of gold and pearls; and being afked, whole bodies these were, they answered, of their predecessor; and that, to preferve them from corruption, they had dried them with fire. The king careffed

careffed the Caftilians, and gave them great prefents : he had feven fons, and one of them, more liberal, gave the Spaniards a prefent of near four thousand performed fine gold, and fome pieces of rare workmanship: they weighed it, and taking the King's fifths, they began to divide the remainder. In the division, two foldiers fell out about their fhare: the Cacique's fon, who had made the prefent, hearing the noife, could not bear it, but coming to them, ftruck the balance where the gold was weighing, and threw it all upon the ground, faying, " Is it poffible you fhould value fo much a thing that fo little deferves your efteem ? and that you fhould leave the repofe of your houfes, and pafs fo many feas, exposed to fuch dangers, to trouble those who live quiet in their own country? Have fome fhame, Chriftians, and do not value thefe things : but if you are refolved to fearch gold, I will fhew you a country where you may fatisfy yourfelves." And, pointing with his finger to the fouth, he told them they fhould fee there another fea, when they had paffed over certain high mountains, where they fhould fee other people, who could go with fails and oars as they did; and that paffing that fea, they fould meet with vaft quantities of gold, whereof the natives made all their utenfils; and that he would be their guide, and conduct them with his father's vafials; but that it would be requifite they flould be more in number, becaufe they were powerful kings, who could hinder their paffage: giving them by this the first notice of Peru and its riches.

This was the first knowledge and light which the Spaniards got of the South-Sea, and of the gold and riches of its coafts, which gave them all great joy; fo that they were impatient to fee the hour of breaking through all obstacles, to fee that fea never before heard of, and enjoy the riches of it. Vafco Nunnes immediately difpofed all things, and went out of Dairen, in the beginning of September in the year 1513, and going along the fea-fide, to the habitation of the friendly Cacique Careta, he went towards the mountains by the lands of the Cacique Ponea; who, though at first he endeavoured to oppose their paffage, yet being advised by the Indians of Careta, who accompanied the Caftilians, he prefented them with gold and provisions, and gave them guides; they, in return, giving him looking-glasses, needles, knives, and other baubles, which they valued very much. Then they began to mount the mountain through the country of a Cacique called Quareca, who appeared in arms, and attacked the Spaniards : he had a long robe of cotton, but all his men were naked. They began to fkirmish, and threaten, by their actions, to hinder the passage; but no fooner did they hear the noife, and feel the effects of the mufkets, and find fome to fall, but they turned their backs, flying like a herd of deer, frighted to fee the fire, and hear the found of the vollies, which appeared thunder to them, and thought the Spaniards had thunderbolts at their command; fo they left the paffage free for them. The Indians of Careta had faid, that from their country to the top of the highest mountain, there was the time of fix funs; for by that they meant fo many days' journey; but the ways were fo bad, that they employed five and twenty days to get to the top. A little before they were at the higheft, Vafco Nunnes de Balboa caufed a halt to be made, defiring to have the glory of having himfelf been the first man that ever faw the South-Sea. And fo it was : he goes alone, difcovers that vaft ocean, and the large bays of the South-Sea, called Pacifick; and upon his knees, with tears in his eyes, lifts up his eyes to heaven, giving thanks to the great Creator of all things, for having brought him from fuch remote parts to contemplate that which none of his anceftors had ever feen : he made a fign after this to his companions to come up, and fo they all run in hafte, pufhing one another on; and when they were on the top, where there is a full profpect of the fea, it is not to be imagined the content they all received in admiring that vaft and

and fmooth liquid chrystal, which not being animated, did not on its fide give leaps of joy, nor go out of its bed to the tops of the mountains, to welcome those who came to deliver it from the tyranny the devil exercifed over it, by infefting it with ftorms and tempests, and infecting the air with the breath of idolatry, which was breathed in all those parts, both east, west, north, and south. Oh! if all the creatures of that world could have come one by one to fee the good that was coming to them by means of the Gofpel, which dawned in those mountains; or, if the predestinated of that new world could have viewed from their cottages, and poor habitations, or rather from the deep night of their errors and fins, the fun that was beginning to enlighten them from that high mountain, and the virtue and efficacy of grace, which then began to appear to reconcile them with God, and the blood of Chrift, which like a great river was falling through those precipices, till it should bathe the utmost parts of the earth, and give life to thofe, who, being fallen and covered with the dark fhadow, did not only not hope for life, but not fo much as know it; how would the children have leaped out of their cradles, who, to go into paradife, expected nothing but baptifm, as has happened to great numbers, who just expired when they were made an end of baptizing; and the old men, who wanted only the knowledge of the Gofpel to fhut their eyes, and being reconciled to God, fly into his glory, how they would open them, and lying upon the ground, fly, at least with their spirit if they could not with their body, to receive the preachers of the Gofpel, who brought peace and a general pardon for their fins! All the other predefinated, every one according to his state, who have by this means been faved, (which are infinite) how they would melt and cry with joy, to hear this news, which is as welcome to them, as that of the coming of Chrift to the holy fathers in limbo, who were expecting it with fuch languishing defires !

CHAP. VIII .- Vafco Nunnes de Balboa purfues the Difcovery of the South-Sea, and dies.

VASCO Nunnes de Balboa, having performed his devotion, and thanked our Lord, with all his companions, for fo great a favour done him, as to bring them to that place, and for the favour he was about to fhew to that new world, by the means of the preachers of the Gofpel, to whom he thus opened a way to publifh it; he then bethought himfelf of his fecond obligation, which was to his King; in conformity to which, he took poffeffion, in His Majefty's name, for the crowns of Caftile and Leon, of the place where he was, and of the fea which he difcovered from thence; cutting for this purpofe many trees, and making great croffes which he fet up, and writ upon them the names of Their Majetties.

After this they began to go down from the mountain, marching always prepared for any encounter that they might have with the Caciques in their way; fo, though the Cacique Chiapes oppoled them with his people, who were flout and many, yet by fetting the dogs at them, and beginning to fire their mufkets, they were foon routed. This made the Cacique offer terms of peace, and receive and make much of the Caffilians, prefenting them with gold; and he proved fo good a friend, that he pacified many other Caciques, who were in arms, to binder the paffage, who likewife made their prefents of gold.

From the town of Chiapes, Vafco Nunnes fent out, to difcover the coafts of the South-Sea, the captains Francifco Pizarro, Juan de Efcara, and Alonfo Martin, each to a different place : this laft found two canoes dry on the fhore, and the fea below them above half a league : he wondered to fee them fo far from the fea; and, as he was

confidering

144

confidering it, he perceived the fea coming very fast in, and did not ftay long before it fet the canoes on float: he entered into one of them, and took witness that he was the first European that had ever been upon that fea. The tides on that coast ebb and flow every fix hours, fo as great ships will be left on shore, the water retiring fo fast, that it gives great admiration when it returns, to see fo great a space covered fo fast, that it appears an inundation.

Vafco Nunnes having advice of this, came down alfo to the coaft; and, going into the fea up to the mid-leg, with a naked fword in his hand, faid, that he took poffeffion of it, and all the coafts and bays of it, for the crowns of Caftile and Leon; and that he was ready with that fword, as often as it fhould be neceffary, to make good that claim, against all that should oppose him. The Indians were in great amaze at this new ceremony; and they were more furprized, when they faw him, against their advice, and that of the Caciques, venture to crofs the gulph of Pearls, to difcover the riches of it in that commodity; though it had like to have cost him dear, for he was near perifhing in croffing that arm of the fea. Now let us fee (in order to undeceive those who shall read this) how little this courage and boldness availed this generous conqueror of the new world, and the great things his invincible mind had brought to pafs. All his military prudence and cunning, by which he made himfelf be refpected by unknown nations, availed him little; for this fo fortunate a great captain had a tragical end : he loft his life in Dairen at his return, finding there the governor Pedrarias, who came to fucceed him. The King, in fending this man, had recommended to him the perfon of Vafco Nunnes de Balboa, and ordered him to made use of his council, as of one who had honoured him by his bold undertakings, and to whom, for a reward, he ordered the governments of Panama and Coiba, and the admiralship of the South-Sea, which he had difcovered, and on which he had already built four fhips, and got together three hundred men, to go upon the difcovery of Peru. But the faid Pedrarias commanded him on fhore, and there feizing him, caufed him to be beheaded publickly as a traitor. The crier went before him, crying, as is cuftomary, that he was a traitor; which, when Vafco Nunnes heard, he faid it was a lie, and that no man had ferved the King with more zeal, nor more fidelity than he, nor more defired to extend his monarchy; but all his complaints were like voices in the defart, which were of no force against envy and emulation, which had prevailed in his enemies, and which can never fail against those who govern. His death was much refented, and appeared very unjust in Spain, becaufe, indeed, the King loft one of his braveft captains, and one who would have difcovered Peru with more facility, and without all those tumults, which fince happened; for his prudence, valour, and zeal, were above the ordinary fize.

It cannot be denied, but that the fentence may be juftified according to the depofitions of witneffes; but yet it was a great argument of his innocency, that which he himfelf faid to the governor Pedrarias, which was, that if he had in his heart to make himfelf mafter, and independent, as they accufed him, he would not have obeyed his call as he did, and leave his fhip without any difficulty; for he had then three hundred men all at his devotion, and four veffels, with which he might have been fafe, and gone upon new difcoveries, if his confcience had accufed him. They add here, that an aftrologer had told him, that that year he fhould fee fomething extraordinary in the heavens, he fhould be in guard againft fome great misfortune that threatened him; and that if he efcaped from it, he fhould be the moft powerful and happy man in the whole Indies. And that accordingly he did fee this fign, but laughed at it, as thinking himfelf in fo high a ftate.

U

VOL. XIV.

CHAP.

CHAP. IX .- The Difcovery of the South-Sea, its Ports and Iflands, is continued.

IT is a common paffion in those who govern, either to oppose the defigns of their predecess, or at least not to execute them by their means, nor by their creatures, that their affistance may not less the glory, which they pretend by making themselves the authors of the enterprizes. As we have already faid, Pedrarias fucceeded Vafco Nunnes de Balboa in the government, just as he had made the discovery of the South-Sea; and, though the King had recommended the perion of Nunnes to him, yet he could not be brought to grant him leave to follow his discovery, though the Bishop of Dairen advised it very earness of the had resolved to give this good morfel to a creature of his, called Captain Gaspar Morales; to whom he added, as companion, Captain Francisco Pizarro, because of the experience he had, having been already employed in the discovery.

They fet out from Dairen, and got to the South-Sea, and embarking there in canoes, they came to the life of Pearls, which the Indians called Tarargui. Thefe by this time began to endeavour to hinder the Spaniards from fetting in their lands, but they were not able to do it, their forces being fo much inferior to those of the Castilians, who, paffing from one ifland to another, came at laft to the largeft, where was the king of almost all those nations, who took arms against the Spaniards, having a brave number of men, and well chosen; but they not being used to fire-arms, they foon yielded and came to composition: to which they were brought also by the fear of a famous dog that was in the Christian camp, who used to fall upon them like a lion; and they having never feen an animal of that fort, did flee him as a devil, becaufe of the mifchief he did amongst them; for they being naked, he could fasten any where without danger. The Chiapefes, our friends, prefently interpofed; and telling the King what dangerous enemies the Spaniards were, and of what importance their friendship was, they being invincible, he at last was prevailed upon to grant them peace. They came to his palace, which was very fumptuous, and, as they judged, better than any they had feen yet. The King received them with marks of friendship; and, as a token of it, caufed a basket of rushes full of pearls, which weighed five marks, to be given them; amongst which, there was one which had but few fellows in the world, (for it weighed fix and twenty carats, and was as big as a fmall walnut,) and another as big as a mufcat-pear, perfect and oriental, and of a fine colour, weighing ten half fcruples. The first came from hand to hand, till it was in the empress's, who valued it as it deferved, as is told by Antonio de Herrera and others. They prefented the King, in return, with the ufual prefents of pins and needles, bells, knives, and other baubles of Europe, which the Indians valued much. The Spaniards not being able to forbear laughing, to fee the value they put upon them, the King faid to them, "What do you laugh at ?" And having heard what it was, he faid, "We might more justly laugh at you, for valuing things fo much which are of no use in life, and for which you pass fo many feas. As for these knives and hatchets you give us, they are very useful instruments to men." This was not the only return the King had for his pearls; for he had the precious pearl of faith by their means : for growing very fond of them, and being by them instructed, he and all his family received the Chriftian religion, which was the principal end to which the Caftilians directed all their enterprizes. They made a folemn christening; and the King, to treat his fpiritual fathers, who had engendered him in the Gofpel, carried them to fee the pearl-fifhing, which was in this manner : The Indians dived to the

the bottom, having about their necks a bag full of ftones, that they might fink the fafter; and it ferved them for a ballaft to keep them fteady while they gathered the oyfters, that the water might not buoy them up. The greateft oyfters are about ten fathom deep; for when they do not go to feed, they keep as low as they can, and flick fo faft to the rocks, and to one another, that it is very hard to loofen them; nay, it happens fometimes, that while they fpend too much time in doing it, their breath fails them, and they are drowned: but, generally fpeaking, they are not in danger, becaufe, as they gather the oyfters, they put them in their bag, and lighten it of the ftones, and before their breath fails, they come up again with their fifh. They open the oyfters, and take out the pearls, which ufe to be many if they are fmall, and few if they are large. They fay, that among thofe they prefented the Castilians at this time, were feveral of the bignefs of large peafe and hazle-nuts; with which they returned very well pleafed to have made a difcovery of fo rich a treafure, as well as of the rich one they had given in exchange to the King and his people, by making them Chriftians.

CHAP. X. — Of the Difcovery of the River of Plata, and the Coaft of Chile, by the Straights of Magellan.

WE have hitherto gone by the North-Sea to the Terra Firma, and the difcovery of the South-Sea, with intent to follow the difcoveries of this new world to its utmost bounds, which is the kingdom of Chile, to which all this narrative is directed. We fhall follow this order by the fame fteps that the first conquerors went; but while they are difpofing all things for this great enterprife, it will not be amifs to leave the South-Sea, and follow those who endeavoured to discover the coasts of Chile by the North-Sea. The first we shall follow is Captain Juan Dias de Solis, who failing from Spain the eighth of October 1515, ran along the coafts of Brafil, till he difcovered the famous river of Plata, which was fo named, not from any filver that is found near it, or on its banks, but from fome plates of that metal which the Indians gave the Spaniards; which filver they had brought from the country about Potofi, with which they had communication by the means of the Tucuman Indians, who are the nearest to that fide to Peru. Solis entered that mighty river, which, if I am not miltaken, is threefcore or feventy leagues over at its first entrance, and is known at fea by its fresh water, at first; till being further in, they can see the mountains and land that bound it. This river is one of the most famous in the world, of sweet and excellent water, being obferved to clear the voice and lungs, and is good against all rheums and defluctions; and all the nations of the Paraguays, who drink this water, have admirable voices, fo tunable, that when they fing they appear organs; and therefore they are all inclined to mufic; and those who come from abroad mend their voices by living there. I know one who was born in Chile, and had naturally a good voice, which he mended extremely by living in Paraguay; but when he left that country, and came to Tucuman, he loft his improvement, as he himfelf told me. This river has another property, which is, that it petrifies the branches of trees which fall into it. The governor Hernan Darias, born in Paraguay, a gentleman of a fingular talent for government, had in his houfe a whole tree all of ftone which had been taken out of this river. Likewife there are formed naturally of the fand of this river, certain veffels of various figures, which have the property of cooling water. There are alfo certain cocos de terra, which contain stones in them, which at a certain time are, as it were, ripe, and burft, dicovering amethyfts within them; they burft open with a great noife.

There are also bred upon its banks most beautiful birds of feveral kinds; and in its ftreams great variety of fishes, very dainty, and in great quantity. The river is navigable every where in canoes, but not with the fame canoes, becaufe of the prodigious fall that is in the midst of it, the whole river precipitating itself into a deep gulph, from whence it runs many leagues, till it empties itfelf into the fea. The noife that this fall makes, the foam that it raifes, the whirlpools it caufes, by the rencounter of its waters, is not to be imagined. The land on both fides this river is very fertile; on the west fide, which is the Tucuman fide, corresponding to Buenos Ayres, there are feveral cities, as St. Jago de Eftero Cordoua, St. Michael la Rioga, and Efteco Juzuy and Salta, which border upon Peru: these cities are not very populous, because they are in the midft of the land, and far from commerce with both feas; but they do increafe very much, particularly Cordoua, which, amongft other properties, has that of producing rare wits in the univerfity governed by the Jefuits, who may match their profeffors and fcholars with those of any other part, as I myfelf have experienced. There are likewife in this diffrict many houses and families of men of quality and antient nobility. Higher up the river to the weft, are also the cities of Affumption, Santa Fee de las Corrientes del Guayta, and others. The city of the Affumption is the chief, and was peopled by gentlemen that came first to the Indics, and is fince much increafed in people, but not in riches; becaufe it being fo far within the land, cannot have fufficient vent for its commodities, which are chiefly fugar, and preferved fruits; among the reft they are famous for a dried fweet-meat, called Ladrillos, which are flices of cetron, done up in fugar, in the form of a tile; but the best fweet-meat they have they will give in great abundance for an apple, or any European fruit. In all this tract of land there are three governments, which are alfo bishoprics, to wit, Paraguay, Rio de la Plata, and Tucuman.

Higher yet on the east fide are many heathen nations, which have others that answer them on the west; and among these are distributed those famous missions which our fathers of the fociety of Jesus have founded.

I am forry I am infenfibly engaged in this matter; and I muft own I have mentioned that which I cannot well explain. This is not a place for panegyrics, nor does the thread of my hiftory admit of fuch large digreffions; yet I cannot but ftop a little, and give fome confideration to that we may call miracles of grace, which are performed in those defarts, of which I myfelf have been an eye-witnes, having lived fome time in that holy province, to which I owe all that I am. But who can explain what those apostolical men deferve in the fight of God, who feem to have nothing of man but what is neceffary to make their lives more admirable, which they lead like angels in human bodies.

Who would not wonder to fee in those mountains and folitudes men ill fed, worfe lodged, naked, painful, and in anguish for the fouls of others, when they might fave their own with lefs trouble, enjoying the good morfels and merry days which, without fin, and fometimes meritoriously, they might have in their own country among their friends, and in the best of Europe? Who can but admire to fee fo many youths banish themselves, and, renouncing all preferment, refolve to pass all their lives like hermits, for the love of God, and zeal of the falvation of fouls? Is this a work of nature? and can human force arrive to this of itself? Let us go out from this confideration, left it be like a loadstone to draw us in further; and yet let me fly as far as I will, I cannot hinder my heart from being with them, and defiring to end my days in this employment. They who defire to fee the fruit of these missions of our company, the numbers of the gentiles which they have brought from folitudes to live in cities, the great progress of the faith, and the numbers of martyrs they have confecrated to God, let him read the book made of all this by that apostolical man Antonio Ruiz de Montoya; and then he will be extremely edified, and admire the work, as well as the author. And fo I return to the thread of my history.

Juan de Solis being landed here, found little refiftance from the Indians, who are neither fo cruel nor fo warlike as in other parts; fo he took poffeffion of all that tract, in the name of Their Majefties, for the crowns of Caftile and Leon, as was always the cuftom of the first discoverers. And he for himself took poffeffion of those feven feet of earth which death allows to those he feizes, let them be never fo ambitious, though while they are alive a whole world will not fuffice them. He lies buried there; and an end was put to his discoveries.

Much about the fame time, there were at His Catholic Majefty's court the two famous captains Ferdinand Magellan and Ruy Falero, offering their perfons, valour, and industry, for to find out, either towards the fouth or west, an end to America, or fome canal or ftraight by which both feas might communicate with each another; and fo the navigation from Europe might be made in the tame flips, in which they might go round all its coafts. They were treating upon this fubject; and the Portugal embaffador made it his bufinefs to oppose Magellan, because being fallen out with his king about this difcovery, he defired he might not make it for the crown of Caftile; but at laft the king having heard at Saragoça, in prefence of his council, the reafons and grounds that Magellan and Falero went upon, he accepted their fervice, and honoured them with the habits of St. Jago; and having fettled the capitulation with them. His Majefty commanded the fquadron to be made ready, and named the captains and officers of it; and having heard that there was a difpute rifen between Magellan and Falero, about who fhould carry the royal ftandard or flag, and the like, he ordered Falero, as not yet well recovered of a diftemper he lay under, to ftay at home, and mind his health; and, in the mean time, that another fquadron fhould be got ready, in which Falero fhould follow.

The first fquadron being ready, His Majesty commanded the affistant of Seville, that he should deliver the royal standard to Magellan in the great church of Santa Maria, of Victory of Triana, taking at the fame time from him an oath of fidelity, or homage, according to the custom of Castile, that he should perform the voyage with all fidelity, as a good and loyal vasal of His Majesty. The captains took likewife an oath to obey Magellan in all things. He, after many vows, having recommended himself and his voyage to our Lord, went on board the ship called the Trinity, and the treasurer general in the Victory (fo famous for being the first that went round the world). The other ships were the Conception, St. Jago, and St. Anthony.

They fet fail the tenth of August in the year 1519. They took the isle of Teneriff, then made the coast of Guinea, and arrived at Rio Genneiro; from whence they failed on St. Stephen's day, and having had a great florm, they entered into the river of Plata: here they flayed eight days; and then following their voyage, they had another terrible tempest, which carried away their forecastle, and forced them to cut away their poop. They made vows to our Lady of Guadalupe and Monferrat, and to St. Jago of Gallicia. It pleased God to hear them, and they took shelter in the river of St. Julian, but not all; for one of their ships was lost: the men got on shore, but enduring fo much by land to port St. Julian by hunger, that they seemed skeletons when they came to their companions. While they were wintering in this river, either idlenefs, or the great fufferings they had undergone, and thofe which they feared, made them mutiny againft Ferdinand Magellan. There were fome of his fhips that revolted; but he with great boldnefs, and no lefs art, made himfelf mafter of them, punifhing fome of the guilty, and pardoning others; and for Juan de Carthagena and his companion in rebellion, he fet them afhore when he fet fail, leaving them a good provision of bread and wine. It was never known whether this was fufficient to fuffain them, till they fhould meet with fome of thofe giants which had been with the fhips, and had been treated by Magellan, who perhaps received them.

Magellan feeing the winter over, as he thought, fet fail the feventh of November, which is when the fummer begins in thofe parts; and having by land obferved what he could of the ftraight, they paffed with great good fortune in twenty days, and then fteering north, they coafted along Chile, which they left fomething at large, as having no knowledge of that land, Peru being not yet difcovered. After this, they came to the Philippine Iflands, in one of which this most courageous captain, and famous Portuguefe, Magellan, died by the hands of the natives, or to fay better, by his own rafhnefs and over-boldnefs.

Some years after, which was that of 1534, Simon of Alcazova, a Portuguefe gentleman of the habit of St. Jago, and gentleman of the chamber of the King, a great cosmographer, and one very expert in navigation, having been employed many years for the crown of Caftile, made an agreement with the king to difcover and people two hundred leagues from the place where Albagro's government fhould end, which was in Chile. He failed from St. Lucar on the 21ft of September 1534, with five good ships, and two hundred and fifty men; and without seeing land from the Gomera to the straight of Magellan, only having touched at cape Abre Ojos, and the Rio de Gallegos, about twenty-five leagues from the straight's mouth, he entered them on the 17th of January 1535, having endured fo much thirst, that the cats and dogs were come to drink wine, and the people were ready to perifh. They found a great crofs erected by Magellan, and the wreck of the ship which he lost there. There appeared about twenty Indians, who gave figns of much joy to fee the Spaniards. They followed their courfe, keeping still the right hand, as the fafest; but yet they had fo furious a ftorm, that it carried away half their fails : it blew fo, that they thought the ships would have been carried away through the air. They took shelter into a port; and becaufe the feafon was fo far advanced, they perfuaded their general Alcazova to go out of the ftraights, which he did, and return to the port of Lions, or of Wolves, which was a very good one.

While they were wintering in those parts, they refolved to enter further into the country, and make discovery of those riches which the Indians told them were there; fo having celebrated mass, they bleffed the banners, and the captains took a new oath of fidelity and obedience; and with this they fet out about 225 men, having fifty arcabuses, feventy cross-bows, four charges of powder and ball, which every one carried with his bread, which was about twenty-fix pounds weight. Thus they marched about fourteen leagues; and there Alcazova, being a heavy man, could go no further, which was his ruin; he named a lieutenant, against whom the men mutinied; for having gone ninety leagues, and their provision failing, they refolved to go back, as they did, though they had met with a river full of fish; and that their guides told them that a little further they should come to a great town, where there was a great deal of gold; for the inhabitants wore plates of it in their ears, and upon their arms: but nothing could move them: and as one mischief feldom comes alone, they refolved

to make themfelves mafters of the fhips at their return, and to kill all that fhould oppofe them; and fo they executed it. But God Almighty punished them immediately; for as they were going out of port, they lost their admiral; and then having but one fhip, durft not venture for Spain, but put in at Hispaniola, where Doctor Saravia, of the audience of St. Domingo, chastized the most guilty. And thus the difcovery of Chile, for that time, and that way, was disappointed: for God referved that honour for another.

CHAP. X1. - Of the Difcovery of other Parts of America before that of Chile.

WHILE the fhips are making ready to go to the difcovery of Peru, it will not be amifs to touch upon the difcovery of fome other parts of America by the by, that at leaft the order of time, with which the difcoveries preceded each other, may be underflood; and what we are to fay afterwards about Chile will be made plainer, that being our chief defign.

It has been faid already, in its proper place, how the Admiral Columbus difcovered the Terra Firma, or continent of America, in his fourth voyage from Spain to the Indies, and found the port of Puerto Bello the fecond of November 1502. We have alfo faid how Vafco Nunnes de Balboa having founded Sancta Maria la Antigua of Dairen, difcovered the South-Sea, and took pofferfion of it in the month of September or October in the year 1513, as alfo that in the year 1515, Juan Dias de Solis difcovered the river of Plata the first of all difcoverers.

Now we will add what is known about the difcovery of other lands; amongft the which, one of the first was that of Yucatan, which was undertaken by Captain Francifco Hernandes de Cordoua, in the year 1517, and the Adelantado of it is at this day Don Chriftoval Soares de Solis, a gentleman of an antient and noble family in Sala-This fame year other Castilians difcovered the land of Campeche, where, in manca. a chapel of the Indians, full of their idols, they found painted croffes, of which they were not lefs aftonished than rejoiced, feeing light in darknefs, and the trophies of Chrift by the fide of Belial; which, at laft, by the Spaniards' arrival in those parts, were better known to those barbarous people. In the year 1518, the Licentiado Efpinofa, who was named deputy to the governor Pedrarias, founded the city of Panama, which is the canal by which all the treasure of Peru passes to Spain in the galleons. This city has not increafed fo much as many others of the Indies, becaufe being fituated near the equinoctial line, its temperature does not agree with those born in Europe; but yet there are many conftitutions that do very well there, becaufe of the great riches that are eafily acquired there: and those who feek them, think no air bad. There are a great many people of quality: for there is a bifhopric, a royal Audiencia, or court of judicature; a tribunal of royal officers, and a chapter of canons, feculars and regulars. But that which in my judgement is most commendable in it, is the piety, mercy, and liberality of its inhabitants. I have this year received advice, that by the negligence of a female flave, the greatest part of the city was burnt; for the houses being of wood, if one take fire, it is hard to ftop the flames: there was loft in this a great mass of riches, a great part of the loss falling on the cathedral; and a little after, there being a gathering made, though this misfortune had concerned almost every body, who for that reason were less in a condition to contribute by way of alms, which fome of them wanted, yet they gave above twenty thoufand pieces of eight, and went on contributing. This was an extraordinary mark of their charity; but

but the ordinary ones, in which they conftantly flow their generofity, are to strangers and paffengers who pass from Spain to the Indies, who most of them are at a loss till they meet with fome patron, or friend, or countryman, to affift them; and they would often be reduced to great extremity, if this were not, as it is, a common inn for all those people; for in the college of our company alone, though it is not yet founded, but lives upon alms, I faw when I was there, a cloth laid at the porters' chambers, where every day they provided for, and fed about fifty or fixty paffengers, with bread and flesh in abundance. The fame is done by other convents; and the feculars, I faw, gave them money and other neceffaries. This, as to the city of Panama, founded in the year 1518, in which year the religious friars of St. Dominick and St. Francis paffed from the island of Hispaniola, and began to found convents in Terra Firma, and the pearl coaft; from whence thefe two holy orders purfued their miffion through all the land, enlightening it with their doctrine and holy examples; by which they have made fuch a progrefs among the Indians, that the prefent flourishing of the faith is owing to them, to the great faving of the Indian fouls. The year 1519, Ferdinand Magellan made the difcovery of the coaft of Chile; and the fame year Hernando Cortes went from the point of St. Antonne la Havana to Corocha, which is the first point of Yutacan east, to begin the conquest of the great empire of Mexico; of which, and the noble actions of that great man, it is better to be filent than to touch upon them only by the by, as we should be forced to do; this being not a place to explain the ftate and grandeur of that mighty monarch Montefuma, who was fovereignly obeyed in fo many and fuch great provinces. Who can express in few words all this, and the felicity that accompanied Cortes in all his undertakings, which were fuch as they appeared poffible only after they were done, feeming otherwife fo high and difficult, as to be inaceffible to the extremeft boldnefs? Indeed, it cannot be denied, but that he was affifted by heaven, whole inftrument he was in planting the Christian faith among those gentiles, and shewing fuch reverence to the preachers of it, as might ferve the Indians for an example; a quality which will always give reputation to princes, both before God and men.

In the year 1528, the king fent a colony to the Rio de la Plata, having agreed with the merchants of Seville for that purpofe. The city they founded was that of Buenos Ayres, which is on the fide of that river, in that part of it where it grows narrow from its large entrance at fea; and the river there is not above nine leagues over. In the year 1532, Cedro de Heredia of Madrid failed from Spain, and founded the city of Carthagena, which is the firft Scala which the Spanifh galleons make coming from Spain for the Indies, to fetch filver. It was fo called, becaufe its port was like that of Carthagena in Spain; for the old name of the Indians was Calamari. He had at firft an engagement with the Indians; and though they fhowed themfelves very brave, yet he beat them, and founded the city, which is at prefent one of the beft of the Indies, being walled with ftone, and fo ftrong, that we may name it as an impregnable fortrefs.

It is fituated in an ifland, divided from the continent by a fmall arm of the fea, which ebbs and flows, and comes to the bog of Canapote : there is a bridge or caufeway there, that goes to the Terra Firma. The port is very fafe, and good fhips go into it by two mouths or entrances, a greater and a lefs; the great is fandy; and the year that I was there, they told me that it was almost flut up by the fand which a river cafts up against it; and now they write me word, that it is quite filled up, fo that there is no going in but by the leffer entrance, which makes it fo much the ftronger, and it is defended by a good caftle; befides which the city is well garnished with artillery,

152

fo as not to fear an invation. The plot of the city is very beautiful, all the ftreets being handfomely difpofed, the houfes of free ftone, high and noble; fo are the churches and convents, particularly that of the Jefuits, which makes a beautiful profpect to the fea. Here is a cuftom-houfe for the king, and a houfe called of the Rigimiento, with other public buildings; it is very populous, and of a great trade, by reafon of the coming of the galleons; and from them they have wine and oil; corn they have in their own territory: there refides a bifhop, and there is a tribunal of the Holy Inquifition. The governor hath both the civil and military command: it increafes every day in riches, being fo fituated, that it fhares all the riches of Peru, Mexico, and Spain.

In the year 1540, Captain Francisco de Orellana discovered the great river of the Amazones, which is called alfo Orellana, and by a common miftake Maragnon; and went from it to Spain, where, upon the relation he gave of its greatnefs, the Emperor Charles V. ordered him three fhips, with people, and all things neceffary to make a fettlement. But this had no effect, becaufe having loft half his men at the Canaries and Cape Vert, he was too weak when he got thither; yet he attempted to go up the river in two large boats, to which his fleet was reduced; but finding his wants of every thing, he came out again, and went by the coaft of Caracos to the Margarita, where he and his people are faid to have died. About twenty years after, the viceroy of Peru fent a good fleet under Pedro de Orfua: but this mifcarried alfo, becaufe he was killed treacheroufly by Lopes de Aguirre, who rebelled with the fleet; but having miffed the entrance of the river, he landed on the continent, near the ifland of Trinidado, where he was executed by order from court. Some years after this the fergeantgeneral, Vincente de los Reyes Villalobos, Alonzo de Miranda, and the general Jofeph de Villa Mayor Maldonado, undertook the fame defign, but with the fame fortune, death taking them away; fo that they gave over at that time all attemps on Peru and Ouito fide. But still the fame of this river continuing, Benito Maciel, general of Paria, and fince that governor of Maragnon, and Francisco Coello de Caravallo, governor likewife of Maragnon and Paria, attempted its difcovery up the river; and though they were backed by the king's royal commands, yet there were many crofs accidents as to hinder the execution of their enterprize.

The fathers of our company of Jefus attempted likewife this difcovery, by the motive of faving fo many fouls; but beginning with a nation called the Cofanes, their progrefs was ftopped by the cruel death given to Father Raphael Fernandes, who was preaching the faith to them. Thirty years after, which was 1537, fome friars of the order of St. Francis, moved by the zeal of amplifying the glory of the gofpel, and by order of their fuperiors, went from Quito, in company of Captain Juan de Palacios, and fome foldiers: they began to fail down this river, and came to the Encabellados, or people with long hair; but not finding the harvest ready, they returned to Quito, except only two of their lay-brethren, which were Domingo de Brieva, and Friar Andres de Toledo, who with fix foldiers more failed down as far as the city of Paria, a fettlement of the Portuguese, about forty leagues from the fea. They paffed by the city of St. Luis de Maragnon, where the governor Jacomo Reymondo de Moronna, by the information he had from these friars, caused seven and forty canoes to be got ready, and embarked upon them feventy Spaniards, with 1200 Indians, fome of war, and fome to help to row, under the command of Captain Pedro Texeira, who, having fpent a whole year in his voyage, came at last to the city of Quito, having discovered and navigated the whole river of the Amazones, from its entrance into the fea to its fource or rife.

VOL. XIV.

X

The

The viceroy of Peru, who at that time was the Count de Chinchon, being informed of this voyage of Captain Pedro Texeira, refolved to fend two perfons back with him for the crown of Caftile, who might give a perfect relation of the difcovery.

At this time the city of Quito was governed by Don Juan Vafques de Acunna, as corregidor for His Majefty over both Spaniards and Indians, and who at prefent is corregidor of Potofi, who very zealoufly offered his perfon for one, and his fortune to raife people at his own charges, and provide them with all neceffaries; but the royal Audientia, confidering how much he would be wanted in his office, where his prudence, experience and zeal, had fhowed themfelves, refufed to let him go, and chofe a brother of his, that they might not totally deprive his illuftrious family of that glory. This brother was a father of our company of Jefus, and named Father Chriftoval de Acunna, who was rector of the college of Cuença, and gave him for companion Father Andres de Arrieda of the fame company, who was profeffor of divinity in the fame college.

They fet out from Quito in the year 1539, and having navigated the whole river, which, according to their account, is thirteen hundred and fifty-fix leagues long (though Orellana makes it eighteen hundred leagues), obferved exactly the rife of this great river, its fituation, its courfe, latitude, and depth, the iflands it makes, the arms into which it is divided, the rivers it receives, the riches, quantities, temperature, and climate of its fhores, the cultoms and manners of that multitude of people that inhabit it, and particularly of those famous Amazones. All which may be feen in a treatife made of it by Father Christoval de Acunna, printed in Madrid; and it is a relation that deferves credit, he being an eye-witnes, and having examined various nations as he went.

Thefe informations were well received in Madrid; but the revolutions which fucceeded in those kingdoms hindered all further progress, and prevented those holy defigns for the conversion of that great part of America. There are infinite numbers of Indians that inhabit the islands, and other parts of this river. It is faid they have one fettlement, that is a town, above a league in length. And now, omitting many other conquests, made much about the fame time in the islands and coasts of the North-Sea, and that which was made in the South-Sea by Xil Gonçales de Avila, in the land of Nicaragua, in the year 1522, let us attend (for it is high time) to the discovery of Peru, of which we shall treat more at large, because it has a connexion to that of Chile.

CHAP. XII. — The Difcovery of Peru is given to Don Francisco Pizarro, and Don Diego d'Almagro, and Hernando Loque; and how much they endured in it.

THE captains Don Francisco Pizarro, and Don Diego Almagro, in company with the scholastic of the cathedral church of Dairen, called Hernando de Loque, came to the governor Pedrarias, and desired of him, as friends, the favour of being employed in the discovery and conquests of those coasts which run fouth from Panama, where lies the powerful kingdom of Peru, of which at that time there was little light; and for this they proposed their reasons; among which, that which was of least value, they relied most upon, and that was their experience they had attained under their general Vasco Nunnes de Balboa. They met with little difficulty with the governor; for so long as they did not desire any affistance of the King's treasure, but ventured their own and their lives, they easily obtained leave to undertake what they would. They prefently bought one of the fhips which Balboa had built for that defign; and having got together threefcore men, and four horfes, (for at that time horfes were a great rarity,) Hernando de Loque faid mafs; and when he came to confecration, he divided the Hoftia, or facrament of the body of Chrift, into three parts, of which he took one, and gave the other two to his two companions, offering themfelves to God, with intention to propagate among those people his glorious name, and plant the Chriftian faith amongst them by the predication of the Gospel. Those who were prefent shed tears out of devotion, and at the fame time pitied these undertakers, looking upon their enterprize as a mad one.

About the middle of November 1524, Don Francisco Pizarro having left Don Diego Almagro behind him, to get more people together, failed from Panama to the Isle of Pearls, to the port of Pinnas, (the last discovered by Balboa, and after him by Pasqual de Andagoya,) and went up the river of the Cacique Biru, or Biruquete, to the country of Chocama, where he stopped to wait for his companion Almagro. The hardfhips that the Caftilians endured of hunger and other inconveniences are not eafly to be told : twenty died ftarved, and the reft were fick, having no other fuftenance than the bitter Palmetos; yet Captain Pizarro, without fhewing the leaft weaknefs, took care of them all with great affection, which made them all love him. At that time Don Diego d'Almagro, his companion in the undertaking, came to him : he was received like an angel, for the relief he brought : he had loft one of his eyes by the flot of an arrow, in a rencounter he had with the Indians. They both together purfued their conquest; but provision failing them once more, and their foldiers being almost naked, and fo perfecuted with molquitoes, which are infinite there, that they could not live, they began to talk of returning to Panama, to which Pizarro himfelf was well enough inclined ; but Almagro exhorted them rather to die than lofe patience, offering to return to Panama for new fuccour, while he fhould leave his companion in the ifland of Gallo.

The effect that this had, was, that he found the government altered in Panama, and Pedrarias fucceeded by Pedro de los Rios, who hearing of the miferable condition of thofe Caftilians, would not fuffer Almagro to return to them, being defirous they fhould give over the enterprize as impracticable. He fent for this end a gentleman of Cordoua, called Juan Tafur, a man of excellent parts, equal to his noble defcent, with a commiffion to bring thofe people back, that they might not all perifh. He came, and fignified his order to Pizarro, at which he was out of all patience, feeing it would be the ruin of his project. Tafur feeing this, took a prudent medium, which was, that he fhould draw a line between him and Pizarro, who fhould be at the head of his men : and Tafur told them, that all thofe who refolved to return to Panama, fhould pafs the line, and come on his fide. Having faid this, they began to pafs the line, all to thirteen and a Mulatto, who faid they would die with Pizarro : and for Tafur returned with all the reft to Panama.

Captain Francis Pizarro remained with his thirteen companions in an island, which, for the greater proof of his courage and constancy, happened to be the Gorgona, which is a picture of hell for the closeness of its woods, the asperity of its mountains, the infinity of its mosquitoes: the sum is fracterly ever seen in it for the continual rains that fall.

When Tafur came to Panama, and his two friends Almagro and Loque found that Pizarro ftaid behind with fo few companions, it is not credible how much affliction they fhewed: they folicited the prefident, that at leaft another veffel might be fent to bring them away, in cafe they found them alive; and after many difficulties, at laft a fhip was ordered after them, but upon condition to be back at Panama in fix months: the fhip failed, and came to the place where Pizarro and his companions were left. Who can express the joy and furprize of those poor abandoned wretches, when they described at a distance the fails of the fhip? At first they could not believe their own eyes; for the defire and longing for a thing makes it appear less probable to come to pass: but at last it arrived; and Pizarro seeing himself master of a good vessel, could not forbear attempting fome discovery.

They failed as far as the country of Tumbefe, which is very rich; though the Tumbefe Indians faid, that their riches were nothing in comparison of what they might fee farther. The lord of that country having heard of the arrival of the Caftilians, he fent prefently to vifit them at their fhip, with twelve baskets of provisions, and, among the reft, a sheep of that country, which was prefented to them by the virgins of the temple, as to men who feemed descended from heaven, and fent by God for some great thing. The ambassifadors came; and wondering to see the flip with white men who had beards, they asked them, Who they were? whence they came? and what they pretended? They answered them, that they were Castilians, vassifals of a powerful monarch, who, though so great, had yet a greater over him, whom he owned, with all other kings, and who is in heaven, and is called Jesus Christ, in whose name they came to undeceive them of their errors in worshipping gods of stone and wood, there being but one God, Creator of all things, whom we all ought to worship. They explained to them, that there was a heaven and hell, the immortality of the foul, and the other mysteries of our faith.

The Indians flood flaring and gaping, hearing this doctrine, which had never been heard of before in their country; for they believed, that there was no other king in the world but their King Guayanacapa, nor other gods but their idols. Among all the things they admired, there were two chiefly : the one was a negro; for they never had feen one, and did believe that his colour was fome ftrong dye; for which reafon, they beftowed much pains in wafhing his face to get it off; but when they faw that he was rather blacker, and that he fhewed at the fame time white teeth, for he could not hold laughing to fee their fimplicity, they fell a laughing too, and could not but admire fuch a fort of men. The other thing was the crowing of a cock, which the captain fent them with a hen of Castile : every time he crowed, they asked what he faid? for they thought his voice articulate, like the human voice; which is an argument that they had not that kind of fowl : and Garcilaffo de la Vega is of that opinion, anfwering the objection of the Indian name they give a hen, that is, Atagualpa, which, he fays, was a name given by the Indians after the coming of the Spaniards. The Spaniards having refreshed themselves well on shore, began to defire of Pizarro to return to Panama, and gather a greater force, that which he then had being very difproportioned to his undertaking : he yielded to their perfuafions, having, for this time, made difcovery only as far as a place called Santa, which is very near the equinoctial line; and having had a more certain account of Cufco, its riches, and the mighty empire it was head of. So taking with him fome Indians, and fome patterns of the gold, as a testimony of the difcovery, he returned to Panama.

CHAP. XIII. — Captain Francisco Pizarro returns to Panama, goes from thence to Spain, and pursues his Conquest.

PIZARRO being come to Panama, went with his two companions to the Governor Don Pedro de los Rios, to reprefent to him their reafons for continuing their difcovery, upon

upon account of the riches of the country, as well as the planting the faith in the capital of fo great a monarch, and fo in all its dominions: but the governor would not agree to it; and fo they refolved that Pizarro fhould go to Spain, to propose it to the King himfelf. He undertook the voyage; and, to give more credit to what he fhould fay, he took along with him feveral things proper to the country he had difcovered, as pieces of gold and filver, fome of those sheep we have mentioned, and some of the Indians themfelves clothed after the manner of their country. The King was much pleafed with them; and Pizarro, in his first audience, began to propose the intent of his difcovery, the great hardships he had endured, he and his companions going naked, and almost starved, exposed to the mosquitoes and poisoned arrows of the Indians; and all this, having fpent three years in this fort of life, for the increase of the Gospel and His Majefty's royal dominions. His Majefty heard him with much attention and goodnefs, fhewing great compafion for his fuerings, and ordered a gratification for himfelf, and his two companions, as also the threen who would not forfake him : he received all his memorials, and ordered them to be difpatched to his mind, having first made an agreement with him proportionably to his great merits. They did not believe in Spain (and that is an old difeafe every where) all that Fizarro faid of the riches of Peru, and of the palaces and houfes of ftone which he had feen, till he fhewed them the pieces of gold and filver which he had brought with him; and then the fame of that land began to fpread itfelf, and with it the covetoufnels of fharing those treafures, every one blaming the governor of Panama for not having given the necessary affiftance to the difcovery.

Pizarro being difpatched with the title of Adelantado of the first two hundred leagues he fhould conquer, having alfo a new coat of arms, and other privileges granted to him; and taking with him four flout brothers that he had, he embarked for the Indies with one hundred and twenty-five Caftilians more. He left Sanlucar in January 1530, and arrived at Puerto Bello, where he was received with great joy by his companions and friends, who were all pleafed with the favours the King had beftowed upon them by his means : only Don Diego de Almagro was not fo well pleafed that Pizarro had made a better bargain for himfelf than for him, his partner in all the undertaking; he made his complaint to him, and refolved to part company, and difcover and conquer by himfelf: but being affured, that as foon as the first two hundred leagues should be conquered, he would use his interest to have him made Adelantado of two hundred more before any of his brothers; and fo fuffering himfelf to be perfuaded, they agreed anew, and fell to preparing every thing for their enterprize. He remained at Panama; and the Adelantado, with his brothers, went from thence with a good crew of men, being to be followed by Almagro, as before. To make fhort about the things performed by this great conqueror, the great riches he got, and among the reft an emerald as big as an egg, which was prefented to him, we will fuppofe him at the ifland of Pura in war with the Tombezinos; and there he came to a clearer information of the riches of Cufco, and the flate in which that monarchy was at prefent : and becaufe he had received a fpecial command, and was himfelf inclined to propagate our facred religion, as the beft means of furthering his own defign, the first thing he did, in landing upon the continent of Peru, was to build a church to God, to give a beginning to the fpiritual conquest of fouls. His first fettlement was at Pura, where was built the first church that was ever erected in those kingdoms. While he was employed in this, he fent out to difcover more lands, to know more of the ftate of the country. There he learnt the division that was between the two brothers Guafcar and Atagualpa, which was occafioned by the death of their father Guayanacapa, who was a most powerful monarch,

narch, and among other fons had thefe two, which were now in war, and fome of his fubjects followed the one, and fome the other. Guafcar was the lawful heir, but not fo brave and warlike as Atagualpa, who, though a baftard, yet becaufe he had followed his father in his wars from a child, drew to himfelf a great part of the kingdom, with which he made war upon his brother, with hopes to prevail.

The Adelantado Don Francisco Pizarro resolved to have an interview with Atagualpa, who was the nearest to the place where he was. So putting his trust in God, he fet out with his fmall army, more to be valued for its bravery than its number, which neverthelefs was feared and refpected in its march. He came near the place where Atagualpa had his camp, which was near fifty thousand men, and fent him his ambaffadors on horfeback, which was a new thing in that country, to give him advice of his arrival, and the reafon of it, which was, to perfuade His Majefty, and his vaffals, to give obedience to the true King of Glory, from whom is derived all the power and command that princes have on earth. Atagualpa received the ambafladors in a flately tent, fhewing in all his behaviour a fovereign majefty; and though his courtiers were in great admiration of the horfes, which they had never feen, yet he kept his countenance, and concealed the effects fuch a novelty might have over him. He looked upon them with fome pleafure, and not as on a ftrange thing he had never feen; for the horfes beginning to corvet, fome of his Indians run away, whom he prefently caufed to be put to death, for having fhewed cowardice in his royal prefence. He answered the ambasfadors courteoufly, fhewing the pleafure he fhould have to fee and hear their general; and fet a day for it, telling them, that they fhould not be difturbed, nor afraid to find him and his people in arms, for it was his cuftom to use them to it.

The day came; and Atagualpa marching in order with his army to the place where the Spaniards were drawn up, he difcovered to his captains the mind he had to make an end with those ftrangers, who had been fo bold as to enter into his country, and come fo near him without having any refpect to his royal power; but he ordered them not to kill them, but to take them alive, becaufe he would use them as his flaves; and as for the dogs and horse, he refolved to offer them in facrifice to his gods. The Castilians, who were not totally ignorant of this false appearance of peace and friendfhip, though they were fo few that the Indians were four hundred to one, yet they did not lose courage; but with confidence in God expected the encounter, taking their posses, and preparing every thing for it, though fecretly, that they might not be thought the aggreffors. Therefore he drawing near, the Adelantado staid for him with only fifteen men, the reft being retired and hid, and fent him an embass were contained the faith, by which he and his people might be faved, and they brought it him from God Almighty."

The King heard the friar, and took the mafs-book out of his hands, looking earneftly upon it; but not knowing how to read it, and taking it all for a jeft and a fiction, he threw the book up into the air, making a fign at the fame time to his people to fall on; which they did; and then the Adelantado lifting up a handkerchief, which was the fignal to our men, they played upon them with their mufkets on one hand, and the dogs and horfemen attacked them on the other, fo that the victory foon appeared for the Caftilians; God Almighty having refolved to deftroy that monarchy of the Ingas, and to remove that obftacle to the propagating of the faith, and to put that land into hands that fhould increafe it, as Their Catholic Majefties have done. They took the King Atagualpa prifoner; but treated him with all refpect due to his royal perfon, as the hiftorians relate more at large. While this happened, which was on a Friday, a day dedicated to the crofs, in the month of May in the year 1533, the army which Atagualpa had fent againft his brother Guafcar, near Cufco, overcame him and took him prifoner, and were bringing him to Atagualpa, without knowing any thing of what had happened between him and the Caftilians; but on the way Guafcar learned that his enemy was a prifoner too; and Atagualpa was at the fame time informed of the victory he had obtained; he hearing it, fhook his head, and cried, "O fortune ! what is this, that I am this day a conqueror, and conquered ?" Guafcar moderated his grief with the news of his enemy's misfortune, thinking that the Caftilians would revenge him on the tyrant, who pretended to take from him his lawful inheritance.

Atagualpa, though a prifoner, began to make reflections in this manner: If I caufe my brother to be put to death, how do I know how the Castilians will take it? and whether they will not put me to death for this, and remain lords of the land? If I let him come on, and he fpeaks with them, the justice of his caufe will fpeak for him, and I must perifh; for I cannot expect mercy from any. What remedy? He found it cunningly, as he thought : he feigned a great fadnefs, with a defign that the Pizarros, who vifited him every day, fhould afk him what was the matter. They did accordingly; and, feeing him fo afflicted, defired to know the caufe of that extraordinary grief. He anfwered deceitfully, that having received the news that his generals had put to death his brother Guafcar, it gave him an exceeding grief, of which he was not to be comforted; becaufe, though they were enemies, yet he was his brother; and he could not but be much concerned at his death. All this was feigned, to fee how the Spaniards would take it; and finding they did not feem offended at the thing, he fent orders immediately to his generals, who were coming on with his brother, that they fhould put him to death prefently by the way; which they did, by drowning of him in a river, which amongft them is an infamous death. His cries to Heaven to revenge his unjuft death, were ufelefs at that time.

But let no man give it to another to fave his own life; for there is not a fhorter, nor a more certain way for him to lofe it : let him not ftrive by politick maxims, which an unjust and ambitious passion suggests; for though that may be an appearance of stability, yet divine justice breaks through it all like cobwebs, and at length leaves no crime without its chaftifement. Atagualpa proved himfelf a great example of this truth, all his artifices ferving only to afford his enemies a pretext to take away his life. He had promifed to fill the room where they kept him prifoner, which was a very large one, with gold and filver, befides ten thousand bars of gold, and fome heaps of jewels, as an earnest, for his ransom. And though this was accepted; and that he performed it according to his promife, yet he did not obtain what he pretended; for, inftead of his liberty, they pronounced to him a fentence of death, which he juftly deferved for having put his brother to it, and tyrannized over that which was none of his own ; and becaufe of the advice the Spaniards had every day of the army that was gathering together, which if it were true, and Atagualpa at liberty at the head of them, there would have been good reafon to fear, from his fubtility, great and irremediable inconveniences, which they thought they could no ways avoid fo well as by taking his life, though with fome hopes of his exchanging it for a better and eternal one, if it be true that before he died he was instructed, and received baptifm, as fome fay he did.

About this time, which was in the year 1533, Don Diego d'Almagro being made marshal, came from Panama to Tombez with a good body of men and arms; and from thence he went on to help his good friend, the Adelantado Pizarro, in his conquests, not letting his men do any injury to his Indians as he went. There were a hundred hundred thousand pieces of eight given them upon their arrival; for though they were not at the battle, yet their prefence confirmed the victory, and helped to keep Atagualpa prifoner. The remainder of the treasfure, which was above a million, was divided among Pizarro's men; and they being few, were all made rich, and in a condition to make difcoveries of their own. The Adelantado fent his brother Hernando Pizarro to Castile, with the news of this happy progress of their difcoveries, and of the propagating the Christian faith in the conversion of the Indians; and he also carried with him the claim of Don Diego d'Almagro to two hundred leagues of land beyond his brother's, of which he was likewise to be Adelantado. All this he negotiated very much to the content of all; and in the year 1534, there was granted, in Toledo, to Don Diego d'Almagro the government of that which they called the new kingdom of Toledo, which began at a place called Las Chinchas, where the territory of Pizarro ended, and extended itself to the Straights of Magellan.

CHAP. XIV. — The News of the Government of Don Diego d' Almagro is brought to him; and he goes upon the Discovery of that of Chile.

DON Francisco Pizarro had given commission to Don Diego d'Almagro, to take poffeffion of Cufco, when the news came of the government of two hundred leagues given him by His Majesty, to begin from the Chinchas. This caused great disturbance; for it was believed that Cufco would fall into this divifion ; and the friends of Don Francifco Pizarro, judging this of great prejudice to Pizarro, that the marshal, even by his commission, should find himself in possession of Cusco, they advised him immediately to revoke the powers he had given, which he did; and this was the first caufe of the difturbance in Peru, which made afterwards fo great a noife, and for which they both loft their lives. But I being to write the hiftory of Chile, and not of Peru, shall leave the reader to those historians who treat of it at large. This news being known in Truxillo, one Diego d'Aguero fet out to carry it to Almagro, who was upon his march to take poffeffion of Cufco. He overtook him at the bridge of Acambay; and he having received it with great moderation, fhewed himfelf above the greatness of his fortune, and gave him as an Albricias, or prefent for his good news, feven thousand Castilians, which are near twenty thousand ducats; and by this news he was moved to change his defign of conquering a people called the Chiriguænaes, and treated of that of Chile; for he fupposed it would fall into the government he was to have, and (as Herrera fays) moved by the informations he had of the great riches of Chile.

To prepare himfelf for this enterprize, which was like to be very chargeable, he caufed a great deal of filver to be melted in Cufco, to draw out the King's fifths. Amongft other things, there was a man's burden of gold rings to be melted down; and one Juan de Lepe being by, and taking a fancy for one of them, begged it of Marfhal Almagro, who fhewed himfelf fo much a gentleman, and fo liberal, that he faid prefently, that he fhould not only take that ring, but that he fhould open both his hands, and take as many as could lie in them; and hearing he was married, he ordered him befides four hundred crowns as a prefent for his wife. He fhewed another piece of liberality to one Bartholomew Peres, for having prefented him with a fhield, which was to order him likewife four hundred pieces of eight, and a filver pot weighing forty marks of filver, and had for handles two lions of gold, which weighed three hundred and forty pieces of eight; and to one Montenegro, who prefented him with the firft Spanifh cat that ever came to the Indies, he ordered fix hundred pieces

12

of eight. There are a great many ftories more of his liberality and charity too, he being very generous and noble minded. Having difpofed all for his enterprize of Chile, he caufed proclamation to be made, that all those who had not fome particular employment to flay them at Cufco, fhould make themfelves ready to go along with him. They were all overjoyed at this, he being extremely beloved for his liberality and courtefy; and that they might furnish themselves with arms and horses, he caused one hundred and eighty load of filver to be brought out of his houfe, (in those days a load of filver was as much as a man could carry,) and twenty more of gold : this he diftributed among them all. Those who were willing, gave him bonds to pay him out of what they should conquer in the land they were to difcover; for this was the way of these conquerors in gaining to His Majesty this new world, having no other pay but what they could purchafe.

The Inga Mango, who was brother to Guafcar and Atagualpa, had fucceeded them in the government, as the fon of Guayanacapa, who had alfo many others. This Inga had taken a great kindnefs for Marshal Almago; fo he gave him, as a companion in his enterprize, a brother of his, called the Inga Paullo Topo, and the high-prieft Villacumu; the Spaniards call him Villaoma, or Vilehoma, that they might by their authority not only keep all his vaffals from falling upon them in the way, but rather should receive him, and make him prefents. The marshal defired these two perfons to go before, in company with three Caftilians, and make a fettlement or habitation at the end of two hundred leagues. The other people, and Juan de Savedra, went by another way; and when they had gone one hundred and thirty leagues from Cufco, they founded the town of Paria. Here the marshal overtook them; and he was likewife affured of the title of Adelantado granted him by His Majefty, with the government of the new kingdom of Toledo, which was to begin from the borders of New Caftile; for fo they called Pizarro's government. His friends advifed him to return immediately, wherever this express overtook him, because there was one come to the city of Los Reves, with a commission from the king to regulate limits of both governments to each of the Adelantadoes: but Almagro was fo poffeffed with the ambition of conquering fo great and rich a kingdom as that of Chile, that he did not value the land he had difcovered. in comparison of what he was to discover, out of which he defigned to reward his friends, and the many gentlemen that accompanied him; fo he purfued his journey; where it will not be amifs to leave him engaged with the fnows, and ill paffages of the Cordillera, while we give a vifit to the great city of Lima, called otherwife De los Reyes, becaufe it being the head of those kingdoms, we cannot well pass it by.

This city was founded by the Adelantado Don Francisco Pizarro in the year 1555, in a very pleafant plain, about two leagues from the fea, upon a fine quiet river ; which being derived by drains and cuts all over the plain, fertilize it fo copioufly, that it is all covered with feveral forts of products, as vineyards, fugar-works, flax, garden product, and other delightful plants: and if there be any thing they want from abroad, it is brought them fo punctually, that all their markets are fupplied with all manner of delicacies that can be wifhed for.

For this and many other delights of this city, it happens to most people who live there, that they cannot endure to think of leaving it for any other place; fo that it feems an inchanted place, where the entrance is eafy, and the getting out difficult. I myfelf heard the Spanish merchants, who, the year I was there, had fold their goods themfelves at Lima, whereas they used to fell them at Puerto Bello, fo enamoured of it, though they staid but a little while there, that during our whole navigation they could talk of nothing elfe; and to fay truth, it deferves their praifes; for though it cannot VOL. XIV. Y . /

be

be denied, that fome cities I have feen in Europe do out-do it in fome things, yet few come near it, take it altogether : and, first, for riches, it is the fountain from whence all the reft of the world drinks; its bravery in cloaths, and magnificency of the court, out-does all others: it is extraordinarily populous; for a father of our company, who had the care of catechifing the Negroes, told me, they were at leaft fixty thousand, and more, that came to confession. They have sumptuous buildings, though outwardly they make no fhew, having no tiles; for it never rains all the year round: all the furniture, as pictures, beds, &c. are mighty rich. There are great numbers of coaches, and abundance of gentry; all the inhabitants very rich, merchants of great ftocks, tradesmen and handicraftfmen of all professions. But that which is to me most confiderable, is, what belongs to the worship of God, and cult of religion; for the cathedral church, and all the parish churches are very sumptuous, and provided of admirable learned men, which come out of that university; of which those of the country are not the leaft to be valued, having furnished fo many preachers and other fubjects for all other dignities, even to the highest government. What shall I fay of the orders of friars and nuns? I fcarce know one order that has not two or three convents in the city, beautiful cloifters, great buildings, and yet greater churches; fome after the old fashion; all with burnished gold from top to bottom, as are those of St. Augustin, and St. Dominick : others after the modern way, with curious wellwrought ceilings; as is that of the Jefuits, and of our lady of Mercedes, which are of a very fine architecture. There are eight nunneries, fome of which have above two hundred nuns in them. There are befides many oratories, confraternities, hofpitals, and congregations. In our convent alone of the Jefuits, I remember there were eight foundations of feveral kinds, and for people of as many different ranks and effates in the world. The great congregation has few in the world equal to it: the chapel of it is very large, and of a very rich material, covered with filk and gold, and rare pictures, with other rich ornaments belonging to it. There is here great frequentation of the facraments by monthly communions: the body of Chrift is exposed, and the church fo adorned with mufick and fweet fmells, that it is a paradife upon earth. And amongst other pieces of devotion performed by this congregation, there is a great entertainment or treat given once a year at an hofpital, which is fo magnificent, that it is worth feeing : the fame is done in proportion by the other congregations.

This city is the feat of a viceroy, who indeed is a king in greatnefs and authority, difpofing of a vaft number of places, commands, and pofts of honour and profit. There is likewife a rich archbifhoprick of great authority; three courts, or royal audiencias; a merchant court, which decides all matters of trade; a famous univerfity, in which are profeffors very learned in their profeffions; three colleges or fchools for youth, under the care of the fathers of our company of Jefus, in which are about one hundred and thirty profeffors or mafters: there are every day new foundations for orphans, widows, and to retire women from lewdnefs: there is the famous hofpital of St. Andrew for the Spaniards; and St. Anne for the Indians; all which would require a relation by themfelves.

This is what I could not avoid faying about this great capital of Peru; and if it continues increafing as it has done for this first age, it will not have its fellow in the world. The fame may be faid of Cusco, Arequipa, Chuquizaga, and the great town of Potofi, which increase fo, that he who is absent a few years, does not know them when he fees them again; and the reason is, that the veins and mines of gold and filver, which, like a loadstone, have drawn fo many people thither, are fo far from leffen-

ļΙ

ing,

ing, that new ones are difcovered every day, and those richer than the old ones; for which reason there comes yearly more people, and among them much gentry, as well as tradefmen of all arts and professions, who most of them settle and increase there.

CHAP. XV. — The Adelantado Almagro enters into Chile, having fuffered extremely by the Way.

WE left the Adelantado Don Diego de Almagro in a place called Paria, from whence he was to purfue his journey to Chile, as he did in the beginning of the year 1535. He himfelf going before, ordered Juan de Savedra to follow with twelve horfe by the royal highway through the province of Las Chicas, the chief place of which was Topifa, where he found the Inga Paulo, and the prieft Villacumu, who prefented him with ninety thoufand pefos of very fine gold, it being the tribute they ufed to fend the Inga from Chile, and which they were now fending, without being informed of the tragical accidents that had befallen the family; and there he fent back a great many Caciques of the countries he left behind him, and who had waited upon him thither.

The three Spaniards, whom he had fent with the Inga Paulo, and two more who joined themfelves to them, being defirous of making new difcoveries, and acquiring honour, and withal making their court to the marshal, went before, till they came to a place called Jujuy, which is a place or country where the people are very warlike, and eat human flefh, and who kept the Ingas always in great awe. This boldnefs coft three of the Spaniards their lives, though they fold them dear. The Adelantado being refolved to revenge their deaths, fent Captain Salfedo, with fixty horfe and foot, to chaftife those Indians; but they, being alarmed, had called together their friends, and made a fort to defend themfelves in, and many pits with fharp stakes in them, that the horfes might fall into them; with which, and many facrifices and invocations made to their gods, they had refolved to expect their enemies. Captain Salfedo found them thus fortified, and being himfelf inferior in ftrength, fent to the Adelantado for relief, who fent it him under the command of Don Francisco de Chares; but the Indians then avoided engaging, and refolved to abandon their fort; though, not to lofe all their pains, they refolved first to attack Don Francisco de Chares, where they killed a great many, and particularly of the Indians Yanaconas; and carrying off the fpoils, they made a fafe retreat : the Spaniards returned back to their chief body. Since we mentioned the Yanaconas, it will not be amifs to explain the fignification of that word, for the better understanding of what follows.

The Yanaconas were, among the Indians, a people fubject to perpetual flavery; and to be known, were bound to wear a fort of habit different from the reft. These feeing the bravery of the Spaniards, and how much they made themselves be feared and respected, began to rife against their masters, and adhered to the Spaniards, hoping thereby to shake off the yoke of flavery; and became cruel enemies to the other Indians. That which this word Yanacona now fignifies in Chile, is, those Indians who do not belong to any particular lord; for as to freedom, there is no difference, the king having made them all free alike.

From Jujuy the Adelantado marched with the vanguard, purfuing his journey, leaving the rear to the care and command of Nogaral de Ulloa. He came to a place called Chaquana, where he found the Indians in arms; for though at first they were frighted

with

with the fwiftness of the horses, yet at last they grew to little afraid of them, that they took a folemn oath by the great fun, either to die or kill them all. The Adelantado attacked them, and was in great danger, for they killed his horfe under him in the engagement; but he continuing still to fight them, they refolved at last to retire : then he purfued his journey, with his whole army, which was of two hundred horfe, and fomething above three hundred foot; with a great many Indians, as well Yanaconas, as others, who affisted the Inga Paulo. The army being thus numerous, they began to want provisions; and, which was worfe, they were without hopes of finding any, there being no place thereabouts that could afford it, the country being a defart, which lasted feven days, all barren ground, and full of falt nitre; and for their comfort, as they defcended a hill or precipice, after which they hoped for fome relief, they met with the fnows of the Cordillera, which was a fight able to freeze the boldeft undertaker, confidering the dangers and fufferings they were threatened with. Herrera, when he comes to this paffage, fays, fpeaking of the bravery of the Spaniards, and their patience in fuffering a great deal, which I shall not relate, that I may not be thought to praife my own countrymen with affectation; but I cannot omit fome part of it: he fays then, that to overcome fuch difficulties, none could have attempted it, but fuch as were used to endure hunger and thirst, and to enter into a country without guides, through forefts, and over great torrents, fighting at the fame time with their enemies and the elements, and shewing invincible minds; marching both day and night, enduring cold and heat, loaded with their arms and provision; being all of them ready to put a hand to all things, even the most noble among them being the first, when a bridge or any thing was to be made, to turn pioneers and carpenters, and cut down trees, by which they were fit for the greatest enterprizes.

The Adelantado feeing the new, and, in all appearance, the infuperable difficulty that attended this journey, did not lofe courage, but made a bold exhortation to his men, telling them, that thefe were accidents that used to befal foldiers, without which no great honour could be gained, nor any of those riches which they fought after; that they fhould put their truft in God, who would not fail to affift them, fince the planting of his faith depended upon their prefervation. They all anfwered chearfully, that they were ready to follow him to death; and becaufe example is the best rhetorick, he first began to enter into the Cordillera, or fnowy mountains, with a detachment of horfe going before, that if he found any provisions, he might fend a share to the army, which began to faint for want of it. But the more he advanced, he met with nothing but vast defarts, with a wind to cold, that it ftruck them through; and the paffage grew ftraiter and ftraiter, till at last it pleased God, that from a high hill they discovered the valley of Copiapo, where the kingdom of Chile begins, where they were received very kindly by the Indians, out of the refpect they bore to the Inga Paulo, and afforded them provisions enough to fend fome to the army which followed. It is not poffible to imagine how much they were preffed both by cold and hunger, both Spaniards and Indians; here one would fall into the fnow, and be buried before he was dead; another would lean against a rock, and remain frozen, just as if he had been alive. If any did but ftop to take breath, immediately a blaft of cold air left him fixed and immoveable, as if he had been of iron; and a Negroe, who had a led horfe in his hand, did but turn his head, and ftop to fee who called him, as fomebody did, and both he and the horfe remained like two flatues; fo that there was no remedy but to keep moving, for it was certain death to ftop a little; but it could not be, but people fo weary and fo weak must stand still fometimes; and therefore they lost a great many men, strowed up and down the mountain.

Gar-

Garcilaffo fays, there died ten thoufand Indians and Negroes; of the fifteen thoufand which went with the Inga Paulo, only five thoufand efcaped; for being all natives of Beru, and not having ever felt fuch cold, for which they were totally unprovided with cloaths, they died apace; the Spaniards being better provided, endured lefs; and yet Garcilaffo fays, they loft above a hundred and fifty men, and thirty horfes, which was a great lofs; others loft their fingers and toes, without feeling it. Their greateft fufterings were in the night-time; for they had no wood to make fire, and the Indians eat the very dead bodies out of hunger. The Spaniards with all their hearts would have eat the dead horfes, but they could not ftop to flea them. At laft the provisions, fent them by the Adelantado, met them; fo they paffed the reft of the way pretty well. When they came to the valley, the Indians made much of them, where we will leave them, to fee how others, that came after the Adelantado, pafs the mountain.

CHAP. XVI. — Others pafs the Cordillera.—What happened to the Adelantado in Copiapo :—His Return from Chile :—His Misfortune and Death.

I DO not find clearly the time of the year in which this army paffed the Cordillera : it is certain it could not be in the midft of fummer, nor in the heart of winter, becaufe not one of them would have efcaped, fince the firft high wind would have overwhelmed them in the fnow; therefore they paffed it, either in the beginning, or the end of the winter; and most probably it was at the entrance of the winter; for if it had been at the going out of the winter, those who followed would not have run fo great a hazard.

The first of these was one Rodrigo Orgonnes, who was left by the Adelantado in Cusco, to raife men and follow him, as he did. He lost his nails, and would have lost his fingers, if he had not taken his hand off the pole that held his tent up: others lost their eyes, their ears, and many their lives; particularly all those who were in one tent, which a ftorm rifing carried up, and in the morning they were found all dead in the fnow: they lost also fix and twenty horses.

The next who paffed after Rodrigo Orgonnes, was one Juan de Arrada, who brought the Adelantado the king's difpatches, and his commiffion for his government, whom we left in Copiapo; and it will not be amifs to fee what befel him there, before he received his commiffion, and faw his friends. The first thing he did in this valley, was a work of charity and justice, in favour of the true lord of that land, and was not in poffeffion of the government, becaufe he was left a minor, under the guardians of his uncle, who not only did not think of putting him in posses for him into his hands; but the fubjects, more loyal than he, had hid him out of the way. The Adelantado being informed of the truth of this matter, and being entreated by the wronged Prince, reftored him to the posses.

Before this happened, at their first arrival at Copiapo, the Inga Paulo took care to look out for fome gold in that little province; and in one day having got together the value of above two hundred thousand ducats, he prefented the Adelantado with it, in the name of his brother, the Inga Mango; which gave the Spaniards great caufe of admiration, feeing that in one village, and in fo little time, fo much gold had been found, gathering from this, how prodigiously rich the country must be; and therefore Almagro was content to think all his pains well taken that he had been at to come into it. The Inga Paulo finding his prefent fo well received, being defirous to make his court, got from the neighbouring parts three hundred thoufand ducats of gold more, which he prefented to the Adelantado; which gave him fuch joy, to fee that fo rich a country was fallen to his lot, that he caufed all his people to be affembled, and pulling out all the bonds and obligations made to him in Cufco, for the gold and filver which he had there lent them, he cancelled them all, one by one, declaring to his debtors, that he freely forgave them their debts, and was forry they were not greater; and not only fo, but opening his bags of gold, he began to ufe great liberalities; which fo pleafed them, that they forgot the dangers they had gone through, every one promifing himfelf vaft riches from fuch a conqueft. Francifco Lopes de Gomara, who writes this hiftory, fays, that it was a liberality becoming a great prince, rather than a private foldier : but he adds, as a confideration of the little ftability of human affairs, and the profperity of this world, that when he died, he had nobody to give a pall to cover his coffin.

But let us not afflict the reader fo foon with the memory of that lamentable tragedy; let us rather follow this great captain in his good fortune. As he went further into the country, he was refpected and treated as if he had been the Inga himfelf, in all the places he came to; but when he came to a nation called the Promocaes, which was the limits, beyond which the kings of Peru could never extend their empire, he found the fame refiftance as they had done. The Adelantado perceiving this, demanded fuccour from the Inga Paulo, who gave it him, by calling in the Inga's garrifons of the neighbouring frontier; and fo the war began.

Here the Spaniards met with their match, and began to experience that the conqueft of this part of America would not be compafied by their bare appearing with their horfes, dogs, and guns; or that a kingdom might be got by taking a king prifoner, and feparating his army to their purpofes, and fo remain abfolute mafters of the field; for here they met with a nation, who, though they admired their horfes, and were furprized to fee them, yet the greatnefs of their courage overcame that furprize; fo they met and engaged them with great valour, and many were killed on both fides. The Spanish blood, which used to be fo little spilt, was here fined in abundance; and from that time to this, the flaughter of them has not ceased, fo as to make either fide safe.

However, the valour of the Spaniards, and the advantages they had over them by horfes and guns, was fuch, as they might well depend upon, which made them conceive the conqueft of Chile to be a work of about two years at moft; as it is probable it would have been, if the divisions between Almagro and Pizarro, and his brothers, had not cut the thread of that enterprife, as it did that of their own lives; for they perished by one another's hands, upon points of contest about jurifdiction.

About this time the Adelantado being engaged with the Indians in a bloody war, Rodrigo Orgonnes arrived with his Spaniards, and fo did Juan de Arrado, with the King's royal patents, and a commiffion for the government of a hundred leagues of the country; which was juft as if a deluge of water had been poured upon the fire already lighted of the war with the Promocaes, Cauquenes, and Pencos, who were the nations that had withftood this invafion. As for the Indians, they pretended to no more than to defend their country, and their liberty, from foreign invaders; and the Spaniards found themfelves called away by more earneft motives of intereft, and fo turned another way. Not but that there were different opinions about what was to be done; fome thought that it was better to fettle where they were, the heavens and earth being both the beft that they had yet difcovered, and its riches fuch as they were witneffes of; others others were of opinion to be content with what they had difcovered, without expofing themfelves to new dangers, and the accidents of war. But those who brought the King's commission, infifted extremely, that the Adelantado should go to enjoy the effect of the King's favour to him; and, above all, that which moved Almagro most, was the jealoufy of feeing the Pizarros masters of Peru: to which might be added, that if he did not take possession of Cusco, by virtue of the King's patent, he might be in danger of remaining, at last, without any title to any thing he had. In this confusion of motives, the Adelantado stuck to the worst, as it happened, fince he lost his life: he had, it feems, arrived to the top of fortune's wheel; and it is the fame thing with her to stand still, and to begin to go down; which he did, till he tumbled quite to the ground, and had his head standard from his shoulders.

The world feldom performs its promifes, otherwife who could have told this great and generous man, that he fhould fall by thofe hands to which he had lent his? The Pizarros would not have been at that height, if the frankness and friendship of Almagro had not affifted them from the beginning with his fortune and good counfel; but nothing of all this was fufficient to fave him from death by their procurement. The differences between them grew to that height, that they engaged in a battle against each other; in which the Pizarros were conquerors, and Hernando Pizarro, the chief of them, ordered Almagro to be beheaded, being no ways touched by their antient friendfhip, nor the fubmiffions and tears of Almagro himfelf, though a venerable old man, begging his compatiion with a body full of honourable wounds; but as if he had been a statue of marble or brass, he shewed no signs of compassion. It is granted that Almagro did ill, to leave the conquest of Chile, fo well begun, and where he might have fettled himfelf and his friends to fuch advantage, to go back to Cufco, to govern there by force, in cafe the Pizarros fhould oppofe him; but they also were much to be blamed, in not coming to fome agreement with their antient friend and companion; but they are inexcufable in fhewing fo much cruelty, as to put him to death : accordingly all their own profperity feemed to end with his, and to turn to a lamentable tragedy, in which they died by one another's hands, as may be feen more at large in the already cited authors. For me, it is my bufinefs to purfue the conqueft and fettlement of Chile, which is my theme.

BOOK V.

OF THE CONQUEST AND FOUNDATION OF THE KINGDOM OF CHILE.

CHAP. I. — The Governor Pedro Valdivia enters Chilc :— He conquers and fettles that Kingdom, and is the first that enters as far as Mapocho.

THE more I draw near to the relating the fettlement made in Chile by its first founders and captains, who reduced that kingdom to the obedience of Their Catholic Majesties, and to the knowledge of God, the more I miss those papers and records, which which being fo far off, I cannot have the help of in defcribing the particulars of the events which were very memorable at the first entrance of the Spaniards. I must therefore make use of such passages as I shall find up and down in the general histories of the Indies; and this will refresh in me the memory of what I have seen or learned by others; and yet I must own the knowledge and information the reader will have from hence, will be but fcanty and short, such as I should have hardly attempted to publish without this apology; and defiring my readers to accept of this collection for the prefent, till the complete history of Chile does come out, I having left men most eminent in their profession employed in it when I left those parts.

The Adelantado Almagro being returned in the year 1537 to Cufco, Colonel Pedro Valdivia defired from the Adelantado Francisco Pizarro leave to pursue the conquest of Chilø, fince he had power and commission from the King to grant it. He promised not to return till he should have completed the subjection of it, and reduced it to the obedience of the crown and God Almighty. The Adelantado, who had it in his thoughts, because of the fame of its great riches, to follow the conquest of Chilø, confidering this gentleman to be one of the bravess control of all that he had undertaken, chose him for this enterprize in the year 1539, giving him a year's time to prepare all things, that he might fet out, as he did, in the year 1540. I do not fay any thing of the particulars of his journey, nor of the people he carried with him, because I am not where I can have a distinct information; only that in which all agree, is, that he got together a good body of men, both Spaniards and Indians; for these last relating what riches the Ingas used to draw from people who owned his empire in those parts, animated every body to this enterprize; and Valdivia feconding, with address, these impressions, made a good army, with which he fet out from Peru.

They had almost perished with cold, hunger, and other inconveniences; yet at last they arrived, and advanced at first with little difficulty; but as they went, engaging further in the country, still they found more opposition: they first came to the valley of Copiapo, which fignifies the feed of Torquoises; for there is a rock of them, of fo great a quantity, that they are grown lefs valuable upon it, as Herrera fays: it is a blue stone, which makes a very good store. And fince now we enter this kingdom with more advantage, and upon a steady foot of stetlement, it will not be amils to describe the valleys and places where the cities were first founded, and the other stetlements, that we may not be obliged to look back with an useles repetition.

The valley of Copiapo is the first of the inhabited valleys of Chile, though the best part of the people are Indians, with a few Spaniards, out of which one is the Corrigedor, who is named by the governor of Chile. The land is of itfelf very fruitful, and is made more fo by a pleafant river, which runs about twenty leagues in it before it empties itself into the fea in a bay which makes its harbour. Here grow all forts of the natural fruits and grains of the country, and of Europe; the maize yields above three hundred for one, and the ears of it are almost half a yard long, as Herrera and other authors relate. Though I am not informed as to the particular of Valdivia's reception here by the Indians, yet I fuppofe it was without much contradiction; becaufe thefe people were already accustomed to the foreign yoke of the Ingas, and had already feen and received the Spaniards out of respect to the Inga Paulo, who accompanied Almagro, who gave them their lawful Cacique, or prince, as we have feen. They had the fame facility in the valleys of Guafco, which is about five and twenty or thirty leagues from Copiapo, and that of Coquimbo Limari, and as far as Quillota. Here the Indians took arms, and opposed the Castilians vigorously; engaging them almost daily, as people that that came to conquer and fubdue their country. The Governor Valdivia penetrated as far as the valley of Mapocho, though with the loss of many of his men. He found this valley extremely well peopled, becaufe of its breadth, fertility, and pleafantnefs, being thoroughly watered by the river of that name, which, after having run fome leagues, finks under ground, does not lofe itfelf entirely, but appears more nobly, and comes out with a more powerful ftream two or three leagues further, being much bettered in its waters, which, from muddy, are turned clear as chrystal.

CHAP. II. - The Foundation of the City of St. Jago in Mapocho.-The Defcription of its Situation.

TOWARDS the east, the great Cordillera, or Snowy Mountain, is a wall to this valley of Mapocho, and is in winter all over white, but in fummer by fpots here and there: to the welt it has the ragged rocks of Poüangue, Caren, and Lampa, whofe foot we may fay is fhod with gold (for that which is found in its mines is fo fine, that a great deal was got out of them). Neither is this valley uncovered on the fides; for to the north and fouth it is environed by other mountains, which, though they do not approach the Cordillera in height, yet are high enough to make a circle about this valley, which in feveral of its rocks produces gold : it is, in its diameter from the Cordillera to the hills of Poüangue and Caren, five or fix good leagues, and from north to fouth, which is from the river Colima to that of Maypo, feven or eight leagues more; fo that its circumference is between 26 and 28 leagues, or more, if we go down as far as Francisco del Monte, which is a place of most pleasant shady woods, where all the timber is cut for the building of the houfes.

In this valley, two leagues from the great Cordillera, by the fide of the river Mapocho, God has planted a mountain of a beautiful afpect and proportion, which is like a watch-tower, upon which the whole plain is difcovered at once with the variety of its culture in arable and meadow; and in other places woods of a fort of oak upon the hills, which afford all the fuel neceffary for the uses of life. At the foot of this mountain, which may be two miles about, the Castilians found many habitations of the Indians, to the number of eighty thousand, as authors report; which Pedro de Valdivia observing, and gueffing from thence, that it was the best part of the whole valley, he refolved to found here the city of St. Jago, which he began the 24th of February in the year 1641. It stands in 34 degrees of latitude, and longitude 77, distant from the meridian of Toledo 1980 leagues. The form and ground-plot of this city yields to few others, and is fuperior to most of the old cities of Europe; for it is regular, like a chefs-board, and in that fhape, and that which we call the fquares for the men, of black and white, are in the city called Ifles, with this difference, that fome of them are triangular, fome oval, fome round; but the fquare ones are all of the fame make and bignefs, and are perfectly fquare : from whence it follows, that wherefoever a man stands at any corner he fees four itreets, according to the four parts of the heavens. These squares at first were but of four large houses, which were distributed to the first founders; but now by time and fucceffion of inheritance, they have been divided into leffer, and are every day more and more divided; fo that in every fquare there are many houfes.

Towards the north, the city is watered by a pleafant river, till it fwells fometimes. in winter, when it rains eight, nay twelve and fourteen days without ceafing; for then it overflows, and does great mifchief in the city, carrying away whole houfes, of which VOL. XIV. the

the ruins may be yet feen in fome places; for this reafon, they have raifed a ftrong wall on that fide; against which, the river losing its strength, is thrown on the other fide, and the city thereby freed from this inundation.

From this river is drawn an arm on the east fide, which being fubdivided into as many ftreams as there are fquares, enters into every one of them, and runs through all the transversal ftreets by a conduit or canal; and bridges are every where, as neceffity requires, for the paffage of carts: fo that all the houfes have a stream of water, which cleanfes and carries with it all the filth of the city : and from this difposition of water, it is eafy to water or overflow all the ftreets in the heat of fummer, without the trouble of carts or other conveniences, and that without any charge. All thefe rivulets empty themfelves to the weft, and are let into the grounds without the city, to water the gardens and vineyards that are there : which being done, it is let into other fields, fowed with all forts of grain, and then returns to the great river. The inhabitants do not drink of this water, though pretty good; but it ferves to water horfes and other animals; therefore they fetch water from the river for their own drinking, or draw it from wells, which yield very good, and very cool : those who are yet nicer fend to the fprings and fountains, of which there are many in the neighbourhood, which yield most excellent fweet water. The streets of this city are all of the fame bigness and proportion, broad enough for three coaches to go abreaft eafily : they are paved on each fide near the houfes, and the middle is unpaved for the paffage of carts. There is one ftreet that is of an extraordinary breadth, and in it fifteen or fixteen coaches may go abreaft; this is to the fouth, and runs eaft and west the whole length of the city: this is called La Cannada; and though at first it did not extend beyond the city, yet now it does, and has many buildings and gardens; and there is the church of St. Lazarus : but there are feveral fquares built further which inclose in again, and fo it is in a good fituation.

'This Cannada is the beft fituation of the whole place, where there is always an air flirring, fo as the inhabitants in the greateft heats of fummer can fit at their doors, and enjoy the cool; to which may be added the agreeable profpect it affords, as well becaufe of the buftle of carts and coaches, as of a grove of willows which is watered by a little rivulet from one end of the ftreet to the other: it is befides adorned with a famous convent of St. Francis, the church of which is all of a white free-ftone, all fquare ftone finely cut, and a fteeple of the fame at one end of it, fo high, that it is feen a great way off by those who come from other parts. It is divided into three parts, and has its galleries; the uppermoft is a pyramid: from it one may discover cm all fides lovely prospects, which delight the eye extremely, and recreate the mind.

CHAP. III. - Of the other Edifices and Churches of the City of St. Jago.

THIS city has (befide this ftreet called the Cannada, which might afford many places, fuch as are in great cities) another very large one, named of St. Saturnino; it has likewife the place of Sancta Anna, where has been lately built a church dedicated to that glorious faint. There is alfo a place called La Placera de la Compania de Jefus, where the front of their church makes a figure, and is a retreat or tabernacle upon the day of the proceffion of Corpus Chrifti. Moft of the other religious houfes have their places before the great porticos or entrances of their churches: but above all, is the place called the Principal Place, where all the bufinefs of law and commerce is driven. The two fides of the place that are eaft and fouth have buildings after the old way, though they they have made very good new balconies to them, and large windows, to fee the bullfeafts and other public diversions which are made there. The north fide is all upon arches of brick; underneath which are the fcriveners and public notaries, as also the fecretariships of the royal Audiencia, and the town-house: and over-head are the royal lodgings, with balconies to the place, with the great halls for the meeting of the townhouse officers; and in the middle are the audience-rooms of the royal chancery, with their galleries to the place: and, lastly, the royal apartments, where the royal officers are lodged; and the rooms necessary for the treasfury and chamber of accounts, and lodgings for the officers.

The fide that lies to the weft has in it, firft, the cathedral church, which is of three ifles, befides its chapels, which it has on each fide: it is all of a fine white ftone: the chief ifle, or that of the middle, being upon arches and pillars of an airy and gallant architecture. The remainder of this fide to the corner is taken up with the epifcopal palace, which has a very fine garden, and noble apartments both high and low, with a gallery fupported by pillars, which anfwer the Place; which, if it were equally built on the eaft and fouth fides, would be one of the moft beautiful and agreeable places that can be; for it is perfectly fquare, and very large, with a due regard to the whole plot of the city. I doubt not but in time the two old-fafhioned fides will be pulled down, and others built on pillars and arches proportionably to the other fides.

The greateft part of the buildings, (except the public ones, which are of a rough flone, but very hard, which the mountain of Santa Lucia affords, and is within the city, and fome great gates and windows which are of mouldings of flone or brick,) that is to fay, the ordinary buildings, are of earth and flraw well beaten together, which is fo flrong, that I have feen great openings made in a wall, to make great gates after the modern way, and yet the wall, though a very high one, not feel it, though the houfe was none of the neweft, but almost as ancient as the city; for the fun bakes and hardens the earth and flraw fo well together, that I have feen a piece of those walls fall from a high place, and not break in pieces, though fo big that a man could not carry it. At prefent, the houses that are built are of a better form, higher, and lighter than at first, because the first conquerors were more intent upon getting gold, and spending it in fumptuous treats, and high living, with fplendour and liberality, than in building palaces, as they might have done, by reason they had many hands, and ftone hard by.

In matter of buildings, this city, as most others of the Indies, may brag, that it imitated Solomon, who began with building the temple and house of God before he built his own palace. So the Spaniards have done all over the Indies, in this new world, inheriting this custom from their ancestors of Old Spain; for I remember, that travelling in Castilla, I made this observation, that let the place or village be never fo small, yet it has a good church; and even where the houses were poor, and like dove-coats, the churches were of free-store, with a steeple of the store; which gave me matter of edification, confidering the piety of the faithful on this occasion.

Juft fo the Spaniards of the Indies began first to erect churches, with fo much application, that they do not feem buildings made within these hundred years; but rather fuch as one would think they had inherited from their ancessors, or had been built by the Gentiles; and yet there is not a church in all the Indies, which they have not raised from its foundation. We have already spoke of the cathedral of St. Jago; and much more might have been faid of its strength and beauty, and the ornament of its altars and facristy. There are besides several other fine churches. That of St. Domingo, though not of stone, is built upon arches of brick, with a great many fine chapels on

each

each fide, particularly that of Nueftra Sennora del Rofario, which is all painted and gilded, with handfome knots and feftoons. The facrifty is full of ornaments of brocade of gold and filver, and embroidered filks of the fame; a great deal of plate for the altar, and mouldings of the altar-piece, all gilded. But this is nothing to the cloifter, which by this time is made an end of, and is of a fine architecture, two ftories high; and the lower, where the proceffion goes, is adorned with exquifite paintings in the four corners, where are four altars all gilded, and light as a bright flame: the apartment at the entrance is alfo finely fet off with pictures of faints of the order, of excellent hands.

The convent of St. Francis may be called a town for its largenefs: it has two cloifters for the proceffions; the first is upon arches of brick; and the fecond, which is the largest, very finely painted, with the story of the life of the faint compared with passages of our Saviour Jesus Christ's life; and over, are all the faints of the order; and at each corner four great pictures, with four altars, which ferve for the processions and ceremonies of holidays.

The church is of free-ftone, and all its altars gilded on the infide; but above all, the feats of the choir are a piece of rare workmanfhip: it is all of cyprefs, by which means there is always an admirable fmell. The first row of feats reaches, with its crowning or ornaments, to the very roof, all of excellent architecture, with its mouldings, bafes, cornifhes, and other proportions.

The church of our Lady of the Mercede, is also built upon brick arches. The great chapel is admirable for the thickness of its wall, and the beauty of ceiling, which is all of cypress wood, in the form of a duomo, or cupola. The great cloifter is begun upon fo fine a model, that to finish it fo, will require the care and application of those who have the government of that convent. The fituation of this convent is the finest and noblest of any, except that of St. Francis: it has the advantage of receiving the river first, whereby water is fo plentiful in the convent, that they have been able to make two mills to grind corn enough for the convent, and to give away.

The convent of St. Augustin is but newly begun; but its church, all of free-stone, will outdo all the others for beauty: it is of three isles, and in the midst of all the hurry and business of the town.

It is not many years that the facred order of the bleffed Juan de Dios has been fettled in this kingdom; and in a little time those fathers have done a great deal; for, having taken upon them the care of the royal hospitals, they have reformed them, affisting the fick with all neatness, care, and diligence, and have added feveral large buildings. They are much helped in this by the devotion the people have for their founder, to whom they address their prayers and vows in their wants and neceffities, and not in vain, for they feel great relief by his interceffion.

The college of the company of Jefus has not been able to build the infide of the houfe, becaufe from their first foundation the fathers have attended only the finishing of the church; which is now compassed, and is without dispute the finess next to the cathedral. It is all of a white store, the front of an excellent architecture, and over the corniss a figure in relievo of a Jefus. The great chapel has its cupola and lanthorn all adorned with festions and knots of two forts of wood, white and red, which makes a beautiful store.

The covering or roof is all of cyprefs, inlaid with all forts of flower-work, and divided into five parts; the middlemost is a composure of all forts of figures, which feem a labyrinth to those who see it from the ground, and, with a noble cornish that runs round, gives a delightful prospect.

The

The architecture of the altar, and the tabernacle for keeping the holy facrament, are valued at a prodigious fum. The altar rifes to the top of the church; and becaufe, according to art, it ought to have reached from wall to wall, which it does not, the empty places are filled up with two reliquaries on each fide, which join to the altar: this being all gilded, feems, when one first comes in, to be one plate of gold.

CHAP. IV. - Of the Civil Government, both Ecclefiastical and Secular, of the City of St. Jago; and of the Nature and Properties of its Inhabitants.

GOVERNMENT is the foul of the body politic; and therefore, at the fame time that the city of St. Jago was founded, the corporation was fettled to administer juftice, without which no government can stand. The corporation confists of two ordinary Alcaldes, an Alferes royal, an Alguazil mayor, a general Depofitarius, fix counfellors, or aldermen, chofen every year, half out of the gentlemen called Encomenderos, and half out of the inhabitants of the place, who have bought that privilege for themfelves and their defcendants. Of the two Alcaldes, he that is of the Encomenderos has the precedence and first vote, and the inhabitant the other: they divide the year between them by fix months. There is a prefident to the affembly, who is always corregidor, and lieutenant to the captain-general; and it is a place of great honour : and though it be of more charge than profit, by reafon of the expence belonging to it being unavoidable, yet it never fails of pretenders, becaufe of its authority, and the refpect paid to the office. There are chosen yearly, with the two Alcades, two others of the holy fraternity, or Hermandad, whole jurifdiction is without the bounds of the city, as is practifed in other parts. About thirty years ago there was founded a royal chancery in this city, which confifts of a prefident, four Oydores, or counfellors, and two fifcals; one who is the ordinary, and another, who has been added within these four years, and has the fame honours, who has the protection of the Indians, and the matters belonging to the holy Cruzada. After thefe is the Alguazil mayor de Corte, who has also the magistrate's habit, and a chair of state: then are the officers called the chancellor, fecretaries, referendaries, and others, as in fuch There is no appeal from the fentence of review given in this court, but to courts. the royal council of the Indies; and then there is a certain fum, below which there is no appeal neither. It cannot be denied but the majefty of this tribunal has very much adorned the city; though there want not those who lament the hindrance it has given to its riches and increase, which would have been more confiderable, if the inhabitants had continued in their first fimplicity, cloathing themselves with the manufactures of the country, and avoiding all those pompous liveries which are now in ufe; for those who before might walk in the public place in a plain drefs of the country, and be honoured and refpected, must now appear in filk, or Spanish cloth, which yet is dearer than filk, for a yard of it cofts fometimes twenty pieces of eight. Any gentleman of eftate cannot now appear decently in public without many fervants in rich liveries; and within a few years they have brought up a vanity of rich parafols, umbrellas, which at first were only used by the people of the greatest quality; and now nobody is without them, but those who cannot compass them; and though it is a thing of great gravity, and very ufeful to preferve health, yet it increafes those forced expences used in great cities; for this, and fome other reasons, fome were of opinion, that it would have been better for the city and kingdom, that they had continued to govern themfelves without this court of a royal Audiencia, as they did formerly:

merly: but, to fay truth, they are in the wrong; for, first, there are many cities in the Indies, where, without a court of this nature, I have feen vanity thrive in liveries and fuperfluous expences as much as any where. Secondly, becaufe, abstracting from passion and interest, which commonly do missed men in the adminission of justice, it cannot be denied but that the fovereign authority of this tribunal is of great weight to maintain the quiet of the kingdom, by keeping an even hand in the administration of justice, and not fussering that the tyranny fome affect, either by reason of their preferments or riches, should stille right reason, or oppress innocency, which has not learned to court and flatter.

Thus a royal Audiencia is a bridle to vice, a reward to virtue, a protection to the poor, and a maintenance of right and reafon; and this was the intention of our catholic monarch: for this reafon did he erect this court, which is the more neceffary, becaufe it is at that diffance from the royal prefence, and fo hard that the cries of the poor fhould reach his ears; for if fometimes they do arrive to his court, it is fo faintly, that they can fcarce be heard: for this reafon, thofe who have the chufing and fending the king's officers into fuch remote parts, ought to be the more careful to provide men of christian principles, and well intentioned, as indeed they have been, and are ftill in that kingdom; and it is no more than is neceffary, for a good example to thofe new christians the Indians.

This royal Audiencia is the caufe likewife, that much gentry comes from Europe to the Indies, and fo help to people them, and to continue the good intercourfe between Spain and that country, which is good for both. It cannot likewife be denied (though that be but as an acceffory), that the prefence and affiftance of this royal tribunal at all public feafts and exercifes, is of great countenance to them, and particularly to the literary acts and commencements, whereby learning is encouraged; and thofe who employ themfelves in that honourable fludy have a reward before their eyes, hoping to attain to be advocates, referendaries, fifcals, and counfellors: for in the Weft-Indies thofe places are all very honourable, and particularly in Chile, where the falaries are larger than in other parts, and yet provifions are cheaper; fo that it is eafy to lay up a good part of one's revenue. Befides thefe tribunals, there are others, as that of the chamber of accounts, or treafury, for the management and adminiftration of the King's revenue; thefe officers do likewife vifit the fhips that come in and out at the port of Valparifo; their offices are very honourable, and of great profit, and they are in the King's gift, as those of the royal Audiencia are.

The affairs of justice, and things belonging to good government, are under the Audiencia; but those of war and preferments belong to the governor, of whom we shall speak in a proper place.

The bifhop is abfolute lord of all the church-government; and though the bifhopric of St. Jago is none of the richeft of the Indies, becaufe all the product of the earth is fo cheap, and by confequence the tithes do not rife high, yet this very abundance is part of the riches of the bifhopric; for by this means the bifhop's family and expences are the eafier fupplied, and he may keep more attendance, and yet lay up a good part of his revenue; whereas other bifhoprics, though richer, have enough to do to keep up the decency of their dignity. There is a numerous clergy, who make a great *cortege* to the bifhop upon certain public days; and when he is received the first time, and takes possible for the militia, horfe and foot, with the people, go out to meet him; fo that it is a day of great pomp. The chapter of the cathedral is a venerable body of men, in which the King alone provides the vacancies by virtue of his royal patronage, and the concellion of the popes; fo that there is not, as in Spain, the bifhop or the pope's month; but in the Indies all dignities of cathedrals, even to the very parifh priefts, are all at the King's nomination, but with fome differences; for the dignities are beftowed in Spain itfelf, by the advice of the council of the Indies; but the cures or livings of parifh priefts, the King does beftow them by his governor or prefident, who exposes a public edict, that all oppofers for the vacancy of fuch a benefice may come and oppofe the examination; and of thefe, the bifhop prefents three to the governor general, to chufe in the King's name.

The holy tribunal of the inquifition, which is in Lima, ferves for all the whole South-America; fo that in Chile there is only a commiffary, with his officers and familiars, who accompany him in all public acts, and form a tribunal with great authority. There is likewife an officer of the Cruzada, called a commiffary, which is likewife a poft of great authority; and the day that the bull is published, all the orders of the religious are bound to be at the procession.

Let us conclude this chapter by faying fomething of the natives who are born and bred in this city: they are generally ingenious, and of good parts; and thofe whofe inclination is to learning, fucceed very well; but they are naturally more inclined to war, very few of them taking to other employments, either of trade or bufinefs; and they who, from their infancy, or by a ftrong inclination, do not take to learning, feldom fucceed, and eafily leave it, if put upon it, to follow the found of a drum or a trumpet, and never are quiet till they get to be enrolled as foldiers, being much better pleafed with the liberty of a foldier's life, than with the difcipline of the fchools.

They are much addicted to horfemanfhip: and I have often feen, that to ftrengthen a child that can hardly go, the beft way is to fet him on horfeback; this makes them prove dexterous horfemen, and bold. And it is a common opinion and a known experience, that for horfe, one of the country is better than four from abroad: this has been fufficiently proved in the courfe of fo long a war as that which has bufied that kingdom.

They are naturally liberal, good-natured, and friendly, particularly if they are treated honourably, with due regard: they are pretty flubborn and wilful; to be led only by fair means, and then they are docile and tractable; but if force is ufed, they do worfe and worfe. This we the fathers of the lociety do often experience in our colleges; fo we are obliged to lead them by fweetness and emulation, rather than by rigour and harfhnefs.

CHAP. V. - Of the Riches, Militia, Studies, and Increase of the City of St. Jago.

THIS city, to which the King has given the title of Moft Noble and Loyal, is the capital city of Chile, and one of the beft in the Indies, next to those two royal ones of Lima and Mexico, which do exceed it in fumptuous edifices, in people and trade, because they are more antient and nearer Spain, and for a greater passing for the people that come from Europe, and free from the tumults of war, which is a canker that eats deepest into great cities and kingdoms; and it is no fmall proof of their force, to be able to maintain fo long a war.

This city was founded one hundred and four years ago; and it had all that while fuftained the heavy load of a long and flubborn war, which the native Indians have made upon the Spaniards without any intermiffion; in which its inhabitants have either always always been in arms, or fending many horfes and provision to the camp; a calamity, which, far from letting it grow to what it is, ought to have kept it down from the beginning: nor is it of a fmall confideration, for the growth of other cities in the Indies, to reflect, that they being in the way, and, as it were, upon the paffage of other places, many new comers have fettled there, who perhaps at first were bound for other countries, or at least were indifferent where they stayed, and took up with them. It is otherwise with the city of St. Jago, because the kingdom of Chile being fo remote, and the last of all the Spanish dominions, it is the *non plus ultra* of the world: fo that nobody goes thither by chance, but on purpose, and upon fome design or particular interest; for which reason the number of strangers is little.

But the city is fo good and convenient to pafs away life with eafe, that notwithftanding thefe difadvantages, it is fo encreafed, that it aftonifhes all who fee it, few cities of the Indies outdoing it in finery, particularly as to the women (it were to be wifhed it were not to that excefs); for all things coming from Europe are there prodigioufly dear; and this caufes many families to run behind hand. Who fhould fee the place of St. Jago, and that of Madrid, could fee no difference as to this point; nay, as to the women, the finery exceeds that of Madrid; for the Spanifh women, fcorning to go to fervice, are all ladies, and love to appear as fuch, as much as they can, and the emulation between them about fine clothes, jewels, and other ornaments for themfelves and their fervants, is fuch, that let their hufhands be never fo rich they want all they have, particularly if they are of the nobility, to fatisfy the pride of the women.

As to the militia of the city, the first part of it is the company of inhabitants, Encomenderos, and reformed captains, who have no other commander but the governor himfelf, or his deputy; after that, there are two or three troops of horfe, and three or four companies of foot, all Spaniards. These often muster on holidays, and are exercised in the use of their arms; and fometimes there are general musters before the Oydores and royal officers, where their arms are examined; who also note them down, to know what strength they can raise upon occasion, punishing such as do not keep their arms and horses fit for fervice. By this diligence they are very ready at their arms, and the exercising of them proves an entertainment for them and the whole city: for very often, in the public processions, one or two of these companies use to come out, and make a falvo for them; and in the holy week there always attend a troop of horse, and a company of foot, who guard the freet, where the processions of the whippers go to keep the peace, because of the Indians, who use to take that time to make some rifings, the Spaniards being wholly taken up with their devotions.

The days in which this militia makes the best show, are, when the bishops come to be received, because they make a lane from the entrance of the city to the great place of it, where they form their battalion; and the concourse of the people uses to be so great, that though the place is very large, there is fcarce room for them.

And fince we are upon that fubject, we cannot omit to obferve that which is worthy of admiration, and that is, to fee how it is increafed in the number of Spaniards within thefe forty years. It is probable, the fame has happened to the other cities of the Indies; but this has had a continual drain, by fupplying foldiers for the war with the Indians, where many perifh, and few return. I remember that I have heard fay, that one of our fathers, newly come from Europe, and coming to our college, where he faw but few people in the ftreet, cried out,

Apparent rari nantes in gurgite vafto.

By

By which he meant to fignify, the difproportion of the inhabitants to the bignefs of the city; but now that very fireet is fo full of people, that all hours of the day, and fome of the night, it is extremely frequented; for there have been built many houfes for handicraftsmen and fhopkeepers on both fides of it, becaufe trade is confiderably increased.

I can myfelf affirm, that I obferved as great an alteration in a much lefs time, as well in people as in building; for having been abfent but eight years, I confefs, that at my return I fcarcely knew the place again; for I found feveral ground-fpots where there was not a houfe built upon, with very good buildings; and thofe which I had left built were altered to the better, with more and higher apartments; and the courts, which were very large, were confiderably ftraightened by other buildings; and yet the plot of the city was larger too; fo that being at first built at the foot of the mountain we have fpoken of, to the west of it, I found it extended as much to the east, and the fame proportionably to the fouth and north, and it increases daily towards the river, and the Cannada.

There was, when I left the place, about a dozen flops of good retailers, and at my return there were above fifty; and the fame proportionably as to the fhops of fhoemakers, taylors, carpenters, fmiths, goldfmiths, and other handicraftfmen, whom I found alfo more curious and exact in their profeffions; and emulation has produced very good pieces of workmanship in gold and filver, and carvings in wood, gildings, paintings, which have adorned the churches, with those which have been brought from Europe, and the particular houfes; fo that in fome houfes alone, there are more things of that kind now, than there were in all the city formerly. Some complain, that there are not now fuch rich and powerful men as there were at first; and that is true: but it does not follow, that the generality is the worfe for that, but rather otherwife; for the lands and houfes which belong now to ten families were antiently in one; it being certain that feveral of the heirs of that man have attained to as great riches as he himfelf had; or at least it is apparent, that the stock of all those who have shared the inheritance far exceeds what was left them : fo that fuppoling that fome were formerly richer, yet the riches are more in the land; which is also clear to any that fhall confider the houfes, poffeffions, and other improvements made fince that time; for now there is forcely room for the people, whereas before there was not half people for the room that was for them; which is also visible in the country round about. where farms that could hardly find purchasers, and were little worth, are now fo rifen in their value, that the finalleft coft great fums; and this rage of purchasing is fuch, that most of the causes in the royal Audiencia are about titles; for the antients, who took poffeffion of the land, thought, that if they had a little footing in a valley, it was all theirs; but those who have come fince, have purchased by virtue of new titles, and taken new poffeffion; which makes fo many law-fuits.

There is not formed a regular univerfity in this city, becaufe that of Lima ferved for all the neighbouring kingdoms and provinces to take their degrees: but when in time the going to Lima was found fo chargeable, and the journey, which is of three or four hundred leagues, fo troublefome, there were bulls obtained of the pope, for the orders of St. Dominic and the Jefuits, to have the privilege of conferring the degrees of batchelor, licentiate of arts, as alfo doctors in divinity, in the kingdoms of Chile, Granada, Ruito, Chuquizago, Tucuman, and Paraguay.

The effect has flewed how neceffary this favour, and how important this privilege has been; for this incitement to honour has caufed a general application to learning; for the priefts and curates are already great proficients in fludy, and fo more capable

VOL. XIV.

AA

of taking upon them the cure of fouls; and those who betake themselves to a religious life, are better qualified to ferve their orders, and be an honour to them, as many of them are; and it does not a little contribute to the value of them, to fee the great folemnity used at the reception of the feveral graduates. And in this, as well as the reft, I think our city of St. Jago is not inferior to any: for, first, all the acts are held with great concourse of all the learned, and very often the bishop honours them with his prefence, and fo do the prefident of the Audiencia. and the chief of the town-government, to whom are dedicated the fubjects of the extempore readings, according to the conftitution of the university, which are given out with great fidelity, dividing the fubject into three parts, for the graduate to difpute upon in prefence of a great concourse of people; and the feverity is indifpenfable in this and all other examinations, for the different degrees which are given by the bishop, by virtue of an approbation first given him by the father rector and the profeffors, as the bull directs; according to which there is no obligation of giving any treat; but yet that the doctors may affift with more pleafure and diligence, there has been introduced a cuftom of giving fome moderate ones, befides gloves, which were allowed inftead of it; but fome out of oftentation give both treat and gloves. Befides this, there has been introduced a cuftom of inviting the horfe of the city to honour the procession, which make the folemnity the more confpicuous; and they very willingly accept of the invitation, for they are very ready to mount on horfeback to honour any, much more those who diftinguish themselves by the exercises of virtue and learning.

CHAP. VI. — Of the Worship of God, and the Church Ceremonies in the City of St. Jago.

IF we were to make a judgment of this city by the worship of God that is performed in it, and the appearance of the clergy, we fhould judge it to be much bigger than it is; for the ftate and expence with which the holidays are kept, in the charge of mufick, perfumes, wax, and other ornaments, are very great : let us give fome particular inftances, and begin with the cathedral. I cannot but commend the piety of those eminent perfons, the bifhop, prefident, and counfellors of the royal Audiencia, who taking each of them a day during the octave of the holy facrament are at the whole expence of that day, and that is very confiderable; for all the wax and perfumes are very dear, as coming from Europe; and the holy emulation that is between them, increases the iplendour of the day; fo that during that octave, the church is fo perfumed, that its fragrancy is fmelt fome diftance from it. The proceffion of the first and eighth day are upon the account of the chapter, as the hanging of the ftreets, and erecting of altars for repolitories, are at the charge of the inhabitants where the proceffion passes: this procession is attended by all the convents, and all the companies of trades, with their banners and flags, fo that it reaches a great way. After this of the cathedral come every day new ones of all the convents, fo that they last a month, every one endeavouring to have theirs the best; by which means there are great variety of ornamental inventions and machines. The Indians of the neighbourhood, that live in the Chagras, that is, little cottages, within fome miles of the city, attend likewife with their banners: and they chufe for this purpofe a leader who makes the expence, and treats those of his company: their numbers are fo great, and the noife they make fo loud, with their flutes, and their hollowing and finging, 13 that

178

that they are placed in the front, or elfe there would be no hearing the church mufic, nor any means of understanding one another about the government of the procession. The other feasts and holidays in the year are proportionably folemnized with the fame decency by all the orders of friars, who all of them have fome devout perfons who help to bear the charge. But the nuns exceed all the reft in ornaments; and thefe nunneries are fo populous, that in that of St. Auftin alone there are above five hundred perfons, whereof three hundred are veiled nuns, the reft are lay-fifters; and becaufe the nunnery being full, there can be no more received, but with great difficulty, the other nunnery of Sancta Clara receives fo many every day, that in a little time it will equal the other in number, as it does already in the pomp and ornament of its church-fervice; that which these angels of Heaven, (for fo we may justly call those who with fo much piety and anxiety do ferve God continually, and are as a wall of defence to the city,) that which they do most fhine in, can hardly be expressed as to the neatness, curiofity, and richness of their altars, and the church-ornaments. What shall I fay of the smells, artificial flowers, fruits, chocolates, paftillos, and perfuming pots, which I have feen fometimes of fo great a fize, that they ftruck me with admiration, confidering the matter they are made of, which is of a refined fugar, as white as fnow, fometimes in form of a caftle, fometimes of a candleftick, or a pyramid most exquisitely wrought.

They are not content with this; for I have fometimes feen the whole grate of the choir, and the joiners' work, and beams of the church, all covered with preferved citron, in form of funs or angels of *mezzo relievo*, and a thoufand other inventions, which I fhould never have done, if I fhould report them all. I muft only fay, that the generofity of thofe ladies is fuch, that though this cofts very much, yet I have often feen them, at the end of a mafs, diffribute all thofe things to thofe who happen to be in the church, without keeping it for themfelves : they do not only do this within the church, but the altars which are fet up in their cloifters, and flreets near them; for the proceflions are adorned, after the fame manner, with fruits and flowers of the fame materials, fo well imitated, that they appear new-gathered.

The monafteries of men are not fo well filled as those of the nuns, though fome have a hundred, others fixty or feventy friars. The fecular clergy is alfo very numerous, very virtuous, and learned. Since I came away, there has been founded another nunnery of about thirty nuns, who will need no portion, being provided for by a gentleman who left all his eftate to that foundation; it was Captain Alonfo del Campo Lantadilla, Alguazil mayor of that city, which will be of great fervice to help the providing for poor maids, who, perhaps, elfe would not find it eafy any other way.

CHAP. VII. — In which is treated of the Proceffions of the Holy Week in the City of St. Jago.

LET us conclude this matter of religion and pious exercifes with faying fomething of the most remarkable practice of it in the holy week, by the statelines of the proceffions at that time; which is fuch, that all strangers confess, that if they had not feen it, they should hardly have believed it. These processions begin on the Tuesday in the holy week, to which the company of the Morenos, which is founded in our college, give a beginning, (of which we shall speak more when we treat of its employments, as also of the brotherhood or confrary of the Indians, on the morning of Easter-day.) The procession that follows next, is that which comes out of the convent of St. Austin,

in

in which is founded the confrary of the Mulattos: they go all covered with black frocks, and have many paffages of the paffion fung very devoutly, with the beft mufic of the place, and many lighted torches. The Wednefday the famous proceffion of the confrary of the Nazarenos fets out, which is all of natural Spaniards, of feveral arts and profeffions, and is founded in the royal convent of Nueftra Sennora de la Mercede; and it is one of the richeft and moft adorned proceffions. This proceffion is divided into three troops: the firft of which carries La Veronica to the cathedral, where it flays to meet the fecond, in which comes the Redeemer with his crofs, fo heavy, that he is forced to kneel often.

When this fecond, which is the largeft, comes to the great place, that which ftaid at the cathedral goes to meet them; and at a certain diftance, in fight of a vaft multitude of people, the Veronica comes, and kneeling down to the image of Chrift, which is a very large one, feemingly wipes his face, and then fhews the people the reprefentation of it remaining in the handkerchief; and then, as they begin to march, there appears the third proceffion, in which comes St. John, fhewing the Virgin Mary that dolorous fpectacle: fo that by all thefe there is formed a mighty proceffion, with many lighted torches, and all the brothers are clothed in their red frocks, marching with great filence and devotion. There is another reprefentation of great piety, which is performed in the convent of St. Francis, and in this convent; which is the parting of Chrift and his mother, which ufes to caufe great paffion and many tears, becaufe of the naturalnefs with which it is acted.

On the Thurfday there are very curious fepulchres erected, and many alms given to the poor; and though in the foregoing proceflions, and on the Fridays in Lent, there are to be feen fome people whipping themfelves, with divers forts of penances, which every one performs according to his own devotion, yet the proceflions, which by excellency are called the bloody proceffions, are performed this night. One of them fets out from the chapel of the true crofs, which is in the convent and chapel of Nueftra Sennora de la Mercede, and is only of the inhabitants and gentlemen, who go all covered over with black frocks; and he who carries the crofs is obliged (befides the collation which he provides for the preacher, and the mufic, and which uses to be very magnificent) to provide alfo men to attend the proceffion, and relieve the whippers, who often draw fo much blood, that they faint away; and others take care to cut off of the difciplines fome of the fpurs of them, for they use to have fo many on, that they almost kill themselves, nay, I have seen some of so indifcreet a zeal, that they used certain buttons with points fo fharp, that if they were let alone, it is a difpute whether they would not die before the end of the procession. Before this go also two others, both of them bloody processions; one of the Indians, and it is that has most whippers; the other comes from St. Domingo, and is of the Morenos: they both have mufic; and the communities of all the convents go to meet them when they come near their churches with torches in their hands. They fpend a great deal of time in their proceffion, and are accompanied by an infinite number of people.

On the holy Friday there are two proceffions more that go out of St. Domingo and St. Francisco, both of natural Spaniards. That of Sancto Domingo is called the proceffion of pity, and has been begun but lately; but it has made fuch progress, that it equals the most ancient: they carry all the marks of the passion by fo many dreffed up like angels very richly, and each of them is attended by two brothers of the procession with lights, and their coats of yellow. The other procession, which comes from St. Francisco, is the antientes, and has always been the best: it is mightily commended for the great filence and devotion with which it is performed; for there is not a word spoke fpoke in it from its going out to its returning. Before it goes, there is performed the defcent of the crofs before a great concourfe of people. This has always been an action of great piety, and very moving. The enfigns, or marks of the paffion, go out in order; and when they come, there is another reprefentation very tenderly made in the Cannada : there is a great crofs fet up; and when the image of the virgin comes up to it, it lifts up its eyes, as one who miffes the fovereign good that hung on it, and, drawing out a white handkerchief, applies it to the eyes, as crying, and then opening the arms, embraces the crofs, and kneeling kiffes the foot of it once or twice : all this it does fo dexteroufly, and becomingly, that one would fwear it were a living creature : and this action being accompanied with the mufic of the day, proportioned to the grief of the myftery, it is incredible what effects it has upon the people, who crowd one upon another to fee it.

On the Saturday, and on Eafter-day in the morning, there are other proceffions. The first comes out of St. Domingo, and is of the gentlemen and citizens, who in this are clothed in white, of most rich cloth of filver or filk, finely garnished with jewels and chains of gold. The ceremony of the refurrection is celebrated by night in the cloifter; and, for that end, there is fuch an illumination, that it feems day. The proceffion goes out very noble and gay, and in it are many lights, mufic, and dances, the ftreets being all adorned with triumphal arches, and hung with tapeftries; and while this proceffion is in the cathedral, celebrating the mafs, and communicating the hoft to the brothers, there comes another to the great place to meet it, another from the college of the Jefuits, which is a confrary of Indians, the most antient of the city, confifting of a company of Indians of both fexes, who, with torches in their hands, accompany the child Jefus dreffed up after the Indian fashion, (which causes great concern and devotion): they have alfo many colours, enfigns, and other ornaments, very rich and gay. At the fame time, two other proceffions of Indians likewife fet out from the convents of St. Francis and Nuestra Sennora de le Mercede, and another of Morenos from St. Domingo, all with a great apparatus of drums, trumpets, colours, hautboys, dances, which make that morning appear very gay and merry; and that it may be fo to our Saviour refufcitated, they all communicate, and give a happy Eafter to the Divine Majefty and all heaven, to which the earth can never pay a greater tribute than by the conversion of sinners, particularly of these new Christians, whose ancestors adored but the other day their idols; and now they acknowledge, and kneel before the true God, fit with him at his table, as grandees of his court; they, who not long before were flaves of the devil.

CHAP. VIII. - Of fome other Holidays of the City of St. Jago.

ONE of the things in which the greatnefs of a city fhews itfelf moft is, in its feafts, holidays, and public entertainments : we will touch a little on those of St. Jago; and, befides the fecular ones of bull-feafts, running at the ring, Juego de Cannas, tournaments, illuminations, and other diversions in which this city fhines, it is wonderful how well there are celebrated the public rejoicings for the birth or marriage of their prince, in universal canonizations of faints, and in all other folemnities, but particularly those ordered by His Majefty, as that was about thirty years ago, when His Majefty, out of his great piety, ordered, in honour of the queen of angels, that the mystery of her holy immaculate conception should be celebrated in all his kingdoms, as well by the feculars, as by the churchmen; and the first indeed need no incitement in this matter, every one being

being ready to fhew their acknowledgments to this fovereign queen of heaven, who has favoured more particularly the kingdom of Chile with her protection from the beginning.

Let us now fay what the city of St. Jago did upon this occafion, that the affection with which the inhabitants correspond to what they owe to this illustrious queen of heaven may be manifested, and some proof given of what they can do on fuch occafions: and letting alone what was done by all the convents and monasteries, I come to other particulars, to which three poetical contests gave rife: these were published folemnly on horseback through the town, with the company of the town magistrates, and all the gentry, without exception. The first of these troops were defrayed by the cathedral, the second by the celebrated monastery of the Conception, the third by the congregation of students founded in our college; and in all these there were prizes proposed of great value for the poets; and those who obtained them, had them given to them with great feleminity; and there were feveral representations, with other diversions, according to the custom of that country.

And, fince we are fpeaking of what happened in those holy feasts, let us not forget as remarkable a passage as any: the day which it fell to the lot of our college to celebrate its feast, the father provincial, who was to preach before mass, felt himself fo moved with love and devotion to the fovereign virgin, that, in a fit of extraordinary zeal, he invited the people to come after dinner to the procession of our church, and to fing before the image of our lady, that ballad which was in those days fo famous, and begins—

> All the world in general Says fo, chofen queen of heaven, That you are conceived even Without fin original.

The auditory was much edified with the piety of the good father, but fmiled at his propofal as impracticable; yet they all came at the hour, moft out of curiofity to fee the event of this novelty: they all took olive-branches in their hands, and began the proceffion while our fathers fung the ftanzas. It was wonderful, that the fame fpirit which moved the father to fuch an extraordinary invitation, moved alfo all the people to fing before the image of our lady, which they carried thus to the cathedral; out of which the clergy coming to meet, and finging the church-hymns, the noife of the others finging was fo great, that the canons were forced to give over, and accompany the people in their ftanzas, finging altogether like fo many children. They looked one another in the face, admiring at what they were doing, being fcarcely able to believe; and if I myfelf had not feen it, knowing, as I do, the natural gravity of that people, I fhould not have believed it neither; but the inward force of devotion can do any thing, when the Lord of hearts makes ufe of it to exalt the immaculate purenefs of his mother.

The rejoicings and entertainments upon this occafion lafted many days; one of them fell to the lot of the congregation of natural Spaniards founded in our college, who made a very ingenious and coftly mafquerade, reprefenting all the nations of the world, with their kings and princes all clothed after their own fashion, with their attendants, and last of all the pope, to whom each nation came with its king, to defire his holiness to favour this mystery. The liveries were very costly, and there was a triumphal chariot, a great machine, in which was reprefented the church: but that which was most most chargeable was the wax, which is very dear there; and this entertainment was given by night.

The other days were divided among the Negroes and Indians of all arts and profefions, who having a pious emulation to each other, made many rare inventions; but the merchants carried the belle in a tournament, which they performed in the great Place, each adventurer coming either out of a fea, or a wood, or an enchanted caftle, with his paper or challenge, acting their parts very well: they broke their lances, and received their prizes, which are things of great value. The gentlemen of the city crowned the feaft with their ufual diversions of bull-feafts, running at the ring Juego de Cannas, &c. There are generally about twenty or thirty horfemen to attack the bulls, and throw the rejous or lances at them, befides him who ftrikes the bull dead. The illuminations of torches, with which they ufe to run about all night, are alfo of great diversion; and upon this occasion they did it with rich liveries, and other chargeable expences, for the greater folemnity of the time.

The ordinary and annual rejoicings which are obferved on Midfummer, on St. John's day, St. James's, and the Nativity of our Lady, are alfo worth feeing, particularly on the day of St. Jago, who is the patron of the city; for then the royal enfign of the crown brings out the great flandard of conqueft, with the king's arms, and is accompanied by all the gentry, who are obliged to appear on that occasion, which they do very glorioufly.

There happen likewife fome marriages or chriftenings of the people of beft fafhion, in which they make as good a fhew as their eftates will let them, and often above their abilities. In the bull-feafts, thofe who undertake them ufe to treat the royal Audiencia, and other bodies corporate ; but in marriages they are profule, for the prefents to the bride have been brought in fafhion to be very rich, fuch as flaves, carpets, fcrutores filled with gold and jewels, and other curiofities of great value. There is not lefs fpent in treats and banquets, particularly of late years, that they have taken to counterfeiting natural fruits, and other things, which ferve for the fideboard ; fo that, after a man has given a treat of all forts of birds and fifhes, his entertainment is not gallant enough, if he does not add a defert of preferved citrons in all figures of love-knots, &c. and the other fruits imitated after nature : thefe they mingle on the cloth, with the figures of ewers, falt-cellers, jars, falvers, difhes, fpoons, forks, knives, all made of citron, covered with leaves of gold and filver ; and the first thing the guefts do, when they fit down, is to plunder the table of thefe, for there are real ones of gold and filver for the banquet.

All this cofts extremely, becaufe the fugar comes from Peru, and the manufacture of all thefe curiofities is very dear; many are the guefts; and, befides the weddingdinner, 'the fathers give another the next day as fumptuous. This is what nobody of fafhion can help doing. I have heard formerly, that first there were gentlemen, who, upon any of thefe public rejoicings, would do it all at their own charges, giving them all liveries of velvet, at the running of the ring for example: and yet then velvet was twice as dear as it is now. But at prefent that is left off, though they make expences equivalent in collations, bonfires, and other contrivances of great sit is a great runn to families, every one straining, out of vanity, to equal another, though the difference in riches be very great.

And now let us leave St. Jago, which has detained us more than ordinary, to fatisfy the curiofity of those who are defirous to know the increase and progress of the cities and colonies of that new world, and how the christian customs and government

183

have begun to flourish in it; and by this effay a judgment may be made of those fettlements. I pass on to the particulars of the conquest of that kingdom, that I may afterwards give an account of the progress of the christian faith, and the great hopes there is of its greater propagation.

CHAP. IX. — The Governor Pedro de Valdivia purfues his Conquest.—The Gold Mines are begun to be wrought.—He sends Proofs of their Riches to Peru; from whence the General Juan Baptiste Pastene brings him the first Succours.

THE Governor Pedro de Valdivia having founded the city of St. Jago, began to hink of fortifying himfelf in that post, to defend himfelf against the fury of the Indians, with whom he was every day engaged; and many men were loft on both fides, fo that his men began to be uneafy, and talk of going back to Peru, as Almagro had done; for though they faw the richness of the country, yet it appeared to them dearly bought, fince they could not get any of it without running great hazards by the many engagements that they had with the enemy; fo that they gave their lives for gone. The Governor Pedro de Valdivia was not ignorant of the difficulty of his enterprize; but yet encouraged by the hopes of fuccefs, at laft he refolved rather to die than give it over; and being an experienced foldier, bred in the wars of Europe, he refolved to raife a fort for the defence of his men, being convinced of the bravery of the enemy he had to do with; and though he was informed of a general rifing, which the Indians defigned, he fent feventy men to make an incurfion towards the river of Cachapoal. The Indians taking the opportunity of the abfence of these men, attacked the fort, and had gained it if the Spaniards had not fhewed incredible valour in the defence of it till the other men returned; and by their affiftance they repulfed the Indians, and remained conquerors.

The governor made good use of this advantage, both with the Indians and his own men; fo that having quieted them, he began to work upon the mines of Quillota, which were of great fame: they proved fo rich, and yeilded fuch a quantity of gold, that he thought it adviseable to make a fort there for the fecurity of his men; but finding want of hands, by the loffes he had had, he refolved to fend to Peru for relief. This he put in execution, giving at the fame time an account of the richnefs and fruitfulnefs of the country, to incite people; and becaufe ocular teftimony perfuades, more than what we only hear of, he trufted fix men, whom he fent along with thirty others, to have a great deal of gold with them, caufing befides the ftirrups of their horfes, and all that is employed of iron work about the bridles and faddles, to be made of maffy gold, making the ftirrups very great and large on purpofe. But all this defign was difappointed; for these men, who were thus gilded like funs, were, when they came to the valley of Copiapo, fallen upon by the Indians, and all perifhed but two, who were Pedro de Miranda, and Monroy, officers, who got away by the help of their horfes; but being purfued by the Indians through mountainous ways, and their horfes tiring, they were taken by an Indian captain, called Cateo, who had a company of archers : they tied their hands behind them, and carried them to their Cacique, who defigned to put them to death.

This Cacique was married to the heirefs of all this valley (for there inheritances follow the women, for greater fecurity of the right line), and when thefe two were expecting nothing but the blow of death, it pleafed God to infpire the Cacica, or Cacique's lady, with compafion; and fo fhe went herfelf, and with her own hands

11

untied

untied theirs, commanding their wounds to be dreffed, and treating them with fome of their drinks, which fhe herfelf prefented to them, having drank first herfelf, according to their custom, and bid them take courage, for they should not die. They feeing themfelves brought, as it were, from death to life, threw themselves at her feet, and dedicated themselves to her as voluntary flaves, fince by her favour they enjoyed a life which they gave for lost.

The captain, who had taken them, feeing his Princefs and Sovereign flew them fo much favour, came to them and bid them be confident of their lives, for that their lady having commanded they flould not be killed. there was not any one bold enough to look awry upon them: they were kept fix months in this captivity; and though it was fo gentle, by the kind ufage they met with, yet the natural defire of liberty, and the hopes of returning to their friends, ftill worked with them.

Let no man think himfelf fecure that has his enemy within his own doors, nor let him truft his prifoner, though yielded up to his difcretion; for let him be ufed as well as can be, yet there is no happinefs like being his own man, and enjoying his liberty. This thought continually took up the minds of thefe two captains, fo they laid a plot how to make their efcape. They had observed in the Cacique a curiofity for horses, which were creatures fo new to those Indian countries; they periuaded him to learn to ride, and manage a horfe. He liked the propofal, and began to exercife himfelf in this genteel amufement, carrying with him neverthelefs always his guard of archers, with an Indian before with a lance upon his fhoulder, and another behind, with a naked fword in his hand, more out of grandeur than diftruft; for he had no fufpicion of their plot, which was, to take an opportunity when he rid out to fall upon him, and kill him, as they did; for Captain Monroy, with an extraordinary intrepidity, without reflecting on the guard that attended him, attacked the Cacique, and Captain Miranda the reft, with fo much fuddennefs, that they made themfelves mafters of the lance and fword; and beftirring themfelves courageoufly, they wounded and difmounted the Cacique; fo that he died of his wounds in fome months. Having gained the horfes, they faved themfelves upon them; and not being purfued in that diforder, they overcame all the difficulties of those folitudes, and arrived at Peru fafe; where at that time they found the government in the hands of the Licenciado Vaca de Caftro.

Thefe two captains were gentlemen of great families; and to this day the Mirandas in Chile are of the flower of the nobility of that kingdom. As for the Monroys, they are fo known in Caftile, particularly about Salamanca, that it is needlefs to fay more of them. They were very well received by His Excellency, for the good news they brought of that difcovery and conqueft, of the pleafantnefs of the country, and richnefs of its mines; and upon this relation, as Antonio de Herrera and other authors fay, it was refolved to further this conqueft, which feemed to be of fuch high importance, and to chufe out fome fit perfon, and accompany him with foldiers, arms, ammúnition, and cloathing for the foldiers, who were almost naked.

He chofe for this employment Captain John Baptifte Paftene, a gentleman of the most antient and illustrious house of Paftenes in Genoa; which family is at prefent extinct in that republick, and remains only in its records, where many of that name are in the books of the nobility, and among the greatest dignities of the state. This gentleman engaged in the conquest of the new world by the same defire of glory which moved others, and to mend his fortune. He happening then to be in Peru, the viceroy took hold of the occasion to employ him for the King's fervice; which this gentleman accepted, and performed, going for Chile, where he arrived with fuccours which that kingdom stood in fo great need of.

VOL. XIV.

This

This relief was received with great joy, as being in the beginning of the enterprize. and extremely wanted, the foldiers being much fatigued and weakened with the continual affaults of their enemies, without any other defence than their fort of St. Jago. where they had enough to do to fhelter themfelves from their valour and fierce attack; but the arrival of these fuccours gave them new courage, and resolution to profecute their enterprize. To undertake it with more regularity, and prevent what accidents might happen from the fea, the governor fent Pastene with the title of lieutenant-general in his own ship, to discover the coast as far as the straights of Magellan, as he did; and it appears by the letters of Their Catholick Majefties, Philip II. and his fon Philip III. how agreeable this piece of fervice was to them. About this time the mines of Quillota being working with great profit, and Don Gonçales de los Rios being captain-governor of the work, the Indians brought him a full pot of great grains of gold, for a shew of a great deal which they faid they had found in a certain place. There they had laid an ambuscade of several of their best men, to fall upon such as, blinded with covetoufnefs, fhould go to feek this treafure. This happened accordingly, for they all run prefently to the place; for there is no alarm never fo warm, that rouzes better than this defire of growing rich at once did them : but they were much miftaken; for inftead of gold, they met with the iron of their enemies' lances, who killed them all but their captain and a Negroe, who escaped by the fwiftness of their horfes: fo the Indians remained victorious, and by the way of triumph, fet fire to a frigate which the Spaniards had almost finished to keep up their correspondency with Peru.

CHAP. X. - The City of Serena is peopled. - John Baptiste Pastene goes for more Succours to Peru, from whence he returns to Chile; and with Valdivia and other Captains, goes to help the Royal Army again/t Pizarro.

HERRERA fays, that with this relief which Valdivia received, he purfued his conquest on the people called the Promocaes; and that he was met by feveral Indians in the valley Quillocma, whom he overcame courageoufly, though with the lofs of fome horfes; and at that time horfes were a thoufand crowns a-piece. Having difcovered large provinces, and being fatisfied of the great number of inhabitants in them, he returned to St. Jago. It is fuppofed the governor did all this in haste, fince he returned without making any fort or settlement : so it is probable he went this time only to difcover, in order to form a force proportionable of an army : therefore the General John Baptiste Pastene being returned from discovering of the fea-coasts, he fent him back to Peru to endeavour to bring more fuccours, as he had done the first, and so form an army capable of enlarging his conquests upon such powerful enemies, as he found the natives of Chile to be. Judging therefore that it was not yet time to leave any thing behind him unfortified, he founded in the valley of Coquimbo the city generally called by that name, but by him called La Serena, to ferve for a refting-place or Scala for the people who came from Peru to Chile; for being in great want of fupplies, he did endeavour to facilitate by all means their paffage, and draw as many people as poffible to preferve his conquest; for acting otherwife would only be to have fo much the more to lofe; as indeed it happened, and fhall be related in its due place.

The city of La Serena was the fecond that was founded in Chile in the year 1544, in a very pleafant and fruitful valley, watered by a very fine river, not of the biggeft,

but

but of clear and admirable water, with which the fields are all fo plentifully refrefhed, that their product is fo various, that the inhabitants want almost nothing from abroad that is neceffary for human life; for they have corn, wine, flefh, all forts of other grain, and pulfe-fruits, even more than in St. Jago; for befides all those of Europe, and those of Chile, they have two forts very extraordinary: the first is a fort of cucumbers, which are very fweet, and do not need paring, for the outfide is a very thin skin, smooth, of a delicate colour between white and yellow, all streaked with a very fine purple; the other fruit is that which they call Lucumas, and is a fruit, as I remember, I have seen in Peru: it is a very wholesome well-tasted fruit, the store is smooth, and of a purple colour. The oil of this place is absolutely the best in the whole kingdom, as clear and bright as one's eyes, and of a rare fmell and taste: they make great quantities, so that they fend a great deal abroad. They have great flocks of cattle, though not fo many as about St. Jago, because it rains less, and so the pasturages are leaner.

But that which is moft particular, and of greateft value in this country, is the great abundance of rich metals, as gold, copper, and lead; fo that though they have given over gathering of gold in all the other parts of Chile, becaufe other products are of greater advantage, yet in this place they go on gathering it more or lefs, according as the winter is more or lefs rainy; for when it rains much, the mountains are diffolved, and the earth opened, and fo the gold is eafier found. And the copper too that is melted down there, ferves for all the kingdom, and Peru befides. The climate of this city is abfolutely the moft temperate of all the kingdom; becaufe the winter, which in other parts is very fharp, particularly nearer the pole, is here fo gentle, that it is hardly perceived, it being within five or fix degrees of the tropick, and being in the 29th degree of latitude, enjoys a moderate climate, the longeft day being of fourteen hours, and is upon the 11th of December, as the fhorteft is on the 11th of June, and the night is of fourteen hours.

But the accidental fituation of the city helps much towards the mildnefs of the climate : it is within two leagues of the fea, having a plain before it all covered with myrtles : it ftands on a rifing ground, having a profpect to the fea, which makes a beautiful bay, abounding in fifh of all forts; by which it is an excellent place to pafs the Lent in, fifh being very cheap : but the good cheer is alfo as well out of Lent; for befides the mutton, which is excellent and very nourifhing, there is plenty of tame fowl, partridge, turkeys, and all forts of wild fowl. This city began to be inhabited by many noble families, the founders being men of the beft quality that came to Chile; and their defcendants have remained, and do maintain the luftre of their anceftors. The governorgeneral appoints the place of Corregidor, or mayor of the city; and it is one of the moft profitable places that are, becaufe of the mines which are wrought in its territory : but notwithftanding all thefe good qualities which we have mentioned, this city does not increafe fo faft as that of St. Jago ; for this laft may be compared to the clove-tree, which fucks to itfelf all the fubftance of the earth round about it, a thing which is proper enough to capital cities every where.

About this time the General John Baptiste Pistene arrived at Peru for a second supply of men, which Pedro de Valdivia defired of the viceroy, to carry on his conquest; but he found the whole country in confusion, caused by the stubborn disobedience of Gonçalo Pizarro, so that the government wanted relief itself, instead of being in a condition to relieve others. This was so true, that Pastene was forced to return to Chile, to bring a force from thence to join with the royal army. This resolution it is probable came to the knowledge of the tyrant Pizarro; for he found means to seize

BB 2

his fhip and his perfon by cunning. Paftene, though much preffed by Pizarro both by promifes and threats to join with him, as very well knowing how much he might affift him as his friend, or injure him as his enemy, yet perfevered in his loyalty to the King, and found means to make his efcape out of the hands of the tyrant, and to reeover his fhip too; which having new fitted with neceffaries, he returned to Chile, to bring from thence fome of the beft officers to encourage the royal army, which was preparing to engage Pizarro, who on his fide had fuch a force, that he had put to death the viceroy Velafco Nunnes Vela. In Chile they were waiting for his return, and the fuccours he fhould bring with him; but when they faw him without any, they were much troubled; for they found themfelves obliged at leaft to fufpend all their projects upon Chile, to go and relieve thofe upon whom their own prefervation depended.

The Governor Pedro de Valdivia, as foon as he heard what paffed in Peru, refolved to go thither in perfon with fome of his beft officers and foldiers to join and help the King's forces. He left in Chile for his lieutenant Captain Francifco de Villagra, a gentleman of great courage and good parts, that he might govern and preferve what we had already in that kingdom, it being impoffible to do more, or make any further progrefs, till the times fhould alter, and he provide more forces. He got together what gold he could, and went aboard with his captains and foldiers in the fame fhip, under the conduct of the fame General Paftene. His arrival at Peru gave great courage to the King's forces, by reafon of the gold and men which he brought, the valour and experience of which was fo great, that in the battle they performed extraordinary things, being the chief caufe of the victory obtained over Pizarro in the valley of Ouiriguana. He himfelf was taken, and chaftifed with his guilty affiftants, as his folly deferved, and his difloyalty to his Prince. The prefident of Peru, Gafca, always advifed with the Governor Valdivia in all his most important affairs, whom he made of his council, with fix more, for the fecreteft affairs and of most importance, making great efteem of his prudence and experience, as well as of the valour of his companions.

The victory being obtained, the governor returned to Chile, with a good fuccour of men and arms, and the fame officers and foldiers, who accompanied him to Peru, with which, and other fuccours which came afterwards, he was in a condition to purfue his enterprize vigoroufly, as we fhall fee hereafter. But all was little enough againft the refiftance of the Indians, who not only kept them from advancing, but for fix years together that their flubborn oppofition lafted, they reduced the Spaniards to great extremities of nakednefs and hunger; fo that they were forced to eat herbs and roots, and rats and mice, and fuch things; and if the heart and courage of the Governor Valdivia had not been invincible, it would have been impoffible to have made the conqueft.

CHAP. XI. — What happened in Chile during the Absence of the Governor Valdivia, and after his Return ; and of the new Succours he received.

PEDRO Sanches de Hoz was a foldier, to whom the King was pleafed to grant a patent for the difcovery and conqueft of certain lands, to begin from the jurifdiction of the Marquifs Francis Pizarro; and he pretending that part of the kingdon of Chile was in his grant, oppofed the Governor Valdivia, to whom Pizarro by a royal commiffion had given the conqueft and government of Chile; but the marquifs perfuaded him to defift, and go along with Valdivia to Chile, recommending his perfon to the governor, to ufe him with regard, and give him a fhare in the beft part of his conqueft. Valdivia

divia did fo, beftowing on him the richeft lands of the Indians; but the ambition of commanding is always very contentious, and fubject to complain till it gets the upper hand. This appeared in Pedro Sanches de Hoz, in the abfence of the governor from Chile; for being vexed that he was not left with the authority of lieutenant in his room, he plotted to take away the life of him who had it, which was Francifco de Villagra, who having notice of his defigns, feized upon Pedro Sanches de Hoz, and cut off his head, by which he affured his own; and Valdivia approved of the thing as well done, when he was informed of it; becaufe he was a friend to juffice, and becaufe a competitor is never forry to have his competitor removed.

About this time, the Indians of Copiapo, who had begun to imbrue their hands in the blood of the Spaniards, in purfuance of the revenge of their Prince's death, whom the Captains Miranda and Monroy had killed, as we have related in the ninth chapter, lay in wait, and furprifed Juan Bon, with forty foldiers more, of fome companies which were coming from Peru, and marching through their country; thefe they put all to death. After their example the Coquimbefes attacked the foldiers and inhabitants of the city of La Serena, whom they killed without fparing one, and fet fire to the city, which they ruined utterly, not leaving one ftone upon another.

All this being underftood by the governor at his return from Peru, he fent Captain Francis de Aguirre with a good force, to follow them to their retiring-place, where in feveral rencounters, in the valley of Copiapo, he overcame the Indians : all which was as much owing to his great valour as conduct, without which the force he had would have proved infufficient (as Herrera obferves). He did the fame in the valley of Coquimbo, and rebuilt the city of La Serena, in the place and fituation where it now ftands. For which reafon he was looked upon as the true founder of it; and his defcendants, who are of the beft nobility of the kingdom, have preferved that prerogative, and are the chiefeft in that government, or rather the mafters of it; for they are fo numerous and fo powerful, that they yield to none in reputation, and are accordingly refpected by all.

Let us now treat of that which it is not reafonable to forget; which is, of those captains, who in those early times entered Chile with fuccours of men to help to conquer it, fince it is just their memory should live for ever in those who enjoy the fruits of their labours, and are now mafters of what they gained with their blood and fweat, and the lofs of many lives, and danger of their own, which they exposed in fo many battles and encounters they had with the enemy. I am only forry, that I cannot fpeak of them all, and defcribe in particular their good qualities and great merits, becaufe I am in a place where I want memoirs and informations for fuch a work; but I will fay what I can of their noble actions, as I find them recorded in other hiftories; though to fay truth, that which they fay about Chile is fo little, that it is almost next to nothing. I am not furprifed at it, for it is a place much out of the way, and its conquerors were bufier with their fwords than with their pens; for their enemies preffed them continually with fo much vigour, that they had but little of that leifure which histories and relations require. We shall begin with the Governor Pedro de Valdivia, who was the first that entered the kingdom with a force, as has been related; then that which General Pastene brought afterwards with arms and cloaths. The fuccours brought by Captain Monroy proved of great importance; as Herrera fays, it was of three-fcore men, which in those days was as much as fix hundred now : these had hired in Peru, being much affifted by the viceroy, who, upon the relations of Monroy and Miranda, was refolved to encourage the enterprize.

I am not certain, whether it was before this, or after, that arrived the fuccours fo opportunely brought by Captain Chriftoval de Efcobar Villaroel; for I do not find it mentioned in any of the hiftorians, which I have read here; but in Chile the memory of it is very frefh, and will never be forgot; not only for his coming in a time when they extremely wanted fupplies, but alfo for that circuftance of this noble captain's having brought these fuccours upon his own charges, (and I think they were feventy men,) and made his way by land to Chile, either by the wilderness of Aracama, or by the Cordillera, either of which must cost a great fum of money, for it is above five hundred leagues.

This action alone was fufficient to fhew the noblenefs of this gentleman; if that of his family had not been fo well known as it is in Spain; but he continued to give proofs of his zeal for the King's fervice, by ferving in perfon, and employing alfo his fon Captain Alonfo de Efcobar Villaroel, whom he had brought with him from Spain, that they might both give an example to their pofterity, as they have; not yielding to any, but have produced many noble perfons, both in arms and other civil employments of the government.

When I reflect upon those I have known of the descendants of this famous head and conqueror, I find, that between sons, grandsons, and great grandsons, they come up to eighty-feven; and if they had not been so many, there was enough to honour this family in the seven or eight sons of the General Luis de las Cucuas, grandsons of this gentleman, with whom he presented himself to the royal army, all armed cap-a-pé, in which they ferved many years at their own charges; for in those days the inhabitants that were gentlemen had no other reward but their loyalty, and the glory of ferving their prince. Antonio de Herrera makes mention of another supply, of one hundred and eighty men, conducted by Captain Francisco Villagra, who was afterwards governor of Chile, and to whom that kingdom owes a great deal of its being, for the hazards he ran, and the noble actions he performed in its conquest, as we shall see hereafter, and may be read in the general history, to which I appeal. The nobility of his family was always notorious, and the gentlemen of his name have shewed themselves worthy of it, in the great fervices they have and do perform every day for the King, worthy of all forts of acknowledgment and reward.

After this, in the time of the viceroy Don Antonio Hurtado de Mendoça, HisExcellency, as Herrera fays, he fent Captain Don Martin de Avendano by land, with good fuccours of men, and three hundred and fifty mares and horfes, which were of as much importance for the war as fo many men. The defcendants of this gentleman are ftill carrying on the luftre of his family, fo known in Salamanca and other parts. I was acquainted with two brothers of that name who alone might preferve and increafe the reputation of their family; the one was Colonel Don Antonio de Avendano, who was colonel of the regiment of Arauco, who fignalized himfelf at the head of that regiment in many rencounters with the enemy, and particularly in one, where our camp was defeated, and where, to preferve the reputation he had gained in fo many noble actions and imminent dangers, he chofe to die, being wounded in a great many places, and almost cut in pieces by the furious enemy. The other was Don Francifco de Avendano, likewife colonel, and who came to Spain; where His Majefty, in confideration of his own and his anceftors' merit, honoured him with the habit of St. Jago, and the government of Tucuman, where he died.

I do not mention those companies out of which, as they passed by Copiaco, forty were killed, with their leader Juan Bon; because Herrera, who speaks of this, does

not

not fay who was the captain of them. Perhaps there were alfo other commanders, who in those fix years time entered into Chile with men; and I should be glad to be where I might have particular information of them, to do them at least that small honour of putting their names in print, and giving some glory to actions which, perhaps, deferve to be graved in brafs.

I do not likewife fet down here, that famous fupply of men brought by the fecond governor of Chile, Don Garcia Hurtado de Mendoça, Marquis of Cannete, for this fhall be fpoke of in its proper place, after the death of the Governor Pedro de Valdivia; and thus we fhall conclude thofe who entered by the way of Peru. For though fince that time, there have been feveral fupplies, and are every day ftill more, yet they have not been remarkable enough, as not having come at first, but after the fettlements were made; and befides, it would carry me too far to report them all. But I shall add here those which have come from Spain by the way of Buenos Ayres, as well because they were the most numerous, fome having been of five hundred or a thousand men, as having come in dangerous times, when the kingdom was ready to be lost, the enemy having, as it were, besieged it; and so it is just to preferve the memory of fuch famous benefactors, who have been, as it were, fathers of their country.

CHAP. XII. — The Governor Pedro de Valdivia purfues his Conquest, and peoples the City called of the Conception, where he had like to have been destroyed in a Battle.

THE Governor Pedro de Valdivia, feeing himfelf with a good force, and the greatnefs of his mind perfuading him that he had wherewithal to put an end to his enterprize, Herrera fays he fent to the other fide of the Cordillera, from St. Jago, Captain Francifco Aquirra with a good number of men, with which he paffed those terrible mountains, and founded the Diagutas and Juries.

Herrera fays no more: nor do I know any thing of thofe individual places and cities which he founded. The Governor Valdivia, on his fide, fet out of St.Jago with a powerful army, and, paffing the furious river of Maypo, Cachapoal, Tinguiritica, Peteroa, Tena, and Metaquito, he conquered the Promocaes, a warlike people, who had refifted Almagro, and, before that, had repulfed an army of fifty thoufand men, which the Inga had fent against them when he endeavoured to conquer Chile; but the good fortune and great valour of Valdivia and his men overcame that which feemed invincible, though I am perfuaded that it was not without blood: but I refer myself to the general history of Chile, which has defcribed the particular encounters and battles on both fides.

The army paffed the deep river of Maule, and the wide Itata, and coming to that of Audalien, quartered by the fea-fide; and, for the conveniency of fituation, he founded there the city of the Conception in the year 1550. But the natives, aftonished and enraged at this boldness of strangers, to enter thus into the heart of their country, as if it were their own, called a general affembly, and, with a numerous and brave army, prefented them battle fo furiously, that our people began to wish they had not engaged themfelves fo far. Much blood was stended on both fides; and our army was in great danger of being destroyed, till it pleased God, (who guides all things to his ends,) who was to reap the fruit of his victory over those Gentiles, whom he had predestinated by the means of the Gospel, which was to be preached to them in case the Spaniards were victorious, to make them fo at last, and that very glorious, the famous Anabillo,

Anabillo, chief head of the Pencones, remaining prifoner, after having behaved himfelf with great bravery in the fight.

The fituation of the city of the Conception is on a plain where the fea makes a most beautiful bay, in form of a half-moon; and nature has provided a mole, by putting there a large island, behind which ships ride fafe from the north wind. By land, towards the eaft, it is encompaffed with fome high hills, the fides of which are all planted with vines and other fruit trees; fo that, which way foever one looks, the profpect terminates in beautiful plantations of trees, or rather a green femicircle, which rejoices the fight, and fortifies the city. From the north, there comes into it a fmall river, which comes down from the mountains, which we have already defcribed in the chapter of the rivers of Chile. On the fouth fide, another larger deeper river runs by it, and is called Audalien. Neither of these rivers does the kindness to the city which Mapocho does to St. Jago, that is, to come into the houfes; but the want of this is fupplied by excellent fountains of chryftalline and delicate water, which rife very near the city, and are brought into it particularly very plentifully, and which were carried to the public place by the General Don Diego Gonçales Montero, he being Corrigedor of this city, and governing it with the fame prudence and generofity, that he fince governed that of St. Jago, in the fame quality of Corrigedor and lieutenant-general.

This city is in the latitude of thirty-three degrees and five and forty minutes to the antartick pole; and for this reafon, and becaufe of the high land it ftands upon, the air is fo temperate, that the heats never are troublefome, nay, in the heat of fummer, it is neceffary to have as many bed-clothes as in winter, which is not at all fevere, becaufe it never fnows there, though it rains extremely. For the fecurity of the city, there was erected a good fort for our people to retire to when preffed by the Indians, which often happened, and made them fland to their arms almost continually; for they, impatient of any yoke, were inceffantly taken up with the thoughts and endeavours of driving them out of the country, and, notwithftanding all the care that was taken, the city was loft at laft, for the enemy overpowered us: but yet in length of time it was built again, as we fhall fee; though ftill remaining a frontier to the enemy, it has not had fuch increafe as St. Jago. But it gains ground, and has many rich inhabitants, who have entered upon a great vent of falt, flefh, and hides, which is one of the richeft commodities of Chile; and they have, befides, magazines of flour, with which they furnish the army: the wines, too, of those parts are generally better than those of St. Jago, though they are lower ceps or vines; nay, the grapes ripen as they lie along on the ground, as it is in many parts in Europe: they have not that abundance of almonds, oil, oranges and lemons, pulfe, Agi Legumes, and dried fruit, as in other parts of Chile, their fummer being fhorter, and the fun having lefs force.

The Spanifh children born here are of a very fweet nature, and docile; of good wits, and take to learning very well. The men are loyal, faithful keepers of their word, friendly, and fuch as for their friends will venture any thing to defend them in their honour and fortunes, even with the hazard of their own, and their lives too: they are very well difpofed to virtue, having good inclinations; and thofe among them, who have taken to arms, have extremely fignalized themfelves. They are bred in great implicity, as being far from the corruption of the court, which generally improves the malice, and raifes the libertinifm of young people. The bifhopric of this city is a poor one, not being worth above two or three thoufand pieces of eight a year, becaufe, though the land is rich of itfelf, and that in which there are moft mines, yet the Decimes or tenths are very fmall, becaufe of thofe continual wars which this city has maintained from its beginning; for we may fay, it has been nurfed with blood, and grown up in arms, arms, not having laid them down in ninety-five years, which is no fmall evidence of the good qualities of its inhabitants, and what it may be henceforward, when this dead weight is taken off. Another caufe of the fmall revenue of this bifhoprick, is the lofs of feven cities, fome of them the richeft of the kingdom, which all belonged to its diocefe.

In the year 1567, there was fettled a high court of chancery, which remained till the year 1574, and afterwards it was removed to St. Jago, where it now is : and though its jurifdiction reaches as far as this city, there is little for it to do, becaufe the governors are generally prefent, to be nearer the garrifons, and countenance and affift the war, of which there is a continual neceflity. The garrifon is very numerous, and of choice foldiers, where every day they mount the guard, as it is practifed in places of war. The general provides all the officers, even to the colonels; but His Majefty names the treafurer and mufter-mafter-general, who is the fecond perfon after the governor : this is a poft of great efteem, and no fmall value in this kingdom; and there go through his hands three hundred thoufand ducats of the King's money, which every year is to be diffributed among the officers and foldiers, who are enrolled in his books.

CHAP. XIII. — The Governor Pedro de Valdivia profecutes his Conquest, and founds the Cities of Imperial, Valdivia, and Villa Rica, and raifes three Forts in Arauco.

THE Governor Valdivia having fpent the year 1550 in peopling the city of the Conception, and defending himfelf in his fort against the continual attacks of the enemy, and having, at the fame time, informed himfelf more exactly of the country, and its fertility, by the means of Captain Hyeronimo de Alderate, who had gone through it, and observed the number of its inhabitants, refolved to go out of the Conception, and purfue his conquest. In order to this, after having well provided his fort, and left a garrison in it, he fet out in the beginning of the year 1551.

He took his way with his army by the plains of Angol, croffing first the great river Biobio, and coming to that of Cauten, which, for its gentlenefs, is called the Ladies River, when joined with another very pleafant one near the fea : here he found great fettlements of Indians, and founded the city of Imperial. This is one of the most agreeable fituations of the whole kingdom, being about three or four leagues from the fea, and thirty-nine leagues from the Conception, and a hundred and nine from the city of St. Jago, in thirty-nine degrees of fouth latitude. All the territory of this city is very fruitful, bearing corn, and all forts of pulfe and fruits, though the black grapes do not ripen fo kindly as the white ones and the mufcadines: the country is not all plains and valleys, nor all hills, but rather a composition of the whole; the hills are gentle and tractable, with good pasture and shelter for cattle; the ground does not want much watering, it having frequent and large dews that fertilize it. The city was fituated upon a pretty ftiff hill, and the confluence of two navigable rivers; but the port is not good, for the flats there are within three fathom and a half of depth. Here the governor met with fourfcore thousand Indians fettled, nay, some authors fay, they were many more; and all agree that they were a quiet and good-natured people, not at all fo warlike as the Araucanos.

This city was the head of the bifhoprick, and it began to increafe at first very much, by reason of the excellency of its foil and fituation; and if it had not been destroyed, as we shall see hereaster that it was, it would by this time have been a great city; for it was already very well peopled, and must have increased, if the gold mines which are in its neighbourhood had been wrought.

VOL, XIV.

This

This city, which was the fourth of this kingdom, being thus founded, the governor divided the territory, and gave the lordships to his conquerors, according to the royal privilege he had fo to do, that he might engage the Spaniards to enter more heartily into his enterprize. He took for himfelf the lordships of Arauco and Tucapel, as far as Puren, except fome manors that he gave to others, to content all. Having left a force, which feemed fufficient in the city of Imperial, he marched as far as Valdivia. Being come to that famous river, and defiring to pass it, to conquer the land and people on the other fide, the brave Indian lady, called Recloma, hindered him, offering to pass the river alone fwimming, and to reduce the Indians to his obedience, as fhe did, and we have already related in the minth chapter of the first book; and there likewife is a full description of the fituation of the city, and all its other qualities, which it was proper to make in that place, and fo it is not neceffary to repeat here. The governor having founded the city of Valdivia, erected a fort, and fettled all things as he had done at the Imperial. While he ftayed there to purfue his fettlement, he fent Captain Hyeronimo de Alderate to difcover the country as far as the Cordillera Nevada; and he having fent to the governor relations of his difcoveries, as he went founded a town, which he called, by the excellency, Villa Rica, the appearances of the riches of that country being greater than any yet had been difcovered.

Though the fituation he chofe feemed at first to be the best, yet in time it was refolved to change it, and place it upon a great lake, at the bottom of the Cordillera, and about fixteen leagues from the Imperial, and forty from the Conception. It has not fuch a plenty of corn and wine as the others, but it has enough, and many other good qualities, which I omit, because it being fince destroyed with other cities, already mentioned, I am likewise forced to be filent of their particular properties, and refer myself to the general history of Chile, which will embrace all those particulars.

Thefe were the cities planted and peopled by the governor Valdivia; and though I have not, as to thefe laft, made mention of the blood fpilt in gaining them, it is not to be imagined but that they colt dear enough, fince the content was with fuch warlike nations, that it feemed a great rafhnefs (and would have been fo without a particular protection from heaven) to undertake fuch enterprizes. There are not wanting thofe who blame the governor Valdivia, judging that he did not meafure well his ftrength, but grafped more than he could hold, as he found by a fad experience at his own peril in a little time.

The authors who fpeak of these attemps are full of the commendation of the valour, patience, and fufferings of the Caffilians; but all this would not have done, nor have fubjected those people, nor twice that force could have prevailed against them, if, becaufe they faw them on horfe-back, and killing people at a diftance, they had not believed them to be Epunamones, by which name they called the gods they adored; fo they imagined them to be immortal, and that they came from above with a power to fend out thunderbolts like God : for having never feen either finall arms, or great artillery, they thought the noife was thunder; and to this day that fort of arms is called Talca, which in their language fignifies thunder; and out of the fame imagination they called the Spaniards Viracochas, which is as much as to fay, fcum of the fea, or a people come by fea, giving to understand, that those men, if they were men, were fent from God to fubject them. This made them ready at first to show all respect to the Spaniards, and kept them from rebelling, and refifting fo vigoroufly as they did afterwards, though they always made fome opposition, particularly the Araucanos, who have ever been the eagles among the Indians. Valdivia having well oblerved this, was content at prefent with what he had conquered, and returning to Arauco Arauco by Puren and Tucapel, he caufed three ftrong houfes to be erected in the diftance of eight leagues from one another, and in fuch places as might have an eafy communication together. Having thus fettled matters, he returned to the Conception, and fo to St. Jago; from whence he difpatched Captain Hyeronimo de Alderate to Caftile, to give the King information of the riches that were difcovered in that country, and its other good qualities; as alfo a relation of the fettlements made there, in order to obtain a fupply of people, which was granted. The cities newly founded were in great danger of being loft; for indeed they were more than our forces could protect, and the Indians fhewed great impatience, and fretted to fee foreigners fettle cities in their country, and erect forts and ftrong places for their fecurity.

The governor being informed of this difpolition of the Indians, fet out from St. Jago with a fupply of men which he had received from Peru, under the conduct of Don Martin de Avendano, and relieved all the garrifons; which having done, and prefuming they were fafe, without reflecting on the danger that threatened him, he applied all his intention to give a beginning to the working of the gold mines for a defign he had.

This was to go to Spain, and carry with him all the gold he could get together, to fhew the King the vaft riches of the country, and to obtain from His Majefty those titles of honour which were generally beftowed upon the conquerors and difcoverers of those Indian kingdoms, and fo bring back a good force to fubdue them For this end he did two things; the first, to fend to the straights of Magellan, in the year 1552, Francisco de Ulloa, that with two ships, which were equipped on purpose, he might difcover all the ftraight, and give an account of it, fo that he might know how to undertake the voyage to Spain that way : the other thing he did, was to fet people to work to find out new gold mines, which they eafily did, there being fo many in these parts; among which, the most famous were the mines of Quilacoya, four leagues from the city of the Conception; and others in Angol, to work which he employed twenty thousand Indians. It is easy to imagine how much gold such numbers of men might get from those mines, which had never been touched till then; it was very great, and enough to enrich both governor and foldiers, which it did: and with the acquifition of fo much treafure, they began likewife to defpife their enemies; who, while they were bufy in fearching the bowels of the earth for gold, were employed in thinking how they fhould recover their loft liberty, and free themfelves from the yoke of fubjection, which they had never felt before.

The city of the Conception went on profpering, becaufe of the great quantity of gold brought into it every day; by which means the minds of the inhabitants were elevated in proportion, and the foldiers grew wanton and infolent. The governor being tainted with the fame difeafe of too much profperity, neglected to take notice of thefe diforders; for the defire of riches increafing by riches, which they faw every day fill their coffers, they were lefs attentive to that which ought most to have drawn their attention, which was their own and the King's prefervation, and fo made way for that blow of fortune that laid them all along.

The Araucanos were as uneafy, and continually plotting how to compass their defigns, and at last refolved to rife unanimously against the Spaniards, and take their revenge of them. To try how it would be taken they began to talk big, and carry themselves haughtily, more like masters of the land than like fervants; they quarrelled with one and the other, and losing all respect drove the thing fo far as to kill fome Spaniards in these contests: and then perceiving that these things were differabled, and that their boldness had its defired effect, they grew every day more infolent; and at

C C 2

laft

last being thoroughly fatisfied that the Spaniards were neither gods nor immortal, nor of any other species than they, but subject to all human infirmities, they began to fear them no longer, but refolved to fall upon them.

CHAP. XIV. — The City of Angol is peopled, and the Indians rife against the Spaniards.

UPON occafion of the mines that were begun to be wrought in the diffrict of Angol, the governor Pedro de Valdivia fettled a city of that name there, which was alfo called the city of the confines. Some attribute this foundation to the Marquis of Cannette, Don Garcia Urtado de Mendoça, who governed after the death of Pedro de Valdivia: perhaps the reafon of this is, that the fituation of this city at first was three leagues from the place where it now stands: fo it might be that Valdivia first fettled it, and the Marquis removed it to the place it is now in, and that was ground enough to make him the founder.

The prefent fituation is in a plain, very large and difengaged, eight leagues from the Cordillera, and twenty from the Conception; fome fay fixteen, which perhaps is caufed by the difference of its two fituations. Their longeft day and longeft night are of fourteen hours and a half. The land is very fertile; fruits ripen very well: there is good wine, and good flore of raifins dried in the fun, figs, and other dried fruits; a vaft quantity of tall cypreffes, which yield a very fweet-fcented wood, of which, Herrera fays, there is made a gum-lac. The great river Biobio runs by it, and ferves it for a wall and ditch on the fouth fide; and on the north fide another pleafant rivulet comes running from hills of a moderate height, and turns many mills for the ufe of the city. Thofe whom I have known that have been born in this city, have proved very gentle in their difpofitions, of good wits, and noble inclinations, very friendly and real, and extremely loyal to the King, as indeed all the Chilenians are, looking upon that as the higheft *punclo* of their gentility.

Now let us return to the Araucanos, who were bufy in calling together their affemblies there, to treat how to cast off the yoke of fervitude, and make themselves masters of that which was truly theirs. So it was, that the Caciques being poffeffed with an opinion that their forces were not inferior to the Spaniards, began to call them together; and they needed no incitements of pay or money; for the love of their liberty, and poffeffions, and pofterity, was a fufficient fpur to them, thinking every day a year that kept them from engaging with their enemies, and conquering them. The Caciques that met were these : first, Tucapel, a great butcher of Christians, with three thousand foldiers; Angol, who was very brave, with four thousand; Cayocupil, with three thousand men, whom he brought from the Cordillera, as hardy as the rocks they came from, and made to endure any labour; Millarapue, an old man, of great wifdom, he brought five thousand; Paicavi, with three thousand; Lemoleno, with fix thousand; Mareguano, Gualemo, and Leucopie, each with three thousand; the robust Elicuera, held for one of the ftrongeft men, with fix thoufand, and they antient; and chief of all, Colocolo, with as many more. Ongolmo offered four thoufand; and Puren fix thoufand ; Lincoyce, who was of the stature of a giant, offered to bring more than any; Peteguelen, lord of the valley of Arauco, from whence the whole took their name, came with fix thousand; and the famous Caupolican, and his two neighbours Thome and Audalican, and many others, kept themfelves ready to come in with their fubjects. They met, according to their cuftom, to eat and drink at their appointed renrendezvous, for that never is omitted in these affemblies; and having been unanimous in the first and chief point, which was to rife, there was some difference about the choice of a general, every one defiring to have that command, as it generally happens in fuch elections; every one alledging their particular merits; the one his valour, another his experience, another his good fortune, and none feemed to want a pretence for obtaining their defire. They grew warm in this ambitious contest, and would have come to blows, if the old and wise Colocolo, by his prudence and authority, had not quieted them, and reduced them to confent to choose Caupolican, not only as the bravest foldier, but the ablest chief. This done they all fwore obedience to him, and promifed to obey his orders, for the better carrying on of their common defign.

The Spaniards had, as we have already mentioned, three caffles for their fecurity, and one of them was near the poft where this affembly was kept; and the Indians, proud and impatient, had a mind to attack it immediately; but Caupolican, their general, forbid it, in order to do it with more dexterity and fafety. He commanded Palta, who performed the place of fergeant-general, to choose him out four-fcore foldiers, of the braveft, and fuch as were leaft known to the Spaniards, and the Indians their friends: thefe he put under the conduct of two very brave men, Cayaguano and Alcatipay, and ordered them to enter the caftle with their arms by this ftratagem. The Araucanos, though in peace, were not permitted to enter the caftle, except fuch as ferved the Spaniards; and these entered often with their loads of grafs, wood, and other neceffaries for the garrifon. Caupolican ordered thefe four-fcore men to feign themfelves to be fervants of the Spaniards, and having hid their arms in the grafs they carried, to answer nothing, but pretend they did not hear if they were asked any queftions: they acted their parts to the life, fome counterfeiting lamenefs, others wearinefs, fo that they were all let in without fufpicion; then they took their arms out of the grafs, and fell unanimoufly upon the Spaniards, who were much aftonished at fo unforefeen a boldnefs. However, they gave the alarm, and all coming out of their quarters, refifted them, fo as to kill fome of the Indians : the others either out of fear of the Spaniards, or on purpole to draw them out of the caftle in their purfuit, retired, on purpofe to gain time till their general Caupolican could come up with his army; which he did with a very numerous one, and forced the Spaniards to retire to their fort. He befieged them in it, and after having killed many of them, those who remained alive were glad to leave the poft, and get away, judging it better to retire to Puren, left they fhould lofe all; whereas being joined to the garrifon of Puren, they might better refift the enemy, though he was very powerful, and much elevated.

The news of this invafion foon reached the Conception, and the governor Pedro de Valdivia, who was then there, began prefently to confider how to remedy fo great a mifchief. Some blame him as tardy in doing of it; for to fecure the treafure of the mines, where (as Herrera fays) he had fifty thoufand vaffals at work to get gold for him. Before he went to fuccour those in Puren, he went out of his way, and ftayed the erecting of a fort at the mines, which took him fo much time, that he came later than was requisite to their relief. But, indeed, if any thing was ill done by him, it was the making too much hafte; for without ftaying for the relief and fuccours he might have received from the other cities, he fet out with a force not ftrong enough to encounter that of Caupolican : his courage deceived him; for being elevated with his fucceffes, and trufting to his fortune, he ran into the precipice, as we fhall fhew in the following chapter.

CHAP.

OVALLE'S HISTORICAL RELATION OF CHILE.

CHAP. XV. — The Governor Pedro de Valdivia, and all his People, are killed by the Indians.—The famous Action of Lautaro is related, that being the chief Caufe of this Event.

THE time of this great captain's death was now come; all things, therefore, feemed to concur to that end. The prefent remedy that was to be applied to this mifchief, to ftop its progress, and the delay of those fuccours he expected from the other garrifons, were all combining caufes : his heart mifgave him at his fetting out from Tucapel. He had fent out parties to bring him an account of the flate of the enemy, but none came bacl. : this gave him fome apprehenfion, but being engaged, it was neceffary to go on. He had fent out fcouts, as I faid, and had fcarcely gone two leagues on his way to them, but he faw the heads of two of them hanging upon a tree : this increafed his fear, and he confulted with those with him, whether it would not be rash to proceed. The young men wire of opinion, that it would be a leffening of their reputation to turn their backs to danger, though there came to them an Indian of their friends, and defired them not to proceed, becaufe Caupolican was at Tucapel with twenty thoufand Indians, and that the bazard they ran was manifest; but he followed on his way, and came within fight of the enemy: they foon engaged, and the battle was cruel on both fides, fo that for a great while no advantage could be perceived, becaufe the brave actions on both fides kept victory in fuspence.

After a good while of this contention, the Spaniards began to prevail, and to cry Viva E/panna, or Live Spain; with which, recovering new vigour, the Indians feemed to give way, when (as Arziila, in his Araucana, fays) the famous Lautaro, an Indian, who had been bred page to the governor Valdivia, having more regard to the love of his native country and his liberty, than for the education he received, and the fidelity he owed his mafter, went over to the Indians, and fpoke to them in this manner :---"What is this, brave Araucanos? Do you turn your backs when your liberty is concerned, your country, your liberty, your posterity? Either recover your liberty, or lofe your lives; for it is a less misfortune to die, than to live flaves. Do you intend to ftain the glory of your anceftors, acquired for fo many ages paft, in one hour? Remember you are descended from those who gained that renown by refisting their enemies, and not flying from them; and fuch as feared not to lofe both lives and fortunes to preferve their fame : drive away all fear, generous foldiers, and either live free, or die." With these words he to inflamed the minds of his friends, that, despising death, they returned with fury to invade those whom before they flew from. Lautaro, to encourage them the more, led them on, shaking his lance against the governor, his master; who, furprised at his action, cried, "Traitor, what dolt thou do?" To which he answered only with a thrust or two, animaling his people to do the fame. This renewed the fight, and they all refolved, by the example and exhortations of Lautaro, to conquer, or die; which they performed with fo much fury, that the concern of both fides was now at the higheft, and the contention only who should venture fartheft into danger. Many Spaniards and Indians fell on both fides, and Lautaro still encouraged his countrymen without any relenting. Valdivia did the fame by the Spaniards, and shewed himself every where, in the greatest danger, without the least apprehension, though he faw many of the braveft of his men fall by the fword. One would have thought the Indians had but just begun to engage, to fee how like lions they fell on, and begun to find victory incline to their fide, till at last there fell fo many Spaniards, that Valdivia was almost left

1

left alone. In this extremity, he went afide with his chaplain to confess his fins, that being the principal thing he had now to do. The Indians gave him but little time to make his peace with heaven; for a great troop of them fell upon him with darts and lances, killing the chaplain, and, taking him prifoner, they brought him alive to their general, for the last triumph of their victory.

This hitherto unconquered captain appeared in the prefence of the great Caupolican, his hands tied behind him as captive, his face all bloody, though venerable. He asked his life as a favour; he who a little before had it in his power to grant it He turned his eyes towards his Lautaro, and, with their language, his enemies. feemed to defire him to intercede for him who had been his lord and mafter, and by whofe means he was in this extremity. He promifed Caupolican, if he might have his life, to withdraw all his forces, and leave the country free from their incumbrance. He made oath of this feveral times, and perfuaded with fo much eloquence his hearers, that Caupolican, who was as generous as brave, began to relent, and incline to compassion. But the greatest part faid it was madness to trust to any words or promifes of a captive, who was forced to humble himfelf; but that when he fhould be free, he would do that which fhould be most for his advantage. However, the difpute between them increafed, and no doubt but Lautaro would have inclined to mercy; for if he fought against his master, it was not out of any hatred to his perfon, but out of the great kindness he had to his country, which, with the defire of liberty, prevailed over the gratitude he owed for the good usage he had received at his hands; but nothing of this was able to appeale the vulgar, though Caupolican was inclined to clemency; fo they forced him to pronounce his death, and to execute it immediately in hot blood, though they differed in the manner of it; for fome fay that they poured melted gold into his mouth, bidding him once for all content his thirst for that metal which he had fo infatiably coveted: others fay, that one of those Caciques, bearing impatiently that it fould bear a queftion whether he fould live or die, gave him a blow on the head with a club; which Caupolican refented highly, as a want of refpect to him. That which I find most probable is, that according to the custom of the Indians, they made flutes and trumpets of the bones of his legs and thighs, and kept his head as a teftimony of fo remarakble a victory, and to animate their youth to undertake the like actions, as they might fee by this their fathers had done. Thus I have heard it related.

Of all the Spanish army, it is faid there escaped only two Indian friends, who, taking advantage of the obscurity of the night, hid themselves in a thicket, from whence creeping out as well as they could, they came to the Conception, and brought the news of this fatal event. The city was immediately full of confusion and complaints, the women crying and bewailing the lofs of their hufbands and fons, others that of their fathers and relations, and altogether the common calamity of their city, in which they were all equally concerned.

CHAP. XVI. - What happened after the Death of the Governor Pedro Valdivia.

THE enemy having obtained fo remarkable a victory, their general Caupolican commanded the retreat to be founded, and called a council, to confider whether, or no, it would be best to follow their blow warmly. Many were of opinion it would be most expedient to fall upon the cities immediately, before they could prepare for them; yet Caupolican, after having heard them all, refolved to do otherwife. It is better, faid where

he, to expect our enemies in our own homes, than to go to feek them at theirs, where all men fight with more valour; let them come to feek us in our mountains and bogs, where we are fure of a fafe retreat: let us give our enemies a free accefs to us, who have our fituation to befriend us; and, in the meantime, our horfes and foldiers may refrefh themfelves: and if they out of fear (which I believe they will not) do forbear to feek us out, we may attack them when we will. Having fpoke thus, he took Lautaro by the hand, and having publicly commended him, by attributing to him the victory and the liberty of his country, he, by confent of all, made him his lieutenant-general, and gave him leave to chufe out the men he would have to ferve under him, to go and pitch upon a fit poft to expect the Spaniards in. Lautaro was no very tall man, but well fet, and ftrong, induftrious, cautious, of good counfel, gentle, and well-proportioned, very brave, as we have feen, and fhall fee hereafter.

To celebrate this victory, the Indians folemnized public games of wreftling, running, leaping, and other proofs of their ftrength and dexterity : they made alfo great feafting with dancings, and for feveral days did nothing but rejoice and be merry ; but ftill without forgetting to be upon their guard, as men that expected their enemies whom they prefumed defirous of revenge.

Francifco de Villagran was lieutenant-general to Valdivia when he was killed; who remaining chief in command, affembled all he could to go and take vengeance of the enemy for this defeat. Setting out, he came as far as Arauco; and being come to a high mountain in the way, he found Lautaro on the top of it, with ten thoufand men, without having fent out any to diffurb the Spaniards' march; for he had left all the paffes eafy, to oblige them to come to that place: it was not far from the fea, which was eafy; all the reft was precipice; but the top was a plain fit to draw up in, and very proper for his defign.

The Spanish general being in prefence, the armies began to draw up on both fides; and, not to make the Indians too prefumptuous, he ordered three troops of holfe to begin the charge, in hopes to draw the Indians from their post, but in vain; for though they made three attacks, yet Lautaro would not flir, but received them with fhowers of arrows, ftones, and darts, which made them retire fafter than they came on. Our people, who could not break this battalion, with the evident danger of falling into precipices, did what they could, but with little effect, only tiring their horfes; for the enemy kept his post, not a man of them stirring out of his rank; only Lautaro would permit some of the bravest to go out, and defy the Spaniards body to body. There came forth, among the reft, a brave youth, called Curioman, who taking a long career, would throw his lance with that dexterity, that he wounded many of the Spaniards: he did this feven times, and, at the eighth, Villagran, being vexed at his importunate boldnefs, commanded a famous foldier, called Diego Lano, to chaftife the Indian's infolence, which he did; and it was all his high courage and ftrength could perform. The Spaniards feeing themfelves tired, and that all the movement of their horfe fignified little, and that the Indians were taking the paffes behind them, began to use their fmall fhet, which at first made a great flaughter among the Indians. Lautaro, to remedy this inconvenience, commanded Leucaton, one of his captains, to attack the Spaniards on the flank, and not to ftop till he came up clofe with their mulqueteers, that by this means mingling with them, they might avoid their fmall fhot, which, in that cafe, could not be of any ife to the Spaniards, without wounding their own men too. This he observed, and they ever fince have practifed the fame with good fuccess; and without this boldnefs, in which they always lofe fome men, they would be much inferior to the II

Spaniards, they having no fire-arms to use in the like manner: they shew in this their invincible courage, and undisturbed bravery, by which they make to themselves a defence of their own enemies; for being once mingled with them, they cannot offend them, without destroying, at the fame time, their own people.

The fight on both fides was bravely maintained, Lautaro relieving and encouraging his men, as Villagran did his, both of them doing the parts both of general and foldier, and exposing themselves to the greatest danger. He that fignalized his valour most on our fide, was the famous Captain Pedro Olmos de Aquillera, killing with his own hand four of the chiefs of the Indians. Our army was encouraged with his valour, which he inherited from that noble family fo fpread in Andalufia: he was feconded by the Bernales Pantoias, Alvarados, and many others, who performed wonders in this battle, which was long contefted, very bloody, and in fufpenfe to the laft. The enemy was much fuperior in ftrength to our forces, and, therefore, the victory began to incline to their fide; for though Villagran the general, and fome others, would rather have chofe to die there with honour, than turn their backs, yet the greatest part judging that there was no honour loft in a vigorous retreat, and that it would be rafhnefs to perfift in fo desperate a cafe, they began to retire, fighting and defending themselves; but the enemy, elevated with this fuccels, followed clofe, and having knocked Villagran off his horfe, they had made an end of him, if he had not valiantly defended himfelf till thirteen of his men came to his relief.

Thefe famous commanders did not obtain lefs glory in this retreat, than if they had gained a victory; for the enemy following them for fix leagues together, being a hundred to one, and having feized upon most of the passes, and the numbers still increasing, yet the Spaniards made a noble defence, and killed many of them. Those who efcaped from this engagement, came with the fad news of the ill fuccefs to the city of the Conception, which fet all the inhabitants in an uproar, mingled with lamentations and crics, every one being in fome measure concerned in the calamity; for between Spaniards and friendly Indians, there died in this engagement two thoufand five hundred. One would have thought the day of judgment had been come, to fee the confufion that was in the city upon this news; one laments the death of his father, another of her hufband; fome cry for their fons, fome for their brothers; the women wring their hands, pull off their hair, fill the air with lamentable cries : the children cling to their parents, asking for their lost fathers, which is more grievous to them than daggers. In the midft of thefe horrors, night came on, in which no one could fhut their eyes, for the memory of their misfortunes keeps the foul attentive, without any confolation.

CHAP. XVII. — Lautaro facks the City of the Conception; and Caupolican befieges the City of the Imperial, which is defended by the Queen of Heaven.

MISFORTUNES feldom come alone; and fo it happened to this afflicted city, which, inftead of receiving comfort from the approaching day, no fooner did it appear, when the noife of drums and trumpets gave a warm alarm of the enemies being at hand. Here the confusion increased; for now the concern was not for the loss of others, but for every one's own fafety, the danger was threatening them fo immediately : there was nothing but diforder, no counfel nor refolution being to be found in the wifeft : they could not defend themfelves, because they were fo overpowered in numbers by the enemy; and the retreat, though necessary, was difficult, because of the approach of vol. XIV. **D D** the Indians. In this hard conflict, at laft the refolution that prevailed was to abandon the city, without pretending to fave any thing but their lives. They leave the city then, and all the gold they had got together in fuch quantities. They go out in long files, the mothers helping their little children along : the way that they undertook, was to the city of St. Jago, a long one, in which many rivers were to be croffed, and hard paffes to be gone through : this labour was accompanied with the perpetual fright of the enemies' purfuing them. Who can relate the hardfhips of hunger and other lufferings, through to long a tract of mountains, defarts, and uninhabited countries? How the women, the children, the old men, could bear this fatigue, we must leave to imagination to represent the true idea of these misfortunes! Let us therefore return to the Indians. The Spaniards had hardly made an end of abandoning the city, when the Indians entered into it; and not being able to execute their rage upon the inhabitants, they did it upon the houfes, to which they fet fire, and confumed them to the very foundation, killing even the very animals which the Spaniards left behind them. Thus was loft the city most abounding in gold, and situated in the most populous part of the Indian country; for it is faid there were not lefs than a hundred thousand Indians, with their families, who were all employed in gathering gold for the Spaniards, whom they enriched to that degree, that Pedro de Valdivia, if he had lived, would have had fifty thousand crowns of gold a-year, and others twenty and thirty thousand.

This burning of the city being over, news was brought, that Caupolican had called a great affembly in Arauco, which made Lautaro return with his people to be at it. When the two generals of the Araucanos met, they greeted one another for the victories obtained over the Spaniards; and, in fign of triumph, one hundred and thirty Caciques, all dreffed themfelves in the Spanish drefs, with the cloths they took from the Spaniards killed in the battle. The general had Valdivia's cloths, which were, as it is reported, of green velvet, laced with gold lace, a back and breaft of well-tempered fteel, and a helmet with a great emerald for creft. All having feated themfelves in order by the general's command, he proposed to them the defign of conquering back all that was gained from them by the Spaniards, who now were fo dejected with their lofs. They all agreed to his defire, every one delivering his opinion with great pride and arrogance. It is faid, that the old and prudent Colocolo, hearing them deliver their opinions with fo much infolence and prefumption, that it looked as if all the world was too weak to refift their valour, humbled them a little, by putting them in mind, that if they had obtained two victories, the Spaniards had gained many more over them, and had made them ferve as flaves; therefore, that they ought to behave themfelves with moderation and temper, that they might expect fuccels from their arms; and added, that it was his opinion, that they fhould divide their forces into three parts, and, at the fame time, affault the city of the Imperial.

Puchecalco, a famous conjuring Cacique, following the fame thought of humbling the intolerable haughtiness of the affembly, told them, that they might give over their prefumption, for he was to acquaint them, that, having confulted his oracles, they had answered him, "that though at prefent they were fo victorious, yet at last they were to live under the Spanish yoke in perpetual flavery." The Cacique Tucapel could not bear to hear this; and rising from his place, with his mace of arms gave him such a blow as took away his life. The general was highly offended at this infolence, and, being refolved to chastife the author of it, the whole associated at the defended himself fo well with his mace of arms, that it was not easy to feize him: but Lautaro, who had great power with the general, made up the whole bufinefs; and the refult of the council being to befiege the city of the Imperial, they immediately put it in execution.

Their army took its post three leagues from the Imperial; which city, though it had a good garrifon of brave men, was not nevertheless prepared nor provided for a fiege with ammunition and victuals, becaufe the enemies would have taken it, if any had been fent to it; but the Queen of Heaven delivered them from this great danger. The enemies drawing near the city, there arofe on a fudden a mighty ftorm of hail and rain, with black clouds; and their Epunamon appeared to them in the form of a terrible dragon, cafting out fire at his mouth, and his tail curled up, bidding them make hafte, for the city was theirs, being unprovided : and that they fhould enter it, and put to the fword all the chriftians, and fo difappeared : but as they were purfuing their defign, animated by this oracle, on a fudden the heavens cleared up, and a very beautiful woman appeared upon a bright cloud, and fhewing them a charming, but majeftic and fevere countenance, took from them the pride and haughtinefs infpired into them by their first vision, commanding them to return to their own homes, for God was refolved to favour the chriftians; and they obeyed immediately. To which the author who reports this flory adds, that the whole camp faw the apparition, which was on the 23d of April, and that all agree in this.

CHAP. XIX. — The City of the Conception is rebuilt; and Lautaro having taken it a fecond Time, marches to take the City of St. Jago, where he dies.

THE Spaniards being in fafety, began to think of returning to the Conception, and rebuilding of it. To this end they raifed men at St. Jago, and with great difficulty compafied their intention, making a good fortrefs within the city for their better fecurity. The Indians of the neighbourhood, though they were in their hearts as averfe as any others to be commanded by ftrangers, and to let them build cities in their territories, diffembled neverthelefs at prefent, but in due time gave advice to Arauco, defiring help to drive out these new comers, or make an end of them at once. Lautaro came to them prefently with a good army; and fome companies of Spaniards, which went out to encounter him, were forced to retire to the fort they had made, in which they defended themfelves as long as they were able to withftand the force of Lautaro; but at laft being overpowered, they were forced to retire a fecond time to the city of St. Jago. Many Spaniards were loft, and Lautaro followed the purfuit, in which many brave actions were performed on both fides : among the reft, a famous Indian captain, called Rengo, following three Spanish captains who were retiring, called them cowards, and faid a hundred infolent things to them, which moved one of them to attack him at the paffage of a river; but he fecured himfelf by choofing a ftrong poft; fo the Spaniards went on to St. Jago, and Lautaro retreated to Arauco, where great rejoicings were made for this new victory.

The Indians renewed their meetings; and being much elevated with their fuccefs, they came to a refolution of not troubling themfelves with the leffer cities, which they reckoned as their own; but to attack the capital of St. Jago. Lautaro offered to undertake this enterprize; and chufing the most warlike among them, he marched with a powerful army. He passed the rivers Biobio, Itata, Maule, and Mataquito; near this last he raifed a fort to fecure his retreat, if need were, he being engaged far from his own territories.

DD2

When the news of this refolution came to St. Jago, many looked upon it as a fable, not being capable of imagining that the Indians had boldnefs enough to march fo far to attack them; but thofe who were come back from the city of the Conception undeceived them, as knowing by experience Lautaro's courage; they therefore fortified the place, and provided it: they alfo fent out parties to engage the enemies, if the occasion offered: but Lautaro forced them to return in hafte to carry the news, and yet fome remained behind too.

Francifco de Villagran, the lieutenant-general, was fick at this time; and fo fent his coufin Pedro de Villagran, with all the force he could make, to meet Lautaro; they lodged within half an hour from the fort which the Indians had raifed upon the Rio Claro; the next day they entered the fort without any refiftance; for Lautaro had cunningly ordered his men to feem to fly, that he might catch the Spaniards in the fort; and fo, when he faw his time, he gave the fignal, and his men fell on the Spaniards like lions, who had enough to do to make their retreat, and efcape from their hands. The Indians followed them for a league, doing them much mifchief, though they defended themfelves with great valour. Lautaro feigned a fecond time to fly; and our people being reinforced, engaged him a-fresh. They attacked his fort, and gave three affaults to it; where they were received with fhowers of arrows, darts, and ftones, and at laft forced to retire to a valley; whence they defigned to return, and try their fortune again: but Lautaro faved them the trouble; for refolving to make an end of them all at once, and in order to it feigning that he wanted provisions, he fent to our camp to demand fome. His project was to let in a river upon the Spaniard's camp, which he could do conveniently, becaufe it was already in dams and canals; and fo having made a marfh of the ground where they lodged, fo as they fhould not be able to ftir, feize all the pafies behind them. But Villagran having difcovered this ftratagem, raifed his camp, and retired to St. Jago, to the great difappointment of the enemy.

Yet this did not make Lautaro give over his defign; for confidering that he could not attack St. Jago, which was well provided with men and ammunition, except he had a greater ftrength, he raifed a fort in a valley to cover himfelf, while his fuccours fhould arrive, and enable him to attack St. Jago. Those of the city were making, with great care, preparations for their defence; and had fent for fuccours to all the other cities. Their general Villagran had fent out upon this defign; and making as if he was going to Arauco, had on a fudden marched to the Imperial, from whence he brought many good men away with him; and while Lautaro was raifing his fort, Villagran, guided by an Indian, came fwiftly and filently upon Lautaro, and attacked his fort. In the first affault that was given, Lautaro himself fell, wounded by an arrow which struck him to the heart; thus ended that valiant captain of the Araucanos. His foldiers were not at all difcouraged with this misfortune of their general; but rather enraged with fuch a lofs, and a defire to revenge his death, they fell like lions upon the Spaniards, taking no quarter at their hands. There were on both fides great actions performed; but the refolution of the Indians was the nobleft in the world, preferring their glory to their lives, which they husbanded fo little, that though they were broke, and but few left in a fighting condition, yet they ran upon the Spaniards' lances, and with their hands pulled them into their bodies, to come clofe to their enemy, and revenge their death with his, or at least die in the attempt.

CHAP. XXII. - Don Garcia Hurtado de Mendoça comes to the Government of Chile ; what happened at his Arrival, and in the Engagement he had with the Araucanos.

AFTER the death of Pedro de Valdivia, there was application made from Chile to the viceroy of Peru, who is to provide a governor till the king can fend one, that is, both prefident and governor independent of Peru. The viceroy at this time was Don Antonio Hurtado de Mendoca, marquis of Canete, who governed with great zeal and a prudent feverity, making exemplary punifhments where they were neceffary, by which he fecured the country. He had then with him his fon Don Garcia Hurtado de Mendoça, who afterwards fucceeded him in his viceroyship, with as much applause and efteem of the world. The embaffadors from Chile defired him of his excellency the father for their governor, which he granted. King Philip the fecond had appointed the Adelantado Hyeronimo de Alderete, to fucceed the governor Pedro de Valdivia, whofe death was known at court; but the news came likewife that Alderete was dead at the ifland of Taboga near Panama. The viceroy's fon having raifed a good body of horfe, fent fome of them by land with the horfes, and he embarked with the reft; and after a hard ftorm, in which they had like to have been all loft, he arrived in the bay of the city of the Conception, and landed upon the island of Quiriquina, to inform himfelf from thence of the flate of the country. The people of the ifland, who were fierce and warlike, took arms when they faw the fhips draw near the harbour, and pretended to hinder the Spaniards from landing; but having no fire-arms, as foon as the cannons of the fhip began to fire, they gave way. As foon as the governor landed he published the defign of his coming, that the Indians might know it : which was, to fave their fouls by the predication of the gofpel, and reconcile them to God by the means of baptifm; and to confer that facrament, he had with him religious men of the famous orders of St. Francis and Mercede : that if they would fubmit to that, he would treat with them in the name of the emperor Charles V. This declaration reached the ears of the Araucanos: and there affembled at Arauco fixteen caciques, and many other captains, to treat about what was beft for them to do in this cafe; and though many youthful and arrogant fpeeches were made, according to their ufual haughtinefs, which made them defpife all good counfel and peace, yet the old and prudent Colocolo reftrained their pride with prudent reafons, and perfuaded them to treat with the Spaniards, fince they were by them invited to do it. "It cannot hurt us," faid he, " to hear them ; we shall have our forces as strong still to maintain our right, if they demand unjust things." This opinion was followed by the most prudent among them; and they fent for their ambaffador the Cacique Milalan, a man of great rhetoric and eloquence among them, giving him order to treat with the Spaniards, and obferve well their ftrength; and that he fhould fhow inclinations to peace, to draw them to land on the continent, and forfake the ifland, hoping that the defire of gold would tempt them to go further into the country. Milalan came to the governor's tent: and making a fmall but civil bow, faluted him, and the other Spaniards that were with him; then with a chearful countenance he delivered his meffuage. He faid, "that his countrymen admitted the terms of peace that were proposed, and should observe those of friendship; not out of any terror or apprehension caused in them by the arrival of thefe new forces: for no power was great enough to terrify them, having fufficiently experienced their ftrength in the fuccefs they had hitherto had: but that which moved them was the compatition they had for fo many innocent people, fo many women and chilchildren, who, upon occafion of this war, remained widows and orphans: that upon fair terms they would own the King of Spain, upon condition that he did not concern himfelf any ways with their liberty or rights; that if they had any thought of acting by violence, and making them flaves, they would fooner eat their own children, and kill themfelves, than fuffer it. "

The governor answered him with all affurance of as good treatment as they expected; and having made him fome prefents, difpatched him back to give an account of his embaffy: but this was not fufficient fecurity for either fide; fo they remained upon their guard. The Indians observing the caution of the Spaniards, to give them more fecurity, feigned to difinifs their forces, but fecretly gave them orders to ftand upon their guard, and not lay down their arms, but be ready upon any occasion that might happen; yet the Spaniards for all this did not think fit to land upon the continent. but ftayed two months upon the ifland where they first landed, till the winter was entirely over. About the fpring, they fet on fhore about one hundred and thirty men of the bravest among them, to raife a fort, as they did, upon the top of an hill which overlooks the city of Penco (otherwife called the city of the Conception). Under the protection of this fortrefs, the reft of the Spaniards went out of the ifland, hoping that in a little time, their horfes, which were coming by land, would arrive, having fome news of them; in the mean time they cut wood and fafcines to fortify their camp, the governor and the commanders flewing an example to the reft in the labour of intrenching themfelves, and cutting of wood, as if they had never done any thing elfe all their life-time. They brought it to perfection in a little time, and planted upon it eight field-pieces, with all other neceffary provisions for their defence.

The Araucanos, who were watching their motions, no fooner faw them bufy in their fort, but, without expecting any further proof of their intentions, which they took to be for war, called immediately an affembly, and with all their firength came like lions, with a refolution to demolifh the new fort. They took up their poil at Talcaguano, about two miles from the Spaniards' fort, and about break of day they gave an alarm, and having first challenged out many Spaniards to fingle combat, they at last fell on in a body, with no more fear of the cannon-bullets than if they had been of cotton or wool, knowing, that though they received at first fome damage, it could last no longer than till the battalions were engaged. With this refolution they fell on like lions, and fome of them got over the fortifications; amongst whom was Tucapel, who did wonderful actions. Neither were the Spaniards unprepared for them, doing extraordinary things, which it were too long to defcribe in particular, though the actions were fuch as very well deferve it.

The Spaniards who were in the ifland and aboard the fhips, hearing of the danger of their companions, came to their affiftance, and by the help of God, who aided them, joined their friends: and then thus united they began to prevail over the Araucanos, who, finding themfelves inferior, and having loft many of their braveft men, began to retreat, all but Tucapel, who having ftayed laft, and being forely wounded, yet made his efcape from the Spaniards, whom he left full of admiration of his valour and refolution.

About this time the horfes which came from St. Jago arrived, and with them a troop of good horfemen from the Imperial. The enemies muftered all their forces, and the Spaniards went to feek them in the valley of Arauco, where they had another very bloody engagement: the Araucanos fled, or rather retired; and the Spaniards having taken one prifoner called Cualbarino, they, in order to terrify the reft, cut off both his hands; but the Araucanos were fo far from being terrified by it, that this enraged

enraged them the more; for Gualbarino himfelf being returned to his countrymen. went up and down, begging them to revenge the injury done to him, which they all looked upon as their own. Caupolican their general fent to challenge the governor Don Garcia with all his strength, telling him, that he would stay for him in his camp, which he moved near the Spanish camp, which was at Millarapue. He came over night; and the next day prefented them battle; which was as well difputed as the reft, both fides fighting with extreme valour. The Indians preffed the Spaniards fo hard, that victory had declared for them, had not a Spanish battalion, in which alone remained all the Spaniards' hopes, charged fo defperately among the Indians, that they were forced to retire, and leave the field to the Spaniards; but their retreat was with great honour and reputation. It is related, that in this engagement fome of the neighbouring Indians were made prifoners: and that though they were put to a moft exquifite torture, to force them to reveal fomething that the Spaniards wanted to know, yet they remained conftant and true to their country, as if they had been infenfible of pain. The Spaniards had here a confiderable advantage; for, befides many dead enemies whom they left upon the fpot, they took twelve prifoners of the chief among the Indians, whom they hanged upon fo many trees for an example to the reft; and among them that fame Gualbarino; who not only fhewed in dying an intrepid mind, but encouraged the others: and among the reft a Cacique, who began to fear and beg his life; to whom Gualbarino fpoke before all with fo much haughtinefs, taxing his bafe cowardice as if he had been the conqueror, and not the conquered, which ftruck the Spaniards with fuch admiration, that they were befide themfelves.

From this place our camp marched to the valley where Valdivia was loft. Here the Spaniards raifed a good fort; from whence they made their excursions upon the enemy, endeavouring to advance their conquests, but not without danger of being often cut off; particularly the hazard they ran at a narrow pais, caufed by the mountains on the way to Puren, where they were attacked by the Indians, and very hard fet by them, whom they might have deftroyed if they had not fallen to plunder the baggage; for a company of Spaniards obferving this mifcarriage, feized on a fpot on the top of a hill, from whence with their fmall fhot they fo galled the Indians below, that they fled in confusion to avoid fuch a tempest, leaving the Spaniards masters of the field, but much weakened : having been forely handled in this rencounter, they retired to their camp, where they were received with great demonstration of joy. After this, leaving a good garrifon in the fort, well provided for two months, the governor went to vifit the other cities, to ftrengthen them, and provide them with neceffaries against all attacks, which they had reason to fear; for Caupolican, enraged that in three months he had loft three victories, had called a general affembly; where it was refolved never to give over, but either die or conquer, that they might drive out the Spaniards, and reftore their country to its liberty.

CHAP. XXIII. — More Events of War. — The Death and Conversion of Caupolican.

CAUPOLICAN followed his defigns, but fortune feemed to be weary of affifting him; for in most rencounters he came off either worsted, or entirely defeated, and the victory fnatched out of his hands when he thought himself fure of it: this made his people begin to grow weary of his command; and the vulgar began to cenfure his conduct as too remis, and that the defire of preferving his power, and being general, made him neglect opportunities of putting an end to the war.

Caupolican being informed of these fuspicions of his own people, called a new affembly, in which he proposed methods of carrying on the war, fo as they might obtain an entire liberty. This was unanimoufly agreed to, with a firm refolution of not giving it over till they either conquered or died. This refolution coming to the knowledge of the governor Don Garcia Hurtado de Mendoça, who was gone, as we have feen to the city of the Imperial, to fortify it, he difpatched to the fort advice of what paffed, and fent them a competent relief.

Amongst other defigns pitched upon by Caupolican, the first was to furprize the Spaniards in their fortrefs by a ftratagem before they were aware of him, and fo master the place. The other captains of repute, Rengo, Orompello, and Tucapel. who were used to lead always the van-guard, did not approve of his project; and fo let him go by himfelf with his own forces, they fcorning, as they faid, to obtain a victory by fraud or furprize. Caupolican fet out then by Limfelf; and being come within three leagues of the Spanish fortrefs, he fent out his fpies to observe their dispofition, and how they might be most easily circumvented. He chose for this purpose one of his beft captains, whofe name was Pran, a cunning fagacious man, and prudent, with a great deal of ready wit. This captain difguifed himfelf; and putting on the habit of an ordinary Indian, he went alone, and without arms, as a private perfon, to the fortrefs of the Spaniards. He entered the fort without fufpicion, or being known. by the other friendly Indians, with whom he foon grew acquainted; and walking up and down, he observed our camp and forces, and took particular notice of the time of day that our men ufed to be leaft upon their guard, which was generally at noon, when they went to fleep, to repair their ftrength, which was wafted by their nightwatches.

There was in the Spanish fort a young Indian, (not like Lautaro, in whom the love of his country prevailed over his duty to his mafter,) but of another temper; his name was Andres, fervant to a Spanish gentleman, and very much inclined to all the Spanish nation. Pran had made a great friendship with this young man; and one day, as they were going together in the fields to feek out fome provision, as they used to do, talking from one thing to another, Pran difcovered himfelf entircly to his friend Andres; perfuading him to help on the defign he came about, fince upon its fuccefs the liberty of the whole nation depended. Andres, who was not lefs fagacious and prudent than Pran, promifed him all he could defire : but diffembled all the while. This being fettled, they agreed, that each of them should return home to his camp, and that the next day Andres should come to a certain post they agreed on, and there Pran fhould meet him, and carry him to Caupolican's quarters, where he might fettle all matters with him. Pran went back to the Indians' camp, overjoyed that he had fucceeded fo well, as he thought : he gave a particular account of all the bufinefs to Caupolican, while Andres did the fame to Captain Reynofo, who commanded in the Spanish fort. If God Almighty had not by this way delivered the Spaniards out of this imminent danger, they must have perished ; for naturally Andres ought to have been of the fide of his own countrymen.

According to what had been agreed between them, Andres came the next day to the affignation, where he met with his friend Pran; and they went together to Caupolican, who received them with all demonstrations of joy and confidence, shewing him his camp and all his army ; the refult was, that he fhould affault the Spaniards the next day about noon. Andres went back to the Spaniards, to inform them of all that paffed, and by that Captain Reynofo knew how to difpofe every thing to receive the attack. Caupolican came at the time appointed with all his Indians, the greatest part of which were

were fuffered to enter, the Spaniards making as if they were alleep; but on a fudden, upon a fign given, they role up like lions, and making a furious difcharge on thole entered, the horfe fallied to engage thole who had remained without, of whom they made a great flaughter. The furprize of the Indians was fo great, that few of them could make their efcape; but Caupolican, with ten more, faved himfelf by bye-paths, though he was hotly purfued; the Indians that were overtaken, ftill denying they knew any thing of him, and neither threats nor gifts could oblige them to reveal what they might know before.

But it being very hard there fhould not be one traitor among many loyal men, the Spaniards light at laft upon one of his foldiers, who was difcontented that he had not been advanced according to his pretenfions, who betrayed to them where he was: this man guided them by a fecret path to a place where they could not be difcovered, and from thence fhewed them a very thick wood, about nine miles from Ongolmo, where in a thicket by a river fide, over a precipice, this brave man had hid himfelf till he could get a new army, and rally his men.

The Spaniards came upon him on a fudden, and furprifed him with the few that were with him; and though he did all that was in his power to defend himfelf, yet they maftered him. His wife feeing him a prifoner, and his hands tied behind him, called him coward, and ufed all the opprobrious language to him that was poffible.

Caupolican was defervedly among the Indians the most valued of their generals; and accordingly, in an affembly of fixteen Caciques, all fovereign lords, who met to raife an army against the Spaniards, he had the chief command given him. This was the man who, with fourfcore bold fellows, furprifed the caftle of Arauco, and overcame the Spaniards in a bloody encounter without the city walls: this was he who durft expect the general Valdivia in open field, and routed him and his whole army, fo as there was not one Spaniard left alive : this was he who deftroyed Puren, and facked Penco, not leaving one ftone upon another in it, the Spaniards having been all frighted away by the terror of his name: this, in fine, was the man who managed all the war with fuch fuccefs, by his military fkill and valour, that his authority was every where refpected. This great man was now, by the means of a traitor, delivered up to his most cruel enemies. In this calamity he fhewed no bafenefs; for though he begged his life, it was in a grave way, promifing, in return, to caufe all the country to fubnit to the King of Spain, and to give way to introduce the Christian religion. " Confider," faid he to Captain Reynofo, "that what I promife, I am able to perform, by the great veneration that all my people have for me; and if thou doft not accept of this proffer, thou wilt do nothing; fince for one head taken away, there will rife up a hundred Caupolicans to revenge my death, that the true one will not be miffed. I defire not to be fet at liberty, but to remain thy prifoner till I perform my promife."

All thefe reafons were of no ufe to Caupolican, for he was publicly fentenced to be empaled alive, and fhot to death with arrows, for a terror to the reft of the Indians; though, as time has fince fnewed, this had no other effect, than to light the fire of war more and more, and make the wound almost incurable. He heard this hard fentence without any alteration in his countenance; but he defired with great concern to be baptized. The priefts are fent for, and, after a fhort inftruction, he receives the holy ablution, and the character of a Christian. After this, the fentence was executed upon him, which he endured with great constancy.

VOL. XIV.

The

The Conclusion.

THOUGH Father Ovalle has continued, in the remainder of his treatife, to give an account of the various events of the war with the Araucanos, in which narrative he runs through the commands and actions of all the governors of Chile, to the peace made with that nation; yet it being by him more a piece of courtfhip to his nation, and to those families, than an information inftructive to a foreign reader, it has been thought proper to take the death of that great general Caupolican for the first natural period of that war. In the course of the remaining narrative, there are fo many superstitious notions inculcated, fo many improbable miracles given for the foundation of great enterprizes, and fuch a monkish spirit runs through the work, that here, in England, it would rather prejudice than recommend the impression, and is therefore omitted.

ABRIDGED NARRATIVE OF TRAVELS

THROUGH THE

INTERIOR OF SOUTH AMERICA,

From the Shores of the PACIFIC OCEAN to the Coafts of BRAZIL and GUYANA, defeending the RIVER OF AMAZONS;

As read by MR. DE LA CONDAMINE, Member of the Academy of Sciences at Paris, at a Sitting of that Academy on the 28th April 1745.

A^T the close of March 1743, after a refidence of fix months in a defert, at Tarqui, near Cuenca, in Peru, during which I had inceffantly, night and day, to contend with an atmosphere unfavourable to astronomy, I learnt from Mr. Bouguer, then near Quito, at the northern extremity of our meridian, that he had there made a feries of obfervations of a ftar, intermediate between our two zeniths, of which obfervations many were effected on the fame night : this ftar had been obferved by me at the fouthern extremity of the line. By these fimultaneous observations, on the importance of which I had laid much ftrefs, we attained the fingular advantage of being enabled to afcertain precifely, and beyond difpute, the real amplitude of an arc of the meridian of three degrees, the meafurement of which was known to us geometrically, and this without having any thing to apprehend from variations, whether of an optical or a real nature arifing from the motion of the ftar, on account of its polition having been fixed at the fame inftant of time by the two observers at the opposite extremities of the arc. Mr. Bouguer, arriving in Europe fome months before me, communicated the refult at the last public meeting of the fociety, a refult corresponding with that of the operations at the polar circle *; as this, with that of the last effected in France +, all conspiring to prove that the earth is a fpheroid flattened towards the poles. Taking our departure in the month of April 1735, twelve months earlier than the academicians difpatched to the north, we reached Europe, on our return, by feven years too late, to communicate any thing new respecting the figure of the earth. This subject, fince then, has been treated by fo many able hands, that I truft for excufe in referring to the memoirs of the academy the detail of my individual obfervations on the matter, renouncing the privilege, but too hardly earned, of addreffing this affembly on that head.

Neither shall I enlarge here on other academical labours, either individually undertaken, or in common, during our voyage from Europe to America, at the different places of our fojourn after arriving in the province of Quito, and during the frequent intervals occasioned by obstacles of every kind, which but too often delayed the progress of our operations. To dilate on these, irrelative as they were to the measurement of the earth, would require extracts from a number of memoirs, which in the space of

^{*} Effected by Meffrs. Maupertuis, Clairaut, Camus, and Monnier, of the Royal Parifian Academy, in conjunction with the Abbe Outhier, a correspondent of that academy, and M. Celfius, aftronomical profeffor at Upfal.

⁺ By Meffrs. Caffini de Thury and L'Abbe de la Caille.

feven or eight years have been forwarded to the academy, but of which fome have not arrived in France, while many others have not hitherto appeared, nor even extracts of them, in our collections. I thall refrain therefore from fpeaking now, of our aftronomical or geometrical conclutions on the latitude and longitude of a great many places; of our obfervation of the two folftices in December 1736, and in June 1737; of the obliquity of the ecleptic which they determine; of our experiments on the thermometer and barometer; on the declination and dipping of the needle, on the fwiftnefs of found, on Newtonian attraction, on the length of the pendulum in the province of Quito, at different heights from the level of the fea, and on the expanfion and condention of metals; I stall carefully abstain from notice of the two journeys made by me, the one in 1736, from the coaft of the South-Sea to Quito, ascending the river of Emeralds; the other in 1737, from Quito to Lima.

Finally, I fhall not advert here to the hiftory of the two pyramids which I caufed to be erected for the purpofe of determining in perpetuity the two extremities of the fundamental bafe of all our meafures, and of thus remedying those inconveniences which were but too lamentably experienced in France, from want of a fimilar precaution, when the bafe of M. Picard was to be verified. The infcription proposed to the Academy of Belles Lettres, before our departure and afterwards, with those alterations which circumstances of time and place required, placed on the pyramid, was denounced by the two lieutenants of the navy of the King of Spain, our coadjutors, as offensive to His Catholic Majesty, and the Spanish nation. I defended, for two years, a lawfuit instituted against myself perfonally on this fcore, and at last gained it, though opposed by the parliament of Quito. What passed on this occasion, and divers other interesting events on our travels, which distance has much difigured, are better calculated to form an historical narrative than an academical memoir; in this I now prefent I shall confine myself to what relates to my return to Europe.

In order to multiply our opportunities of making obfervations, M. Godin, M. Bouguer, and myfelf, planned different routes for our return. For my part I refolved on felecting one, almost unknown, and fuch as I felt perfuaded no one would envy me, that of the river of Amazons, a river which croffes the whole continent of South-America, from west to east, and which justly passes for the largest in the world. I proposed to render a voyage on this river of utility, by forming a chart of its course, and by remarks on fuch objects as a country fo little known might afford. Such as relate to the manners and fingular customs of the nations which inhabit its banks, would doubtles be most gratifying to the majority of readers; but, in prefence of an affembly with whom physics and geometry are familiar, I deem it inadmissible I should dilate on matters foreign to the object of its meeting: nevertheles, that I may be better comprehended, I cannot dispense with giving fome preliminary notion of the river in question, and its first navigators.

It is commonly believed that the first European who difcovered the river of Amazons, was Francis d'Orellana. He embarked in 1539 on the river Coca, in the vicinage of Quito, a river which fomewhat below affumes the name of Napo; from this river, he defcended into one of larger fize; and, fuffering his veffel to be carried along conftantly by the current, he arrived without any pilot at the North Cape, on the coalt of Guyana, after a voyage, by effimation, of 1800 leagues. The fame Orellana perifhed ten years afterwards, together with three veffels entrufted to his command by Spain, without ever being able again to find the true mouth of the river. A rencounter which he flates to have had with certain armed women, againft whom an Indian Cacique had previoufly warned him, occafioned his naming this river, that of

the

the Amazons. Some writers call it Orellana, but previous to this denomination it was already known by that of Marañon from another Spanish captain. Geographers, who reprefent the Amazons and the Marañon as different rivers, following, as did Laet, the authority of Garcilafo and Herrera, were undoubtedly ignorant, not only that the most antient Spanish authors* denominated the river we speak of Marañon, as early as 1513, but alfo that Orellana himfelf in his narrative fays, that he met with the Amazons on defcending the Marañon, an identification which puts difpute at reft; in fact this name of Maranon has uninterruptedly been preferved throughout its courfe, and from its very origin, in Upper Peru, by the Spaniards, during more than two centuries. Still, the Portuguele, established fince the year 1616 at Para, an episcopal city at the most eastern mouth of this river, in this part know it by no other name than that of the Amazons, giving it the title of Solimoês on afcending it higher up, and transferring the denomination Marañon, or as fpelt in their language Maranhaô, to a city and whole province, or captaincy, adjoining that of Para. I shall use indifferently the names Maranon and Amazons in fpeaking of this river.

In 1568, Pedro de Urfoa, difpatched by the viceroy of Peru in fearch of the famous Gold Lake of Parima, and the town El Dorado, fuppofed to exift in the vicinity of the Amazons river, fell into this river from one flowing into it on the fouthern fide, one of which I fhall fpeak in its place. The fate of Urfoa was ftill more tragical than that of his predeceffor Orellana. Urfoa perifhed by the hands of Aguiré, a private foldier, who rebelled and declared himfelf king. This man afterwards defcended the river by a long route, which to this day is not clearly known, marking his courfe by pillage and murder, and terminating his career by being flayed alive in the ifland of Trinidad.

Voyages like these afforded no great information respecting the course of the river; other governors, in after-time, repeated attempts for this purpose, but with as little success. The Portuguese were more fortunate than the Spaniards.

Pedro Texeira, in 1638, a century after Orellana, placed by the governor of Para at the head of a numerous detachment of Portuguefe and Indians, afcended the Amazons river to where it receives the Napo, and afterwards proceeded up that river itfelf to the neighbourhood of Quito, whither he repaired by land, accompanied by fome of the Portuguefe under his orders. He met with a favourable reception from the Spaniards, the two nations at that juncture being fubject to one lord. The next year he returned, by the fame channel, to Para, in company with Father Acuña, and Father Artieda, appointed to render account of the particulars of the voyage to the court of Madrid. They effimated their courfe from the hamlet of Napo, the fpot at which they embarked, to Para, at 1356 Spanifh leagues \dagger . The narrative of this voyage was printed at Madrid in 1640. The French tranflation effected in 1682 by M. de Gomberville is in the hands of every one.

The very defective chart of the courfe of this river, published by Sanfon from this purely historical narrative, was afterwards, for want of new memoirs, copied by all fucceeding geographers, none more correct appearing in France before the year 1717.

At this time, in the twelfth volume of *Lettres edifiantes*, &c. was first published a copy of the chart engraved at Quito in 1707, but planned as early as 1690 by Father Fritz, a German Jefuit missionary on the banks of the Maranon, the course of which river he had traced throughout its whole length. From this chart was discovered that

^{*} Pedro Martyr, Fernan de Encifo, Fernandez de Oviedo, Pedro Ciega, Augustin Larate.

⁺ At 15 to the degree, 6255 British statute miles.

the Napo, efteemed the main fource of the river, was merely tributary, and that the Amazons itself, under the denomination of Maranon, iffued from a lake near Guanuco, thirty leagues from Lima. But Father Fritz, deftitute of pendulum or telescope, was enabled to determine no one longitudinal point, and for ascertaining the latitudes he had merely a fmall wooden femicircle of three inches radius; he was moreover ill, as he fell down the river near Para. One need only read his manufcript journal, of which I have a copy taken from the original in the archives of the college of Quito, to fee that numerous obstacles, both at that time and on return to his station, prevented his making those observations requisite for rendering his chart exact, especially towards the lower part of the river. This chart is merely accompanied by a few notes on the map itfelf, without any historical detail, fo that, in fact, to this time Europe remains, with refpect to the countries through which the river of Amazons takes its courfe, as deftitute of information as it was left a century ago, after the narrative of Father Acuna *.

The Marañon iffuing from its parent lake, in 11° of latitude fouth, directs its courfe northward to Juan de Bracomoros, through a fpace of fix degrees : thence it bends eaftward, in a line nearly parallel to the equator, to the North Cape, difemboguing its waters into the ccean under the line itfelf, after traverfing from Taen, where it begins to be navigable, nearly thirty degrees of longitude or 750 common leagues; or, computing its windings, from 1000 to 1100 leagues †. From the north, as well as from the fouth, it receives a prodigious number of rivers, many flowing through an extent of five or fix hundred leagues, and feveral of them equalling in volume the Danube or the Nile. The banks of the Marañon, more than a century back, were peopled with a great variety of nations, who withdrew to the interior at fight of Europeans. In the prefent day merely a few affemblages of natives are to be feen themfelves, or their immediate predeceffors, recently drawn from their native woods by the Spanish missionaries in the upper portion, and by those of Portugal, in the lower division of the river.

Three roads communicate between the province of Quito and that of Maynas, which gives its diffinction to the Spanish missions on the Maranon. These roads traverse that famous chain of fnow-capped mountains termed Las Cordilleras de los Andes. The first of these roads, almost immediately under the line, eastward of Quito, leads by Archidona to the Napo: this was the road traced by Texeira on his return from Quito, and by Father Acuna. The fecond road is through a gorge below the Volcano of Tonguragua in $1\frac{1}{2}^{\circ}$ of latitude fouth : it leads to the diffrict of Canelos acrofs numerous torrents, the junction of which forms the river Pastaça, a river that falls into the Marañon one hundred and fifty leagues higher up than the Napo. Thefe two roads are those commonly travelled by the miffionaries of Quito, the only Europeans by whom these countries are frequented; for the communication between them and the neighbouring province of Quito is rendered almost impracticable by the Cordilleras, which are paffable but for a few months in the year. The third road is by Juan de Bracomoros in $5\frac{1}{2}^{\circ}$ of latitude fouth, where the Maranon begins to be navigable for boats. This last is the only road by which beasts of burthen can travel to the place of embarkation. The two preceding require a march of many days on foot, and on these every thing must be carried by Indians; nevertheless the last road is that the least frequented, as much on account of the long circuit it requires, and the constant

^{*} The work entitled El Maranon o Amazonas, 1684, is of no value.

⁺ According to the chart, about 2350 British miles, 1000 leagues (25 to a degree) is 2768 British miles.

IN SOUTH-AMERICA.

rains to which the traveller is fubject on the way, and which render the roads almost impaffable even in the fineft feafon, as of the difficulty and danger attending the celebrated pafs on quitting the Cordilleras called Pongo. Principally that I might furvey this pafs, which is never fpoken of at Quito without admiration and dread, and that I might lay down on my chart the whole navigable extent of the river, I felected of the three roads, the laft.

I left Tarqui, the fouthern extremity of our meridian, five leagues fouth of Cuenca, on the 11th of May 1743. On my journey to Lima in 1737, I travelled the cuftomary road from Cuenca to Loxa; on this occafion I went by a circuitous one, paffing by Zaruma, in order to place that fpot on my map. I ran fome rifk in fording the great river Los Jubones, then much fwollen, and always very rapid, but by chofing this courfe I avoided a greater; as I have fince been given to underftand, affaffins employed by the authors of, or accomplices in the murder of our furgeon, laid in wait for me on the high road from Cuenca to Loxa.

From a mountain over which I paffed on my way to Zaruma, Tumbez is diftinguifhed, a port on the South-Sea, at which the Spaniards effected their first landing, fouth of the line, on their expedition for the conquest of Peru. From this point it was that I began to turn my back on the South-Sea, and take an eastward course across the continent of South-America. This place was formerly celebrated for its mines, now almost abandoned. The gold extracted is much alloyed, being no more than fourteen carats fine; it is mingled with filver, and very ductile.

.At Zaruma the barometer flood at 24 inches two lines; unlike in our climates, beneath the torrid zone it is fubject to little variation; for at Quito we found that the extreme difference, in the fpace of feveral years, did not exceed a line and a half. Mr. Godin was the first who remarked that the variations of the barometer, which in the courfe of four and twenty hours extend to about a line, are fubject to pretty regular alterations, which, once known, allow the afcertainment of the mean height of the mercury by a fingle experiment. The different experiments made by me on the fhores of the South-Sea, and those I repeated on my journey to Lima, fatisfied me what this mean height was at the level of the fea, whence I was enabled to affign with tolerable exactitude an elevation of 700 toifes (about 4400 English feet), to the territory about Zaruma, an elevation not half fo great as that of the land about Quito. In this calculation I made use of atable computed by M. Bouguer, after an hypothesis, which has hitherto corresponded better than any other with experiments made with the barometer, and verified by trigonometrical meafurement. I came from Tarqui, a region rather cold, and experienced great warmth at Zaruma, notwith landing I was fcarcely lefs elevated there than on Mont Pelée, in Martinico, where we found the cold fevere, afcending from a low and warm country. I prefuppofe here that the reader is apprized already of our having conftantly obferved, during our long fojourn in the province of Quito, under the equinoctial line, that the elevation of the foil almost exclusively determines the degree of heat, and that it does not require one fhould afcend fo high as 2000 toifes (about 12,600 English feet), from a valley parched by intenfe heat, to reach the foot of maffes of fnow, antient as the globe itfelf, with which a neighbouring mountain is crowned.

On my way, I croffed many bridges made with cords, bark of trees, or lianas. Thefe lianas, netted together, form an aërial gallery, which is fufpended from two large cables of fimilar materials, the extremities of which are faftened to branches of trees on opposite banks. Collectively, the whole of thefe fingular bridges refembles a fifther's net, or rather an Indian hammock, extending from one to the other fide of the river. As the mefhes of this net are very wide, and would fuffer the foot to go between them, a fort of flooring is fuperimpofed, confifting of branches and fhrubs. It will readily be conceived, that the weight of this net-work, but efpecially that of the paffenger, muft give a confiderable curve to the bridge; and when, in addition, one reflects that the traveller paffing it is expofed to great ofcillations, to which it is incident, particularly when the wind is high, and he reaches near the middle, this kind of bridge, which is oftentimes thirty fathoms long, muft needs have fomething frightful in its afpect': the natives, however, who are far from being naturally intrepid, pafs fuch bridges on the trot, with their loads on their fhoulders, together with the faddles of the mules, which crofs the river by fwimming, and laugh at the timidity of the traveller who hefitates to venture. But this is not the moft fingular nor moft dangerous fort of bridge in the country; I fhall, however, omit defcription of the reft, that I may not wander too far from my fubject.

I repeated, on paffing Loxa, my obfervations on the latitude, and the height of the mercury on the barometer, and the refults agreed with those obtained, in 1737, on my journey to Lima. Loxa is less elevated than Quito by about 350 toifes, and the heat is there fensibly greater. The neighbouring mountains are but paltry hills compared with those of the neighbourhood of Quito; but, nevertheles, their ridges are the partition-lines of the courses of rivers; and the very hill on which the best Quinquina grows, two leagues south of Loxa, and called Caxanuma, gives birth to streams which flow westward to the fouthern ocean, and eastward, after merging in the Marañon, to the Atlantic.

The 3d of June, I fpent the whole day on one of these mountains; though affisted by two Americans of the neighbourhood, whom I took with me for guides, I was able to collect no more than eight or nine young plants of Quinquina in a proper state for transportation. These I caused to be planted, in earth taken from the spot, in a case of fuitable size, and had them carried on the shoulders of a man constantly in my fight, to the place at which I embarked, hoping to preferve, at least, some of the plants, to leave under charge at Cayenne, if they should not, on my arrival there, be in fit condition for transporting to France for the King's garden.

Between Loxa and Jaen, the left hills of the Cordilleras are paffed. The road, on almost all this journey, lays through woods, where rain is fo inceffant, that it prevails eleven and fometimes the whole twelve months of the year, fo that nothing can be kept dry. The baskets covered with ox-hides, which are the packages used in the country, rot, and exhale an intolerably offenfive fmell. I paffed by two towns, which now have only their names, Loyola, and Valladolid; both, a century back, were opulent, and teeming with Spaniards; but, at prefent, they are reduced to wretched hamlets of Americans or Mestees, and removed from their original fite. Jaen itfelf, which is ftyled a city, and fhould be the refidence of the governor, is now but a miferable village. Such, indeed, has been the general fate of the major part of thefe towns of Peru, built at a diftance from the fea, and out of the high road from Carthagena to Lima. On this route I croffed a variety of rivers, fome by fording, others by means of bridges fimilar to that I have described; others again on rafts, constructed on the spot of the timber with which nature has prodigally filled all these forests. These rivers united form one of great breadth and rapidity, called Chinchipé, fuperior in volume to the Seine. I descended it the space of five leagues on a raft to Tomependa, an American village, within fight of Jaen, in a pleafant position at the confluence of three great rivers, the middlemost of which is Maranon. On the southern fide it receives the Chachapoyas, on the western that of Chinchipé, down which I floated.

This junction of the three rivers takes place in latitude $5\frac{1}{2}$ fouth; and from this point, notwithstanding many windings, the main course of the Marañon constantly approaches nearer, and more near the line till its mouth. Below this fame point the river narrows, and forces itfelf a paffage between two mountains, at a fpot where the violence of its current, the rocks in its bed, and a number of falls, render it unnavigable; what is called the port of Jaen, the place where the traveller embarks, being four days' journey from Jaen on the little river Chuchunga, which merges in the Maranon below the falls. However, notwithstanding the imagined impracticability of passing the cataract, an express dispatched by me from Tomependa, with orders from the governor of Jaen to his lieutenant at Sant Yago to forward a boat for me to the port, overcame every obstacle on a little raft, composed of two or three pieces of timber, a float fufficiently large for a naked American, expert as they all are at fwimming. In my way from Jaen to the port, I croffed the Marañon, and frequently found myfelf on its banks. Within the interval between the above town and its port, the Maranion receives a number of torrents from the north, which, in the rainy feafon, bring down with them a fand mingled with fmall plates and grains of gold. At this featon the natives go to collect it, but they merely feek for what is neceffary to pay their tribute or poll-tax, and when urgently obliged; at any other feafon, they would rather trample under foot this coveted metal, than take the pains of collecting and cleaning it. Throughout the whole of this diffrict, both fides of the river are covered with the wild cocoa-trees, the fruit of which is nothing inferior to the cultivated, but on which, alfo, the natives fet as little value as on the gold.

The fourth day after my departure from Jaen, I paffed the torrent Chuchunga, one and twenty times by fording, and the laft time in a boat; the mules, on reaching the river, dafhed into the water, laden as they were, and, in confequence, all my inftruments, books, and papers, were thoroughly wetted. This was the fourth accident of the kind which I had experienced in travelling among the mountains, my cafualties from water never ceafing until I was fairly embarked on that element.

Chuchunga is an hamlet containing half a fcore American families, governed by their Cacique, who underftood about as many Spanish words as I did of his native language. I was under neceffity of leaving behind me at Jaen two fervants of the country, who might have acted for me as interpreters; and neceffity enabled me to manage without them. The inhabitants of Chuchunga poffeffed no other than fmall canoes fuited to their purpofes, and that I had fent for by express to Sant Yago could not arrive in lefs than a fortnight, I therefore engaged the Cacique to caufe his people to frame a raft for me, or, as termed by them, a Balfe, the fame word denoting as well the float itfelf as the fpecies of wood of which it is conftructed ; directing him to make it large enough for myfelf, my inftruments, and baggage. The time occupied in preparing the Balfe, afforded me leifure to dry my books and papers, fheet by fheet, a precaution as neceffary as it was tedious. The fun was visible only about noon, but this glimpfe of it enabled me to take an altitude, which gave for the latitude 5° 21' fouth; and from the barometer, fixteen lines lower than at the fea-fide, I gathered that at 235 fathoms above its level, &c.; navigable rivers occur without being interrupted by falls: I am far from inclined to affert, that this is not the cafe with the Maranon at a ftill greater elevation, but I can only fpeak politively of what I know; though it appears far from improbable, that the fpot at which a river begins to be navigable for boats, the courfe of which river to the fea is even from here more than a thousand leagues, fhould be more elevated above the level of the ocean than that where navigation commences on rivers of fhorter courfe.

VOL. XIV.

On

On the 4th of July, in the afternoon, I went on board a fmall two-oared canoe. preceded by the Balfe, and efcorted by all the Indians of the hamlet. They were up to the middle in the water for the purpose of guiding the Balse through difficult channels, and preferving it from rocks, and down the gentle falls, from the violence of the current. The fucceeding day, after a very tortuous courfe, I entered the Maranon about four leagues north of the fpot where I embarked. Here it is the Marañon begins to be navigable. It now became neceffary to enlarge and ftrengthen the raft, which. before, had been proportioned to the bed of the river I had floated down. During the night, the river role ten feet, and rendered neceffary a hafty removal of a bower which had ferved me for shelter, and which the natives raife with marvellous skill and promptitude. In this fpot I was detained three days by advice, or rather by order of the guides, on whom I was obliged to rely. They had in confequence full leifure to prepare the Balfe, and I alfo to make observations. I measured the breadth of the river trigonometrically, and, though narrower than before by from 15 to 20 toifes, I found it 135 toifes wide *. Many rivers which it receives above Jaen are much broader, which made me conclude its depth to be very confiderable : in fact, though I founded with 28 toifes of cord, this did not reach its bottom at a third of its breadth from the fide. In the middle of the ftream I was unable to obtain foundings, as a canoe in this part was carried along at the rate of a fathom and a half in a fecond. The barometer, higher by four lines than at the port, indicated the level of the river to be lower by 50 toifes than at Chuchunga, from which place I had been but eight hours in defcending. At the fame place, I found the latitude 5° 1' fouth.

On the 8th, I continued my route, and paffed the ftrait of Cumbinamba, dangerous on account of the flones with which it is filled. It is fcarcely 20 toifes broad. The next day I came to that of Efcarrebragas, which is one of a different defcription. The river, arrefted in its courfe by the fide of a fteep rock, against which it strikes, is diverted fuddenly, fo as to form a right-angle with its former direction. The shock of the tide, rendered more impetuous by the narrowness of the channel, has hollowed a deep bay, where the waters of the margin, feparated by the rapidity of the mid-ftream, are kept back. My raft, on which at that time I happened to be driven by the current into this bay, for an hour and fome minutes, was inceffantly whirled about, the fport of eddies. The waters, as they revolved, bore me towards the mid ftream, where the waves, occafioned by the revultion of the eddies, would infallibly have overwhelmed a small canoe; the fize and folidity of the float fecured it from this danger, but repeatedly did the force of the current drive me back to the bottom of the bay, from which I was indebted for my ultimate releafe to the skill of four Americans, whom I had retained with a finall canoe in cafe of accident. Thefe, navigating their bark along the margin, climbed the rock, from which, with much difficulty, they threw Lianas, the fubstitutes in this country for cords, on board the raft, and, by means of these, dragged it into the current. The fame day, I paffed a third ftrait, called Guaracayo, in which the bed of the river, confined between two immense rocks, is only thirty toiles broad; this ftrait is dangerous only at the period of great fwells. On the evening of the fame day, I met the large canoe from Sant Yago; but it would have taken it fix days more to have reached the fpot from which I had fallen down fince the morning, and which had taken me only ten hours.

On

^{* 840} English feet wide; depth upwards of 175 feet; distance from the sea more than 2,600 British miles.

On the 10th, I arrived at Sant Yago de las Montañas, a hamlet fituate at the mouth of the river of fimilar name, and built from the ruins of a town which had given denomination to the river. The banks of it are inhabited by an American nation called Xibaros, formerly Chriftians, but who fhook off the Spanifh yoke a century ago, to efcape from the toil exacted from them in working the gold mines of their country : ever fince, fecluded in inacceffible woods, they preferve themfelves independent, and impede the navigation of this river, by which it would be eafy to fall down in the fpace of a week, from the vicinage of Loxa and Cuenca, the tranfit whence had taken me two months. The dread infpired by thefe Indians has twice obliged the inhabitants of Sant Yago to change their abode, and, in courfe of the laft forty years, to defcend to the fpot where that river empties itfelf into the Marañon.

Below Sant Yago is Borja, a town of much the fame ftamp as the preceding, though the capital of the government of Maynas, a government which comprehends all the Spanish missions on the banks of the Maranon. Borja is divided from Sant Yago merely by the famous Pongo de Manferiché. Pongo, anciently Poncu, fignifies in the . Peruvian language a gate. It is a term, in this language, given to all narrow paffes, but to this as a mark of excellence. This ftrait is a road worked for itfelf by the Marañon in its paffage eaftward, after a courfe of two hundred leagues towards the north and the mountains of the Cordilleras, its bed being dug between two parallel walls of rock almost perpendicular. Little more than a century has elapsed fince certain Spanish foldiers of Sant Yago difcovered this passage, and went through it. Two Jefuit miffionaries followed them fhortly after, and, in 1639, founded the miffion of Maynas, which extends to a confiderable diffance down the river. Arrived at Sant Yago, I hoped to crofs over to Borja the fame day, and, indeed, an hour would have carried me thither, but fpite of reiterated expresses, fpite of the orders and recommendations with which we were conftantly well provided, but which were fo feldom duly attended to, the timber of the large raft with which I was to pass the Pongo was not yet felled. I contented myfelf with ftrengthening mine by a new fence, with which I caufed it to be furrounded, to enable it to refift the first effect of the almost inevitable fhocks to which the rafts, from their mode of ftructure, and being without any rudder, are unavoidably liable in the windings of the ftrait. As for the canoes, they are fo light, that they are guided by the fame paddles with which they are rowed.

I was unable to overcome the repugnance of my mariners to attempt the paffage on the day after my arrival, owing to the waters, as they faid, not being fufficiently low. All I could induce them to, was to crofs over to the oppofite fide, there to wait a favourable opportunity in a fmall bay at the entrance of the Pongo; in this, the violence of the current is fuch that, although properly fpeaking there be no cataract, the waters feem to plunge, while the flock of them, as they dafh againft the rocks, deafens the ear with its tremendous noife.

The four Americans who had followed me thus far from the port of Jaen, lefs folicitous than I of a near view of the Pongo, proceeded onwards by a footpath, or rather a flaircafe cut in the rock, to wait for me at Borja. In confequence, this night, as the preceding, I was left on the raft with no other companion than an old negro flave. Lucky for me it was, that I determined on not leaving him alone, as I was threatened with an accident perhaps without a parallel. The river, which in thirty-fix hours fell five and twenty feet, ftill continued vifibly to fink. In the middle of the night, the fplinter of an immenfe branch of a tree, concealed under water, penetrated between the timbers of my raft, and, in proportion as the waters abated of their height, became more deeply entangled, fo that, had I not been prefent and awake, I fhould in FF 2 all probability have been left on the raft, fubtended in the air by the branch; in which cafe, the lightest misfortune I should have incurred, would have been the loss of my journals and obfervations, the fruit of eight years' toil. I fucceeded, fortunately, in difengaging the raft, and fetting it again on float.

I availed myfelf of my obligatory ftay at Sant Yago to meafure trigonometrically the breadth of the two rivers, and to take the angles required to enable me to draw a topographical chart of the Pongo.

The i2th July, at noon, I caufed the raft to be unmoored, and pushed from shore: foon I found myfelf carried along by the ftream in a deep and narrow gallery, formed by two walls of rock, in fome parts flanting, but in others perpendicular; in lefs than an hour, I was transported to Borja, three leagues, according to common computation, from Sant Yago. However, the Balfe, which did not draw half a foot of water, and which, from the bulk of its loading, prefented to the air a refiftance feven or eight times as great as that it oppofed to the current, did not confequently proceed with equal velocity to that of the current itfelf; and this velocity diminifhes materially as the channel increafes towards Borja. In the narrowest part I reckoned, that, comparing the fpeed of our courfe with that on former occafions, which I had meafured trigonometrically, in the narrowest part, we were carried along at the rate of two toifes in a fecond.

The channel of Pongo, hollowed by the hand of nature, begins a fhort league below Sant Yago, narrowing gradually till, from 250 toifes, the breadth at the junction of the two rivers, it diminishes in the narrowest part to twenty-five. I know very well, that the breadth hitherto afcribed to the narroweft part of the Pongo, is only five and twenty Varas, equivalent fcarcely to ten of our toifes; and that the paffage from Sant Yago is faid to be effected in a quarter of an hour. For my part, I remarked that, in the very narrowest part, I was at least thrice the length of my raft from either fide. I moreover obferved by my watch, that we were fifty-feven minutes in fpeeding from the entrance of the strait to Borja, and all combined, I found the measures as I have given them; and, however well inclined to fhew a deference to the opinion commonly received, I can fcarcely admit the diftance from Sant Yago to Borja, inflead of three, as computed, to be even fo much as two leagues, of twenty to a degree.

I ftruck twice or thrice with violence against the rocks in course of the different windings, an accident calculated, but for being forewarned of the little danger thence to be apprehended, to create no fmall portion of alarm. A canoe on fuch an occafion would be dafhed into a thousand pieces; and the spot was pointed out to me, as I paffed along, where a governor of Maynas thus met destruction : but the beams of the raft being neither nailed nor dovetailed together, the flexibility of the Lianas, by which they are fastened, have the effect of a spring, and deadens the shock fo, that when the strait is passed in a raft, these percussions occur unheeded. The greatest danger for these is, their being liable to be driven out of the stream into eddies, an accident which, as related above, it was my lot to experience. Not a year had elapfed before fince a miffionary, drawn thus into a vortex, was kept in it for two days deftitute of provisions; and, but for a fudden swell of the river, which brought him again into the current, he might there have perished of hunger. The Pongo is never attempted in a canoe, except when the waters are fo low as to admit its being fteered without being overpowered by the ftream. Canoes alfo ftem the current when the waters are at their lowest, and afcend ; but this is impracticable for Balfes.

At Borja, I found myfelf in a new world, feparate from all human intercourfe, on a fresh water sea, furrounded by a maze of lakes, rivers, and canals, penetrating in every

every direction the gloom of an immenfe foreft, which but for them were forbidden to accefs. New plants, new animals, and new races of men, were exhibited to view. Accustomed during feven years to mountains loft in clouds, I was wrapt in admiration at the wide circle embraced by the eye, reftricted here by no other boundary than the horizon, fave where the hills of Pongo, foon about to difappear, raifed themfelves to checquer the conftant monotony of the fcene. To the crowd or varying objects which diverfify the cultured fields of Quito, and which ftill prefented themfelves to the imagination, fucceeded the most uniform contrast, the whole to be seen being verdure and water; for the earth is fo thickly covered with tufted plants and buffes, that it is trod, but not perceived; to find a barren fpace, though but a foot fquare, requiring a world of toil. Below Borja, and 4 or 500 leagues beyond, on falling down the river, a ftone, nay a pebble, is an object rare as a diamond. The favages of these countries indeed have no conception of ftones, and when, on vifiting Borja, they first perceive them, the wonder they occafion is admirable to behold; every gefture tokens furprife; they collect them together, and load themfelves with the precious burden, till, beginning to notice their abundance, they finally difregard, and throw them away.

Before I proceed farther, I deem it right to fay a word of the genius and character of the primitive inhabitants of South America, improperly called Indians, in fpeaking of whom, I mean to include neither the Spanish or Portuguese Creols, nor the various races produced by a mixture of Europeans with the blacks of Africa, or the red men of America, fince the establishment of the first in the country, and the introduction by them of the Negroes of Guinea.

All the old natives of the country are of a tawny colour, inclining to a red of different fhades of brightnefs; the difference in the fhades arifing probably in a great degree from the varying temperature of the climate they inhabit, which embrace the intenfe heat of the torrid zone with the cold of the vicinage of fnow.

This variety of climates; the wooded countries, plains, mountains, and rivers, which different fites afford; a difference of aliment; the little intercourfe fubfifting between neighbouring nations, and numerous other caufes, must neceffarily have introduced a variety in the occupations, as in the cuftoms of these people. Again, it will readily be conjectured that a nation, become Christian, and subject during a century or two to the Spanish or Portuguese yoke, must, of confequence, have adopted somewhat of the manners of its conquerors, and that an American inhabitant of a town or village in Peru, for example, must differ from the favage of the interior, and even from a new inhabitant of those countries in which missions are established on the Marailon. In order, therefore, to prefent an exact idea of the American people, almost as many defcriptions are requifite as there are nations; however, as in Europe all nations, notwithstanding diffinct languages, manners, and customs, have yet fomewhat in common to the eyes of an Afiatic who examines them with attention, fo do all the Americans of the different countries I had opportunity of noticing in the course of my travels, prefent features of refemblance, the one to the other, indeed (with exception of light fhades of difference, fcarcely to be diftinguifhed by a paffing observer,) I fancied in all alike a fimilar base of character.

Infenfibility among these people is generally prevalent, which, whether to be dignified by the name of apathy, or funk in that of flupidity, I leave to the decision of others. Undoubtedly it is caused by the paucity of their ideas, which extend no farther than their wants. Voracious gluttons, where means of fatiety exist; when want enforces fobriety they patiently bear with abstinence, and seem to be void of care. Pufillanimous and timid in extreme, unless when transported by drunkenness; inimical to toil; indifferent to every impulse of glory, honor, or gratitude; wholly engroffed and determined by the object of the moment, without concern for the future; defititute of forefight and reflection; and giving themselves up, when nothing prevents them, to a childish joy, which they manifest by leaping, and loud bursts of laughter, with no apparent object; they pass their lives without thought, and see old age advance, yet unremoved from childhood, and preferving all its faults.

Were this the picture merely of the Indians of fome provinces of Peru, who may be regarded as flaves, the want of civilization might be afcribed to the degeneracy incident on their fervile ftate; for the degradation to which flavery is capable of reducing man, is fufficiently exemplified in the prefent condition of the Greek nation: But the Americans of the country of the miffions, and the favages free from all controul of Europeans, fhewing themfelves equally limited, not to fay flupid, with the others, the reafoning mind cannot but feel humiliation, contemplating how little man, in a ftate of nature, and defitute of inftruction and fociety, is removed in condition from beafts.

All the languages of South-America with which I am acquainted, are very poor; many poffefs energy, and are fufceptible of elegance, efpecially the antient language of Peru; but they are univerfally barren of terms for the expression of abstract or universal ideas, an evident proof of the slight progress of intellect among these people. Time, duration, space, entity, substance, matter, corporeity; these are words which, with many others, have no equivalent in their languages. Not only metaphysical terms, but also moral attributes, require long periphrases to be expressed, though with them, in but an imperfect manner. They have no words that correspond exactly with virtue, justice, liberty, gratitude ingratitude; a fact with which it feems difficult to reconcile what Garcilaso relates of the policy, industry, arts, government and genius of the antient Peruvians. Unless the love he bore his country induced him to exaggerate, we must needs allow that these people have greatly degenerated from their ancessors. As for the other nations of South-America, they are not known to have ever emerged from their pristine barbarism.

I have formed a vocabulary of the most common words in different American languages. A comparison of these words with those of fimilar import in other languages of the interior, may not only be ferviceable towards proving the different transmigrations of these people from one to the other extremity of this valt continent : but where it can be effected also with the different languages of Africa, Europe, aud the East-Indies,, may furnish, possibly, the only means of ascertaining the origin of the Americans. A well-proved conformity of language would without doubt folve the queftion. The word abba, baba, or papa, and that of mama, which with flight inflections feem to have been adopted from the antient tongues of the eastern world by a majority of the nations of Europe, are common to a great number of the American nations, however different the reft of their language. And though we fhould allow thefe words to be those which would preferably be received in every country by parents, from their being the first articulations of infancy, as the representatives of the relation of father and mother, it yet follows to enquire wherefore, in all the languages of America in which these words occur, the application of them should be uniformly the same, without their meaning being reverfed; for example, how comes it in the Omagua language, spoken in the centre of the American continent, and in which the terms papa and mama are used, that papa should never fignify mother, nor mama father, but the contrary, as in the languages of Europe and the east. It is far from improbable, that among the natives of America other terms might be found, the well confirmed

firmed relation of which with those of some other language of the antient world, throw light on a question hitherto left purely to conjecture.

I was expected at Borja by the reverend Father Magnin from the canton Fribourg, a Jefuit miffionary, from whom I received that attention and kindnefs naturally to be expected from a friend and countryman. I had no occafion with him, nor afterwards with the other miffionaries of his order, to avail myfelf of the recommendations I brought from their friends at Quito, and ftill lefs of the paffports and orders of the court of Spain, which I carried with me. Befides other curiofities in natural hiftory, this Father made me a prefent of a chart, drawn by him, of the territory of the Spanifh miffions of the Maynas, together with a defcription of the manners and cuftoms of the neighbouring nations. During my ftay at Cayenne I was affifted by Mr. Artur, phyfician to the King, and member of the Upper Council of that colony, in translating this Spanifh work into French: it is highly worthy the curiofity of the public.

I found the latitude of Borja 4° 28' S.

From this place I took my departure on the 14th July with the fame Father, who was fo obliging to accompany me as far as Laguna. On the fifteenth we paffed on the north the mouth of the Morona, which flows from the volcano Sangay, the afhes thrown from which, traverfing the provinces Macas and Quito, are fometimes carried beyond Guyaquil. Beyond this, on the fame fide, we diffinguifhed the three mouths of the river Paftaca before mentioned. At this time its banks were fo much overflown that no landing could be effected; I was confequently unable to meafure the breadth of its principal mouth, which I reckoned to be 400 toifes, nearly equalling the breadth of the Marañon itfelf. A little beyond, the fame evening and the fucceeding morn, I obferved the fun at its fetting and rifing, and, as at Quito, I found its declenfion $8\frac{1}{2}$ ° towards the north. By two amplitudes thus obferved in fucceffion in the evening and morning, the variation of the needle may be computed without knowing that of the fun; all that is required being to notice the difference of declenfion of the fun in the interval of the two obfervations, provided this difference be fufficiently great to be flown by the compafs.

On the 19th we arrived at Laguna, where Don Pedro Maldonado, governor of the province of Efineraldus, had been waiting for me fix weeks; to this nobleman, as well as to his two brothers and his entire family, I owe a public acknowledgement for the diftinguifhed civilities our academic detachment experienced at their hands, during our long Itay in the province of Quito. He, as well as myfelf, on his paffage to Europe, felt difpofed to proceed down the river of Amazons, and had taken the fecond of the three routs defcending the Paftaca; after many dangers and great fatigue he had been fortunate enough to arrive much before me, notwithftanding the period of his departure from Quito was nearly the fame as that at which I left Cuenca; he had made the requifite obfervations as he travelled along, with a compafs and portable gnomon, to enable him to defcribe the courfe of the Paftaca, an undertaking, to which I not only had prompted him, but likewife facilitated, by furnifhing him with means for its execution.

Laguna is a confiderable village, containing more than a thoufand Americans capable of bearing arms, who are a medley of various nations. It is the chief eftablifhment of all the miffions of the province of Maynas. The town is placed on dry and elevated ground, which is rare to be feen in thefe countries, and at the fame time on the margin of a great lake, five leagues above the mouth of the Guallaga, a river which, like the Marañon, has its origin in the mountains eaftward of Lima. By the Guallaga it was that Pedro de Urfoa, of whom mention has already been made, defcended to the river

river of Amazons. The memory of his expedition and the events which occasioned his lamentable end, is still preferved among the inhabitants of Lamas, a small place in the neighbourhood of the port at which he embarked. The breadth of the Guallaga on its influx into the Maranon might, at this time, be 250 toiles. It is a river very inferior in volume to the majority of those I shall have occasion to notice as I proceed.

At Laguna I made a number of obfervations on the fun and ftars, in order to determine the latitude, which I found to be 5° 14'. I made a halt here of twenty-four hours, for the purpose of ascertaining the longitude, but I lost fight of Jupiter in the vapours of the horizon, before I could diftinguish its first fatellite emerging from its shadow.

On the 23d Mr. Maldonado and myfelf left Laguna in two canoes from forty-two to forty-four feet long, by only three in breadth, each formed of the trunk of a fingle tree. In these canoes the rowers are placed from the prow to the middle, the traveller and his equipage at the poop, under fhelter from the fun and rain beneath a rounded canopy, formed with much ingenuity by the natives, of matted palm leaves. This fpecies of bower has a cavity in the middle of the roof, by which light is admitted, and it ferves likewife to enter by; in cafe of rain, or otherwife at the pleafure of the traveller, this entrance is closed by a fliding roof of fimilar materials, which draws over that which is fixed.

We refolved on continuing our voyage by night as well as by day, in order to overtake, if poffible, the brigantines, or large canoes difpatched annually by the Portuguele missionaries to Para in quest of necessaries. During the day our Americans paddled along; two only of their number kept watch during the night, the one at the prow, the other at the stern, to preferve the boat in the current.

In undertaking a chart of the course of the river of Amazons, I provided myself a refource against the tirefomeness of a weary though tranquil voyage through a country, in which the continued fameness of objects, however novel in themselves, tended to fatigue rather than pleafe the eye. My attention was perpetually engroffed by the compass, and the watch I held in my hand, in order to observe the deflections of the course of the river, and the time occupied between each bend; to notice the varying breadth of its bed, and that of the mouths of the different rivers it receives, with the angles formed by them on delivering their waters; the occurrence of iflands and the length of them; but especially to ascertain the degree of celerity with which the current flowed, and the canoe proceeded along, using for these last purposes various methods too tedious to explain. Every inftant of my time was employed : repeatedly I fathomed the depth of the stream; almost every day I took a meridianal altitude, and oftentimes observed the amplitude of the fun at its rifing and fetting : wherever I made a halt, there likewife did I determine the height of the barometer. I fhall notice these observed vations only in the most remarkable spots, referving a more minute detail for our private meetings.

On the 25th we paffed on the north fide the river Tiger, which poffibly exceeds in fize the cognominal one in Afia, but which, for its celebrity lefs happily fituate, is here lost, owing to the vast superiority of a number of other rivers. This day at an early hour, we halted on the fame fide of the river at a miffion newly established among favages, denominated Tameos, who had recently been drawn from the woods. The language of this people is indefcribably difficult, and their enunciation still more extraordinary than their language. They draw their breath in fpeaking in fuch manner that the found of fcarcely one vowel can be diffinguished. They have words which, to defcribe, and then but imperfectly, would require at least nine or ten fyllables, though as pronounced by them they feem to confift of but three or four; Poettarrarorincouroac rincouroac fignifies the number *three* in this tongue: happily for those who have tranfactions with them, their arithmetic goes no farther. However incredible it may appear, this is not the only American nation with whom an equal poverty of numbers is common. The Brazilian tongue, a language fpoken by peopler lefs favage and uncivilized, is equally barren; the people who fpeak it, where more than three is to be expressed, are obliged to use the Portuguese.

The Yameos are well skilled in the art of making long Sarbacanas, the most common inftrument used by native Americans on their hunting excursions. Within thefe they infert fmall arrows, made of wood, and, inftead of being feathered, furrounded by a ball of cotton which exactly fills the cavity of the tube. By a ftrong puff of the breath they dart thefe arrows to the diftance of thirty or forty paces, and fcarcely ever mifs their aim. This fimple inftrument ferves as an admirable fubflitute among all these favages for fire-arms. The points of these diminutive arrows, as well as those they shoot from their bows, are steeped in a poifon of such activity, that when recent it kills any animal from which the inftrument dipped in it may chance to draw blood. Notwithstanding we had fowling peices, we fcarcely ever, in going down the river, ate of game killed by other means than these arrows, the tips of which we often discovered in eating, between our teeth; there is no danger from fuch occurrences, for the venom of this poifon is only mortal when abforbed by the blood, in which cafe it is no lefs fatal to man than to animals. The antidote is falt, but of fafer dependence fugar. In their proper place, I fhall notice the experiments I made to afcertain the truth of this opinion, as well at Cayenne as at Leyden.

The next day, the 26th, we fell in with, on the fouthern fide of the mouth of the Ucayale, one of the largest rivers which swell the tide of the Maranon. It is even a moot point which of the two fhould be effeemed the chief, and which the tributary. At their confluence, the Ucayale is the broadest of the two, and its fources are more distant and more copious than those of the other; it receives the waters of many provinces of Peru, and at the fame degree of latitude at which the Maranon is only a torrent, it is enlarged by the tribute of the Apu-rimac, and already flows a confiderable stream; to conclude, the Ucayale, on meeting the Maranon, repulses its tide and changes its courfe. On the other hand, before its juncture with the Ucayale, the Marañon makes a long circuit and receives the rivers St. Jago, Pastaca, Guallaga, &c.; moreover, the Maranon is throughout its course of very great depth. Still again the depth of the Ucayale has never yet been fathomed, nor is it known what the number or what the volume of the rivers it receives. I think therefore that the queftion, of which fhould be confidered the main ftream, must remain undecided till the Ucayale be better known. This it was likely to have been at one period, but the infurrection of the Cunivos and the Piros, who maffacred their miffionary in 1695, by occafioning the abandonment of the establishments effected on its banks, have placed this event at a distance.

Below the Ucayale the breadth of the Marañon is vifibly increafed, as is the number of its iflands. On the 27th in the morning, we reached the miffionary eftablifhment of Saint Joachim, composed of a number of American nations, especially of the Omaguas, a people formerly powerful, and which a century before inhabited the iflands and banks of the Amazons river throughout a space of two hundred leagues below the Napo. Nevertheless this people is not esteemed to be originally of this country, and there is much probability that they proceeded to their fettlement on the Marañon down some of the rivers which flow into it from the new kingdom of Gre-

VOL. XIV.

GG

nada,

nada, flying hither to avoid the dominion of the Spaniards, at the period of their conquering the country they abandoned.

This opinion is founded on the fact of the existence of a nation near the fource of one of these rivers, and known by the name of Omagua; on the use of clothes, a circumstance noticed among the Omaguas alone of all the tribes found on the Amazons; fome vestiges of the ceremony of baptism; and finally, certain disfigured traditions. Father Samuel Fritz converted the whole of this people to christianity at the close of the last century (the seventeenth), and as many as thirty of their villages are laid down by name, in the map of that Father, of which however we could only trace the ruins or the fite; the whole of their population, intimidated by certain ruffians from Para, who ascended the river thus far, and made flaves of many of them, having fled to the woods, or disperfed among the missions of Spain and Portugal.

The Peruvian word Omagua, and the Brazilian term Cambevas, applied by the Portuguele of Para to thefe people, alike fignify flat-head; and in fact this nation has adopted the whimfical practice of prefling between two boards, the forehead of their new-born infants, in order to give it the fingular form which originated their denomination, and, as they fay, to make them more perfectly refemble the full moon. The language of the Omaguas is as fweet and eafy of enunciation, as that of the Yameos is harfh and difficult: it has no affinity to that of Peru or that of Brazil, the one common above, the other below the country of the Omaguas, along the banks of the river.

The Omaguas make great use of two plants, both purgative; the flower of the one, called by the Spaniards Floripondio, relembles an inverted bell; this plant has been defcribed by F. Feuillée; of the other plant called Curupa, I brought away the feed. This people, by means of these, effect an intoxication which lasts twenty-four hours, during which they are fubject to extraordinary visions. They moreover take the Curupa dried and reduced to powder, as we do fnuss, but after a fingular fashion. They use for the purpose a reed terminating in two prongs like the letter Y, each extremity of which is inferted into either nostril; from these, by a strong infpiration which occa-fions their making a grimace that to Europeans, accustomed to refer every thing to their own customs, appears truly laughable, they inhale the powder.

In a country where heat and moisture combine to excite the greatest fertility, it will naturally be concluded, that the abundance and variety of plants must be great. Those of the province of Quito will not have escaped the researches of our affociate M. Jof. de Juffieu, but I may fafely affirm, that the multiplicity and diverfity of the trees and plants found on the banks of the Amazons river, in its courfe from the Cordilleras de los Andes to the sea, and on the banks of the different rivers its tributaries, would require years of toil from the most indefatigable botanist, and employ for the fame space more than one draughtsman to describe. I speak here merely of the labour which a minute delineation of all these plants, and the reduction of them into classes, genera, and fpecies, would neceffarily require, but if to this were fuperadded an examination into the virtues afcribed to them by the natives of the country, certainly the most interesting part of a study of this nature, how tediously long were the task! No doubt these virtues have been much mis-stated and greatly exaggerated by prejudice and ignorance, but are we to imagine that Bark, Ippecacuhana, Simaroba, Salfaparilla, Guiacum, Cacos, and Vanilla, are the only ufeful plants which the fruitful bofom of America prefents? And does not the well-attefted and widely-acknowledged ufefulnefs. of these hold forth encouragement to new refearches? For my part, all I was enabled to effect, was, to collect feed at every step of my journey, where this was practicable.

The

The genus of plants which feemed most to strike the attention of new comers, on account of the fingularity of its different fpecies, was in my efteem the Liana, a kind of oziers, which as before noticed ferves in lieu of cordage, and which is very abundant in all the hot parts of America. All the fpecies of this genus have this in common, that they twine around the trees and fhrubs in their way, and after progreffively extending to the branches, occafionally to a prodigious height, throw out thoots which, declining perpendicularly, ftrike root in the ground beneath, and rife again to repeat the fame courfe of uncommon growth. Other filaments again, driven obliquely by the winds, frequently attach themfelves to contiguous trees, and form a confused fpectacle of cords, fome in fuspension, and others ftretched in every direction, not unfrequently refembling the rigging of a ship. Of these Lianas there are fcarcely any but to which fome particular virtues are afcribed, fome of them with appropriate justice, as in the inftance of Ippecacuhana. In many parts I observed a fpecies readily difcovered by its potent and diffinct odour, refembling that of garlic. Some of thefe Lianas are as thick as, nay thicker even than the arm of man, and fome, like the Boa Confirictor its victims, ftrangle and deftroy the tree round which they twine their parafitic arms: to thefe, a well-earned name, the Spaniards have given the title of Matapalo (wood-killer). At times it happens that the tree dies at root, and the trunk rots and falls in powder, leaving nothing but the fpirals of the Liana in form of a tortuous column, infulated, and open to the day; nature in this inftance laughing to fcorn, and defying the imitations of art.

The gums, refins, balfams, nay juices of every fort, which exude by incifion from different kinds of trees, as well as the various oils extracted from them, are numberlefs. The oil obtained from a palm called Unguravé is reputed to be equally fweet, and by fome as pleafant to the tafte, as that of the olive. That of others again, for example the Andiroba, yields a brilliant light, without the leaft offenfive finell. In many parts the Americans, in lieu of oil, burn Copul, furrounded by leaves from the Banana tree; in others, certain feeds threaded on a pointed flip of wood, which, fluck in the ground, ferves as a candleftick. The refin called Cahouchou in the province of Quito, where it grows in the vicinage of the fea, is also very common on the banks of the Marañon, and is used there for fimilar purposes; when fresh, by means of moulds, any fhape is given to it at pleafure; it is impervious to rain, but its most remarkable property is its elafticity. Of it are made infrangible bottles, boots, and hollow balls, which can be flattened at will, but which, when the preffure that flattens them is removed, affume again their priftine form. From the Omaguas the Portuguefe of Para learnt the method of forming fyringes of the fame matter, and pumps which need no fucker: these fyringes are made in the shape of a pear, with a neck at the extremity, that, as well as the body, being hollow. Into this neck a cane is fitted. When it is wifhed to fill this veffel with a fluid, the air is expelled by preffure, and the reed inferted downwards into the fluid ; on removal of the preffure the veffel refumes its fhape, and the fluid preffed upon by the circumambient air, is forced into the vacuum formed by the reftoration of its fhape to the veffel; this when full being fuddenly prefied the contained liquid is expelled with the fame effect as from a fyringe; among the Omaguas it is a very common utenfil. When they affemble on occafion of any entertainment, the mafter of the houfe never fails to prefent one of these bottles to each of his guefts, and its contents are voided conftantly previous to the beginning of a grand dinner.

At Saint Joachim we took other canoes and a fresh crew, departing thence the 29th July, with a defign of reaching the mouth of the Napo in time to observe at that place

G G **2**

an emeriion of the first fatellite of Jupiter, which would occur on the night between the 31ft and the 1ft of August. From the period of commencing my journey, I had no certain point of longitude afcertained wherewith to correct my computed diftances. from west to east; however the travels of Orellana, Texeira, and Father Acuna which had rendered famous the river Napo, and the pretentions of Portugal to both fides of the river of Amazons as far as the Napo, made it important to determine the exact position of this point. In spite of various obstacles, I happily succeeded in completing my observation, and thus reaped the first fruit of the toil which the transport of a telescope eighteen feet long, over mountains and through woods, for the space of one hundred and fifty leagues, must necessarily have occasioned. My fellow-traveller, actuated with the fame zeal as myfelf, on this occasion, and on a variety of others at which he rendered me affiftance, was of great fervice, his intelligence and activity being equally exerted. I first observed the height of the fun at noon, in an island opposite to the great mouth of the Napo, which I found to be 3° 24' S. I computed the whole breadth of the Maranon below the ifland, at nine hundred toifes, but was only able to measure one of its branches trigonometrically. The Napo appeared to me fix hundred toifes broad above the iflands at its mouth, which divide it into feveral arms. At length, the fame night, I observed the emersion of the first fatellite of Jupiter, and immediately afterwards, to afcertain the time, I took the height of two ftars. The intervals between the observations were computed by an excellent watch, and by these means, the mounting and regulating of a pendulum, a matter which was scarcely poffible of execution, and which would have required fome time, was rendered unneceffary. The refult of the calculation I made, was, that the difference between the two meridians of Paris and the mouth of the Napo, was four hours and three quarters. This determination will be rendered more exact when the precise inftant of observation shall be ascertained at some place the longitude of which is known, and at which the emerfion may have been vifible.

After obferving the longitude, we continued our way; and the next morning, the 1ft Auguft, landed ten or twelve miles below the mouth of the Napo at Pevas, now the laft of the miflionary eftablifhments belonging to Spain on the banks of the Marañon. Father Fritz had laid them down as extending two hundred leagues beyond, but, in 1710, the Portuguefe poffeffed themfelves of the major part of the lands thus defcribed as pertaining to Spain. The favages of the neighbourhood of Napo were never completely fubdued by the Spaniards, for, at different periods, the governors and miflionaries fent to reduce them to fubjection, have been maffacred; but fifteen or twenty years back, the Jefuits of Quito formed eftablifhments here anew, fending other miffionaries; and thefe fettlements, at prefent, are in a highly flourifhing condition.

The name of Pevas, given to the town at which we landed, is that of an American nation, many individuals of which are inhabitants; but here are collected Americans of divers nations, each of which has a language peculiarly its own, as is common over the two or three families, the wretched veftige of a tribe deftroyed, and devoured by fome other: for, notwithftanding there are at prefent no man-eaters along the banks of the tribes of Americans, who eat their prifoners. The majority of the new inhabitants of the neceflary preliminary of debrutalizing them, a tafk of no fmall difficulty, not having yet been completed.

On

On the prefent occasion, it is not meet I should expatiate on the manners and cuftoms of these nations, and of others I met with, beyond what is necessary, from their relation to phyfics or natural hiftory; I fhall fay nothing, therefore, refpecting their dances, inftruments, entertainments, arms, fishing, and hunting apparatus, their whimfical ornaments of bones of fifhes and quadrupeds, run through their noftrils and lips, or of their cheeks riddled with holes, which ferve them for fixing in feathers of various hues; but anatomifts will poffibly fee a theme for reflection in the monftrous extension of the lobe of the lower part of the ear, of certain nations of this people, without any fenfible diminution of its thickness occurring in confequence of the prolongation. We were much furprized at feeing lobes of this defcription, four or five inches in length, pierced through by a hole from feventeen to eighteen lines in diameter, a circumftance which we were affured was far from uncommon. After first making a hole, they infert in it a narrow cylinder of wood, the fize of which is gradually augmented, until the pendant lobe is fo much lengthened as to reach the fhoulders. The chief decoration is a large nofegay or tuft of herbs and flowers, which is drawn through this hole, forming most uncommon pendants.

From Pevas, the laft of the millionary fettlements belonging to the Spaniards, to St. Pablo, the firft defcending the river pertaining to the Portuguefe*, and in which a deputation from the order of Mount Carmel officiates, the diftance is reckoned fix or feven days' journey; this diftance we travelled in three days and nights. In this interval no dwelling is found on the banks of the river. Here begin the large iflands formerly inhabited by the Omaguas, and here the bed of the river increafes fo much in breadth, that oftentimes a fingle arm of it is from eight to nine hundred toifes broad. As fo wide an extent of furface prefents great room for the action of wind, the waves here run fo high, as at times to overwhelm the canoes by which it is navigated. On our paffage from Pevas to Saint Pablo, we experienced two ftorms; but owing to the long experience of the Americans, it rarely happens they are furprized in the middle of the river, and no imminent danger is to be apprehended, except where they are prevented from feeking fhelter at the frequent mouths of fmall rivers or rivulets. Immediately after the fubfidence of the wind, the current of the ftream reftores the furface to its priftine tranquillity.

The greatest peril in navigating this river arises from the frequency of uprooted trees flicking in the fand or mud, and concealed below the furface; we ourfelves, by striking against one thus under water, on approaching the shore to gather fome wood recommended as efficacious in the dropsy, were nearly overset. To avoid such accidents, the canoes are kept at a distance from shore, when, owing to the great depth, such trees as are carried along by the current float, and, being seen from a distance, are easily avoided.

I fhall not dilate on another accident, much lefs common, but always fatal, to which thofe are liable who keep near the coaft, I mean the fudden fall of trees, whether owing to caducity, or the ground beneath them being gradually undermined by the waters. Many canoes with all their crews have by fuch cafualties been entirely overwhelmed, though, unlefs on fimilar occafions, the drowning of a native is an occurrence never heard of.

On the immediate banks of the Marañon there is now no warlike tribes inimical to Europeans, all having either fubmitted or withdrawn themfelves to the interior : ftill,

^{*} By reference to the letter of Mr. Godin, will be feen, that two fettlements, fince the voyage of M. de la Condamine, have been formed; the one Loreta, belonging to the Spaniards, *below* Pevas, the other Savatinga, belonging to the Portuguefe, *above* San Pablo, at the mouth of the river Yavari.

in fome places, it would be hazardous to fleep on fhore. But a few years back the fon of a Spanifh governor, whofe father we knew at Quito, on defcending this river, having ventured to land, was furprifed in the woods, and maffacred by favages from the interior, who by unlucky chance had ftolen as far as the banks of the river. The fact was related to us by a companion of his who efcaped the danger, and is now fettled at one of the Portuguefe eftablifhments.

The miffionary at St. Pablo, apprifed before-hand of our coming, had prepared for us a large canoe, pirogue, or brigantine, with fourteen rowers and a master. He moreover aisorded us, in another canoe, a Portuguese for a guide; indeed from him, as well as from the whole of the monks of his order, we received courtefies which made us for the time forget we were in the centre of America, five hundred leagues from countries inhabited by Europeans. At St. Pablo we first began to notice, in lieu of ruftic chapels, and bowers for dwellings made of reeds, houses and churches of ftone, brick, and plafter, neatly whitened. We were likewife agreeably furprifed at meeting here amid the deferts with native women all clad in Britany linen, coffers with locks and keys, iron utenfils, needles, knives, fciffars, combs, and a variety of little European articles imported hither annually by the natives, who purchase them in barter for the wild cocoa they gather on the banks of the river, and which they transport to Para. This commerce fpreads among thefe people a femblance of eafe and comfort which at first glance diffinguishes the Portuguese from the Spanish settlements higher up the river. The latter, as the inhabitants hold no intercourfe with their neighbours down the river, but draw every thing from Quito, whither they go fcarcely once in a year, and from which they are effectually as much divided by the Cordilleras as by a fea a thousand leagues in breadth, in every particular exhibit the difficulty with which the conveniences of life are procured.

The canoes in use among the Portuguese, and which we employed down the river from St. Pablo, are much larger, and far more convenient, than those in which we navigated among the Spanish fettlements. The trunk of a tree, which constitutes the whole body of the latter, ferves only to frame the keel and bottom of thefe: in constructing a veffel of this kind, the Portuguese first split the tree, and hollow it out with the axe; they afterwards open it by means of fire to give it breadth : but as the depth is confequently diminifhed by this process, they add planks to the fides, which are fast-ened to ribs fixed in the keel-tree. The rudder in these cances is fo contrived, that the tiller in nowife inconveniences the cabin or little apartment fashioned in the poop. Some of thefe veffels are fixty feet long, by feven broad, and three and a half deep; while others again are much larger, and are manned with forty oars: most of them have two mafts and fails, a very material advantage on afcending the ftream under favour of the east winds, which prevail from October to May. About four or five years ago, one of these brigantines of moderate fize, decked over, and manned by a French trader and three mariners of the fame nation, to the great aftonifhment of the inhabitants of Para, ventured well out to fea, and in fix days arrived at Cayenne from Para, a voyage, as will be feen, (from my following the common practice of the country and coafting along fhore, as best fuited the object I had of taking a chart of the coaft,) which I was two months in completing.

In five days and nights, not including about two days' halt at the intervening fettlement of Yvirataha, Traquatuha, Paraguari, and Tefé, we completed our voyage from St. Pablo to Coari. Coari is the laft of the fix fettlements of the Portuguefe Carmelite miffionaries; the five first have rifen out of the wreck of the eftablishment anciently formed by Father Samuel Fritz, and composed of a variety of nations, most of them emigrants

The whole fix are flationary on the fouthern fide emigrants from their former abodes. of the river, on which the land lies higher, and is fheltered from floods. Between Saint Pablo and Coari, we noticed the confluence with the Amazons of a number of large and beautiful rivers. From the fouth, the chief are the Yutay, of fuperior volume to the Yuruca, by which it is fucceeded, and which, at its mouth, has a breadth of three hundred and fixty-two toifes; the Telé, called by Father Acuna the Tapi, and the Coari, which fome years back was regarded as a lake; the direction of all is from fouth to north, their fources in the mountains eaftward of Lima and north of Cufco. Thev are all of them navigable for a fpace requiring feveral months to afcend, proceeding from their mouths; and different American natives relate, that on the banks of the Coari, in the higher lands, they had observed an open country, flies and a number of horned cattle (the fpoils of which they exhibited on their return), objects to which they were unufed, and which prove that the early waters of thefe rivers take their courfe through countries widely different from those they inhabit, and, no doubt, contiguous to the Spanifh colonies of Upper Peru, where, as is known, the multiplication of cattle is very great. On the northern fide, the Amazons likewife receives, between the two places adverted to, two large and famous rivers; the Yca, which, like the Napo, flows from the vicinage of Pafto, north of Quito, where the miffionary eftablishment of Francifcans, called Sucumbios, is fituate, and where the inhabitants call it Putumayo; the Yupura, the fources of which are farther north, and which, in its early progrefs, is denominated the Caquetá, a name utterly unknown by the inhabitants at its different mouths, for it empties its waters into the Amazons by feven or eight branches, which leave the main trunk in fucceffion, and at fuch diffance the one from the other, that there is an interval of a hundred leagues between the point of entrance of the first and the laft of them. The Americans on their banks give various names to thefe, which have caufed them to be miltaken for different rivers. Yupura is that by which one of the largeft is known, and, following the practice of the Portuguefe, who have extended this name on afcending it, I give the fame denomination, not only to that branch fo called by the natives, but likewife to the trunk itfelf. The whole of the country watered by thefe ftreams is fo low, that when the water in the Amazons is at its greatest height, it is flooded, and admits the paffage of canoes from one branch to the other, as well as from thefe branches to lakes in the interior. The banks of the Yurupa are in fome places inhabited by those ferocious nations of whom I have already spoken, who mutually deftroy each other, and who, many of them, devour their captives. The trunk of this river, and indeed its branches, are frequented by few other Europeans befides those of Para, who refort thither by ftealth to purchase flaves. We shall advert again to the Yupura, in fpeaking of the Rio Negro.

In thefe parts it was that Texeira, afcending the river in 1637, received in exchange, from the ancient inhabitants of an American village, certain trinkets of a very fine gold which, affayed at Quito, proved to be twenty-three carats fine. This village he called The Golden. On his return, he planted a land-mark, and took pofferfion of it in the name of His Majefty of Portugal, on the 26th August 1639, by an act which is ftill preferved in the archives of Para, in which it was feen by mc. This act, figned by all the officers of his detachment, ftates the pofition of the place to have been on high land oppofite to the mouths of the Golden River.

Father Acuña declares that by different channels which he points out, there is a communication between the Yupura and the Yquiary, the river which he calls the Golden. He adds, moreover, that the inhabitants of the banks of this river carry on traffic

traffic in this metal with the Manaos * their neighbours, and thefe again with the people of the banks of the Amazons, of whom he himfelf purchafed a pair of golden ear-rings. Father Fritz in his journal flates, that in 1687, that is to fay fifty years later than Father Acuña, he faw eight or ten canoes of Manaos, who, taking advantage of the floods, had proceeded from their abodes on the Yurubefh, to trade with his flock on the north bank of the Amazons. He fays that among other articles they brought finall plates of beaten gold, which thefe fame Manaos received in exchange from the Americans of the Yquiary. All thefe places and rivers are laid down on the chart of this Father. So many concordant tellinonials, proceeding all from refpectable individuals, leave no room for doubting of the truth of thefe facts ; and this, notwithflanding the river, the lake, the gold mine, the land-mark, and even the Golden village itfelf, have vanifhed like a fairy palace, fo that on the very fpots defignated all memory of them is loft.

Even in the time of Father Fritz himfelf, the Portuguefe, forgetting the title on which their pretentions were founded, infifted that the land-mark raifed by Father Texeira was placed higher up the river than the province of Omaguas, while, running into the oppofite extreme, Father Fritz, a miffionary fubject of the crown of Spain, maintained that it was reared only in the neighbourhood of the river Cuchivara, lower towards the mouth by two hundred leagues. As is ever the cafe in difputed matters, each party launched into extremes. As for the fpot where the land-mark was planted in the Golden village, if the diffrict in which the fourth Portuguefe miffion is fituate defcending the river, be well examined, which is called Paraguari, and ftands on the fouth fide of the Amazons, fome leagues above the mouth of the Tefé, where I obferved the latitude to be 3° 20' S. it will be found to unite all the characteriftics by which the fite of the famous village is marked in the act of Texcira, dated at Guayaris, and in the relation of Father Acuna. The Gupura confequently, one of whofe mouths is oppofite to Paraguari, will be the Rio de Ouro, or Golden river, the mouth of which noticed in the fame act as being oppofite to the village. Remains to know what have become of the Yurubesh and Yquiari, to which Father Acuna gives the name of the Golden River, and to which you afcend by the Tupura; the difcovery of this coft me fomewhat more pains, I think however that I have refolved the queftion, and perhaps found the origin of the Parima Lake and the celebrated Dorado, but regularity and precifion require the postponement of the discuffion to the period of our treating of the Black River.

In the courfe of our navigation, we enquired of the people of various nations, if they had any knowledge of those warlike women which Orellana pretended to have encountered; and if it were true they lived apart from men, receiving them but once a year, as is related by Father Acuña, in whose narrative this forms a part fingularly curious, and well worthy of attention. We uniformly were answered, that they had heard their fathers speak of such things, and repeated many particulars which it were tedious to detail, but which tended to confirm the fact, that in this continent did exist a republic of women, who lived entirely speate from the men, and who withdrew towards the north into the interior, either by the Black River or some other which flows on the fame fide into the Marañon.

^{*} Father Fritz writes Manaves. In the French translation of Acuna's narrative, the word is disfigured to Mavagus. The Portuguese at prefent write indifferently either Manaos or Manaus, pronouncing the word Manaoos.

An inhabitant of St. Joachim de Omaguas informed us that we fhould probably find at Coari, an old man whofe father had feen thefe Amazons, but arriving there, we found the individual alluded to was dead; we however converfed with his fon, who feemed to be feventy years of age, and who was the chief of his tribe in the village. He affured us that his grandfather had in reality feen them pafs by at the entrance of the Cuchiura river, that they came from the Cayamé which falls into the Amazons on the fouthern fide, between the Tefé and the Coari, and that he had fpoken with four of them, one of whom had an infant at the breaft : he moreover told us the names of each of them, and added that on leaving Cuchiura, they croffed the Great River and proceeded towards the Black River. I omit here feveral particulars related, unlikely in themfelves, but which at bottom were of little import. Below Coari, the natives every where related to us the fame facts, varied indeed by circumftances, but which agreed in the main.

The Topayos efpecially, of whom in their place more express mention will be made, as well as of certain green stores called Amazons' stores, relate that they inherit them from their forefathers who obtained them from the Cougnantainsfecouina, a word signifying in their language, women without husbands, among whom as they fay they are found in abundance.

A native inhabitant of Mortigura, a miffionary fettlement in the vicinage of Para, offered to fhow me a river, by failing up which I might, he affured me, afcend to within a flort diftance of the country at this very time inhabited by Amazons. This river is called Irijo, and fince this converfation paffed I failed by its mouth, which is between Macapa and the North Cape. According to this man, it is neceffary, in order to reach the country inhabited by thefe Amazons, to travel for feveral fucceffive days weftward, through woods, and crofs a mountainous country.

An old foldier once belonging to the garrifon of Cayenne, but now fettled near the falls of the river Oyapoc, affured me that being one of a detachment fent into the interior in 1726, for the purpofe of exploring the country, they had penetrated into a part inhabited by the Amicouanes, a nation with long ears. The region inhabited by thefe people lies beyond the fources of the Oyapoc, and in the neighbourhood of a river which falls into the Amazons. Among this nation he noticed that their wives and daughters wore necklaces formed of the green ftones I have before mentioned, and enquiring whence they procured them, he was anfwered from the women without hufbands, whofe territories were feven or eight days journey further towards the weft. This nation of Amicouanes inhabit an elevated country at a diffance from the fea, where the rivers do not yet admit of navigation; it follows therefore that little likelihood exifts of this tradition having paffed hither from the inhabitants of the Amazons, with whom they have no intercourfe, the Amicouanes knowing of no other nations but thofe their immediate neighbours, from among whom the Frenchmen belonging to the detachment felected their guides and interpreters.

It is neceffary to obferve, that not only the teftimonials adduced, but alfo others paffed by in filence, and those of which mention is made in relations given in 1726, and fince then by two Spanish governors * of the province of Venezuela, are alike in unifon with respect to the fact of the existence of Amazons; but what is no less deferving of remark, while these different accounts designate the point of retreat of these American Amazons, fome towards the east, others the north, and others again the west, these feveral directions converge in one common center, that is, the mountains

^{*} Don Diego Portales lately a refident of Madrid, and Don Francisco Torralva who was his successor. VOL. XIV. H H

in the midft of Guyana, a diftrict to which neither the Portuguele of Para, nor the French of Cayenne, have hitherto penetrated. Yet notwithstanding these corroborations I must confess, that I shall give credence to the existence of Amazons at this time, in the fpot pointed out, with great reluctance, until more positive proofs be gradually afforded by the natives of the countries in the neighbourhood of the European colonies on the coast of Guyana; but this migratory nation will very possible again have changed its refidence; or, what to me appears a more probable event than any other, will have forfaken its antient habits, either in confequence of being overpowered by fome other nation, or of the maidens having at length lost the aversion of their mothers to the company of men. Thus, though no remaining vestige should be found of this feminine republic, this would not yet prove that none fuch had ever existed.

Sufficient on the contrary has been adduced to determine the historical fact of the existence at one time, of a nation of women who had no men living with them. For the customs of this nation, and especially that of cutting off one of their breafts, as, trusting to the tales of American natives, Acuña relates; these are accessorial circumstances, independent of the fact itself, and are probably exaggerations or inventions of Europeans informed of the practices attributed to the Amazons of Afia, and which a fondness for the wonderful may have caused the natives of America learning these tales from them, to interweave in their narratives. In fact, it is flated, that the Cacique who admonished Orellana to be on his guard against the Amazons, whom in the language of his country he denominated Comapuyaras, defcribing them as but with one breaft; and the native of Coari, on repeating the relation of his grand-father who faw four Amazons, one of them fuckling her child, made no mention of this peculiarity, one of too remarkable a nature to have escaped observation.

I return to the principal fact. If, in refutation of the existence of a nation of this defcription, be alledged the want of probability, and the next to moral impoffibility, that fuch a feminine republic could be founded and fubfift, I shall not attempt to support it by inftancing the antient Amazons of Afia, nor the modern ones of Africa *, as what we read of these in antient and modern authors, is at best much mingled with fable, and open to difpute; but shall confine myself to remarking that if ever such a nation had existence, there is most reason to conclude it must have been in America, where the frequent wanderings of the women, who often accompany their hufbands to war, and the hardships of their domestic life, might not only originate such an idea, but likewise furnish them with numberless opportunities of shaking off the yoke of their tyrants, of forming an independent establishment, and of avoiding that vilifying condition of flavery, fo little removed from that of beafts of burthen, in which they had previoufly lived. Such a refolution once formed, it would neither be more extraordinary, nor more difficult to put it in execution than fimilar plans, in the European colonies of America; whence flaves, who weary of ill-treatment, or difgusted with their condition, so frequently fly to the woods, either in bands, or where no affociates are found, alone; thus paffing years, and oftentimes their whole lives, in the folitude of the unbounded wildernefs.

I am aware that if not all, yet the majority of the natives of South America are liars, credulous, and prone to the marvellous; but none of these people could ever have heard of the Amazons of Diodorus, Siculus, and Justin, previous to the arrival of the Spaniards among them; but even then Amazons were spoken of as existing in

L

^{*} See Father Labat, and the description of Eastern Ethiopia by Father Juan de Santos, in Portuguese, Lisboā, and the French translation at Paris.

the center of the country, and have fince been by nations who never had held commerce with Europeans. This is proved by the advice given by the Cacique to Orellana and his people, and by the traditions related by Father Acuña and Father Baraze*. Is it poffible to conceive that favages, inhabiting countries fo diftant one from the other, fhould have leagued together in inventing the fame fact, and that this fuppofed fable fhould be fo uniformly and fo generally adopted at Maynas, at Para, in Cayenne, and in Venezuela, among fo many nations who comprehend not one the language of the other, and who have no intercourfe whatever?

Moreover, I have not enumerated the authors and travellers † of different nations of Europe,, who during more than two centuries, have continued to fpeak of the exiftence of Amazons in America, and of whom many pretend to have feen them, contenting myfelf with the adduction of new teftimonies, which Mr. Maldonado and myfelf were enabled to collect on our way. A difcuffion on this queftion may be feen in the preface to the first book of the Teatro Critico of Father Feijoo, a Spanish Benedictine, the work of his learned difciple Father Sarmiento of the fame order.

On the 20th of August we left Coari in a fresh canoe, and with another crew. The Peruvian language fpoken by Mr. Maldonado and our domeftics, and of which I had a flight knowledge, enabled us to hold converfe with the natives of the country, in all the miffionary fettlements of the Spaniards, in which it has been the fludy of thefe to make it the common language. At St. Pablo and at Tefé we had Portuguefe interpreters, who fpoke the Brazilian tongue, introduced in like manner throughout the whole of the establishments of the Portuguese missions; but meeting with none at Coari, where, fpite of our diligence, we failed in arriving fufficiently in time for the great miffionary canoe difpatched to Para, we found ourfelves among the natives with whom we could hold no difcourfe other than by figns, and the help of a fhort vocabulary I had framed of queftions in their language, but which vocabulary unfortunately could not lead to the comprehension of their answers. I was nevertheles enabled to gather fome fmall information from them, especially the names of rivers. I likewife remarked that they were acquainted with a number of fixed ftars, and that they gave the names of animals to different conftellations. The Hyades, for example, or the head of the bull, they call Tapiera Rayouba, from a name which now fignifies in their tongue, the bull's jaw. I fay now, becaufe, fince bulls have been imported from Europe into America, the Brazilians, as well as the natives of Peru, have applied to these animals, the name which either of them before in their maternal tongue gave to the elk t, the largest of the quadrupeds they knew before the arrival of Europeans.

The day after we left Coari, continuing our progrefs down the river, we paffed on the northern fide of one of the mouths of the Yupura, about a hundred leagues diftant from the first; and the fucceeding day, on the fouth fide, the mouths of the Purus, as it is now called, formerly denominated the Eucrivara, from the name of a village in its neighbourhood; in this village it was that the grand-father of the old Indian of Coari was visited by the Amazons. The Purus is inferior in volume to none of the rivers which swell the current of the Maranon, and if the native Americans can be credited, is equal in breadth to even that river itself. Seven or eight leagues below the

[†] Americo Vespucci, Halderic Schmiddel, Orellana, Betrio, Sir W. Raleigh, Fathers Acuna, Artieda, Baraze, &c.

[‡] This is a millake of Condamine; Tapiura, in the Brazilian tongue, does not fignify an elk, but the Tapir, an amphibious animal about two feet high by forty inches in length, fometimes wrongly termed a Hippopotamus. TRANS.

confluence of the two, at a fpot where no iflands were, and where the breadth of the Marañon was from one thousand to one thousand two hundred toises, while stemming the current with all fail fet, in order, as well as poffible, to keep the boat stationary, I founded, but found no bottom with one hundred and three fathoms of line.

On the 23d we entered the Rio Negro, or Black River, another fea of fresh water which flows into the Amazons on the northern fide. The map of Father Fritz, who never entered the Rio Negro, and the last map of America by Delisse, which copies that of Fritz, represent this river as having a course from north to south while the fact is according to the relations of those who have ascended it, that its course is from weft to east, with a slight inclination towards the south : that such is its direction for several leagues above its confluence with the Amazons, I myfelf had ocular demonstration, having observed that at this point its course is fo nearly parallel to that of the Amazons, that, were it not for the transparency of its waters, which has earned it the diffinction of the Black River, it might be miltaken for a branch of the Amazons, feparated by an island. We ascended two leagues up this river as high as to the fort built by the Portuguese on its northern bank, at its narrowest breadth, where I measured it and found it to be one thousand two hundred and three toises in width. The latitude of the fort I observed to be 3° 9' S. This was the first fettlement we came to belonging to the Portuguese on the northern fide of the river Maranon. The Rio Negro has been frequented by the Portuguese more than a century, and a great traffic for flaves is carried on, on its banks. On thefe there is conftantly a detachment of Portu-guele from the garrifon of Para, encamped for the purpole of keeping the different American nations in awe, and of facilitating the flave-trade within the limits prefcribed by the laws of Portugal; and every year this flying camp called the Redemption Troop advances farther into the country. The Captain Commandant was absent from the fort on our arrival, and I halted here but four and twenty hours.

On the whole of the banks of the Black River hitherto explored, are fettlements of Portuguese mislionaries of the fame order of Mount Carmel, we had constantly noticed in descending the Maranon, after quitting the fettlements of the Spanish missionaries. On afcending this mighty river for a fortnight, three weeks, nay even a longer time, it is yet found of ftill greater breadth than at its mouth, owing to the multiplicity of iflands and lakes that it forms. Throughout the whole interval of fpace, its banks are elevated and never overflowed; they are lefs thickly covered with wood, and altogether the country prefents an afpect widely different from that which borders the Marañon.

While at the fort on Rio Negro, we obtained more diftinct information respecting the communication that exifts between this river and the Oronooco, and, confequently, between the latter and the Amazons. I shall not detail the various proofs of this fact which I gleaned with care on my voyage, (of which, the most material was the indifputable testimony of a native American female, belonging to the Spanish missions on the banks of the Oronooco, of the Cauriacani nation, and the village of Santa Maria de Bararuma, with whom I held conversation, and who had been brought from thence in a canoe to Para,) thefe evidences being rendered fuperfluous by that ultimately obtained. By a letter from the reverend father John Ferreyra, rector of the college of Jefuits at Para, I have recently learnt that last year (1744), the Portuguese belonging to the flying camp, after ascending from river to river, at length met the superior of the Jefuits of the Spanish missions from the banks of the Oronooco, whom they brought back with them by the way they came, without once landing to their camp on the Rio Negro. The fact, therefore, of the connection of the two rivers, no longer admits of doubt, however contradicted by the recent author of El Orinoco Ilustrado, (Madrid,

1741, p. 18.) long a miffionary on the banks of the Orinooco, who, in 1741, regarded fuch connection as impoffible. He was certainly ignorant at that time, that his own letters to the Portuguese commandant, and the almoner of the Redemption Troop, were forwarded by the very channel reputed fabulous to Para, where I faw the originals themselves in possession of the governor; but even this author himself, by what I learn from Mr. Bouguer, who faw them last year at Carthagena in America, is by this time completely undeceived.

The politive certainty of an exifting communication between the waters of the two rivers, which the cited teltimonials adduce, is a geographical fact the more important, from the circumftance that, though this union be unequivocally marked on ancient maps, it has been generally fupprefied in those given by modern geographers, as if by common confent, and treated as chimerical by those who were fuppofed to have the best means of information. This, probably, is not the first example of theoretic conjecture, fupported by plaufibility prevailing over facts attested by travellers of faith; nor the only inftance in which criticism, too far extended, has ventured on denial, where juffice allowed but of doubt.

Yet, where does this communication between the Oronooco and the Amazons take place? This we can learn with exactitude only when the court of Portugal fhall think fit to publifh a chart of the Rio Negro. In the meantime, I fhall explain my ideas on this fubject, grounded on a comparifon of the feveral accounts I collected in the courfe of my travels, with the collective narratives, memoirs, and maps, in manufcript or in print, which I have been able to confult, as well on the fpots themfelves as fince my return, and efpecially with the draughts fketched by my companion and myfelf in the prefence of, and after hearing the relation of the beft informed, among those of the miffionaries, and others, who had afcended and descended the Amazons and the Black River.

From these combined accounts, the one ftrengthening and elucidating the other, I gather, that a fmall village of native Americans in the province of Mocoa (eaftward of that of Pasto, and in 1° N.) gives its name of Caquetá to a river on the banks of which it is fituate. Defcending lower, this river divides into three branches; one, the famous Oronooco, which mixes with the fea oppofite the ifland of Trinidad, takes a north-eaftern direction; another, the fame as lower down, is called Rio Negro by the Portuguefe, flows eaftward with a gentle declination towards the fouth; the third, the Yapura fo often mentioned, has likewife an eaftward courfe, but with a more fouthern inclination than the preceding. I am uncertain whether or no this laft river leaves the main trunk earlier than the two preceding, or whether it be merely an offspring of the fecond branch, the Rio Negro : in determining, I have only conjecture for my guide ; but this, founded on fubftantial reafoning, leads me to think the former of thele pofitions most worthy of affent. However this may be, it is at least plain that, if the Yupura be acknowledged as a branch of the Caquetá, (a name unknown on the banks of the Amazons) the whole of the relation of Father Acuña refpecting the Caquetá and Yupura, becomes eafy of comprehension, and accordant. It is well known, that the diverfity of names given to places, and efpecially to rivers, by the various nations inhabiting their banks, has at all times occafioned to geographers the greateft perplexity.

In this ifland it is, or rather this new Mesopotamia, formed by the Amazons and the Oronooco, united by the Rio Negro, that the fabled Golden Lake Parima, and the imaginary city Manoa del Dorado, have long been fought, a speculation which has occasioned the death of so many individuals, and, among others, of Sir Walter Ra-

leigh,

leigh, a famous navigator, and one of the moft fhining characters England can boaft, one alfo whofe tragical hiftory is fo generally known. It is vifible from the expressions of Father Acuña, that, in his time, the existence of this fanciful chimera was far from general difcredit. I must here apologize for a flight geographical detail which too closely belongs to my subject to be omitted, and which may ferve to unravel the origin of a romance, which nothing but a thirst for gold could render credible: a town with roofs and walls of golden plates, a lake with fands of gold !

Here it will be neceffary to call to mind what before has been obferved refpecting the Golden River, and the previoufly quoted facts, extracted from the narratives of Fathers Acuna and Fritz.

The Manaos, according to the laft author, were a warlike nation, the dread of all their neighbours. They long refifted the Portuguefe, with whom at prefent they are on friendly terms : many have fettled among the tribes and miffionary fettlements on the Rio Negro; while fome ftill make long excursions into the countries inhabited by roving tribes, and are ferviceable to the Portuguese in their flave-trade. Two of this nation it was who penetrated as far as to the Oronooco, and bore away and fold to the Portuguese the American Christian female I have before mentioned. Father Fritz, in his journal, fays expressly, that those Manaos whom he faw trading with the inhabitants of the banks of the Amazons, and who procured their gold from the Yquiari, came from the banks of the Yurubesh. By dint of inquiry, I learnt, that after five days' failing up the Yupura, a lake occurs on the right, which it takes a day to traverfe, and which is called Marahi, or Para-hi, a word fignifying, in the Brazilian tongue, River Water; that from this lake, by dragging the canoe along where infufficient water is found, but where, during the floods, there is depth enough for navigating the veffels in use, one comes to another river called Yurubesh, by which, floating with the current, a paffage to the Black River is effected in five days; finally, that this last river, a few days' fail above the confluence of the Yurubesh, received another called Quiquiari, in which were many cataracts, and which proceeds from a mountainous country abounding in mines. Can it be doubted that thefe rivers are the fame as are alluded to under the names of Yurubesh and Yquiari by Fathers Acuna and Fritz? The latter, it is true, gives a different courfe to there two rivers, making the Yurubesh a tributary to the Yquiari, and the latter to difembogue its waters into a great lake in the interior; but, founding his relation on the testimonies of American natives alone, from whom it is difficult to obtain any clear or diffinct account, especially where the intervention of an interpreter is necessary, it is far from surprising, if errors should occur; on the other hand, the names of these rivers are preferved with but the flightest alteration. On the map of Father Fritz, a large affemblage of Manaos, which he calls Yenefiti, is laid down as inhabiting this district. Of this I was enabled to obtain no fatisfactory intelligence, which is not to be wondered at, when we reflect on the migrations and difperfion of the Manaos' nation; at the fame time, it feems highly probable that, from the capital of the Manaos, the city of Manao was invented. I lay no ftrefs whatever on the poffible derivation of Parima from Marahi or Para-hi, but confine myself to authentic data. The Manaos had a confiderable affemblage or town in this diffrict; they had in their vicinage a great lake, nay feveral lakes, for collections of water are very common in a country fo low as this, and fo much liable to inundations. The Manaos, moreover, brought gold from the Yquiari, and flattened it into fmall plates : thefe are facts well established, and which may have been exaggerated fo as to have given birth to the fabulous city of Manao and the Golden Lake. If the cafuift fhould dwell on the difproportion between the fmall plates of gold of the Manaos and the roots of golden tiles

tiles of the city of Manao, the particles of gold walhed from mines by the Yquiari, and the golden fands of the Parima lake, he muft yet allow, great as it really is, that cupidity and prejudice, on the part of European adventurers, determined on finding what they fancied had existence; and, on the part of the native Americans, interested in ridding themfelves of unwelcome guests, a genius prone to exaggeration and lies, that these, I fay, are media fufficient to account for the affimilation of objects thus widely diffimilar in themfelves, and the change and disfigurement of facts, fo as not to be known for the fame. The history of the discoveries in the new world furnish more than one instance of metamorphose equally ftrange.

I poffefs an extract from the journal and a copy of the map of Nicolas Hortfman, a native of Hildefheim, probably the laft traveller who attempted a difcovery of thefe vifionary incognitæ. They were given to me at Para by the author himfelf, who, in the year 1740, afcended the river Effequibo, whofe mouth is on the ocean between the rivers Surinam and Oronooco. After having traverfed lakes and vaft tracks of land, now dragging, now carrying his canoe, and enduring in his excursion incredible toil and fatigue, but without any traces of the object of his fearch, he at length came to a river with a fouthern courfe, by which he defcended into the Rio Negro on its northern fide. The Portuguefe have given it the name of Rio Branco, or White River; and to the river Effequibo, the Dutch have attached that of Parima; doubtlefs, becaufe of their fuppofing it to proceed from the lake of that name; and, for a fimilar reason, one of the rivers of Cayenne has a like denomination. It may be conceived by fome, that this Parima lake was one of those croffed by the adventurer last noticed, but in any of them, he found so little that corresponded with the idea he formed of the Golden Lake, as to be far, in my opinion, from adding his fanction to fuch a conjecture.

The cryftalline waters of the Black River had barely loft their transparence by blending with the pale and muddy current of the Amazons, before, on the fouth fide, we drew near the first mouth of another river, fcarcely fecondary to the preceding, and no lefs reforted to by the Portuguefe. By them it is called Rio de Madera, or the Wood River, possibly from the abundance of trees brought down by its current after floods. Some idea of the length of its course may be entertained, from the fact of its having been ascended in 1741 as high as to the vicinage of Santa Cruz de la Scirra, an episcopal fee of Upper Peru, in latitude $17\frac{1}{2}$ fouth *. In its superior part, where the missionary fettlement of Moxes is established, this river is called Mamore; of its course, in this part, the Jesuits of Lima published a chart in 1713, which is given in Book XII. of *Lettres Edifiantes et Curieuses*; but the earliest fource of the Madera is in the neighbourhood of the mines of Potosi, but little distant from that of the Pitcomayo, a tributary of the great river De Plata.

The general breadth of the Amazons below the two laft noticed rivers, the Rio Negro, and the Madera, is about a league; where iflands occur, its breadth from bank to bank is two to three leagues; but in time of the greateft height of its waters, the widely fpreading deluge has no limits. At this point it is that the Portuguefe of Para give the name of Amazons to the river; higher up, it is known by no other than that of O Rio de Solimoes, the River of Poifons, a diffinction which probably originated from the envenomed arrows before noticed, the most common weapon of the inhabitants of its fhores.

* The whole course of this large river exceeds 1,700 British miles, during more than 1,500 of which it is navigable; and the greater part of this length it is of confiderable depth.

239

On the 28th we paffed the Jamundas on the left. Father Acuña calls this river Cunuris, and ftates it to be that in which Orellana was attacked by the warlike women whom he calls Amazons. A little below, we landed on the fame fide oppofite to the Portuguefe fort Pauxis, where the bed of the river is narrowed to a breadth of nine hundred and five toifes. The tide rifes thus high, at leaft the waters rife and fall vifibly every twelve hours, and each day at a later period than on the preceding, as upon the coaft. As the higheft rife of the tide at Para is fcarcely ten feet and a half, as I afcertained by new obfervation, it follows that from Pauxis to the fea, a diffance of upwards cf two hundred leagues, or, according to Father Acuña, three hundred and fixty, the fall of the river is not more than ten feet and a half; this well agrees with the height of the mercury in the barometer which, at Fort Pauxis, fourteen toifes above the level of the water, was about one and a fourth line higher than at Para on the fea.

It will readily be conceived that the flow of tide will not be experienced at the ftrait of Pauxis, more than two hundred leagues from Cape North at the mouth of the Amazons, until many days after its occurrence at that cape, inftead of in five or fix hours, the ordinary duration of the flux of the fea. In fact, between the coast and Pauxis, there are a fcore of points which mark, as I may fay, the diurnal progress of the tides in afcending the river. At all these different points the height of tide is noticed at the fame inftant as on the coaft; thus, fuppofing, for more clear explanation of what I mean to express, that the interval between each two of these points were twelve leagues, there would be high water within fuch interval at every intermediary hour; that is to fay, at every league afcending from the fea, one hour later than at the preceding. The fame, in courfe, takes place with refpect to low water. These alterations, however, of ebb and flow, as before remarked, are constantly and naturally fubject to the fame retardment every day as on the coaft. A fimilar progreffion of undulatory tides, in all probability, prevails at open fea, making the period of high and low water gradually later in proportion to the diftance of each fpot from the point where the first rife and fall of the fea takes place till the breaking of its waves on the fhores. The graduation of the decreafe of velocity with which the tide flows on afcending the river; two opposite currents observed on the flux of tide, the one at the furface, the other at a certain depth; two others, one of which runs up along the margin of the river and increases its speed, while the other, in the middle of the river, runs down, and is flayed in its progrefs; and, finally, again two other oppofite currents, which frequently meet in the vicinage of the fea in the natural crofs-channels, where the flux at one inftant enters either extremity; all thefe facts, of which I am uncertain whether fome of them have ever been duly noticed, and the different combinations of them, together with divers other accidental circumftances relating to the tides, that in a river in which they afcend to a greater diftance in all probability from the fea than in any other in the world, are doubtlefs more numerous and more varied than in any part; would affuredly give room for curious, and perhaps altogether, novel remarks; but, in order to leave little to conjecture, they would require a fucceffion of minute observations, a long refidence at each fpot, and a delay, which but ill agreed with the reafonable anxiety I experienced of revifiting France, after an absence already of nearly nine years duration. I did not omit, however, to pay attention, in the neighbourhood of Para and the North Cape, to a phenomenon incident to the fpring-tides, of greater fingularity than any to which I have alluded, and to which, at due feafon, I shall advert.

We were received at Pauxis, as we had every where elfe been, from the inftant of our entering the territories of Portugal. The Commandant, Captain Manuel Maziel Parente, Parente detained us four days at the fort, and again another day at his country-houfe; and afterwards accompanied us fix or feven days as far as to the fortrefs Curupa, half way to Para. The pofitive orders of His Portugues Majesty, favourable in extreme to my fafety and comfort, were known at every station before I arrived, and infured the most obliging treatment, not to myself alone, but to all who accompanied me; a treatment continued through the whole of my journey to Para, for which I am under the highest obligations to a minister who loves the sciences, who duly values their utility, and whose careful vigilance was ever on the alert to provide, during our long sojourn at Quito, for all the wants of our numerous companions.

In lefs than fixteen hours, we arrived oppofite the fortrefs of Topayos, at the entrance of the river of fimilar name; this again is a river of the first order; it defcends from the mines of Brazil, croffing unexplored countries inhabited by wild and warlike nations, whom the miffionary Jefuits are employed in civilizing.

The town of Topayos has rifen out of the ruins of Tupinambara, formerly fituate in a large ifland at the mouth of the river Madera; and its inhabitants are nearly all that remains of the brave Tupinambos, but two centuries back the lords of Brazil, and through which their language yet prevails. For their hiftory and long peregrinations, the narrative of Father Acuña may be confulted.

Among the Topayos those green stones are more common than with any other people, known by the name of Amazonian, of unknown origin, and which formerly were in high requeft for their fuppofed efficacy in curing the ftone, niphritic colic, and epilepfy, and on which a treatife, under the title of *Pierre Divine*, or the Divine Stone, has been published. These stores differ nothing in colour and in hardness to oriental jade; and as they refift the file, it is inconceivable how the ancient Americans were enabled to fashion them as they did into the shape of various animals. It was no doubt the difficulty of folving this problem which gave origin to a fable fo improbable in itfelf as fcarcely to merit refutation. It was ferioufly afferted, that this from was nothing elfe than the mud of the river, which, when recently taken from its bed, might be moulded into any form, and which obtained its extreme hardness by exposure to the air. Yet were this marvel granted, refpecting the fallacy of which credulity was not undeceived but by fuccefsful experiment alone, ftill would the lapidary be pofed to answer a question of similar nature. This queftion is, by what means were wrought those rounded and polifhed emeralds, pierced with two conical holes diametrically opposite one to the other, which are still to be found in Peru, on the banks of the river St. Jago, in the province of Efmeraldas, forty leagues from Quito, and which are accompanied by divers other monuments of the ingenuity of the ancient inhabitants. As for the green ftones, they every year become more fcarce, as well owing to the unwillingness of the American natives, by whom they are highly prized, to part with them, as to the great number of them which have found their way to Europe.

The 4th, we began to diffinguish the mountains in the north ten or twelve leagues in land. To us who, from leaving the Pongo, had navigated two months without feeing one fingle hill, this spectacle was a novelty. What we faw were the anterior hills of a long chain of mountains extending from west to east, the loss of which mountains divide the spring heads of the streams which irrigate the northern plain of the Amazons, and those of Guyana. To these mountains it was, according to tradition in the country, that the Amazons withdrew. Another tradition, no less general, but of the truth of which less contessible evidence is faid to be afforded, reputes these mountains to abound in mines of various metals. This last statement, however, though of a nature

VOL. XIV.

to

to excite the attention of a greater number of inquifitive perfons, is, neverthelefs, no better fubstantiated than the other.

On the evening of the 5th, I noticed, at fun-fet, that the variation of the compass was $5\frac{1}{2}$ eaft. Finding no fpot favourable to my landing, I made my obfervation on the trunk of an uprooted tree driven by the current and fixed against the flore. We had the curiofity to measure the length of this tree, which, from the roots to the flooting of the branches, measured eighty-four feet, and, in circumference, notwithstanding it was withered and stripped of its bark, twenty-four. By this tree, thrown in our way by chance; by the great dimensions of the pirogues of which I have had occasion to speak, hollowed from one fingle trunk; and by a table without joint, of a hard wood that received an admirable polish, from eight to nine feet long by a breadth of four and a half, which we afterwards faw in the house of the governor of Para, fome idea may be formed of the height and beauty of the timber that grows on the banks of the Amazons, and many of the rivers by which its volume is increased.

At night fall, on the 6th, we left the principal trunk of the Amazons, oppofite to fort Para, newly erected by the Portuguese on the northern bank, on the ruins of an old Dutch fort. There, to avoid the strong current at the mouth of the river Xingu, which had proved destructive to many canoes, we entered a natural canal communicating with the laft-mentioned rivers. The iflands in the mouth of the Xingu, which form a number of channels, prevented my measuring by triangles its actual breadth; but as near as it can be determined by the eye, it is not lefs than a league. It is the fame river which Father Acuna, from what he learnt of natives fpeaking a different language to those now inhabiting its banks, (and here it is fit I should observe, that in the different rongues spoken, rivers are often known by different names,) calls Paranaiba, and Father Fritz, in his chart, Aoripana; Xingu is the American name of a village, the feat of a miflion, fome leagues up the river. It defcends, like the Topayos, from the mines of Brazil; feven or eight days' journey up this river is a cataract, which, however, does not prevent its being navigable to a height, whither it requires two months to fail up. Its banks abound in two species of aromatic trees, the one called Cuchiri, the other Puchiri. The fruit of them, about the fize of a Spanish olive, refembles in flavour the nutmeg, and, grated, is ufed as a fubftitute for that fpice. The bark of the first has the fmell and taste of the clove, which, by the Portuguese, is termed Cravo; whence the French of Cayenne, by corruption, apply to the tree which bears this bark the term Bois de Crabe, or Crab-tree. Were it not for the fpices obtained from the east, this would be more known in Europe. In many spirituous liquors made in Italy and England, it forms a component ingredient.

After the union of the Xingu with the Amazons, the breadth of this is fo confiderable, that but for the continued fucceffion of great iflands which interrupt the fcan of the eye, the fpectator on the one bank would be unable to defcry that oppofite to him *. At this place we found ourfelves happily entirely freed from the mulquitoes, gnats, and flies of every fpecies, which had been our greateft torment throughout the whole of our voyage, a torment indeed fo intolerable, that the natives themfelves never travel without a cotton awning to protect them from their ftings during the night. At certain feafons one is entirely enveloped in fome parts, efpecially in the country of the Omaguas, by clouds of thefe infects, whofe ftinging caufes extreme itching. It is a

* If lefs than eleven English miles in breadth, the banks on one fide must be visible from the other, allowing them to be each eighteen feet above low water-mark, and the eye of the observer five feet from the bank. TRANS.

242

well-known fact, and highly worthy of remark, that from the mouth of the Xingu they no longer are feen, or at leaft are very rare on the right bank of the Amazons, while the opposite bank continues still infested by them. After reflecting on this singularity, and examining the fites of these spots, I conceived this difference to be the confequence of the change in the course of the river at this place; it rising here to the north, the east wind, which almost constantly prevails, must necessarily, coming from fea, drive these infects to the western shore.

On the 9th, in the morning, we arrived at the Portuguese fortress of Curupa, built by the Dutch when masters of the Brazils. The King's lieutenant received us with extraordinary marks of distinction. The three days of our stay were one continued gala, in which was displayed the most profuse magnificence, such indeed as was little to be expected in this country. Curupa is a small Portuguese town, in which are no other natives than such as are states to the inhabitants. It is pleasantly situate on high ground, on the south of the river, eight days' fail from Para.

From Curupa, where the ebb and flow is very perceptible, boats move only with the tide; at a few leagues below, a fmall arm of the Amazons, called Tagipuru, leaves the main channel, which has a northern courfe, and, taking an opposite direction towards the fouth, tends to form the great ifland Joanes or Marayo, disfigured in all maps. From its extremity on this bend it changes its courfe, and, forming a femicircle, rifes north by eaft, and is flortly loft in an eftuary which receives feveral large rivers one after the other. The most confiderable of these is : first, the Rio de dos Bocas, or the Two-mouthed Rivers, formed of the union of the Guanapu and Pacujas; it is two leagues wide at its mouth, and is laid down in all the old maps, as well as the Laet, under the name of the Para river; the fecond the Tocantin, of ftill greater width than the preceding, allows navigation to a height which it requires feveral months to attain, and, like the Topayos and the Xingu, has its origin among the mountains of Brazil, abounding in mines; finally, the Muju, which, two leagues up from its mouth I found feven hundred and forty-nine toiles in breadth, and on which I faw a frigate belonging to His Portuguefe Majefty going up under full fail, in order to take, many leagues higher up, certain rare and curious wood, the growth of its banks. On the eastern bank of this river it is that Para is fituate, just below the mouth of the river Capim, which, flortly before its difemboguing itself into the effuary, receives another called the Guama. Nothing lefs than the fight of a correct map is requifite to furnish a diftinct idea of the fite of this city at the concourse of fo many rivers, and prove that it is not without reafon its inhabitants are far from conceiving themfelves placed on the banks of the Amazons, of which river it is possible that not a fingle drop bathes the walls of their city; for as well might we fay that the Loire flows by Paris, becaufe that river communicates, by the canal of Riare, with the Seine. Indeed there is abundant ground for fupposing, that the immense quantity of running water which separates the Terra Firma on which Para stands from the island Joanes, would experience no fensible diminution, though the communication between it and the Amazons fhould be interrupted by the clofure, or deviation of the narrow branch of this river, which comes, as it were, to take possefilion of all these rivers before recited, by usurping their titles. This, however, if fuch be chosen, may remain a question ; and that I may accommodate myfelf to the common opinion, I shall not object to stating, that Para stands on the eaftern mouth of the Amazons; all that is required of me being, to flate in what light this is to be underftood.

On my paffage from Curupa to Para, without being confulted on the courfe I chofe, I was conducted between iflands, by narrow and crooked canals, from one river to an-

II 2

other,

other, for the purpofe of avoiding the peril attendant on paffing their mouths. What enfured my fafety, and had been gratifying to another traveller, was far from fatisfactory to me, whofe chief object was the ftructure of my chart; in order, mid this tortuous labyrinth of iflands and innumerable canals, to preferve the thread of my rout, while it largely multiplied my toil, exacted redoubled attention.

I have hitherto faid nothing of the fingular fifh which the Amazons produces, nor of the rare animals found on its banks. This portion of natural hiftory alone would furnifh materials for an entire work, and the exclusive fludy of it would not only require a voyage expressly undertaken for the purpose, but a traveller whose attention should be called to no other object. I shall merely enumerate fome of the most fingular.

At St. Pablo de Omaguas I defigned, from nature, the largest fresh-water fish that is known, to which the Spaniards and Portuguese have given the name of the Sea-cow or Sea-bull; which, however, must not be confounded with the feal or fea-calf. The one in question browzes the grafs of the banks of rivers, and in its flesh and fat bears fome refemblance to veal. The female has teats, with which it fuckles her young. Some writers have increafed the fimilitude fuppofed between it and the bull, by attributing horns to it, which nature, lefs generous than they, has denied. It is not amphibious, properly fpeaking, as it never entirely quits the water; and, indeed, is unable fo to do, having only two fins near the head, in fhape of fmall wings, about fixteen inches long, which ferve it for hands and feet, and, confequently, merely raifes its head out of water to reach the grafs it feeds on. The one I defigned was a female; its length was feven and a half Paris feet, and its greateft breadth two: I have fince feen others of fuperior fize. The eyes of this animal are difproportionate; they are round, and only three lines in diameter; the opening of the ears is ftill fmaller, and can better be compared to nothing than a hole made with a pin. This fifh, by fome, has been reckoned peculiar to the Amazons, but it is equally common in the Oronooco; it is likewife, though lefs frequently, found in the Oyapoc, and in many other rivers of Cayenne, and off the coaft of Guyana, and very probably in other parts. It is the fame animal in genus, though I think of different fpecies, that is called the Lamentin, in Cayenne, and in the French islands of America. It is not met with in the open fea, and is rare near the mouths of rivers; but it is found inland at more than a thousand leagues from the fea in the major part of the great rivers which fall into the Amazons, the Gullaga for example, the Pastaca, &c. In the Amazons itself, it is only stopped in its upward courfe by the Pongo of Borja; but this barrier is no obstacle to another fish called Mixano, as diminutive as this is large, many of them not exceeding the length of a finger. This fry annually proceed to Borja, at the commencement of the fubfiding of the waters, about the end of June. They present nothing fingular, if we except the ftrength they exhibit in stemming and fwimming against the current. As the narrow bed of the river neceffarily collects them in great number near the ftrait, they are feen croffing in shoals from one bank to another, and, alternately on either fide, overpowering the violence with which the waters are impelled through this ftrait. When the waters are low, they are taken by hand from the hollows in the rocks of the Pongo, where they reft to refume their ftrength, and which ferve them as fo many ladders in afcending.

In the neighbourhood of Para I faw a kind of lamprey, the body of which, like that of the common fpecies, is pierced by many openings, but, at the fame time, it poffeffes the fame faculty with the torpido; whoever prefumes to touch it with the hand, or even with the end of a flick, experiences a painful numbnefs in the arm, and a

fhock,

fnock, which is faid at times to be fo powerful, as to lay one proftrate. Of this laft afferted fact I had no ocular proof. M. de Reaumur has unfolded the myftery of the fecret fpring which occasions this wonderful effect in the torpido.

The turtles of the Amazons are much in effeem at Cayenne, being reckoned the most delicious that are known. So numerous are they on this river, of different species and of various fize, that they alone with their eggs would yield ample nourifhment to the inhabitants of its banks. Tortoifes or land turtle likewife abound, called, in the Brazilian tongue, Tabutis; these, at Para, are preferred to the other or river turtle. Either, but especially the latter, will live for months together out of the water, and without any visible nourifhment.

Indulgent nature feems, by her prodigality, to favour the general idlenefs of the Americans, and anticipate all their wants: the lakes and marfhes which occur at every ftep on the banks of the Amazons, and, occafionally, at confiderable diffance inland, are filled with fifh of every kind at the time of the annual inundations; and when the waters fall, they remain in thefe as in fo many natural refervoirs, where they are caught with the utmost eafe.

In the province of Quito, in the different countries traverfed by the Amazons, at Para, and in Cayenne, a variety of plants are found, which differ from all known in Europe; the leaves or roots of which, thrown into the water, have the faculty of intoxicating fifh. While thus torpified, they float on the water, and are taken with the hand; by means of thefe plants, and by weirs, which they place at the mouth of fmall ftreams, the Americans catch as many fifh as they pleafe: to preferve thefe, they fmoke them in riddles very rarely, using falt for this purpofe; the inhabitants of the miffion of Maynas, however, obtain rock-falt from a mountain in the neighbourhood of the Gullaga; and those fubject to Portugal, from Para, whither it is brought from Europe.

Crocodiles are very common through the whole courfe of the Amazons, and even in most of its tributaries. They are fometimes twenty feet in length, and possibly more. In the river of Guyaquil, I faw many before I embarked on the Amazons. They remain for hours and days together ftretched on the mud, exposed to the fun, and motionlefs, and refemble trunks of trees or long pieces of timber covered with rough and dry bark. As those of the banks of the Amazons are less purfued, they are confequently less fearful of man. During the floods, they fometimes enter the cabins of the Americans, and more than one example has occurred, of this ferocious animal having borne away a man from his canoe in fight of his companions, and devoured him without the possibility of refcue.

The most dangerous adverfary of the crocodile, and, perhaps, the only one that dares encounter it, is the tiger. A combat between these two animals must present a fingular spectacle, but such a fight must necessarily be the result of hazard, and very uncommon. The Americans give this account of it. When the tiger approaches the river's brink to quench its thirst, the crocodile raises its head to feize him, as on similar occasions it attacks steers, horses, mules, and whatever animal presents itself; the tiger then strikes its talons into the eyes of the crocodile, the only undefended part; but this diving into the water carries the tiger with it, which suffers rather to be drowned than forego its prey. The tigers, an animal common to all hot countries covered with wood, which I saw in America, differ neither in fize nor beauty from those of Africa. Of them there is a one species with a brown skin without stripes. The Americans are very expert in combating the tiger with a spontoon or half-pike, their common travelling weapon. In the province of Quito only, and no where on the banks of the Amazons, did I meet with the animal called by the Peruvians Puma, the lion of the American Spaniards. I cannot determine whether it be deferving the name; the male has no mane, and is much finaller than the lions of Africa. I never faw any but fuch as were dead and flufted.

It would be no fubject of wonder if bears, common but in cold countries, though found on feveral of the mountains of Peru, fhould be unknown in the woods of the Maranon, of which the climate is fo different; neverthelefs, in this part I have heard mention made of an animal called Ucumari, a name that in the Peruvian tongue defignates the bear, though I never was able to convince myfelf of its identity to that beaft.

The elk, which is found in fome of the wooded diftricts of the Cordilleras of Quito, is not uncommon in the woods of the Amazons, nor in those of Guyana. I give the name of elk here to the animal known to the Spaniards and Portuguese by the name of Danta, by that of Uagra to the Peruvians, and Tapiïra to those of Brasil, and which is called in the Galibi tongue on the coasts of Guyana Maypouri. As the continent in the neighbourhood of the island of Cayenne forms a part of the continent traversed by the Amazons, and adjoins the plain watered by that mighty river, in each country is found most of the animals common to the other.

I defigned on my way among the Yameos, a fpecies of weazel which is eafily tamed: I was unable to pronounce or write the name by which it was called, but I faw one again in the vicinage of Para, when it was termed Coati, in the Brazilian tongue. This animal is mentioned by Laet.

Monkeys are the most common game, and that most prized by the Americans of the Amazons. In the courfe of my long voyage down this river I faw fo many, and heard fpeak of fuch a variety of fpecies, that the mere enumeration of their names would take up much time. There are fome as large as a grey-hound, and others fmall as a rat; I do not mean in this comparison to allude to the diminutive species called Sapajou, but others much fmaller, difficult to tame, with long fhining hair moftly of a chefnut colour, and fometimes fpotted with fawn. They have tails twice the length of the body, a small square head, falient ears, pointed like those of the cat and dog, and not like those of other monkeys, between whom and these there is little refemblance, as thefe have rather the look and port of a lion. At Maynas they are called Pinches, in Cayenne Tamarins. I had many, but was unable to preferve them: they are of the fame species called in the Brazilian tongue Sahuins, in French Sagoins; Laet fpeaks of them, citing L'Eclufe and Lery. That prefented to me by the governor of Para, was the only one of its species ever feen in the country; the hair of its body was filvered, and a beautiful auburn; that of the tail, a fhining chefnut approaching to black. It had another fingularity still more remarkable; its ears, cheeks, and mouth, were of a vermillion, fo lively as fcarcely to be taken for a work of nature.

I kept it a whole year, and it was ftill living while I was writing this defcription almost within fight of the French shore, to which country I promifed myself the pleafure of bringing it alive; but, notwithstanding every precaution I took to guard it from cold, probably owing to the rigour of the feason, it died. As I had no convenience on board to dry it in the manner recommended by Mr. Reaumur, all I could do was to preferve it in spirits, but even thus it will probably exhibit fufficient to show no exagge-

This country produces many other rare animals, but most of them have already been described, and are found in divers parts of America, for example, various species of .

boars

boars and rabbits, the pac, the ant-eater, the porcupine, the floth, the tatoo or armadillo, and numerous others, of which fome were drawn by me, while of the refidue the reprefentations taken by M. de Morainville were left in the cuftody of Mr. Godin.

It is by no means aftonifhing that in countries fo hot and humid as that of which I treat, ferpents and fnakes of every kind fhould be common, I have read, but in what relation I forget, that none of those of the Amazons are poifonous; what however is more certain, while many of them are perfectly innocent, of a number of others the bite is almost constantly mortal. One of the most dangerous is the rattle-fnake, remarkable by the variety and livelinefs of its colours; but the most rare and fingular of all is a large amphibious ferpent, from twenty-five to thirty feet long and more than a foot thick, according to report; it is called Tacu Mama, or the Mother of the Water by the Americans of Maynas, and commonly inhabits the large lakes formed by the riverwaters after floods. Facts are related refpecting them of which not even the fancied evidence of my fenfes could prevent me from doubting, though I should fee them, and which I merely venture to repeat from the ferious affurance of their authenticity of the author of El Oronooco Haftrado before quoted. Not only as affirmed by the Americans, does this amazing ferpent fwallow a goat whole, but also by its breath irrefiftibly attracts those animals towards it, which it devours. Various Portuguese of Para endeavoured to perfuade me of the verity of tales equally improbable, for example, of another immenfe fnake which kills men with its tail. I fufpect this laft to be of the fame fpecies found in the woods of Cayenne. There, experience flews, that notwithftanding its teeth are well calculated to excite terror, a man may be bitten by it, and preferve the marks of its langs without any dangerous confequence : of this reptile I brought home two fkins, one of which, dry as it is, measures fifteen feet long by more than one in breadth. Doubtlefs others of still larger dimensions have existence. I am indebted for these fkins, and various other natural curiofities to the Jesuits of Cayenne, Mr. de Lille Adam commiffary of the navy, Mr. Arthur King's phyfician, and feveral of the officers belonging to the garrifon.

The worm called by the Maynas, Suglacuru; and at Cayenne, Macaque; grows in the flefh of men and animals to the fize of a bean, and occafions intolerable anguifh. I defigned the only one I faw, and have the worm itfelf preferved in fpirits of wine; it is related to originate from the egg of a fpecies of gnat or mulquito, but of this there is hitherto no certainty.

Bats which fuck the blood of horfes, mules, and even men, when unfheltered from them by fleeping under cover, are a torment common to most of the hot countries of America; fome of them are of monstrous fize; at Borja, and in various other parts they have entirely destroyed the cattle introduced by the missionaries, and which had previously begun to multiply.

The variety of birds of different fpecies in the forefts of the Maranon is ftill greater than of quadrupeds, but it is generally remarked, that fcarcely any have a pleafing fong, their chief recommendation being their fplendid plumage, and the diverfity of colours with which they enchant the eye. Among thefe beautiful works of nature, none exceed the Colibri mentioned by numerous authors, and which is common in America throughout the torrid zone. Of this magnificent bird I fhall only remark, that though it is generally underftood to belong to hot climates alone, I have no where feen it in fuch numbers as in the gardens of Quito, the temperate climate of which is rather cool than otherwife. The Toucan, the red and yellow beak of which is fo large and difproportionate to its body; and to whofe iongue, which refembles a long and narrow quili, great virtues are afcribed; is another bird not peculiar to this country alone.

CONDAMINE'S TRAVELS

Of parrots and water-fowl, the varieties, differing in fize, colour and form, are numberlefs; the most rare among the parrots are those entirely yellow, except a fmall tinge of green at the extremity of the wings. Of this species I faw but two at Para, where the grey with the tip of the wings of a flame colour, so common in Guenca, is unknown.

The Maynas, Omaguas, and various other nations form fancy-works in feathers, but with much inferior ingenuity, and far lefs neatnefs, than is obferved among the Mexicans.

The inhabitants on the Oyapoc have the fkill of caufing parrots to affume colours different to those they originally difplayed, by plucking their feathers and rubbing the wounds with the blood of certain frogs; this operation is what in Cayenne is termed Tapirer un Parroquet : possibly the fecret confists in nothing beyond bathing the fpot from whence the feathers were plucked with fome acid, indeed the application may be altogether useles, for it is no more wonderful that red or yellow feathers should fpring up in lieu of the green that were plucked, than to fee grey hairs grow from a wounded part on a horfe where black had been before.

Among the fingular birds I faw at Para was one the fize of a goofe, the plumage of which poffeffes nothing extraordinary, but of which the extremity of the wings is armed by a fharp horny fubftance, fimilar to a large thorn, half an inch in length. It has moreover, above its beak, another very flender and flexible horn, the length of the finger: it is called by the Brazilians, from the cry it makes of fimilar found, Cahuitahu.

The bird called Trompetero by the Spaniards of the province of Maynas, is the fame with the Agami of Para and Cayenne. It is very familiar and poffeffes nothing extraordinary if the noife it occafionally makes be excepted, which has earned it the title of trumpeter. Those who have conceived the noife made by this bird to be a note or fong, are much in error; it proceeds not from the throat, but an organ diametrically opposite.

The celebrated Contur, by corruption called Condor, of Peru, which I faw in many parts of the mountains of the province of Quito, is likewife found, if reliance is to be placed in my informants, on the banks of the Marañon, nay, I have myfelf feen thefe birds fcudding over a flock which probably the prefence of the fhepherd reftrained them from pouncing upon. It is a generally received opinion that the Contur can carry off a kid, and fometimes flies away with a child. It is faid the Americans, as a lure, expofe the image of a child, formed of a fpecies of clay of very vifcous and adherent nature, from which this bird, ftriking on it as it pitches, with violence, is afterwards unable to difengage itfelf.

On the 19th of September, nearly four months from my leaving Cuenca, I arrived within fight of Para, called by the Portuguefe the Great Para (Para in the Brazilian tongue fignifying a river), and landed at a dependency of the college of Jefuits. The provincial of the convent gave us welcome, and the rector detained us a week, procuring us every diversion the country could afford, while apartments in the city were preparing for our reception. On reaching Para on the 27th, we found in readiness for us, a very commodious and richly furnished house, with a garden commanding the nor and captain-general of the province received us in that handsome manner we were led to expect, from the orders he had transmitted for our treatment on the way, to favour, transmitted by him to the various missionaries we had met with.

248

On reaching Para and bidding adieu to the woods of the Amazons, we fancied ourfelves at once transported to Europe. We found here a large city, rectilinear ftreets, pleafant houfes, most of them rebuilt of stone and brick within the last thirty years, and churches of magnificent appearance.

The commerce of Para direct with Lifbon, whence a fleet of merchant fhips arrives every year, enable those of the place whose circumstances are easy, to provide themfelves with all the comforts of life. They receive European commodities in exchange for the produce of the country; fome little gold-dust brought from the interior of the Brazils, and all the various useful articles as well from the rivers which fall into the Amazons, as from that river itself, such as clove-wood and the black nutmeg, falfaparilla, vanilla, fugar, coffee, and in abundance cocoa, which is the currency of the country, and at the fame time its staple.

Probably the latitude of Para had never before been obferved on fhore, for when I arrived there I was confidently told I was under the line. Fritz's map places this city in lat. 1° o' S. By repeated obfervations, all of them agreeing, I found it to be 1° 28' S. which latitude differs immaterially from that laid down in the Map of Laet, one, not to my knowledge followed by any after-geographers. In the New Portuguefe Traveller it is laid down in lat. 1° 40' S. As to the longitude I am enabled to fix it with nicety by the eclipfe of the moon, which I obferved on 1ft Nov. 1743, and by two immerfions of the first fatellite of Jupiter, on the 6th and 29th December, in the fame year. In the interval of my procuring corresponding obfervations in fome fpot the longitude of which is authenticated, as there were none effected at Paris, I calculated the difference of the two meridians of Para and Paris to be three hours, twenty-four minutes. I omit the obfervations I made on the variation and dipping of the needle, and on the tides, which are rather irregular at Para.

A more important observation, and which immediately relates to the figure of the earth, the chief object of our voyage, was undertaken by me; I mean the afcertainment of the length of the pendulum to give mean time, or rather the difference of the length of fuch pendulum at Quito and at Para, one of these cities being on a level with the fea, the other from fourteen to fifteen hundred toifes above its level, and both under the equinoctial line; for a degree and a half here is of no confequence. In this experiment I employed a pendulum twenty-eight inches long, more minutely defcribed elfewhere, which continued its ofcillations visibly for more than twenty-four hours and with which I had made a great number of experiments at Quito, and on Mount Pichinchi feven hundred and fifty toifes above the level of Quito. The refult of nine experiments made at Para, the two most distant of which varied but three ofcillations in 98,740, I found that my pendulum vibrated from thirty-one to thirty-two times oftener than at Quito, and from fifty to fifty-one oftener than on Pichinchi. From thefe experiments I concluded that under the equator, two bodies, one of which fhould weigh one thousand fix hundred and the other one thousand pounds, at the furface of the fea, being transported, the one to the height of one thousand four hundred and fifty, the other to a height of two thousand two hundred toifes, would each of them lofe a pound of their weight, as, or nearly, would be the cafe if the fame experiments were made under the parallels of 22° and 28° according to the tables of Sir Ifaac Newton, or, judging from the actual experiments made under the equator, and in various parts of Europe, under the parallels of 20° and 25°. The numbers I have cited are merely approximate, and I claim the privilege of making what flight alteration may be neceffary, after applying the fuitable equations, when I publish the detail of my experiments on the pendulum.

VOL. XIV.

During

During my fojourn at Para I made feveral fhort excursions in a canoe, and availed myself on these occasions to improve my chart. I was however unable to complete it without feeing the true mouth of the Amazons, and tracing its northen bank to Cape North, where it terminates in the fea. This, and other reasons, made me resolve on proceeding from Para to Cayenne, whence I might fail direct to France, on board a King's ship which was there to await me, rather than, as did Mr. Maldinado, profit of the opportunity afforded by the failing of the Portuguese fleet, which took its departure for Lifbon on the 3d of December 1743. I was in confequence detained at Para till the close of the month, less owing to the representations made to me of the contrary winds prevalent at this feason, than to the difficulty I experienced of procuring a complement of rowers; the source of abandon the adjacent villages.

It is noticed at Para that this malady is more fatal to the American inhabitants of the miffions, newly brought from the woods, and who go naked, than to fuch of their fraternity as are clothed, and who received life, or have long dwelt with the Portuguese. The former, a fort of amphibious animal, as often in the water as on land, and enured from infancy to the inclemency of the weather, have poffibly in confequence a lefs porous fkin than the reft of mankind, one confequently which will oppofe more difficulty to the eruptions. The cuftom, moreover, of thefe people, of rubbing their fkins over with anatto, genipa, and various thick and greafy oils, which in process of time must obstruct the pores, may likewife tend to increase this difficulty; and this conjecture is fupported by an additional obfervation; the negro flaves from Africa, who follow no fuch practice, are lefs affected by this malady than the natives. However this may be, the favage newly from the woods who chances to be attacked by this complaint, may in common be regarded as a dead man; but again, how comes that this is not the cafe where inoculation is reforted to? About fifteen years ago a Carmelite miffionary, perceiving all his flock dying about him in fucceffion, and having information from a news-paper of the efficacy of inoculation, which at that time made great noile in Europe, judging wifely, that by reforting to this remedy he might at least render doubtful that death, which without the application was certain; he confequently, after half his catechumens had perifhed, boldly inoculated the whole of the remainder who had not hitherto been attacked, and not one of the number died. He was followed in the example he fet by another miffionary on the Black River, and with equal fuccefs. The fenfible Carmelite reafoned but as others might have done, who, like him, feeing the ravage this diforder occafioned, had heard of the fuccefs of the new difcovery; yet to him is the honour of its first introduction into this part of America.

After these experiments, fo well authenticated, it will be reasonably concluded, that, during the contagion of 1743 which occasioned my detention at Para, all those who had American flaves would refort to a remedy fo falutary. I should myself have thought fo, had I not been witness to the contrary; at least as long as 1 stayed at Para it was not yet thought of. It is indeed true, that hitherto the proprietors had not lost half their flaves.

On the 29th December I embarked for Cayenne, in a canoe belonging to the captain-general, with twenty-two oars, flored with every neceffary to render the voyage comfortable, and furnished with recommendations for the Franciscan Fathers of Reform, who have their mission on the island Marajo or Joannes, and who on my reaching their abode were instructed to supply me with a recruit of rowers; but the want of communication between Para and Cayenne, and other accidents, prevented my finding a single good practical pilot in four villages, at which I landed in the early part of IO January 1744. Defitute therefore of this effential, and committed to the little experience and timidity of my American rowers, and the perfon affigned me to command them (a Portuguefe Meftee who, fpoke their language and who even confidered me myfelf as fubject to his orders), I was two months on a voyage which might have been effected in a fortnight, a delay which hindered my being able to obferve the comet on fhore which at this time made its appearance, and which was loft in the fun's rays before I reached Cayenne.

Some leagues below Para, I croffed the eaftern mouth of the Amazons, or the Para branch, feparated from the real or western mouth by the large island called by the Portuguese Joannes, but more commonly at Para Marajo, and by the Americans there Marago. This fingle island occupies almost the whole intervening space between the two mouths of the river. It is of an irregular form, and more than one hundred and fifty leagues in circumference. Inftead of this fingle ifland, in almost all maps is fubftituted a multitude of fmall islands, which might be conceived to have been laid down at hazard were they not copied into the Flambeau de la Mer, accompanied by details as falle as circumftantial. The Para branch where I croffed, five to fix leagues below that city, is upwards of three leagues broad, and thence, as it approaches the fea, continues to increafe. I coafted along the ifland, running towards the north for thirty leagues, as far as its last head-land called Maguari, beyond which I turned westward, keeping in with the coaft of the ifland; which in this direction fpreads forty leagues, diverging fcarcely at all from the equatorial line. I paffed within fight of two great iflands which I left on the north, the one called Machiana, the other Caviana, now deferts, but once inhabited by the Arouas, who, though difperfed, have preferved their peculiar tongue. These islands, like the major part of the island of Marajo, are nearly level with the water, fwampy, and almost uninhabitable. I left the coast of Marajo where the ifland bends towards the fouth, and once again enterd into the real bed, or principal channel of the Amazons, opposite the new fort of Macapa, on the western bank of the river, transported by the Portuguese two leagues to the northward of the antient fcite. It would be impossible on this part to cross the river in common boats, were not the channel narrowed by fmall iflands, under fhelter of which, by felecting favourable feasons, it is croffed with fafety. From the last island, however, to Macapa, there is still a distance of two leagues. In this last trip I at length repassed, for the last time, the equinoctial line, towards which I had infensibly progressed from the point of embarkation. At Fort Macapa, or, more properly fpeaking, on the fpot deftined for the new fort, on the 18th and 19th January, I observed the latitude to be 0° 3' N.

The bafement on which the fort is to be raifed is two or three toifes above high-watermark. It is only the margin of the river in this part which is covered with trees, the land in the interior is open, the first unwooded country which I had noticed fince I had left the Cordillera of Quito. The natives affured me it continues thus towards the north, and that one might travel hence on horfe-back to the fources of the Oyapoc, over large open favannahs, on which but a few thinly growing fmall woods are feen at intervals. From the vicinage of the fources of the Oyapoc, are diffinguished, towards the north, the Aprouaga mountains, which also are diffinctly perceptible at fea, many leagues from the coast. Taking thus much for granted, it is evident that, departing from Cayenne in lat. 5° o' N. and proceeding fouthward, two, three, nay perhaps four degrees of the meridian might have been measured without quitting the French territory: in short, if chosen, one might, with permission from Portugal, have extended the line to the parallel of Macapa, that is to fay to the equator. This plan would

KK 2

undoubtedly have been more eafy of execution than I conceived it myfelf when I propofed it to the Academy twelve months before the voyage to Quito was projected. Had my opinion been followed, there is every probability we fhould have returned years earlier : but it was only by infpection of the country could be determined that what I recommended was practicable.

Between Macapa and the North Cape, at that part where the main channel is most confined by the iflands, and especially opposite the wide mouth of the Arauary, which falls into the Amazons from the north, a fingular phenomenon is obfervable in the flow of the tides. For the three days next to a new and full moon, the periods of the highest tides, inftead of taking near fix hours in running up, the flood rushes to its height in a couple of minutes, not, as may be conceived, in the most tranquil manner. At the distance of a league or two a frightful noise is distinguished, the herald of the Pororoca, which is the name given by the Americans of the diffrict to this tremendous bore. In proportion as it advances, the noife increases, and shortly a promontory of water is seen, from twelve to fifteen feet high, which is fucceeded by a fecond, afterwards another, and fometimes again a fourth, rapidly impelled one after the other, and filling the whole breadth of the channel: this bore advances with prodigious rapidity, and carries away before it whatever opposes resistance. In some places I faw large tracts of land torn from the main, immenfe trees rooted up, and, in fhort, devastations of every kind, the effects of its violence. Wherever it paffes, the fhore is as clean as if it were fwept with a broom. Canoes, pirogues, and even larger veffels, have no other means of fecurity from the fury of the bore than by anchoring in great depth of water. I fhall not in this place expatiate further on the fact, or its caufe, than to indicate the latter by obferving that, after attentively remarking the occurrence of this bore in feveral places, I found it no where happen, fave where the tide, running in by a narrow channel, encounters in its way a fand-bank, or fhallow, which obstructs the progress of the volume of water it brings; in fuch fpots this impetuous and irregular rufh of the waves commences, ceafing at a fhort diftance beyond where the channel begins to have greater depth or extension. Something fimilar is faid to happen at the Orcades, north of Scotland, frequently in the Briftol Channel, and occafionally in the mouth of the Garonne, near Bourdeaux, where a bore is called Le Mafcaret.

The dread experienced by the chief of my Americans, of not being able, in the fpace of the five days wanting of the high tides of the full moon, to reach the North Cape, from which, however, we were but fifteen leagues diftant, and beyond which we fhould find shelter, occasioned his determining, notwithstanding my entreaties to the contrary, to wait nine whole days on a defert ifland, until the moon fhould have fome time paffed the full. Thence we reached Cape North in lefs than two days; the day after that of the moon entering its last quarter, when the neap tides occur, we grounded on a mud bank, and, at ebb, the fea retiredfar from us. The following day, the flood-tide failed of coming up to us; in fine, I remained in the mud bank a whole week, during which my rowers, now without employ, had ample leifure to wander in fearch of brackish water, wading for the purpose through mud up to the waist. For my part, I amused myself as well as I could in this irkfome position, by repeating my observations within fight of Cape North, but, as may be gueffed, heartily wearied with remaining fo long in latitude 1° 51' N. My canoe, stationary on mud hardened by the sun, became a fixed observatory. I found the variation of the compass 4° E.; two and a half degrees less E. than at Pauxis, and remarked, that on every fide I caft my eyes, nothing was to be feen but Mangle-trees, in lieu of those lofty mountains whose points are so circumstantially detailed in the description of the coast which accompanies the charts given in the Flambeau de de la Mer, a book translated from all languages, and which, in this part, feems rather calculated to miflead than afford any light to navigators. At length, at the approach of the full moon, the commencement of the fame bore fo much dreaded fet us affoat, but not without much danger, as it drove the canoe before it, and caufed it to pitch and labour more in the mud, and with even greater velocity, than I experienced while in the currents of the Pongo in the upper part of the river I had lately navigated, of which, at length, I faw the mouth. Here my chart of the Amazons river finished; I continued, however, to take a plan of the coast, and to make my observations of the latitudes, as far as Cayenne.

At a diftance of fome leagues weft of the bank and under the fame parallel, I found a fecond mouth of the Arauari, now barred by the fands. This mouth, and the deep and broad channel leading to it from the north, with the iflands in advance of the cape northward, are the river and bay of Vincent Pinçon. The Portuguefe have their reafons for confounding it with the river Oyapoc, the mouth of which, by Cape D'Orange, lies in latitude 4° 15' N.; yet, notwithftanding the article of the treaty of Utrecht confounds the Oyapoc with the river of Pinçon, regarding them as one, they are neverthelefs fundered by a fpace of more than fifty leagues. This is a fact that will not be difputed by any who have confulted the old charts of this country, and have read the original authors who wrote on America before the eftablifhment of the Portuguefe in Brazil. I found, by obfervations made on the 23d and 24th of February, that the French fort of Oyapoc ftands in latitude 3° 55' N.: its fite is on the north bank of the river, fix leagues up from its mouth.

At length, after a voyage of two months by land, I may fay, as well as by fea, (for the coaft is fo flat between Cape North and the ifland of Cayenne, that the rudder conftantly grounded, or rather, never ceafed furrowing the mud, as half a league from fhore there was at times no more than a foot of water,) I arrived at Cayenne on the 26th February 1744.

It is well known, that it was in this island M. Richer of this academy, in 1672, made difcovery of the inequality of weights under different parallels, and that his experiments were the bafe of the theories of Mr. Huygens and Sir Ifaac Newton refpecting the figure of the earth; now, one of the motives which induced me to go to Cayenne, was a profpect of the utility that would refult from a repetition of his experiments, as we are in the prefent day greatly accustomed to them, and enabled to exercise far more precision than formerly. I bring with me a steel rule, which, according to my observations, is precifely of the fame length with the fimple pendulum at Cayenne; but I look for ftill greater exactitude, from a comparison of the number of the ofcillations of my fixed pendulum at Cayenne with the vibrations at Paris of the fame pendulum in equal fpace of time, when I shall be enabled to make the experiment. This comparifon will flew the politive excels of the number of the vibrations of the pendulum at Cayenne over those of the pendulum vibrating feconds at Paris, the length of which is determined by M. Mairan; and as more precifion was observed by him in the afcertainment of the length of this pendulum than any by whom he had been preceded, it is fair to prefume it is correct. As an eftablished term may also be regarded the length of the pendulum afcertained at Quito, in various manners, and with different inftruments, by M. Godin, M. Bouguer, and myfelf, in which length we feverally agree to within lefs than the hundredth part of a line. But, from whichever point we proceed, the difference between the number of ofcillations in the fpace of twenty-four hours of the fame pendulum at Quito, at Para, and at Paris *, determined by a long feries of expe-

* It is questionable, whether, in lieu of "Paris," should not be read "Cayenne." TR.

riments

riments at each place, will give the precife length of a pendulum ftriking feconds on the equinox at the level of the fea, that length the moft proper, by common confent, to be received as a univerfal meafure. How defirable, indeed, were fuch a meafure, at leaft for mathematicians! The diverfity of tongues, an inconvenience which yet muft endure for many centuries, does it not prefent fufficient obftacles to the progrefs of the fciences and the arts, by prefenting, in a degree, the requifite communication between different people; but it muft be ftill increafed, as one may fay, purpofely, by an affectation of ufing, in each country, and at each fpot, meafures and weights which conftantly vary one from the other, while nature, in the pendulum ftriking feconds under the equator, prefents an invariable teft, fo well adapted to the eftablifhment of a common meafure and a common weight in every country; one, too, which calls upon every lover of learning for its adoption ?

The object of my first folicitude on reaching Cayenne was, to distribute to various perfons feeds of Quinquina, or the Bark-tree, then only eight months old; by means of thefe, I trusted to repair the loss might be experienced by the failure of the young plants of that tree, the last of which, preferved by me from the heat of the climate and the cafualties incident on fo long a voyage, had been carried away by a wave which, off Cape D'Orange, threatened our canoe with destruction. The feeds at Cayenne did not prosper; indeed, reflecting on their delicacy, and their inevitable exposure to a high temperature, their prosperity was more than could reasonably be expected. I have not, moreover, received any information respecting the result of those I committed to the management of the Jesuit mission respecting the result of those I committed to the management of the Jesuit mission respecting the result of those I committed to the management of the Jesuit mission respecting the result of those I committed to the management of the Jesuit mission respecting the result of the fail and the ritory and more temperate climate of whose establishment associated, far more than Cayenne, with that of Loxa, whence the feeeds were brought.

At Cayenne I obferved the latitude to be, as determined by M. Richer, $5^{\circ} 56'$ N.; but was at first furprifed to find, by four obfervations of the first fatellite of Jupiter, each of them agreeing with the others, that the difference between the meridians at Paris and Cayenne is nearly one degree lefs than is stated in the *Connuiffance des Temps*; but I have fince learnt, that M. Richer made no obfervation of the fatellites of Jupiter at Cayenne, and that the longitude of this place was deduced from other obfervations made by him, in a manner very imperfect and much subject to error. A more enlarged detail on this subject, as well as of my remarks on the tides, and the variation and dipping of the needle, made at the fame place, will more appropriately occur at our private meetings.

Noticing that at Cayenne, the mountains of Courou, effimated ten leagues diftant, were very diffinctly vifible, I conceived, that a fpot, whence the flafh and report of a cannon fired at the fort of Cayenne could be perceived, would be well adapted to the menfuration of the celerity of found in a climate fo different from that of Quito, where we had made a variety of experiments. M. d'Orvilliers, commandant of the fort, not only complied with my requeft of iffuing the requifite orders, but gladly undertook to fhare the toil with me on the occafion; M. Frefneau, of the engineer corps, undertook, on his part, the hoifting of fignals, and afcertaining the celerity of the wind, with feveral other incidental matters. From five experiments made on two different days, four of which agreed within lefs than half a fecond in one hundred and ten, and from the diftance, which was concluded to be twenty thoufand two hundred and thirty toifes by trigonometrical calculations, in which a bafe twice meafured on a level beach of one thoufand nine hundred toifes was employed, we determined, as the mean refult hundred and eighty-three and a half toifes in a fecond in this part, whereas its progrefs at Quito was only one hundred and feventy-five. The cannon used in these experiments was a twelve pounder.

I took advantage of the angles I had already meafured, and the diffances afcertained in order to determine geometrically the polition of thirty or forty points, as well in the ifland of Cayenne as on the continent and the coaft, among others, of certain rocks, and efpecially that called the Conftable, which ferves as a fea-work to fhips. I likewife took the angles of elevation of the most confpicuous capes and mountains. Their height, well afcertained, would furnifh pilots with a much better dependence than mere reckoning, for appreciating, on catching fight of them, (and that without other trouble than confulting a fimple table,) their diffance from the coaft. It is but too well known how neceffary, on approaching the land, an exact knowledge of this is to the mariners; nor is the help which geometry affords to navigation, and which has been hitherto neglected, confined to this inftance alone.

On another excursion out of the island, in company with M. d'Orvilliers, we afcended feveral rivers on the main, and measured their courses; I also frequently took the latitudes, and thus obtained materials which, with the principal points I had before determined, may ferve to form an exact map of this colony, which is the more wanting, as there are none at prefent deferving the name.

During my fojourn at Cayenne, I had the curiofity to try, if the venom of the poifoned arrows, which I had preferved upwards of a year, ftill retained its activity, and whether fugar be in reality as fecure an antidote as it is reprefented. The experiments for determining these points were made in presence of the governor of the colony, of feveral officers of the garrifon, and of the King's phyfician. A pullet, flightly wounded by a finall arrow, which had been dipped in this poifon thirteen months before, and which was blown through a farbacan, lived about half a quarter of an hour; another, pricked in the wing with one of these fame arrows, newly dipped in the venom diluted with water and immediately withdrawn, feemed to faint a minute afterwards, was fhortly feized with convulsions, and, notwithstanding it was made to fwallow fugar while in this ftate, expired. A third, pricked with the fame arrow fresh dipped in the poison, having had the fame remedy immediately administered, exhibited no fign of the least inconvenience. I repeated these experiments afterwards at Leyden in prefence of the celebrated profeffors, Muffenbrock, Van Swieten, and Albinus, belonging to the univerfity there, on the 23d January of this year. The poifon, the force of which was neceffarily diminished by length of time, and by the cold, did not produce its effects in less than five or fix minutes; but fugar was given to no purpose in another instance, the fowl which fwallowed it living but a flort time longer than the other *. The experiment was not repeated. This poifon is an extract made by boiling the juices of certain plants, especially particular lianas. For the venom used by the Ticunas, which is that I tried, and which is held in higheft efteeem of all the different fpecies known along the river Amazons, I am affured that more than thirty kinds of herbs or roots enter into its composition. These Americans constantly follow the fame process in preparing it, that handed down to them by their forefathers, and this with as nice exactitude as with us apothecaries in the composition of the theriaca Andromachi, omitting not

^{*} Should this relation be perfectly correct, it would appear that, although at a high temperature of the air fugar immediately taken on the blood becoming infected with this poifon, may be regarded as a remedy aud antidote, it lofes its efficacy when adminiftered in a cold climate. The temperature, at the time the experiment was made at Cayenne, in July, would be about 80° Fahr., while that at Leyden, in the midit of winter, was poffibly below 30°. TRANS.

the fmallest ingredient, although it is highly probable the great multiplicity of components is as little requisite in the American poison as in the European antidote.

It will no doubt occafion furprife, that among a people who poffefs an inftrument fo certain and fo quick of effect, with which to fatiate their vengeance, their jealoufy or hate, it fhould be fatal to monkeys or birds alone. It is the more to be admired, as a miffionary, ever dreaded, and often held in abhorrence by these neophytes, towards whom his functions admit not of shewing that indulgence they exact, though furrounded by them, lives without fear or mistruft of harm; and what should ftill farther increase our admiration, these innoxious people are favages, for the major part destitute of the least idea of religion !

Having learnt, while at Cayenne, the marvellous and even novel fact, of the multiplication of Polypi, difcovered by M. Trembley, and fince confirmed by the experiments of M. Reaumur, M. de Juffieu, and a variety of other naturalifts, I made fome trials on fea-polypi of large fize, which, off this coaft, are very common. My first experiments were not attended with fuccefs, and an illnefs with which I was feized, prevented my repeating them as I intended.

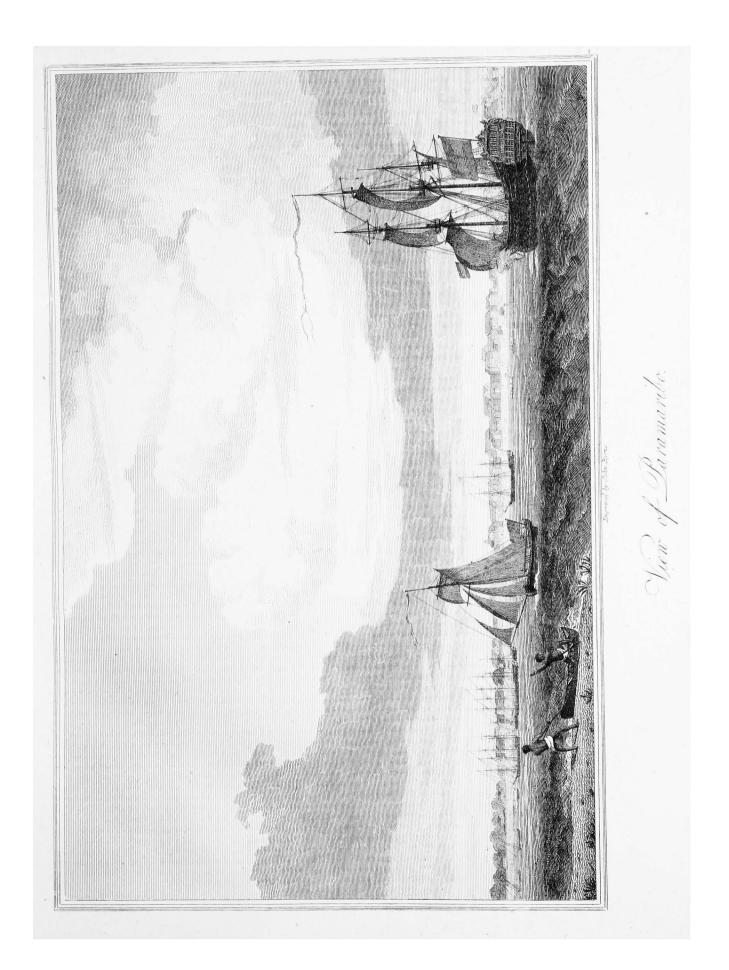

Five months' ftay at Cayenne, without feeing the King's fhip arrive, which was expected, and without receiving any news from France, a pleafure of which I had been deprived for five years, made more impression upon me than nine years' travelling and fatigue. I was attacked with a lowners of fpirits and the jaundice, from which I found greater relief than from all medicine, in the extremely polite anfwer I received from M. Mauricius, governor of the Dutch colony of Surinam, in which he invited me to his houfe at Surinam, and offered me a paffage to Holland, engaging to furnish me with a paffport in cafe of rupture between France and the States General. I loft not a moment; and, after a ftay of fix months at Cayenne, I left it in a convalescent state on the 22d August 1744, in a King's barge, furnished me by M. Orvilliers, with a ferjeant belonging to the garrifon, who had command only over the rowers. In confequence, this trip was much fhorter than that from Para to Cayenne. I ftopped on the way no longer than was neceffary to complete my crew of Americans. The miffionary father at Senamary procured me a fufficient number of hands, notwithstanding the rumour of a contagious diftemper exifting at Surinam, which, though falfe, had fpread to a diftance a general panic among the natives. Deducting stoppages, now voluntary, and now conftrained, I was fomewhat more than fixty hours on my voyage from Cayenne to the river of Surinam, which I entered the 27th.

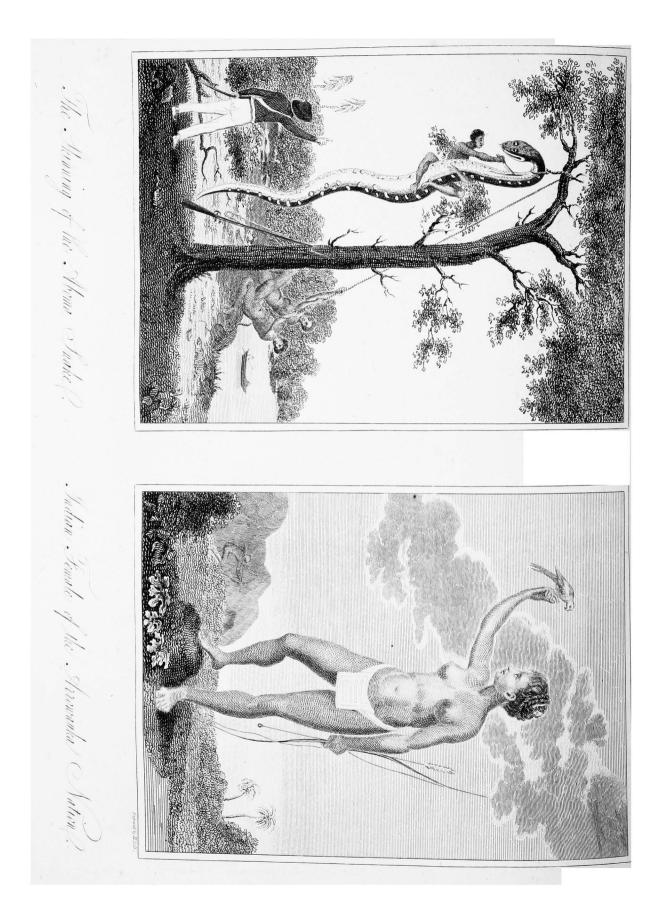

On the 28th, I afcended the river the height of five leagues, which brought me to Paramaribo, the capital of the Dutch colony of Surinam, the governor of which, in his conduct, furpaffed the expectations I had formed from his obliging letters. I obferved the latitude, which I found to be 5° 49' N.; and I likewife made feveral other obfervations during the five days I ftopped: on the 3d September, I embarked on board a merchant thip bound to Amfterdam.

The 29th, we difpenfed with fhewing my paffport to an English cruifer, owing to the bad weather; this, however, would probably have met with little respect, as, at first fight, the cruifer faluted us with shot, to make us fend our boat on board, notwith standing we were under Dutch colours.

On the 6th November, at the entrance of the channel, we were accofted by a cruifer from St. Maloes for a fimilar purpofe, but in a lefs difcourteous manner, for, coming within hail, the captain was fatisfied, on the affurance I gave him, mentioning who I was, of whence we were, that he was merely lofing time with us. On the 16th, at the entrance of the Texel, we took on board a coaffing pilot to conduct us into port;

but,

257

but, forced to keep aloof from the land we fought, we kept wandering about at random, conftantly founding, and accompanied with conftant fogs, for fifteen of the fhortest days of the year, furrounded all the time by fhoals and fhallows. One night we diffinguished the Scheveling lights, feldom feen with impunity; at length we diffinguished the fhore of Vlieland, while our pilots, by their reckoning, imagined us within fight of the Texel. The 30th November, in the evening, I landed at Amfterdam, where, and at the Hague, I waited two months for the paffports requifite to crofs the Low Countries. I am indebted for those from England to Mr. Trevor, the minister of that nation at the Hague, who, without hefitation, granted them to the entreaty of M. l'Abbé de la Ville, the French ambaffador; for those from the minister of the Queen of Hungary, I am obliged to Lord Bentinck. To conclude ;---on the 23d February 1745, I arrived in Paris, after a laple of ten years from my departure thence.

LETTER of M. DE LA CONDAMINE, written in 1773, to M. ****; giving an Account of the Fate of those Astronomers who participated in the requisite Operations for the Measurement of the Earth, begun in 1735.

You feel interested, Sir, in the labours of the Academy of Sciences undertaken for the measurement of the earth, and are anxious to learn the fate of all who were employed on this great work abroad fince the year 1735; well might I answer you in the words of Virgil,-

Apparent rari nantes in gurgite vafto.

But few remain buoyed on the extensive wafte.

We failed from Rochelle in the month of May 1735, provided with paffports from His Catholic Majesty Philip V., for the purpose of measuring the degrees next the equator in his South American dominions. Our party confifted of three members of the Academy, M. Godin, M. Bouguer, and myfelf; of M. Jofeph de Juffieu, M. D. regent of the Faculty at Paris, and brother of the two other academicians, admitted likewife, during his abfence, a member of the academy; M. Seniergues, a furgeon; M. Verguin, engineer in the navy; M. de Morainville, draughtsman for the department of Natural Hiftory; M. Couplet, a nephew of the academician of that name; M. Godin des Odonais, who will form the chief fubject of this letter; and M. Hugo, a watch and mathematical inftrument-maker: at Carthagena, in America, we were, moreover, joined by two lieutenants of Spanish ships, appointed by the court of Madrid to accompany us during our obfervations.

The following year M. de Maupertuis, nominated for the measurement of the degrees of the meridian under the Arctic Circle; embarked at Rouen, accompanied by Meffrs. Clairaut, Camus, and Monnier the younger, academicians, M. l'Abbé Outhier, M. Celfius, a Swedifh aftronomer, and others.

In 1751, M. l'Abbé de la Caille, an academician, fet fail for the Cape of Good Hope, on which expedition the measurement of two degrees of the meridian was one of his lighteft labours.

Of the five travellers to the Arctic Circle, only M. Monnier at prefent furvives. The Abbé de la Caille, who undertook alone the voyage to the Cape, and whofe health appeared proof against every attack, on his return to Paris died, a martyr to his astro-VOL. XIV. nomical nomical zeal, in 1762; and M. l'Abbé Chappe d'Auteroche, an academician, the junior of the last mentioned, whom he took for his model, experienced in California, in 1769, a fimilar definy.

Of my companions on the voyage to the equator, M. Couplet, the most robust and one of the youngest, was carried off, three days after his arrival at Quito, by a putrid fever. M. Seniergues, our surgeon, was killed in a popular commotion at Cuenca. M. Bouguer in 1758 died of an abscess of the liver. M. Godin, after entering the Spanish fervice, in which he was appointed to the direction of the Academy of Naval Guards at Cadiz, younger than M. Bouguer, survived the latter but two years. M. de Morainville, who remained in the province of Quito, met with death by falling from the fcantling of a church, of which he was the architect, at Cicalpa, in the vicinage of Riobomba. Of M. Hugo, who married at Quito, I have received no intelligence these fifteen years back. I do not enumerate how many of our fervants, white as well as of colour, who died in the course of our travels; two of them of a violent death.

Commander Don Jorge Juan, the fuperior of the two Spanish officers attached to our party, made a post-captain on his return to Spain, and afterwards commandant of the Naval Guards, commodore, and ambaffador to Morocco, though younger than moft of us, died lately of apoplexy at Madrid. Dr. Jofeph de Juffieu, long detained by the Audencia Real of Quito for the benefit of his professional affistance, and afterwards by the Viceroy of Lima, returned to Paris two years back : as formerly the famous M. Mabillon, he has loft his memory, but, not fo fortunate as he, to M. de Juffieu it has never returned; for this laft gentleman and myfelf I know not whether in juftice we can both together be reckoned equivalent to one living being. A deafnels, which I began to experience in America, is become exceffive; and for these last five years I have been deprived of all external feeling in my lower members, the vitality of which I am rendered fenfible of only by the pains I experience in them on change of weather. Thus, of eleven travellers in the Torrid Zone, exclusive of fervants, the only ones deferving to be reckoned alive, are M. Verguin, naval engineer at Toulon; Don Antonio de Ulloa, commodore in the Spanish navy, and late governor of Louisiana (nor indeed are either of these exempt from infirmities); and M. Godin des Odonais, who, after thirtyeight years' absence, has lately reached Paris, and who has furnished me with matter calculated to afford you entertainment. I received from him, in the month of August last, in confequence of entreaty that he would favour me with a narrative of the travels of his wife, a lady known to me from her infancy, and of whofe adventures I had heard but a confused account, the letter of which I inclose you a transcript : by it you will fee what miracles may be effected by refolution and perfeverance. Callous indeed must be that heart which can remain unmoved at the recital of the shocking misfortunes of an amiable woman brought up with tenderness, who, by a feries of events not to be avoided by human forefight, found herfelf in the depth of impervious forefts, the haunts of ferocious beafts and dangerous reptiles, and there exposed to all the horrors incident on thirst, on hunger, and fatigue; and who, after beholding feven perfons who accompanied her fink under the weight of fuch diftrefs, and expire by her fide, wandered, an infulate being, the only one furviving for feveral days through this defert; finally, who, by providence, bordering on a miracle, escaped all the perils of her critical fituation. You will at the fame time notice the munificence of His Portuguese Majesty towards M. Godin, and the liberal demeanor of the officers charged with the execution

Upon reprefentation made to him by M. Godin, the beneficent minister (M. le Duc de Vrilliere), whose department embraces the Academies, has recently obtained for

him

IN SOUTH AMERICA.

him from His Majefty a penfion, well earned by his zeal and toil during our operations, and by the long exile he endured from a country to which he was fo anxious to return.

LETTER to M. DE LA CONDAMINE from M. GODIN DES ODONAIS.

Sir.

St. Amand, Berry, 28th July 1773. You require of me a narrative of the travels of my fpoule along the Amazons river, the fame route I followed after you. The rumours which have reached your ears of the dangers to which fhe was exposed, and which fhe alone of eight perfons furmounted, augment your curiofity. I had refolved never to fpeak of them again, fo painful to me was the recollection of them; but, as an old companion in your travels, a diffinction which I prize, I cannot refufe in turn for the interest you take in our welfare, and the marks of friendship you have shewn me, to give you the fatisfaction you require.

We landed at Rochelle on the 26th of June laft, after a paffage from Cayenne, effected in fixty-five days, having left this last place on the 21st of April. On our arrival, I made enquiries after you, and leart with much grief that four or five months had elapfed fince you were no more. While yet in tears, my wife and myfelf were delighted on wiping them away, to find that at Rochelle the literary journals, and what regards the Academy, are far lefs read than the news which relates to commerce. Accept, Sir, for yourfelf and Mad. de la Condamine our heartiest congratulations.

You will recollect that the laft time I had the honour of feeing you in 1742, previous to your leaving Quito, I told you that I reckoned on taking the fame road that you were about to do, along the river of Amazons, as much owing to the wifh I had of knowing this way, as to infure for my wife the most commodious mode of travelling, by faving her a long journey over-land, through a mountainous country, in which the only conveyance is on mules. You took the pains in the course of your voyage to give information at the Spanish and Portugueze missions established on its banks, that one of your companions would follow you; and, though feveral years elapfed from the period of your leaving them, this had not been forgotten. My wife was exceedingly folicitous of feeing France, but her repeated pregnancies, for feveral years after your departure, prevented my confent to her being exposed to the fatigues incident on fo long a voyage. Towards the clofe of 1748 I received intelligence of the death of my father; and my prefence thence becoming indifpenfable for the arrangement of my family affairs, I refolved on repairing to Cayenne by myfelf down the river; and planning every thing on the way to enable my wife to follow the fame road with comfort, I departed in March 1749 from the Quito, leaving Mad. Godin at that time pregnant. I arrived at Cavenne in April following, and immediately wrote to M. Rouillé, then minister of the navy, intreating him to procure me paffports and recommendations to the court of Portugal, to enable me to afcend the Amazons, for the purpose of proceeding to my family, and bringing it back with me by the fame channel. Any one but you, Sir, might be farprifed at my undertaking thus lightly a voyage of fifteen hundred leagues, for the mere purpofe of preparing accommodations for a fecond : but you will know that travels in that part of the world are undertaken with much lefs concern than in Europe; and by those I had made during twelve years for reconnoitring the ground for the meridian of Quito, for fixing fignals on the loftiest mountains, in going to and returning from Carthagena, had made me perfectly a veteran. I availed myfelf of the opportunity afforded by the conveyance which took my letters to forward feveral objects pertaining to natural hiftory for the King's garden; among others, feed of the farfaparilla, and of the five

five species of the Butua; with these also a grammar, printed at Lima, of the language of the Incas, which I defigned as a prefent for M. de Buffon, from whom I received no answer. By that with which I was honoured from M. Rouillé, I learnt that His Majesty had been pleafed to direct that the governor and intendant of Cayenne should both furnish me with recommendations to the government of Para. Upon this, I wrote to you. Sir, and you were so obliging as to solicit passports for me. You moreover favoured me with a letter of recommendation from Commander La Cerda, minister of Portugal to France, addreffed to the governor of Para, with a letter from M. l'Abbé de la Ville, which informed you that my pafiports had been expedited, and forwarded to Para. I enquired respecting them of the governor of that place, who expressed his entire ignorance of the fact. I repeated my letters to M. Rouillé, who then was no longer in the ministry. Since that time I renewed my letters every year, four, five, and even fix times, for the purpole of obtaining my pafiports, and constantly without effect. Many of my letters were loft, or intercepted, during the war, of which I the lefs doubt from your having ceafed to receive any, notwithftanding I regularly continued my correspondence. At length, hearing cafually that M. le Comte d'Herouville was in the confidence of M. de Choifeul, I ventured, in 1765, to write to the former of these noblemen, although I had not the honour of being known to him, explaining in a few words who I was, and entreating him to intercede with the Duc de Choifeul for the transmission of my paffports. To the kindness of this nobleman alone can I attribute the fuccess that followed this ftep; for, the tenth month from the date of my letter to M. le Comte de Herouville, I faw a decked galliot arrive at Cayenne, equipped at Para by order of the King of Portugal, manned with thirty oars, and commanded by a captain of the garrifon of Para, inftructed to bring me to Para, thence transport me up the river as high as the first Spanifh fettlement, to wait there till I returned with my family, and ultimately re-conduct me to Cayenne, all at the special charge of His Most Faithful Majesty; a liberality truly loyal, and fuch as is little common among fovereigns. We left Cayenne at the clofe of November 1765, in order to take in property belonging to me at the fort of Oyapoc, where I refided. Here I fell fick, and even dangeroufly fo. M. de Rebello, the captain, a knight of the order of Chrift, was fo complaifant as to wait for me fix weeks; finding at length that I still continued too ill to venture on the voyage, and, fearful of abufing the patience of this officer, I befought him to continue his route, and that he would permit me to put fome one on board, to whom I might entrust my letters, and who might fill my place in taking care of my family on its return. I caft my eyes on Triftan D'Oreafaval, a perfon whom I had long known, and in whom I had confidence. The packet I entrusted to him contained the orders of the Father-general of the Jefuits to the Provincial of Quito, and the Superior of the miffions of Maynas, for furnishing the canoes and equipage neceflary for the voyage of my fpoufe. The inftructions I gave to Triftan were fimplyto deliver those letters to the Superior, refident at La Laguna, the capital of the Spanish missions of Maynas, whom I entreated to forward my letters to Riobamba, in order that my wife might receive information of the veffel difpatched by His Majesty of Portugal, at the recommendation of the King of France, to bring her to Triftan was further directed to wait an answer from Riobamba at Laguna. Cayenne. He failed from Oyapoc on the 24th January 1766, and arrived at Loreto, the first establishment belonging to Spain on afcending the river, in the month of July or August of the fame year. Loreto is a miffion established below that of Pevas fince the period of your coming down the river in 1743; nay, both this and the Portugueze miffion of Savatinga, above that of St. Pablo, which was before their last fettlement up the river, have been founded fince my paffage defcending in 1749. The better to comprehend t_4 what

what I now defcribe, it may be well you fhould caft your eyes over the chart made by you of the courfe of the Amazons, or that of the province of Quito, inferted in your Hiftorical Journal of the Voyage to the Equator. The Portugueze officer, M. de Rebello, after landing Triftan at Loreto, returned to Savatinga, in conformity to the orders he had received of waiting there until Madame Godin fhould arrive; and Triftan, in lieu of repairing to Laguna, the capital of the Spanifh miffions, and there delivering his letters to the Superior, meeting with a miffionary Jefuit, called Father Yefquen, who was on his return to Quito, by an unpardonable overfight, which had every appearance of a bad intent, delivered to his care the packet of letters. This was addreffed to Laguna, fome days' journey from the fpot where Triftan was: but in lieu of attending to this circumftance, he fent it five hundred leagues beyond, to the other fide of the Cordilleras, and himfelf remained in the Portuguefe miffions, carrying on trade.

You will pleafe to notice that, befides different articles which I had entrufted him to difpofe of for me, I had furnished him in addition with more than fufficient to defray all expence in travelling through the Spanish missions.

Spite, however, of his bad conduct, a vague rumour obtained circulation through the province of Quito, and reached the ears of Madame Godin, not only of letters addreffed to her being on their way in the cuftody of a Jefuit, but alfo, that in the uppermoft miffions of Portugal a veffel equipped by His Moft Faithful Majefty had arrived to tranfport her to Cayenne. Her brother, a monk of the order of Augustins, in conjunction with Father Terol, a provincial Dominican, exerted themfelves much to induce the Provincial of the Jefuits to obtain thefe letters. The Jefuit who received them at length made his appearance, and flated he had delivered them to another; this other, being interrogated, replied, he had committed them to a third : but, notwithstanding the most diligent perquifition, the letters never were found. With refpect to the arrival of the veffel, opinions differed, fome giving credit to, while others difputed the fact. To venture on a voyage of fuch length without any certainty, and preparatory thereto to arrange all family affairs, and part with her furniture, was what Madame Godin could not, without much rifk and imprudence, refolve upon : fhe determined on the commendable medium of difpatching a faithful negro, who departed with fome Americans, but who, in confequence of obstacles, was obliged to return. His mistrefs fent him forward a fecond time with new inftructions, and means of furmounting the difficulties which had prevented his progrefs before. More fortunate on this fecond trip, the negro reached Loreto, faw and communicated with Triftan, and, returning, acquainted Madame Godin of the reality of the report, and that Triftan was at Loreto. Upon this fhe determined on her journey, fold part of her furniture, but left the reft, as well as her houfe at Riobamba, a garden and eftate at Guaflen, and another property of ours between Galté and Maguazo, to her brother-in-law. Some idea of the length of time which elapfed fince the month of September 1766, at which epoch the letters were delivered to the Jefuit, may be formed by computing how long the journey of the reverend father to Quito will have occupied, how much time would be loft in feeking the letters, in enquiry into the fact of the rumour, in hefitating about what was best to do, and by the two journeys of the negro to Loreto and back to Riobamba, by the fale alfo of our effects, and the requifite preparations for a voyage of fuch length; in fact, thefe prevented her fetting out from Riobamba, forty leagues fouth of Quito, before the ift of October 1769.

The arrival of the Portuguele veffel was rumoured at Guayaquil, and even as far as the fhore of the South Sea; for M. R., who reported himfelf to be a French phylician, coming from Upper Peru, and on his way to Panama and Porto Bello, in view of paffing thence

thence to Santo Domingo, Martinico, or, at any rate, to the Havannah, and from that place to Europe, touching at Point Saint Helena, learnt there that a lady of Rio. bamba was on the point of fetting out for the Amazons river, and embarking thence in a veffel equipped by the order of His Portugueze Majefty, to take her to Cayenne. This engaged him to change his route, and afcending the Guayaquil river, he proceeded to Riobamba to entreat Madame Godin to grant, him a paffage, undertaking in return to watch over her health, and fhew her every attention. At first she answered, that she had no authority to grant his request; but M. R. applying to her two brothers, they reprefented to her fo urgently that fhe might have need of the affiftance of a phyfician on fo long a voyage, that fhe at length confented to his accompanying her. Her two brothers, who likewife were fetting out for Europe, hefitated not an inftant to avail themfelves of the opportunity which now offered of haftening their arrival, the one at Rome, whither he was called by bufine's relative to his order, the other in Spain, where his private affairs required his prefence. The latter took with him a fon about nine or ten years of age, whom he wished to educate in France. M. de Grandmaison, my father-in-law, went on before to obtain every possible accommodation for his daughter on the road, to the point of embarkation beyond the great Cordillera. He at first met with obftacles from the prefident and captain-general of the province of Quito; for you, Sir, are aware that the paffage by the Amazons is forbidden by the Spanish court; but these difficulties were soon overcome. On my return from Carthagena, whither I had been difpatched on matters relative to our company in 1740, I brought back with me a paffport from the viceroy of Santa Fé, Don Sebaftian de Eflava, authorifing our taking whatever road we pleafed; and in confequence of the production of this, the Spanish governor of the province of Maynas and Omaguas, informed of the approach of Madame Godin, politely fent to meet her a canoe flored with refreshments, fuch as fruit, milk, &c. which reached her a little diftance from the town of Omaguas; but to what misfortunes, what a horrible fituation was fhe not expofed before that happy moment! She left her refidence of Riobamba with her efcort on the ift of October 1769; and with thefe fhe reached Canelos, the fpot at which they were to embark, fituate on the little river Bobonafa, which empties itfelf into the Paftaca, as that laft does into the Amazons. M. de Grandmaison, who preceded them a month on the way, found the village of Canelos well inhabited, and immediately embarked, centinuing his journey, to prepare every thing neceffary for the transport of his daughter at each stage of her way. As he knew that she was accompanied by her brothers, a phyfician, her negro, and three female mulattoes or Americans, he proceeded on to the Portuguese miffions. In the interval, however, between his journey and the arrival of my wife, the fmall pox, an European import, more fatal to the Americans in this part than the plague, which is fortunately here unknown, is to the people of Levant, had caufed the village of Canelos to be utterly abandoned by its population. They had feen those first attacked by this distemper irremediably carried off, and had in confequence difperfed among the woods, where each had his own hut, ferving as a country-retreat. On her departure my wife was escorted by thirty-one American natives to carry herfelf and baggage. You know, Sir, that this road, the fame purfued by M. de Maldonado, is impracticable even for mules; that those capable, effect the paffage on foot, but that others are carried. The Americans who efcorted Madame Godin, who were paid in advance according to the bad cuftom in this country, a cuftom founded on miltrust, at times but too well founded, scarcely reached Canelos before they retraced their fteps, either from dread of the air being infected, or from apprehenfion of

of being obliged to embark, a matter obnoxious in extreme to individuals who had perhaps never feen a canoe in their lives but at a diltance. Nay fuch excufes are poffibly fuperfluous, for you well know how often we are abandoned by them on our mountains, on to pretence whatever. What under fuch circumflances was to be done? Had my wife been able to return, yet the defire of reaching the veffel waiting her, together with her anxiety to rejoin a hufband from whom fhe had been parted twenty years, were incentives powerful enough to make her, in the peculiar circumflances in which fhe was placed, brave even greater obflacles.

In the village only two Indians remained free from the contagion; thefe had no boat, but they engaged to conftruct one and pilot it to the miffion of Andoas, about twelve days' journey below, defcending the river Bobonaza, a diftance of from one hundred and forty to one hundred and fifty leagues; fhe paid them beforehand; the canoe being finished, they all departed from Canelos. After navigating the river two days, on the fucceeding morning the pilots abfconded ; the unfortunate party embarked without any one to fleer the boat, and paffed the day without accident. The next day at noon, they difcovered a canoe in a fmall port adjoining a leaf-built hut, in which was a native recovering from illnefs, who confented to pilot them. On the third day of his voyage, while flooping over to recover the hat of Mr. K., which had fallen into the water, the poor man fell overboard, and, not having fufficient ftrength to reach the fhore, was drowned. Behold the canoe, again without a fleerfman, abandoned to individuals perfectly ignorant of managing it; in confequence it was fhortly overfet, which obliged the party to land, and build themfelves a hut. They were now but from five to fix days journey from Andoas. Mr. R. propofed to repair thither, and fet off with another Frenchman of the party, and the faithful negro belonging to Madame Godin, taking effectial care to carry his effects with him. I fince blamed my wife for not having difpatched one of her brothers to accompany Mr. R., but found that neither of them, after the accident which had befallen the canoe, were inclined to truft themfelves on the water again, without a proper pilot; Mr. R. moreover promifed that within a fortnight a canoe fhould be forwarded to them with a proper complement of natives. The fortnight expired, and even five and twenty days, when, giving over all hopes, they conftructed a raft on which they ventured themfelves, with their provisions and property. The raft, badly framed, ftruck against the branch of a funken tree, and overfet, all their effects perifhing in the waves, and the whole party being plunged into the water. Thanks to the little breadth of the river at this place no one was drowned, Madame Godin being happily faved, after twice finking, by her brothers. Placed now in a fituation ftill more different than before, they collectively refolved on tracing the course of the river along its banks. How difficult of effect this enterprise, you, Sir; are well aware, who know how thickly the banks of the rivers are befet with trees, underwood, herbage and lianas, and that it is often neceffary to cut one's way. They returned to their hut, took what provisions they had left behind, and began their journey. By keeping along the river's fide they found its finuofities greatly lengthened their way, to avoid which inconvenience they penetrated the wood, and in a few days they loft themfelves. Wearied with fo many days' march in midft of woods, incommodious even for these accustomed to them, their feet torn by thorns and brambles, their provisions exhausted, and dying with thirst, they were fain to subfift on a few feed, wild fruit, and the palm cabbage. At length, oppreffed with hunger and thirft, with laffitude and lofs of ftrength, they feated themfelves on the ground without the power of rifing, and, waiting thus the approach of death, in three or four days expired one after the other. Madame Godin, firetched on the ground by the fide of the corplex of

of her brothers and other companions, stupified, delirious, and tormented with choaking thirst, at length affumed resolution and strength enough to drag herself along in fearch of the falvation which providentially awaited her. Such was her deplorable condition fhe was without fhoes, and her clothes all torn to rags: the cut the fhoes off her brothers' feet, and fastened the foles on her own. It was about the period between the 25th and 30th of December 1769 that this unfortunate party (at least feven of the number of them) perished in this miserable manner; the date I gather by what I learn from the only furvivor, who related that it was nine days after the quitted the fcene of the wretched cataftrophe defcribed before fhe reached the banks of the Bobonafa. Doubtlefs this interval must have appeared to her of great length, and how a female fo delicately educated and in fuch a ftate of want and exhaustion, could support her diftrefs, though but half the time, appears most wonderful. She affured me that fhe was ten days alone in the wood, two, awaiting death by the fide of her brothers. the other eight wandering at random. The remembrance of the flocking fpectacle fle witneffed, the horror incident on her folitude and the darkness of night in a defert, the perpetual apprehension of death, which every inftant ferved but to augment, had fuch effect on her fpirits as to caufe her hair to turn grey. On the fecond day's march, the diftance necesfarily inconfiderable, fhe found water, and the fucceeding day fome wild fruit and fresh eggs, of what bird she knew not, but which, by her description, I conjecture to have been a species of partridge. These with the greatest difficulty was fhe enabled to fwallow, the cefophagus, owing to the want of aliment, having become fo much parched and straitened; but these and other food she accidentally met with, fufficed to fupport her fkeleton frame. At length, and not before it was indifpenfable, arrived the fuccour defigned for her by providence.

Were it told in a romance that a female of delicate habit, accustomed to all the comforts of life, had been precipitated into a river; that, after being withdrawn when on the point of drowning, this female, the eighth of a party, had penetrated into unknown and pathlefs woods, and travelled in them for weeks, not knowing whither fhe directed her steps; that, enduring hunger, thirst, and fatigue to very exhaustion, she should have feen her two brothers, far more robust than her, a nephew yet a youth, three young women her fervants, and a young man, the domestic left by the physician who had gone on before, all expire by her fide, and she yet survive; that, after remaining by their corpfes two whole days and nights, in a country abounding in tigers and numbers of dangerous ferpents, without once feeing any of these animals or reptiles, she should afterwards have strength to rife, and continue her way, covered but with tatters, through the fame pathlefs wood for eight days together till fhe reached the banks of the Bobonafa, the author would be charged with inconfiftency; but the hiftorian fhould paint facts to his reader, and this is nothing but the truth. The verity of this marvellous tale is attested by original letters in my hands, from many missionaries on the Amazons who felt an interest in this event, and by other proofs as will be feen in the fequel of this narrative. These misfortunes would have been avoided altogether but for the infidelity of Triftan, but for his neglect, in lieu of stopping at Loreto, of delivering as inftructed, in perfon, my letters to the Superior at Laguna; with this precaution on his part my wife would, as her father had done, have found the village of Canelos peopled with natives, and a canoe ready to convey her forward.

To return, it was on the eighth or ninth day, according to Madame Godin, after leaving the dreadful fcene of the death of her companions, that fhe found herfelf on the banks of the Bobonafa. At day-break fhe heard a noife at about two hundred paces from her. Her first emotions, which were those of terror, occasioned her to ftrike ftrike into the wood; but, after a moment's reflection, fatisfied that nothing worfe could poffibly befal her, than to continue in her prefent flate, and that alarm was therefore childifh, fhe proceeded to the bank of the river, and perceived two native Americans launching a boat into the ftream. It is the cuftom of these people, on their landing to pass the night, to draw their canoe either wholly, or partially on shore, as a fecurity against accidents, for should it be left afloat, and the fastening tackle break, it would be carried away by the current, and leave the fleepers on fhore in a truly helplefs state. The natives, perceiving Madame Godin, advanced towards her, on which fhe conjured them to transport her to Andoas : they had been driven by the contagion prevalent at Canelos to withdraw with their wives to a hut they had at a diffance, and were then going to Andoas. They received my wife on board with kindnefs truly affectionate, flewed every attention to her wants, and conducted her to that village. Here fhe might have flopped fome days to reft herfelf and recruit her ftrength, (and well may it be conceived fhe had great need of reft,) but, indignant at the conduct of the miffionary at whole mercy fhe was left, and with whom for that reafon fhe was obliged to diffemble, fhe refolved on making no ftay at Andoas, nor would even have ftopped a fingle night had it been poffible to be avoided.

A great revolution in the miffions of Spanish America dependent upon Lima, Quito, Charcas, and Paraguay, founded and administered to by the Jefuits, for from one to two centuries, had recently taken place. An unexpected order from the court of Madrid expelled them from all their colleges and miffions; they had in confequence been every where arrefted, put on board, and transported to the pope's dominions. This event, however, had occafioned no more diffurbance than would have done the change of a village-rector. In lieu of them, the fecular clergy were fubfituted, of which class was the individual who officiated as miffionary at Andoas, an individual whofe name I with to banifh from my memory. Madame Godin, ftripped of almoft every thing, not knowing otherwife how to tellify her gratitude to the two Americans who had faved her life, took from her neck two chains of gold, fuch as are ufually worn in this country, of about four ounces weight, and gave one to each of them, whofe admiration at the richnefs of the prefent equalled that they would have experienced had the heavens opened before them; but the miffionary, in her very prefence, took poffellion of the chains, and gave the poor Americans in lieu about three or four yards of coarfe cotton, fuch as is manufactured in the country, and called Tucuyo. Conduct thus infamous exafperated my wife to fuch a degree that fhe inftantly demanded a canoe and men, and the next day fet out for Laguna. A female American at Andaos made a cotton petticoat for her, which fhe fent to pay for immediately on reaching Laguna, and which the preferves with care, with the foles of the thoes of her brothers, converted by her into fandals; ----mournful tokens, rendered dear to me as they are to her herfelf!

While my wife was yet wandering in the woods, her faithful negro, with a party of Americans from Andoas, afcended the river. M. R. thinking more of his own affairs than forwarding the boat which fhould recall his benefactors to life, fcarcely reached Andoas before he departed with his companion and baggage for Omaguas. The negro, on reaching the hut where he left his miftrefs and her brothers, traced them through the woods, in company with his companions, until he came to the fpot where their corpfes laid, already putrid and uncognizable. At fight of thefe, perfuaded that no one had escaped death, the negro and his companions returned to the hut, collected what had been left there, and again reached at Andoas before my wife arrived there. The negro thence repaired to M. R. at Omaguas, and delivered to him the property of his VOL. XIV. MM

miftrefs.

miftrefs. This man was not ignorant that M. Grandmaifon, who had reached Loreto, awaited there with impatience the arrival of his children. A letter in my poffeffion even proves that my father-in-law, informed that the negro Joachim was at Omaguas, advifed Triftan to repair thither and bring him forward; but neither Triftan nor M. R. thought fit to fatisfy him, and fo far from complying with his requeft, M. R., of his own accord, fent the negro back to Quito, keeping the property he had brought back with him.

You know, Sir, that Laguna is not fituate on the Amazons, but fome leagues up the Guallaga, a tributary of the former river. Joachim difinified by M. R. did not in courfe proceed to Laguna in fearch of his miftrefs, whom he imagined dead, but returned to Quito, and thus have we loft his fervices. You will certainly be far from gueffing the excufe of M. R. for fending away a faithful fervant who was fo much wanted by us. "I was afraid," faid he in anfwer to this enquiry, "that he would "murder me." What, replied I, could have given birth to a fufpicion of fuch intention in a man whofe zeal and fidelity were fo well known to you, and with whom you fo long had travelled? If you apprehended he might diflike you from imputing the death of his miftrefs to your negligence, what prevented your fending him forward to M. Grandmaifon, who exacted this of you, and who was fo nigh at hand?. At leaft what hindered your putting him in prifon? You lodged with the governor of Omaguas, who would readily have complied, had you made him fuch a requeft.

In the meantime Madame Godin, with the canoe and crew from Andoas, had reached Laguna, where they were received with the greateft politeness by Dr. Romero, the new chief of the miffions, who, by his kind treatment during fix weeks that fhe remained with him, did much towards re-establishing her health, but too much impaired, and making her forget her misfortunes. The first care of this respectable character was to forward an express to the governor of Omaguas, to inform him of the arrival of Madame Godin, and the languid state of her health. Upon this intelligence M. R. could do no lefs, having promifed to render her his fervices, than haften to join her, bringing with him four filver difhes, a filver faucepan, a velvet petticoat, one of Perfiana, and one of taffety, fome linen, and other trifles, belonging to her brothers as well as herfelf; adding, that all the reft were rotten, forgetting that bracelets, fnuff-boxes, and rofaries of gold, and ear-rings fet with emeralds, were not fubject to rottennefs, any more than various other effects. " Had you," faid Madame Godin ; " had you brought back my negro, I should have learnt from him what he had done with my property found in the hut. But of whom, refpecting it, am I now to inquire? Go your ways, Sir; it is impoffible that I can ever forget that, to you, I owe all my misfortunes and all my loffes; manage henceforward as you may, I am determined you shall make no part of my company." My wife had but too much reafon on her fide, but the interceffions of M. Romero, to whom the could refuse nothing, and who represented to her that, if she abandoned M. R., his condition would be deplorable, at length overcame her repugnance, and induced her to confent he fhould yet continue with her.

When Madame Godin was fomewhat recovered, M. Romero wrote to M. Grandmailon, informing him that fhe was out of danger, and requefting him to difpatch Triftan to accompany her to the Portuguefe veffel. He likewife wrote to the governor, acquainting him that he had reprefented to Madame Godin, whofe courage and piety he could never fufficiently admire, that fhe was yet merely at the beginning of a long and tedious voyage; and that, though fhe had already travelled upwards of four hundred leagues, fhe had yet four or five times that diffance to pafs before fhe reached Cayenne; that, but juft relieved from the perils of death, fhe was about to incur frefh

danger;

danger; concluding with offering, if the chofe to return, to caufe her to be efforted back in perfect fecurity to her refidence of Riobamba; to thefe he added, that Madame Godin replied, "She was furprifed at his propofals; that the Almighty had preferved her when alone amid perils in which all her former companions had perifhed; that the firft of her withes was to rejoin her hufband; that for this purpofe the had begun her journey; and, were the to ceafe to profecute her intention, that the fhould efteem herfelf guilty of counteracting the views of Providence, and render ufelefs the affiftance the had received from her two dear Americans and their wives, as well as all the kindnefs for which the was indebted to him, and for which God alone could recompenfe them." My wife was ever dear to me, but fentiments like thefe add veneration to tendernefs. Triftan failing to arrive when expected, M. Romero, wearied with waiting for him in vain, equipped a canoe, and gave directions for the transport of Madame Godin, without halting any where, to the Portuguefe veffel. Then it was that the governor of Omaguas, knowing of her coming, and that the was to stop no where by the way, difpatched a canoe to meet her, loaded with refreshments.

The Portuguese commander, M. de Rebello, hearing of her approach, fitted out a pirogue, commanded by two of his men and ftored with provisions, to meet her, which they did at the village of Pevas. This officer, the better to fulfil the orders of his mafter, with great labour, and by doubling the number of oars, worked his vefiel up the river as high as the mission of Loreto, where he received her on board. I learn from her, that from that inftant till she reached Oyapok, throughout a course of nearly a thousand leagues, she wanted for nothing to render her comfortable, not even the nices delicacies, and fuch as could not be expected in the country; wine and liquors which she never uses, fish, game, &c. were supplied by two cances which preceded the galliot. The governor of Para, moreover, had fent orders to the chief part of the stages at which they had to halt, with additional refreshments.

I forgot to mention, that the fufferings of my wife were not at an end, and that one of her thumbs was in a very bad flate, owing to its being wounded by thorns in the wood, which had not yet been extricated, and which had not only occafioned an abfcefs. but had injured the tendon and even the bone itfelf. It was proposed to take off the thumb, but, by dint of care and fermentations, she had only the pain to undergo occafioned by the extraction of two fplinters at San Pablo, but the entirely loft the ufe of the tendon. The galliot continued its course to the fortress of Curupa about fixty leagues above Para. M. de Martel, knight of the order of Chrift, and major of the garrifon of Para, arrived there the fucceeding day, by order of the governor, to take command of the galliot, and conduct Madame Godin to Fort Oyapok. A little beyond the mouth of the river, at a fpot off the coaft where the currents are very violent, he loft one of his anchors, and as it would have been imprudent to venture with only one. he fent a boat to Oyapok, to feek affiftance, which was immediately forwarded. Hearing by this means of the approach of Madame Godin, I left Oyapok on board a galliot belonging to me, in view of meeting her; and, on the fourth day of my departure, fell in with her veffel opposite to Mayacare. On board this veffel, after twenty years' abfence, and a long endurance on either fide of alarms and misfortunes, I again met with a cherifhed wife, whom I had almost given over every hope of feeing again. In her embraces I forgot the lofs of the fruits of our union, nay, I even congratulated myfelf on their premature death, as it faved them from the dreadful fate which befel their uncle in the wood of Canelos beneath their mother's eye, who certainly could never have furvived the fight. We anchored at Oyapok the 22d July 1770. I found in M. Murtel an officer as much diftinguished by his acquirements as by his prepoffeffing MM 2 exterior.

exterior. He has acquaintance with moft of the languages of Europe, is an excellent latinift, and well calculated to fhine on a more extensive fcene than Para. He is a defcendant of the illustrious French family of fimilar name. I had the pleasure of his company for a fortnight at Oyapok, whither M. de Fiedmont, governor of Cayenne, whom the commandant of Oyapok, advifed of his arrival by express, immediately difpatched in a boat with refreshments. We caused the Portuguese vessel to undergo a repair, which it much wanted, and refitted it with fails to enable it to ftem the currents on its return. The commandant of Oyapok gave M. Martel, moreover, a coast-pilot, to accompany him to the frontiers. I offered to go fo far as his confort on board my galliot, but he would fuffer me to proceed no farther than Cape D'Orange. I took my leave of him with those feelings which the polite attention and noble behaviour of that officer and his generous nation were fo well calculated to infpire in me, as well as my wife, a conduct on the part of either, which I was led to expect from what I had individually experienced on my former voyage.

I fhould previoufly have told you that, when I defcended the Amazons in 1749, with no other recommendation to the notice of the Portuguele than arole from the remembrance of the intimation afforded by you in 1743, that one of the companions of your travels would follow the fame way, I was received in all the Portuguefe fettlements, by the miffionaries and commandants of the forts, with the utmost courtefy. On paffing San Pablo I purchafed a canoe, in which I defcended the river to Fort Curupa, whence I wrote to the governor of Grand Para, M. Francis Mendoza Gorjaô, to acquaint him of my arrival, and beg permiffion of failing from Curupa to Cayenne, whither I intended to repair direct. He favoured me with fo polite an anfwer, that I made no hefitation of quitting my intended cruife and taking a longer, in order to thank him and pay him my refpects. He received me with open arms, and infifted on my making his houfe and table my own during a week that I flopped with him; nor would he fuffer me to depart before he fet off himfelf for St. Louis de Marinhan, whither he was about to go on his circuit. After his departure, I remounted the river to Curupa with my canoe, efcorted by one of greater dimensions, fent with me by the commandant of that fort on my voyage to Para, a city which, as you have jultly remarked, ftands on a large river, confidered, but improperly, the right arm of the Amazons, as the river of Para merely communicates with the Amazons by a channel hollowed by the tides, and called Tagipuru. At Curupa I found waiting for me, by order of the governor of Para, a large pirogue of fourteen oars, commanded by a ferjeant of the garrifon, and deftined to carry me to Cayenne, whither I repaired by Macapa, coafting along the left of the Amazons to its mouth, without, like you, making the tour of the great illand of Joanes, or Marajo. After fimilar courtefies, unprovoked by express recommendations, what had I not to expect, feeing His molt Faithful Majefty had condefcended to iffue precife orders to expedite a veffel to the very frontiers of his dominions, for the purpose of receiving my family on board, and transporting it to Cayenne?

To refume my narrative.—After taking leave of M. de Martel off Cape D'Orange with those reciprocal falutes common with failors, I returned to Oyapok, and thence to Cayenne.

Here I was engaged in a law-fuit. Triftan demanded of me the wages I had promifed him of fixty livres per month. I offered to pay him for eighteen months, the utmoft time the voyage could have required, had he ftrictly followed his inftructions. The fentence pronounced by the fuperior council of Cayenne condemned him to render me an account of from feven to eight thousand franks, the value of effects I had committed to his care, deducting one thousand and eighty for the eighteen months' falary I had offered offered him; but the wretch, after dealing treacheroufly with me as he had done; after caufing the death of eight perfons, including the American who was drowned, and all the misfortunes which befel my wife; in fhort, after diffipating the whole of the effects I had entrufted with him, proved infolvent; and, for my part, I judged it unneceffary to augment the loffes I had already furtained by having to fupport him in prifon.

I conceive, Sir, that I have now complied to the full with your requeft. The narrative I have given, by recalling the mournful fcenes I have depicted, has coft me infinite anguish. The law-fuit with Tristan, and the illness of my wife on reaching Cayenne, a confequence but too natural of the fufferings fhe had undergone, did not admit of my venturing to expose her earlier than the prefent year (1773), to fo long a voyage by fea. At prefent fhe is, with her father, in the midft of my family, by whom they have been tenderly received. M. de Grandmaison had originally no intention of proceeding to France, but merely meant, by his voyage, to fee his daughter fafe on board the Portuguese veffel; but finding old age creep on apace, and penetrated with the most lively grief at the intelligence of the fad death of his children, he abandoned all, and embarked with her, trufting the care of his property to his other fon-in-law, M. Savula, who refides at Riobamba. For my wife, however folicitous all about her to enliven her fpirits, fhe is conftantly fubject to melancholy, her horrible misfortunes being ever prefent to her imagination. How much did it coft me to obtain from her the relations requisite for the judges in the course of my lawfuit! I can even readily conceive that, from delicacy, fhe has abstained from entering into many details, the remembrance of which fhe is anxious to lofe, and which, known, could but add to the pain I feel. Nay fhe was even anxious that I fhould not profecute Triftan, compafionating even that wretch; thus following the gentle impulse of a heart inspired with the purest benevolence, and the genuine principles of religion !

(270)

AN ABRIDGED RELATION

OF A

VOYAGE TO PERU,

Undertaken by Gentlemen of the Royal Academy of Sciences, to measure the Degrees of the Meridian near the Equator, whereby to infer the Figure of the Earth. — By M. BOUGUER.

TRANSLATED FROM THE FRENCH.

THE Academy has been fo diligent in publishing every thing it has done to determine the magnitude and figure of the earth, that I am warranted to fuppofe the affembly perfectly inftructed with the ftate of the queftion *. The experiments already made to afcertain the weight of bodies which are found to diminish therein in proportion as they draw towards the equator; the various operations undertaken in France to measure the extent of the degrees of both latitude and longitude; every thing, indeed, concurs to fatisfy us, that the earth is not completely fpherical; but these very experiments and operations are known to lead to oppofite conclusions as to its real deviation from this form. Geometry and phyfics feemed here fo much in contradiction with each other, that none were fufficiently aware of the means of reconciling them; it was a controverfy to which the learned themfelves gave rife, and not one of thefe difputes deemed purely fpeculative, and of no importance in practice : even the academy itfelf were undecided; nor were its doubts entirely laid at reft until fome voyages had been accomplifhed to the pole and the equator. The errors to which all our operations are liable, are not to be corrected by comparing, only, degrees of latitude within a fmall extent; their inequality is not manifest enough to be depended on : it is a very different thing to compare the degrees meafured in regions very remote, as is the pole and the equator, from each other. The difference produced from the fum of the whole of the small differences of these measured degrees, must have, neceffarily, by reason of its magnitude, difengaged us from those errors not to be avoided by calculating the difference of one degree from another feparately; and the confequences drawn from the mode of the first calculation, had acquired a certainty the latter could not give.

If towards the perfecting navigation it had been conceived neceffary to afcertain the magnitude of the degrees of it, it was not of lefs confequence to be acquainted with its exact figure. They were not able to diffinguifh whether the accidents, which happen even now, too frequently at fea, ought or not to be imputed to the negligence of pilots, not fcrupuloufly enough attentive to the precepts of their art, or whether the evil were not to be traced to a higher fource,—to the imperfectnefs of the art itfelf, by the maxims of it being chiefly founded upon the fpherical figure of the earth; of which it ought neceffarily to be affured, as well as of the circumftance, if fuggefted to it, of the imperceptible irregularity of the figure. Setting afide every other advantage which may

^{*} One part of this difcourse was publicly read in the Astembly of the Royal Academy of Sciences, 14th November 1744.

have prefented itfelf in our way, we could not fail to propole to ourfelves a variety of verifications on different fubjects; to labour at a defcription, and to correct the maps of the countries through which we had to pass; to make observations on the loadstone, examine the weight of the air, its degrees of condenfation, elasticity, refraction, and many other things, as occafion fhould offer. Nor even, perhaps, would all thefe neceffaries, duly confidered, and taken in the aggregate, be eftimated of lefs importance, than what we regarded as the principal object of our million. The project of the voyage of the academicians to the polar circle was fubfequent to ours; it has been a much fhorter one, and the public has already happily reaped the fruits of it; at leaft to the extent possible from the nature of the thing, until they shall form to themselves a common refult, the laft object of every voyage undertaken. With regard to ourfelves, whofe defination was to the fouth, and to encounter difficulties not to be imagined, we had to make our way to the equator; and it was clear enough we had no bufinefs beyond it, fince the degree of the meridian could undergo but little change on the other fide; and if we had proceeded far enough, we fhould have found them equal to those of France. It cannot be doubted that there is fome fort of conformity between the two hemifpheres of the north and fouth : if the degrees enlarge on one fide, they muft, of confequence, do the fame on the other, even when not exactly fubject to the fame law. It behoved us, then, to be flationed at the equator, to determine, as this was neceffary, the inequality, whether in excefs, or lack, when at the greateft. M. Le Comte de Maurepas, whole love for the fciences urged him to every thing that might contribute to their advancement, loft fight of none of the advantages to be derived from our voyage, that could reconcile himfelf to the undertaking; he fmoothed all our difficulties; indeed, we have felt at the extremities of the globe, that we had been travelling under his aufpices. We were three, M. Godin, M. de la Condamine, and myfelf, all academicians, not reckoning M. de Juffieu, regent doctor of the faculty of medicine at Paris, brother of the two academicians of the fame name, who joined us after our departure. This gentleman's employment was to attend, as he did with exemplary care, to the natural hiftory of the countries through which we travelled; and in this he was to be affifted by M. Senergues, furgeon, who, it was conceived, might alfo fometimes render much affiftance to us. We had need of the aid of many perfons, to draw, to examine the calculations, or to explore the country with us: for which purpofes, they appointed M. Verguin, engineer of the marines, and Meffrs. Couplet, Defodonnais, de Morainville, and Hugot, the laft a clock-maker, who was to have the charge and care of our inftruments.

M. Godin had more pretenfions than one to be placed at the head of our company; befide being my elder in years, he alfo had the merit of proposing the voyage. For my own part, I had no intention of having any thing to do with the enterprize, when every thing being prepared and the period for its departure approaching, feveral of the mathematicians or aftronomers on whom much reliance were placed, found themfelves in a fituation, from perhaps their private affairs attaching them to Paris, or other causes, to be unable to give efficacy to their zeal, which determined me to conquer the repugnance which the weak state of my health had always given me to fea-voyages. In the meantime, though our absence, from many particular incidents to which I was not the least acceffory, became very long and tedious, I shall not, I am fure, repent of having rashly come to the resolution I did, if I have the gratification of knowing that my individual efforts have been of public utility.

It must be remembered, we were not limited to measure the extent of a fingle degree of the meridian; the arch we ascertained contained more than three; fo that our labour labour in this fingle place has been three times longer, and more painful, than that experienced in Lapland, which has received fuch well-earned applaufe. On the other hand, if we have had to overcome many difficulties, it is certain many of them were infeparable from fuch undertakings; when it was necessary to crofs the ocean to a country fo diftant, as to render all communication with Europe exceedingly difficult, and when the fuccefs of the miffion depended on fuch a number of circumstances, and the concurrence of fo many perfons; the moral difficulties are then multiplied, and unite themfelves with local and phyfical ones. The first have been greater than can be described, and the extent of the latter may be conceived when you are informed, that the vaft height of the mountains, which in Europe has commonly contributed to accelerate these operations, were to us the greatest hindrance; either from the circumstance of being stationed fo high as to be enveloped in clouds, or having our fignals carried away by the tempests, and being frequently reduced to the necessity of having regard to nothing but our own fafety. We have fometimes been obliged to purchafe, for a month and a half's patience, a fingle quarter of an hour of fine weather; and in one of these flations we have been longer detained, than we should have been toiling through a whole meridian in Europe. We were working, too, in a country, to which even its inhabitants themfelves were ftrangers; and obliged continually to penetrate into defarts, where no paths but those made by wild beafts were to be discovered.

We could not, without a paffport, enter the territories under the domination of Spain, which are ordinarily interdicted to every defcription of ftrangers to all places beyond the feas. We were even in want of a fpecial permiffion. His Catholic Majefty did not fimply permit our operations to be made in whatever place we might choose in Peru, but declared himfelf the protector of them, by making known his pleafure in this regard to his viceroys and to his audience at Quito; and, at the fame time, nominated two marine officers lieutenants of fhips, Don George Juan, commandant, D'Aliaga, of the order of St. John of Jerufalem, and Don Antonio de Ulloa, to affift in our work. We found them at Carthagena, in America, where they were arrived fome months before us, directly from Cadiz. It was a flattering circumstance for the two united nations, to be able to turn their thoughts towards the attempt of examining the figure of the earth, while the fortunate fuccels of their arms altonished Europe, and turned its attention to very different objects. In the meantime, if we had the good fortune to fucceed, the advantages to be derived from our voyage would be common to every nation, all would equally be benefited thereby. It is fit Kings should not limit the benefits arifing from their glorious undertakings to one reign or one age ; by generoufly extending them to the whole human race, they flow themfelves kings or as fathers of every people : this trait of goodnefs and wildom is confpicuous in every thing commanded by the cherished fovereign to whom we are subjects.

I fhall divide this difcourfe under different heads, in order the better to defcribe a country we have had too many occafions to become well acquainted with. Our French travellers have penetrated but a little way into it, and the idea they have formed to themfelves of the country, have ordinarily been founded upon the relation of perfons who have never been induced to a ftrict examination of what they beheld. Hence it occurred to me, a fomewhat circumftantial detail would afford pleafure, until I can give a complete relation of the whole journey. Befide this detail may throw fome light upon the operations of the meafuring of the globe, of which I have given in an account.

PART I.

DESCRIPTION OF THE PART OF PERU COMPREHENDED BETWEEN THE SEA AND THE GREAT CHAIN OF MOUNTAINS KNOWN UNDER THE NAME OF CORDELIER.

WE embarked in a King's ship in the road of Rochelle the 16th of May 1735, and made our way very fuccessfully to Saint Domingo, after having first put into Martinique, where we remained a few days. We made a variety of obfervations in both thefe iflands, fome of which are noticed in the memoirs of the Academy. We meafured the height of the different mountains we had occasion to afcend, to fatisfy our minds in certain refearches we proposed to ourfelves; we tried our ability, without being fenfible of it, to fcale other mountains incomparably higher; those which form the famous chain known under the name of Cordelier, and of which but little is known than the name in Europe. We made a confiderable ftay at Saint Domingo, and left it the 30th of October for Carthagena; from whence we made our way to Porto Bello, and having croffed the ifthmus, we embarked at Panama on the South Sea, and on the oth of March 1736, we faluted, for the first time, the coast of Peru, and anchored in the road of Manta, where we propofed to ourfelves to harbour. It is already known M. Condamine and myfelf feparated here from the reft of our companions, by reafon that we believed we might make fome use of our time in this part of the coaft, on which the heavy rains had already ceafed to fall, and we were affured it would be fome time yet ere they abated to the fouthward, and that the way to Quito would be impaffable until the month of June.

We faw M. Godin, with the reft of the company, fet fail for Guayaquil, and had no caufe to regret the refolution we had taken to remain behind; our ftay purchafed us a perfect acquaintance with this coaft, which being the part jutting moft to the weft of South America, required to be afcertained with particular exactnefs. We examined the length of the pendulum under the equator, and I was myfelf much privately taken up with aftronomical refractions.

The day after M. Godin's departure, we went to the village of Monte Chrifti, fituated at the foot of the mountain of that name, famed in thefe feas, and known to all navigators coming from a diftant country; it is the refidence of the antient inhabitants of Manta, who, to fhelter themfelves from the infults of pirates, have removed from the coaft where they formerly refided. We were lodged in the King's houfe *, which fhould be confidered as a Town-houfe[†], though, like the reft of the cabins, only conftructed of bamboos; it was raifed upon piles about feven or eight feet in height; we afcended it by a ftair formed of two bamboos of large fize, in which they had contrived notches to receive one's feet. On Thurfday the 15th, in the morning, the Indians came to vifit us, preceded by their Alcades or magiftrates, carrying in their hands their wands, as diffinctive marks of their authority; they prefented to us fome fruits, and announced to us that they had orders, by letters from Don Jofeph de Olabés y Gamoroa, commandant of Puerto Viejo, to fhew us the fame attention as to himfelf. We chofe a more commodious flation as an obfervatory, at about a third of a league from the village; we there eftablifhed ourfelves under a roof, raifed by our good

VOL. XIV.

friends

friends the Indians with much facility, confidering the extreme fimplicity of the architecture common to this country. M. Condamine and myfelf made an unfuccefsful attempt to put in practice the method I fuggested in the memoirs of the Academy for 1735, to afcertain the precife moment of the equinox. The fun was visible in the evening, but not in the morning ; this circumstance, joined to other accidents, deprived us of the correspondent observations we were in want of. We were prevented by a cloudy fky from observing fome eclipses of the fatellites of Jupiter; but it permitted us to notice the end of the eclipfe of the moon, of the 26th of March 1736, in the evening; which, from the circumftance of its fixing the fituation of all this coaft, the moft westerly of South America, is become an extremely important observation *. We learn from it that Monte Christi, whose latitude is 1° 3' S. is fourteen leagues to the west of the meridian of Panama or Porto Bello, and the cape St. Lorenzo, which is near four leagues more to the weft, is about fifty-four minutes of a degree to the weft. of the fame meridian.

I was, with respect to myself, more fortunate in the observations I made at the mouth of the river De Jama, north of the Cape Paffado, at 0° 9' fouth of the equator. We did not go to this place until we had first made our visit to Don Joseph de Olabes at Puerto Viejo, by whom we were very well received. Puerto Viejo is one of the oldeft Spanifh fettlements in Peru. It yet has the title of city, which it merits as little as that of port, being a very inland town, and the river that paffes it very inconfiderable. We found notwithstanding a great number of Spaniards here, but for the most part very poor; they have wax and cotton, and cultivate both the cocoa and tobacco, for exportation, but the badnefs of their roads and a defective navigation depresses their commerce; it is even a fort of hazard that throws an opportunity in their way for the fale of their commodities.

We noticed in this, as in feveral other places we paffed, fome very pretty houfes, under roofs thatched with ftraw or the leaves of the palm-tree, containing a great number of chambers, and which to their other embellishments, if we may use the term, were added galleries and balconies. The bamboo ferves for beams, as well as joifts and boards. These bamboos of which they make such a variety of uses, are as thick as a man's leg; when they form boards of them, they fplit them down the whole length on one fide, then open them by breaking the diaphragm within, and fpread them flat; thus prepared, thefe boards are as long as ours, and fometimes fifteen inches in breadth; and of thefe they make their floors, their partitions, and window-frames; all the parts of the building are united by the roots of trees, or cords made of the bark or rind, fo that not a particle of iron enters into the composition or construction of the edifice; and nothing can be more accommodating to the natural indifpofition of the people of this country to labour; who, were they inclined to give themfelves a little

more trouble, might find more folid and durable materials in their forefts. It is true, it would coft them more to erect their habitations in a better and more careful manner; befides, generally they are in want of nothing elfe than a fhelter from the extreme heat of the fun, or the frequent heavy rains. Walk or move as gently as you can in thefe houfes, the whole edifice fhakes. Accidents by fire, too, are much to be apprehended, but as their furniture partakes of the fimplicity of the building, the damage can never be very confiderable.

From Puerto Viejo we went to Charapoto, another Spanish fettlement, where there are yet fome Spaniards to be met with. From this place we proceeded to Canow, and afterwards to the north of the Cape Paffado. On our way to Canow we paffed by the bay of Caracas, a port, the juttings of which are formed by nature. This bay, fupposed to have fome refemblance to that of the fame name in the North Sea, has a very narrow entrance, but is nevertheless very spacious; and there is much wood in the neighbourhood of it, proper for the construction of spaniards, who founded a city near the entrance of it, the ruins of which are yet evident, continue here from time to time, eftablishing timber-yards.

In all the places not abfolutely defert, we found and had a refource in bananas, and fome other fruits, milk, eggs, and poultry. In other places we fubfifted upon rice, and what provifions we carried with us; the bananas, and maize-cakes, which had no other fault than being exceedingly dry, ferved us inflead of bread.

The Indians provided us with horfes, of which we had much need; and they taught us to profit of the flux and reflux of the tide, by directing our way upon the flat flores, where no roads were found made over the heights of the coaft. Horfes multiply very much in this country, and there has been a great number of them fince the Spaniards have transported them from Europe; their goodness does not arise from the care taken of them, as is the cafe in our islands; they fuffer them always to run out even during the night, and never floe them; they are fometimes fo lean and flarved as to excite the compassion of a cavalier, but notwithstanding this, they are excellent and truly ferviceable. We availed ourfelves of another fort of conveyance, when we had occasion to keep to the coaft. We found fome pirogues, a species of canoe or boat, formed of a fingle trunk of a tree, in which they will venture very far from flore, and even dare to double the cape, when the fea is not greatly agitated.

All our propositions in our different coaffings were defigned to make us as much acquainted as possible with the country: but while we had in view the perfecting of geography, we did not neglect other observations that prefented themselves; to multiply which it was that, being in the fouthern hemself principally for a commodious fituation to observe the aftronomical refractions near the horizon, and I at length found one at the mouth of the river Jama, where I fixed myself for near fifteen days. The observations I made there, joined to those already accomplished at St. Domingo, furnished me with a term of comparison which turned out exceedingly useful to me when I got to Quito; I noticed there the refractions to be lefs, and that, contrary to all received opinion till that time, they diminished in proportion as we were above the level of the fea.

While I was thus occupied below, I beheld, the 13th of April 1736, a very uncommon fight, and of which there have been but few examples: I faw two funs very diffinct, fucceffively fet; they were in contact, and one exactly over the other. I do not think I ought to attribute this phenomenon to the reflection of the furface of the fea, which had fent back the fecond image: for in this cafe the two images would have

N N 2

had a contrary motion, inftead of defcending with an equal one. The lower fun, whofe light was not quite fo brilliant, but whofe edge was not lefs determined than the upper one, was when I obferved it already divided by the horizon, and did not even form a complete half-circle. It fet, and was immediately followed by the other, which did not appear to me fubject to any other refraction than what I had already obferved, and for fome days following continued to obferve.

Most part of the places we have mentioned are famous in the antient history of Peru. Manta, at the time of the Incas, was the metropolis of all this country, then funk in the groffeft idolatry : the divinity they adored was competent to do them neither good nor harm; it was an emerald of the fize of an offrich egg, to which they had confecrated a temple, and attached a college of priefts to have charge of its worfhip. Every emerald of an ordinary bignefs partook of a fmall portion of its divinity, were reputed her daughters, and were often brought from a great diffance to be deposited in the fame place, that they might have the fame homage rendered to them as the goddefs their mother : this laft was loft on the arrival of the Spaniards; probably the Indians carried it away and concealed it. It is in vain they have fought for the mines from whence these flones are taken; nor have they been more fuccessful in the perquifitions made in another neighbouring country, further north upon the fame coaft, the name of which augurs a better prospect. They pretend to be acquainted in this province, which is that of the Emerald, with the Little Mountain, in which are the richeft of thefe mines; it is not farther than five leagues from the fea, and is upon the fouth bank of the river of the fame name as the province. But, befides the impenetrable nature of the country, almost throughout caufed by the thick woods, the Indians are wife enough not to be very aiding in these fort of refearches: they are fenfible, no doubt, should they fucceed, they would be opening a career of labour painful to excefs, which themfelves alone would bear the weight, and with but little portion of the profits.

It is very probable this coaft, notwithstanding the relation of the first travellers who have gone over it to the contrary, have never been much peopled. The villages are at ten or twelve leagues diftance from each other, and in many places twice that; and there are none of them fituated at a fhort diftance from the fea. We may hazard an opinion that this has always been the fame : immenfe forefts are not fituations calculated for the fubfiftence of a numerous population. It is a contradiction, of which fome writers, otherwife very able, have not been fenfible; who have believed that the Gauls in the time of the Romans were more numerous than the French are now, although all the country, almost, was then covered with wood. We are aware, befides, that we cannot, in the remote countries of which we are now speaking, confider forests as a new production : commerce alone, by the abundance it draws fometimes from without, may furnish the means of fubfistence to a large population : but we are not left ignorant that there has ever been but little communication between the coaft and the reft of the continent; befides, as we shall not hefitate long to prove, the infpection of these places confirms this to be very probable.

We must not feek in these forests for our oaks or elms, and other trees commonly found in our woods. There are, however, to be noticed fome which the Spaniards, from some vague relation, have taken for the French, or holm-oak. We fee there also oranges, citrons, and olives: these trees have been carried there by the Spaniards, for which reason they cannot, any more than figs and pomegranates, be expected to be seen in America, but in cultivated spots. We may even observe of the

276

†3

olive,

olive, that this climate is rather too warm for it, and that it would turn to better account beyond the other tropic, in the diffricts of Chili, the moft neighbouring upon the torrid zone. We noticed a great number of fhrubs and plants we have not in Europe, and others which grow better in the former than in the latter country, as is evidenced by their growth. Acacias, brooms, ferns of numerous fpecies; the prickly Cuiges, the Opuntia, the different fpecies of aloes, not to mention the Mangliers, which even grow in the fea, and multiply to a prodigious degree by means of their branches, which fo intertwine as in their turn to become trunks and roots. In all thefe forefts nothing is to be found but heavy wood, excepting only a few plants, converted by the goodnefs of the foil into trees. Moft of the fpecies, for inflance, of the Ferule grows to a great height in Europe, principally in Pouille : but it attains to a larger fize in the hot regions of Peru, and it yields a white wood, which, though in weight four or five times lighter than the lighteft fir, is capable notwithftanding of as great power. Nothing can be found more proper to make rafts, of which the ufe is fometimes fo neceffary, travelling over thefe deferts*.

It is only neceffary to penetrate into the thickeft places of the forefts to find cedars, of which there are two or three species; cotton trees; and the various forts of ebony, or hard wood; Guyaco, and many other kinds of wood, efteemed for their fragrance or colour, and for the fine polifh they will receive. The trees known under the name of Maria are diffinguifhable by the whitenefs of their bark, and their great height and ftraightnefs; thefe are the only trees in Peru they can convert into mafts for fhips; they are very flexible, nor are they to exceffively heavy as almost all the others are. I must not omit noticing the palm-trees, of which I have myself reckoned more than ten or twelve species, yet there are many more. Confidered in every manner, this is a very fingular tree: its branches, or rather leaves, being at the very top of its trunk, gives it, notwithstanding its height, the form rather of a plant than a tree. It is obferved in the hot countries of the torrid zone, trees fpread their roots near the furface of the foil : but the roots of many of the palms are altogether out of the ground, and the bafe of the trunk is obferved to lift itfelf up as the tree advances in age; it will fometimes rife to fix or feven feet, and the roots which divide form beneath a kind of trench or pyramid, in the hollow of which it is possible to shelter onefelf.

Near the fea thefe forefts fcarcely ever exceed the growth of a coppice; in proportion as you advance into land, the trees visibly increase in fize, and gradually in height, and at feven or eight leagues from the coaft, and not at a fhorter diftance, they attain to their utmost elevation. This *maximum* bears itfelf up; it comprises a very confiderable tract, but at the fame time of unequal breadth, varying according to fituations; for if we continue to advance, we find the trees lofe much in their height, either becaufe the quality of the land is no more the fame, or becaufe of the elevation of the foil as it approaches the Cordelier, and its not having the fame depth of good earth; the fpaces between the trees are filled with a prodigious quantity of plants and parafite fhrubs; fome of thefe entwine the trunks and branches; others fall vertically in a ftraight line, refembling cords attached to their heights; the remaining voids are taken up by bamboos of all growths, fome of them twenty or thirty feet high, and the most part of the larger ones thorny. When I fay that all the trees are encumbered with plants and fhrubs, I mean to fay, generally; we muft, I believe, except the Acomas, which are confiderably larger here than in our iflands, and which, like even tome other trees, have appeared to me exempt from mofs. They owe, apparently, this dif-

* The Spaniards name this wood, Wood of Balfa.

tinction to the lacteous moifture of their bark, which is prejudicial to many parafite plants.

We acknowledge, on entering thefe woods, the truth of the obfervation already made by other travellers, that if the birds of America exceed ours in beauty of plumage, ours have the advantage, infinitely, in variety and fweetness of note. Instead of fong, nothing is heard almost throughout the forest, but a discordant stunning noise. The clamour of the paroquets, which are feen here in great tribes, is particularly difturbing. These birds do not frequent the sea-fide; to find them, we must penetrate for fome leagues into the country : I have frequently eat of the fmall green ones, and found them very good, though their flesh may be confidered rather hard. The apes, alfo, choose to take themselves far from the coast, and generally follow the course of the rivers and brooks. Here, alfo, you fee the Toucan, called by the natives the Preacher, although he never opens his mouth. He bears no refemblance to any other bird, from the monftrous fize of his beak, which is almost as large as his whole body. Pigeons are very common, and very good, fo are alfo ducks, principally those which the Spaniards name Palos Reales, and which are decorated with a creft. The Galinaffo is found in many places here; it is a fingular fpecies of the Coori, to the flefh of which they attribute different properties; but it is rarely made use of, by reason of its flinking fmell. It differs from ours by its fize, in which it is larger, and the head of it, inftead of being covered with feathers, has fimply a black fkin upon it, of an helmet form.

The number of mifchievous terreftrial animals is very great here, particularly remote from the fea and the thick receffes of the forefts, and where the trees are at their loftieft growth. The lion we fee there, is not one; he has much more relation with the wolf; and does not attack man. But the tigers are as large there, and favage, as those of Africa: of which, there has been at different times most terrible proofs. When, in 1740, I returned from Quito towards the fea, taking a northerly direction to measure the absolute height of the mountains which had ferved for our meridian, I paffed by Nigonas, which is, as it were, the centre of the Province of Emeralds, and faw there many perfons who had been lamed by thefe terrible animals : ten or twelve Indians had been torn to pieces by them two or three years before. I proceeded farther, and fixed myfelf in a little island formed by the meeting of the two rivers of the Emeralds and Inca. In this island we imagined ourfelves perfectly fecure from any attack; but, lo! the first night the tigers fwam over to difpute our provisions with us, and carried off a part of them; and we were under the neceffity every night of making a large fire as a protection. It is a bleffing these animals, like all those offensive by the ferocity of their nature, are not teeming. Tigers are but few in Peru; but it requires but one or two of them to defolate a whole country.

The Indians, who never crofs the deferts without being armed with a lance and hanger, affemble themfelves at certain times to hunt thefe animals, and never fail, when accidents have happened to imprefs them with the neceffity of doing fo. Much alfo is to be apprehended from ferpents, which are here very common, and of many dangerous fpecies; among them the rattle-fnake, which will not, like the moft part of others, turn afide from man. Lizards are found here as large as your arm, but harmlefs. We will now notice those divers species of animals, of which some are confidered amphibious. The Iguana has a thorny creft on his head and along his back : his form, he is fo meagre and fhrivelled, is truly hideous. I fuspect he has the means, when he fwims, of blowing himfelf up into a large volume, which gives him lightness, and induces a belief that he walks upon the water as upon land. They eat of this animal,

278

and

and find his flefh excellent; as alfo of a fpecies of wild boar, which has a head not fo long as ours, and fomething like a navel upon his back. I believe this laft is peculiar to the woods of America; but the Taton or Armadillo is common to both continents: it is remarkable for the diffinct fcales or armour with which its body, head, tail, and legs, are feparately covered.

The most part of the infects to be found with us are also there, but ordinarily of larger fize, and fometimes fo big, that Europeans confider them monftrous. Earth worms, for inftance, though entirely refembling what are common to us, are as long as one's arm, and an inch in circumference. Some of their fpiders are covered with hair, and as large as a pigeon's egg. We fee there different fpecies of the pifmire often confiderably larger than ours, and fome of them venomous. Scorpions are alfo very common, but their fling is not of much confequence; the diffrefs of it generally ends with a flight fever : it has, however, happened to an acquaintance of mine, befide feeling this inconvenience, to have been afflicted with a fwelling of the tongue, fo as to render fpeaking painful. I have frequently feen a little dog ftung, and it only occafioned him at first to flart. The stings were made chiefly in the tender part of the belly not covered with hair: the little dog did not appear at all indifpofed. But there is nothing in these forests that diffrestees you to much as the mosquitos and maringouins; by reafon they caufe an uneafinefs, or rather a plague, which is never ceafing, and it is very difficult to guard onefelf against it. The first are a species of flies fcarcely perceptible, and affect you like red-hot iron ; the fecond are of two different fpecies, the fmallest differing little from our gnats. We are acquainted in Europe with the nature of the fting of the latter, but the poifon of the maringouins is, neverthelefs, more active : it caufes great blifters, chiefly upon those lately from Europe, whose blood is apparently more fluid. It cannot be defcribed with what obftinacy they feem to attack thefe ftrangers. The air is frequently darkened by their multitude, and we are obliged to be in incefant motion to defend ourfelves from them; they conquer by making their way through every little hole they find in our clothes, and it is impossible to reft at night for them, unless under a tent made purpofely to guard us against them. This tent has curtains of calico, and is formed like a tomb; they fasten it, when they sleep in the woods, by its two extremities or four angles to fome trees; and it is a piece of furniture fo abfolutely neceffary, that the pooreft Indian is always provided with, and never journeys without it. As the maringouins ftrive to avoid both wind and fun, the open places they will never voluntarily infeft; and many places are found entirely free of them. The inconvenience is not fo great in hamlets and all cleared fpots.

It will not be confidered extraordinary that the country I have defcribed fhould be very hot, fince it is upon a level with the fea, and placed in the midft of the torrid zone. At the fame, the thermometer of M. de Reaumur did not rife in the afternoon but to 26° , 27° , or 28° ; in the morning, a little before fun-rife, it was commonly at 19° , 20° , or 21° . It is not to be doubted but it is the continuity of the heat which makes it feem fo great in the torrid zone, for we have very frequently known the thermometer in France to rife confiderably higher. The ftrength is exhaufted by transpiration and violent fweats. The heat abates but very little during the night, and we even rife fatigued in the morning. To the degree the faculties of the foul find themselves incumbered, the laffitude of the body communicates itself to the mind; and we then find ourfelves in a ftate of indolence, which not only prevents us from acting, but unfits us for any thing that requires application and attention. It is very possible all travellers, in passing through the torrid zone, are not equally fensible to this effect of the great heat. There is reason to believe also, that, in the end, we recover in a great measure measure our usual state; provided the re-establishment is sufficiently speedy, and no other causes throw any hindrance in the way.

But what will, no doubt, create furprife, is, that in thefe countries, where the heat is always fo great, the humidity is always exceffive; and fo it is in all the places fituated between the two tropics, where there is much wood. Even upon the higheft eminences, from whence it is natural to imagine the waters fhould run off, you fink midleg into the mud. I have already intimated, that the houfes were raifed upon piles; but this does not prevent the mifchief occafioned by the inceffant dampnefs excited by the heat. At certain feafons, every poffible care is required to preferve paper, and to prevent our faddle and portmanteau from rotting. To attempt to fire a gun after being loaded for three or four hours, is an ufelefs effort; and there is no means of preferving powder, but drying it, from time to time, at fome diftance from a fire.

This country, the length of which I fhall give by and by, is from forty to forty-five leagues in breadth from eaft to weft, being comprehended between the coaft and the Cordelier, whofe direction is nearly north and fouth. Sometimes the coaft abruptly changes its direction; and the chain of mountains, as if affected thereby, feems, although at fo great a diffance, to confine itfelf to the alteration; but it commonly takes its courfe in a direct line; infomuch, that it is found at the leaft diffance from the fea, when any gulph, like that of Guayaquil, for inftance, penetrates far into land. Going beyond this gulph, fouthward towards Lima, the face of the country is altered; the foil is covered with fand feemingly depofited by the fea; or it poffibly may be attributed to a contrary origin, this fand may have fallen from the Cordelier: the country is open; and there is no wood, as on this fide the gulph.

But what more particularly diffinguishes this part of Peru, lying beyond the Guayaquil, is, that, notwithstanding the fky is often cloudy, there never falls any rain: a fingularity this which gives rife to a problem in physics the more difficult to be refolved, as it depends upon the most perfect acquaintance with the nature of clouds. It is not furprising that Augustin de Zarate, who was, I believe, the first who started this difficulty, has not better explained it; yet I am not acquainted with any person, though the fubject has occupied the attention of many naturalist, who has done better.

We have now to fpeak of a phenomenon, the regular and certain effects of which is not confined to a fmall extent of territory. The country fubject to the rains reach as far as Panama, and is in length more than three hundred leagues; and they are at the fame time fo heavy and inceffant, particularly in Choco, the most central province of this tract, that the people the most avaricious of gain have the greatest repugnance to refide there, although this is, cf every other country in the world, that in which nature has difplayed the utmost profusion, by making the bowels of the earth a depository of gold duft. A fortune cannot fail to be made there in a little time; but there is nothing more certain than falling victims to the pernicious qualities of the climate, the humidity of which inceffantly applied, checks transpiration, and fuspends the fweat continually promoted by an oppreflive heat. The other country in which rain never falls, and which is to the fouth of the Gulph of Guayaquil, extends beyond Arica towards the deferts of Atacama, or towards the confines of the torrid zone and the fouth temperate zone, a fpace of more than four hundred leagues in length by between twenty and thirty in breadth. There thunder is never heard, nor are we ever exposed to any ftorm. The foil there is always dry, or with more propriety we may obferve, that nothing is feen but arid fands. No verdure meets the eye, excepting on the banks of the rivers, which, falling from the mountains, traverse these countries with unufual rapidity. So affured are they of having no rain, and fo little apprehenfive of it, that the houses in Arica, as well well as Lima, are never roofed; they content themfelves with mats by way of a covering, over which they throw a fprinkling of foil or afhes, to abforb the dew and damps of the night.

That the extreme differences in the conflictuation of the atmosphere, and the quality of the foil of these countries, have a connection with each other, cannot be doubted. The nature of the foil has an influence upon the lower region of the air. Forefts, in all hot countries, notwithstanding the sky may be served, and the air pure without, are almost always involved in a thick atmosphere. The fact is certain, because it is visible; befides, it is not difficult to explain the reason of it. Trees, like the earth, which is covered with corrupted vegetable and animal matter, and always exposed to exceffive heat, is fubject to a perpetual wafting. The evaporation takes the appearance of a fog which rifes to no height, feldom above that of the trees, if we notice only the denfe part of it; but the imperceptible parts afcend to a great height, fufficient, fuch is the attractive virtue of the wood, to conftitute a fpecies of communication between the forest and the clouds. The exhaled particles unite themselves with the vapours which form the clouds, which becoming, as it were, very fuddenly heavy, lofe their equilibrium on the bed of the air in which they are fufpended. While it is raining, they are in the midft of a fog; that is to fay, the rain falls not ufually as it does here, breaking from a cloud apparently high over our heads: more frequently in the forefts of the torrid zone, all the upper and lower regions of the atmosphere are equally thick, or furcharged.

Whatever tends to the progrefs of phyfics, is certainly not foreign to the relation of a voyage which has been undertaken to improve that fcience. I, therefore, fhall not be afraid of joining to the recital of facts, certain reflections arifing therefrom, from which fome benefit may be derived. There is every reafon to induce a belief, that the fmall particles of which the fogs and clouds are formed, are not fmall folid fpheres; but that they are rather, fimply, bubbles of air. Were this not fo, it would be impoffible that the clouds fhould rife, and that they fhould afcend to a greater height in fummer than winter, when the air, lefs condenfed, is lefs capable of fupporting them. Attention to every other circumftance, and even to the manner the evaporation of liquors is accomplified, will confirm this truth. In fact, whatever internal agitation may be imagined in any liquor that evaporates, the fmall particles which are thrown out, quickly lofe all their motion by the refiftance of the air, if they were but fimply thrown out, and a e not poffeffed of a lightness disposing them to float and rife.

Thefe fmall bubbles fufpended in the air may be diffolved in various ways to rain. The wind, by driving them one against the other, may jumble and break them. The heat may become fo violent, that the bubbles, by too great an inflation occafioned by it, may burft. A very contrary caufe will produce a very fimilar effect, when the air contained in these fmall hollow spheres shall experience a too great condensation, which will caufe fuch a diminution in the bulk of thefe fmall bubbles, that they cannot When the wind coming from the fea, bringing a cloud along with buoy themfelves. it, conducts it over a coaft covered with wood, it can affect but little alteration in the heat. A wood reflects the rays of the fun but in a very trifling degree; and it is certain that the heat, at a certain height above it, cannot be more intenfe than over the fea. But the continual evaporation, we have observed, of the woods, further the defcent of the clouds and their diffolution; whereas, in the environs of Lima, and to the fouth of Guayaquil, nothing like this happens.

The winds, which prevail most in these parts, ordinarily blow from the sea and south. weft : but when a cloud driven by this wind reaches the land, it becomes exposed to a VOL. XIV.

0.0

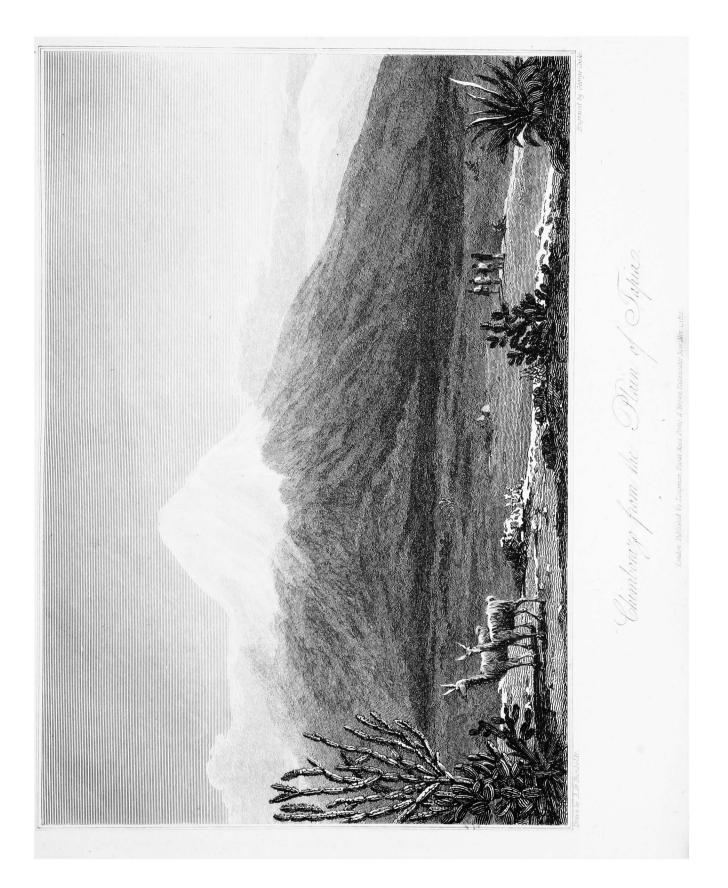

new heat, that is to fay, to one different from what it received from the fea; and which arifes from the reflection, and the neighbourhood of foil, composed of nothing but fand. Thus the cloud is likely to be lefs disposed to fall by its own weight, as the volumes of each of its bubbles must neceffarily augment. It is true, if the dilatation were already too great, from the facility the small portion of the confined air had to receive the heat, the neighbourhood of an overheated coast would only tend to accelerate the burfting of the bubbles, and rain would be the more certain. So there is oftentimes a fufficiency of rain where the irrigation of the foil is practifed; but it is more common to observe the clouds pass over to a distance of twenty-five or thirty leagues beyond, where they are met by the Cordelier, which, as a high wall, intercepts every thing not high enough elevated to fly over it.

April 23, 1736.—It is now a month and a half ago fince we first visited these deferts, and it became neceffary that we should think of making our way to Quito, the roads to which we had now reason to expect, from the ceffation of the rains, were now beginning to be practicable. Being at this time at the mouth of the river Jama, which is nearly upon the same parallel with Quito, M. Condamine and myself agreed to separate and take different routes. M. Condamine followed the coast towards the north in fearch of the river of Emeralds, continuing to lay down a map of the country he croffed in re-ascending it. With respect to myself, retracing back my steps, I took a fouthern direction for Guayaquil, and penetrated the forests, the furface of which was so overflowed, that I was frequently, when mounted on horseback, up to the knees in water : it was, in truth, no other than a continual morass or shough. The violent efforts by the mules to extricate themselves, exposed one every instant to the hazard of being dashed against a tree.

Having reached Guayaquil, I quitted it the fame day, of courfe could not myfelf acquire much knowledge of it. The town is large, and one of the most flourishing of all the country. Its advantageous fituation renders it the ftaple of the commerce of both Panama and Lima; and though it is at a confiderable diftance from Quito, it is, properly fpeaking, the port of this latter place. It is big enough, and divided into two towns, called the old and new. The houfes, which are all built of wood, are feparated but by fimple partitions. Its fituation is five leagues from the fea, upon the weftern bank of a wide and deep river, immediately below its confluence with the Daule, which is also a very fine river. Almost all the rivers falling from the Cordelier into the Pacific Ocean, are no other than impetuous currents, notwithstanding the great quantity of water that comes down. But these rivers come down from too great an height, and fo rapid are their courses to the fea, that they have not time to enlarge themselves. Some are confined within very narrow beds, particularly the most part of those which cross the countries on this fide the Gulph of Guayaquil; others, running over a fandy foil, are much wider; they frequently form great fheets of water, preferving, at the fame time, the rapidity impreffed by their fall. But the river Guayaquil, in falling into the gulph of that name, has a more gentle course, by reason that it runs almost parallel with the Cordelier; its defcent is not fo great; it is fubject to flux and reflux; and is the recepticle of many other rivers. All these circumstances render it more navigable, and abounding in fish; but, at the fame time, it is full of Caymans, or crocodiles, fo common in America.

I embarked upon this river, afcending it, and, on the 19th May 1736, reached Caracol, feated at the foot of the Cordelier; a place left by M. Godin about three days before. This gentleman, although he had all the mules of the province at his command, was under the neceffity of leaving here nearly a fifth part of our equipage, by

reafon,

reafon, on account of the impracticability of the roads, he was obliged to render the weight as moderate as he could. He continued his route, and entered Quito on the 29th May, one year and fome days more, from our departure from Europe. The manner of the reception of our companions in this capital is already known; all the different corporate bodies of the city haftened to congratulate them on their arrival, and they were lodged in the palace until they could provide convenient houses for themfelves.

PART II.

T was the 10th of June before I reached Quito, having been detained at Caracol for want of a carriage, and my health had fuffered confiderably by the fatigue of the journey from Rio Jama, and more particularly from Puerto Viejo to Guayaquil. However, I fet about, in my turn, to furmount the difficulties of the chain of mountains before me, which took me up feven days to accomplifh, although I did not effimate the paffage over at more than nine or ten leagues. But it is an extremely rugged afcent, interrupted by an infinity of different precipices, on the brinks of which we are often obliged to walk; we are obliged too, many times to pass a little river called Ojiva, in which many people are loft every year; though it is not a wide torrent, its rapidity is frightful: we pass it for the last time, we remove ourselves from it, and yet we dread it, fo much it feems to threaten the traveller, even when at a diftance from it, with its roar. Sometimes, defcending, a deep ravine prefents itfelf, which we have difficulty to get over, and often a whole day is confumed only in afcending its opposite fide, and then we find ourfelves but at a little diftance from the place we left in the morning. The laffitude of the mules is fo great, that you must allow them to rest and take their breath every feven or eight fteps they make; the whole journey becomes thus, although very laborious, but intervals of alternate reft, and a flowly progreffive motion.

The rain was fo heavy, and every thing, during the first few days, fo very wet, that it was not poffible to make a fire; and we had to live on bad cheefe, and bifcuit made partly of maize. We made each night, when we were not fo fortunate as to meet with a cabin already conftructed by fome other traveller, the beft bed we could of the branches of trees, and their leaves. In proportion as we advanced, the heat of the torrid zone abated, and we foon became fenfible of cold. When I fay I was feven days on my journey, I do not reckon the ftay I made in the town called Guarenda, in the heart of the Cordelier, and which prefents a fituation of reft which no perfon fhould fail to avail themfelves of. The whole of my way was through woods, which terminated, as I have fince fatisfied myfelf, at the height of fourteen or fifteen hundred toifes; and when I came to any flation more open than ufual, and caft my looks behind, I could fee nothing but the immenfe forests through which I had passed, fpreading themselves even to the fea. I at length got to the height, and found myfelf at the foot of a mountain called Chimborazo, always loaded with fnow, and all the foil covered with froft and The Cordelier being nothing elfe than a long range of mountains, of which an ice. infinity of its pointed fummits are lost in the clouds, it is not possible to cross them but

by

by the necks or defiles; but that by which I made my way, partook of its great elevation above the level of the fea. I was at the foot of the Chimborazo, and, in the mean time, I found myfelf already in the region where rain never falls; to the greateft diftance around me I beheld nothing but fnow or hoar froft.

I followed exactly the fame route taken by the ancient troop of Spaniards, who are handed down to us in hiftory. This troop, commanded by Don Pedro Alvarado at the beginning of the conqueft of Peru, and precifely two centuries before me, made this voyage to the aid of Francis Pizarro: he took, as I have done, his way from Puerto Viejo to Guayaquil, by way of Jipijapa; from Guayaquil he afcended to the foot of Chimberago, and went along the fouth fide of this mountain to Riobamba, called at that period Rivecpampa: but in going over a hill, which could be no other than that known now under the name of Arenal, feventy of his followers, no otherwife acquainted with Peru than from report of its riches, and having taken no precaution, perifhed with cold and laffitude, among whom were two or three of the Spanifh women who firft ventured into the country. Having attained the height, I muft neceffarily defcend. How was I furprifed at the novelty of the view! I imagined myfelf, after having been fucceffively expofed to the ardour of the torrid zone and the horrors of cold, tranfported all at once, as it were, into the temperate climate of France, and into a country, as embellifhed here, in the moft engaging feafon.

At a diftance I beheld well-enough cultivated fields, a great number of towns and villages, inhabited by Spaniards or Indians, other fmaller and pretty towns, and all the open and unwooded tracts, peopled as are fome of our provinces. The houfes, no longer conftructed with bamboos, as are those lower down, but built of folid materials, fome of ftone, but for the most part of large bricks dried under shade. Every village is ornamented with a fquare, one of the fides of which is partly taken up by the church; in no region of the world have they failed to fet this place, which is a parallelogram, to the east, from which streets divide in straight lines, open to the distant country; even the fields are frequently interfected thus at right angles, which give to them the form of a garden. Such is that part of the province of Quito, fituated by the Cordelier to the north and fouth of this capital; worthy, indeed, by its fize, its edifices, and number of inhabitants, of its title. This city is about eight or nine hundred toifes in length, by five or fix in breadth; is the feat of a bifhop, and the refidence of the prefident of the Audience, who is also governor of the province. It has a great number of religious focieties in its bofom, and two colleges, which are a fort of univerfities, one under the direction of the Jefuits, and the other under the Dominicans. The inhabitants amount to between thirty and forty thousand, one-third of whom are Spaniards, or of Spanish origin. Provisions are exceedingly dear. The only foreign merchandize there is, and that carried on with difficulty, is at an exceffive price, as our cottons, woollen cloths, and filk fluffs. I have frequently given fix reals, or more than a crown, a pound for iron, to make fome inftruments of; a drinking-glafs cofts eighteen or twenty francs: but every neceffary of life is to be found there, and the country furnishes them in abundance.

It must be confessed, when one is in the deferts, at a distance from the Cordelier, and look upon this briftled chain of fummits, it is impossible to imagine to onefelf any thing concealed among them. One would be led to believe that, in climbing these mountains of fuch terrific afpect, when we have reached the height, we should be compelled by the inclemency of the weather to defeend on the other fide, where we should meet with forests like those we had left behind : it could never enter the mind that behind these mountains extend a second range equally high, and that they ferve, neither one one nor the other, but as a fhelter to this happy country; where nature has traced out in her gifts, to fay rather, in her profufions, the image of a terreftrial paradife.

This country is comprehended between the double chain of the Cordelier, which, like two walls, feparate it on the fides of eaft and weft from the reft of America. The firft of the two chains is, as we have already mentioned, at from 40 to 45 leagues from the fea; the two are parallel to each other at about the diftance of feven or eight leagues; I mean their ridges; fometimes they fly off, at others approximate, but always preferve the fame direction, which varies little from that of the meridian: from their extreme vicinage, the land or plain which feparates them muft be very elevated. This plain is five or fix leagues in breadth; the two chains of the mountains, which, to thofe on the outfide of them, appear but a fingle mafs, are very vifibly diftinct to the inhabitants living between them. Quito, and the largeft portion of the province, is thus fituated in an extended valley, which is ever reputed a mountain, from being placed between higher mountains, the molt of which are covered with fnow, or, if I may be permitted an exprefiion conformable to that in ufage in the country, fnowed.

The Cordelier is not double in its whole length, though I know it to be fo, having vifited the country, from the fouth of Cuenca to the north of Popayan, to an extent of more than one hundred and feventy leagues; and I know it to be double yet further towards the north, although the country, by its finking, lofes by degrees the good qualities it poffeffes in the environs of Quito.

The fufficient width of the valley and its exposition to the fun would, it might be fuppoled, render the heat of it infupportable: but, on the other hand, the great elevation of the hand, and the vicinage of the fnow, it must be eafily conceived, must temperate the heat; the two contraries, if one may fo express onefelf, are intermarried, and the iffue of the connection can be no lefs a lafting autumn than a perpetual fpring. They are ftrangers to many of the hurtful animals, the tiger and ferpent, fo frequent in the forefts of the low countries; the heat in the higher country is not fufficient for them. The thermometer of Reaumur kept its fituation at fourteen or fifteen degrees; the fields are always green, where grow the fruits of the torrid zone with those of Europe, as apples, pears, and peaches: the trees there are almost always in fap; every species of grain, and particularly wheat, is there very productive. Wine might be made there, had not Lima obtained an exclusive privilege to make it one of the objects of her commerce, while Quito fubfisted on her commodities, and by her manufactories of woollen cloths, calicoes, and cottons.

Years of fcarcity and dearth do not ordinarily furnish proofs of the fertility or goodnefs of the country in which it prevails, neverthelefs Peru is a fingular excep-Another example of a more rainy year than 1741, perhaps, a tion to this rule. The crops all failed, and the harvest did not yield fcarcely century will not produce. a feventh or an eighth part of the average of other years; the price of every thing increafed, as may be imagined, enough; for the inhabitants of the country of Peru are unacquainted with magazines of referve to have recourfe to on fuch occasions. A very moderate degree of labour is fufficient to render the foil, which is there extremely teeming, liberally productive; yet is bread very dear, double and treble of what it is with us, becaufe the views of the people of the province of Quito extend not beyond the prefent wants, and leave much of their lands uncultivated. The fcarcity caufed a rife nine times over in the price of wheat, maize, and all other grain, and even in potatoes, which, with the maize, is the chief food of the Indians. It feems the public calamity nuft have been extreme, and it was, too, fpread widely round : in the mean time fcarcely any body fuffered; the poorer fort were fomewhat incommoded, but

but they lived; they had recourfe to fruits and various forts of vegetables, which never failed them. Cheefe they were never without; and, as the cattle could always find rich pafturage in the extensive open plains of the mountains, meat was always cheap, and at a price, although I have noticed the reason of the advance, which will surprize, when compared with that of bread; beef was more than two or three source fous a pound of our money.

Every thing neceffary for clothing is there as eafily obtained. Flax grows very well: I have feen fome which had been cultivated in the country, which was very fine. The wools are not of quite fo good a quality as ours, but by using the better fort of it they might make better cloths than they do. The Vicuna is not feen at Quito, but they have an animal of much the fame fpecies, which the Indians call Llamas; it may better be compared to a fmall camel, and this they use to carry burthens of from fifty to fixty pounds weight : the Vicuna is to be found in Chili, and will live, no doubt. in many places of the Cordelier of Peru. Ingredients are found proper for dyeing. Indigo is common in the low countries; in the higher, there is a fhrub grows that gives a very fair yellow, and in many places they attend to the breeding of the infect, known under the name of the Cocheneal, which gives the crimfon colours. They carry on a commerce with Ambato, a place twenty leagues fouth of Quito, where the temperature is nearly the fame; perhaps the thermometer may ftand at one or two degrees higher. There is now no want of fpices, or, what is the fame thing, they have it in their power to fubflitute, for those with which we are acquainted, others produced in the country, which they do effectively, and more fuccessfully. Laftly, it is fufficient to chuse a fituation either a little higher or lower (for we have flewn this long valley does not form a perfectly even plain), to enjoy the air and the advantages of the most different climates.

From the circumftance of the fphere being here very much equal, the days are always nearly of the fame length with the nights; it is a perpetual equinox, and the degree of temperature is nearly the fame throughout the year in the fame place : the rains only mark the feafons, and they fall nearly as they do in the low countries in the forefts, from the month of November till May: thefe rains, together with the earthquakes, and frequent volcanic eruptions, which are in great numbers, conftitute the bad qualities, of which but few good ones are behind to balance, of these countries. It is eafy enough for a traveller who penetrates into the interior of the valley, to fatisfy himfelf he does not defcend within as he afcends without, and that he is at a confiderable height above the level of the fea, but to what degree is difficult, nay impofible, for him to effimate. There is no time for reflection in fuch a journey; man, in purfuing it, is then but a machine. All the collected waters difcharging themfelves from the two Cordeliers, fall in all directions of the horizon, on the outfide of them, either to the North'or South Sea, which mark their great height; thefe waters form the higheft cataracts in the world; but they mark out nothing precifely to the fimple traveller. Thus it is not aftonishing that the inhabitants of Quito should have had the information from us, that of all the people of the known world, they are the higheft fituated; that their elevation above the fea was from fourteen to fifteen hundred toiles, and that they breathed an air more rarified by one third than other men *. Nor need any part of the known world be excepted in this obfervation, as from every circumftance we have reason to believe, that the mountains of the temperate and frozen zones are uninhabitable, and even inacceffible to half their height.

286

^{*} The mercury in the barometer at Quito kept its station at twenty inches one line.

We found ourfelves, at first, confiderably incommoded by the rarefaction of the air, particularly those among us who had delicate lungs, felt the alteration most, and were fubject to little hemorrhages; this no doubt arifes from the lightness of the atmosphere, no longer aiding by its compression on the vessels, to the retention of the blood, which on its fide maintains always the power of action. I did not myfelf, when we had occafion to afcend much, obferve this inconvenience to increafe; perhaps the reafon might be I was already inured to the country, or it might be owing to the cold preventing the dilatation of the air to the degree it might otherwife have Many of us while afcending, fainted, and were fubject to vomiting; but thefe been. accidents were more the effect of wearinefs than a difficulty in breathing; this is inconteftibly proved by their never being fubject to this inconvenience while on horfeback, and when they had attained the fummit, where the air, notwithftanding, was more fubtle. I do not deny that this great rarefaction haftens laffitude, and contributes not a little to exhauftion, for refpiration becomes extremely oppreffive at every exertion however triffing, and at the least motion we make we are out of breath : but ceafe thefe exertions and this motion, and the confequences are no more. I advance nothing that I have not been many times witnefs to, and fhould have witneffed many times more, had not experience quickly taught many among us that it was not permitted us to expose ourselves to fo great a fatigue.

Quito is at the foot of one of these mountains, named Pichincha, which belongs to the weitern chain of the Cordelier, and is that on the fide of the South Sea; this is afcended, as are the most part of the others, very high on horfe-back. Many of these mountains refemble each other, infomuch that their bases are formed by feveral hills covered with an argillaceous or common foil, from the middle of which a pyramid or mass of stones rifes from one hundred and fifty to two hundred tois in height. There is fome appearance that in remote times the whole was covered with a foil, and that it has stilled by degrees from, or fome finking occasioned by an earthquake, have laid bare, the rocks.

This part of Pichincha is very difficult to climb, we remained upon its fummit for three weeks: the cold was very intenfe, fo much fo, that fome fcorbutic affections began to make their appearance on fome of us, and the Indians, and other fervants we had engaged in the country, experienced violent pains: they vomited blood, and fome of them were obliged to defcend; but this indifposition was not continual while we were flationed upon the point of the rock, it arole from the intenfenels of the cold, to which they had never been accustomed; the dilated state of the air did not appear to be the caufe, at leaft the immediate or most approximate caufe : I examined with the more circumfpection into this, as I was aware that the most part of travellers had been led into an error with regard to the circumftance, by not enough unravelling the different effects. Frequently, when we have been at fupper in the evening, we have had an earthen pan of fire, with many candles alight in the midft of us, and the door of our cabin with double hides, and yet all would not prevent the water freezing in our glasses. We had every difficulty imaginable to manage a pendulum; we were continually in the clouds, which abfolutely veiled from our fight every thing but the point of the rock upon which we were stationed. Sometimes the sky would change three or four times in the space of half an hour; a tempest was followed by fine weather, and in an inftant after, thunder, loud in degree to its proximity, ftruck upon our ears; our rock producing the fame effect with regard to it, as the fands of the fea when the waves dash against them. We did not use our thermometer towards the end of our ftay upon the rock, and when we thought the cold had become too intenfe; but

but we had already obferved the inftrument to have been at fome degrees below the freezing point, and that it varied more than at Quito. It had often varied between morning and the afternoon feventeen degrees, although always in the fhade.

The mercury which stood exposed on the margin of the sea, was at twenty-eight inches one line, and on the rock one line below fixteen inches; the elasticity of the air was proved to be, as in the lower countries, and in Europe, exactly in proportion to their condenfations. These observations, together with many others made with much care, not only confirm this exact relation, but proves to us that the intenfity, even of the elastic force, or virtue of the air, is evidently equal in all the places of confiderable elevation of the torrid zone. The actual condenfations in every place are there proportional to the weight of the upper columns of air, which caufe the compression: and these condensations or densities alter in a geometrical progression, while the heights of places are in arithmetrical progression *. Below, this is not the fame, becaufe the intenfity of the elastic force of the air is there really lefs than at one or two hundred toifes higher, and it must necessarily be confiderably lefs, becaufe it is fo notwithstanding the effect of the heat which contributes to render it greater. This is not the place to infift farther on this fubject, and to explain the different means I availed myfelf of to afcertain, in every place, the precife degree of this force. To close my account of the observations made upon Pichincha, the pendulum in feconds, when it was flopped immediately for the purpose of experiments, was fhorter there, than on the fhore of the fea, by thirty-fix hundredths of a line †.

All our perfeverance was requifite to ftruggle against the rigour of our fituation for more than twenty days; and we were at length obliged to acknowledge the neceffity of renouncing fo elevated a flation. The higher we afcended, the more ground we would explore, our difcoveries dwindled almost to nothing. A high mountain not only arrefts every cloud that meets it, but those alfo at a certain diffance passing the fide of it, they are thrown behind by the wind, and are there becalmed. Befides, if it happens the point upon which we are flationed flould be free of them, frequently the others we want to fee, are not; and the difficulty becomes incomparably greater when the fight of four or five mountains is absolutely neceffary almost at the fame

† I have noticed it on the mountains at thirty-fix inches fix feventy-one-hundredth lines; at Quito thirty-fix inches fix eighty-three-hundredth lines; and on the fea fhore thirty-fix inches feven feven-hundredth lines.

288

^{*} This fupplies a very fimple rule which I here explain in favour of fome of my readers. They have only to look into the ordinary table of logarithms for the heights of the barometer, expressed in lines; and if they take a thirtieth part from the difference of these logarithms, in taking with the characteristic the four first figures only which follow it, they will have the relative heights of the places in toiles. The mercury flood in the barometer at Carabouron, which is the lowest of our flations, at twenty-one inches two and three-quarter lines, or at two hundred and fifty-four and three-quarter lines: whereas on the rocky fummit of Pichincha it flood at fifteen inches eleven lines, or one hundred and ninety-one lines. If we take the difference of the logarithms of these two numbers, it will produce one thousand two hundred and fifty, and if a thirtieth part is fubtracted, it will give one thousand two hundred and nine toiles for the height of Pinchincha above Carabouron, which corresponds with the geometrical folution. The application of this rule is the more exact as the heights of the mercury in the barometer vary very little in any place of the torrid zone. The variation below, near the fea, is little more than two and a half or three lines, and at Quito, which I attribute to the daily dilatation caused by the heat of the fun upon the atmosphere. On the banks of the fea, this dilatation causes no alteration in the weight of the air, for be its column higher or lower its weight sould be equally the fame; but the dilatation caused during the day takes fomewhat away from a part of the lower column, which adds more to the higher one; and this varies the diffribution of the weight with relation to all places fituate in the Cordelier, and even upon other mountains.

inftant. We therefore became fenfible it would in every refpect be more to our advantage not to make the triangles of our meridian fo high, and that we ought ordinarily to be fatisfied with placing our fignals upon the hills at the bafe of the rocky pyramids. But notwithstanding this very neceffary precaution, nothing incommoded us in our labour fo much, as the fudden alterations of heat and cold which we experienced from one moment to another, every time, however inconfiderable, we afcended or defcended.

M. Condamine and myfelf had already once more ascended the mountain, but with no other defign than to examine the flation, when we were obliged inftantly to defcend; we were furprifed by a ftorm, the wind had no particular direction, but blew from every quarter at the fame moment upon us. The thunder drove the hail-ftones horizontally againft us, and was fcarcely louder than the flafh from a gun, which impreffed the idea upon us, that upon the most elevated mountains the report of it would not be at all heard. We had every opportunity during the three weeks we were ftationed here, to reform this first opinion; and we have been a great number of times fince upon other mountains, where we have heard the most terrible rolling of thunder, fometimes over our heads; at others, beneath us. It is not to be difputed that the claps of thunder are fometimes very weak; fuch as they are generally when the lightening is feen and no noife follows. We do not hear them below; thefe are happily ftrokes without effect, which may arife from many caufes, and often from the great diftance at which we may be from them. At the time I have just mentioned, when upon the height, we were in the very focus of the florm, but apparently the inflammable matter had collected in too fmall a quantity.

The highest stations, in our work of the meridian, have always occasioned us the most trouble. The most elevated station we availed ourfelves of for our triangles, is two thousand three hundred and thirty-four toises above the sea, and is named Sinazahuan; it forms one of the fummits of the mountain of Afouay, which divides the jurifdiction of Riobamba and Cuenca. It will furprife you to be told the Incas have carried a road over this height, which they are in the habit of daily frequenting; but they are careful to chufe the weather; for if they have the misfortune to be caught in a ftorm, mingled with hoar or fnow, they run a rifk of never returning more. We fortunately carried a change of tents along with us; ten or twelve of the days we were flationed there, we had to fublitute the one for the other three times fucceflively. So greatly were they alarmed on our account at Atun-Cagnor, a town three or four leagues diftant, that public prayers were offered up for us.

Every variety of weather we have had whilft amid thefe mountains, has fufficiently fatisfied us how much certain philosophers have been miltaken, who have conceived the clouds of a nature different from fogs. The clouds have frequently not afcended to us, they have been five or fix hundred toifes below us, and have veiled the valley from us, while the inhabitants of the plain could not difcern the fky: at other times thefe clouds having lefs weight, have rifen higher, and become to us a fimple fog in which we found ourfelves involved. When I have noticed them very much above me, they have always appeared very white : I do not know what better I can compare them to with regard to the colour and form they then prefented, than to heaps of cotton touching each other, whole union prefents a wavy furface. With respect to the colour, it is precifely the fame as with water and glafs; glafs we know lofes its transparency when pulverifed, and when looked on at its brighteft fide, appears to have all the whitenefs of fnow. So it is with water when reduced to very fmall particles, or almost imperceptible drops in the clouds or fogs. If these small drops are nothing elfe than small $\mathbf{P}:\mathbf{P}$

VOL. XIV.

hollow

hollow fpheres, the interior air more or lefs dilating them must necessarily oblige the water which forms the bubble to vary its thickness, and the fmall sphere changing its bulk, the cloud must afcend to a greater or lefs height, till it meets with an equilibrium in the bed of the atmosphere in which it floats. To-day the clouds are of a certain fpecific weight, and maintain their fituations at a precife height; they are obferved throughout the whole mountain to attain but to a certain point; to-morrow the fmall bubbles will be bigger or lefs, the clouds become more or lefs light, and they will be obferved to flation themfelves in a higher or lower region. It is at fun-rife they are noticed to be more fufceptible of motion, when they afcend in an uniform manner, and fometimes with great velocity. But to return to their transparency, as the fmall bubbles which compose them, prefent too large a number of fmall furfaces to the light, they appear opake when viewed from below; whereas were the fpectator ftationed above them, as we frequently were upon Pichincha and other mountains, all the reflected and intermingled rays, after having undergone various refractions, form the white, conformably to what we are acquainted with, regarding the property of light.

There is an extraordinary phenomenon visible almost every day upon these mountains, and which must necessarily be as old as the world, yet there is much probability we have been the first to notice it. The first time we remarked it, we were together upon a mountain of a medial height called Pambamarca. A cloud in which we were enveloped, removing, opened to our view the fcene of a very brilliant rifing fun, the cloud paffed from the other fide; it was not thirty paces diftant, being yet too fhort a one to give it that whitenefs of which I have fpoken, when each of us faw his own fhadow projected above, and only faw his own, by reafon the cloud did not prefent an even furface. Its proximity allowed us to diftinguish every part of the shadow; we saw the arms, legs, and head; but what aftonished us the most was, that the head was decorated with a glory or circlet composed of three or four concentric coronets, of a very lively colour, each with the fame variety as the first rain-bow, the red being the outward colour. The diftances between these circles were equal, the last circle the fainteft; and after all at a great diftance we noticed a large white circle, which furrounded the whole. This was a fort of apotheofis to each fpectator; and I must not neglect to apprize you, each every day calmly enjoyed the exquifite pleafure of viewing himfelf decorated with all these glories, and faw no trace of those of his neighbour's. It is true it is precifely the fame thing with regard to the rain-bow, although it has not always been attended to. Each spectator views a diffinct rain-bow, fince the arch has a different centre for every perfon; but as the coronets which are feen upon the moun. tains of Peru are very fmall, and feem to belong to the fhadow of the fpectator, each has a right to appropriate what he difcovers to himfelf. The first immediately encircles the head of the fhadow, the others follow, and the fpectator, only witneffing what concerns himfelf, merely conjectures that his neighbours find themfelves in a fimilar fituation.

I frequently noticed the diameters of thefe circles, nor did I fail to do fo the firft time I beheld them; for I haftily made a fort of radius with the firft rules at hand, becaufe I was apprehenfive this admirable fight might prefent itfelf but feldom. I have remarked the diameters from one moment to another to vary in dimension, but whether leffer or greater, the interval or fpace between them always maintained its equality. Befide the phenomenon is only pictured upon the clouds, and on fuch only whofe particles are congealed, and not, like the rain-bow, on drops of rain. When a cloud that fhades the fun withdraws, and the fun becomes more ardent, quickly the

12

little bubbles of the oppofite cloud neceffarily dilate ; their furface enlarging, the thicknels of the water contained in them diminishes: and reduced to a thinner substance, it is only a greater obliquity, or bubbles more remote from the centre of the fhadow, which can prefent to us, as other experiments of this nature have confirmed, the fame colours. The diameter of the first circle was commonly nearly five degrees twothirds, the next nearly eleven degrees, the third feventeen degrees, and thus on; the white circle was nearly fixty-feven degrees in diameter. The time proper to view this phenomenon, which requires that the fhadow be projected from a cloud, is a fufficient excufe for the Peruvians never having beheld it, and why they fhould not be blamed for it. It is an hour not usual for any but a philosopher to be found upon the fummit of a high mountain: it might probably be noticed fometimes, on our moft elevated steeples. All of us have seen at a short distance from us, fogs confined to a very circumfcribed fpace; one thing only was wanting, which was the fun in the opposite horizon; but where this latter circumstance has not exactly corresponded, a portion of the white circle is frequently to be diffinguished, as I have at different times remarked fince I have paid attention thereto.

The height of the rocky fummit of Pichincha, is nearly the fame with that of the lowest constant termination of the fnow on all the mountains of the torrid zone; and I have found it at two thousand four hundred and thirty-four toiles above the level of the South Sea. The fnow falls much lower; it even, though but rarely, fometimes falls at Quito, which is more than nine hundred toifes fhort of the height of Pichincha, but it may be thawed the fame day: whereas in all the parts of the Cordelier I have gone over, I have observed it higher to lie undiffolved. Some mountains do not reach this point of termination; others, as Pichincha, border upon it; others, and thefe in great numbers, lift themfelves still higher, and have their fummits continually covered; and confequently, from the fnow being converted into ice, are inacceffible. When the mountains are not enveloped in clouds, their furface must be a little thawed during the day; but the fun ceafing to act, the furface becomes glazed; the water paffes into the interflices of the lower beds, and there freezing, renders the frow extremely compact, and forms a folid whole. The furface hardens at the fame time, and becomes as fmoothly polifhed as a mirror, fo that it is as it were impoffible to afcend higher. This limit depends upon too great a variety of circumftances not to be liable to great irregularities. Many mountains in Peru have a difposition to emit flame, for almost all of them have been volcanic, or actually are fo notwithstanding their snows, which much induce a forgetfulness of the circumstance: it is besides certain, the larger the dimension of the mass is which constitutes their base, the more fusceptible they must be of heat, and the limit of congelation farther removed; as these masses must be confidered a secondary foil, every day imbibing the heat of the fun; on the other hand the part covered with fnow, when very confiderable, produces a contrary effect; it caufes a greater cold around, capable of congelation, or producing ice a little lower down. In the mean time the difference is not great, inafinuch as I have remarked the lower boundary of the fnow, to form a level line through all the mountains of Peru, in a manner to enable us at a glance to judge of their height.

The volcanoes, as I have noticed, create the ftrongeft exception to this rule; but the exception is fometimes fuch as it may be difficult to forefee. This I have remarked with regard to Cotopaxi, a flation of our meridian, fituated on the eaftern chain. The fpot on which we were flationed was between one hundred and fifty and one hundred and eighty toifes below the fnow; but this mountain, from a recent irruption in 1742, had caufed the fnow above to thaw. We faw it from below fometimes increase, and P P 2 fometimes fometimes diminifh, in thickness; but, at the fame time, the boundary of the beginning of congelation likewife lowered; and fell below the flation on which we were encamped to work at our triangles. I gave myfelf the trouble, at the beginning of 1743, again to vifit the mountain, to fatisfy myfelf of this, and various other circumstances, fo that I could not be deceived. This fingularity feems to have fome connection with those acknowledged operations, in which congelation is haftened by the affiftance of fire. In the meantime, the examination led me to a difcovery, that the fingularity depended upon a very different caufe. I difcovered, that what at a diftance I had taken for fnow was not, but water, which, falling from above, and gufhing from out the mountain on every fide, froze as it run. It is certain, that the leaft degree of heat is fufficient to thaw particles fo delicate as fnow, when it falls upon a furface interiorly heated. But when a body of water of a certain thickness runs over the fame ground, the heat below may be fo weak, as not to communicate with the upper furface; and if this furface is found exposed to an excess of cold, nothing can prevent it being converted into ice. The fnow on the higher parts of Cotopaxi thawing, from its vicinity to the fire, continually produces new water, and this water freezing below after being divided into an infinity of ftreams, forms, as it were, when received at a certain diffance, ringlets of ice on the mountains, but, looked at from a certain diftance, it appears a perfect covering. The fame effect may have place upon all the other mountains; the fnow only maintaining itfelf to a certain limit in defcending; whereas a body of water will, in proportion as it decreases in bulk, freeze on its furface, lower on the mountain. Such is the elueidation of this phenomenon, derived to me from my vifiting the places. If regard is had to the exception it furnishes, and to others less confiderable, we repeat it, the lower limits of the fnow conftitutes a fufficiently exact level line through all the country in the environs of the equator.

But if we examine the circumftance in a more general manner, if we direct our regard to the globe, this line will not be found exactly parallel with the earth: it is evident it muft, in its direction, gradually fall, as it retires from the torrid zone, or advances towards the poles. In the middle of the torrid zone this line is at two thousand four hundred and thirty-four toifes above the level of the fea; at the entrance into the temperate zone, it will be found but two thousand one hundred, paffing by the fummit of Theyde, or the Peak of Teneriff, which is nearly of this height *. In France and Chile, the line will pass at fifteen or fixteen hundred toifes, and, continuing to defcend

6

^{*} The Pere Feuillée, to whom we are indebted for a great number of obfervations, affigns, in a manufcript relation prefented to the Academy on his return from a voyage to the Canaries in 1724, two thousand two hundred and thirteen toiles to the height of the Peak of Teneriff. But we are induced to believe, for reasons we shall give, that we must take from the calculation of this height one hundred and forty or one hundred and fifty toiles at least. The obferver worked upon a bafe, whose length, not being more than two hundred and ten toiles, was much too short, confidering that he was distant from the Peak not less than ten thousand toiles. This bafe, too, from the badness of its fituation, was not equivalent to another much lefs: for, conformably to a method fearcely ever good but in theory, it was directed up the mountain, inftead of having a direction nearly perpendicular : infomuch, that the bafe was really reduced to forty toifes, which had been placed in a fituation nearly perpendicular to two visual rays directed to the fummit of the mountain. Finally, P. Feuillée neglected the inclination of his bafe, because they told him the fea had formerly covered the ground. Now, were this true, the ground must have acquired elevation fince, and ftill more towards the foot of the mountain where his fecond flation was fixed : now, as confiderable, the two visual rays, by reason of the elevation of the fecond flation, have met at little diftance, and at little elevation in the air; and regard being had to the floot for the reduced bafe, which was not more than forty toifes, we must diminish the height calculated by P. Feuillée a thirteenth or fourteenth part. I conceive the reader will not confider this note as foreign to a work of the nature of this, which has so often a relation to mountains.

in proportion as it removes from the equator, it will touch the earth beyond the two polar circles, though our calculations have regard only to the fummer.

This line may be called that of the Conftant Lower Boundary of the Snow, for there must neceffarily be another, i. e. the Upper Boundary; but this, to all appearances, the highest mountain of the world does not reach. If there were mountains high enough to lift their fummits above all the clouds, the more elevated parts of thefe high fummits would be free of fnow, and we fhould there enjoy, could we attain the flation, a perfect and perpetual ferenity, as is improperly conceived of Olympus, Mount Ararat, and of Theyde, or the Peak of Teneriff, although the latter does not completely reach to the lower boundary of congelation. To limit myfelf fimply to declare here, what I myself proved, fome of the mountains which have ferved as flations for our triangles, Cotopaxi for inftance, have a portion covered at from fix to feven hundred toiles of perpendicular height. It will be unneceffary to mention others along our meridian, as well as on both fides the river Magdalene, approaching the fea from the north, to Saint Martha. Chimborazo, which is the highest of all I have noticed, or even feen, is three thousand two hundred and feventeen toiles above the fea, and the part of it on which the fnow lies more than eight hundred. But if the clouds fometimes pass lower, which opens the fummit to our view, they also pass fometimes confiderably above the fummit, even to three or four hundred toifes, which has enabled me at a diffance to judge of them, comparing their height with the dimensions of the mountains I had already meafured. In a word, the fpace, in the perpendicular or vertical fenfe, between the two boundaries, the upper and lower of the fnow, is at leaft, in the torrid zone, eleven or twelve hundred toifes; we muft even confiderably add to this height, if it is permitted us to confound the clouds formed by the fmoke of the volcanoes with others, for I have obferved it afcend feven or eight hundred toifes ftill higher. Thus, if we fhould ftop at this laft boundary, and there had been mountains high enough, a girdle or zone of ice might have been noticed, the beginning of which would have been at two thousand four hundred and forty toiles above the level of the fea, and ending at nearly four thousand three hundred or four thousand four hundred toifes; not that we are to conclude from hence the ceffation of the cold at this point, fince it is certain, on the contrary, the farther we are removed from the earth, the greater will be the degree of cold, but by reafon that the clouds or vapours cannot afcend higher.

It is not difficult, by a little attention, to be convinced, that the cold muft naturally increafe in the proportion we are lifted into the atmosphere. It is not only the first obstacle to our ascending, but also to our breathing, in a very great elevation, had we the power to reach it; a circumstance which has not enough impressed the minds of those, whose ideas have led them to conceive and talk of an agreeable refidence above the region of the clouds. It had been reasonable, in order to defcribe the cold felt upon the fummit of mountains, to infiss upon the fhort duration of the power or action of the fun, which falls but for a few hours upon each of their fides, and frequently not at all. An horizontal plain, when the fky is clear, is subject, in the middle of the day, to the perpendicular action of his rays, the force of which nothing can diminiss is an inclined furface, the fides of an high point of rocks, almost perpendicular, can only be played upon by them. But let us confider for a moment an infulated point, in the midst of an elevated atmosphere, and draw an abstraction from all mountains, and even clouds which float in the air.

The more diaphanous the centre may be, the lefs of heat it will imbibe from the immediate action of the fun. The facility with which a very transparent body gives paf-

fage

fage to the rays, is evidence that its fmall particles is fcarcely affected by them. Indeed, what impression can it receive, opposing no obstacle to their passage? According to the observation I have formerly made, the light, when formed of parallel rays, loses not here below one hundred thousandth part of its force traversing a foot of free air. One may judge from this, how few of the rays are deadened, or can act upon this fluid, in paffing through a bed whofe thickness (I will not confine myself to fay) is not an inch or a line, but I will even fay, is not the fimple diameter of a molecule. In the meantime, fubtilty and transparency are the greater as more elevated : the natural eye, in looking at objects at a diftance in the Cordelier, will fometimes perceive this. Finally, the groffer air heats below, by its contact with, or vicinage, to denfer bodies that it furrounds, and upon which it creeps; and the heat may communicate itfelf with it, nearer and nearer, to a certain diftance. The lower part of the atmosphere, by this means, daily contracts a very confiderable heat; and it will be the greater, to its degree of denfity. But this, we know, is not the cafe at a league and a half, or two leagues above the furface of the earth, although the light, when it paffes there, fhould be more vivid. The air and the wind must necessarily then be very cold; and the more elevated the situation in the atmosphere, the more penetrating it must be.

Further, the heat we ftand in need of to exist, is not fimply that we receive every inftant immediately from the fun. The momentary degree of this heat corresponds but with a fmall portion of that which all the bodies which prefs upon us have contracted, and by which ours is pretty nearly regulated. The action of the fun does but merely maintain in the fame ftate the aggregate of total heat, by fupplying the diminution it continually fuffers from the night. If the degrees added are greater than those lost, the body of heat, as in fummer, will augment, and it will increafe more and more to a certain line; but, conformably to what we have feen, this addition, or this total, thus to express it, of accumulated degrees, can never reach far up the fummit of a high mountain, the most elevated point of which is generally but of small fize. This is the caufe why the changes in the thermometer were fo great upon Pichincha; while at Quito they were fo little, and ftill lefs on the fea fide. The lowest state of the thermometer, at every place, has always relation to the degree of heat imbibed by the foil, and this quantity being very fmall upon the fummit of the mountain, the portion fupplied by the fun during the day must necessarily be found relatively greater.

It is certain one may compare the heat the earth contracts by the conftant action of the fun, with the most part of other physical effects, which augment by degrees, and are comprehended in limits they cannot pass. The degrees of augmentation which refult from the complication of the whole, are never continually equal : these degrees, principally, if confidered in the middle of their progress, go on diminishing, till they become nothing, or till the effect ceasing to augment, reaches the utmost verge of accretion. Now it follows from hence, that the leffer the accumulated heat is, or the further distant from its *maximum*, the more augmentation it will admit in an equal time by the action of even the fame agent.

There is yet another fingularity peculiar to the elevated parts of the Cordelier, and which arifes from the fame caufe; and that is, when you pafs out of the fhade into the fun, a greater difference or alteration is felt in the temperature of the air than here during our fineft days: there are times when every thing confpires at Quito to render the fun exceedingly piercing; one ftep only is neceffary into the fhade, and we are almost fensible of the cold, a circumstance that could not be, were the body of heat acquired by the earth much more confiderable. This explains why the fame thermothermometer placed in the fhade, and afterwards in the fun, undergoes in no weather or place any proportional alteration. Upon Pichincha, this inftrument commonly flands in the morning fome degrees below the freezing point, which muft be regarded as the natural temperature of the flation; but let this inftrument be exposed during the day to the fun, it is not difficult to conceive the effect will be very great, and much more than double in whatever manner measured.

There remains another object, the laft to be confidered on this fubject, which is, to explain why fometimes we experience an excefs of cold, while the thermometer indicates but a moderate degree of it. It feems that three or four degrees, at which this inftrument ftands below the freezing point, does not correfpond with all the inconvenience, it is better to fay, with all our fuffering: but we ought to recollect that we had left a very temperate climate, of which we had made to ourfelves, as it were, a new country, and that our removals into another had always been very fudden. It is known from daily experience, in the countries we fpeak of, that the heat and cold are but relatively great, and that our prefent difposition depends in a great measure on the place we have quitted. When we ascend or descend the Cordelier, and pass the places elevated fix or feven hundred toises above the fea, we feel the cold or heat in the fame place, as we may happen to have come from below or above it; if from below, we are cold; on the contrary, we are in the most violent perspiration when coming down from an height on which it freezed.

We had already remarked fomething fimilar to this, when in our own iflands we had to afcend the highest of the mountains there. After a journey of five or fix hours at Martinique, we attained the fummit of Pelée at one o'clock in the afternoon, and we were fhivering with cold, although the thermometer flood yet at $17\frac{1}{2}$ degrees above the freezing point: it is even neceffary our refidence in any place flould be of confiderable length, to know that we could make it our conftant one; and this proves that our pores do not eafily undergo an alteration, and that we do not all at once take a difposition of body congenial with each climate. Here we may difcern the caufe of all those unfortunate accidents happening at times to those obliged to pass over fome very high ridge or defile on leaving or entering the Cordelier. By the interception of the wind by the mountain we find a fpecies of fhelter, and enjoy a temperate climate in our afcent; but no fooner have we reached the ridge, than we are all at once feized on by the cold, rendered incomparably fharper by the frozen particles carried by the impetuofity of the wind that rifes upon us. Let it be reflected how much the hafte of this change differs from the flownefs with which our different feafons are brought on, and the danger to which we are exposed under fuch circumstances will be the better imagined. I have had alfo more than once or twice occasion to remark, that a very little difference of elevation in very high flations make a very confiderable one in their temperature : fometimes the weather where I have been stationed has been but moderately unfavourable. When at thirty or forty toifes above me on the part of the mountain covered with fnow, on which the form feemed moft to prefs, I could clearly behold it was very different. Some travellers have only been able to preferve themfelves, when the ftorm has been of fhort duration, by ripping up the belly of their horfes, and fheltering themfelves in them.

I have already mentioned a paffage at the foot of Chimborazo, above the Guayaquil, or Caracol: but there is another pafs, infinitely more to be dreaded, and is the moft famed in all South America; it is named the Pafs of Gouanacas, fituated in 2° 34' N. latitude, between Popayan and the little town of Plata. This pafs conducts over over the eaftern Cordelier, which maintains its height, its fummits at certain diftances all along being covered with fnow, keeping its first direction, and terminating at about one hundred leagues northwards, towards the confluence of the rivers Cauca and Magdalene, between which it passes from Papayan. The Pass of Gouanacas is never hazarded without the utmost dread, particularly when it is taken approaching the eastern fide. It is neceffary to encamp as high as one can, or rather to ftop at a village, which is of the fame name, on the exterior of it; and it is alfo neceffary abfolutely to refolve to wait there, if the blacknefs of the clouds fufpended above us gives indication of bad weather. The mules, which are ufed always in thefe journeys, on account of their furefootedness and ftrength, are still more exposed to the dangers of this pass; they have not only, like their masters, to guard against the intenseness of the cold, but they are worn out with fatigue: for more than two leagues on this way, the bones of these animals that have died in the journey lie fo thick, that it is not poffible to fet a foot down without treading on them. I have been obliged to encounter this defile in order to embark on the river Magdalene for Carthagena, on my return to Europe. As I croffed it from the interior of the Cordelier, I must necessarily have been in a fituation more able to buffet with the labour of the paffage, on the fouth fide of which, and at a diftance of from four to five leagues, there is a very high mountain covered with fnow, called Cocounoucou, an old volcano, now abfolutely extinguished, and on the north another mountain, covered in the fame manner with fnow, which is that of Houila. Upon the fummit of the defile is a fmall lake, the water of which was not frozen; and, at lefs than one hundred toifes from each other, on one fide are found the fources of the Cauca, and on the other the fources of the Magdalene. I faw many packages that had been left by travellers on their route, but we chose to leave them to another time, preferring this to the not getting out of this dangerous pafs between fun-rife and funfet. I estimate the distance between Popayan and La Plata at from nineteen to twenty leagues, while the journey commonly requires twenty or twentytwo days.

Although the mountains are rendered inacceffible by the fnow, above the lower freezing boundary, yet M. Condamine and myfelf afcended the volcano of Pichincha in the month of June 1742, which is another fummit more elevated than the first, behind which, with refpect to Quito, it is fituated. We found ourfelves furrounded with fnow; it blocked up for fome days all the road to us, and we were fometimes obliged to exert ourfelves very much to prevent it crushing our tents down upon us, under which we were fheltered; from its recent fall, and yielding to the preffure of our fleps, the declivity, too, not being precipitous, nor the diftance long, we were able to reach the height and the edge of the volcano, whole different eruptions had proved fatal to Quito. The extreme sharpness of the cold would not allow us to remain little more than half a quarter of an hour. It occurred to us, in our infpection of the places, that two obftacles had fufpended the great effect of the volcano upon the town; one was the interpolition of the stony fummit, upon which we made the long and diffreffing ftay; the other, the half-circle of rocks upon the mouth of the volcano, to the fide of Quito, the refiftance of which determined the direction of the erupted matter generally another way. It is fingular, while we were in the midft of our examination, another volcano in the eaftern chain flamed beneath us, Cotopaxi, which, by melting its fnows, recalled to our recollection its ancient ravages, and one of the most remarkable epochs in the hiftory of those countries.

M. Condamine and myfelf alcended once more above the lower boundary of perpetual fnow, upon Chouffalong, or Le Coraçon de Barionuevo, another mountain, one of the hills hills of which ferved us as a bafis to our triangles. Its ftony parts were formed like the roof of a houfe, and its northern extremity being almost quite bare of fnow, we availed ourfelves, though with much labour, of the circumstance: when we had reached the height, we found ourfelves covered with ice. The height of the mountain is 2476 toifes, conformable to the geometrical admeasurements I have taken of it: the mercury in the barometer was at 15 inches 9 lines, rather more than 12 inches 3 lines lower than on the fea-fhore. A barometer had never before been taken to high, and there is much probability that no perfon had ever been at the fame place; for thefe forts of journeys are attempted without a motive. The love of riches, which moves fo many people at Peru, as every where elfe, fo far from leading them up fuch elevated rocks, rather urges them to feek and ranfack the hollows beneath.

It is enough that the firft bed of fnow that has fallen upon a mountain has not been fubject to be diffolved; that the firft and fecond fhould be ftill lefs liable: thus, it feems, the fnow muft neceffarily increafe in thicknefs, till, lofing its fhelving form, it finks, which an earthquake may alfo occafion it to do. Mafles large as a houfe have been feen to roll down, and have kept their body, although confiderably below the line of the level we have mentioned, by reafon they have fallen under fhade into fome hollow or deep ravine. The wind covers thefe mafles with fand, which attaches itfelf to them, hence they lofe their whitenefs, and may be miftaken for real rocks, of which they partake almost of the hardnefs. One of thefe maffes having fallen from Cotopaxi in 1739, I afcertained fome months after a part of the thicknefs of the fnow on the mountain : I meafured it by the aid of a micrometer, examined it in various places, and found it fifty-four feet thick, although this could only be confidered as a part of the whole thicknefs. I had occafion, at the beginning of the year 1743, to meafure another thicknefs, though a partial one, and I found it feventy-fix feet, at the time the mountain was vomiting torrents of fmoke and flame.

PART III.

REMARKS, OR PARTICULAR OBSERVATIONS, UPON THE NATURE OF THE SOIL, EARTH-QUAKES, VOLCANOES, &C.

THE mountains around Quito appear to contain but few metals, notwithftanding, in remote and even at the prefent times, gold in duft has been found. The places where they actually find a confiderable quantity of this precious metal, particularly in duft, are commonly fituated much lower. On the north fide of the equator, and at two degrees diftant from it, the Cordelier is perceived to have almost lost all its height: fcarcely it posses one-fourth of the elevation it has in the environs of Quito; it afterwards rifes again very fuddenly near to Popayan, which is fituated at from eight to nine hundred toifes above the level of the fea*, but it lowers once again, not the eastern part, but the other chain on the fide of the South Sea, which, turning afide to the west, after having thrown out a branch to the east of the gulph of Darien, takes the way of the isthmus of Panama, dividing the Choco from the rest of South America, and passes on to Mexico.

* The mercury flood in the barometer at Popayań at 22 inches $10\frac{3}{3}$ lines; nor would it vary, as is the cafe in all elevated places in the torrid zone, beyond $1\frac{1}{2}$ line.

VOL. XIV.

There

There is much gold contained in the western Cordelier, as also in the base of the caftern one, and in another very long chain, which breaks a little to the fouth of Popayan, and afterwards paffing on by Santa Fé de Bogota and Merida, ends towards Caraccas upon the North Sea; as the gold-duft is found in fituations low with respect to the rest of the Cordelier, it is never discovered till two beds of different strata are removed, under which it lies concealed. The first is of ordinary or the common earth, three or four feet thick, and fometimes ten or twelve; beneath is often found a ftratum or bed not fo thick, of a yellowifh colour, and yet lower a third, of a violet colour, which is often three or four feet in thickness, but fometimes not an inch. The colour of the earth changes again and this it is with which the gold is mixed. below, becomes black as at the furface, and contains no metal. It appears as if the gold, before it had been covered by the two upper strata, had been washed by the running waters. We are also affured that this foil, once washed or robbed of their riches, never produces them more, which proves that the gold had been, as it were, deposited there: it is probable this may not hold good with regard to other mines, in which the metal may be incorporated with fome ftony fubftance. It is pretended in these last, which, properly fpeaking, are the mines, and which are found in the bowels of the mountains, though I have never feen them, and are only found beyond the fouth of the equator, there is a daily new production of metallic matter.

In the environs of Popayan, as is the cafe at Quinamajor, Barbacoa, and even at Choco, the fituation of which places I have already noticed, they do not carry away the foil to be washed, as is done at Chili: to do this would be almost always too difficult, and even impoffible, particularly as the roads are impracticable for beafts when burthened. The gold is feparated from the earth by an operation upon the fpot: a trench is made of about forty feet in length, according to the inclining of the foil, to which they give from five to fix in breadth; the two first strata are thrown out, and water paffes through the excavation by means of an opening at the lower extremity; while this is passing five or fix men are labouring in the water with shovels and iron rakes to feparate the earth which contains the metallic particles. This labour will laft for a fortnight or three weeks, and until all the parts of the third bed comprehended in the fpace have not only been diluted, but drawn away, and nothing remains at the bottom but the gold duft, with the heaviest part of the fand. They know when they have dug a fufficient depth by the blacknefs of the earth adhering to the implements There is no failure of water in the country, where the rain they use in digging. falls almost inceffantly; at the fame time, as the foil is not competent to the retention of it, they have fometimes to go far in fearch of it; and their right to it in the forefts is difputed, fo that they are obliged fometimes to purchase it very dear, and it is really obtained but by weight of gold; and the expence is great to convey it to the places where they want it, which is done by a fort of aqueducts, haftily confiructed of the bamboos I have before mentioned. This difficulty, joined with a want of provisions, which in these places are not to be got at, or which they have not time to cultivate, obliges them frequently to abandon their works in different places, rich in the extreme.

The remainder of the labour, the gold-duft, and the fand with which it is intermixt, once collected, takes up but little time; a few washings are fufficient; for which purpose they use a fort of dish or bason, in which they toss it about, and pour it off from time to time. The operation is frequently forwarded by the glutinous juice of certain plants, which fixes upon the fand, but not with the fame facility on the gold: when the latter is drawn away by the fand, which often happens, they use the loadstone to liberate it. Sometimes they have recourse to a very opposite expedient: they make use of mercury; to Choco they are frequently under the neceffity of doing this, as the metal is found mixed with the platina, a fpecies of pyrite peculiar to the country. The artifts who work in the deferts of America fhould be acquainted only with the fimpleft modes of chemical operations. To withdraw the quickfilver without lofing any of it, they content themfelves with a wooden difh or bafon, in which they put a certain quantity of water; in the middle they lay two tiles, upon which they put another, heated, and which is intended to fupport the amalgamation, and then cover the whole with a letter bafon, fo that it may throw back the exhaling mercury into that below. The gold in the environs of Popayan is from twenty-one to twenty-two carats. One of thefe trenches, the dimenfions of which I have given, will not give fometimes more than a fingle mark, but frequently five or fix, and even as far as eighteen or twenty, when they have been fortunate in their difcovery. Grains of a very confiderable fize are fometimes found.

Quito cannot boaft of poffeffing thole riches, fo ambitioufly fought after, that are found in Choco, but it poffeffes a more fubftantial bleffing in the goodnefs of its foil. I will add to what I have already noticed, that they have frequently there the pleafure to behold the trees bearing at the fame time bloffom, buds, and fruit. It cannot be doubted that the perfect equality of the feafons is favourable to thole trees peculiar to hot countries, though it appears to have rather a contrary effect upon thole transplanted there from Europe. A convenient temperature for the latter may eafily be found in the Cordelier, but, as the heat is not distributed there as with us, there must be always fomething wanting; they cannot, as it were, repose themselves for a certain time, and at another, fo act as to collect their whole force; and this may be the reafon why our fruits never reach the perfection they acquire in Europe. Perhaps, among thole of the country, there are alfo fome which might be improved by changes in the feafons; for even the tree which produces the most delicious fruit that I am acquainted with, lofes its leaves every year.

This fruit, which I can compare to none of ours, and which I fhould be tempted to place in a rank above any, is called Chirimoya: it is frequently larger than the largeft of our apples; its fkin is rather tougher, though not quite fo thick as that of our fig, and of deeper colour, and is in a manner covered with fcales, flightly formed, or as they might have been engraven with a chifel; the pulp is white and fibrous, but infinitely delicate. The Anana, when well chofen, and thoroughly ripe, is alfo of exquifite flavour, and the most perfect perfume: but the most part of other fruits, which leaves not a little degree of acidity behind their flavour, have in the torrid zone a taste of cassia or fome other, disagreeable to those not accustomed to it.

After all, it is not clear that, with additional attention, it would not be poffible, not only to improve the quality of thefe fruits, but to increafe their quantity. Agriculture, notwithftanding the fmiling appearance of the plains, is, as are all other arts, extremely neglected in Spanifh America, where they ignorantly renounce many advantages it would coft them little to benefit from. It will be with difficulty credited, though the fact is not to be difputed, confidering the great number of people who go every year into thefe countries, and cannot be conceived entirely ignorant of gardening, that the trees of Peru are all wild': they underftand not here to convey the fap of one tree into another, and as little do they comprehend the utility of thinning them of their branches. Thus muft we be ignorant of the real value of all thefe fo naturally fertile lands. We can only comprehend that they are capable of being rendered more productive, fince they are fo very liberal, with fo little trouble to the inhabitants, in their gifts.

Perhaps the afhes thrown out at the eruption of the volcanoes, when perfectly incorporated with the foil, may contribute much to its fecundity; the whole country abounds

QQ 2

3

in

in falts, almost every morning the falt-petre appears lightly, like meal, fpread over divers places of the ftreets and ways; I merely relate these particular things, and relate them only because I think them worthy of notice. M. de Tournefort has observed that the water-melons thrive well in the faline foils of Armenia, particularly in the neighbourhood of Trois-Eglifes (three churches). To judge by the course of the rivers as laid down in our maps, we must imagine this last place to be very elevated. I was much furprised to find a place at fifteen or fixteen leagues north of Quito, in every respect like to the fouth of the river of Mira. The foil there, particularly in the village of Saint Catherine de Salines, is fufficiently impregnated with falt, to furnish the whole province with that article: excellent water-melons grow in the fame place, and the whole of the canton is the most fruitful of the Cordelier.

It is eafy enough to examine into all the depth neceffary of the foil in Peru, the earth being there cut into ravines; thefe are found frequently of two hundred toifes broad by from fixty to eighty in depth, fome even more confiderable. Many of them may have been the effect of earthquakes, but the moft part have been caufed by the rapid currents of water from the mountains, capable in florms of carrying every thing along with them; yet thefe flreams at other times are fo fhallow that one may pafs over them without wetting one's feet; fometimes the fides of thefe ravines are cut perpendicularly down, and if we give ourfelves the trouble of going to their origin, we difcover they begin by a vertical fall, which fometimes is not announced by the height of the furface. We frequently walk over a gentle declining fward, and on a fudden come upon the brink of one of thefe precipices.

It is only neceffary to feek out fome convenient defcent into those species of large beds of rivers, which contain at all times but little water, to examine, as one would defire, all the qualities of the different ftratas of the foil. No veftige is diffinguishable there of those violent inundations which have left fo many marks of their ravages in every other region. I have taken every possible means, but always without fucces, to difcover any fhells; probably the mountains of Peru are too high. You fee much of that black fand which is attracted by the loadftone, and it is eafy to recognife that the strata, the different shades of which are very distinct, so far from being the effect of different alluvions, are rather the expansion of matters vomited from the volcanoes; almost every thing there has the appearance of being the work of fire. Some of these mountains are, to a very great depth, composed but of fcoriæ, of pumice-ftones and fragments of burnt ftones of all fizes, and fometimes all concealed beneath a ftratum of common earth, which bears both herbage and even trees. Thefe materials are ranged in beds of different thickness, which diminish in proportion to their distance from the mountain: they are observed to reduce themselves to a foot, half a foot, and to an inch; nor are they loft fight of for four or five leagues, when they get into the vicinage of fome other volcano, and then the fame effect becomes vifible as in the firft.

Thefe remarks have been made chiefly at the foot of Cotopaxi, which is become a mutilated cone, the fummit of which has been carried away: the bafe of this volcano is rounded, and has taken a regular form by the effufion of matter which has not been thrown out with force enough, or which was too light to be impelled. I have before faid, that the ftony pyramids found at the fummit of almost every mountain, have been only laid bare, perhaps, by the fudden rolling of the foil from them, or by the imperceptibility of their fall. But the caufe, there is much reason to imagine, has been different with respect to many of them, and possibly with Pichincha, to which we now allude. It is not impossible that the rock which is burnt and black, and which

0

contains much of that matter attracted by the loadstone, has been heaved up by the action of a subterraneous fire; this fire having been without sufficient force to make its way through the summit of the rock, had found other avenues to its rage.

To return to Cotopaxi, we difcovered at its bafe, beds of burnt ftone reduced to very fmall particles, in thicknefs equal to five or fix times the height of a man; the upper bed is the thickeft, and is the fame I doubt not that fpreads itfelf very wide, and is hid under the good foil, which was originally nothing elfe than afhes. I am led to believe we muft attribute the upper bed of calcined ftones to the dreadful eruption taken notice of by hiftorians, which took place after the death of Atahualpa, King of Quito, about the beginning of 1533, and of which we have viewed with greater aftonihment other more extraordinary veftiges, — ftones of from more than eight to nine feet diameter, carried to the diffance of three leagues, many of which form furrows that indicate the volcano from whence they were ejected. Thefe large ftones are not burnt like thofe with which the bafe of the mountain is covered, and could not have been ejected fo far but at the firft effort of the explosion. Thus it feems a like effect is not to be apprehended while the mouth of the volcano continues of its prefent breadth, which appears to be fix hundred toifes.

The Indians pretend this difafter was announced to them, and they confidered it as the fatal moment when any opposition to the strangers who were come to subjugate them, and had already much advanced their conqueft, was become ufelefs. Pedro Cieca de Lion, Garcilaffo, Herrera, and all the other hiftorians mention this circumftance; they attribute thefe predictions in part to Huayana Capac, the twelfth and laft emperor, and father of Atahualpa; this volcano, which is from five to fix leagues diftant, is called Latacunga. Were we authorifed to compute the different eruptions by the multitude of different beds of calcined ftones, found at the foot of this mountain, having no regard to the interior beds, we might fet it down the twentieth in fucceffion : apparently there has been an iflue of new matters, and of different colours and fpecies at every eruption, and have been fucceffively ejected as they are diverfely arranged in the bosom of the mountain. In the mean time, there can be no doubt of there having been many conflagrations, and it is as certain that that of the year 1533 has not been able alone, to fupply the quantity of matter lying at the foot of the volcano. Had all the different beds been ejected at the fame time, the divers eftablishments the Indians had in the environs of it, would have been entirely deftroyed, whereas fome of thefe are yet in being; but nature forgetting, thus to express myfelf, her flow manner of acting, embraced all this portion of the Cordelier in the convultion. I have observed these broken beds in the environs of a place called Tioupoulou, at more than four leagues from the volcano, and more than forty feet in depth; how prodigious must have been the agitation thus to have fractured, and piled them upon one another in the manner we find they are!

It was apparently, in remote times, and perhaps ere the country was yet inhabited, that was formed that mals of publice-flones which is at nearly feven leagues from Cotopaxi. The publice-flones found upon the mountains are only of a certain bignefs, and fimply fragments. But in this place of the Cordelier which corresponds with our tenth triangle, thefe flones are whole rocks, parallel finelves of from five to fix feet thick, within a fpace of more than a fquare league, the depth of which is unknown. Only imagine the nature, and what must have been the volume of five capable of throwing this more mals into fusion, and doing it at once, and in the place where it now is; for it is eafy to fatisfy one's-felf it has never been thrown out of order, and that it has cooled in the very place it has been liquified. The neighbourhood has profited by this this immense quarry, the whole of the little town of Latacunga, in which there are fome very pretty houses, has been built entirely of the stone taken from it, fince the earthquake which destroyed it in 1698.

The last burning of Cotopaxi (1742,) which began in our prefence, did no mifchief but by the melting of the fnows; although it made a new opening at the fide near the center of the portion of the mountain continually fnowed, while the flames made their way at the fummit of the truncated cone. There were two fudden inundations, viz. the 24th of June, and the ninth of December; but the laft is incomparably the greatest. We must first mention that the water fell at the least from feven to eight hundred toifes. It overthrew in its first impetuofity the post we had availed ourfelves of as a station for our fixth and seventh triangles. The surges it formed in the plain were lifted up more than fixty feet, and in fome places more than one hundred and twenty. Not mentioning the infinite number of cattle it carried away, it fwept along with it from five to fix hundred houfes; and was the occasion of the death of from eight to nine hundred perfons. All thefe waters had a courfe of feventeen or eighteen leagues to run, or rather to ravage, to the fouth of the Cordelier, before they could find an outlet at the foot of Tongouragoua; the voyage of which was made in three hours and not more: hence the mean rapidity of the waters may be estimated. But if we may be permitted to judge by the various effects produced at three or four leagues from the mountain, its courle must have been after the rate of fifty feet in a fecond of time. There were very heavy flones more than ten or twelve feet in diameter that had changed their places, and had been transported more than fourteen or fifteen toifes, upon an almost horizontal furface.

Every body at Quito was perfuaded that the waters iffued from the bowels of the mountain; and this they were the more led to believe from the fignification attached to the word volcano, in that country. They pretend volcanoes are of two fpecies, *i. e.* fire and water. Indeed it is not impoffible that large collections of water may be formed in these cavities, which lie high upon the mountain. This collection, as M. Defcartes explains it, may be kept up by the evaporation of the waters below. If this evaporation is not the effect of the heat of the fun, a very ftrong one may be kept up by its contiguity to a fubterraneous fire; and when these waters fhall have collected to a great quantity, we are not to be furprifed at its breaking down the walls or partitions that confine it, and that it fhould spread all at once over the face of the country. But we do not conceive this to be the cafe with respect to Cotopaxi, to prove that the waters boiled in the reservoir formed in the fummit of the mountain for their reception, and that it was the excess of ebullition which occasioned their burfting their bounds, they instance the drowned carcass, which almost all appear to have been exposed to the action of boiling water.

Many neceffary points with relation to the prefent fubject were cleared up to me on my vifiting the places. I had many teftimonials from perfons entitled to all confidence, who fortunately were refident but upon the edge, as it were, of the inundation; who affured me the water was not hot. They obferved an oily matter which was inflamed, and forced on before it; and which might have produced the effect obfervable on the carcaffes. They affured me alfo, when they heard the great noife which probably was caufed by the first fall, the mountain was enveloped in the clouds, which abfolutely confutes the relation of those who gave out they had feen the waters like a river, rulh over the brink of the volcano, in a manner refembling liquor pouring from an inclining vafe. And laftly, it appears to me on examining the extent of the space which had been overflown, and every other circumftance attending the overflow, that a very fmall fmall quantity of water might have occasioned all the difaster. The inundation was not of more than a quarter of a minute's duration in many places; it was commenced by a flunning noife; neighbours reciprocally gave notice of the danger to each other; but many, inflead of taking to the neighbouring heights, met the danger. The waters difappeared in an inftant, and but for the melancholy veftiges and marks it left of its paffage, it might have been conceived as a dream. I fufpect the fnow had melted for fome time upon the fummit of the volcano, and that below being more diftant from the fire, preferved its confiftence, and formed a kind of balon with the ridge of the mountain; but the melting always increasing, and the weight augmenting too confiderably, the waters must neceffarily fall; and with it many large masses of fuming fnow were obferved to be drawn along with them, and which, although broken, were yet more than fifteen or twenty feet diameter.

Something fimilar to this happened when a violent earthquake overthrew the little town of Latacunga, and many hamlets or villages as far as Ambato, lying towards the third part of our meridian. A very high mountain fituated very near to Chimborazo, fell; as even did fome others of lefs elevation which were upon the fame line, and whofe fragments have been of ufe to us in our triangles. There iffued fo great a quantity of water from them, as to caufe a great inundation in the neighbourhood of them, if foil falling, diluting, and metamorphofing itfelf into mud may be called an inundation; but it was a mud fufficiently liquified to run under the form of ftreams and rivers, of which many veftiges are yet visible. Cargavirazo, the highest of these mountains, is now but of middling elevation. Others partially crumbled, one half fell, and the other remained; having the fide from which the falling portion feparated, too fteep to be afcended. I had the curiofity to go up one of these mountains named Pugnalic, at the foot of which we had a fignal; I met with an infinity of clefts, which obliged me to proceed with caution, and the foil appeared to me extremely pulverifed. Cargavirazo, when it loft its height, took a dwarf conical figure; there must be much falt contained in it, which aids congelation. Although it is much below the line of the lower level of the fnow on other mountains, yet is its fummit continually covered with fnow; and is the only marked exception to what is generally obferved. Whole fields planted with trees are noticed, that have evidently been detached and carried to fome leagues from each other. At Latacunga the calamity was in the extreme, whole families were buried together under the fame roof, and abfolutely there was not a houfe in which they had not to lament the death of fome one inhabiting it. This dreadful fcene took place on the 20th of June 1698, one hour after mid-night, and the whole mifchief was caufed by the first shock.

It is not aftonifhing that judicial aftrology at Peru fhould pretend to a prognoftication of the periods of earthquakes and volcanic irruptions. A tafte for this vain fcience is preferved in every country, where true fcience has yet made but little progrefs. A curious man, a fubstitute of the professor of mathematics in the university of Lima, published, in 1729, a work, under the title D'Horloge Astronomique des Tremblemens de Terre, (an Aftronomical Dial of the Earthquakes,) in which he confined himfelf to mark out the fatal hours during which they were to be apprehended. In 1734, he fent out another book into the world, wherein he imparted to the public a Tragic Period, to ferve as a rule to diftinguish the years subject to similar accidents; and he did not fcruple to advance, that if, in 1729, his aftronomical dial was already confirmed by one hundred and forty-three obfervations, he had, in 1734, collected feventy others, equally conformable thereto. It has been long observed, that maritime places are more expofed to these dreadful phenomena than inland ones. If we glance over the places of the old old world, where volcanoes have been, we fhall find them to have been fituated on iflands, or upon the fhores of the fea. The Abs, for example, are not fubject to earthquakes; it is the portion of Italy advancing upon the Mediterranean. So it is in America. There may be fometimes a collection of inflammable matter concealed in the bowels of the earth, waiting only for water to take fire. Now, on any unufual rife of the fea, occafioned either by the flux or reflux of its tide, or from being finply impelled by the winds, it may make its way over the banks within which it is confined, into divers fubterraneous canals, and find an entrance into many places, which under any other circumflance it could not otherwife do.

It follows, evidently, from hence, that all the circumftances of the moon's motion, fo fenfibly affecting the flux and reflux of the fea, may alfo extend themfelves to earthquakes and volcanic irruptions. Thus an aftrologer, continually talking of the head and tail of the dragon, of the moon, of the diftance of this planet from the fun, and its fituation, with regard to his apogeon or perigeon, and talking of them as he ever does, in a vague and undetermined manner, may by hazard advance many things in this particular divination not altogether void of fenfe. I have ever confidered the fubject worthy of difcuffion; and I will now, in a few words, offer here the refult of my obfervations, which falls naturally within the plan of this relation.

The great number of individual caufes which contribute to thefe dreadful accidents, is, perhaps, the reafon why the concurrence of many of them often fupply what is wanted on the fide of others; but the precife inftant, and even the time of the effect muft be, neceffarily, more uncertain. Perhaps the heat of the fun may alfo have fome influence: we know, at leaft, that it is affifting to the inflaming ingredients or matters chemifts fometimes mix together, to give us a reprefentation of a volcano when emitting fire. The town of Lima has been three times deftroyed : the first time, in 1586; the two laft, in 1687 and 1746. The first difafter happened in July the 9th; but the two others in October the 19th and 28th; after the equinoctial tides had thrown a great quantity of water into the fubterraneous cavities, and when the fun, advancing in the auftral hemifphere, began to difpenfe his greateft heat. There have been three other very confiderable earthquakes; the one of the 17th June 1678, we cannot urge as an example to our purpofe; but the other two happened in November the 27th and 13th, one in 1630, and the laft in 1655. Thus, it appears, that of the fix violent earthquakes with which Lima has been

Thus, it appears, that of the fix violent earthquakes with which Lima has been afflicted, inftead of having happened at feafons in the year remote from each other, four have taken place in the months of October and November. This fingularity may, perhaps, be regarded as chance: but, is it not poffible, that the return of the heat, and high tides, may have contributed thereto? The gales that blow upon the coaft of Peru in the environs of Lima, may have a tendency to keep thefe back in the September equinox, longer than in other places, confidering alfo, that numbers of thefe places are fituated far fouthward, although in the torrid zone. The communication there is between the different fubterraneous cavities may alfo give a wider fcope to the effect of the flux and reflux of the tide. The moft violent of the different earthquakes I have felt, threw down fome houles in the vicinage of Latacunga, and killed many people. There was feen at the fame time, although not at the fame hour, a flame iffuing from a lake, on a neighbouring mountain. This was at the beginning of December of the year 1736. From other fimilar obfervations I have made, and all things elfe confidered, it appears to me, confining myfelf to a fimple fact, that if in all featons in Peru they are liable to thefe difaftrous phenomena, they are neverthelefs rather more liable to them in the latter months of the year.

The author we have already fpoken of, affures us there is abfolutely no other critical time, than that of the fix hours and fome minutes the moon takes up to pass the horary circle between three and nine. This is precifely the time of reflux: for it is full fea upon almost all the coast of South America in the South Sea, when the moon passes the horary circle at three. But let us examine how many different circumftances muft concur to prove that our author's rule must be an exact one. It is necessary the focus of the fire be always in the fame place; the water must always take the fame course, enter always with the fame celerity, and that the mixture ever take up exactly the fame portion of time to enflame. If it is not neceffary that all these circumstances should concur, very exact compensation should at least be made to supply the defect. The earthquake, alfo, of the year 1746, which occafioned the deftruction of Lima, did not happen while the moon was on her way of the horary circle between three and nine, but, on the contrary, while fhe was paffing the fame circle between nine and three. The tragic period is not lefs falfe. The author pretends, that nothing is to be apprehended but when the horns of the moon are found in the malignant figns of Scorpion, or Amphora; whereas thefe horns were then in the figns of the Virgin and Pifces.

There are few weeks during which fome flight flocks of an earthquake are not felt; if it is not in one place, it is in another; frequently no perfon pays any attention to them, nor gives himfelf the trouble to collect or mark their dates. An aftrologer, therefore, is at full liberty to boaft, that the obfervation has never been at variance with his conjectures. The only earthquakes to be dreaded by him are those attendant with the most difastrous confequences. Happily these are rare, and may, after all, happen as well at one feason as at another. They have always the wife precaution, not to confine their prognostications within too narrow bounds; and befide that, the pretended rule ought at least to quadrate with fome one precedent calamity, with those upon which they form them.

After all, if we would proceed with any method to difcover if there is really a period that may be denominated tragic, we must go another way to work. We should begin by the examination of the fimplest facts: the first object of our observations, it feems to me, fhould be the eruptions of the volcanos. In truth, with refpect to the return of earthquakes, the events are extremely complicated; they may be transmitted folely by the contiguity of lands, though they be very remote from the point which corresponds to the upper focus of the eruption. In every place shocks are felt around to a certain diftance, and yet we are ignorant where particularly to fix its origin : whereas the points of volcanoes are more determinate in every country, and, confequently, fupply us with lefs equivocal obfervations. Any regular returns of thefe eruptions have never been remarked; and this muft neceffarily be the cafe with refpect to earthquakes, which, for the reafons we have flated, are lefs under the controul of any rules, and becaufe that, in every place, they must depend upon a great number of cafualties. The rain-waters very often produce the fame effects as the fea-water, and it should be confidered, it is in the latter months that the rains fall the most in the countries we are speaking of. Sometimes a very violent flock in the Cordelier is felt but over a very confined fpace. There is then reafon to imagine the inflammable mass lies very deep, and that the fea has no immediate connection with the accident. Both the fea and rains contribute to many fhocks, which is a double reafon they fhould be very frequent.

A comparison of volcanic eruptions with earthquakes throws fome light upon many particulars of these last phenomena. Volcanoes, when in flames, act, as it were, by fits; the flame or fmoke is feen to iffue by whiffs or blasts. When I was engaged on one of our stations at Senegualap, my night's fleep was continually interrupted by the

VOL. XIV.

RR

roaring

roaring of the volcano of Macas, called Sangai. I was more than eighteen thousand toifes diftant from it; notwithstanding, the noife was fo frightful, as every moment to wake me. This mountain is of a conic form, wanting only the point, whole fides are perfectly regular. The people of the country all agree, that the mais of this mountain is continually diminishing; its actual height above the fea is two thousand fix hundred and fixty-four toifes. The flames iffue from its fummit, and a ftream of inflamed matter often rolls down one of its fides; a ravine at its bafe has taken the name of the Sulphur River. The roarings of the volcano are fometimes like the noife of a fharp peal of thunder; but they quickly refume their regular periods, and rumbling founds, the repetition of which fo much incommoded me. I have observed the fame puffs of fmoke iffue out at regular intervals from Cotopaxi, and form a fort of fheaves of light. The intervals between their emiffions, when I obferved them, were from forty-two to fortythree feconds. The inflamed matter in the interior of the volcano doubtlefs extended each time its dilatation : but this dilatation in part weakening, the inflammable parts alfo a little diminished; which would open a way for the exterior air to re-enter, either by the upper or fome other opening. Perhaps, alfo, at this interval, other inflammable matter, unlooked for, may find an eafy introduction; and inftantly the eruption acquires additional force, and re-produces a new emiffion of fmoke, or a new roar.

The materials which take fire in the bowels of the earth, and which caufe earthquakes, must neceffarily be fubject to the fame changes. When the fire takes in a concavity, the dilatation of the inflammable matter and air will naturally fpread wide, and be conveyed to other fubterraneous cavities communicating with the first. The roof of the vault is also violently forced, as are its fides, although the mass of matter lies precifely beneath. The direction of the effort will depend then upon the horizontal or inclined polition of the cavity; hence the caufe why fometimes the walls of buildings remain or not, according to the manner they are fituated. The roof of the vault returns to its place, after the neceffary vibrations, which are independent of the action of the fire. Their fpeed muft depend upon the fize of the vault, its thicknefs, and the nature of the materials of which it is formed. But the effort of the explosion abating a little, while the air becomes much too compressed in the adjacent cavities, it makes a violent reflux towards the place of eruption, which opens another access, and gives occasion to a new and more violent flock. Thus there muft neceffarily be returns marked by a more excelfive activation; and their intervals will be more fenfibly regular, till fome confiderable change happens, either in the inflamed matter, or the difpolition of the cavity. The weaseft flocks are those from the earth already flaken; the ftrongeft those caufed immediately by the influentation, which are analogous to the roarings of the volcanoes, and which are reproted more or lefs frequently, according to the facility with which the materials take fire. and alfo, as their volume has relation with the extent of the fpaces in which they are included.

A country containing in it fo many inflammable materials, must be a fubject to furnish many other remarks to natural history. Nature has there, thus to express myfelf, continually in her hands the materials and implements for extraordinary operations. Exhalations may produce, in certain places, the fame cafualties as in the famous Grotto del Cani. Waters impregnated with mineral matters will make hot-baths, while, in other places, we shall see them labouring at incrustations and crystalizations. But I must wave these details till another time, that I may give you a little account of the part of America over which I paffed on my return.

PART

PART IV.

RETURN OF THE AUTHOR FROM QUITO TO THE NORTH SEA, BY WAY OF THE RIVER MAGDALENE ;- OBSERVATIONS ON THE LOADSTONE, &C. &C.

WHEN I returned to Europe, and left Popayan, inftead of taking an immediately eaft direction, and paffing out of the Cordelier by Guanacas, I could continue my way northward between the two chains of mountains, and crofs the eaftern one near its extremity. The eaftern Cordelier has many ways over it. There is one about forty-five leagues more to the north, which leads from Cartago to Ibague, over which we muft be drawn by oxen, inftead of mules. Thefe animals have rings through the cartilage of their nofes, to which are faftened leather thongs, which are ufed as reins: they have more ftrength to bear the fatigue of fo opprefive a road; the traveller is lefs expofed to being fatigued by their movements, which are flow; and befides, the feet of oxen, by their particular make, are better adapted to extricate themfelves from the mires, in which are found neither any ftones, nor any folid body to prevent them finking. I had many reafons for preferring the Pafs of Guanacas; but what induced me the more readily to make choice of it, was, being defirous of examining the courfe of the river Magdalene, I was very glad to reach as foon as poffible its fhores. I had traced a map of the countries I had gone over, and I propofed to myfelf to make one of thofe wafhed by this river.

It is exceedingly eafy for an obferver to determine the fituation of any place, through which he is led, refpectively, in all this part of America. It is fufficient, with the compafs, to take the direction of the moft diftant mountains in view. We chance, after a few days, to journey at the bafe of thefe mountains, and others in the diftance prefent themfelves to our fight. I found it equally eafy to afcertain the length of the way. My courfe was almost always pretty exact to the north; I made my way, as it almost always happens, but by fhort journeys; when one is obliged to carry one's bed and provisions along with one; befides our batings were frequent. Sometimes we have been ftopped by the fudden fwelling of fome river, at others by our mules ftraying, which occafioned the lofs of part of a day to find them. They are never tied to one another, but left at liberty, that they may find more eafily and with lefs rifk provender in the woods, and on the brinks of the precipices : there is no better method known to guard against losing them, than by accustoming them to the company of horse, which will ferve them as a guide, and will feldom wander far. I endeavoured to benefit all I could from thefe forced batings, of which I did not always complain, by acquiring a more perfect knowledge of the country. I took the latitude every time it was in my power. I had a round iron plate with a hole pierced through it, by which I was enabled to form a gnomon, which I fometimes raifed to eight or nine feet in height by refting it upon the trunk of fome tree, or against the posts of my tent; when, inftead of encamping in the open field, I met with any cabin or houfe, the facility of the operation encreafed; I had only to throw afide a little of the thatch, to introduce my plate of iron. To avoid the error of any unevenness of the furface which commonly was not horizontal, I received the rays of the fun upon a tile or piece of board; from the fmall hole I let fall a plumb-line; I meafured with the equal divisions of a compass of proportion, using a reed for my rule, two fides of a triangle, the length of the ray of light which ferved for the hypothenuse, and the shortest distance

R R 2

from

from the point on which the ray fell to the plumb-line; and afterwards refolved the triangle by a calculation, treating it, as it was effectively, as a rectangle.

These observations, frequently repeated, corrected one in the estimation I made of the length of diffances. The badness of the road in the Cordelier, the passage of the ftreams and rivers we frequently meet with when we leave it, and when we coaft the bafe of the chain of mountains, will throw us into errors, howfoever experienced we may be. The reiterated obfervations of the latitude came to my aid, which, in combining with the directions I obtain with the load-ftone, I attained to determinations fufficiently exact for all the ordinary purposes of geography. We follow the shore of the Magdalene almost all the way from Plata to Honda, and most generally its western fide. Honda is a very cheerful little town, and the first port we meet with up the river, which is neverthelefs navigable confiderably above. I had no means during my navigation, of availing myfelf of the heights of the mountains; but I meafured from time to time the rapidity of the run of the river, and continually noticed its direction. It took me up fourteen days to defcend, fubmitting myfelf to the force of its current. and every night I flept on fhore. The time I remained at Mompox, which is a very pretty port about feven leagues above the confluence of the Magdalene with the Cauca. is not comprehended in these fourteen days. I annex here under the form of notes, the refult of all my afcertainments, which were confirmed, when on the 30th of September 1743 I reached the lower part of the river in the vicinage of Carthagena and Saint Martha, the fituation of which places with regard to Quito, I was acquainted with *.

2			I	was

I was

I was under the neceffity, in order to attain to a fufficient exactitude in the conftruction of my map, frequently to notice the variation of the needle, and I was farther invited to this from a conviction how much fuch forts of experiments are interefting to philosophy. I remarked at Quito the magnetic needle to dip towards the north nearly ten degrees below the horizon. I fay nearly, becaufe, having caufed three different needles to be made of different lengths, I could not fucceed in fixing them precifely to the fame inclination. At the period the variation was found to be eight degrees and a half towards the north-east, it was at Plata the fame the following year in July; and four months after, I found it at Saint Martha at fix degrees thirty-five minutes, and always to the north-east. I must notice by the way, as it is fubject to divers irregularities, I have frequently found portions of rocks fpread over the furface of the foil, which exteriorly were black, and appeared to have been exposed to the action of fire, and I really believe they had been thrown there by the explosion of fome volcano. I can compare them to nothing fo properly as maffes of clay, fplit and chapped by the fun, and afterwards converted into ftone. The variation of the needle differs fo much in these places, that you have only to advance five or fix paces, and you find a difference fometimes of more than thirty degrees in the direction of it. Thefe ftones are noticed in feveral places; but at about one third of the diftance on the way from Plata to Honda, three leagues or thereabouts from Bacche, fome re-markable ones are to be found. Two of the biggeft of them have a furface of nearly twenty feet in length, by eleven high; it is very fmooth, not chipped, and upon it are engraved many characters and figures. Similar ftones equally well engraved are found in places more remote and higher in the neighbourhood of the Cordelier, but I have feen none of them; I have made a drawing of the laft. They call them, but very improperly in the country, painted ftones (Piedras Pintadas); probably fome infcription is defigned by all thefe figures and characters, and points out by hieroglyphics, the time and circumstances of the eruption of volcanoes, or other events, as fome extraordinary and fudden fwell of the river. It appears to me to have been a work of much deliberation and patience; the figures are cut two inches and a half deep at leaft. The property these stones have to act to forcibly upon the compass, demonftrates them to contain fome portion of iron in their composition, but these parts lie very much concealed; the interior of the ftone is white, and it is befide of very fine grain.

I fhall take occafion, while upon the fubject of the load-ftone, to communicate the refult of fome experiments which occupied me much on my journey home. It has not relation to a phenomenon that required but one examination, but a fucceffion of examinations made at different places more or lefs diftant from the equator. I do not intend to examine if in magnetifm the governing force is diffinct or feparable from the attractive force; but I am aware that many perfons pretend that one of the poles of the earth is much more attractive than the other, and I could not make choice in the world of a more proper fituation than Quito, to work at the decifion of this queftion. With this defign, I caufed to be made a long needle of copper, fufpended as a magnetic needle. I had a fmall nail foldered to one of its extremities and fet upright, I placed this needle horizontally upon a pivot, and to the nail just mentioned, which was vertical, I applied an ordinary magnetic needle; and I fo contrived it, by fmall counter-weights, that the whole was in exact equilibrium, and could turn freely about. It is evident that if one of the magnetic poles has more virtue than the other; as if, for example, the north pole has more force, two effects must necessarily arife; not only the magnetic needle will take its ordinary direction, but being attracted more powerfully fully by the north pole of the earth, it will communicate by degrees a motion to the copper needle, and both in moving towards the north, will fix themfelves upon the magnetic meridian; fo that the two needles will form a ftraight line.

Every thing being prepared, I made not one only, but twenty or thirty experiments at Quito; and I made them with the more care, as I was prejudiced in favour of the opinion I proposed to myself to verify or confirm : but all I could do, the copper needle was never moved by the other, and remained always flationary. Neither could I attribute its repose to the friction of the pivot, for when I put the two needles together, they took very properly the direction given to them by the loadstone. I alfo. fometimes, put the copper needle in motion, while the other was left at perfect liberty, and the first remained always indifferently fixed in every direction. From hence it may be naturally concluded that the two magnetic poles of the earth, which perhaps refult themfelves from the complication of many others, have fenfibly the fame power. Our ordinary magnetic needles, when they take a certain direction, yield to this power; and they cannot advance, literally, in their length, becaufe they are kept back by their centre, but as that I made use of in my experiments was in every respect moveable, and neverthelefs it made no advance neither to the north nor fouth, it was a demonstration not to be difputed, that one of its extremities had no more tendency towards one of the poles, than its other extremity to the oppofite.

The equality between the abfolute forces being eftablished, although contrary to my expectation, it remained to me to examine the relative powers; I mean to fay the perceptible power of the part of the pole from which we may be receding, and that of the other which fhould naturally encreafe in proportion as we draw near it, and this I could do with much facility in my journey, by a repetition of obfervations in places diverfely remote from the equator. I made three trials on my way, the third at Porquera, a little town low on the river Magdalene, and three leagues from its mouth; but the fuccefs of thefe experiments was fimilar to that at Quito. The centre of gravity of the magnetic needle, although moveable, remained always at reft while placed upon the magnetic meridian. I now began to think I had not advanced far enough northward, notwithstanding I was already eleven degrees removed from the equator, which made twenty degrees of difference between the diffances of the two oppofite poles. At length on my arrival in France, I again repeated the experiment, but with no other fuccefs. As I was apprehenfive I had not taken all the precautions neceffary, it did not fatisfy me to proceed in the fame manner, I had recourfe to another expedient by which I could not fail to perceive the most minute inequality. I fuspended a magnetic needle from its center of gravity, with a number of hairs five or fix feet in length; this new line would not fall vertically, but incline below a little to the north, if it is true that the boreal magnetic pole to which we are most adjacent, acts with a greater force than its opposite; and a digression of five feconds, or a difference in the power not more than a forty thousandth part of the weight of the needle, would have been manifest to me. But by all the attention I was competent to, I was not able to difcern any horizontal tendency which composed itself with the weight, or altered at all the direction; it always appeared to me that the hair hung vertically, and that while the needle pointed north and fouth, it made not the least effort in the direction of its length, to move towards either of the poles.

It is only fince my return, and reflecting more on the fubject, that I have at length conceived the reafon for the conftant perfect equality, which appeared to me fo extraordinary, always prevailing between the attractive powers of the two poles. The direction of the magnetic efflux may be compared to the rays of light, whofe power augments

augments or diminifhes according as thefe rays are found united in a greater or leffer fpace. When the rays are divergent, the force of light decreafes; and it continues to do fo, at leaft until, by the falling of it upon a convex glafs, or a concave mirror, the divergency is changed to a convergency : then the force of light increases, although received at a greater diffance from the luminous body. So it fhould be with regard to the magnetic virtue. The directions, according to which this power operates, are a species of meridians, and they are at the greatest possible distance from each other in the environs of the equator; it is there, then, the magnetic power flould be the weakeft. But if we advance into either of the other hemifpheres, we are not to imagine that it is the effect of the pole to which we may be approaching, that folely operates to its augmentation; it will be also the effect of the other pole; fince these directions are the fame as the rays of light, which, from being divergent, become convergent. Those directions which are the fartheft feparated from each other towards the equator, mutually draw to each other as they go forward. According to this, the force of the auftral magnetic pole as felt at Paris, fhould be fenfibly equal to that we fhould experience from the part of the fame pole, if we were at the fame diftance from the equator on the other fide. Thus, generally fpeaking, and fetting afide every confideration upon which one might infift, it matters not on what place of the earth we fland; it fignifies nothing, that it is or is not an equal diftance from the two poles; we shall always feel the action of one pole as powerfully as the other. It is true, that the force of each pole will be greater or lefs, but the two will neverthelefs be always equal, which alfo my obfervations confirm. The refiftance of the air will apparently introduce fome difference between the two actions, if the magnetic matter creeps upon the furface of the ground, and if it has a long voyage to make through the gross air we breathe. But the inclining of the needles marks out the route taken by the magnetic matter; and this route varies little from a vertical one below, which demonstrates, that the magnetic matter has prefently passed through the groffer air, and that its passage through the higher region is made above the denfer part of the atmosphere.

My readers will, doubtlefs, not difapprove, that, in giving him an account of thefe observations, I have conducted him from Peru to Europe, to instantly carry him back towards the middle of the torrid zone. When I got out of the Cordelier, I had no reafon to doubt, that, if the country was low enough, I flould find it nearly the fame in quality as that on the other fide of the double chain of mountains. In the meantime, I was ftruck at the first view, with the difference in many respects. Plata is of moderate elevation : the mercury in the barometer flood exactly at twenty-five inches; and at Honda at twenty-feven inches and five lines and three quarters. The upper grounds are all ftony, and the country naked. The environs of Plata, which is four or five leagues to the weft of the river Magdalene, are tolerably peopled; the reft but thinly; and the places or towns, Honda and Mompox excepted, towards the fea, are of little confideration. Mompox is ornamented with a very fine quay, which they have been obliged to raife high, by reafon of the fudden fwells to which the river is liable; for, although it is very wide, it rifes every year, at the beginning of December, to twelve or thirteen feet. It has its courfe between rocks, and upon fand, as far as the midway between Honda and Mompox; but it experiences, below, much the fame change as the interior of the Cordelier. It rolls it waters over flime; its fine fhores are converted below almost entirely into moraffes, fome of which fpread very wide around.

One fingular circumstance has frequently drawn my attention throughout all these countries; and that is, all the mountains near which I journeyed, and which are at the

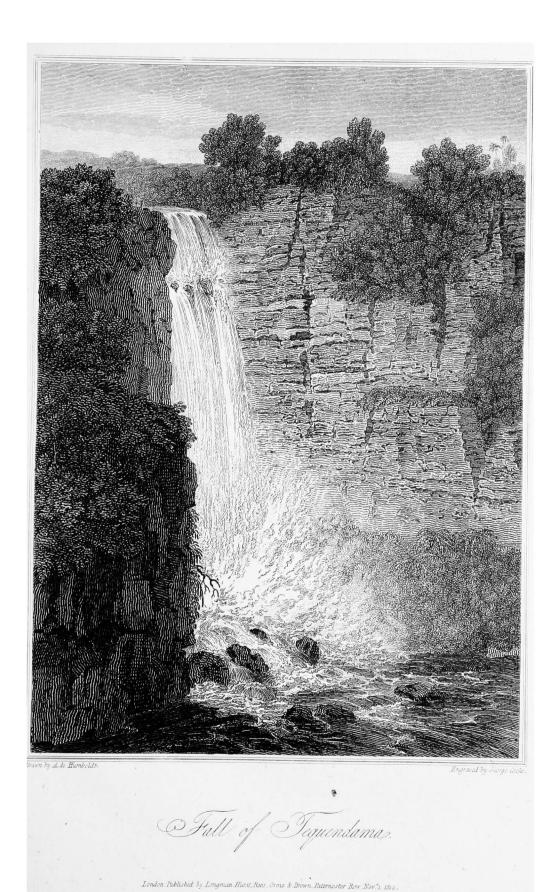

bale,

base, and on the outfide of the great Cordelier, appear to me to have a different origin from those I had before seen. The beds of different soils, and oftener the rocks, of which they were formed, were not, as were the others, of various inclinations; they were perfectly horizontal; and fometimes I noticed them to correspond with others, in very remote mountains. The most part of these are two or three hundred toiles high, and are almost all of them inacceffible; they are frequently cut like walls, which gives one an opportunity of better examining their horizontal beds, of which they flow the extremities. The fpectacle is not beautiful, but it is rare and fingular. When chance has formed them round, and abfolutely detached them from others, each of their beds takes the form of a very flat cylinder, or truncated cone, of but little height; and thefe different beds lying one upon another, and diftinguished by their colours and their various floping outlines, have frequently given to all a form of artificial workmanship, executed with the greatest justness. One of these fort of mountains stands about a league from Honda, upon the bank of the Guali, on the road to Mariquita, which is in view of every traveller; but were I to give a defcription of it, I should first request all the credit due to a relater who has no interest in departing from the truth, and has his whole life held an untruth in the greatest abhorrence. The mountains in these countries are feen continually to take the appearance of ancient and fumptuous edifices, chapels, domes, caftles; fometimes fortifications with lengthened curtains provided with baftions. It is difficult, in noticing these objects, and the correspondent nature of their beds, to doubt that the earth around is not much funk. It appears those mountains, whofe bafes were more folidly fupported, are left as a fpecies of teftimony, or as monuments, which indicate the height of the ancient foil.

I am not acquainted with the environs of Orinoko, but from report; but I know that, in many places there, the mountains are formed with horizontal beds, and that their fummits are perfectly level platforms. There is nothing, I believe, found fimilar to this in Peru, notwithstanding the almost infinite variety there fpread around. All the beds incline around every fummit, conforming themfelves to the declivity of the hills. If, as there is an appearance, this portion of the furface of the earth is funk from one part to the other of the chain of mountains which, parting fouth of Popayan, feparate the river Magdalene from the Orinoko, the fubmerfion of the Atlantide, of which Plato has fpoken, will become much more plaufible. Our imagination revolts, when we would reprefent to ourfelves fuch great alterations made in the exterior form of our globe, the actual ftate of which appears fo permanent; but we are not at liberty, in this regard, entirely to conjecture of most remote times from the prefent. Great changes have their bounds: they are always fucceeded by a ftate of equilibrium or relative repofe, to which they lead, and which muft have a certain duration.

The road is even from Plata to Honda, and is croffed by many fmall rivers which run into the Magdalene; which river receives alfo other fmall ones on the oppofite fide, and principally the Bogota, which paffes by Santa-Fe, and joins the Magdalene over againft Ibagué, whofe fituation I have already defcribed. The Bogota is very confiderable, even at Santa-Fe. A higher cataract is not to be found in the world, than is formed by it at fifteen or fixteen leagues below this town, and about eight leagues from the Magdalene, at a place called Tequendama, being fuppofed to be about two hundred fathoms in height.*

* The remainder is omitted, as the topics are better illustrated in the following voyage.

A

VOYAGE TO SOUTH AMERICA,

DESCRIBING AT LARGE

THE SPANISH CITIES, TOWNS, PROVINCES, &c. ON THAT EXTENSIVE CONTINENT :

Undertaken, by command of the King of Spain, by DON GEORGE JUAN, and DON ANTONIO DE ULLOA, Captains of the Spanish Navy, Fellows of the Royal Society of London, Members of the Royal Academy at Paris, &c. &c.—Translated from the original Spanish; with Notes and Observations; and an Account of the Brazils.

By JOHN ADAMS, Efq. of Waltham Abbey; who refided feveral Years in those Parts.*

PREFACE.

IT is certainly a very true, as well as trite obfervation, that knowledge is the food of the mind; and if this be fo, then certainly that ought to have the preference, which is at once equally nutritive and pleafant. On this account, books of voyages and travels have been in fuch general effect, and at the fame time have been commended by perfons of the greatest fagacity, and in the highest reputation for superior understanding. The pleafantnefs of this kind of reading has attracted many, who had before no relifh for learning, and brought them by degrees to enter upon feverer inquiries, in order more effectually to gratify that curiofity which this kind of ftudy naturally excites. Men of higher abilities have turned their thoughts on this fubject, from the confideration of its real utility. This induced the ingenious Hakluyt to make that noble collection, which procured him the patronage of Queen Elizabeth's ableft minister. This led the elder Thevenot, to enrich the French language with a very copious collection of the fame kind. And, not to multiply examples, this made voyages and travels the favourite ftudy of the judicious Locke, who looked upon it as the best method of acquiring those useful and practical lights, that ferve most effectually to strengthen, and also to enlarge the human underftanding.

It is indeed true, that in refpect to this, as well as other branches of fciences, there have been many productions, which for a time have been applauded and admired, and which, notwithftanding, have ferved rather to miflead, than to inftruct men's minds, by a difplay of fpecious falfehoods, highly acceptable to fuch as read merely for amufement. But thefe authors of marvellous, and very often incredible relations; of ftrange and furprifing adventures; thefe pompous defcribers of wonderful curiofities, which men

* This translation has paffed through five Editions.

VOL. XJV.

S S

any degree of certainty. But by the accident of thefe gentlemen going thither, with no other view than the improvement of knowledge, purfuing that view with the moft lively zeal and affiduous application, and founding their reputation upon a plain and candid communication of all that knowledge which, with fo much pains and labour, they had acquired, we have now as clear, concife, and correct a reprefentation of thefe extensive regions as we can poffibly defire; fuch a one, as will answer all the ends of information and inftruction, enable us to difcover the errors and partialities in former accounts, and prevent our being amufed or mifled by any erroneous relations for the future, which are certainly circumftances of very great confequence.

The natural hiftory of these countries will be likewise found in the following sheets, in a manner no less perfect and pleafing. These gentlemen went about it in a proper method, and with the talents requifite to the complete accomplishment of their defign. They faw things with their own eyes, they enquired carefully, but they took nothing on truft: on the contrary, they difcovered, and they have difclofed, many errors of an old flanding; exploded various common notions that were ill founded, and have left others in the ftate in which they ought to be left, as things not thoroughly proved, or abfolutely difproved; but which are referved for further examination. It is chiefly from the natural hiftory that we collect the value and importance of any country, becaufe from thence we learn its produce of every kind. In these sheets we find the greatest care taken in this particular; all the riches of the mineral, vegetable, and animal kingdoms exhibited to our view, their places exactly affigned, their refpective natures defcribed, the methods of using, improving, and manufacturing them pointed out; and, exclusive of a multitude of vulgar errors exposed, and mistaken notions refuted, an infinity of new, curious, and important remarks are made, all tending to explain and illustrate the respective subjects. Of these many instances might be given; but that would be to anticipate the reader's pleafure, and arrogate to ourfelves the merits of the authors we celebrate.

In refpect to the civil hiftory, the world in general was yet more in the dark than as to the natural; knowing much lefs of the inhabitants than of the commodities of thefe countries; and in this refpect our authors have been as candid, as circumstantial, and as copious, as in the other. They not only acquaint us with the diffribution and difpofition of the Spanish governments; with the nature, extent, and subordination of those who prefide in them; but have also given us a regular plan of their administration, and of the order and method in which juffice is difpenfed, and the civil policy maintained; the domeftic æconomy of the Spaniards, their cuftoms, manner of living, their way of treating the Indians, both fubjects and favages, are flated with the fame freedom and precifion. In like manner they give us a fuccinct account of the Creoles, that is, fuch as are defcended from the Spaniards, and have been longer or later fettled in the Indies, with whatever is peculiar in refpect to the genius, humour, virtues, and vices of thefe people; and more efpecially the points in which they differ from the native Spaniards. The flate and condition of the Indians who live in fubjection to the Spaniards, their tempers, employments, good and ill qualities, labours, and diverfions. The habitations of the free Indians, their cuftoms, drefs, manner of fpending their lives, exercifes, talents, religion, and method of preferving the remembrance of paft transactions, as alfo the condition of the negroes and mulattoes, whether in the capacity of flaves, domestic fervants, or in poffession of their freedom, with whatever differences occur in the ftate of any of these people in different provinces.

But to the English reader, perhaps, nothing in the following pages will be more acceptable, as indeed nothing feems to have been more carefully confidered by the authors 2 than

than the commercial hiftory of thefe countries. We find here not only the principal commodities of every province diffinctly enumerated, but we are also informed of the particular places where they grow, their different qualities and degrees in value, the method of collecting and curing most part of them, the manufactures of cotton, wool, and other materials, the produce of their mines and different kinds of metal, their potteries, and whatever elfe is the object of industry and skill: the manner of conveying them from one province to another, the great roads, the inland and coafting navigation, their commerce with Spain, their contraband trade, the manner of introducing, and the great confumption, of European commodities and manufactures, the advantages and difadvantages attending their prefent regulations, the difcoveries that are yet to be made, and the improvements which may ftill take place in the management of affairs in those countries: the fingular inventions of the natives for paffing great rivers, transporting their goods by the help of veffels of their own contruction, their adroitness in some respects, and their stupidity in others.-From the due confideration of this part of the work, the reader will perceive that in many things we have been imposed upon, in former accounts; and that other things, in a long course of years, are very much changed from what they were. But instead of old errors, we fhall find many new truths, and fome established from example and experience, that are of too great confequence not to be frequently remembered, and perfectly underftood; fuch as, that countries are not the better, and, which is ftill ftranger, are not the richer, for producing immenfe quantities of gold and filver, fince this prevents their being cultivated, exposes the natives to pass their lives in the feverest drudgery, and, after all, makes the digging of metal from the mine little more than drawing water in a fieve; fince, in fuch countries, riches difappear almost as foon as they are revealed. Industry alone, in the old world and in the new, has the power of acquiring and preferving wealth, and this, too, without the trouble of mining. Befides, though not infifted upon, it will be evidently feen, that feverity in government, and fuperfitiion in religion, fubvert both liberty and morals, and are confequently in all refpects deftructive of the happiness of mankind.

The account given by our authors, of the miffions which the Jefuits have eftablished in Paraguay, is as interefting as it is entertaining, and may be very juftly confidered as one of the most curious and best written parts of the whole performance; fince, at the fame time that it breathes all the deference and refpect poffible for the fathers, it informs us of a great variety of facts of fo much the more confequence, as, at the time it was written, nobody could forefee that the courts of Madrid and Lifbon would make fo thorough a change as they have done in their fentiments in regard to this order; and therefore the informations thefe gentlemen give us are the more to be relied on. They fhew us in what manner, and under what fpecious pretences the Jefuits acquired a kind of independent poffeffion of fo large a tract of country, and, except their annual tribute, an almost absolute dominion over an immense number of people. They acquaint us that there is a civil government in every village, after the model of the Spanish towns; but the magistrates are chosen by the people, subject only to the approbation of the father Jefuit, who refides in and, in reality, governs the village. We learn from them, that the Jefuits draw from the people all the commodities and manufactures that are fit for foreign commerce, which are vended by a commiffary of their appointing, and the returns in European commodities made to and diffributed by them at their pleafure; they tell us, that the church in every village is fpacious, and elegantly adorned; that, though they are ftyled villages, they are in effect large towns, and the houfes in them neat, commodious, and, in comparison of the Spaniards', very well furnished. We lear**n** from

from them that, under a pretence of the excursions of the Portuguese, who used to feize these Indians and make them work in their mines, and of the favage Indians who furrounded them in a manner on all fides, the fathers have taught them the use of arms, make them fpend their holidays in military exercifes, have a large body of welldifciplined troops, magazines well furnished with military stores, together with mills and other neceffary machines for making their own gunpowder. They likewife let us know that, to prevent the manners of their difciples from being corrupted, the Jefuits exclude them entirely from all communication with ftrangers, whether Europeans or Indians, and fuffer none to enter into their miffions, who may report either the strength or the weaknefs of their condition, or penetrate into the mysteries of their policy.

PART I.

ACCOUNT OF CARTHAGENA, PANAMA, &C. AND OF THE PROVINCE OF QUITO.

BOOK I.

Reasons for this Voyage ; Navigation from the Bay of Cadiz to Carthagena in America, and a Description of the latter.

CHAP. I. - Motives of this Voyage to South America, with Remarks on the Navigation between Cadiz and Carthagena.

THE heart of man is naturally inclined to attempt things, the advantages of which appear to increase in proportion to the difficulties which attend them. It spares no pains, it fears no danger in attaining them; and inftead of being diverted from its purpofe, is animated with fresh vigour by opposition. The glory infeparable from arduous enterprifes is a powerful incentive, which raifes the mind above itfelf; the hope of advantages determines the will, diminifhes dangers, alleviates hardfhips, and levels obftacles, which otherwife would appear unfurmountable. Defire and refolution are not, however, always fufficient to enfure fucces; and the best-concerted measures are not always profperous. Divine Providence, whofe over-ruling and incomprehenfible determinations direct the courfe of human actions, feems to have prefcribed certain limits, beyond which all our attempts are vain. The caufes his infinite wifdom has thought proper to conceal from us, and the refult of fuch a conduct, is rather an object of our reverence than fpeculation. The knowledge of the bounds of human understanding, a difcreet amufement and exercife of our talents for the demonstration of truths which are only to be attained by a continual and extensive fludy, which rewards the mind with tranquillity and pleafure, are advantages worthy of our higheft efteem, and objects which cannot be too much recommended. In all times the defire of enlightening others by fome new difcovery has roufed the industry of man, and engaged him in laborious refearches, and by that means proved the principal fource of the improvement of the fciences.

Things which have long baffled fagacity and application, have fometimes been difcovered by chance. The firmeft refolution has often been difcouraged by the infuperable

318

able precipices which, in appearance, encircle his inveftigation. The reafon is, becaufe the obftacles are painted, by the imagination, in the most lively colours; but the methods of furmounting them escape our attention; till, smoothed by labour and application, a more easy passage is different.

Among the difcoveries mentioned in hiftory, whether owing to accident or reflection, that of the Indies is not the leaft advantageous. Thefe parts were for many ages unknown to the Europeans, or, at leaft, the remembrance of them was buried in oblivion. They were loft through a long fucceffion of time, and disfigured by the confusion and darknefs in which they were found immerfed. At length the happy æra arrived, when industry, affisted by refolution, was to remove all the difficulties exaggerated by ignorance. This is the epocha which diftinguished the reign, in many other respects fo glorious, of Ferdinand of Arragon, and Ifabella of Caftile. Reafon and experience at once exploded all the ideas of rafhnefs and ridicule which had hitherto prevailed. It feems as if Providence permitted the refufal of other nations to augment the glory of our own; and to reward the zeal of our fovereigns, who countenanced this important enterprife; the prudence of their fubjects in the conduct of it, and the religious end propofed by both. I mentioned accident or reflection, being not yet convinced whether the confidence with which Chriftopher Columbus maintained, that weftward there were lands undifcovered, was the refult of his knowledge in cofmography and experience in navigation, or whether it was founded on the information of a pilot who had actually difcovered them, having been driven on the coafts by ftrefs of weather; and who, in return for the kind reception he had met with at Columbus's houfe, delivered to him in his laft moments the papers and charts relating to them.

The prodigious magnitude of this continent; the multitude and extent of its provinces; the variety of its climates, products, and curious particulars; and, laftly, the diffance and difficulty of one part communicating with another, and effectially with Europe, have been the caufe, that America, though difcovered and inhabited in its principal parts by Europeans, is but imperfectly known by them; and at the fame time kept them totally ignorant of many things, which would greatly contribute to give a more perfect idea of fo confiderable a part of our globe. But though investigations of this kind are worthy the attention of a great prince, and the ftudies of the molt piercing genius among his fubjects, yet this was not the principal intention of our voyage. His Majefty's wife refolution of fending us to this continent was principally owing to a more elevated and important defign. The literary world are no ftrangers to the celebrated queftion that has lately produced fo many treatifes on the figure and magnitude of the earth which had hitherto been thought perfectly fpherical. The prolixity of later observations had given rife to two opposite opinions among philosophers. Both supposed it to be elliptical; but one affirmed its transverse diameter was that of the poles, and the The folution of this problem, in which not other, that it was that of the equator. only geography and cofmography are interested, but also navigation, astronomy, and other arts and fciences of public utility, was what gave rife to our expedition. Who would have imagined that these countries, lately discovered, would have proved the means of our attaining a perfect knowledge of the old world; and that, if the former owed its difcovery to the latter, it would make it ample amends by determining its real figure, which had hitherto been unknown or uncontroverted? who, I fay, would have fufpected that the fciences floud in that country meet with treafures not lefs valuable than the gold of its mines, which has fo greatly enriched other countries? How many difficulties were to be furmounted in the execution! What a feries of obftacles were to be overcome in fuch long operations, flowing from the inclemency of the climates; the difadvandifadvantageous fituation of the places where they were to be made, and in fine, from the very nature of the enterprife! All these circumstances infinitely heighten the glory of the monarch, under whose auspices the enterprise has been to happily accomplished. This difcovery was referved for the present age, and for the two Spanish monarchs, the late Philip V. and Ferdinand VI. The former caused the enterprise to be carried into execution, the latter honoured it with his countenance, and ordered the narrative of it to be published; not only for the information and instruction of his own subjects, but also for those of other nations, to whom these accounts will prove equally advantageous. And, that this narrative may be the more instructive, we shall introduce the particular circumstances which originally gave occasion to our voyage, and were in a manner the basis and rule of the other enterprises, which will be measured in the sequel, each in its proper order.

The attention of the Royal Academy of Sciences at Paris for the improvement of human knowledge, and its continual ardour to difcover and apply the beft methods for that noble end, could not fit down contented under the uncertainty concerning the real figure and magnitude of the earth, the investigation of which had, for feveral years past, employed the most eminent geniuses of Europe. This learned affembly represented to their fovereign the neceffity of determining a point, the exact decifion of which was of fuch great moment, efpecially to geography and navigation; and at the fame time laid before him a method of doing it. This was, to measure fome degree of the meridian near the equator; and (as was done with great propriety after our departure) by meafuring other degrees under the polar circle, in order to form a judgment of the different parts of its circumference, by their equality or inequality, and from thence to determine No country feemed fo proper for this as the province of its magnitude and figure. Quito in South America. The other countries under the equinoctial line, both in Afia and Africa, were either inhabited by favages, or not of an extent fufficient for these operations; fo that, after the most mature reflection, that of Quito was judged to be the only place adapted to the plan in queftion.

His most Christian Majesty Lewis XV. applied, by his ministers, to King Philip, that fome members of his Royal academy might pass over to Quito, in order to make there the neceffary obfervations; at the fame time fhewing the intention and univerfal advantage of them, and how very remote they were from any thing which tends to awaken a political jealoufy. His Majefty, perfuaded of the candour of this application, and defirous of concurring in fo noble a defign, as far as was confiftent with the dignity of his crown and the fafety of his fubjects, referred the matter to the council of the Indies; and, on their favourable report, the licence was granted, with all the neceffary recommendations and affurances of the royal protection to the perfons who were to repair to America to make thefe obfervations. The patents, which were made out for them on the 14th and 20th of August 1734, contained the most precife orders to the viceroys, governors, &c. in the countries through which they were to país, to aid and affift them, to fhew them all friendship and civility, and to fee that no perfons exacted of them for their carriages or labour more than the current price; to which His Majefty was pleafed to add the higheft proofs of his royal munificence, and of his zeal for the advancement of the fciences, and efteem for their pro feffors.

This general regard of His Majefty was followed by fome measures, particularly defigned to promote the honour of the Spanish nation, and to give his own subjects a taste for the same fciences. He appointed two officers of his navy, well skilled in mathematics, to join in the observations which were to be made, in order to give them

them a great dignity and a more extensive advantage; and that the Spaniards might owe only to themfelves the fruits and improvements expected from them. His Majefty also conceived that the French academicians, having these officers in their company, would be more regarded by the natives, and, in the places through which they were to pass, all umbrage would be thus removed from perfons who might not be fufficiently acquainted with the nature of the defign. Accordingly the commanders and directors of the academy of the Royal Guardas Marinas received orders to recommend two perfons, whose dispositions not only promised a perfect harmony and correspondence with the French academicians, but who were capable of making, equally with them, the experiments and operations that might be necessary in the course of the enterprise.

Don George Juan, commander of Aliaga, of the order of Malta, fub-brigadier to the Guardas Marinas, equally diftinguifhed by his application to the mathematics, and his faithful fervices to the crown, was, with myfelf, propofed to His Majefty, as qualified to contribute to the fuccefs of fuch an enterprife. We had commiffions given us as lieutenants of men of war, and, with all neceffary inftructions, were ordered to embark on board two fhips fitting out at Cadiz, for carrying to Carthagena, and thence to Porto Bello, the Marquis de Villa Garcia, appointed viceroy of Peru. About the fame time, the French academicians were to fail in a fhip of their nation, and, by way of St. Domingo, to join us at Carthagena, in order to proceed from thence in company.

The two men of war, on board of which we had been ordered, were the Conquiftador of fixty-four guns, and the Incendio of fifty; the former commanded by Don Francifco de Liano, of the order of Malta, commodore; and the latter by Don Augustin de Iturriaga, by whom it was agreed that Don George Juan should go in the Conquistador, and myself in the Incendio. We failed from Cadiz bay, May 26, 1735; but, the wind shifting, we were obliged to put back and come to an anchor about half a league without Las Puercas.

On the 28th, the wind coming about to north-east, we again fet fail, and continued our courfe in the manner related in the two following journals:

Journal of Don George Juan, on board the Conquistador.

THE 2d of June 1735, faw the Canary Iflands; and the winds, which are ufually very variable in this paffage, were either north-weft by north, or north-eaft. Don George Juan, by his reckoning, found the difference of longitude between Cadiz and the Pico of Teneriffe $10^{\circ} 30'$.

According to Father Feuillée's obfervations, made at Loratava, fix minutes and a half eaft of the Pico, the difference of the longitude betwixt the latter and the obfervatory at Paris is 18° 51'. Subtracting therefore 8° 27', which, according to the Connoiffance des Tems, is the difference of longitude between that obfervatory and Cadiz; the difference of longitude between that city and the Pico is 10° 24', and confequently differs fix minutes from Don George's reckoning.

On the 7th we loft fight of the Canaries, and continued our course towards Martinico, fleering fouth between forty-two and forty-five degrees westerly, encreasing the angle every day, till near the island, we steered due west under its parallel, and on the 26th of June discovered Martinico and Dominica.

The difference of longitude between Cadiz and Martinico appeared from our reckoning to be 59° 55', that is, 3° 55' more than the chart of Antonio de Matos vol. xiv.

makes it; which is however generally followed in this voyage. According to the observations of Father Laval, made at Martinico, the difference of longitude is 55° 8' 45"; according to those of Father Feuillée, 55° 19'. This error in a great measure proceeds from a want of accuracy in the log-line; for had the pilot of the Conquiftador, who found the fame defect in his calculations, made the diffance between the knots of the log-line thirty English feet, instead of forty-feven and a half, the difference of longitude, by account, would have been only fifty-feven degrees. This error in marking the log-line is common both to the pilots of Spain and other nations; and this, like many other faults in navigation, remains uncorrected for want of attention.

The diftance between the knots on the log-line fhould contain $\frac{1}{120}$ of a mile, fuppoling the glass to run exactly half a minute : and though all agree in this respect, yet not in the true length of the mile, which ought to be determined by the most exact menfurations; as those of M. Caffini in France, ours in the province of Quito, or those of M. Maupertuis in Lapland. If the length of the degree be computed according to M. Caffini's meafures, 57,060 toifes, a minute or geographical mile will contain 951 toifes, or 5,706 royal feet, of which $\frac{1}{120}$ is nearly equal to forty-feven feet fix inches and a half; and as the Paris foot is to that of London as 16 to 15*; this, when reduced to English measure, makes nearly fifty feet eight inches and a quarter. And this is the true diftance between each knot on the log-line.

This menfuration, which fhould have been hitherto the rule obferved, is not exact, when compared to that which has been found from inveftigating the figure of the earth, which is difcovered to be very different from what it has been imagined; fo that it is not furprifing that there fhould be found confiderable differences in the nautical calculations.

The Author's Journal, on board the Incendio.

HAVING fet fail on the fame day, namely, the 28th of May 1735, and fteered fouth, between fifty-two and fifty-fix degrees westerly, we perceived on June 2d, about fix in the evening, the island of Savages, one of the Canaries; and on the 3d we faw Teneriffe. I found the difference of longitude between Cadiz and Naga-Point to be 11° 6', which agrees with the English and Dutch charts, but differs a little from the true longitude determined by Father Feuillée at Loratava, in the fame ifland of Teneriffe.

On the 4th, we had fight of the islands of Palma, Gomera, and Fer; but again loft fight of them on the fifth. On the 29th about noon, we made Martinico, and continuing our courfe, paffed between that island and Dominica. The difference of longitude between Martinico and Cadiz bay, according to my reckoning, was 57° 5', one degree more than San Telmo's chart makes it. But it is proper to obferve, that in order to estimate my course, and avoid the danger of finding a great difference at making land, I followed two different calculations, one according to the measures commonly given by pilots to the diftance between the knots on the log-line, of forty-feven English feet and a half, and the other by reducing them to forty-feven

^{*} According to the late regulation of the Royal Society of London, and the measures fent by it to the Academy of Sciences at Paris, and with which I was favoured by Martin Folkes, Efq. the worthy prefident of that fociety, the Paris foot is to that of London as 864 to 811, which fhews how erroneous thefe are published by Father Tosca +.

⁺ The Paris foot is divided into twelve inches, and each inch into twelve lines; wherefore, if we suppose each line to be divided in 310 parts, the Paris foot will be 1440 parts, the London, 1850. These proportions were settled by the Royal Academy of Sciences at Paris, in their treatife of the figure and magnitude of the earth, Part xi. Chap. 5, which shews the erroneous of the above. A.

royal feet : for though in ftrictnefs, it ought to have been forty-feven and a half of the latter, the difference being but small, I thought it best to omit the half foot, that my reckoning might be before the ship. According to the first method, the difference of longitude between Cadiz and this ifland was between fixty and fixty-one degrees, which nearly agrees with the journal of Don George.

From Martinico we continued our courfe towards Curafao, which we had fight of July 3d. The difference of meridians between that and Martinico, Don George Juan found to be 6° 49', whereas I made it 7° 56'. The caufe of this difagreement was, that finding a fenfible difference in the latitudes, I regulated myfelf by the currents, imagining, according to the opinion of all our navigators, that they fet to the northweft; which Don George did not, and by that means his reckoning anfwered to the real diftance betwixt thefe two iflands, and mine was erroneous. But that the water was in motion, is not to be queftioned : for in all the latitudes from June 30th, to July 3d, those found by observation exceeded those by account ten minutes thirteen feconds, and even fifteen minutes; a fufficient proof that the currents run directly north and not north-weft.

From the 2d, at fix in the morning, till the day we made Curafao and Uruba. we had fhallow water, of a greenifh colour, which continued till about half paft feven in the evening, when we entered the gulf.

Our courfe from Martinico to Curafao, during the two first days, was fouth eightyone wefterly; and the two last fouth fixty-four degrees wefterly. From thence to Carthagena we kept at a proper diffance from the coaft, fo as to diffinguish its most noted capes, and inhabited places.

On the 5th we difcovered the mountains of St. Martha, fo well known for their height, and being all covered with fnow; and at fix in the morning we croffed at the current of thick water, which iffues with prodigious rapidity from the river De la Magdalena, and extends feveral leagues into the fea. About fix in the evening found ourfelves to the northward of Cape de Canoa, where we lay to, and continued till feven in the morning, when we fet all our fails, which at eight in the evening brought us under fort Boca Chica, where we came to an anchor in thirty-four fathom water, the bottom muddy. On the 8th we endeavoured to get into Carthagena bay, but could not before the oth fecurely moor our fhip.

During our paffage betwixt the Canary iflands, we had faint and variable winds, with fome fhort calms; but, after we had loft fight of them, the gales encreafed upon us, but moderate, and continued in this manner till we arrived within one hundred and feventy or one hundred and eighty leagues of Martinico, when we had fqualls accompanied with violent rains. After paffing the Canaries, at about twen y leagues from the fe iflands, we had the wind at north-welt, and at the diftance of rear eighty leagues it fhifted to east and east-north-east. We had nearly the fame in the middle of the Atlantic ocean, and afterwards the wind came about to the eaft, with different degrees of velocity; but the variation was not fuch as to occation any inconveniency.

Thefe are the winds generally met with in this voyage. Sometimes it veers away to the weft and weft-north-weft, though it is very feldom known to continue on thefe points. Sometimes long calms intervene, which lengthen the voyage beyond the ufual time. All this depends on the feafons; and according to the time of the voyage, the weather and winds are more or lefs favourable. The winds above-mentioned are the most general; and the best time for making use of them, as they then are fettled, is when the fun approaches near the equator in his return from the tropic of

TT2

Capri-

Capricorn: for his approach to the autumnal equinox is the time when the calms most prevail.

From the iflands of Martinico and Dominica to that of Curafao and the coaft of Carthagena, the winds continued the fame as in the ocean, though more variable, and the weather lefs fair. I have faid that about one hundred and feventy leagues before we reached Martinico the winds were interrupted by fqualls; and thefe are more common beyond those islands, and are immediately fucceeded by fhort calms; after which the wind freshens again for half an hour, an hour, two hours, and fometimes longer. From what quarter these tornadoes or fqualls proceed, I cannot positively affirm; but it is certain, that when they are over, the wind begins to blow from the fame point as before, and nearly with the fame force. And here it may be of use to observe, that on any appearance of these fqualls in the atmosphere, the utmoss to admit of no time for preparatives; and therefore the least negligence may be attended with the most fatal confequences.

In the voyage from Cadiz to the Canaries, in fome parts, though the winds are otherwife moderate, the fea is agitated by thofe from the north and north-weft fometimes in large and long waves; fometimes in fmall but more frequent ones, which happens when the wind blows ftrongly along the coaft of France and Spain; for in the ocean the winds are fo mild, that the motion of the fhip is hardly perceived, which renders the paffage extremely quiet and agreeable. Within the windward iflands, and even before we reach them, in the parts where thefe terrible fqualls prevail, the fea is agitated in proportion to their violence and duration; but no fooner is the wind abated, than the water becomes again clear and fmooth.

The atmosphere of the ocean answers to the calmness of the winds and fea, fo that it is very feldom an observation cannot be taken, either from the fun's being obscured, or the haziness of the horizon. This is to be understood of the fair feason; for otherwife here are dark days, when the air is filled with vapours, and the horizon very hazy. At all times it is feen filled with white and towering clouds, embellishing the sky with a variety of figures and ramifications, which amufe the eye, tired with being fo long confined to two such fimilar objects as the fea and sky. Within the windward issues the variety is ftill greater, the quantity of vapours profusely exhaled, filling it in such a manner, that sometimes nothing but clouds are to be seen, though part of these are gradually dispersed by the heat of the fun, so that some parts are quite clear, others obscure; but a general darkness during the whole day is never known.

It is well known and allowed, that through the whole extent of the ocean, not the leaft current is perceiveable, till we arrive within the iflands, where in fome parts they are fo ftrong and irregular, that without the greateft vigilance and precaution, a fhip will be in great danger among this archipelago. This fubject, together with the winds peculiar to this coaft, fhall hereafter be confidered more at large.

In the track to Martinico and Dominica there is a fpace where the water, by its white colour, vifibly diftinguifhes itfelf from the reft of the ocean. Don George, by his eftimate, found this fpace to terminate one hundred leagues from Martinico; whereas, according to my reckoning, it reached only to within one hundred and eight leagues; it may therefore, at a medium, be placed at one hundred and four. This fmall difference doubtles proceeds from the difficulty of difcovering where this whitifh colour of the water terminates, towards Martinico. It begins at about one hundred and forty leagues from that ifland, which muft be underftood of the place where the different colours of the water are evident; for if we reckon from where it begins to be juft differenible, cernible, the diftance is not lefs than one hundred and eighty leagues. This track of water is a certain mark for directing one's courfe; becaufe, after leaving it, we have the fatisfaction of knowing the remaining diftance; it is not deleniated on any map, except the new one lately published in France; though it would doubtles be of great use in them all.

Nothing farther remains, than to give an account of the variation of the needle in different parts in which we found the ship by her latitude and longitude; a point of the utmost confequence in navigation, not only with regard to the general advantage to mariners in knowing the number of degrees intercepted bebetween the magnetic and true north of the world, but alfo as, by repeated obfervations of this kind, the longitude may be found, and we may know within a degree, or a degree and a half, the real place of the ship; and this is the nearest approximation to which this has been carried by those who revived it at the beginning of this century. Among thefe the chief was that celebrated Englishman, Dr. Edmund Halley: in emulation of whom, many others of the fame nation, as also feveral Frenchmen, applied themfelves to the improvement of it. We already enjoy the fruits of their labours in the variation charts lately published, though they are principally useful only in long voyages; where the difference of two or of even three degrees is not accounted a confiderable error, when there is a certainty that it cannot exceed that number. This fystem, though new with reward to the use it is now applied to, is far from being fo among the Spaniards and Portuguefe, very plain vestiges of it remaining in their old treatifes of navigation. Maniel de Figueyredo, cosmographer to the King of Portugal, in his Hydrographia, or Examin de Pilotos, printed at Lifbon in 1608, chap. ix. and x. propofes a method for finding, from the variation of the needle, the diffance run in failing eaft and weft. And Don Lazaro de Flores, in his Arte de Navegar, printed in 1672, chap. i. part ii. quotes this author, as an authority to confirm the fame remark made by himfelf; adding (chap. ix.) that the Portuguefe, in all their regulations concerning navigation, recommend it as a certain method. It must, however, be acknowledged, that those ancient writers have not handled this point with the penetration and accuracy of the English and French, affifted by a greater number of more recent obfervations. And that the obfervations made in this voyage may be of the most general use, I shall infert them in the two following tables; previoufly informing the reader, that the longitudes corresponding with each are true, the error of the courfe, with regard to the difference of meridians, being corrected from the observations of the fathers Laval and Feuillée :---

Variations observed by Don George Juan, the Longitude being reckoned west from Cadiz.

Deg. of Lat.	Deg. of Long.	Variation obferved.	Variation by the Chart.	Difference.
27 30	11 00	8 00W.	9 00W.	1 00

To the above observations on the variation of the needle, compared with those on the variation chart, first published by the great Dr. Halley in 1700, and corrected in 1744, from other observations and journals by Meffrs. Montaine and Dodson of London, I shall add some reflections, in order to expose the negligence in constructing the magnetic needles. 1. It appears that the variations observed by Don George Juan do not agree with mine, which is not to be attributed to a defect in the observations. This is fufficiently evident from comparing them. The differences between those observed by Don George and those on the chart, are nearly every where uniform; the most confiderable being a degree and fifty minutes; one making the variation 2° 30', and the other a degree only. This probably arole from the motion of the ship, which hinders the needle from being entirely at reft; or from the difk of the fun, by reafon of intervening vapours, not being accurately determined, or fome other unavoidable accident; the error, when the difference is lefs than a degree, being fcarcely perceivable in thefe obfervations. Thus, on a medium, the rational conclusion is, that the needle used in thefe obfervations varied a degree and forty minutes lefs than those when the map was constructed.

The fame uniformity appears in the differences between my obfervations and the chart; but it must be observed, that having used two different needles, the particulars of each nearly correspond, fo that between the five first, the greatest difference is of forty minutes, which intervene between the fmallest difference of 2° 50', and the greatest of 3° 30'. Hence, taking the medium between both, the difference between my obfervations and the chart will be 3° 16', the latter being fo much lefs than the former. The three last do not want this operation, the difference of 1° 30' being equal in all, and the variations refulting from these observations are also less than those delineated on the map; the variation having paffed to a different fpecies; namely, from north-weft to north-eaft. This demonstrates, that the first needle I made use of, whether it had been ill touched, or the fteel not accurately placed, varied 1° 30' wefterly lefs than that used by Don George Juan; and as this officer continued his observations to the end of the voyage with the fame needle, the difference, which at first was negative, on the variation changing its denomination became pofitive; and from my changing inftruments, the difference on my fide continued always negative. The reafon of this is, that the difference of the five first observations proceeded less from a real difference in the variation, than from the poles of the needle, which was fo far from anfwering exactly with the meridian-line on the compafs-card, that it inclined towards the north-weft; the contrary happened in the fecond compass made use of, its inclination being towards the north-east; confequently, whatever the angle of that inclination was, it occasioned a proportionate diminution in the variation of a contrary species.

Thefe

Thefe observations, thus compared, shew the errors to which navigators are liable, for want of attention in making choice of proper needles, which they fhould be careful to procure, not only well made and exact, but also strictly tried with regard to their inclination to the true meridian, before they venture to depend upon them in any voyage. In this point, Spain is guilty of a notorious neglect, notwithftanding it is evidently the fource of a thousand dangerous errors; for a pilot, in correcting the course he has fteered, in making use of a compass whose variation is different from the true, will confequently find a difference between the latitude by account and the latitude observed; and to make the neceffary equation according to the rules commonly received in failing on points near the meridian, he must either increase or diminish the distance, till it agrees with the latitude, whereas in this cafe the principal error proceeded from the rhomb. The fame thing happens in parts where it is apprehended there may be currents; which often occur in failing when the latitude by account, and that by obfervation, difagree; though in reality the water has no motion, the difference proceeding entirely from making use of another variation in the course, than that of the needle by which the fhip is fteered; as was the cafe with me in failing from Martinico to Curafao, and likewife of all the artifts on board the fhip. Another error incident to navigators, though not fo much their own, is to fleer the fhip by one needle, and obferve the variation by another; for though they have been compared, and their differences carefully obferved, their motions being unequal, though at the beginning of the voyage the difference was only a certain number of degrees, the continual friction of the former on the pivot, renders the point of the needle, on which it is fufpended, more dull than the other, which is only hung when they make obfervations, being at all other times kept with the greatest care; and hence proceeds the change observable in their differences. In order to remedy this evil, all needles intended to be used at fea should be equally proper for obferving the variation; and the obfervation made with those before placed in the bittacle; and, to improve the charts of variation, fhould be touched in the fame manner, and adjusted to the meridian of place, where the exact variation is known. Thus obfervations made in the fame places by different fhips, would not be found fo confiderably to vary; unlefs the interval of time between two obfervations be fuch as to render fenfible that difference in the variation, which has been obferved for many years paft, and is allowed of by all nations.

These are the causes of the manifest difference between needles; there may be others, but this is not the proper place for enumerating them.

CHAP. II. - Defcription of Carthagena.

ON the 9th of July 1735, we landed, and Don George Juan and myfelf immediately waited on the governor of the place. We were informed that the French academicians were not yet arrived, nor was there any advice of them. Upon this information, and being by our inftructions obliged to wait for them, we agreed to make the beft ufe of our time; but were unhappily defitute of inftruments, those ordered by His Majefty from Paris and London not being finished when we left Cadiz, but were forwarded to us at Quito foon after our arrival. We, however, fortunately heard that there were fome in the city, formerly belonging to Brigadier Don Juan de Herrera, engineer of Carthagena; by these were enabled to make observations on the latitude, longitude, and variation of the needle. We also drew plans of the place and the bay from those of this engineer, with the necessfary additions and alterations.

2

In these operations we employed ourselves till the middle of November 1735, impatient at the delay of the French academicians. At length, on the 15th, a French armed vessel came to an anchor, during the night, under Boca Chica; and to our great fatisfaction we learned, that the long-expected gentlemen were on board. On the 16th we visited them, and were received with all imaginable politeness by M. de Ricour, captain of a man of war, and king's lieutenant of Guarico, in the island of St. Domingo; and Messel. Godin, Bouguer, and De la Condamine, academicians, who were accompanied by Messel. Juffieu, botanist; Seniergues, furgeon; Verguin, Couplet, and Desson of the seniergues, furgeon dessel.

Our intention being to go to the equator with all poffible expedition, nothing remained but to fix on the most convenient and expeditious route to Quito. Having agreed to go by the way of Porto Bello, Panama, and Guayaquil, we prepared to fail; in the meantime, by help of the inftruments brought by the academicians, we repeated our obfervations on the latitude, weight of the air, and the variation of the needle; the refult of which will appear in the following defcription:—

The city of Carthagena stands in $10^{\circ} 25' 48\frac{1}{2}''$ north latitude; and in the longitude of $282^{\circ} 28' 36''$ from the meridian of Paris; and $301^{\circ} 19' 36''$ from the meridian of Pico Teneriffe; as appeared from our observations. The variation of the needle we also, from feveral observations, found to be eight degrees easterly.

The bay, and the country, before called Calamari, were difcovered in 1502 by Roderigo de Bastidas; and in 1504, Juan de la Cosa and Christopher Guerra began the war against the Indian inhabitants, from whom they met with greater resistance than they expected; those Indians being a martial people, and valour so natural to them, that even the women voluntarily shared in the fatigues and dangers of the war. Their usual arms were arrows, which they poisoned with the juice of certain herbs; whence the flightest wounds were mortal. These were fucceeded by Alonso de Ojeda, who some years after landed in the country, attended by the fame Juan de la Cosa, his chief pilot, and Americo Vespucio, a celebrated geographer of those times; but made no greater progress than the others, though he had feveral encounters with the Indians. Nor was Gregorio Hernandez de Oviedo more fortunate. But, at length, the conquest of the Indians was accomplished by Don Pedro de Heredia, who, after gaining feveral victories over them, peopled the city in 1533, under the title of a government.

The advantageous fituation of Carthagena, the extent and fecurity of its bay, and the great fhare it attained of the commerce of that fouthern continent, foon caufed it to be erected into an epifcopal fee. The fame circumftances contributed to its prefervation and increase, as the most esteemed fettlement and staple of the Spaniards; but at the fame time they drew on it the hostilities of foreigners, who, thirsting after its riches, or induced by the importance of the place, have feveral times invaded, taken, and plundered it.

The first invasion was made foon after its establishment in 1544, by certain French adventurers, conducted by a Corfican pilot, who, having spent fome time there, gave them an account of its fituation, and the avenues leading to it, with every other particular necessary to the fuccessful conduct of their enterprise; which they accordingly effected. The fecond invader was Francis Drake, termed the destroyer of the new conquests, who, after giving it up to pillage, set it on fire, and laid half the place in asses; and its fatal destruction was only prevented by a ransform of a hundred and twenty thousand filver ducats paid him by the neighbouring colonies.

It was invaded a third time in 1597, by the French, commanded by M. de Pointis, who came before the place with a large armament, confifting partly of Flibuftiers, little

9

better

328

better than pirates: but, as fubjects to the King of France, were protected by that monarch. After obliging the fort of Boca Chica to furrender, whereby the entrance of the bay was laid open, he landed his men, and befieged Fort Lazaro, which was followed by the furrender of the city. But the capitulation was no fecurity against the rage of avarice, which had configned it to pillage.

This eafy conqueft has by fome been attributed to a private correspondence between the governor and Pointis; and what increases the fuspicion is, that he embarked on board the French squadron at its departure, together with all his treasures and effects, none of which had shared in the general calamity.

The city is fituated on a fandy ifland, which forming a narrow paffage on the fouthweft opens a communication with that part called Tierra Bomba, as far as Boca Chica. The neck of land which now joins them, was formerly the entrance of the bay; but it having been closed up by orders from Madrid, Boca Chica became the only entrance; and this alfo has been filled up fince the attempt of the English in 1741, who, having made themfelves mafters of the forts which defended it, entered the bay with an intent of taking the city; but they mifcarried in their attempt, and retired with confiderable lofs. This event caufed orders to be difpatched for opening the old entrance, by which all fhips now enter the bay. On the north fide the land is fo narrow, that, before the wall was begun, the diftance from fea to fea was only thirty-five toifes; but afterwards enlarging, forms another ifland on this fide, and the whole city is, excepting thefe two places, which are very narrow, entirely furrounded by the fea. Eaftward it communicates, by means of a wooden bridge, with a large fuburb called Xexemani, built on another ifland, which has also a communication with the continent by means of another wooden bridge. The fortifications, both of the city and fuburb, are conftructed in the modern manner, and lined with free-ftone. The garrifon, in times of peace, confifts of ten companies of regulars, each containing, officers included, feventy-feven men; befides feveral companies of militia.

In the fide of Xexemani, at a fmall diffance from that fuburb, on a hill, is a fort called St. Lazaro, commanding both the city and fuburb. The height of the hill is between twenty and twenty-one toifes, having been geometrically meafured. It is joined to feveral higher hills, which run in an eaftern direction. Thefe terminate in another hill of confiderable height, being eighty-four toifes, called Monte de la Popa, and on the top of it is a convent of bare-footed Augustines, called Nuestra Senora de la Popa. Here is an enchanting prospect, extending over the country and coast to an immense diffance.

The city and fuburbs are well laid out, the ftreets being ftraight, broad, uniform, and well paved. The houfes are built of ftone, except a few of brick; but confift chiefly of only one ftory above the ground-floor; the apartments well contrived. All the houfes have balconies and lattices of wood, as more durable in this climate than iron, the latter being foon corroded and deftroyed by the moifture and acrimonious quality of the nitrous air; from whence, and the finoky colour of the walls, the outfide of the buildings makes but an indifferent appearance.

The churches and convents of this city are the cathedral, that of the Trinity in the fuburbs, built by bifhop Don Gregory de Molleda, who alfo in 1734 founded a chapel of eafe dedicated to St. Toribio. The orders which have convents at Carthagena, are those of St. Francis, in the fuburbs, St. Dominic, St. Augustin, La Merced, alfo the Jacobins, and Recollets; a college of Jefuits, and an hospital of San Juan de Dios. The nunneries are those of St. Clara and St. Terefa. All the churches and convents are of a proper architecture, and fufficiently capacious; but there appears fomething of poverty

VOL. XIV.

in the ornaments, fome of them wanting what even decency requires. The communities, particularly that of St. Francis, are pretty numerous, and confift of Europeans, white Creoles, and native Indians.

Carthagena, together with its fuburbs, is equal to a city of the third rank in Europe. It is well peopled, though moft of its inhabitants are defcended from the Indian tribes. It is not the moft opulent in this country, for, befides the pillages it has fuffered, no mines are worked here; fo that moft of the money feen in it is fent from Santa Fe and Quito, to pay the falaries of the governor and other civil and military officers, and the wages of the garrifon; and even this makes no long ftay here. It is not, however, unfrequent, to find perfons who have acquired handfome fortunes by commerce, whofe houfes are fplendidly furnifhed, and who live in every refpect agreeable to their wealth. The governor refides in the city, which, till 1739, was independent of the military government. In civil affairs, an appeal lies to the audience of Santa Fe; and a viceroy of Santa Fe being that year created, under the title of viceroy of New Granada, the government of Carthagena became fubject to him alfo in military affairs. The firft who filled this viceroyalty was lieutenant-general Don Sebaftian de Eflava; who defended Carthagena againft the powerful invafion of the Englifh in 1741.

Carthagena has alfo a bifhop, whofe fpiritual jurifdiction is of the fame extent as the military and civil government. The coclefiaftical chapter is composed of the bifhop and prebends. There is alfo a court of inquintion, whofe power reaches to the three provinces of Isla Espanola (where it was first fettled), Terra Firma, and Santa Fe.

Befides thefe tribunals, the police and administration of justice in the city is under a fecular magistracy, confisting of regidores, from whom every year are chosen two alcaldes, who are generally perfons of the highest efteem and distinction. There is alfo an office of revenue, under an accountant and treasurer: here all taxes and monies belonging to the King are received; and the proper iffues directed. A perfon of the law, with the title of *auditor de la gente de guerra*, determines processes.

The jurifdiction of the government of Carthagena reaches eaftward to the great river De la Magdalena, and along it fouthward, till, winding away, it borders on the province of Antioquia; from thence it stretches westward to the river of Darien; and from thence northward to the ocean, all along the coafts between the mouths of thefe two rivers. The extent of this government, from eaft to weft, is generally computed at fifty-three leagues; and from fouth to north, eighty-five. In this fpace are feveral fruitful vallies, called by the natives Savannas; as those of Zamba, Zenu, Tolu, Mompox, Baranca, and others; and in them many fettlements large and fmall, of Europeans, Spanish Creoles, and Indians. There is a tradition, that all these countries, together with that of Carthagena, whilft they continued in their native idolatry, abounded in gold; and fome veftiges of the old mines of that metal are ftill to be feen in the neighbourhoods of Simiti San Lucas, and Guamaco; but they are now neglected, being as imagined, exhausted. But what equally contributed to the richness of this country, was the trade it carried on with Choco and Darien ; from whence they brought in exchange for this metal, the feveral manufactures and works of art they ftood in need of. Gold was the most common ornament of the Indians, both for men and women.

CHAP. III. - Description of Carthagena Bay.

CARTHAGENA bay is one of the beft, not only on the coaft, but also in all the known parts of this country. It extends two leagues and a half from north to fouth; has has a fufficient depth of water and good anchorage; and fo fmooth, that the fhips are no more agitated than on a river. The many fhallows, indeed, at the entrance, on fome of which there is fo little water that even fmall veffels ftrike, render a careful fteerage neceffary. But this danger may be avoided, as it generally is, by taking on board a pilot; and for further fecurity, His Majefty maintains one of fufficient experience, part of whofe employment is to fix marks on the dangerous places.

The entrance to the bay, as I have already observed, was through the narrow ftrait called Boca Chica, a name very properly adapted to its narrownefs, fignifying, in Spanifh, Little Mouth, admitting only one fhip at a time, and even fhe must be obliged to keep clofe to the flore. This entrance was defended on the eaft by a fort called Saint Lewis de Boca Chica, at the extremity of Tierra Bomba, and by Fort St. Jofeph on the oppofite fide in the Isle of Baru. The former, after fultaining, in the last fiege by the English, a vigorous attack both by fea and land, and a cannonading of eleven days, its defences ruined, its parapets beat down, and all its artillery difmounted, was relinquifhed. The enemy being thus mafters of it, cleared the entrance, and, with their whole fquadron and armaments, moved to the bottom of the bay. But, by the diligence and industry of our people, they found all the artillery of fort Santa Cruz nailed up. This fort was alfo, from its largeness, called Castillo Grande, and commanded all the fhips which anchor in the bay. This, together with that of Boca Chica, St. Joseph, and two others, which defended the bay, called Manzanillo and Pastelillo, the enemy, enraged at their difappointment, demolifhed when they quitted the bay. The promifing beginning of this invafion, as I have already obferved, gave occafion to the fhutting up and rendering impracticable the entrance of Boca Chica, and of opening and fortifying the former ftrait; fo that an enemy would now find it much more difficult to force a paffage.

The tides in this bay are very irregular, and the fame may nearly be faid of the whole coaft. It is often feen to flow a whole day, and afterwards ebbs away in four or five hours; yet the greateft alteration obferved in its depth is two feet, or two feet and a half. Sometimes it is even lefs fenfible, and only to be perceived by the current or flow of the water. This circumftance increafes the danger of ftriking, though a ferenity continually reigns there. The bottom alfo being compofed of a gravelly ooze, whenever a fhip is aground, it often happens that fhe muft be lightened before fhe can be made to float.

Towards Boca Chica, and two leagues and a half diftant from it feawards, there is a fhoal of gravel and coarfe fand, on many parts of which there is not above a foot and a half of water. In 1735, the Conquiftador man of war, bound from Carthagena to Porto Bello, ftruck on this fhoal, and owed her fafety entirely to a very extraordinary calm. Some pretended to fay that the fhoal was before known by the name of Salmedina; but the artifts on board affirmed the contrary, and that the fhoal on which fhe ftruck had never been heard of before. From the obfervations of the pilots and others, Nueftra Senora de la Popa bore eaft-north-eaft two degrees north, diftance two leagues; the caftle of St. Lewis de Boca Chica, eaft-fouth-eaft, diftance three leagues and a half, and the north part of Ifla Vofaria, fouth one quarter wefterly. It muft, however, be remembered, that thefe obfervations were made on the apparent rhombs of the needle.

The bay abounds with great variety of fifh both wholefome and agreeable to the palate; the most common are the shad, the taste of which is not indeed the most delicate. The turtles are large and well tasted. But it is greatly infested with sharks, which are extremely dangerous to seamen, as they immediately seize every perform they

U U 2

difcover in the water, and fometimes even venture to attack them in their boats. It is a common diverfion for the crews of those fhips who ftay any time in the bay, to fifh for these rapacious monsters, with large hooks fastened to a chain; though, when they have caught one, there is no eating it, the flesh being as it were a kind of liquid fat. Some of them have been feen with four rows of teeth; the younger have generally but two. The voracity of this fish is fo prodigious, that it fwallows all the fishth either thrown out of fhips, or cast up by the fea. I myself faw in the flomach of one the entire body of a dog, the foster parts only having been digested. The natives affirm that they have also feen alligators; but this being a fresh-water animal, if any were ever feen in the fea, it must be fomething very extraordinary.

In the bay the galleons from Spain wait the arrival of the Peru fleet at Panama, and on the first advice of this, fail away for Porto Bello; at the end of the fair held at that town, they return into this bay, and, after taking on board every neceffary for their voyage, put to fea again as foon as possible. During their absence the bay is little frequented; the country veffels, which are only a few bilanders and feluccas, ftay no longer than is neceffary to careen and fit out for profecuting their voyage.

CHAP. IV. — Of the Inhabitants of Carthagena.

THE inhabitants may be divided into different cafts or tribes, who derive their origin from a coalition of Whites, Negroes, and Indians. Of each of these we shall treat particularly.

The Whites may be divided into two claffes, the Europeans, and Creoles, or Whites The former are commonly called Chapetones, but are not nuborn in the country. merous; most of them either return into Spain after acquiring a competent fortune, or remove up into inland provinces in order to increase it. Those who are fettled at Carthagena carry on the whole trade of that place, and live in opulence; whilft the other inhabitants are indigent, and reduced to have recourfe to mean and hard labour for fubfiftence. The families of the White Creoles compose the landed interest; fome of them have large eftates, and are highly refpected, becaufe their anceftors came into the country invested with honourable posts, bringing their families with them when they fettled here. Some of thefe families, in order to keep up their original dignity, have either married their children to their equals in the country, or fent them as officers on board the galleons; but others have greatly declined. Befides thefe, there are other Whites, in mean circumftances, who either owe their origin to Indian families, or at leaft to an intermarriage with them, fo that there is fome mixture in their blood; but when this is not difcoverable by their colour, the conceit of being Whites alleviates the preffure of every other calamity.

Among the other tribes which are derived from an intermarriage of the Whites with the Negroes, the first are the Mulattos. Next to these the Tercerones, produced from a White and a Mulatto, with some approximation to the former, but not so near as to obliterate their origin. After these follow the Quarterones, proceeding from a White and a Terceron. The last are the Quinterones, who owe their origin to a White and Quarteron. This is the last gradation, there being no visible difference between them and the Whites, either in colour or features; nay, they are often fairer than the Spaniards. The children of a White and Quinteron are also called Spaniards, and confider themselves as free from all taint of the Negro race. Every person is so jealous of the order of their tribe or cast, that if, through inadvertence, you call them by a

332

degree

degree lower than what they actually are, they are highly offended, never fuffering themfelves to be deprived of fo valuable a gift of fortune.

Before they attain the clafs of the Quinterones, there are feveral intervening circumftances which throw them back; for between the Mulatto and the Negro there is an intermediate race, which they call Sambos, owing their origin to a mirture between one of thefe with an Indian, or among themfelves. They are alfo diftinguifhed according to the cafts their fathers were of. Betwixt the Tercerones and the Mulattos, the Quarterones and the Tercerones, &c. are those called Tente en el Ayre, fuspended in the air, because they neither advance nor recede. Children, whose parents are a Quarteron or Quinteron, and a Mulatto or Terceron, are Salto atras, retrogrades, because, instead of advancing towards being Whites, they have gone backwards towards the Negro race. The children between a Negro and Quinteron are called Sambos de Negro, de Mulatto, de Terceron, &c.

Thefe are the most known and common tribes or Caftas; there are, indeed, feveral others proceeding from their intermarriages; but, being fo various, even they them-felves cannot eafily diftinguish them; and thefe are the only people one fees in the city, the eftancias*, and the villages; for if any Whites, efpecially women, are met with, it is only accidental, thefe generally refiding in their houses, at least, if they are of any rank or character.

These cafts, from the Mulattos, all affect the Spanish drefs, but wear very flight fluffs on account of the heat of the climate. These are the mechanics of the city; the Whites, whether Creoles, or Chapitones, difdaining fuch a mean occupation, follow nothing below merchandize: but it being impossible for all to fucceed, great numbers not being able to procure fufficient credit, they become poor and miserable from their aversion to those trades they follow in Europe; and, instead of the riches which they flattered themselves with possible for all to lucies, they experience the most complicated wretchedness.

The clafs of Negroes is not the leaft numerous, and is divided into two parts; the free and the flaves. These are again fubdivided into Creoles and Bozares, part of which are employed in the cultivation of the haziandes †, or estancias. Those in the city are obliged to perform the most laborious fervices, and pay out of their wages a certain quota to their mafters, fubfifting themfelves on the finall remainder. The violence of the heat not permitting them to wear any clothes, their only covering is a fmall piece of cotton fluff about their waift; the female flaves go in the fame manner. Some of thefe live at the eftancias, being married to the flaves who work there; while thofe in the city fell in the markets all kind of eatables, and dry fruits, fweet-meats, cakes made of the maize, and caffava, and feveral other things about the ftreets. Those who have children fucking at their breaft, which is the cafe of the generality, carry them on their fhoulders, in order to have their arms at liberty; and when the infants are hungry, they give them the breaft either under the arm or over the fhoulder, without taking them from their backs. This will, perhaps, appear incredible; but their breafts, being left to grow without any preffure on them, often hang down to their very waift, and are not therefore difficult to turn over their shoulders for the convenience of the infant.

^{*} Eftancia properly fignifies a manfion, or place where one ftops to reft; but at Carthagena it implies a country-houle, which, by reafon of the great number of flaves belonging to it, often equals a confiderable village.

⁺ Hazianda in this place fignifies a country-house, with the lands belonging to it.

The dreis of the Whites, both men and women, differs very little from that worn in Spain. The perfons in grand employments wear the fame habits as in Europe; but with this difference, that all their clothes are very light, the waiftcoats and breeches being of fine Bretagne linen, and the coat of fome other thin ftuff. Wigs are not much worn here; and during our ftay, the governor and two or three of the chief officers only appeared in them. Neckcloths are alfo uncommon, the neck of the fhirt being adorned with large gold buttons, and thefe generally fuffered to hang loofe. On their heads they wear a cap of very fine and white linen. Others go entirely bareheaded, having their hair cut from the nape of the neck *. Fans are very commonly worn by men, and made of a very thin kind of palm in the form of a crefcent, having a flick of the fame wood in the middle. Thofe who are not of the White clafs, or of any eminent family, wear a cloak and a hat flapped; though fome Mulattos and Negroes drefs like the Spaniards and great men of the country.

The Spanish women wear a kind of peticoat, which they call pollera, made of a thin filk, without any lining, and on their body, a very thin white waistcoat; but even this is only worn in what they call winter, it being infupportable in fummer. They, however, always lace in fuch a manner as to conceal their breafts. When they go abroad they wear a mantelet; and on the days of precept, they go to mass at three in the morning in order to discharge that duty, and return before the violent heat of the day, which begins with the dawn \dagger .

Women wear over their pollera a taffety petticoat, of any colour they pleafe, except black; this is pinked all over, to fhew the other they wear under it. On the head is a cap of fine white linen, covered with lace, in the fhape of a mitre, and, being well ftarched, terminates forward in a point. This they call panito, and never appear abroad without it, and a mantelet on their fhoulders. The ladies, and other native Whites, ufe this as their undrefs, and it greatly becomes them; for, having been ufed to it from their infancy, they wear it with a better air. Inftead of fhoes, they only wear, both within and without doors, a kind of flippers, large enough only to contain the tip of their feet. In the houfe their whole exercife confifts in fitting in their hammocks[‡], and fwinging themfelves for air. This is fo general a cuftom, that there is not a houfe without two or three, according to the number of the family. In thefe they pafs the greater part of the day, and often men, as well as women, fleep in them, without minding the inconveniency of not ftretching the body at full length.

Both fexes are poffeffed of a great deal of wit and penetration, and alfo of a genius proper to excel in all kinds of mechanic arts. This is particularly confpicuous in thofe who apply themfelves to literature, and who at a tender age, fhow a judgment and perfpicacity, which in other climates, is attained only by a long feries of years and the greateft application. This happy difposition and perfpicacity continues till they are between twenty and thirty years of age, after which they generally decline as fast as they role; and frequently, before they arrive at that age, when they fhould begin to reap the advantage of their fludies, a natural indolence checks their farther progress, and they forsake the fciences, leaving the furprising effects of their capacity imperfect.

 \dagger The heat is inconfiderable, compared with that of the afternoon, till half an hour after fun-rife. — A. \ddagger Thefe hammocks are made of twifted cotton, and commonly knit in the manner of a net, and make no small part of the traffick of the Indians, by whom they are chiefly made. — A.

^{*} Here, and in most parts of South America, they have their hair cut fo short, that a stranger would think every man had a wig, but did not wear it on account of the heat.

The principal caufe of the fhort duration of fuch promifing beginnings, and of the indolent turn fo often feen in those bright geniufes, is doubtlefs the want of proper objects for exercifing their faculties, and the fmall hopes of being preferred to any post answerable to the pains they have taken. For as there is in this country neither army nor navy, and the civil employments very few, it is not at all furprifing that the defpair of making their fortunes by this method, fhould damp their ardour for excelling in the fciences, and plunge them into idleness, the fure forerunner of vice; where they lose the use of their reason, and stiffe those good principles which fired them when young and under proper subjection. The fame is evident in the mechanic arts, in which they demonstrate a surprising skill in a very little time; but foon leave those also imperfect, without attempting to improve on the methods of their masters. Nothing indeed is more furprising than the early advances of the mind in this country, children of two or three years of age conversing with a regularity and ferious that is rarely feen in Europe at fix or feven; and at an age when they can fcarce fee the light, are acquainted with all the depths of wickedness.

The genius of the Americans being more forward than that of the Europeans, many have been willing to believe that it alfo fooner decays; and that at fixty years, or before, they have outlived that folid judgment and penetration, fo general among us at that time of life; and it has been faid that their genius decays, while that of the Europeans is haftening to its maturity and perfection. But this is a vulgar prejudice, confuted by numberlefs inflances, and particularly by the celebrated Father Fr. Benito Feyjoo, Têatro Critico, vol. iv. effay 6. All who have travelled with any attention through thefe countries, have obferved in the natives of every age a permanent capacity, and uniform brightnefs of intellect; if they were not of that wretched number, who diforder both their minds and bodies by their vices. And indeed one often fees here perfons of eminent prudence and extensive talents, both in the fpeculative and practical fciences, and who retain them in all their vigour, to a very advanced age.

Charity is a virtue in which all the inhabitants of Carthagena, without exception, may be faid particularly to excel: and did they not liberally exert it towards European strangers, who generally come hither to feek their fortune, fuch would often perifin with ficknefs and poverty. This appears to me a fubject of fuch importance, though well known to all who have vifited this part of the world, that I shall add a word or two on it, in order to undeceive those, who, not contented with perhaps a competent estate in their own country, imagine that it is only fetting their foot in the Indies, and their fortune is made.

Thofe who on board the galleons are called Pulizones, as being men without employment, flock, or recommendation; who, leaving their country as fugitives, and, without licenfe from the officers, come to feek their fortune in a country where they are utterly unknown; after traverfing the ftreets till they have nothing left to procure them lodging or food, they are reduced to have recourfe to the laft extremity, the Francifcan hofpital; where they receive, in a quantity fufficient barely to keep them alive, a kind of pap made of cafava; of which, as the natives themfelves will not eat, the difagreeablenefs to wretched mortals never ufed to fuch food, may eafily be conceived *. This is their food; their lodging is the entrance of the fquares and the porticos of churches, till their good fortune throws them in the way of hiring themfelves to fome trader going up the country, who wants a fervant. The city merchants,

^{*} This is called Mandioc by the natives, and is the chief inbilitute the poorer people have for bread; and is far from being rejected even by the richer, that many prefer it to bread made from the beft European flour, much more to bifcuit, which after fuch a voyage generally begins to be full of weevils. A.

ftanding in no need of them, difcountenance thefe adventurers. Affected by the difference of the climate, aggravated by bad food, dejected and tortured by the entire difappointment of their romantic hopes, they fall into a thoufand evils, which cannot well be reprefented : and among others, that diftemper called Chapetonada, or the diftemper of the Chapetones, without any other fuccour to fly to than Divine Providence; for none find admittance into the hofpital of St. Juan de Dios, but thofe who are able to pay, and confequently poverty becomes an abfolute exclusion. Now it is that the charity of thefe people becomes confpicuous. The negro and mulatto free women, moved at their deplorable condition, carry them to their houfes, and nurfe them with the greateft care and affection. If any one die, they bury him by the charity they procure, and even caufe maffes to be faid for him. The general iffue of this endearing benevolence is, that the Chapetone, on his recovery, during the fervour of his gratitude, marries either his negro or mulatto benefactrefs, or one of her daughters; and thus he becomes fettled, but much more wretchedly than he could have been in his own country, with only his own labour to fubfift on.

The difinterestedness of these people is such, that their compassion towards the Chapetones must not be imputed to the hopes of producing a marriage, it being very common for them to refuse such offers, either with regard to themselves or their daughters, that their misery may not be perpetual, but endeavour to find them masters whom they may attend up the country, to Santa Fe, Popayan, Quito, and Peru, whither their inclinations or prospects lead them.

They who remain in the city, whether bound by one of the above marriages, or, which is but too common, are in another condition very dangerous to their future happinefs, turn Pulperos*, Canoeros, or fuch like mean occupations; in all which, they are fo harraffed with labour, and their wages fo fmall, that their condition in their own country muft have been miferable indeed, if they have not reafon to regret quitting it. The height of their enjoyment, after toiling all day and part of the night, is to regale with bananas, a cake of maize or cafava, which ferves for bread, and a flice of cafajo, or hung-beef; without tafting wheat bread during the whole year.

Others, not a few, equally unfortunate, retire to fome fmall estancia, where, in a Bujio or straw hut, they live little different from beasts, cultivating, in a very small spot, such vegetables as are at hand, and subsisting on the sale of them.

What has been obferved with regard to the negro and mulatto women, and which may alfo be extended to the other cafts, is, as to the charitable part, applicable to all the women and whites; who in every tribe, are of a very mild and amiable difposition; and from their natural foftness and fympathy excel the men in the practice of that christian virtue.

Among the reigning cuftoms here, fome are very different from those of Spain, or the most known parts of Europe. The principal of these are the use of brandy, chocolate, honey, fweat-meats, and fmoking tobacco: all which shall be taken notice of.

The use of brandy is so common, that the most regular and sober performs never omit drinking a glass of it every morning about eleven o'clock; alledging that this spirit strengthens the stomach, weakened by copious and constant perspiration, and sharpens the appetite. Hazer las onze, to take a whet at eleven, that is to drink a glass of brandy, is the common invitation. This custom, not esteemed persicious by these people when used with moderation, has degenerated into vice; many being so

336

^{*} Pulperos are men who work in a kind of tent, called in Spanish Pulperios, and the Canoeros are watermen who carry goods in Pirogues or canoes.

fond of it, that during the whole day, they do nothing but hazer las onze. Perfons of diffinction use Spanish brandy, but the lower class and negroes very contentedly take up with that of the country, extracted from the juice of the fugar-cane, and thence called Agoa ardente de canna, or cane brandy, of which fort the confumption is much the greatest.

Chocolate, here known only by the name of cacao, is fo common, that there is not a negro flave but conftantly allows himfelf a regale of it after breakfaft; and the negro women fell it ready made about the ftreets, at the rate of a quarter of a real (about five farthings fterling) for a difh. This is however fo far from being all cacao, that the principal ingredient is maize: but that ufed by the better fort is neat, and worked as in Spain. This they conftantly repeat an hour after dinner, but never ufe it fafting, or without eating fomething with it.

They also make great use of fweet-meats and honey; never for much as drinking a glafs of water without previously eating fome fweet-meats. Honey is often preferred as the fweeter, to conferves or other fweet-meats either wet or dry. Their fweet-meats are eaten with wheat bread, which they use only with these and chocolate; the honey they fpread on cafava cakes.

The paffion for fmoking is no lefs univerfal, prevailing among perfons of all ranks in both fexes. The ladies and other white women fmoke in their houfes, a decency not obferved either by the women of the other cafts, nor by the men in general, who regard neither time nor place. The manner of ufing it is, by flender rolls compofed of the leaves of that plant; and the women have a particular manner of inhaling the fmoke. They put the lighted part of the roll into their mouths, and there continue it a long time without its being quenched, or the fire incommoding them. A compliment paid to those for whom they profess an intimacy and efteem, is, to light their tobacco for them, and to hand them round to those who visit them. To refuse the offer would be a mark of rudeness not eafily digested; and accordingly they are very cautious of paying this compliment to any but those whom they previously know to be used to tobacco. This custom the ladies learn in their childhood from their nurfes, who are negro flaves; it is fo common among perfons of rank, that those who come from Europe easily join in it, if they intend to make any confiderable flay in the country.

One of the most favourite amufements of the natives here, is a ball, or Fandango. Thefe are the diftinguished rejoicings on festivals and remarkable days. But while the galleons, guarda costas, or other Spanish ships are here, they are most common, and at the fame time conducted with the least order; the crews of the ships forcing themfelves into their ball-rooms. These diversions, in houses of diffinction, are conducted in a very regular manner; they open with Spanish dances, and are succeeded by those of the country, which are not without spirit and gracefulness. These are accompanied with finging, and the parties rarely break up before day-light.

The Fandangos or balls of the populace, confift principally in drinking brandy and wine, intermixed with indecent and fcandalous motions and geftures; and those continual rounds of drinking foon give rife to quarrels, which often bring on misjortunes. When ftrangers of rank visit the city, they are generally at the expense of these balls; as the entrance is free, and no want of liquor, they need give themselves no concern about the want of company.

Their burials and mournings are fomething fingular; as in this particular they endeavour to difplay their grandeur and dignity, too often at the expense of their trauquillity. If the deceased be a perfon of condition, his body is placed on a pompons vol. xiv. x x Catafalco, Catafalco, erected on the principal apartment of the houfe, amidft a blaze of tapers. In this manner the corpfe lies twenty-four hours or longer, for friends to vifit it at all hours; as alfo the lower clafs of women, among whom it is a cuftom to lament over the deceafed.

Thefe women, who are generally dreffed in black, come in the evening, or during the night, into the apartment where the corpfe lies; and having approached it, throw themfelves on their knees, then rife and extend their arms as to embrace it; after which, they begin their lamentations in a doleful tone, mixed with horrid cries, which always conclude with the name of the deceafed: afterwards they begin, in the fame difagreeable vociferations, his hiftory, rehearfing all his good and bad qualities, not even omitting his amours of any kind, and in fo circumftantial a narrative, that a general confeffion could hardly be more full; at length, quite fpent, they withdraw to a corner ftored with brandy and wine, on which they never fail plentifully to regale themfelves. As thefe depart from the body, others fucceed, till they have all taken their turn. The fame, afterwards is repeated by the fervants, flaves, and acquaintance of the family, which continues without intermiffion during the remainder of the night; whence may eafily be imagined the confusion and noife occafioned by this difmal vociferous ceremony.

The funeral alfo is accompanied with the like noify lamentations; and even after the corple is deposited in thegrave, the mourning is continued in the house for nine days, during which time the Pacientes or mourners, whether men or women, never ftir from the apartment, where they receive the Pesanes, or compliments of condolence. During nine nights, from fun-fet to fun-rifing, they are attended by their relations and intimate acquaintances; and it may be truly faid of them, that they are all fincerely forrowful; the mourners for the loss of the deceased, and the visitors from the uneasines and fatigue of fo uncomfortable an attendance.

CHAP. V. — Of the Climate of Carthagena, and the Difeases incident to Natives and Foreigners.

THE climate of Carthagena is exceflively hot, for by obfervations we made on the 19th of November 1735, by a thermometer conftructed according to Mr. Reaumur, the fpirit was elevated to $1025\frac{1}{2}$; and in our feveral experiments made at different hours, varied only from 1024 to 1026. By experiments made the fame year at Paris on a thermometer of the fame gentleman, the fpirit rofe on the 16th of July at three in the afternoon, and on the 10th of August at half an hour after three, to $1025\frac{1}{2}$; and this was the greatest degree of heat felt at Paris during that year; confequently the degree of heat in the hottest day at Paris, is continual at Carthagena.

But the nature of this climate chiefly difplays itfelf from the month of May to the end of November, the feafon they call winter; becaufe during that time, there is almost a continual fucceffion of thunder, rain, and tempests; the clouds precipitating the rain with fuch impetuosity, that the streets have the appearance of rivers, and the ccountry of an ocean. The inhabitants make use of this opportunity, otherwise fo dreadful, for filling their cisterns; this being the only sweet water they can procure. Besides the water faved for private uses, there are large refervoirs on the bassions, that the town may not be reduced to the shocking confequence of wanting water. There are indeed wells in most houses; but the water being thick and brackish, is not fit to drink, but ferves for other uses. From the middle of December to the end of April, the rains ceafe, and the weather becomes agreeable, the heat being fomewhat abated by the north-east winds which then fet in. This feafon they call fummer; befides which, there is another called the Little Summer of St. John, as, about the festival of that faint, the rains are intermitted, and refreshing gales begin to blow, and continue about a month.

The invariable continuance of fuch great heats, without any fenfible difference between night and day, occafions fuch profule perfpiration, that the wan and livid complexion of the inhabitants would make a ftranger fulpect they were juft recovered from fome terrible diffemper. Their actions are conformable to their colour; in all their motions there is fomething lax and fluggifh; it even affects their fpeech, which is foft and flow, and their words generally broken. But notwithftanding all thefe appearances of ficknefs and debility, they enjoy a good ftate of health. Strangers from Europe retain their ftrength and ruddy colour poffibly for three or four months; but afterwards both fuffer fuch decays from the exceflive perfpiration, that thefe new-comers are no longer to be diftinguifhed by their countenances from the old inhabitants. Young perfons are generally moft affected by the climate, which fpares the more aged, who preferve their vivid countenance, and fo confirmed a ftate of health, as even to reach their eightieth year and upwards: this is common among all the claffes of inhabitants.

The fingularity of the climate, in all probability, occafions the fingularity of fome of the diftempers which here affect the human race; and these may be confidered in two different lights; one, as only attacking the Europeans newly landed, and the other, as common both to Creoles and Chapitones.

Those of the first kind are, in the country, commonly called Chapetonadas, allud-ing to the name given there to the Europeans. These distempers are fo very deleterious, that they carry off a multitude of people, and thin the crews of European ships; but they feldom laft above three or four days, in which time the patient is either dead or out of danger. The nature of this diftemper is but little known, being caufed in fome perfons by cold, and in others by indigeftion; it foon brings on the vomito prieto, or black vomit, which is the fatal fymptom; very few being ever known to recover. Some, when the vomit attacks them, are feized with fuch a delirium, that, were they not tied down, they would tear themfelves to pieces, and thus expire in the midft of their furious paroxyfms. It is remarkable, that only the new-comers from Europe are fubject to this diftemper, and that the natives, and those who have lived fome time here, are never affected by it; but enjoy an uninterrupted state of health, amidst the dreadful havock it makes among others. It is alfo obferved to rage more among the common feamen, than those who have been able to live on more wholesome food; whence, falt meat has been confidered as pernicious in bringing on this diftemper, and that the humours it produces, together with the labour and hardfhips of the feamen, incline their blood to putrefaction, and from this putrefaction the vomito prieto is fuppofed to have its origin. Not that the failors are its only victims, for even paffengers, who poffibly have not tafted any falt meat during the voyage, often feel its effects. Another remarkable circumftance is, that perfons who have been once in this climate are never after, upon their return again, fubject to this diftemper; but enjoy the fame state of health with the natives, even though they do not lead the most temperate lives.

The inveftigation of the caufe of this ftrange diftemper has exercised the attention of all the furgeons in the galleons, as well as the physicians of the country; and the result of their refearches is, that they impute it to the food, labour, and hardships of the feamen. Doubtless these are collateral caufes; but the principal question is, why persons exempt from those inconveniences, frequently die of the diftemper? Unhappily,

XX 2

after

after all the experiments that have been made, no good method of treatment has been difcovered; no fpecific for curing it, nor prefervative against it. The fymptoms are fo vague, as fometimes not to be diffinguished from those of flight indispositions; and though the vomit be the determinate fymptom, the fever preceding it is observed to be very opprefive, and extremely affecting to the head.

This diffemper does not fhew itfelf immediately after the arrival of the European fhips in the bay, nor has it been long known here; for what was formerly called Chapetonades, were only indigeftions, which, though always dangerous in thefe climates, were, with little difficulty, cured by remedies prepared by the women of the country, and which are ftill ufed with fuccefs, efpecially if taken in the beginning. The fhips afterwards going to Porto Bello, were there first attacked by this terrible diffeafe, which has always been attributed to the inclemency of the climate, and the fatigue of the feamen in unloading the fhips, and drawing the goods during the fair.

The vomito prieto was unknown at Carthagena and all along the coaft, till the years. 1729 and 1730. In 1729, Don Domingo Juftiniani, commodore of the guarda coftas, loft fo confiderable a part of his fhips' companies at Santa Martha, that the furvivors were ftruck with aftonifhment and horror at the havock made among their comrades. In 1730, when the galleons under Don Manuel Lopez Pintado came to Carthagena, the feamen were feized with the fame dreadful mortality; and fo fudden were the attacks of the difeafe, that perfons walking about one day, were the next carried to their graves.

The inhabitants of Carthagena, together with those in the whole extent of its government, are very fubject to the mal de San Lazaro, or leprofy, which feems fill to gain ground. Some phyficians attribute the prevalence of it to pork, which is here a very common food; but it may be objected, that in other countries, where this flefh is as frequently eaten, no fuch effects are feen, whence it evidently appears that fome latent quality of the climate must also contribute to it. In order to slop the contagion of this diftemper, there is without the city, an hospital called San Lazaro, not far from the hill on which is a caftle of the fame name. In this hofpital all perfons of both fexes labouring under this diffemper are confined, without any diffinction of age or rank; and if any refufe to go, they are forcibly carried thither. But here the diftemper increafes among themfelves, they being permitted to intermarry, by which means it is rendered perpetual. Befides, their allowance being here too fcanty to fubfift on, they are permitted to beg in the city; and from their intercourfe with those in health, the number of lepers never decreafes, and is at prefent fo confiderable, that their hofpital refembles a little town. Every perfon at his entering this ftructure, where he is to continue during life, builds a cottage, called in the country Bujio, proportional to his ability, where he lives in the fame manner as before in his houfe, the prohibition of not going beyond the limits prefcribed him, unlefs to afk alms in the city, only excepted. The ground on which the hofpital ftands is furrounded by a wall, and has only one gate, and that always carefully guarded.

Amidft all the inconveniences attending this diffemper, they live a long time under it, and fome even attain to an advanced age. It alfo greatly increafes the natural defire of coition, and intercourfe of the fexes; fo that, to avoid the diforders which would refult from indulging this paffion, now almost impossible to be controlled, they are permitted to marry.

If the leprofy be common and contagious in this climate, the itch and herpes are equally fo, effectially among Europeans, who are not feafoned to the climate; and, if neglected in the beginning, it is dangerous to attempt a cure when cuftom has rendered

340

them

them natural. The remedy against them, in the first stage, is a kind of earth called Maquimaqui, found in the neighbourhood of Carthagena, and, on the account of this virtue, exported to other parts.

Another very fingular diftemper, though not fo common, is the cobrilla, or little fnake, being, as the most skilful think, a tumour caused by certain malignant humours, fettled longitudinally between the membrane of the fkin, and daily increasing in length, till the fwelling quite furrounds the part affected, which is usually the arm, thigh, and leg; though fometimes it has been known to fpread itfelf all over these parts. The external indications of it are, a round inflamed tumour, of the thickness of a quarter of an inch, attended with a flight pain, but not vehement, and a numbnefs of the part, which often terminates in a mortification. The natives are very skilful in removing it by the following process:—They first examine where (according to their phrase) the head is, to which they apply a fmall fuppurative plafter, and gently foment the whole tumour with oil. The next day the fkin under the plafter is found divided, and through the orifice appears a kind of white fibre, about the fize of a coarfe fewing thread; and this, according to them, is the cobrilla's head, which they carefully faften to a thread of filk, and wind the other end of it about a card, rolled up like a cylinder. After this they repeat the fomentation with oil, and the following day continue to wind about the cylindric card the part of this fmall fibre which appears in fight. Thus they proceed till the whole is extracted, and the patient entirely cured. During this operation, their chief care is not to break the cobrilla; becaufe, they fay, it would then caufe a humour to fpread through the body, and produce a great quantity of fuch little fnakes, as they will have them to be, when the cure would become extremely difficult. It is a current notion among them, that when it has, for want of care in the beginning, completed the circle, and, according to them, joined its head with its tail, the difeafe generally proves fatal. But this is very feldom the cafe; the pain warning the patient immediately to apply a remedy, which fhould be accompanied with emollients for difperfing the humour.

These people firmly believe it to be a real cobrilla or fmall fnake, and accordingly have called it by that name. At its first appearance, a fmall flow motion may indeed be perceived; but this is foon over, and possibly proceeds from the compression or extension of the nervous fibres which compose it, without its having any animal life. I do not, however, pretend to determine absolutely on this point.

Befides thefe, another diftemper common in this country is the fpafm, or convultion, which always proves mortal, and feldom comes alone. And of this I thall fpeak when I defcribe other parts of America, where it is equally dangerous, and more common.

CHAP. VI. — Defcription of the Country, and of the Trees and Vegetables in the Neighbourhood of Carthagena.

THE country about Carthagena is fo luxuriant, that it is impoffible to view, without admiration, the rich and perpetual verdure of the woods and plants it naturally produces. But these are advantages of which the natives make little use; their innate floth and indolence not allowing them to cultivate the gifts of nature, which seem to have been dealt out with a lavish hand. The interwoven branches of the trees form a shelter impenetrable both to heat and light.

The trees here are large and lofty, their variety admirable, and entirely different from those of Europe. The principal of these for dimensions are, the caobo or acajou, the cedar cedar, the maria, and the balfam tree. Of the first are made the canoes and champanes used for fishing, and the coast and river trade, within the jurifdiction of this go-Thefe trees produce no eatable fruit; but their wood is compact, fragrant, vernment. and beautiful. The cedar is of two kinds, white and reddifh; but the last most effeem-The maria and the balfam trees, befides the ufefulnefs of their timber, diftil those ed. admirable balfams called Maria Oil, and Balfam of Tolu, fo called from a village in the neighbourhood of which it is found in the greatest quantity, and of a peculiar excellency.

Befides thefe trees, here are also the tamarind, the medlar, the fapote, the papayo, the guayabo, the cannafiftulo or caffia, the palm, the mancanillo, and feveral others, most of them producing a wholesome and palatable fruit, with a durable and variegated wood. The mançanillo is particularly remarkable; its name is derived from the Spanish word Mançan, an apple, which the fruit of this tree exactly refembles in fhape, colour, and flavour; but contains, under this beautiful appearance, fuch a fubtle poifon, that its effects are perceived before it is tafted. The tree is large, and its branches form near the top a kind of crown; its wood hard, and of a yellowish tinct. On being cut, it iffues out a white juice, but not unlike that of the fig-tree, lefs white, and of a thinner confiftence; but equally poifonous with the fruit itfelf; for if any happens to drop on any part of the flefh, it immediately caufes an ulcer and inflammation, and, unlefs fpeedy application be used, foon fpreads through all the other parts of the body *; fo that it is neceffary, after felling it, to leave it till thoroughly dried, in order to its being worked without danger; and then appears the beauty of this wood, which is exquifitely variegated and veined like marble on its yellow ground. Upon tafting its fruit, the body immediately fwells, till the violence of the poifon, wanting fufficient room, burfts it; as has been too fully confirmed by feveral melancholy inftances of European failors who have been fent on fhore to cut wood. The fame unhappy confequence alfo attended great numbers of Spaniards at the conquest of these countries, till, according to Herrera, common oil was found to be the powerful antidote to this fubtle poifon.

But fuch is the malignity of the mançanillo, that if a perfon happens to fleep under it, he is foon awaked, and finds his body fwelled almost as if he had actually eaten the fruit †; and continues in great danger and tortures, till relieved by repeated anointings and the use of cooling draughts. The very beasts themselves, by their natural instinct, are fo far from eating its fruit, that they never approach the tree.

The palm-trees, rifing with their tufted heads above the branches of the others, form a grand perspective on the mountains. These, notwithstanding the difference is scarce perceivable, are really of different kinds, as is evident from the diverfity of their fruit. They diftinguish four principal species: the first produce cocoa; the second dates, of a very pleafant tafte; the third, called Palma-real, whofe fruit, though of the fame figure, but fomething less than the date, is not at all palatable, but has a very difagreeable taste; and the fourth, which they call corozo, has a fruit larger than dates, of an exquisite taste, and proper for making cooling and wholesome draughts. 'The palmitos, or branches of the palma-real, are agreeably tafted, and fo large, as frequently to weigh from two to three arrobas ‡. The other species also produce them,

The juice dropping on the flesh generally causes an inflammation; but I do not remember ever to

have feen an ulcer produced, or any very bad effects, the hot burning pain excepted. A. + The author is here mifinformed. Indeed perfons, who have flept under the tree, have afterwards complained of an head-ach. Those who happen to take fhelter under it in a flower, generally feel the fame effect, from the dropping of the leaves, as though the juice had dropt on them. A.

[‡] The arroba is twenty-five pounds.

but neither in fuch plenty, nor fo fucculent. Palm-wine is alfo extracted from all the four; but that from the palma-real and corozo is much the beft. The manner of making it, is either by cutting down the palm-tree, or boring a hole in the trunk, in which is placed a tap, with a veffel under it for receiving the liquor, which, after five or fix days fermentation, becomes fit for drinking. The colour of it is whitish; the tafte racy : it bears a greater head than beer, and is of a very inebriating quality. The natives, however, reckon it cooling, and it is the favourite liquor of the Indians and Negroes. The guaiacum and ebony trees are equally common; and their hardnefs almost equal to that of iron. These species of wood are fometimes carried into Spain, where they are greatly effeemed, but here they are difregarded from their great plenty.

Among the variety of vegetables, which grow under the fhade of the trees, and along the funny borders of the woods, the most common is the fensitive; on touching one of the leaves of which, all those on the fame branch immediately close against each other. After a fhort interval, they begin gradually to open and feparate from each other, till they are entirely expanded. The fenfitive is a fmall plant about a foot and a half or two feet in height, with a flender ftem, and the branches proportionally weak and tender. The leaves are long, and fland fo clofe together, that all on one branch may be confidered as a fingle leaf, four or five inches in length, and ten lines in breadth; which, being fubdivided into the other ftill fmaller, forms in each of them the true leaf, which is about four or five lines in length, and not quite one in breadth. On touching one of these small leaves, all of them immediately quit their horizontal position, and fly into a perpendicular direction, clofing their inward fuperficies, fo that thofe, which before this fenfitive motion made two leaves, now feem as but one. The vulgar name of this plant at Carthagena being improper to be mentioned here, we fhall omit it; in other parts it is more decently called La Vergonoza, the bashful, and La Doncella, the maiden. The common people imagine that this effect is caufed by pronouncing its name at the inftant of the touch; and are amazed that a plant flould have the wifdom of flewing its obedience to what was ordered, or that it was too much affected by the injury offered it to conceal its refertment.

We afterwards met with this plant at Guayaquil, where the climate feems to be better adapted to it than that of Carthagena; for it is not only more common, but grows to three or four feet in height, the leaves and every part in proportion.

In the woods about Carthagena are found a great quantity of bejucos of a different magnitude, figure, and colour, and fome of the ftems flat. One fpecies is particularly known on account of its fruit called Habilla de Carthagena, the bean of Carthagena. It is about an inch broad, and nine lines in length, flat, and in the fhape of a heart. The fhell, though thin, is hard, and on the outfide fcabrous. It contains a kernel refembling an almond, but lefs white, and extremely bitter. This is one of the moft effectual antidotes known in that country against the bites of vipers and ferpents; for a little of it being eaten immediately after the bite, it prefently flops the effects of the poifon; and accordingly all who frequent the woods, either for felling trees or hunting, never fail to eat a little of this habilla fafting, and repair to their work without any apprehension. I was informed by an European, who was a famous hunter, and by feveral other perfons worthy of credit, that, with this precaution, if any one happened to be bit by a ferpent, it was attended with no ill confequence. The natives tell you, that, this habilla being hot in the higheft degree, much of it cannot be eaten; that the common dofe of it is lefs than the fourth part of a kernel, and that no hot liquor, as wine, brandy, &c. must be drunk immediately after taking it. In this cafe, they doubtlefs

doubtless derive their knowledge from experience. This valuable habilla is also known in other parts of America near Carthagena, and goes every where by its name, as being the peculiar product of its jurifdiction.

CHAP. VII. - Of the Beafts, Birds, Reptiles, and Infects, in the Territories of Carthagena.

FROM the trees and plants in this jurifdiction, we fhall proceed to the different kinds of animals; fome of which are tame for the use and pleasure of its inhabitants; others wild, and of such different qualities and kinds, as wonderfully display the diversity which the Author of nature has shewn in the multitude of his works. The quadrupeds and reptiles frequent the dry and defert places, and are distinguished by an endless variety of spots, whils the vivid plumage of the feathered race glows with exquisite beauty; and the brilliant scales of another kind conceal the most active poisons.

The only tame eatable animals are the cow and the hog, of which there are great plenty. The beef, though not abfolutely bad, cannot be faid to be palatable. The conftant heat of the climate preventing the beafts from fattening, deprives their flefh of that fucculency it would otherwife have acquired: the pork is delicate, and allowed not only to be the beft in all America, but even to exceed any in Europe. This, which is the ufual food of Europeans and Creoles at Carthagena, befides its palatablenefs, is alfo looked upon to be fo wholefome, that even fick perfons are allowed it preferably to poultry, which is here very good, and in great abundance.

I muft not omit a fingular ftratagem practifed here for taking wild geefe, the extreme cheapnefs of which naturally inclined us to afk how they caught them in fuch quantities : in anfwer to our question, we received the following account. Near Carthagena, to the eaftward of Monte de la Popa, is a large lake called La Cienega de Tefcas, abounding with fish, but reckoned unwholefome. The water of this lake, communicating with the fea, is falt, but without increafe or decreafe, the difference of the tides here being infignificant. Every evening vaft flights of geefe retire hither from all the neighbouring countries, as their natural place of reft during the night. The perfons who catch thefe birds, throw into the lake about fifteen or twenty large calabafhes, which they call totumos; and the geefe, being accuftomed to fee thefe calabafhes floating on the water, never avoid them. In three or four days the perfons return early in the morning to the lake, with another calabash, having holes in it for feeing and breathing. This calabash he places on his head, and walks in the water, with only the calabafh above the furface. In this manner, with all poffible ftillnefs, he moves towards the geefe, pulling them under water with one hand, and then feizing them with the other. When he has thus taken as many as he is able to carry, he returns towards the fhore, and delivers them to his companion, who waits for him at a certain diffance in the water. This done, he renews his fport, either till he has taken as many as he defires, or the birds begin to difperfe over the country.

Other perfons make it their bufinefs to procure different kinds of game, as deer, rabbits, and wild boars, called here fajones; but thefe are eaten only by the country Negroes and Indians, except the rabbits, which meet with a good market in the city.

The wild beafts are alfo of various kinds; as tigers, which make a great havock, not only among the cattle, but among the human fpecies. Their fkin is very beautiful, and fome are as large as little horfes *. Here are alfo leopards, foxes, armadillos, a

* They are not larger than mastiff dogs. A.

kind

kind of fcaly lizard; ardillas, or fquirrels, and many others; befides innumerable kinds of monkies living in the woods, fome remarkable for their fize, others for their colour. The artifice generally obferved by the fox, in defending itfelf againft dogs or other animals, by whom it is purfued, by voiding its urine on its own tail and fprinkling it on them, effectually here anfwers the intention; the fmell of it being fo ftrong and fetid, that it throws the dogs into diforder, and thus the fox efcapes. The ftench of this urine is fo great, that it may be fmelt a quarter of a league from the place; and very often for half an hour after. The fox here is not much bigger than a large cat; but delicately fhaped; has a very fine coat, and of a cinnamon colour; but no large brufh on its tail. The hair, however, is fpungy, and forms a bunch proper for the above-mentioned method of defence.

Nature, which has furnished the fox with such an effectual defence, has not forgot the armadillo, the name of which partly describes it. The fize of it is about that of a common rabbit, though of a very different shape; the shout, legs, and tail, refembling those of a pig. His whole body is covered with a strong shell, which, answering exactly every where to the irregularities of its structure, protects it from the infults of other animals, without affecting its activity. Besides this, he has another, as a helmet, connected by a joint to the former; this guards his head, and thus he is every way fafe.

These shells are variegated with several natural relievos, as it were, in chiaro ofcuro, fo that they are at once his defence, and a beautiful ornament. The Negroes and Indians, who eat its flesh, give a high character of it.

Among the monkies of this country, the most common are the micos, which are alfo the fmallest. They are generally about the fize of a cat, of a brownish colour; and too well known to need any further description. The larger kind, which are less known, I shall describe in another place.

The birds feen in this hot climate are fo numerous, that it is impofible to give a diftinct reprefentation of them; particularly of the beauty and brilliancy of their various plumage. The cries and croakings of fome, mixed with the warblings of others, difturb the pleafure which would flow from the melody of the latter, and render it impoffible to diftinguifh the different cries of the former; and yet in this inftance we may obferve the wifdom of Nature in diftributing her favours; the plumage of those birds being the most beautiful, whose croakings are the most offensive; while, on the other hand, those whose appearance has nothing remarkable, excel in the fweetness of their notes. This is particularly evident in the guacamayo, the beauty and luftre of whose colours are absolutely inimitable by painting; and yet there is not a more fhrill and difagreeable found than the noise it makes: this is in a great measure common to all other birds, whose bills are hard and crooked, and their tongue thicker than ufual, as the parrots, the cotorras, and the periquitos. All these birds fly in troops, fo that the air often founds with their cries.

But of all the fingularities among the feathered race, nothing is more remarkable than the bill of the tulcan, or preacher. This bird is about the fize of a common pigeon, but its legs much larger; its tail is fhort, and its plumage of a dark colour, but fpotted with blue, purple, yellow, and other colours; which have a beautiful effect on the dark ground. Its head is beyond all proportion to its body, but otherwife he would not be able to fupport his bill, which, from the root to the point, is at leaft fix or eight inches, and the upper mandible has, at its root, a bafe of at leaft an inch and a half, of a triangular figure, whofe apex is at the point of the bill. The two lateral fuperficies form a kind of elevation on the upper part; and the third receives the lower manvol. XIV. Y dible, which closes with the upper through the whole length; fo that the two parts are every where perfectly equal, and from their roof narrows infenfibly, till near the top, where it fuddenly becomes incurvated, and terminates in a ftrong and fharp The tongue is formed like a feather, and of a deep red colour, like the point. The bill is variegated with all those bright colours whole infide of its mouth. which adorn the plumage of other birds. At the bafe, and alfo at the convexity, it is generally of a light yellow, forming a kind of riband half an inch in breadth. The reft is of a fine deep purple, except two streaks near the root, of a rich fcar-The inward flefhy parts, which touch when let, an inch distant from each other. the bill is closed, are furnished with teeth, which form the furface of its two fer-The name of Preacher has been given to this bird, from its rated mandibles. cuftom of perching on the top of a tree above his companions, while they are afleep, and making a noife refembling ill-articulated founds, moving his head to the right and left, in order to keep off the birds of prey from feizing on the others. They are eafily rendered fo very tame, as to run about in houfes, and come when called. Their usual food is fruit; but the tame eat other things, and in general whatever is given them.

To defcribe all the other extraordinary birds would engage me in a prolixity of little entertainment or use; but I hope a word or two on the Gallinazos will be excused. This bird is about the fize of a pea-hen, but the neck and head fomewhat larger. From the crop to the bafe of the bill, inftead of feathers, it has a wrinkled, glandulous and rough fkin, covered with fmall worts and tubercles. Its feathers are black, which is alfo the colour of its fkin, but ufually with fomething of a brownish tinct. Its bill is well proportioned, ftrong, and a little crooked. They are fo numerous and tame in the city, that it is not uncommon to fee the ridges of the houfes covered with them. They are also very ferviceable; for they clean the city from all kinds of filth and ordure, greedily devouring any dead animal, and, when these are wanting, feek other filth. They have so quick a scent, that they will smell at the distance of three or four leagues * a dead carcafe, and never leave it till they have entirely reduced it to a fkeleton t. The infinite number of these birds found in fuch hot climates is an excellent provision of Nature, as otherwife the putrefaction caufed by the conftant and exceffive heat would render the air infupportable to human life. At first they fly heavily, but afterwards On the ground they hop along with a kind of torpor, though dart up out of fight. their legs are ftrong and well proportioned. They have three toes forward turning inwards, and one in the infide, turned a little backwards; fo that, the feet interfering, they cannot walk with any agility, but are obliged to hop or fkip. Each toe has a long and thick claw.

When the gallinazos find no food in the city, their hunger drives them into the country, among the beafts in the paftures; and, on feeing any one with a fore on the back, they immediately alight on it, and attack the part affected. It is in vain for the poor beaft to endeavour to free itfelf from these devourers, either by rolling on the ground, or hideous cries; for they never quit their hold, but with their bills fo widen the wound that the creature foon expires.

There

^{*} The author fhould have faid miles. — A.

 $[\]dagger$ It is furprifing to fee what numbers of thefe birds gather round the carcafe of a dead whale, which is no uncommon thing on these coafts. The carcafe shall be covered with them; and yet their number shall be nothing in comparison to that hovering about, waiting for their turn, for which they often fight. They are feldom above a fortnight in making a skeleton of a large whale, — A.

There is another kind of gallinazos, fomewhat larger than thefe, only to be met with in the country. In fome of these the head and part of the neck are white, in some red, and in others a mixture of both these colours. A little above the beginning of the crop, they have a ruff of white feathers. These are equally fierce and carnivorous with the former, and called the kings of the gallinazos, probably becaufe the number of them is but few; and it is observed, that when one of these has fastened on a dead beast, none of the others approach till he has eaten the eyes, with which he generally begins, and is gone to another part, when they all flock to the prey.

Bats are very common all over the country; but Carthagena is infefted with fuch multitudes of them, that after fun-fet, when they begin to fly, they may, without any hyperbole, be faid to cover the streets like clouds*. They are the most dextrous bleeders both of men and cattle; for the inhabitants being obliged, by the exceffive heats, to leave open the doors and windows of the chambers where they fleep, the bats get in, and if they happen to find the foot of any one bare, they infinuate their tooth into a vein, with all the art of the most expert furgeon, fucking the blood till they are fatiated, and withdraw their tooth; after which the blood flows out at the orifice. I have been affured, by perfons of the ftricteft veracity, that fuch an accident has happened to them; and that, had they not providentially awaked foon, their fleep would have been their paffage into eternity, they having loft fo large a quantity of blood, as hardly The puncture not being felt is (befides the great to be able to bind up the orifice. precaution with which it is made) attributed to the gentle and refreshing agitation of the air by the bat's wings, hindering the perfon from feeling this flight puncture by throwing him into a deeper fleep. Nearly the fame thing happens to horfes, mules, and affes, but beafts of a thick and hard fkin are not exposed to this inconveniency.

We shall next proceed to the infects and reptiles, in which nature has no lefs dif-The great number of them is not only an inconvenience to played its infinite power. the inhabitants, but health, and even life itfelf, often fuffers from the malignity of their poifon. The principal are the fnakes, the cientopes †, the fcorpions, and the fpiders; of all which there are different kinds, and their poilons of different activity.

Of the fnakes, the most common, and at the fame time the most poilonous, are the corales, or coral-fnakes, the cafcabeles, or rattle-fnakes, and the culebras de bejuco t. The first are generally between four and five feet in length, and an inch in diameter. They make a very beautiful appearance, their fkin being all over variegated with a vivid crimfon, yellow, and green. The head is flat and long, like that of the European viper. Each mandible is furnished with a row of pointed teeth, through which, during the bite, they infinuate the poifon; the perfon bit immediately fwells to fuch a degree, that the blood gufhes out through all the organs of fenfe, and even the coats of the veins at the extremities of the fingers burft, fo that he foon expires. The cafcabel or rattle-fnake feldom exceeds two feet, or two feet and a half in length; though there are fome of another fpecies, which are three and a half. Its colour is brown, variegated with deeper fhades of the fame tinct; at the end of its tail is the cafcabel or rattle, in the form of a garvanzo or French bean-pod, when dried on the plant, and, like that, has five or fix divisions, in each

of

^{*} They are almost as large as rats; and the inside of the roofs of the out-houses are generally lined with them. — A.

⁺ Or hundred feet. They are very common throughout the warmer regions of America. Common falt is a fpecific against their bite, as also against the sting of the scorpion. - A. They are called Cobras by the natives, which is their common name for all kinds of serpents. - A.

of which are feveral fmall round bones; thefe, at every motion of the fnake, rattle, and thence gave rife to its name. Thus nature, which has painted the coral fnake with fuch fhining colours, that it may be perceived at a diftance, has formed the latter in fuch a manner, that, as its colours render it difficult to diftinguish it from the ground, the rattle might give notice of its approach.

The culebras de bejuco, which are very numerous, have their name from their colour and fhape refembling the branches of the bejuco, and, as they hang down from that plant, appear as real parts of the bejuco, till a too near approach unhappily difcovers the miftake; and, though their poifon be not fo active as that of the others, without a fpeedy application of fome fpecific, it proves mortal. These remedies are perfectly known to the Negroes, Mulattos, and Indians frequenting the woods, and called curanderos. But the fafeft antidote is the habilla, already mentioned.

It is not, however, often that these dangerous ferpents bite any one, unless, from inadvertence or defign, he has been the aggression. Besides, they are so far from having any extraordinary agility, that they are remarkably torpid, and, as it were, half dead; so that, were it not for their motion in retiring to hide themselves among the leaves, it would be difficult to determine whether they were dead or alive.

There are few parts of Europe which do not produce the cientopies or fcolopendra; but at Carthagena they not only fwarm, but are of a monftrous fize, and the more dangerous, as breeding more commonly in houfes than in the fields. They are generally a yard in length, fome a yard and a quarter, the breadth about five inches, more or lefs, according to the length. Their figure is nearly circular, the back and fides covered with hard fcales, of a mufk colour, tinged with red; but thefe fcales are fo articulated, as not in the leaft to impede their motion, and at the fame time fo ftrong as to defend them against any blow, fo that the head is the only place where you can ftrike them to any purpofe. They are alfo very nimble, and their bite, without timely application, proves mortal; nor is the patient free from confiderable torture, till the medicine has deftroyed the malignity of the poifon.

The alacranes, or fcorpions, are not lefs common, and of different kinds, as black, red, musk colour, and some yellow. The first generally breed in dry rotten wood, and others in the corners of houses, in closets and cupboards. They are of different fizes, the largeft about three inches long, exclusive of the tail. The fting alfo of fome is lefs dangerous than that of others; that of the black is reckoned the moft malignant, though timely care prevents its being fatal. The ftings of the other kinds produce fevers, numbneffes in the hands and feet, forehead, ears, nofe and lips, tumours in the tongue, and dimnefs of fight; these diforders last generally twenty-four or fortyeight hours, when by degrees the patient recovers. The natives imagine, that a fcorpion falling into the water purifies it, and therefore drink it without any examination. They are fo accustomed to these infects, that they do not fear them, but readily lay hold of them, taking care not to touch them only in the last vertebræ of the tail, to avoid being flung; fometimes they cut their tails off and play with them. We more than once entertained ourfelves with an experiment of putting a fcorpion into a glass vessel, and injecting a little smoke of tobacco, and immediately by stopping it found that its aversion to this smell is such, that it falls into the most furious agitations, till giving itfelf feveral repeated ftings on the head, it finds relief by deftroying itfelf. Hence we fee that its poifon has the fame effect on itfelf as on others.

Here is also another infect called caracol foldado, or the foldier-fnail. From the middle of the body to the posterior extremity it is shaped like the common shail, of a whitish colour and a spiral form: but the other half of the body refembles a crab, both in fize

anđ

348

and the difpofition of its claws. The colour of this, which is the principal part of its body, is of a light brown. The ufual length, exclusive of the tail, is about two inches, and the breadth one and a half. It is defitute both of fhell and fcale, and the body every where flexible. Its refource against injuries is to feek a fnail-fhell of a proper fize, in which it takes up its habitation. Sometimes it drags this fnail-fhell with it, and at other times quits it, while it goes out in quest of food; but on the least appearance of danger, it hastens back to the solution the field into it, beginning with its hind part, fo that the fore part fills the entrance, while the two claws are employed in its defence, the gripe of which is attended with the fame fymptoms as the fting of a fcorpion. In both cases the patient is carefully kept from drinking any water, which has been known to bring on convulsions; and these always prove fatal.

The inhabitants relate, that when this creature grows too large for making its way into the fhell which was its retreat, it retires to the fea coaft, in order to find there a larger, where killing the wilk, whofe fhell beft fuits him, he takes poffeffion of it; which is indeed the fame method it took to obtain its firft habitation. This laft circumftance, and the defire of feeing the form of fuch a creature, induced Don George Juan and myfelf to defire the inhabitants to procure us fome; and upon examination, we found all the above-mentioned particulars were really true; except the bite, which we did not choofe to experience.

There are feveral other forts of infects remaining, which though fmaller, yet afford equal reafon for admiration to a curious examiner; particularly the infinite variety of maripofas, or butterflies, which though differing vifibly in figure, colours, and decorations, we are at a lofs to determine which is the most beautiful.

If thefe are fo entertaining to the fight, there are others no lefs troublefome; fo fo that it would be more eligible to difpenfe with the pleafure of feeing the former, than to be continually tortured by the latter; as the mofchetos, of which large clouds may be feen, effectially among the favannahs and manglares, or plantations of mangrove trees, fo that the one, as affording the herbage on which they feed, and the other, as the places where they produce their young, are rendered impaffible.

There are four principal fpecies of this infect; the first called zancudos, which are the largest; the fecond the moschetos, differing little or nothing from those of Spain *; the third gegenes, which are very small and of a different shape, refembling the weevil, about the fize of a grain of mustard-feed, and of an associate the inflammation of their bite mantas blancas, or white cloaks, and so very minute that the inflammation of their bite is felt before the infect that caused it is seen. Their colour is known by the infinite numbers of them which fill the air, and from thence they had their name. From the two former, few houses are free. Their sting is followed by a large tumour, the pain of which continues about two hours. The two last, which chiefly frequent fields and gardens, raise no tumour, but cause an insupportable infects disturb the repose of the night. And though the mosquiteros, a kind of gauze curtains, in some measure defend us from the three former, they are no faseguard agains the latter, which make their way between the threads; unless the stuff be of a closer texture, in which case the heat becomes insupportable.

The infect of Carthagena called nigua, and in Peru pique, is fhaped like a flea, but almost too fmall for fight. It is a great happines that its legs have not the elasticity with those of fleas; for could this infect leap, every animal body would be filled with

* Or the gnat of England. A.

them;

them; and confequently, both the brute and human species be soon extirpated by the multitudes of these infects. They live amongst the dust, and therefore are most common in filthy places. They infinuate themfelves into the legs, the foles of the feet. or toes, and pierce the skin with such subtilty, that there is no being aware of them, till they have made their way into the flesh *. If they are perceived at the beginning, they are extracted with little pain; but if the head only has pierced through the fkin, an incifion must be made before it can be taken out. If they are not foon perceived, they make their way through the fkin, and take up their lodgings between that and the membrane of the flefh; and fucking the blood, form a nidus or neft, covered with a white and fine tegument, refembling a flat pearl : and the infect is at it were, enchased in one of the faces, with its head and feet outwards, for the convenience of feeding, while the hinder part of the body is within the tunic, where it depofits its eggs; and as the number of these encreases, the nidus enlarges, even to the diameter of a line and a half, or two lines, to which magnitude it generally attains in four or five days. There is an abfolute neceffity for extracting it : for otherwife it would burft of itfelf, and by that means fcatter an infinite number of germs, refembling nits, in fize, fhape, and colour, which becoming niguas, would, as it were, undermine the whole They caufe an extreme pain, efpecially during the operation of extracting them : foot. for fometimes they penetrate even to the bone; and the pain, even after the foot is cleared of them, lafts till the flefh has filled up the cavities they had made, and the fkin is again clofed.

The manner of performing this operation is both tedious and troublefome; the flefh contiguous to the membrane where the eggs of the infect are lodged, is feparated with the point of a needle, and those eggs fo tenaciously adhere to the flesh and this membrane, that to complete the operation without bursting the tegument, and putting the patient to the most acute pain, requires the greatest dexterity. After feparating on every fide the small and almost imperceptible fibres, by which it was fo closely connected with the membranes and muscles of the part, the perilla, as they term it, is extracted, the dimensions of which are proportional to the time it has existed. If unfortunately it should burst, the greatest care must be used to clear away all the roots, particularly not to leave the principal nigua; as before the wound could be healed, there would be a new brood, further within the flesh; and confequently the cure much more difficult and painful.

The cavity left by the removal of the nidus, must be immediately filled either with tobacco ashes, chewed tobacco, or fnuff; and in hot countries, as Carthagena, great care must be taken not to wet the foot for the first two days, as convulsions would ensue; a diffemper feldom got over: this confequence has possibly been observed in fome, and from thence confidered as general \dagger .

The first entrance of this infect is attended with no fensible pain; but the next day, it brings on a fiery itching extremely painful, but more fo in fome parts than in others. This is the cafe in extracting it, when the infect gets between the nails and the flesh, or at the extremity of the toes. In the fole of the foot and other parts where the skin is callous, they cause little or no pain.

This infect flows an implacable hatred to fome animals, particularly the hog; which it preys on with fuch voracity, that when their feet come to be fcalded, after being killed, they are found full of cavities made by this corroding infect.

+ There is no neceffity for this precaution, as is well known to the honeft tar. The tobacco ashes, &c. entirely destroy the nits or ovaria, if any be left. A.

2

Minute

^{*} They feldom infinuate themfelves into the legs. A.

Minute as this creature is, there are two kinds of it; one venomous, and the other The latter perfectly refembles the flea in colour, and gives a whitenefs to the not. membrane where it deposits its eggs. This caufes no pain, but what is common in fuch cafes. The former is yellowifh, its nidus of an afh colour, and its effects more extraordinary; as when lodged at the extremity of the toes, it violently inflames the glands of the groin, and the pain continues without abatement, till the nigua is extracted, that being the only remedy : after which the fwelling fubfides, and the pain ceafes, those glands corresponding with the foot, where the cause of the pain resided. The true caufe of this apparently ftrange effect I shall not undertake to investigate; the general opinion is, that fome finall mufcles extending from these glands to the feet, being affected by the poifon of the bite, communicate it to the glands, whence proceed the pain and inflammation. All I can affirm is, that I have often experienced it, and at first with no fmall concern; till having frequently observed that these effects ceased on extracting the nigua, I thence concluded it to be the true caufe of the diforder. The fame thing happened to all the French academicians who accompanied us on this expedition; and particularly to M. de Juffieu, botanist to the King of France, whom frequent experience of these kinds of accidents taught to divide these infects into two kinds.

As the preceding animals and infects chiefly exercise their malignant qualities on the human fpecies, fo there are others which damage and deftroy the furniture of houses, particularly all kinds of hangings, whether of cloth, linen, filk, gold or filver ftuffs, or laces; and indeed every thing, except those of folid metal, where their voracity feems to be wearied out by the refiftance. This infect called comegen, is nothing more than a kind of moth or maggot; but fo expeditious in its depredations, that in a very fhort time it entirely reduces to dust one or more bales of merchandife where it happens to fasten; and without altering the form, perforates it through and through, with a fubtility which is not perceived till it comes to be handled, and then inftead of thick cloth or linen, one finds only fmall fhreds and duft. At all times the flricteft attention is requifite to prevent fuch accidents, but chiefly at the arrival of the galleons; for then it may do immenfe damage among the vaft quantity of goods landed for warehoufes, and for fale in the fhops. The beft, and indeed the only method is, to lay the bales on benches, about half a yard from the ground, and to cover the feet of them with alguitran, or naphtha, the only prefervative against this fpecies of vermin; for with regard to wood, it eats into that as eafily as into the goods, but will not come near it when covered with naphtha as above.

Neither would this precaution be fufficient for the fafety of the goods, without a method of keeping them from touching the walls; and then they are fufficiently fecured. This infect is fo fmall, as to be fearcely vifible to the naked eye, but of fuch activity as to deftroy all the goods in a warehoufe, where it has got footing, in one night's time. Accordingly it is ufual that in running the rifks of commerce, in goods configned to Carthagena, the circumftances are fpecified, and in thefe are underflood to be included the loffes that may happen in that city by the comegen. This infect infefts neither Porto Bello, nor even places nearer Carthagena, though they have fo many other things in common with that city; nor is it fo much as known among them.

What has been faid, will, I hope, be fufficient to give an adequate idea of this country, without fwelling the work with trivial obfervations, or fuch as have been already published by others. We shall now proceed to treat distinctly of other equally wonderful works of Omnipotence, in this country.

CĤAP.

CHAP. VIII. — Of the esculent Vegetables produced in the Territories of Carthagena, and the Food of the Inhabitants of that City.

THOUGH Carthagena has not the convenience of being furnished by its foil with the different kinds of European vegetables, it does not want for others, far from being contemptible, and of which the inhabitants eat with pleafure. Even the Europeans, who at their first coming cannot easily take up with them, are not long before they like them fo well as to forget those of their own country.

The conftant moifture and heat of this climate will not admit of barley, wheat, and other grain of this kind; but produces excellent maize and rice in fuch abundance, that a bufhel of maize fown, ufually produces an hundred at harveft. From this grain they make the bollo or bread, ufed in all this country; they alfo ufe it in feeding hogs and fattening poultry. The maize bollo has no refemblance to the bread made of wheat, either in fhape or tafte. It is made in form of a cake; is of a white colour, and an infipid tafte. The method of making it is to foak the maize, and afterwards bruife it between two ftones; it is then put into large bins filled with water, where by rubbing and fhifting it from one veffel into another, they clear it from its hufk; after this it is ground into a pafte, of which the bollos are made. Thefe bollos being wrapped up in plantane or vijahua leaves, are boiled in water, and ufed as bread; but after twenty-four hours, become tough and of a difagreeable tafte. In families of diffinction the bollo is kneaded with milk, which greatly improves it, but being not thoroughly penetrated by the liquids, it never rifes, nor changes its natural colour; fo that inftead of a pleafing tafte, it has only that of the flour of maize.

Befides the bollo * here is alfo the cafava bread, very common among the negroes, made from the roots of yuca, names, and moniatos. After carefully taking off the upper fkin of the root, they grate it, and fteep it in water, in order to free it from a ftrong acrid juice, which is a real poifon, particularly that of the moniato. The water being feveral times fhifted, that nothing of this acrimony may remain, the dough is made into round cakes about two feet diameter, and about three or four lines in thicknefs. Thefe cakes are baked in ovens, on plates of copper, or a kind of brick made for that purpofe. It is a nourifhing and ftrengthening food, but very infipid. It will keep fo well, that at the end of two months it has the fame tafte as the firft day, except being more dry.

Wheat bread is not entirely uncommon at Carthagena; but, as the flour comes from Spain, the price of it may well be conceived to be above the reach of the generality. Accordingly it is ufed only by the Europeans fettled at Carthagena, and fome few Creoles; and by thefe only with their chocolate and conferves. At all other meals, fo ftrong is the force of a cultom imbibed in their infancy, they prefer bollos to wheat bread, and eat honey with cafava.

They alfo make, of the flour of maize, feveral kinds of paftry, and a variety of foods equally palatable and wholefome; bollo itfelf being never known to difagree with those who use it.

* Or cake made of mandioc yams, and fweet potatoes (or camiotes), which they grate and mix together. The bollo is far from infipid, when a proper quantity of the camiote is put in. A.

352

Befides these roots, the foil produces plenty of camiotes, refembling, in taste, Malaga potatoes; but fomething different in shape, the camiotes being generally roundish and uneven. They are both pickled and used as roots with the meat; but, confidering the goodness and plenty of this root, they do not improve it as they might.

Plantations of fugar-canes abound to fuch a degree, as extremely to lower the price of honey: and a great part of the juice of these canes is converted into spirit for the disposing of it. They grow so quick as to be cut twice in a year. The variety of their verdure is a beautiful ornament to the country.

Here are also great numbers of cotton-trees, fome planted and cultivated, and these are the best; others spontaneously produced by the great fertility of the country. The cotton of both is spun, and made into several forts of stuffs, which are worn by the Negroes of the Haciendas, and the country Indians.

Cacao trees also grow in great plenty on the banks of the river Magdalena, and in other fituations which that tree delights in; but those in the jurifdiction of Carthagena excel those of the Caracas, Maracaybo, Guayaquil, and other parts, both in fize and the goodness of the fruit. The Carthagena cacao or chocolate is little known in Spain, being only fent as prefents; for, as it is more efteemed than that of other countries, the greater part of it is confumed in this jurifdiction, or fent to other parts of America. It is also imported from the Caracas, and fent up the country, that of the Magdalena not being fufficient to answer the great demand there is for it in these parts. Nor is it amifs to mix the former with the latter, as correcting the extreme oilinefs of the chocolate, when made only with the cacao of the Magdalena. The latter, by way of diftinction from the former, is fold at Carthagena by millares, whereas the former is difpofed of by the bufhel, each weighing one hundred and ten pounds; but that of Mara-caybo weighs only ninety-fix pounds. This is the most valuable treasure which Nature could have beftowed on this country; though it has carried its bounty ftill farther, in adding a vaft number of delicious fruits which evidently difplay the exuberance of the foil. Nothing ftrikes a fpectator with greater admiration, than to fee fuch a variety of pompous trees, in a manner emulating each other, through the whole year, in producing the most beautiful and delicious fruits. Some refemble those of Spain; others are peculiar to the country. Among the former, fome are indeed cultivated, the latter flourish spontaneously.

Those of the fame kind with the Spanish fruits are melons, water-melons, called by the natives Blanciac, grapes, oranges, medlars, and dates. The grapes are not equal to those of Spain; but the medlars as far exceed them: with regard to the rest, there is no great difference.

Among the fruits peculiar to the country, the preference, doubtlefs, belongs to the pine-apple; and accordingly its beauty, fmell, and tafte, have acquired it the appellation of queen of fruits. The others are the papayas, guanabanas, guayabas, fapotes, mameis, platanos, cocos, and many others, which it would be tedious to enumerate, efpecially as thefe are the principal; and, therefore, it will be fufficient to confine our defcriptions to them.

The ananas or pine-apple, fo called from its refembling the fruit or the cones of the European pine-tree, is produced by a plant nearly refembling the aloe, except that the leaves of the pine-apple are longer, but not fo thick, and most of them stand near the ground in a horizontal position; but as they approach nearer the fruit, they diminish in length, and become lefs expanded. This plant feldom grows to above three feet in height, and terminates in a flower refembling a lily, but of fo elegant a crimfon, as even to dazzle the eye. The pine-apple makes its first appearance in the centre of the vol. XIV. z z

flower, about the fize of a nut; and as this increases, the lustre of the flower fades. and the leaves expand themfelves to make room for it, and fecure it both as a bafe and ornament. On the top of the apple itfelf, is a crown or tuft of leaves, like those of the plant, and of a very lively green. This crown grows in proportion with the fruit. till both have attained their utmost magnitude, and hitherto they differ very little in colour. But as foon as the crown ceafes to grow, the fruit begins to ripen, and its green changes to a bright ftraw colour : during this gradual alteration of colour, the fruit exhales fuch a fragrancy as difcovers it, though concealed from fight. While it continues to grow, it fhoots forth on all fides little thorns, which, as it approaches towards maturity, dry and foften, fo that the fruit is gathered without the leaft inconvenience. The fingularities which concentre in this product of nature, cannot fail of ftriking a contemplative mind with admiration. The crown, which was to it a kind of apex, while growing in the woods, becomes itfelf, when fown, a new plant; and the ftem, after the fruit is cut, dies away, as if fatisfied with having anfwered the intention of nature in fuch a product; but the roots floot forth fresh stalks, for the further increafe of fo valuable a fpecies.

The pine-apple, though feparated from the plant, retains its fragrancy for a confiderable time, when it begins to decay. The odour of it not only fills the apartment where the fruit is kept, but even extends to the contiguous rooms. The general length of this delicious fruit is from five to feven inches, and the diameter near its bafis three or four, diminifhing regularly, as it approaches to its apex. For eating, it is peeled and cut into round flices, and is fo full of juice, that it entirely diffolves in the mouth. Its flavour is fweet, blended with a delightful acidity. The rind, infufed in water, after a proper fermentation, produces a very cooling liquor, and ftill retains all the properties of the fruit.

The other fruits of this country are equally valuable in their feveral kinds; and fome of them also diftinguished for their fragrancy, as the guayaba, which is, befides, both pectoral and aftringent.

The most common of all are, the platanos, the name of which, if not its figure and taste, is known in all parts of Europe *. These are of three kinds. The first is the banana, which is so large as to want but little of a foot in length. These are greatly used, being not only eaten as bread, but also an ingredient in many made diffues. Both the store and kernel are very hard; but the latter has no noxious quality. The second kind are the dominicos, which are neither so long nor fo large as the bananas, but of a better taste; they are used as the former.

The third kind are the guineos, lefs than either of the former, but far more palatable, though not reckoned fo wholefome by the natives, on account of their fuppofed heat. They feldom exceed four inches in length; and their rind, when ripe, is yellower, fmoother, and brighter, than that of the two other kinds. The cuftom of the country is to drink water after eating them; but the European failors, who will not be confined in their diet, but drink brandy with every thing they eat, make no difference between this fruit and any other; and to this intemperance may, in fome meafure, be attributed the many difeafes with which they are attacked in this country, and not a few fudden deaths; which are, indeed, apt to raife, in the furvivors, concern for their companions for the

* The plantane and banana are, I believe, little known in Europe by name. The first two forts the Author defcribes, are better known by the names of the long and fhort plantane, and the last by the name of banana, than by those he has given them. They have neither from nor kernel, but a very small feed, as small as that of thyme, which lies in the fruit in rows like that of a cucumber, to which the banana bears the greatest refemblance of any thing in England; only it is smooth, and not fo large. A.

prefent;

prefent; but they foon return to the fame excelles, not remembering, or rather chooling to forget, the melancholy confequences.

By what we could difcover, it is not the quality of the brandy which proves fo pernicious, but the quantity; fome of our company making the experiment of drinking fparingly of this liquor after eating the guineos, and repeating it feveral times without the leaft inconvenience. One method of dreffing them, among feveral others, is to roaft them in their rind, and afterwards flice them, adding a little brandy and fugar to give them a firmnefs. In this manner we had them every day at our table, and the Creoles themfelves approved of them.

The papayas are from fix to eight inches in length, and refemble a lemon, except that, towards the ftalk, they are fomewhat lefs than at the other extremity. Their rind is green, the pulp white, very juicy, but ftringy, and the tafte a gentle acid, not pungent. This is the fruit of a tree, and not, like the pine-apple and platano, the product of a plant. The guayaba, and the following, are alfo the fruit of trees.

The guanabana approaches very near the melon, but its rind is much fmoother, and of a greenifh colour. Its pulp is of a yellowifh caft, like that of fome melons, and not very different in tafte. But the greateft diffinction between thefe two fruits is a naufeous fmell in the guanaba. The feed is round, of a fhining dark colour, and about two lines in diameter. It confifts of a very fine transparent pellicle, and a kernel folid and juicy. The fmell of this little feed is much ftronger and more naufeous. The natives fay, that, by eating this feed, nothing is to be apprehended from the fruit, which is otherwife accounted heavy and hard of digeftion; but, though the feed has no ill tafte, the ftomach is offended at its fmell.

The fapotes are round, about two inches in circumference, the rind thin and eafily feparated from the fruit; the colour brown, ftreaked with red. The flefh is of a bright red, with little juice, vifcid, fibrous, and compact. It cannot be claffed among delicious fruits, though its tafte is not difagreeable. It contains a few feeds, which are hard and oblong.

The mameis are of the fame colour with the fapotes, except that the brown is fomething lighter. Their rind alfo requires the affiftance of a knife, to feparate it. The fruit is very much like the brunion plum, but more folid, lefs juicy, and, in colour, more lively. The ftone is proportioned to the largeness of the fruit, which is betwixt three and four inches in diameter, almost circular, but with fome irregularities. The ftone is an inch and a half in length, and its breadth, in the middle, where it is round, one inch. Its external furface is fmooth, and of a brown colour, except on one fide, where it is vertically croffed by a ftreak refembling the flice of a melon in colour and fhape. This ftreak has neither the hardness nor fmoothness of the reft of the furface of the ftone, which feems in this place covered, and fomething fcabrous.

The coco is a very common fruit, and but little efteemed; all the ule made of it being to drink the juice whilft fluid, before it begins to curdle. It is, when firft gathered, full of a whitifh liquor, as fluid as water, very pleafant and refrefhing. The fhell which covers the cocoa nut, is green on the outfide, and white within; full of ftrong fibres, traverfing it on all fides in a longitudinal direction, but eafily feparated with a knife. The coco is alfo whitifh at that time, and not hard; but, as the confiftency of its pulp increafes, the green colour of its fhell degenerates into yellow. As foon as the kernel has attained its maturity, this dries and changes to brown; then becomes fibrous and fo compact, as not to be eafily opened and feparated from the coco,

te

to which fome of those fibres adhere. From the pulp of these cocos is drawn a milk like that of almonds, and, at Carthagena, is used in dreffing rice.

Though lemons, of the kind generally known in Europe, and of which fuch quantities are gathered in some parts of Spain, are very scarce; yet there are such numbers of another kind, called futiles or limes, that the country is, in a manner, covered with the trees that produce them, without care or culture. But the tree and its fruit are both much lefs than those of Spain, the height of the former feldom exceeding eight or ten feet ; and from the bottom, or a little above, divides into feveral branches, whole regular expansion forms a very beautiful tuft. The leaf, which is of the fame shape with that of the European lemon, is lefs, but fmoother; the fruit does not exceed a common egg in magnitude; the rind very thin; and it is more juicy, in proportion, than the lemon of Europe, and infinitely more pungent and acid; on which account, the European phyficians pronounce it detrimental to health; though, in this country, it is a general ingredient in their made difhes. There is one fingular use to which this fruit is applied in cookery. It is a cuftom with the inhabitants not to lay their meat down to the fire above an hour at farthest, before dinner or supper; this is managed by steeping it for fome time in the juice of these limes, or squeezing three or four, according to the quantity of meat, into the water, if they intend boiling; by which means, the flefh becomes fo foftened, as to admit of being thoroughly dreffed in this flort fpace. The people here value themfelves highly on this preparative, and laugh at the Europeans for fpending a morning about what they difpatch fo expeditioufly.

This country abounds in tamarinds; a large branchy tree, the leaf of a deep green; the pods of a middle fize, and flat; the pulp of a dark brown, a pleafant tafte, very fibrous, and is called by the fame name as the tree itfelf. In the middle of the pulp is a hard feed, or ftone, fix or eight lines in length, to two in breadth. Its tafte is an acid fweetnefs, but the acid predominates; and it is only ufed when diffolved in water as a cooling liquor, and then but moderately, and not for many days fucceffively; its acidity and extreme coldnefs weakening and debilitating the ftomach.

Another fruit, called mani, is produced by a fmall plant. It is of the fize and fhape of a pine-cone; and eaten either roafted, or as a conferve. Its quality is directly oppofite to that of the former, being hot in the higheft degree; and, confequently, not very wholefome in this climate.

The products which are not natural here, befides wheat, barley, and other grain, are grapes, almonds, and olives: confequently the country is defitute of wine, oil, and raifins, with which they are fupplied from Europe: this neceffarily renders them very dear; fometimes they are not to be had at any price. When this is the cafe with regard to wine, great numbers fuffer in their health; for, as all those who do not accustom themfelves to drink brandy at their meals, which are far the greater number, except the Negroes, being used to this wine, their flomach, for want of it, loses their digeftive faculty, and thence are produced epidemical diftempers. This was an unhappy circumftance at our arrival, when wine was fo extremely fcarce, that mass was faid only in one church.

The want of oil is much more tolerable; for, in dreffing either fifh or flefh, they use hog's lard, of which they have fo great a quantity, as to make it an ingredient in their foup, which is very good, and, confidering the country, not at all dear: inftead of lamps too, they use tallow candles: fo that they want oil only for their falads.

From fuch plenty of flefh, fowl, and fruits, an idea may be formed of the luxuriancy of the tables in this country; and, indeed, in the houses of perfons of wealth and diftinction, they are ferved with the greatest decency and splendour. Most of the dishes

are

are dreffed in the manner of this country, and differ confiderably from those of Spain; but some of them are so delicate, that foreigners are no less pleased with them, than the gentlemen of the country. One of their favourite diffues is the agi-aco, there being fcarcely a genteel table without it. It is a mixture of several ingredients, which cannot fail of making an excellent ragout. It confiss of pork fried, birds of several kinds, plantanes, maize paste, and several other things highly feasoned with what they call pimento, or aji.

The inhabitants of any figure generally make two meals a-day, befides another light repaft. That in the morning, their breakfaft, is generally composed of fome fried difh, paftry of maize floar, and things of that nature, followed by chocolate. Their dinner confifts of a much greater variety; but at night the regale is only of fweetmeats and chocolate. Some families, indeed, affect the European cuftom of having regular fuppers, though they are generally looked upon at Carthagena as detrimental to health. We found, however, no difference as to ourfelves; and, poffibly, the ill effects flow from excels in the other meals.

CHAP. IX. — Of the Trade of Carthagena, and other Countries of America, on the Arrival of the Galleons and other Spanish Ships.

THE bay of Carthagena is the first place in America at which the galleons are allowed to touch; and thus it enjoys the first fruits of commerce, by the public fales made there. These fales, though not accompanied with the formalities observed at Porto Bello fair, are very confiderable. The traders of the inland provinces of Santa Fe, Popayan, and Quito, lay out not only their own stocks, but also the monies intrusted to them by commissions, for feveral forts of goods, and those species of provifions which are most wanted in their respective countries. The two provinces of Santa Fe and Popayan have no other way of supplying themselves with the latter, than from Carthagena. Their traders bring gold and filver in specie, jngots, and dust, and also emeralds; as, besides the filver mines worked at Santa Fe, and which daily increase by fresh difcoveries, there are others which yield the finest emeralds. But the value of these gems being now fallen in Europe, and particularly in Spain, the trade of them, formerly fo confiderable, is now greatly leffened, and, consequently, the reward for finding them. All these mines produce great quantities of gold, which is carried to Choco, and there pays one-fifth to the King, at an office erected for that purpofe.

This commerce was for fome years prohibited, at the folicitation of the merchants of Lima, who complained of the great damages they fultained by the transportation of European merchandifes from Quito to Peru; which being thus furnished, while the traders of Lima were employed at the fairs of Panama and Porto Bello, at their return, they found, to their great lofs, the price of goods very much lowered. But it being afterwards confidered, that reftraining the merchants of Quito and other places from purchafing goods at Carthagena, on the arrival of the galleons, was of great detriment to those provinces, it was ordered, in regard to both parties, that, on notice being given in those provinces, of the arrival of the galleons at Carthagena, all commerce, with regard to European commodities, fhould ceafe between Quito and Lima, and that the limits of the two audiences fhould be those of their commerce: that is, that Quito fhould not trade beyond the territories of Loja and Zamora; nor Lima, beyond thofe of Piura, one of the jurifdictions of its audience. By this equitable expedient, those provinces were, in time, fupplied with the goods they wanted, without any detriment 2.5.43 to to the trade of Peru. This regulation was first executed in 1730, on the arrival of the fquadron commanded by Don Manuel Lopez Pintado, who had orders, from the King, to place commerce on this footing, provided it bid fair to answer the intentions of both parties, and that no better expedient could be found. Accordingly this was carried into execution; being not only well adapted to the principal end, but also, during the ftay of the galleons at Carthagena, procured business for the Cargadores *, in the fale of their goods; and thus made them ample amends for their expenses.

During the prohibition, the merchants of Carthagena were obliged to have recourfe to the flotilla of Peru, in their course from Guayaquil to Panama; or to wait the return of the galleons to Carthagena, and, confequently, purchase cnly the refuse of Porto Bello fair; both which were, doubtlefs, confiderable grievances to them. If they purfued the first, they were obliged to travel across the whole jurifdiction of Santa Fe to Guayaquil, which was a journey of above four hundred leagues, with confiderable fums of money, which having difpoled of in merchandifes, the charges of their return were still greater. In fine, the loffes inevitable in fuch a long journey, where rapid rivers, mountains, and bridges, were to be croffed, and their merchandifes exposed to a thousand accidents, rendered this method utterly impracticable; fo that they were obliged to content themfelves with the remains of the fair; though it was very uncertain whether thefe would be fufficient to anfwer the demand. Befides, the inland merchants ran the hazard of not meeting at Carthagena with goods fufficient, in quality and quantity, to anfwer their charges; and were fometimes actually obliged to return with the money, and the vexation of a fruitlefs, though expensive, journey. Thefe inconveniences produced a repeal of the prohibition, and commerce was placed on the prefent equitable footing.

This little fair at Carthagena, for fo it may be called, occafions a great quantity of fhops to be opened, and filled with all kinds of merchandife; the profit partly refulting to Spaniards who come in the galleons, and are either recommended to, or are in partnerfhip with, the Cargadores; and partly to thofe already fettled in that city. The Cargadores furnish the former with goods, though to no great value, in order to gain their cuftom; and the latter, as perfons whom they have already experienced to be good men; and both in proportion to the quickness of their fale. This is a time of univerfal profit; to fome by letting lodgings and fhops, to fome by the increase of their refpective trades, and to others by the labour of their Negro flaves, whose pay also is proportionally increased, as they do more work in this bufy time. By this brick circulation through all the feveral ranks, they frequently get a furplus of money beyond what is fufficient for providing themselves with necessfaries. And it is not uncommon for flaves, out of their favings, and after paying their masters the daily tribute, to purchase their freedoms.

This affluence extends to the neighbouring villages, eftancias, and the most wretched chacaras, of this jurifdiction; for, by the increase of ftrangers to a fourth, third, and fometimes one-half, of the usual number of people, the confumption, and confequently the price of provisions, advances, which is, of course, no small advantage to those who bring them to market.

This commercial tumult lafts while the galleons continue in the bay; for they are no fooner gone, than filence and tranquillity refume their former place. This the inhabitants of Carthagena call Tiempo muerto, the dead time; for, with regard to the trade carried on with the other governments, it is not worth notice. The greater part of it

* Perfons who bring European goods for fale.

confilts

confifts in fome bilanders from La Trinidad, the Havannah, and St. Domingo, bringing leaf-tobacco, fnuff, and fugars; and returning with Magdalena cacao, earthen-ware, rice, and other goods wanted in those islands: and even of these fmall vessels, fcarcely one is feen for two or three months. The fame may be faid of those which go from Carthagena to Nicaragua, Vera Cruz, Honduras, and other parts: but the most frequent trips are made to Porto Bello, Chagra, or Santa Martha. The reason why this commerce is not carried on more briskly is, that most of these places are naturally provided with the fame kind of provisions, and consequently are under no necessity of trafficking with each other.

Another branch of the commerce of Carthagena, during the tiempo muerto, is carried on with the towns and villages of its jurifdiction, from whence are brought all kinds of neceffaries, and even the luxuries of life, as maize, rice, cotton, live hogs, tobacco, plantanes, birds, cafava, fugar, honey, and cacao, most of which is brought in canoes and champanas, a fort of boats proper for rivers. The former are a kind of coafters, and the latter come from the rivers Magdalena, Sinu, and others. Their returns confift of goods for apparel, with which the shops and warehouses furnish themfelves from the galleons, or from prizes taken on the coast by the King's frigates, or privateers.

No eatable pays any duty to the King; and every perfon may, in his own houfe, kill any number of pigs he thinks he fhall fell that day: no falted pork is eaten, becaufe it is foon corrupted by the exceflive heat of the place. All imports from Spain, as brandy, wine, oil, almonds, raifins, pay a duty, and are afterwards fold without any farther charge, except what is paid by retailers, as a tax for their fhop or ftall.

Befides thefe goods, which keep alive this flender inland commerce, here is an office for the affiento of Negroes, whither they are brought, and, as it were, kept as pledges, till fuch perfons as want them on their effates come to purchafe them, negroes being generally employed in hufbandry and other laborious country works. This, indeed, gives fome life to the trade of Carthagena, though it is no weighty article. The produce of the royal revenues in this city not being fufficient to pay and fupport the governor, garrifon, and a great number of other officers, the deficiency is remitted from the treafurers of Santa Fe and Quito, under the name of Situado, together with fuch monies as are requifite for keeping up the fortifications, furnifhing the artillery, and other expences, neceffary for the defence of the place and its forts.

BOOK II.

Voyage from Carthagena to Porto Bello.

CHAP. I. - General Winds and Currents between Carthagena and Porto Bello.

W HEN the French frigate had watered, and was ready for failing, we embarked on board her, on the 24th of November 1735; the next day we put to fea, and on the 29th of the fame month, at half an hour after five in the evening, came to an anchor at the mouth of Porto Bello harbour, in fourteen fathom water; Caftle Todo Fierro, or the iron caftle, bearing north-east four degrees northerly; and the fouth point of the harbour east one quarter northerly. The difference of longitude between Carthagena and Punta de Nave, we found to be 4° 24'.

We had fteered west-north-west and west one quarter northerly, till the spip was obferved to be in the eleventh degree of latitude, when we stood to the west. But when our difference of longitude from Carthagena was 3° 10', we altered our course to southwest and south, a quarter westerly, which, as already observed, on the 29th of November, at five in the evening, brought us in fight of Punta de Nave, which being south of us, we were obliged to make feveral tacks before we could get into the harbour. In this passage we met with fresh gales. The two first days at north quarter easterly,

In this paffage we met with frefh gales. The two firft days at north quarter ealterly, and the other days till we made the land at north-eaft, a high fea running the whole time. But we were no fooner in fight of Punta de Nave, than it became calm, and a breeze from the land fprung up, which hindered us from getting that day into the harbour. It alfo continued contrary on the 30th; but, by the help of our oars, and being towed, we got at laft to the anchoring-place, where we went on fhore, with our baggage and inftruments neceffary for beginning our obfervations. But this being the moft proper place for mentioning the winds which prevail in this paffage along the coaft, and that of Carthagena, we fhall beftow fome paragraphs on them.

There are two forts of general winds on these coasts; the one called Brifas, which blow from the north-east, and the other called Vendabales, which come from the west, and west-fouth-west. The former set in about the middle of November, but are not fettled till the beginning or middle of December, which is here the summer, and continue blowing fresh and invariable till the middle of May; they then cease, and are succeeded by the vendabales, but with this difference, that these do not extend farther than 12 or $12\frac{1}{2}$ degrees of latitude, beyond which the brifas constantly reign, though with different degrees of strength, and veer sometimes to the east, and at other times to the north.

The feafon of the vendabales is attended with violent ftorms of wind and rain; but they are foon over, and fucceeded by a calm equally transitory; for the wind gradually freshens, especially near the land, where these phenoma are more frequent. The same happens at the end of October and beginning of November, the general winds not being fettled.

In the feafon of the brifas, the currents, as far as 12° or 12° 30' of latitude, fet to the weftward, but with lefs velocity than ufual at the changes of the moon, and greater at the full. But beyond that latitude they ufually fet north-weft. Though this muft not be underftood without exception; as, for inftance, near iflands or fhoals, their courfe becomes irregular: fometimes they flow through long channels, and fometimes they are met by others; all which proceeds from their feveral directions, and the bearings of the coafts; fo that the greateft attention is neceffary here, the general accounts not being fufficient to be relied on; for, though they have been given by pilots who have for twenty or thirty years ufed this navigation, in all kinds of veffels, and therefore have acquired a thorough knowledge, they themfelves confefs that there are places where the currents obferve no kind of regularity, like thofe we have mentioned.

When the brifas draw near their period, which is about the beginning of April, the currents change their courfe, running to the eaftward for eight, ten, or twelve leagues from the coaft, and thus continue during the whole feafon of the vendabales; on which account, and the winds being at this feafon contrary for going from Carthagena to Porto Bello, it is neceffary to fail to twelve or thirteen degrees of latitude, or even

·360

even fometimes farther; when being without the verge of those winds, the voyage is eafily performed.

While the brifas blow ftrongeft, a very impetuous current fets into the gulf of Darien, and out of it during the feafon of the vendabales. This fecond change proceeds from the many rivers which difcharge themfelves into it, and at that time being greatly fwelled by the heavy rains, peculiar to the feafon; fo that they come down with fuch rapidity, as violently to propel the water out of the gulf. But in the feafon of the brifas thefe rivers are low, and fo weak, that the current of the fea overcomes their refiftance, fills the gulf, and returns along the windings of the coaft.

CHAP. II. - Description of the Town of St. Philip de Porto Bello.

THE town of St. Philip de Porto Bello, according to our obfervations, ftands in 9° 34' 35" north latitude; and by the obfervations of Father Feuillée, in the longitude of 277° 56' from the meridian of Paris, and 296° 41' from the Pico of Teneriffe. This harbour was difcovered on the 2d of November 1502 by Chriftopher Columbus, who was fo charmed with its extent, depth, and fecurity, that he gave it the name of Porto Bello, or the fine harbour. In the profecution of his difcoveries, he arrived at that which he called Baftimentos, where, in 1510, was founded by Diego de Niqueza the city of Nombre de Dios, "the Name of God;" fo called from the commander having faid to his people on their landing, "Here we will make a fettlement in the name of God," which was accordingly executed. But this place was in its infancy entirely deftroyed by the Indians of Darien. Some years after, the fettlement was repaired, and the inhabitants maintained their ground till 1584, when orders arrived from Philip II. for their removing to Porto Bello, as much better fituated for the commerce of that country.

Porto Bello was taken and plundered by John Morgan, an English adventurer, who infested those feas; but in confideration of a ranfom, he spared the forts and houses.

The town of Porto Bello stands near the fea, on the declivity of a mountain which furrounds the whole harbour. Most of the houses are built of wood. In some the first story is of store, and the remainder of wood. They are about one hundred and thirty in number; most of them large and spacious. The town is under the jurifdiction of a governor, with the title of lieutenant-general; being such under the prefident of Panama, and the term of his post is without any specified limitation. He is always a gentleman of the army, having under him the commandants of the forts that defend the harbour; whose employments are for life.

It confifts of one principal ftreet, extending along the ftrand, with other imaller croffing it, and running from the declivity of the mountain to the fhore, together with fome lanes, in the fame direction with the principal ftreet, where the ground admits of it. Here are two large fquares, one opposite to the cuftom-house, which is a ftructure of ftone, contiguous to the quay; the other opposite the great church, which is of ftone, large, and decently ornamented, confidering the smallness of the place. It is ferved by a vicar and other priefts, natives of the country.

Here are two other churches, one called Nueftra Signora de la Merced, with a convent of the fame order; the other St. Juan de Dios; which, though it bears the title of an hofpital, and was founded as fuch, is very far from being to in reality. The church of La Merced is of itone, but mean and ruinous, like the convent, which is

VOL. XIV.

3 4

alfo

alfo decayed : fo that wanting the proper conveniences for the religious to refide in, they live in the town difperfed in private houses.

That of St. Juan de Dios is only a fmall building like an oratory, and not in better condition than that of La Merced. Its whole community confifts of a prior, chaplain, and another religious, and fometimes even of lefs: fo that its extent is very fmall, fince properly fpeaking, it has no community: and the apartments intended for the reception of patients confifts only of one chamber, open to the roof, without beds or other neceffaries. Nor are any admitted but fuch as are able to pay for their treatment and diet. It is therefore of no advantage to the poor of the place; but ferves for lodging fick men belonging to the men of war which come hither, being provided with neceffaries from the fhips, and attended by their refpective furgeons, lodging-room being the only thing afforded them by this nominal hofpital.

At the eaft end of the town, which is the road to Panama, is a quarter called Guiney, being the place where all the negroes of both fexes, whether flaves or free, have their habitations. This quarter is very much crowded when the galleons are here, most of the inhabitants of the town entirely quitting their houfes for the advantage of letting them, while others content themfelves with a fmall part in order to make money of the reft. The mulattos and other poor families alfo remove, either to Guiney, or to cottages already erected near it, or built on this occasion. Great numbers of artificers from Panama likewife, who flock to Porto Bello to work at their respective callings, lodge in this quarter for cheapnefs.

Towards the fea, in a large track between the town and Gloria caftle, barracks are alfo erected, and principally filled with the fhips' crews; who keep ftalls of fweetmeats, and other kinds of eatables brought from Spain. But at the conclusion of the fair, the fhips put to fea, and all these buildings are taken down, and the town returns to its former tranquillity and emptines.

By an experiment we made with the barometer in a place a toile above the level of the fea, the height of the mercury was twenty-feven inches eleven lines and a half.

CHAP. III. - Description of Porto Bello Harbour.

THE name of this port indicates its being commodious for all forts of fhips or veffels, great or fmall; and though its entrance is very wide, it is well defended by Fort St. Philip de Todo Fierro. It ftands on the north point of the entrance, which is about fix hundred toifes broad, that is, a little lefs than the fourth part of a league; and the fouth fide being full of rifes of rocks, extending to fome diftance from the fhore, a fhip is obliged to ftand to the north, though the deepeft part of the channel is in the middle of the entrance, and thus continues in a ftraight direction, having nine, ten, or fifteen fathom water, and a bottom of clayey mud, mixed with chalk and fand.

On the fouth fide of the harbour, and oppofite to the anchoring-place, is a large caftle, called Saint Jago de la Gloria, to the eaft of which, at the diftance of about one hundred toifes, begins the town, having before it a point of land projecting into the harbour. On this point flood a fmall fort called St. Jerome, within ten toifes of the houfes. All these were demolished by the English admiral Vernon, who with a numerous naval force *, in 1739, made himself master of this port; having found it

¥

fo

^{*} The numerous naval force mentioned by our author, confifted we know of fix ships only.

fo unprovided with every thing, that the greater part of the artillery, efpecially that of the caftle de Todo Fierro, or iron caftle, was difmounted for want of carriages, part of the few military flores unferviceable, and the garrifon flort of its complement even in time of peace. The governor of the city, Don Bernardo Gutierrez de Bocanegra, was alfo abfent at Panama, on fome accufation brought againft him. Thus the Englifh meeting no refiftance, eafily fucceeded in their defign upon this city, which furrendered by capitulation.

The anchoring-place for the large fhips is north-weft of Gloria caftle, which is nearly the centre of the harbour; but leffer veffels which come farther up, must be careful to avoid a fand-bank, lying one hundred and fifty toiles from St. Jerome's fort, or point, bearing from it west one quarter northerly; and on which there is only a fathom and a half, or at most, two fathom water.

North-weft of the town is a little bay, called la Caldera, or the kettle, having four fathom and a half water; and is a very proper place for careening fhips and veffels, as, befides its depth, it is perfectly defended from all winds. In order to go into it, you muft keep pretty clofe to the weftern fhore till about a third part of the breadth of the entrance, where you will have five fathom water (whilft on the eaftern fide of the fame entrance, there is not above two or three feet), and then fteer directly towards the bottom of the bay. When the fhips are in, they may moor with four cables eaft and weft, in a fmall bafon formed by the Caldera; but care muft be taken to keep them always on the weftern fide.

North-east of the town is the mouth of a river called Cascajel, which affords no fresh water within a quarter of a league or upwards from its mouth; and it is not ucommon to fee in it Caymanes, or alligators.

The tides are here irregular; and in this particular, as well as that of the winds, there is no difference between this harbour and that of Carthagena; except that here the fhips must always be towed in, being either becalmed, or the wind directly against them.

From observations we made, both by the pole-ftar and the fun's azimuth, we found the variation of the needle in this harbour to be 8° 4′ easterly.

Among the mountains which furround the whole harbour of Porto Bello, beginning from St. Philip de Todo Fierro, or the iron caftle (which is fituated on their declivity), and without any decreafe of height, extends to the oppofite point, one is particularly remarkable for its fuperior loftinefs, as if defigned to be the barometer of the country, by foretelling every change of weather. This mountain, diftinguifhed by the name of Capiro, ftands at the utmost extremity of the harbour, in the road to Panama. Its top is always covered with clouds of a density and darkness feldom feen in those of this atmosphere; and from these, which are called the capillo or cap, has possibly been corruptly formed the name of Monte Capiro. When these clouds thicken, increase their blackness, and fink below their usual flation, it is a fure fign of a tempest; while on the other hand, their clearness and ascent as certainly indicate the approach of fair weather. It must however be remembered, that these changes are very frequent and very fudden. It is also feldom that the fummit is ever observed clear from clouds; and when this does happen, it is only as it were, for an instant.

The jurifdiction of the governor of Porto Bello is limited to the town and the forts; the neighbouring country, over which it might be extended, being full of mountains covered with impenetrable forefts, except a few vallies, in which are thinly fcattered fome farms or Aaciendas; the nature of the country not admitting of farther improvements.

3 A 2

CHAP.

CHAP. IV. — Of the Climate of Porto Bello, and the Diftempers which prove fo fatal to the Crews of the Galleons.

THE inclemency of the climate of Porto Bello is fufficiently known all over Europe. Not only ftrangers who come thither are affected by it, but even the natives themfelves fuffer in various manners. It deftroys the vigour of nature, and often untimely cuts the thread of life. It is a current opinion, that formerly, and even not above twenty years fince, parturition was here fo dangerous, that it was feldom any women did not die in child-bed. As foon therefore as they had advanced three or four months in their pregnancy, they were fent to Panama, where they continued till the danger of delivery was paft. A few indeed had the firmnefs to wait their deftiny in their own houfes; but much the greater number thought it more advifable to undertake the journey, than to run fo great a hazard of their lives.

The exceffive love which a lady had for her hufband, blended with a dread that he would forget her during her abfence, his employment not permitting him to accompany her to Panama, determined her to fet the first example of acting contrary to this general cuftom. The reafons for her fear were fufficient to justify her refolution to run the risk of a probable danger, in order to avoid an evil which she knew to be certain, and must have embittered the whole remainder of her life. The event was happy; she was delivered, and recovered her former health; and the example of a lady of her rank did not fail of infpiring others with the like courage, though not founded on the fame reasons; till, by degrees, the dread which former melancholy cafes had impressed on the mind, and gave occasion to this climate's being confidered as fatal to pregnant women, was entirely disperfed.

Another opinion equally ftrange is, that the animals from other climates, on their being brought to Porto Bello, ceafe to procreate. The inhabitants bring inflances of hens brought from Panama or Carthagena, which immediately on their arrival grew barren, and laid no more eggs; and even at this very time, the horned cattle fent from Panama, after they have been here a fhort time, lofe their flefh fo as not to be eatable; though they do not want for plenty of good pafture. It is certain that there are no horfes or affes bred here, which tends to confirm the opinion that this climate checks the generation of creatures produced in a more benign or lefs noxious air. However, not to rely on the common opinion, we inquired of fome intelligent perfons, who differed but very little from the vulgar, and even confirmed what they afferted, by many known facts, and experiments performed by themfelves.

The liquor in Mr. Reaumur's thermometer, on the 4th of December 1735, at fix in the morning, flood at 1021, and at noon role to 1023.

The heat here is excefive, augmented by the fituation of the town, which is furrounded by high mountains, without any interval for the winds, whereby it might be refrefhed. The trees on the mountains fland fo thick, as to intercept the rays of the fun; and, confequently, hinder them from drying the earth under their branches: hence copious exhalations, which form large clouds, and precipitate in violent torrents of rain; thefe are no fooner over, than the fun breaks forth afrefh, and fhines with its former fplendour; though fcarce has the activity of his rays dried the furface of the ground not covered by the trees, when the atmosphere is again crowded by another collection of thick vapours, and the fun again concealed.' Thus it continues during the whole day: the night is fubject to the like vicifitudes; but without the least diminution of heat in either. These torrents of rain, which, by their fuddenness and impetuofity, feem to threaten a fecond deluge, are accompanied with fuch tempests of thunder and highteness, as must daunt even the most resolute: this dreadful noise is prolonged by repercultions from the caverns of the mountains, like the explosion of a cannon, the rumbling of which is heard for a minute after. To this may also be added the howlings and shricks of the multitudes of monkies of all kinds, which live in the forests of the mountains, and which are never louder than when a man of war fires the morning and evening gun, though they are fo much used to it.

This continual inclemency, added to the fatigue of the feamen in unloading the fhips, carrying the goods on fhore in barges, and afterwards drawing them along on fledges, caufes a very profufe perfpiration, and, confequently, renders them weak and faint; and they, in order to recruit their fpirits, have recourfe to brandy, of which there is, on thefe occafions, an incredible confumption. The exceffive labour, immoderate drinking, and the inclemency and the unhealthfulnefs of the climate, mult jointly deftroy the beft conftitutions, and produce thofe deleterious difeafes fo common in this country. They may well be termed deleterious; for the fymptoms of all are fatal, the patients being too much attenuated to make any effectual refiftance; and hence epidemics and mortal diftempers are fo very common.

It is not the feamen alone who are fubject to thefe difeafes; others, ftrangers to the leas, and not concerned in the fatigues, are attacked by them; and, confequently, is a fufficient demonstration that the other two are only collateral, though they tend both to fpread and inflame the diftemper; it being evident, that when the fluids are difposed to receive the feeds of the diftemper, its progress is more rapid, On fome occafions, phyficians have been fent for and its attacks more violent. from Carthagena, as being fuppofed to be better acquainted with the propereft methods of curing the diftempers of this country, and, confequently, more able to recover the feamen; but experience has flewn, that this intention has been fo little anfwered, that the galleons or other European fhips, which ftay any time here, feldom depart, without burying half, or, at least, a third of their men; and hence this city has, with too much reason, been termed the grave of the Spaniards; but it may, with much greater propriety, be applied to those of other nations who visit it. This remark was fufficiently confirmed by the havoc made among the English, when their fleet, in 1726, appeared before the port, with a view of making themfelves mafters of the treafure brought thither from all parts to the fair held at the arrival of the galleons, which, at that time, by the death of the Marquis Grillo, were commanded by Don Francifco Cornejo, one of those great officers whole conduct and resolution have done honour to the navy of Spain. He ordered the fhips under his command to be moored in a line within the harbour; and erected, on the entrance, a battery, the care of which he committed to the officers of the fhips : or rather, indeed, fuperintended it himfelf, omitting no precaution, but vifiting every part in perfon. These preparatives struck fuch a confternation into the English fleet, though of confiderable force, that, instead of making any attempt, they formed only a blockade, depending on being fupplied with provisions from Carthagena, and that famine would at length oblige the Spaniards to give up what they at first intended to acquire by force; but when the admiral thought himfelf on the point of obtaining his ends, the inclemency of the feafon declared itfelf among his fhips' companies, fweeping away fuch numbers, that in a fhort time he was obliged to return to Jamaica, with the loss of above half his people.

But, notwith fanding the known inclemency of the climate of Porto Bello, and its general fatality to Europeans, the fquadron of 1730 enjoyed there a good state of health, though

though the fatigues and irregularities among the feamen were the fame: nor was there any perceivable change in the air. This happy fingularity was attributed to the flay of the fquadron at Carthagena, where they paffed the time of the epidemia, by which their conflitutions were better adapted to this climate; and hence it appears, that the principal caufe of thefe diftempers flows from the conflitutions of the Europeans not being ufed to it; and thus they either die, or become habituated to it, like the natives, Creoles, and other inhabitants.

CHAP. V. - Account of the Inhabitants and Country about Porto Bello.

IN feveral particulars there is no effential difference between Carthagena and Porto Bello; fo that I fhall only mention those peculiar to the latter; and add fome observations, tending to convey a more exact knowledge of this country.

The number of the inhabitants of Porto Bello, by reafon of its fmallnefs, and the inclemency of its climate, is very inconfiderable, and the greater part of thefe, Negroes and Mulattos, there being fcarce thirty white families; thofe, who by commerce or their eftates are in eafy circumftances, removing to Panama. So that thofe only ftay at Porto Bello, whofe employments oblige them to it; as the governor or lieutenant-general, the commanders of the forts, the civil officers of the crown, the officers and foldiers of the garrifons, the alcaldes in office and of the hermandad, and the town-clerk. During our ftay here, the garrifons of the forts confifted of about one hundred and twenty-five men, being detachments from Panama; and thefe, though coming from a place fo near, are affected to fuch a degree, that in lefs than a month they are fo attenuated, as to be unable to do any duty, till cuftom again reftores them to their ftrength. None of thefe, or of the natives of the country, above the Mulatto clafs, ever fettle here, thinking it a difgrace to live in it : a certain proof of its unhealthinefs, fince thofe to whom it gave birth forfake it.

In manners and cuftoms, the inhabitants of Porto Bello refemble those of Carthagena, except that the latter are more free and generous, those in the parts round Porto Bello being accused of avarice; a vice natural to all the inhabitants of these countries.

Provisions are fcarce at Porto Bello, and confequently dear, particularly during the time of the galleons and the fair, when there is a neceflity for a fupply from Carthagena and Panama. From the former are brought maize, rice, cafava, hogs, poultry, and roots; and from the latter, cattle. The only thing in plenty here is fifh, of which there is great variety, and very good. It also abounds in fugar-canes, fo that the chacaras, or farm-houfes, if they may be fo called, are built of them. They have also ingenios * for making fugar and molaffes, and, from the latter, brandy.

Fresh water pours down in streams from the mountains, fome running without the town, and others croffing it. These waters are very light and digestive, and, in those who are used to them, good to create an appetite; qualities, which in other counwould be very valuable, are here pernicious. This country seems to curfed by nature, tries that what is in itself good, becomes here destructive. For, doubtles, this water is too fine and active for the stomachs of the inhabitants; and thus produces dysenteries, the last stage of all other distempers, and which the patient very feldom furvives. These rivulets, in their descent from the mountains, form little refervoirs, or ponds, whose coolness is increased by the stage of the trees, and in these all the inha-

bitants

^{*} Ingenio fignifies the mill, ftill, and apparatus, for making fugar, rum, &c. A.

bitants of the town bathe themfelves conftantly every day at eleven in the morning; and the Europeans fail not to follow an example fo pleafant and conducive to health.

As these forests almost border on the houses of the town, the tigers often make incursions into the ftreets during the night, carrying off fowls, dogs, and other domestic creatures; and fometimes even boys have fallen a prey to them; and it is certain, that ravenous beafts, which provide themfelves with food in this manner, are afterwards known to defpife what the forefts afford; and that, after tafting human flefh, they flight that of beafts *. Befides the fnares ufually laid for them, the Negroes and Mulattos, who fell wood in the forefts of the mountains, are very dexterous in encountering the tigers; and fome, even on account of the flender reward, feek them in their retreats. The arms in this combat, feemingly fo dangerous, are only a lance, of two or three yards in length, made of a very ftrong wood, with the point of the fame hardened in the fire; and a kind of cimeter, about three quarters of a yard in length. Thus armed, they ftay till the creature makes an affault on the left arm, which holds the lance, and is wrapped up in a fhort cloak of baize. Sometimes the tiger, aware of the danger, feems to decline the combat; but his antagonift provokes him with a flight touch of the lance, in order, while he is defending himfelf, to ftrike a fure blow; for, as foon as the creature feels the lance, he grafps it with one of his paws, and with the other flrikes at the arm which holds it. Then it is that the perfon nimbly aims a blow with his cimeter, which he kept concealed with the other hand, and hamftrings the creature, which immediately draws back enraged, but returns to the charge; when, receiving another fuch ftroke, he is totally deprived of his most dangerous weapons, and rendered incapable of moving. After which the perfon kills him at leifure, and ftripping off the fkin, cutting off the head, and the fore and hind feet, returns to the town, difplaying thefe as the trophies of his victory.

Among the great variety of animals in this country, one of the most remarkable is the Perico ligero, or nimble Peter, an ironical name given it on account of its extreme fluggifhnefs and floth. It refembles a middling monkey, but of a wretched appearance, its fkin being of a greyifh brown, all over corrugated, and the legs and feet without hair. He is fo lumpifh, as not to fland in need of either chain or hutch, for he never ftirs till compelled by hunger. When he moves, every effort is attended with fuch a plaintive, and at the fame time fo difagreeable a cry, as at once produces pity and difguft; and this even on the flighteft motion of the head, legs, or feet; proceeding probably from a general contraction of the mufcles and nerves of his body, which puts him to extreme pain, when he endeavours to move them. In this difagreeable cry confifts his whole defence; for, it being natural to him to fly at the first hostile approach of any beaft, he makes at every motion fuch howlings as are even infupportable to his purfuer, who foon quits him, and even flies beyond the hearing of his horrid noife. Nor is it only during the time he is in motion that he utters thefe cries; he repeats them while he refts himfelf, continuing a long time motionlefs before he takes another march. The food of this creature is generally wild fruits; when he can find none on the ground, he looks out for a tree well loaded, which, with a great deal of pains, he climbs; and, to fave himfelf fuch another toilfome afcent, plucks off all the fruit, throwing them on the ground; and to avoid the pain of defcending, forms himfelf into a ball, and drops from

^{*} This is an error. Beafts of prey in America are not fo fierce as in Africa and Afia; they never attack the human fpecies, but when forced by hunger, or provoked. It is affirmed by the natives, that if an European, with his Negro and dog, were to meet with two hungry beafts of prey, whether tigers or ounces, they would feize the dog and Negro, and leave the European. But the truth I never knew experienced. A.

the branches. At the foot of this tree he continues till all the fruits are confumed, never flirring till hunger forces him to feek again for food.

Serpents are here as numerous and deadly as at Carthagena; and toads * innumerable, fwarming not only in the damp and marfhy places, as in other countries, but even in the ftreets, courts of great houfes, and all open places in general. The great numbers of them, and their appearance after the least flower, have induced fome to imagine, that every drop of water becomes a toad; and though they allege, as a proof, the extraordinary increase of them on the smallest shower, their opinion does not feem to me to be well founded. It is evident, that thefe reptiles abound both in the forefts and neighbouring rivers, and even in the town itfelf; and produce a prodigious quantity of animalcula, from whence, according to the beft naturalists, these reptiles are formed. These animacula either rife in the vapours, which form the rain, and falling together with it on the ground, which is extremely heated by the rays of the fun, or being already deposited in it by the toads, grow, and become animated, in no lefs numbers than were formerly feen in Europe. But fome of them which appear after rains being fo large as to measure fix inches in length, they cannot be imagined the effect of an inftantaneous production; I am therefore inclined to think, from my own obfervations, that this part of the country being remarkably moift, is very well adapted to nourifh the breed of those creatures, which love watery places; and therefore avoid those parts of the ground exposed to the rays of the fun, feeking others where the earth is foft, and there form themfelves cavities in the ground, to enjoy the moifture; and as the furface over them is generally dry, the toads are not perceived; but no fooner does it begin to rain, than they leave their retreats to come at the water, which is their fupreme delight; and thus fill the ftreets and open places. Hence the vulgar opinion had its rife, that the drops of rain were transformed into toads. When it has rained in the night, the ftreets and fquares in the morning feem paved with thefe reptiles; fo that you cannot ftep without treading on them, which fometimes is productive of troublefome bites: for, befides their poifon, they are large enough for their teeth to be feverely felt. Some we have already obferved to be fix inches long, and this is their general measure; and there are such numbers of them, that nothing can be imagined more difinal than their croakings, during the night, in all parts of the town, woods, and caverns of the mountains.

CHAP. VI. - Of the Trade of Porto Bello.

THE town of Porto Bello, fo thinly inhabited, by reafon of its noxious air, the fcarcity of provisions, and the barrenness of its foil, becomes, at the time of the galleons, one of the most populous places in all South America. Its fituation on the ifthmus, betwixt the South and North Sea, the goodness of its harbour, and its small diftance from Panama, have given it the preference for the rendezvous of the joint commerce of Spain and Peru, at its fair.

On advice being received at Carthagena, that the Peru fleet had unloaded at Panama, the galleons make the beft of their way to Porto Bello, in order to avoid the diftempers which have their fource from idlenefs. The concourfe of people on this occafion is fuch as to raife the rent of lodging to an excefive degree; a middling chamber, with a clofet,

lets,

^{*} Called by the natives ferpos: they appear every dewy evening in as great numbers as after a flower. I never heard of the opinion the author fpeaks of. A.

lets, during the fair, for a thousand crowns, and some large houses for four, five, or fix thoufand.

The fhips are no fooner moored in the harbour, than the first work is to erect in the fquare a tent made of the fhip's fails, for receiving its cargo, at which the proprietors of the goods are prefent, in order to find their bales by the marks which diftinguish them. These bales are drawn on fledges to their respective places by the crew of every ship, and the money given them is proportionally divided.

Whilft the feamen and European traders are thus employed, the land is covered with droves of mules from Panama, each drove confifting of above an hundred, loaded with chefts of gold and filver, on account of the merchants of Peru. Some unload them at the exchange, others in the middle of the fquare; yet, amidft the hurry and confusion of fuch crowds, no theft, lofs, or diffurbance is ever known. He who has feen this place during the tiempo muerto, or dead time, folitary, poor, and a perpetual filence reigning every where; the harbour quite empty, and every place wearing a melancholy afpect, must be filled with astonishment at the fudden change; to fee the bustling multitudes, every houfe crowded, the fquare and ftreets encumbered with bales and chefts of gold and filver of all kinds; the harbour full of fhips and veffels, fome bringing by the way of Rio de Chape the goods of Peru, as cacao, quinquina, or Jesuits' bark, Vicuna wool and bezoar ftones; others coming from Carthagena loaded with provisions; and thus a fpot at all other times detefted for its deleterious qualities, becomes the ftaple of the riches of the old and new world, and the fcene of one of the most confiderable branches of commerce in the whole earth.

The fhips being unloaded, and the merchants of Peru, together with the prefident of Panama, arrived, the fair comes under deliberation. And for this purpole the deputies of the feveral parties repair on board the commodore of the galleons, where, in prefence of the commodore, and the prefident of Panama, the former as patron of the Europeans, and the latter, of the Peruvians, the prices of the feveral kinds of merchandifes are fettled; and all preliminaries being adjusted in three or four meetings, the contracts are figned, and made public, that every one may conform himfelf to them in the fale of his effects. Thus all fraud is precluded. The purchases and fales, as likewife the exchanges of money, are transacted by brokers, both from Spain and Peru. After this, every one begins to difpole of his goods ; the Spanish brokers embarking their chefts of money, and those of Peru fending away the goods they have purchafed, in veffels called chatas and bongos, up the river Chagre. And thus the fair of Porto Bello ends.

Formerly this fair was limited to no particular time; but as a long flay, in fuch a fickly place, extremely affected the health of the traders, His Catholic Majefty tranfmitted an order, that the fair flould not laft above forty days, reckoning from that in which the fhips came to an anchor in the harbour; and that, if in this fpace of time the merchants could not agree in their rates, those of Spain should be allowed to carry their goods up the country to Peru; and accordingly the commodore of the galleons has orders to re-embark them, and return to Carthagena; but otherwife, by virtue of a compact between the merchants of both kingdoms, and ratified by the king, no Spanish trader is to fend his goods, on his own account, beyond Porto Bello; and on the contrary, those of Peru cannot fend remittances to Spain, for purchasing goods there.

Whilft the English were permitted to fend an annual ship, called Navio de Permisso, fhe used to bring to the fair a large cargo on her own account, never failing first to touch at Jamaica, fo that her loading alone was more than half of all those brought by the galleons; for befides that her burthen fo far exceeded five hundred Spanish

VOL. XIV.

tons.

tons, that it was even more than nine hundred, fhe had no provisions, water, or other things, which fill a great part of the hold; fhe indeed took them in at Jamaica, from whence fhe was attended by five or fix fmaller veffels, loaded with goods, which, when arrived near Porto Bello, were put on board her, and the provisions removed into the tenders; by which artifice the fingle fhip was made to carry more than five or fix of the largeft galleons. This nation having a free trade, and felling cheaper than the Spaniards, that indulgence was of infinite detriment to the commerce of Spain.

In the dead time, all the trade ftirring here, confifts in provisions from Carthagena, and cacao and quinquina, down the river Chagre; the former is carried in fmall veffels to Vera Cruz, and the quinquina either deposited in warehouses, or put on board ships, which with permission, come from Spain to Nicaragua and Honduras; these ships also take in cacao. Some small vessels likewise come from the islands of Cuba, La Trinidad, and St. Domingo, with cacao and rum.

Whilf the affiento of negroes fubfifted either with the French or English, one of their principal factories was fettled here, and was of confiderable advantage to its commerce, as being the channel by which not only Panama was fupplied with negroes, but from whence they were fent all over the kingdom of Peru; on which account the agents of the affiento were allowed to bring with them such a quantity of provisions as was thought neceffary, both for their own use, and their flaves of both fexes.

BOOK III.

VOYAGE FROM PORTO BELLO TO PANAMA.

CHAP. I. - Voyage up the Chagre, and Journey from Cruces to Panama by Land.

AS it had always been our fixed defign to ftay no longer than abfolutely neceffary in any place, till we had anfwered the great end of our commiffion, our ardour to enter upon it, together with a defire of quitting this dangerous climate, induced us to make the utmost difpatch. In order to this, we fent advice from Porto Bello to Don Dionysio Martinez de la Vega, president of Panama, of our arrival, the motives of our voyage, and other circumstances, together with His Majesty's orders relating to the affiltance to be given us by all his officers; adding our requests, that he would be pleased to fend one or two of those vessels used on the Chagre, to bring us to Panama, it being impracticable for us to travel thither by land, as some of the instruments were too large for the narrow craggy roads in many parts, and others of a nature not to be carried on mules. This gentleman, who has always shewn a remarkable zeal for every thing dignified with His Majesty's name, was not in the least wanting on this occasion; and his polite reply, which fully answered our most fanguine hopes, was followed by two vessels dispatched to Porto Bello. Immediately on their arrival, we put on board the instruments and baggage, belonging both to the French gentlemen, and ourfelves; and on the 22d of December 1735, departed from Porto Bello.

The land wind being contrary to us, we rowed out of Porto Bello harbour; but the brifas fetting in at nine in the morning, both veffels got under fail; and a frefh gale brought us, at four in the evening of the fame day, to the mouth of the river

370

Chagre,

Chagre, where we landed at the cuftom-houfe; and the next day we began to row up the river.

On the 24th, we endeavoured to proceed in the fame manner, but the force of our oars being too weak to ftem the current, we were obliged to fet the veffels along with poles. At a quarter after one in the afternoon, we meafured the velocity of the current, and found it ten toifes and one foot in forty feconds and an half. In this flow toilfome manner we proceeded till the 27th at eleven in the morning, when we arrived at Cruces, the landing place, about five leagues from Panama. As we advanced up the river we found a great increafe in the velocity of the current, which on the 25th was ten toifes in twenty-fix feconds and a half: on the 26th, at the place where we anchored for that night, ten toifes in fourteen feconds and a half: and on the 27th, at the town of Cruces, the fame fpace in fixteen feconds. Confequently the greateft velocity of the water is two hundred and eighty-three toifes, or about a league, in an hour.

This river, which was formerly called Lagartos, from the number of alligators in it, though now better known by that of Chagre, has its fource in the mountains near Cruces. Its mouth, which is in the North Sea, in 9° 18' 40" north latitude, and 295° 6' longitude, from the meridian of Teneriffe, was difcovered by Lopez de Olano. Diego de Alvites difcovered that part of it where Cruces is fituated; but the first Spaniard who failed down it, to reconnoitre it to its mouth, was Captain Hernando de la Serna, in the year 1527. Its entrance is defended by a fort, fituated on a fteep rock on the east fide near the fea shore. This fort is called San Lorenzo de Chagres, has a commandant and a lieutenant, both appointed by His Majesty, and the garrison is draughted from Panama.

About eight toiles from the above fort, is a town of the fame name. The houses are principally of reeds, and the inhabitants negroes, mulattos, and mestizos. They are a brave and active people, and on occasion, take up arms to the number of triple the usual garrison of the fort.

Opposite, on a low and level ground, stands the royal custom-house, where an account is taken of all goods going up the Chagre. Here the breadth of the river is about one hundred and twenty toiles, but grows narrower gradually as you approach its fource. At Cruces, the place where it begins to be navigable, it is only twenty toiles broad; the nearest distance between this town and the mouth is twenty-one miles, and the bearing north-west 7° 24' westerly; but the distance measured along the feveral windings of the river, is no lefs than forty-three miles.

It breeds a great number of caymanes or alligators; creatures often feen on its banks, which are impaffable, both on account of the clofenefs of the trees, and the bufhes which cover the ground, as it were with thorns. Some of thefe trees, efpecially the cedar, are ufed in making the canoes or banjas employed on the river. Many of them being undermined by the water, are thrown down by the fwellings of the river; but the prodigious magnitude of the trunk, and their large and extensive branches, hinder them from being carried away by the current; fo that they remain near their original fituation, to' the great inconvenience and even danger of the veffels; for the greater part of them being under water, a veffel by ftriking fuddenly on them is frequently overfet. Another obfruction to the navigation of this river is the races, or fwift currents over the fhallows, where thofe veffels, though built for that purpofe, cannot proceed for want of a fufficient quantity of water; fo that they are obliged to be lightened, till they have paffed the fhallow.

3 B 2

The

The barks employed on this river are of two kinds, the chatas and bongos, called in Peru, bonques. The first are composed of feveral pieces of timber, like barks, and of great breadth, that they may draw but litte water; they carry fix or feven hundred quintals. The bongos are formed out of one piece of wood; and it is furprifing to think there should be trees of such a prodigious bulk, fome being eleven Paris feet broad, and carrying conveniently four or five hundred quintals. Both forts have a cabin at the stern, for the conveniency of the passengers, a kind of awning supported with a wooden stancheon reaching to the head, and a partition in the middle, which is also continued the whole length of the vessel; and over the whole, when the vessel is loaded, are laid hides, that the goods may not be damaged by the violence of the rains, which are very frequent here. Each of these require, besides the pilot, at least eighteen or twenty robust negroes; for without such a number, they would not be able, in going up, to make any way against the current.

All the forefts and woods near this river are full of wild beafts, efpecially different kinds of monkeys. They are of various colours, as black, brown, reddifh, and ftriated; there is alfo the fame diverfity in their fize; fome being a yard long, others about half a yard, and others fcarce one third. The flefh of all thefe different kinds is highly valued by the negroes, efpecially that of the red; but however delicate the meat may be, the fight of them is I think, enough to make the appetite abhor them; for when dead, they are fcalded in order to take off the hair, whence the fkin is contracted by the heat, and when thoroughly cleaned, looks perfectly white, and very greatly refembles a child of about two or three years of age, when crying. This refemblance is fhocking to humanity, yet the fcarcity of other food in many parts of America renders the flefh of thefe creatures valuable; and not only the negroes, but the Creoles and Europeans themfelves, make no fcruple of eating it.

Nothing in my opinion, can excel the profpects which the rivers of this country ex-The most fertile imagination of a painter can never equal the magnificence of hibit. the rural landscapes here drawn by the pencil of Nature. The groves which shade the plains, and extend their branches to the river; the various dimensions of the trees which cover the eminences; the texture of their leaves; the figure of their fruits, and the various colours they exhibit, form a most delightful scene, which is greatly heightened by the infinite varitety of creatures with which it is diversified. The different fpecies of monkeys, fkipping in troops from tree to tree, hanging from the branches, and in other places fix, eight, or more of them linked together, in order to pass a river, and the dams with their young on their fhoulders, throwing themfelves into odd poftures, making a thousand grimaces, will perhaps appear fictitious to those who have not actually feen it. But if the birds are confidered, our reafon for admiration will be greatly augmented : for, befide those already mentioned (Book I. chap. vii.), and which, from their abundance, feem to have had their origin on the banks of this river, here are a great variety of others, also eatable, as the wild and royal peacock, the turtle-dove, and the heron. Of the latter there are four or five fpecies; fome entirely white, others of the fame colour, except the neck and fome parts of the body, which are red; others black, only the neck, tips of the wings and the belly white; and fome, with other mixture of colours; and all differing in fize. The fpecies first mentioned are the leaft; the white mixed with black the largeft and most palatable. The flefh of peacocks, pheafants, and other kinds, is very delicate *. The trees along the banks

372

^{*} The fifty tafte, which most of the fowls in this country have, is an exception to their delicacy as food. A.

of this river are furprifingly loaded with fruit; but the pine-apples, for beauty, fize, favour, and fragrancy, excel those of all other countries, and are highly effeemed in all parts of America.

On our arrival at Cruces, we went on fhore, and were entertained by the alcalde of the town, whole house was that of the customs, where an account is taken of all goods brought up the river. Having, with all possible dispatch, got every thing ready for our journey to Panama, on the 29th, at half an hour after eleven in the morning, we fet out, and reached that city by three quarters after fix in the evening. We made it our first business to wait on the prefident, a mark of respect due, not only to his dignity, but also for the many civilities he had fhewn us. This worthy gentleman received us all, and particularly the foreigners, in the most cordial and endearing manner. He alfo recommended to all the King's officers, and other perfons of diffinction in the city, not to be wanting in any good office, or mark of efteem : a behaviour which flewed at once the weight of the royal orders, and his zeal to execute his Sovereign's pleafure.

Some indifpentable preparations which were to be made for the profecution of our journey, detained us longer at Panama than we expected. We however employed our time to the best advantage, making feveral observations, particularly on the latitude and the pendulum; but the proximity of Jupiter at that time to the fun hindered us from fettling the longitude. I also employed myself in taking a plan of the place, swith all its fortifications, and adjacent coaft. At length, all things being in readinefs, we embarked without any farther lofs of time.

CHAP. II. - Description of the City of Panama.

PANAMA is built on an ifthmus of the fame name, the coaft of which is washed by the South Sea. From the obfervations we made here, we found the latitude of this city 'to be 8° 57' 48' $\frac{1}{2}$ north. With regard to its longitude, there are various opinions: none of the aftronomers having been able, from observations made on the spot, to afcertain it, so that it is still doubtful whether it lies on the east or west fide of the meridian of Porto Bello. The French geographers will have it to lie on the eaft fide, and accordingly have placed it fo in their maps; but, in those of the Spaniards, it is on the weft : and I conceive the latter, from their frequent journies from one place to the other, may be concluded to have a more intimate knowledge of their respective fituations; whereas the former, being ftrangers, in a great measure, to those places, have not the opportunity of making fo frequent observations. I allow indeed that, among the Spaniards who make this little journey, the number is very fmall of those who have either capacity or inclination for forming a well-grounded judgment of the road they travel; but there have been also many expert pilots, and other perfons of curiofity, who have employed their attention on it, and from their report the fituation of the city has been determined. This opinion is in fome measure confirmed by our course, the direction of which on the river, from its mouth to the town of Cruces, was eaft 6° 15' foutherly, and the diftance being twenty-one miles, the difference between the two meridians is twenty minutes, the diftance Chagre is fituated to the weft of Cruces. We must also confider the diftance between Porto Bello and Chagre. During the first two hours and a half we failed a league and a half an hour, when, the land-breeze fpringing up, we failed two leagues an hour for feven hours, which in all makes eighteen leagues; and the whole courfe having been very nearly weft, the difference of longitude must have been been forty-four miles, or forty-one, allowing for what might have been wanting of a due weft courfe; and from this again fubtracting the twenty minutes which Cruces lies to the eaft of Chagre, the refult is, that Cruces is fituated twenty-one minutes to the weftward of Porto Bello. To this laft refult muft be added the diftance of meridians between Cruces and Panama, the bearing of which is near fouth-weft and north-eaft; and reckoning that we travelled, on account of the roughnefs and cragginefs of the road, only three quarters of a league an hour, during the feven hours, the whole is fourteen miles, and the difference of meridians ten minutes and a half. Confequently Panama is fituated about thirty minutes weft of Porto Bello; and the Spanish artists are nearer the truth than the French.

The first difcovery of Panama the Spaniards owe to Tello de Guzman, who landed here in 1515; but found only fome fishermen's huts, this being a very proper place for their businefs, and from thence the Indians call it Panama, which fignifies a place abounding in fish. Before this, namely, in the year 1513, Bafco Nunez de Balboa difcovered the South Sea, and took legal posses of it in the names of the Kings of Castile. The difcovery of Panama was, in the year 1518, followed by the fettlement of a colony there, under Pedrarias Davila, governor of Castilla del Oro, the name by which this Terra Firma was then called; and in 1521, His Catholic Majesty, the Emperor Charles V., constituted it a city, with the proper privileges.

It was this city's misfortune, in the year 1670, to be facked and burnt by John Morgan, an English adventurer. He had before taken Porto Bello and Maracaybo; and, retiring to the iflands, he every where published his defign of going to Panama; upon which many of the pirates, who then infelted those feas, joined him. He first failed for Chagre, where he landed fome of his men, and, at the fame time, battered the caftle with his fhips; but his fuccefs was owing to a very extraordinary accident. His ftrength was confiderably diminished by the great numbers killed and wounded by the fort, and he began to think it advisable to retreat; when an arrow, shot from the bow of an Indian, lodged in the eye of one of Morgan's companions. The perfon wounded, rendered defperate by the pain, with a remarkable firmnefs and prefence of mind, drew the arrow from the wound, and, wrapping one of its ends in cotton, or tow, put it into his mufket, which was ready loaded, and difcharged it into the fort, where the roofs of the houfes were of ftraw, and the fides of wood, according to the cultom of that country. The arrow fell on one of the roofs, and immediately fet it on fire, which was not at first observed by the befieged, who were bufy in defending the place; but the fmoke and flames foon informed them of the total deftruction of the fort, and of the magazine of powder, which the flames must foon reach. This unexpected accident filled them with terror and confusion; the courage of the foldiers degenerated into tumult and difobedience; and, every one being eager to fave himfelf, the works were foon abandoned, in order to escape the double danger of being either burnt or blown up. The commandant, however, determined to do all in his power, ftill defended the fort, with fixteen or twenty foldiers, being all that were left him, till, covered with wounds, he fell a victim to his loyalty. The pirates, encouraged by this accident, pufhed their attack with the utmost vigour; and the few people were obliged to furrender the place, which the violence of the flames foon laid in afhes. Having furmounted this difficulty, the greater part of them proceeded up the river in boats and launches, leaving the ships at anchor, for the defence of their new conquest. The detachment having landed at Cruces, marched towards Panama, and, on the Sabana, a fpacious plain before the city, they had feveral skirmishes, in which Morgan always gained the advantage; so that he made himself master of the city, but found it almost forfaken;

forfaken; the inhabitants, on feeing their men defeated, having retired into the woods. He now plundered it at his leifure; and, after flaying fome days, agreed, for a large ranfom, to evacuate it without damaging the buildings; but, after the payment of the money, the city was fet on fire, by accident, as they gave out, and as the hiftory of his adventures relates; but it is much more probable that it was done by defign. To pretend it was owing to accident, feemed to them the beft palliative for their violating the treaty.

This misfortune rendering it abfolutely neceffary to rebuild the city, it was removed to its prefent fituation, which is about a league and a half from the former, and much more convenient. It has a wall of free-ftone, and is defended by a large garrifon of regulars; whence detachments are fent to do, duty at Darien, Porto Bello, and Chagre. Near the city, on the north-weft, is a mountain called Ancon, whofe perpendicular height, by a geometrical menfuration, we found to be one hundred and one toifes.

The houfes, in general, when we vifited this city, were of wood, having but one ftory, and a tiled roof, but large; and from their difpolition, and the fymmetry of their windows, made a handfome appearance. A few were of ftone. Without the walls is an open luburb, larger than the city itfelf, and the houfes of the fame materials and conftruction as those within, except fuch as border on the country, most of which are thatched with ftraw; and among them fome bujios, or huts. The ftreets, both of the city and fuburb, are ftraight, broad, and, for the most part, paved.

Though the greater part of the houfes were formerly of wood, fires were rarely known at Panama, the nature of the timber being fuch, that if any fire is laid on the floor, or placed againft a wall, it is productive of no other confequence than that of making a hole, without kindling into a flame; and the fire itfelf extinguifhed by the afhes. But, notwithftanding this excellent quality in the wood, in the year 1737, the city was almost entirely confumed, the goodness of the timber being unable to fecure it from the ravages of the flames; indeed, by the concurrence of another cause, the timber was then rendered more combustible. The fire began in a cellar, where, among other goods, there were great quantities of pitch, tar, naphtha, and brandy; these inflammable fubftances rendered this fingular kind of wood a more easy prey to the devouring flames. In this conflagration the fuburb owed its fastety to its distance from the city, which is one thousand two hundred toises. Since this misfortune, it has been again rebuilt; and the greater part of the houses are now of ftone, all forts of materials for buildings of this kind being here in the greatest plenty.

In this city is a tribunal or royal audience, in which the governor of Panama prefides; and to this employment is annexed the captainfhip general of Terra Firma, which is generally conferred on an officer of diffinction, though his common title is that of prefident of Panama. It has alfo a cathedral, and a chapter confifting of the bifhop, and a number of prebendaries; an aujutamiento, or corporation, compofed of alcaldes and regidores; three officers of revenue, under an accomptant, treafurer, and agent; and a court of inquifition appointed by the tribunal of inquifition at Carthagena. The cathedral, and alfo the convents, are of ftone; indeed, before the conflagration, feveral of the latter were of wood; but that terrible misfortune fhewed them the neceffity of ufing more folid materials. The convents are those of the Dominicans, Franciscans, Auguftines, and Fathers of Mercy; a college of Jesuits, a numery of the order of St. Clara, and an hospital of St. Juan de Dios. The flender revenues will not admit of their being very numerous; and accordingly the ornaments of the churches are neither remarkably rich, nor contemptible. The decorations of private houfes are elegant, but not coftly; and though there are here no perfons of fuch monftrous fortunes as in fome cities of America, it is not deftitute of wealthy inhabitants, and all have a fufficiency; fo that, if it cannot be claffed among opulent cities, it is certainly above poverty.

The harbour of this city is formed in its road, by the fhelter of feveral islands, particularly Isla de Naos, de Perico, and Flamencos: the anchoring-place is before the fecond, and thence called Perico. The ships here lie very fafe; and their distance from the city is about two and a half, or three leagues.

The tides are regular; and, according to an observation we made on the day of the conjunction, it was high-water at three in the evening. The water rifes and falls confiderably; fo that the fhore, lying on a gentle flope, is, at low water, left dry to a great distance. And here we may observe the great difference of the tides in the North and South Seas, being directly opposite : what in the ports on the North Sea is accounted irregular, is regular in the South; and when in the former it ceafes to increafe or decreafe, in the latter it both rifes and falls, extending over the flats, and widening the channels, as the proper effect of the flux and reflux. This particular is fo general, as to be observed in all the ports of the South Sea; for even at Manta, which is almost under the equinoctial, the fea regularly ebbs and flows nearly fix hours; and the effects of thefe two motions are fufficiently visible along the shores. The fame happens in the river of Guayaquil, where the quantity of its waters does not interrupt the regular fucceffion of the tides. The like phenomena are feen at Paita, Guanchaco, Callao, and the other harbours; with this difference, that the water rifes and falls more in fome places than in others; fo that we cannot here verify the well-grounded opinion entertained by failors, namely, that between the tropics the tides are irregular, both in the disproportion of the time of flood to that of the ebb, and also in the quantity of water rifing or falling by each of these motions; the contrary happening here. This phenomenon is not eafily accounted for; all that can be faid is, that the ifthmus, or narrow neck of land, feparating the two feas, confines their waters, whereby each is fubject to different laws.

The variation of the magnetic needle, in this road, is 7° 39' eafterly. Both the road and whole coaft abound in a great variety of excellent fifh, among which are two kinds of oyfters, one fmaller than the other; but the fmalleft are much the beft.

At the bottom of the fea are a great number of pearls; and the oyfters, in which they are found, are remarkably delicious. This fifthery is of great advantage to the inhabitants of all the iflands in this bay.

The harbour of Perico is the rendezvous of the Peru fleet, during the time of the fair; and is never without barks loaded with provisions from the ports of Peru, and a great number of coafting veffels going from thence to Choco, and parts on the weftern coaft of that kingdom.

The winds are the fame as along the whole coaft; the tides or currents are ftronger near the iflands than at a diftance from them; but no general rule can be given as to their courfe, that depending on the place where the fhip is, with regard to the channels which they form. They also vary in the fame place according to the winds. Let it therefore fuffice that we have flewn there are tides on this coaft, that, on any occasion, this notice may be applied to use.

376

CHAP.

CHAP. III. — Of the Climate and Inhabitants of Panama.

MANY countries of America have fuch a refemblance, in refpect to the inhabitants and cuftoms, that they appear the fame. This is equally obfervable in the climate, when no difference is occafioned by the accidental difpofition of the ground, or quality of the foil. But, this fubject having been already fufficiently handled, a rational curiofity will require us only to mention those particulars in which they differ. Thus, after faying that the inhabitants of this city refemble those of Carthagena with regard to their conflictution, I must add, that there is fome difference in their disposition, those of Panama being more parfimonious, more defigning and infidious, and ftopping at nothing when profit is in view, the pole-ftar both of Europeans and Creoles; and it is difficult to determine which fet the first example. The fame felfishness and parfimony reigns equally among the women, fome Spanish ladies excepted, who have accompanied their husbands, appointed auditors, or to fome other employments; these ftill retaining the qualities they imbibed from education.

The women of Panama begin to imitate the drefs of those of Peru, which, when they go abroad, confifts only of a gown and petticoat, nearly refembling those worn in Spain; but at home, on vifits, and fome particular ceremonies, their fhift is their only clothing from the waift upwards. The fleeves are very long and broad, and quite open in the lower part or near the hand; and thefe, like the bofom, are decorated with very fine lace, the chief pride of the ladies of Panama. They wear girdles, and five or fix chaplets or rows of beads about their necks, fome fet in gold, fome of coral mixed with fmall pieces of gold, and others lefs coftly; but all of different fizes, in order to make the greater flow; and befides thefe, one, two, or more gold chains, having fome relics dependent from them. Round their arms they wear bracelets of gold and tombac; alfo ftrings of pearls, corals, and bugles. Their petticoat reaches only from their waift to the calf of their legs; and from thence to a little above their ancle, hangs, from their under petticoat, a broad lace. The Meftiza, or Negro women, or the coloured women as they are called here, are diftinguished in their dress from those of Spain, only by the gown and petticoat; the particular privilege of the latter, and which also gives them the title of Signora; though many of them have little to boaft of, either with regard to rank or wealth *.

If I omitted in Carthagena the following obfervation, it was in order to referve it for this place; namely, that in Carthagena, Porto Bello, and Panama, the inhabitants have a very fingular pronunciation; and as fome nations have a haughty accent, fome a politenefs in their manner of expression, and others speak in a very quick manner; so here their pronunciation has a faintness and languor, which is very difagreeable, till we are reconciled to it by custom. And what is still more particular, each of these three cities has a different accent in this languor; besides particular fyllables peculiar to each, and no less different than they are from the manner of speaking used in Spain. This may, in some measure, flow from an ill habit of body, weakened by the excessive heat of the climate; but I believe it is principally owing to custom.

The only difference between the climate of Carthagena and this is, that fummer begins later, and ends fooner, as, the longer the brifas delay their return, the fooner they are over. From many thermometrical obfervations made on feveral days without any fentible difference betwixt them at the fame hours, on the 5th and 6th of January

* These customs are general throughout all the northern parts of South America. A. VOL. XIV. 3 C 1736, 1736, at fix in the morning, they found the liquor at $1020\frac{1}{2}$, at noon $1023\frac{1}{2}$, and at three in the afternoon at 1025. But, at the fame time, it must be observed, that the brifas now began to blow, and, confequently it was not the time of the greatest heats; these prevailing in the months of August, September, and October.

Though this climate would naturally be fuppofed to produce the fame plants with others in the fame latitude, it is very different. Nor does this feem to proceed from any defect in the foil, but from the fondnefs of the inhabitants for trade, and their total neglect of agriculture, as too laborious. But, be the real caufe of it what it will, this is certain, that even in the parts contiguous to the city, the land is left entirely to nature; nor does the leaft veftige remain of its being formerly cultivated. From hence proceeds a fcarcity of all things, and, confequently, they are fold at a high price. Here are no pulfe or pot-herbs of any kind; and that this is not owing to the fterility of the earth, we had an evident proof in a fmall garden, belonging to a Gallician, where all things of this kind were produced in great plenty. By this means Panama is under a neceffity of being fupplied with every thing, either from the coaft of Peru, or places in its own jurifdiction.

CHAP. IV. — Of the ufual Food of the Inhabitants of Panama.

THE very want of provisions causes the tables at Panama to be better furnished; and it may be truly faid, that this city subsists wholly by commerce, whatever is confumed in it coming from other places. The ships of Peru are continually employed in exporting goods from that country, and the coasting barks in bringing the products of the several places in its jurifdiction and that of Veraguas. So that Panama is plentifully furnished with the best of wheat, maize, poultry, and cattle. Whether it be owing to the superior goodness of their food, the temperament of the climate, or to fome other cause to me unknown, it is certain that the inhabitants of this city are not fo meagre and pale as those who live at Carthagena and Porto Bello.

Their common food is a creature called Guana. It is amphibious, living equally on the land and in the water. It refembles a lizard in fhape, but is fomething larger, being generally above a yard in length : fome are confiderably bigger, others lefs. It is of a yellowish green colour, but of a brighter yellow on the belly than on the back, where the green predominates. It has four legs like a lizard ; but its claws are much longer in proportion; they are joined by a web, which covers them, and is of the fame form as those of geele, except that the talons at the end of the toes are much longer, and project entirely out of the web or membrane. Its fkin is covered with a thin fcale adhering to it, which renders it rough and hard; and, from the crown of its head to the beginning of its tail, which is generally about half a yard, runs a line of vertical fcales, each fcale being from one to two lines in breadth, and three or four in length, feparated fo as to reprefent a kind of faw. But from the end of the neck to the root of the tail, the fcales gradually leffen, fo as, at the latter part, to be fcarce vifible. Its belly is, in largeness, very disproportionable to its body; and its teeth separated, and very fharp pointed. On the water it rather walks than fwims, being fupported by the webs of its feet; and on that element its fwiftnefs is fuch, as to be out of fight in an inftant; whereas on the land, though far from moving heavily, its celerity is greatly lefs. When pregnant, its belly fwells to an enormous fize; and, indeed, they often lay fixty eggs at a time, each of which is as large as those of a pigeon. Thefe are reckoned a great dainty, not only at Panama, but in other parts where this 10 creature

creature is found. Thefe eggs are all inclofed in a long, fine membrane, and form a kind of ftring. The flefh of this animal is exceedingly white, and univerfally admired by all ranks. I tafted both the flefh and the eggs, but the latter are vifcid in the mouth, and of a very difagreeable tafte: when dreiled, their colour is the fame with that of the yolk of a hen's egg. The tafte of the flefh is fomething better: but, though fweet, has a naufeous fmell. The inhabitants, however, compared it to that of chicken; though I could not perceive the leaft fimilarity *. Thefe people, who, by being accuftomed to fee them, forget the natural horror attending the fight of an alligator, delight in this food, to which the Europeans at first can hardly reconcile themfelves.

Here are two fingularities attributed to Nature, and firmly believed by the inhabitants; one in the plant called Yerva del Gallo; the other, the double-headed fnake, called La Cabeça.

It is conftantly afferted in this city, that its neighbourhood produces a fnake having a head at each extremity; and that from the bite of each a poifon is conveyed equal in activity to that of the coral, or rattle-fnake; we could not have the fatisfaction of feeing one of this ftrange fpecies, though we ufed all the means in our power to gratify our curiofity: according to report, its ufual length is about half a yard, in figure perfectly refembling an earth-worm. Its diameter is about fix or eight lines, and its head different from that of other fnakes; being of the fame dimensions with its body. It is, however, very probable, that the creature has only one head, and, from its refembling a tail, has been imagined to have two \dagger . The motion of it is very flow, and its colour variegated with fpots of a paler tint.

The herb called Del Gallo, or cocks-herb, is fo highly valued here, that they affirm, if an incifion be made round the neck of that fowl, provided the vertebra be not injured, on the application of this herb, the wound immediately heals. Whatever conftruction we put upon this pretended cure, it can only be confidered as a mere vulgar notion; and I mention it here with no other intention, than to fatisfy the world that we were not ignorant of it.

During our ftay at Panama, we were very urgent with thole who related this ftory to procure us fome of the herb, that we might make the experiment; but in this we were as unfortunate as in the article of the two-headed fnake, none being to be had. I have, however, fince been told, by perfons fettled in Panama, that it was very common; a fufficient proof, in my opinion, that the ftory has no foundation; for, if it was fo eafy to be had, and of fuch furprifing virtue, what reafon could they have for refufing to convince us by ocular demonstration? It may have a ftyptic virtue, when none of the principal blood-veffels are injured; but that it can join them after being cut, together with the nerves and tendons when totally fevered, no perfon of any knowledge or judgment will ever be brought to believe. And, if its effects are for remarkably happy on poultry, it is furely natural to think it fhould have the fame on any other animal; and, confequently, on the human fpecies. If this were the cafe, it would be of infinite value; and no foldier, efpecially, fhould be without it, as a few ounces of this grand reftorative would immediately cure the most terrible wounds.

3 C 2

CHAP.

^{*} The flefh of the guana is whiter than chicken, and more pleafing to most palates, except as to the drynefs of it. The common fauce to it is lime juice, feafoned with Chian pepper; which fauce the natives eat with their fifh, flefh, and fowl. If the guana were to be had in England, I doubt not but it would be ranked among the greatest dainties. A.

[†] This conjecture is very right. H.

ULLOA'S VOYAGE TO SOUTH AMERICA.

CHAP. V. — Of the Trade and Commerce of Panama.

FROM what has been faid relating to the commerce of Porto Bello in the time of the galleons, an idea may be formed of that of Panama on the fame occafion; this city being the first where the treasure from Peru is landed, and likewife the staple for the goods brought up the river Chagre. This commerce is of the greatest advantage to the inhabitants, both with regard to letting their houses, the freight of vessels, the hire of mules and Negroes, who, forming themselves into separate bodies, draw along from Cruces large bales, or any brittle and delicate wares; the roads here, though the diftance is but short by crossing the chain of mountains called the Cordilleras, are in some parts fo narrow, that a beast of burden can hardly pass along; and, consequently, an imminent danger would attend the employing of mules for this fervice.

This city, even during the abfence of the armada, is never without a great number of strangers; it being the thoroughfare for all going to the ports of Peru, in the South Sea, as alfo for any coming from thence to Spain: to which must be added, the continual trade carried on by the Peruvian ships, which bring variety of goods, as meal of different forts, wines, brandy from grapes, or brandy castilla, as it is called by all the Americans in thefe parts, fugar, tallow, leather, olives, oil, and the like. The fhips from Guayaquil bring cacao, and quinquina or Jefuits' bark; which always meet with a quick exportation here, efpecially in time of peace. All goods, particularly those of Peru, are fubject to great alterations in their prices, fo that, on many occasions, the owners lofe confiderably, and fometimes their whole purchafe: on the other hand, there are favourable opportunities, when they triple it, according to the plenty or fcarcity of the commodity. The different forts of meals are in particular fubject to this accident; they foon becoming fo extremely vitiated by the great heat, that there is an abfolute neceffity for throwing them overboard. The wines and brandies alfo, from the heat of the jars, contract a pitchy tafte, and are foon unfit for ufe. The tallow melts, becomes full of maggots, and turns into a kind of earth; the fame may be obferved of other goods. Hence, if the gain is fometimes great, the rifk of the lofs is proportional.

The coafting barks, which make frequent trips from the adjacent ports, fupply the city with hogs, poultry, hung-beef, hogs'-lard, plantanes, roots, and other eatables; with all which, this city, by the induftry of others, is abundantly fupplied.

The Peru and Guayaquil veffels, unlefs at the time when the armada is here, return empty, except when they have an opportunity of taking Negroes on board; as, while the affiento fubfifts, there is at Panama a factory, or office, which corresponds with that at Porto Bello; and hither the Negroes are brought, as being, in fome measure, the staple for them, with regard to the kingdoms of Terra Firma and Peru.

The prefident of Panama is invefted with a power of licenfing every year one or two fhips, which go to Sonfonate, el Realejo, and other ports in the province of Guatemala and New Spain, to fetch from thence tar, naphtha, and cordage, for the veffels belonging to the Panama trade; they carry thither fuch parts of the Peruvian goods as do not find a market at Panama; but few of the fhips which have obtained this permiffion return immediately; for the most profitable part of their trade confisting of indigo, they make the best of their way to Guayaquil, or other ports farther to the fouthward. The dearness of provisions in this city and its diffrict, occasioned by the large quantity required, and the great diffance from whence they are brought, is amply compensated by the multitude and value of the pearls found in the oysters of its gulf; and particularly those near the islands del Rey, Tabaga, and others, to the number of forty-three, forming ing a fmall archipelago. The first to whom the Indians made this valuable difcovery was Bafco Nunez de Balboa, who, in his paffage this way, to make farther difcoveries on the South Sea, was prefented with fome by Tumaco, an Indian prince. At prefent they are found in fuch plenty, that there are few perfons of fubstance near Panama, who do not employ all, or, at least, part of their flaves in this fishery, the manner of which not being commonly known, it will not be improper to defcribe it here.

The owners of the Negroes employ the most proper perfons for this fifnery; which being performed at the bottom of the fea, they mult be expert fwimmers, and capable of holding their breath a long time. These they fend to the islands, where they have huts built for their lodgings, and boats which hold eight, ten, or twenty Negroes, under the command of an officer. In these boats they go to fuch parts as are known to produce pearls, and where the depth of water is not above ten, twelve, or fifteen fathom. Here they anchor; and the Negroes having a rope fastened round their bodies, and the other end to the fide of the boat, they take with them a finall weight, to accelerate their finking, and plunge into the water. On reaching the bottom, they take up an oyfter, which they put under the left arm; the fecond they hold in their left hand, and the third in their right : with these three oysters, and sometimes another in their mouth, they rife to breathe, and put them in a bag. When they have refted themfelves awhile, and recovered their breath, they dive a fecond time; and thus continue, till they have either completed their tafk, or their ftrength fails them. Every one of these Negro divers is obliged daily to deliver to his mafter a fixed number of pearls; fo that when they have got the requifite number of oyfters in their bag, they begin to open them, and deliver the pearls to the officer, till they have made up the number due to their mafter; and if the pearl be but formed, it is fufficient, without any regard to its being fmall or faulty. The remainder, however large or beautiful, are the Negro's own property, nor has the mafter the leaft claim to them; the flaves being allowed to fell them to whom they pleafe, though the mafter generally purchafes them at a very fmall price.

These Negroes cannot every day make up their number, as in many of the oysters the pearl is not at all, or but imperfectly formed; or the oyster is dead, whereby the pearl is so damaged, as to be of no value; and as no allowance is made for such pearls, they must make up their numbers with others.

Befides the toil of this fifhery, from the oyfters ftrongly adhering to the rocks, they are alfo in no fmall danger from fome kinds of fifh, which either feize the Negroes, or, by ftriking on them, crufh them by their weight againft the bottom. So that thefe creatures feem to know that men are robbing them of the moft valuable product of their element, and therefore make a moft vigorous defence againft their enemy. The fifhery on the whole coaft is obnoxious to the fame danger from thefe fifh; but they are much more frequent where fuch riches abound. The fharks and tintoreras, which are of an enormous fize, feed on the bodies of thefe unfortunate fifhermen; and the mantas, or quilts, either prefs them to death by wrapping their fins about them, or crufh them againft the rocks by their prodigious weight. The name manta has not been improperly given to this fifh, either with regard to its figure or property; for being broad and long like a quilt, it wraps its fins round a man, or any other animal that happens to come within its reach, and immediately fqueezes it to death. This fifh refembles a thornback in fhape, but is prodigioufly larger.

Every Negro, to defend himfelf againft thefe animals, carries with him a fharp knife, with which, if the fifh offers to affault him, he endeavours to ftrike it in a part where it has no power to hurt him; on which the fifh immediately flies. The officers keep a watchful eye on thefe voracious creatures, and, on difcovering them, fhake the ropes

fastened

fastened to the Negroes' bodies, that they may be upon their guard; many, on the divers being in danger, have thrown themselves into the water, with the like weapon, and hasten down to their defence: but too often all their dexterity and precaution is not sufficient to protect the diver from being devoured by these fish, or losing one of his legs or arms by their bite. Several ineffectual schemes have been practifed, to prevent fuch melancholy accidents.

The pearls of thefe fifheries are generally of a good water, and fome very remarkable, both in their fhape and fize; but as there is a difference in both thefe properties, fo there is alfo a difference in their water and colour; fome being highly valuable, and others as remarkably defective. Some of thefe pearls, though indeed but few, are fent to Europe, the greater part being carried to Lima; where the demand for them is very great, being not only univerfally worn there by all perfons of rank, but alfo fent from thence into the inland parts of Peru.

Befides thefe pearls, the kingdom of Terra Firma was formerly equally remarkable for the fine gold produced by the mines in its territories; and which confequently proved a very confiderable addition to its riches. Part of thefe mines were in the province of Veraguas, others in that of Panama; but molt, alfo the richeft, and whofe metal was of the fineft quality, were in the province of Darien; and, on that account, the conftant object of the miners. But the Indians revolting, and making themfelves mafters of the whole province, there was a neceffity for abandoning thefe mines, by which means the greater part of them were loft; a few only remaining on the frontiers, which ftill yield a fmall quantity of gold. Their produce might indeed be increafed, did not the fear of the fickle nature of the Indians, and the fmall confidence that can be placed on their apparent friendfhip, deter the mafters of the mines from taking proper meafures for improving them.

Though the mines of Veraguas and Panama are not exposed to these dangers, yet they are not worked with more vigour than the others; and this for two reasons: the first is, that, besides their being less rich in metal than the others, the gold they yield is not of so good a quality as that of Darien: the second, and indeed the most weighty, is, that as these feas, by their rich produce of pearls, offer a more certain, and at the same time a more easy profit, they apply themselves to this fishery preferably to the mines. Some, indeed, though but few, are worked, besides those above mentioned, on the frontiers of Darien.

Befides the advantage arifing to Panama from its commerce, as the revenue here is not equal to the difburfements, a very confiderable fum of money is annually remitted hither from Lima, for the payment of the troops, the officers of the audience, and others in employment under His Majefty.

CHAP. VI. - Extent of the Audience of Panama, in the Kingdom of Terra Firma.*

THE city of Panama is not only the capital of its particular province, but alfo of the whole kingdom of Terra Firma, which confifts of the three provinces of Panama, Darien, and Veraguas. The first is the feat of every branch of the government, as being fituated between the other two; Darien lying on the east fide, and Veraguas on the west.

* The appellation of Terra Firma has been abfurdly extended by our mariners to Caraccas, &c.

The kingdom of Terra Firma begins northwards at the river of Darien, and ftretching along by Nombre de Dios, Bocas del Toro, Bahia del Almirante, is terminated weftward by the river de los Dorados in the North Sea; and towards the South Sea, beginning on the weftern part, it extends from Punta Gorda, in Cofta Rica, by Punta de Mariatos, Morro de Puercos, to the gulf of Darien; whence it continues fouthward along the coaft, by Puerto de Pinas, and Morro Quemado, to the bay of St. Bonaventura. Its length from eaft to weft is one hundred and eighty leagues, but if meafured along the coaft, it exceeds two hundred and thirty; and its breadth, from north to fouth, is the fame as that of the ifthmus, which includes the whole province of Panama, and part of that of Darien. The narroweft part of this ifthmus is from the rivers Darien and Chagre, on the North Sea, to thofe of Pito and Camito on the South Sea: and here the diftance, from fea to fea, is about fourteen leagues. Afterwards it increafes in breadth towards Choco and Sitara; and the fame weftward in the province of Veraguas, forming an interval of forty leagues from fea to fea.

Along this ifthmus run those famous chains of lofty mountains, called the Andes, which, beginning at fuch a prodigious diftance as the Terra Magellanica, traverfe the kingdom of Chili, the province of Buenos Ayres, and thence through the provinces of Peru and Quito; and from the latter, contract themfelves, as it were, for a paffage through this narrow ifthmus. Afterwards, again widening, they continue their courfe through the provinces and kingdoms of Nicaragua, Guatemala, Cofta Rica, St. Miguel, Mexico, Guajaca, la Puebla, and others; with feveral arms or ramifications, for ftrengthening, as it were, the fouthern with the northern parts of America.

In order to give the reader a comprehensive idea of this kingdom, I shall speak particularly of each of its three provinces, beginning with that of Panama as the principal. Most of its towns and villages are fituated in small plains along the shore, the rest of the country being covered with enormous and craggy mountains, uninhabited on account of their sterility.

In this province are three cities, one town, a few forts, villages, and country feats; the names of which, with the tribes of the inhabitants, are here fubjoined.

The cities are Panama, Porto Bello, and Santiago de Nata de los Cavelleros. The fituation of the latter was first discovered, in the year 1515, by captain Alonzo Perez de la Rua, at which time Nata was prince of this district. Gaspar de Espinosa was first commissioned to people it, under the title of a town. It was afterwards taken and burnt by the Indians, but he rebuilt it, and called it a city. It is large, but the chief houses are only of earth, or unburnt bricks, and the others of mud walls. Its inhabitants are a mixture of Spaniards and Indians.

The town called los Santos is a modern fettlement of Spaniards, who before lived at the city of Nata, but, with a view of augmenting their fortune by improving the ground, left the city; and the inhabitants of the town are at prefent more in number than thofe of Nata. Its environs were first difcovered by Rodrigo Valenzuela, and at that time contained an Indian town, governed by a prince called Guazan: the origin of the town fufficiently specified by Spaniards and Indians.

The number of villages in this province is very confiderable, and of different kinds.

1. Nuestra Senora de Pacora, to which we give the preference, is inhabited by Mulattos and their defcendants.

2. San Christoval de Chepo owes its name to the caciques, or princes, Chepo and Chepauri, and was difcovered in 1515, by Tello de Guzman. Befides Indians, here is a company of foot, belonging to the garrifon of Panama, most of whom are fettled here with their families.

Several Rancherias, or affemblages of Indian huts, are under the jurifdiction of a village. These Rancherias are fituated to the fouthward, in the small chasms or breaches of the mountains.

In the favannahs of the river Mamoni are feveral fuch affemblages of huts, and within the fame jurifdiction; namely,

On the river De la Campana.

In the breach of Curcuti.

On the banks and at the mouth of the river Canas.

On the river Del Platanar.

On the river de Pinganti.

On the river De Bayano.

In the breach De Terralbe.

In that of Platanar.

In that of Calobre.

In that of Pugibay.

In that of Marcelo.

On the river de Mange.

Under the jurifdiction of the fame village are also the following Rancherias, fituated to the northwards.

On the river Del Playon.

On the fmaller river De la Conception.

On the river de Guanacati.

On the river Del Caco, or Mandinga.

On the river De Sarati.

3. The village of San Juan, fituated on the road between Panama and Porto Bello, is inhabited by Mulattos and their defcendants.

4. The village of Nuestra Sinor de la Confolation, a Negro fettlement.

5. The village De la Santifima Trinidad de Chame, difcovered by Captain Gonzalo de Badajoz, and called Chame from its prince at that time, is inhabited by Spaniards and Indians.

6. The village of St. Ifidro de Quinones, difcovered by the fame officer, and then governed by its prince Totronagua : its prefent inhabitants Spaniards and Indians.

7. The village of St. Francisco de Paula, in the Cordillera; also inhabited by Spaniards and Indians.

8. The village of St. Juan de Pononome, fo called from the name of its cacique; its inhabitants are Indians, who ftill retain the bow and arrow, at which they are very dextrous, and of an intrepid bravery.

9. The village of Santa Maria is fituated in a tract of land difcovered by Gonzalo de Badajoz. The name of its last prince was Efcolia; it is at prefent wholly inhabited by Spaniards.

10. The village of Santo Domingo de Parita, the last word being the name of its prince. It was formerly inhabited wholly by Indians, but at prefent there are many Spaniards among them.

11. Taboga, Taboguilla, and other iflands, near which the pearl fifheries are carried on, were difcovered by the order of Pedro Arias Davila, the first governor and captaingeneral of the kingdom of Terra Firma. In these islands are houses belonging to Spaniards, and huts for the Negro divers.

12, The

384

12. The iflands del Rey were difcovered by Gafpar de Morales and Captain Francifco Pizarro. In these islands some Spaniards have houses, besides great numbers of Negro divers.

Second Province of Terra Firma.

THE fecond province of this kingdom is that of Veraguas, of which the city of Santiago is the capital. The firft who difcovered this coaft was Admiral Chriftopher Columbus, in 1503. To the river now called Veragua, he gave the name of Verdesaguas, on account of the green colour of its water; or, according to others, becaufe the Indians called it by that name in their language. But, however that may be, it is from this river that the province derives its name. In 1508, the Captains Gafpar de Efpinofa, and Diego de Alvirez, renewed the difcovery by land; but being repulfed by prince Urraca, were obliged to content themfelves with a fettlement in the neighbourhood : and even here the Spaniards were not able to maintain their ground againft the frequent incurfions of the Indians; fo that, finding the abfolute neceffity of a ftronger fettlement, they built the city of Santiago de Veraguas on the fpot where it now ftands.

Befides this city, the province contains two others, and feveral villages.

The city of Santiago al Angel was founded in 1521 by Benedict Hurtado, governor of Panama: it has been twice deftroyed and rebuilt: the inhabitants partly Spaniards, partly Mulattos.

The city of Nuestra Senora de los Remedios de Pueblo-Nuevo; the inhabitants the fame as those of the former.

1. The villages in this province are San Francisco de la Montana, inhabited by Indians using bows and arrows.

- 2. San Miguel de la Haya, inhabited by different forts of people.
- 3. San Marcelo de Leonmefa de Tabarana, inhabited by Indians.
- 4. San Raphael del Guaymi, by Indians.
- 5. San Philipe del Guaymi, by Indians.
- 6. San Martin de los Caftos, by Indians.
- 7. San Augustin de Ulate, by Indians.
- 8. San Jofeph de Bugava, by Indians.
- 9. and 10. La Piedad, and San Miguel, by Indians.
- 11. San Pedro, and San Pablo de los Platanares, by Indians.
- 12. San Pedro Nolofco, by Indians.
- 13. San Carlos, by Indians.

Third Province of Terra Firma.

THE third province of Terra Firma is that of Darien, where the greater part of the inhabitants are wandering Indians, living without any religion, and in the most flocking barbarism, which was indeed the motive of their revolt. In 1716, there was here a confiderable number of villages, Rancherias, and Doctrinas *, whose inhabitants had sworn allegiance to the King of Spain, and therefore under the governors of Panama;

* A name, given by the Jesuits, to Indian communities, which they have gathered together and civilized.

VOL. XIV.

though,

though, at prefent, very few are remaining. Those remaining in the above-mentioned year, were,

1. The village and staple for the mines of Santa Cruz de Cana, a very confiderable fettlement of Spaniards and Indians.

2. The village De la Conception de Sabalo, inhabited like the preceding, but lefs populous.

3. The village of San Miguel de Tayequa ; inhabitants the fame. 4. The village of San Domingo de Balfas, inhabitants like the others, being Spaniards and Indians.

5. Spanish village, in the territory of Santa Marica.

6. The Doctrina San Geronymo de Yabira, a word in the Indian language fignify. ing Doncel, i. e. a virgin; and, for this reafon, the river near it is called Rio Doncel, or Virgin River.

7. San Enrique de Capeti, or the fleepy.

8. Santa Cruz de Pucro. In the Indian language, Pucro fignifies a fort of light wood, which, at Guayaquil, is called Balfa.

9. The Doctrina de San Juan de Tacaracuna, and Matarnati; the names of two of the mountains of the Andes, contiguous to the community.

10. The Indian village of San Jofeph de Zete-Gaati, is not a Doctrina. Zete-Gaati is the name of a kind of willow growing in the neighbourhood.

Rancherias and Hamlets in the Southern Parts.

The hamlet of Nuestra Senora del Rofario de Rio Congo. Other hamlets on the rivers Zabalos, Balfas, and Uron. On the river Tapanacul. On the river Pucro. On the banks, and at the mouth of the river Paya. At Los Paparos, or the Peafants. On the river Tuquefa. On the river Tupifa. On the river Yabifa. And at Chepigana.

Rancherias and Hamlets in the Northern Parts.

On the river Queno. On the Seraque. On the Sutagunti. On the Moreti. On the Agrafenequa. On the Ocabajanti. On the Uraba.

All thefe Doctrinas and communities were formerly of Indians, and not inconfiderable, fome of the latter confifting ci four hundred perfons; but their general number was between one hundred and fifty and two hundred; from whence we may form an idea of the populoufnefs of these Doctrinas. But, to fave the trouble of computing 2 the

386

the feveral inhabited places in this kingdom, as I thought proper to infert their names, I fhall conclude with a concife lift of all thefe places, which will affift the reader in forming fome idea of this country.

Recapitulation of all the inhabited Places in the Kingdom of Terra Firma.

Four fortreffes. Six cities.

One town of Spaniards and Indians.

Thirty-five villages -

- Eleven of Spaniard and Indians. Two of Mulattos and Negroes. Twenty-two of Indians, most of them Doctrinas.

Thirty-two Rancherias or hamlets, each containing feveral cottages fcattered among the breaches, along the fides of rivers and favannahs.

Forty-three islands, where the pearl-fishery is carried on, fome of them in the bay of Panama, fome near the coaft of that city, and others fouth of Veraguas.

BOOK IV.

VOYAGE FROM PERICO HARBOUR TO GUAYAQUIL.

CHAP. I. - Voyage from Perico to the City of Guayaquil.

UR tents and other neceffaries being ready, we all embarked on board the St. Chriftopher, captain Don Juan Manuel Morel; and the next day, being the 22d of February 1736, we fet fail; but having little wind, and that variable, it was the 26th at funfet before we lost fight of the land, the last we faw being Punta de Mala.

By remarks repeatedly made till we loft fight of this laft point, and which agreed with obfervations, but differed from those by account, we found the fetting of the current to be fouth-weft 5° wefterly; which observation corresponded with the accounts given us by able pilots, who affured us it continued to three or four degrees of latitude; and, according to their farther information, we corrected our daily account at one mile and one fixth per hour; and found their information to be well founded. But it is neceffary to obferve, that, till our fhip was off Punta de Mala, there was no visible current; and that, whilft we continued failing in the gulf of Panama, the latitude by account agreed with the observed.

From the time we fet fail, till Punta de Mala bore from us north-west 6° 30' westerly. we continued to fteer S. S. W. 1° 30' and 8° 30' wefterly: the winds variable with calms.

After paffing Punta de Mala, we steered S. between 8° westerly and 2° 30' easterly, till fix in the evening of the first of March 1736, when we discovered the land contiguous to St. Matthew's bay. Upon which we flood to the S. W. to avoid a ledge of rocks, which runs three leagues into the fea, and alfo the currents, which fet towards it, and Gorgona bay.

This

This ledge of rocks was difcovered in 1594, by a fhip's ftriking on it.

From St. Matthew's bay, we, for fome hours, fteered fouth-weft 6° 15' wefterly; and the next day fouth-east and one-fourth foutherly; which, being the third day, at one in the afternoon, brought us in fight of Cape St. Francis, bearing north onefourth eafterly.

According to the reckoning of Don George Juan, the difference of meridians between Panama, and Cape St. Francis was 09 36'; which nearly agrees with the map of this coaft. It muft, however, be fuppofed that the diftance between each knot on the logline was forty-feven feet by five and an half royal inches, which is equal to fifty and an half English feet : this confirms what we have already observed, book I. chap. i. and proves the justness of our observations on the currents.

Having weathered this cape, we fteered weft 3° foutherly; fouth-weft 3° wefterly; and on the 6th and 7th fouth 7° eafterly, and fouth-eaft 6° eafterly; till on the 7th, at eight in the morning, we again made Cape St. Francis, bearing north 5° eafterly, and Cape Paffado fouth ; after which we coafted along fhore, obferving the most remarkable parts, till the 9th, when, at half an hour after three in the evening, we came to an anchor in Manta bay, in eleven fathom water, the bottom mud mixed with fand : Cape St. Lorenzo, bearing weft-fouth-weft and Monte Chrifto fouth-fouth-eaft 6° eafterly.

Two reafons induced us to anchor here: the first was, that as part of the intention of our original voyage was to meafure fome degrees of the equator, befides those of the meridian; and having been informed at Panama of the fituation of this coaft, we were defirous of viewing it, in order to know whether, by forming our first base on its plains, the feries of triangles could be continued to the mountains contiguous to Quito: the fecond, the want of water and provisions; for the feason being pretty far advanced, we had flattered ourfelves, while at Panama, with falling in with the brifas, and by that means of foon reaching Guayaquil; and had therefore taken in provisions only for fuch a fhort voyage.

In order to fatisfy ourfelves with regard to our first and principal view, we all went on fhore on the 10th in the evening to the village of Monte Chrifto, about two leagues and a half from the coaft. But we foon found any geometrical operations to be impracticable there, the country being every where extremely mountainous, and almost covered with prodigious trees, an infurmountable obfruction to any fuch defign. This being farther confirmed to us by the Indian inhabitants, we determined to purfue our voyage to Guayaquil, and thence to Quito. Accordingly, on the 11th we returned to the coaft of Manta, where, whilft the fhip was taking in water and provision, we employed ourfelves in making obfervations, by which we found the latitude of this place to be 56' $5\frac{1}{2}$ " fourth. But Meffrs. Bouguer and De la Condamine, reflecting that our flay at Guayaquil would be confiderable before the feafon would permit the mules to come from Guaranda to carry us to the mountains, and defirous of making the beft use of their time, determined to flay here, in order to make further obfervations on the longitude and latitude, that they might afcertain the place where the equator cuts this coaft, examine the length of the pendulum, and make other obfervations equally important. Accordingly proper inftruments were left with them.

On the 13th of the fame month of March, our veffel put to fea, keeping along the coast, and passed the next day within the island de la Plata. The 15th we began to lose fight both of Cape St. Lorenzo, and also of the island; at one in the afternoon we steered fouth-fouth-east, till the 17th, when we discovered Cape Blanco, the fouth point of the Bay of Guayaquil. From Cape Blanco we coafted along the bay, till, about noon on the 18th, coming to the mouth of the river Tumbez, we anchored anchored about half a league from the land; the river's mouth bearing eaft five degrees northerly, and the ifland of Santa Clara, commonly called Amortajado, or Muerto, from its refembling the figure of a human corpfe, north four degrees eafterly, in fourteen fathoms water, and a muddy bottom.

Some particular affairs of the captain of the fhip obliged us to remain here till the 2cth, when, at fix in the morning, we weighed; and at half an hour after fix in the evening, the ftrength of the current on the ebb obliged us to come to an anchor. Thus we continued anchoring every ebb, and failing during the flood. And here we found that the current always fets out of the bay, though with much lefs velocity on the flood than on the ebb; for we obferved that the tide never altered its direction in nineteen hours and a half. The caufe of this phenomenon is fuppofed to be, the prodigious quantity of water difcharged into it by the rivers. On the 23d, having come to an anchor off Punta de Arenas in the ifland of Puna, we fent on fhore for a pilot to carry in our fhip; for, though the diftance was only feven leagues, the great number of fhallows in this fhort paffage rendered a precaution of this kind prudent, if not abfolutely neceffary; and on the 24th, at feven in the morning, we fafely anchored in Puna harbour, Cape Centinela bearing fouth-fouth-weft 2° 30' wefterly, and Cape Maria Mandinga weft-north-weft 1° 15' wefterly, diftant one quarter of a league.

From Punta de Mala to St. Matthew's bay, we had the wind first at north, and north-west; afterwards it shifted to the north-east, and during the last day veered to the east-north-east; but when we came in fight of this bay, changed again to north, being preceded by rains, which continued till our arrival at Manta, the winds having shifted to the fouth-east, fouth, and south-west and west, but with some variations from all those points.

I have already mentioned that at St. Matthew's bay it was not only the opinion of the pilots relating to the currents which fet towards Gorgona, but alfo our own experience, that induced us to alter our courfe, which was neceffary, in order to continue our voyage. All the reft of the coaft, from Cape St. Francis to Manta, they fet to the north, and this prevented us from getting to windward, and obliged us to tack, as the wind was contrary.

In our paffage from Manta to Cape Blanco, the winds were not lefs favourable, continuing as before, except a few gales at north-weft and north-north-eaft, till we made the above cape. The currents here alfo fet to the northward, and from Cape Blanco to Puna harbour, to feaward, that is, towards the weft; but, as we have before obferved, a greater velocity on the ebb than on the flood.

Being very defirous of obferving an eclipfe of the moon, which was to happen on the 26th of March, and our time for preparing for it being but fhort, we concluded to ftay at a little village fituated in this harbour; but finding thefe houfes, which were entirely built of canes, too weak to fupport the pendulum, we determined to make the beft of our way to Guayaquil; and accordingly, at half an hour after eleven at night we left the fhip at anchor, and went to the city in a boat; and, at five in the evening of the 25th, by the vigour of our rowers, we arrived at Guayaquil, notwithftanding the ftrength of the tide againft us. Here we immediately applied ourfelves to fettle the pendulum; but our diligence was entirely fruftrated, the air being fo filled with vapours, that nothing was to be feen.

It may not be amifs here to infert the variations we observed in different parts of the South Sea, in the same order with those observed from Cadiz to Carthagena.

A Table of Variations observed in several Parts of the South Sea, the Longitude reckoned from the Meridian of Panama.

We fhould, for feveral days, have been without knowing certainly the latitude, an object of the laft importance in any voyage, had not Mr. Godin had the precaution to take with him a Hadley's quadrant. This ingenious gentleman having been pitched upon for the voyage to America, undertook a journey to London, purely to purchafe feveral inftruments, and among others bought that already mentioned, and which proved of the greateft ufe to us in finding the latitude during this paffage; a point the more difficult and neceflary, on account of feveral perplexing circumftances, the courfe being fometimes north, fometimes fouth, and the currents fetting in the fame direction. Affifted by this inftrument, we were enabled to take the meridian altitude of the fun, whilft, from the denfity of the vapours which filled the atmosphere, the fhadow could not be defined on the usual inftruments.

CHAP. II. - Account of the Voyage from Perica to Puna.

THE brifas, by their return, as we before obferved, occasion an alteration in the weather of Panama, by introducing the fummer, as they also do in the passage from Perico Perico to Puna, or more properly, to Cape Blanco; for, after the brifas have begun to blow at Panama, they gradually increafe and fpread in oppofition to the fouth winds, till, overcoming them, they are fettled: but their periods are not always equal, either on the land or in the ocean. Generally the brifas do not reach beyond the equator, or are fo faint, as often to be interrupted by calms, or other weak and unfettled winds. Sometimes, indeed, they have an extraordinary ftrength, being felt even to the ifland of Plata: but their greateft force is gradually increafed as we approach nearer to Panama. Thefe winds, which blow from between the north and north-eaft, clear the atmofphere, free the coaft from fogs, and are not attended with tempefts of rain; but frequently fo fqually, efpecially between Cape Francifco and the Bay of Panama, that, without particular care and the utmost difpatch in putting the fhip in a proper condition, they are often dangerous.

At the period of the brifas, the fures or fouth winds begin to blow, and, when fettled, are more violent than the former. But they do not, as many have imagined, blow always precifely from the fouth; for they fhift from the fouth-eaft even to the fouth-weft, and their diftance from the fouth is obferved to be greateft at particular times. When they incline to the fouth-eaft, which is the land fide, they are accompanied with violent, but happily fhort tempefts of wind and rain. The fhips which trade from the coafts of Peru and Guayaquil to Panama, generally fail during the fures, in order to take the benefit of the north wind at their return, and, by that means their voyages are eafily and expeditioufly performed. Sometimes, indeed, they fail with other winds, though they are generally longer at fea, in order to reach Paita; but often this diligence, or rather avarice, is fo far difappointed, that they are obliged to put in at Tumaco, Acames, Manta, or Punta de Santa Elena, for provifions and water.

These are the principal winds in this passage; and whatever changes may fometimes happen, they are not of any continuance, the fettled wind foon recovering its place.

The currents in these parts are not fo regular as the winds; for, during the brifas, the waters run from Morro de Puercos south-west and west, to the height of Malpelo; and from thence east and east-fouth-east to Cape St. Francis, inclining something towards Gorgona. From Cape St. Francis, their direction is south and fouth-west, which continues for thirty or forty leagues seawards, the strength of them being proportionate to that of the brifas.

During the feafon of the fures, or fouth winds, the currents run north and north-weft from Punta de Santa Elena, as far as Cape St. Francis, extending thirty or forty leagues feawards; from hence they run with a great velocity eaft, as far as the meridian of Malpelo; and from Morro de Puercos fouth-eaft along the coaft, though at fome diftance from it, and tending partly to the bay of Gorgona. But from the meridian of Malpelo to Morro de Puercos, they run with great violence north-weft and weft. Alfo in the paffage from Cape Blanco to Cape Santa Elena, a violent current runs weft from the river of Guayaquil, during its fwellings; but when the river is low, the current fets into Puna bay: the time of the former is during the brifas, and the latter in the feafon of the fures.

At all times, in leaving Perico to fail to Guayaquil, or the coaft of Peru, care muft be taken to keep at a proper diftance from the ifland of Gorgona, many inftances having happened of fhips being loft either by this negligence, or more frequently, by calms. It is alfo equally neceffary to be careful of the ifland of Malpelo; but the latter is of the two the leaft dangerous, as the greatest detriment is only a longer delay of the voyage. If a fhip happens to come in fight of the island of Gorgona, it will be found very difficult to get clear of it by fteering either fouth fouth-west, or even north, so that the furest method is to return towards Panama along the coast, the currents there changing their direction; at the same time taking care not to keep at a great distance from it, to avoid being again carried away by the current, which sets south-east.

The land all along the coaft from Panama to Santa Elena is of a middling height, except in fome parts, where we difcern mountains at a vaft diftance, and very high; being part of the Cordillera. Monte Chrifto is the land-mark of Manta, being a high mountain, and having a village of the fame name at its foot.

In the bays along this coaft, and particularly at the mouths of rivers, it is dangerous to keep clofe to the fhore, there being many fhallows not known even to the pilots of the country. In the bay of Manta, there is one at the diffance of three or four leagues from the fhore, on which feveral fhips have ftruck; but the water is here fo fmooth, that all the damage they fuffained was, their being obliged to be immediately careened, in order to ftop the leaks occafioned by the accident.

In all this paffage a rough fea is feldom met with; for, if it be fometimes agitated by fqualls and fhort tempefts, it foon fubfides after the ftorm is over. Whilft the fouth winds prevail, fogs are very frequent, and fometimes fo thick as totally to preclude all fight of the coaft. This we ourfelves partly experienced in our paffage: whereas during the brifas, it is quite the contrary: the air is ferene, and the coaft fo clear as to be approached with confidence and fafety.

CHAP. III. — Of our Stay at Guayaquil, and the Measures taken for our Journey to the Mountains.

THE fhip St. Chriftopher, which we left at Puna, followed us fo foon, that on the 26th in the evening fhe came to an anchor before the city; the next day all our baggage and inftruments were landed, and we began our obfervations for determining the fituation of Guayaquil, with regard to its latitude and longitude. The defire of fucceeding rendered us very attentive to obferve an immerfion of the fatellites of Jupiter, to make amends for our difappointment of the eclipfe of the moon; but we were in this equally unfortunate; the denfity of the vapours which filled the atmosphere rendered our defign abortive; but, the days being more favourable than the nights for aftronomical obfervations, we took feveral meridian altitudes of the fun, and never neglected any opportunities that offered, during the nights, of doing the fame with regard to fome particular ftars.

On our arrival at Guayaquil, the corregidor of that city, whole great civility, together with that of all the King's officers and other perfons of diffinction, deferves our acknowledgments, fent notice of it to the corregidor of Guaranda, that he might order carriages to the port of Caracol, for conveying us to the mountains. The paffage thither was then indeed impracticable; it being in this country the end of winter, at which time the roads are extremely bad, and the rivers fwelled fo as not to be forded without the greateft rifk, and too wide for the bridges of this country.

The corregidor of Guaranda was then at Quito on fome bufinels of his office; but the prefident and governor of that province, Don Dionyfio de Alcedoy Herrera, ordered him to return to his jurifdiction without delay, for providing every thing neceffary for our journey; fending, at the fame time, circular orders to all the other corregidors, through whole jurifdictions we were to pals to Quito, enjoining them not to be wanting wanting in any kind of good office in their power. Every thing being thus happily difpofed, and advice arriving that the mules were on their way to Caracol, where they arrived the 6th of May, we were no lefs expeditious to embark on the river, which is the ufual paffage. There is indeed a road by land; but at all times extremely difficult and dangerous, on account of the many bays and large rivers which must be paffed; fo that no perfon travels this road but in fummer, and then only fuch as have no baggage, and are, befides, well acquainted with the country and the ferries.

CHAP. IV. - Description of Guayaquil.

THOUGH there is no certainty with regard to the time when Guayaquil was founded, it is univerfally allowed to be the fecond city of Spanish origin, both in its own province and the kingdom of Peru; it appearing, from antient records preferved in its archives, that it was the next city founded after San Miguel de Piura: and the foundation laid of Los Reyes, Remac, or Lima, being in 1534, or according to others, in 1535, the building of Guayaquil may be fixed between those two years; but the prolperity it attained under its governor Belalcazar, was of no long continuance, being, after feveral furious attacks, entirely destroyed by the neighbouring Indians. It was however in 1537, rebuilt by Captain Francisco de Orellana. The first situation of Guayaquil was in the bay of Charapoto, a little to the northward of the place where the village of Monte Chrifto now stands; from whence it was removed to the prefent fpot, which is on the west bank of the river of Guayaquil, in 2° 11' 21" of fouth latitude, as appeared from our obfervations. Its longitude was not determined by any accurate observations; but by computing it from those made at Quito, it is 297° 17', reckoning from the meridian of Teneriffe. On its removal by Orellana, from its first fituation, it was built on the declivity of a mountain called Cerillo Verde, and is now termed Ciudad Vieja, or the old town. Its inhabitants being afterwards straitened by the mountain on one fide, and by ravines or hollows made by floods of rain on the other, formed a defign, without entirely abandoning the place, to build the principal part of the city at the diffance of five or fix hundred toifes; which was accordingly begun in 1693; and for preferving a communication with the old part, a bridge of timber was erected, of about three hundred toiles in length, by which means the inconveniences of the ravines are avoided, and, the intervals being filled with fmall houses, the old and new towns are now united.

This city is of confiderable extent, taking up, along the bank of the river from the lower part of the old town to the upper part of the new, near half a league; but the breadth is not at all proportional, every perfon being fond of having a houfe near the river, both for the amufements it affords, and for the benefit of refreshing winds, which, in winter, are the more eagerly coveted as they are very rare.

All the houfes of both towns are built of wood, and many of them covered with tiles; though the greater part of those in the old town are only thatched; but in order to prevent the fpreading of fires, by which this city has feverely fuffered on feveral occasions, fuch covering is now prohibited. Most of these conflagrations owed their rife to the malevolence of the negroes, who, in order to revenge fome punishments inflicted on them by their masters, took the opportunity, during the night, of throwing fire on the thatch, and by that means, not only ruined those who were the immediate objects of their revenge, but also the greater part of the inhabitants of the city.

VOL. XIV.

3 E

Though

Though the houfes are wholly built of wood, they are generally large and beautiful; have all one ftory and an entrefole; the back part of the ground floor ferves for warehoufes; in the front are fhops of all kinds, and generally before them fpacious porticos, which in winter are the only parts where you can walk, the ftreets being utterly impaffable.

As a further precaution against fire, which they have for much reason to dread, the kitchens stand twelve or fifteen paces from the houses, with which they communicate by means of a long open gallery, refembling a bridge; but so lightly built, that on the least appearance of fire in the kitchen, it is demolished in an instant; by which means the house is preferved. Perfons of rank and fortune live in the upper apartments, and the entrefoles are let to strangers who come to trade, or pass through the city with their goods.

The ground on which the new city is built, and the favannahs in its neighbourhood, are not to be travelled over either on foot or horfeback during the winter; for, befides being a fpongy chalk, it is every where fo level, that there is no declivity for carrying off the water; and therefore on the first rain, it becomes one general flough. So that, from the time of the rains fetting in till the end of winter, it is neceffary to lay in the parts not covered by the above-mentioned piazzas, very large planks for croffing over them; but these foon become flippery, and occasion frequent falls into the chalky flough. The return of fummer, however, foon exhales the water, and renders the ground fufficiently dry for travelling. In this respect the old town has the advantage, being built on a gravelly foil, which is never impaffable.

This city is defended by three forts, two on the river near the city, and the third behind it, guarding the entrance of a ravine. Thefe are all built after the modern method of fortification; but before they were erected, it had only a platform, which is ftill remaining in the old town. Thefe forts are built of large pieces of very hard wood, forming a variety of pallifades, and the wood is particularly proper for this country, and the ufe it is here applied to; retaining its folidity either under the water or in the mud. Before thefe fortifications were erected, the city was taken by European corfairs, in the year 1686 and 1709; but the fuccefs of the latter was owing to the villainy of a mulatto, who, in order to revenge himfelf on fome particular perfons in the city, conducted the enemy through a bye-way, where they were not expected; fo that the inhabitants being furprifed, were not prepared for defence.

All the churches and convents are of wood, except that of St. Domingo, ftill ftanding in the old town, which is of ftone; the great folidity of the ground in that part being fufficient for fupporting buildings of this kind. The convents in the new city, befides the parochial church, are an Auguftine and a Franciscan, with a college of Jefuits; the members of them not very numerous, on account of the fmallness of the revenues. Here is also an hospital, but without any other endowment than the shell of the building. The city and its jurifdiction are under a corregidor, nominated by the King, who holds his office during five years. Notwithstanding he is subordinate to the prefident and audience of Quito, he appoints the deputies in the feveral departments of his jurifdiction; and, for the police and civil government, Guayaquil has ordinary alcaldes and regidores. The revenue is managed here by a treasfurer and an accomptant, who receive the tributes of the Indians, the duties on imports and exports, and the taxes on commodities, which are either confumed there, or carried through it.

The ecclefiaftical government is lodged in the bifhop of Quito's vicar, who is generally alfo the prieft of the town.

CHAP.

GUAYAQUIL contains, in proportion to its dimensions, as many inhabitants as any city in all America; the continual refort of strangers, drawn thither by commerce, contributing very greatly to increase the number, generally computed at twenty thoufand. A great part of its eminent families are Europeans, who have married there; besides which, and substantial Creoles, the other inhabitants are of different casts, as in the cities already described.

The inhabitants capable of bearing arms, are divided into companies of militia, according to their rank and caft; fo that on occafion they may be ready to defend their country and property. One of thefe, confifting entirely of Europeans, and called the foreign company, is the moft numerous, and makes the moft fplendid appearance among the whole militia. Without confidering their wealth or flation, they appear in arms, and pay a proper obedience to their officers, who are chosen by themfelves from their own body, being generally fuch as have ferved in Europe, and confequently more expert in military affairs. The corregidor is the commander in chief; having under him a colonel and major, for difciplining the other companies.

Though the heat here is equal to that of Panama, or Carthagena, yet the climate diftinguishes itself in the colour of the human species; and if a certain author has styled it the equinoctial Low Countries, in allufion to the refemblance it bears to the Netherlands of Europe, it may, with equal propriety, bear that appellation from this fingularity, namely, that all the natives, except those born from a mixture of blood, are fresh-coloured, and so finely featured, as justly to be styled the handsomest, both in the province of Quito, and even in all Peru. Two things are here the more remarkable. as being contrary to common obfervation: one, that notwithstanding the heat of the climate, its natives are not tawny; the other, that though the Spaniards have not naturally fo fair a complexion as the nothern nations, their children born here of Spanifh women are very fair; nor has this phenomenon hitherto been fufficiently explained. To attribute it to the effluvia exhaling from the contiguous river, appears to me little fatisfactory; other cities having the fame advantageous fituation, without producing any improvement in the complexions of the inhabitants; whereas here fair perfons are the most common, and the children have universally light hair and eye-brows, and very beautiful faces.

To these perfonal advantages bestowed by nature in a diffinguished manner on the inhabitants, it has added the no less pleasing charms of elegance and politeness; fo that feveral Europeans, who intended only a short stay here, have married and settled; nor were their marriages owing to the immense fortunes of their ladies, as in some other cities of this country, the inhabitants not being at all famous for their riches.

The drefs of the women at Guayaquil nearly refembles that at Panama, except only when they either pay or receive a vifit; inftead of the pollera, they wear a faldellin, which is no longer than the pollera, but being open before, and croffing one fide over the other, is adorned in the most profuse manner. It is furbeloed with a richer ftuff, near half a yard in depth, and bordered with fine laces, gold or fringe, or ribands, disposed with an air which renders the drefs extremely rich and becoming. When they go abroad without a veil, they wear a light brown-coloured mantelet, bordered with broad ftrips of black velvet, but without laces or any other decorations. Befides necklaces and bracelets, they wear rofaries, of the fame degree of richnefs as at Panama; and not only load their ears with brilliant pendants, but add tufts of black filk, about the fize of a filbert, and fo full of jewels, as to make a very fplendid appearance.

From the commerce of this city, a ftranger would imagine it richer than it actually is. This is partly owing to the two dreadful pillages it has fuffered, and partly to fires, by both which it has been totally ruined. And though the houfes here, as already obferved, are only of wood, the whole charge of which is the cutting and bringing it to the city; yet the expence of a houfe of any figure amounts to fifteen or twenty thoufand dollars, workmen's wages being very high, and iron remarkably dear. Europeans, who have raifed any thing of a fortune here, when they have no immoveable goods to detain them, retire to Lima, or fome other city of Peru, where they may improve their flocks with greater fecurity.

CHAP. VI. - Of the Temperature of the Air, and the different Seafons at Guayaquil; its Inconveniences and Diftempers.

IN Guayaquil, the winter fets in during December, fometimes at the beginning, fometimes in the middle, and fometimes not till the end of the month, and lafts till April or May. During this feafon, the elements, the infects, and vermin, feem to have joined in a league to incommode the human fpecies. Its extreme heat appeared from fome thermometrical experiments; for, on the 3d of April, when its intenfenefs had begun to abate, at fix in the morning the liquor flood at one thoufand and twenty-two'; at noon at one thoufand and twenty-five; and at three in the afternoon at one thoufand and twenty-feven; which fhews the heat in the middle of winter to be greater than at Carthagena. The rains alfo continue day and night, accompanied with frequent and dreadful tempefts of thunder and lightning; fo that every thing feems to confpire to diftrefs the inhabitants. The river, and all thofe which join it, overflow their banks, and lay under water the whole country. The long calm renders the refrefhing winds very defirable; and the innumerable fwarms of infects and vermin infeft both the air and ground in an intolerable manner.

The fnakes, poifonous vipers, fcorpions, and fcolopendræ, in this feafon find methods of getting into the houfes, to the deftruction of many of the inhabitants. And though they are not actually free from them all the reft of the year, yet at this time they are far more numerous, and alfo more active; fo that it is abfolutely neceffary to examine carefully the beds, fome of thefe animals having been known to find their way into them: and both as a fafeguard against the danger, and to avoid the tortures of the moschitos and other infects, all perfons, even the Negro flaves and Indians, have toldos or canopies over their beds. Those used by the lower class of people are made of tucuyo, or cotton, wove in the mountains: others use white linen laced, according to the temper or ability of the owner.

Though all these hot and moift countries swarm with an infinite variety of volatile infects, yet the inhabitants are no where so greatly incommoded as at Guayaquil, it being impossible to keep a candle burning, except in a lantern, above three or four minutes, numberless infects flying into its flame and extinguishing it. Any perfon therefore being obliged to be near a light, is soon driven from his possible to the infinite numbers which fill his eyes, ears, and nostrils. These infects were almost infupportable to us, during the flort clear intervals of fome nights, which we spent in making observations on the heavenly bodies. Their stings were attended with great tortures; and more than than once obliged us to abandon our obfervations, being unable either to fee or breathe for their multitudes *.

Another terrible inconvenience attending the houfes here, are the numbers of pericotes, or rats; every building being fo infefted with them, that, when night comes on, they quit their holes, and make fuch a noife in running along the ceiling, and in clambering up and down the fides of the rooms and canopies of the beds, as to difturb perfons not accuftomed to them. They are fo little afraid of the human fpecies, that, if a candle be fet down without being in a lantern, they immediately carry it off; but, as this might be attended with the moft melancholy confequences, care is taken, that their impudence is feldom put to this trial, though they are remarkably vigilant in taking advantage of the leaft neglect. All thefe inconveniences, which feem infupportable to ftrangers, and alone fufficient to render fuch a country uninhabited, little affect the natives, as having been ufed to them from their infancy: they are more affected with cold on the mountains, which the Europeans fcarce feel, or, at leaft, think very moderate, than with all thefe difagreeable particulars.

The leaft troublefome feafon is the fummer, as then both the number and activity of thefe vermin are diminifhed; it being a miftake in fome authors to fay they abound moft in that feafon. The heat is then abated, by the fetting in of the fouth-welt and weft-fouth-weft breezes, called here chandui, as coming over a mountain of that name. Thefe begin conftantly at noon, and continue to refrefh the earth till five or fix in the following morning. The fky is always ferene and bright, the gentleft fhowers being rarely known. Provifions are in greater plenty, and thofe produced in the country of a very agreeable tafte, if ufed while frefh. Fruits are more common, efpecially melons and water-melons, which are brought in large balzas[†] to the city. But the capital advantage is the remarkable falubrity of the air in that feafon.

During the winter, tertian fevers are very common, and are here particularly painful and dangerous, owing partly to neglect, and partly to an averfion to the ufe of the bark, being prepofiefied with a notion, that on account of its hot quality it can have no good effect in that climate; fo that, blinded with this prejudice, without ever confulting phyficians, who would undeceive them, they fuffer the diftemper to prey upon them, till they are often reduced to an irrecoverable ftate. The natives of the mountains, who are inured to a cold air, cannot endure that of Guayaquil, it having a natural tendency to debilitate them; and by an intemperate ufe of its delicious fruits they throw themfelves into thofe fevers, which are as common to them in one feafon as another.

Befides this difeafe, which is the most general, fince the year 1740 the black vomit has also made its appearance, the galleons of the South Sea having, on account of the war, touched here in order to fecure the treasure among the provinces of the Cordillera. At that time great numbers died on board the spine for the figure with many for eigners, but very few of the natives. In faying that the galleons brought this diffemper to Guayaquil, I follow the general opinion, as it was before that epocha unknown there.

The natives are very fubject to cataracts, and other diftempers of the eye, which often caufe a total blindnefs. Though these diftempers are not general, yet they are much more common than in other parts; and I am inclined to think it proceeds from the aqueous exhalations during the winter, when the whole country is overflowed with water, and which, from the chalky texture of the foil, must be viscid in the highest

^{*} This account is too hyperbolical. They are, however, troublefome enough, and almost insupportable, throughout all South America, except in the plains and deferts. A.

[†] Čalled by the natives jungadas: they are rafts made by pinning or tying feveral bodies of fmall trees together: the author defcribes them particularly in the next chapter. A.

degree; and, penetrating the external tunic, not only foul the crystalline humour, but also cover the pupil, from whence cataracts, and other diforders of the eyes, have their origin.

CHAP. VII. - Provisions, and Manner of Living at Guayaquil.

HERE, as at Carthagena, nature and neceffity have introduced feveral kinds of bread, made from different grains and roots, to fupply the want of wheat. The moft ufual here is the criollo, or natural bread, being unripe plantanes, cut into flices, roafted, and ferved up as bread. But this is not entirely owing to neceffity, as feveral kinds of meal might eafily be brought from the neighbouring mountains in fufficient quantities to fupply all the inhabitants of the city; though only a fmall fhare of it would fall to the lot of the poor, on account of the price, which vaftly exceeds that of the plantanes. However this be, the latter are defervedly preferred to wheat bread, which is fo badly made, that even the Europeans refufe to eat it, and accuftom themfelves to the criollo, which is far from being unpalatable.

Moft of the other provifions, except beef, fruits, and roots, are imported from the provinces of the Cordilleros and Peru. It would naturally be expected, that the feveral branches of this river, which abounds in fifh, would caufe a great plenty of them in the city; but it is quite otherwife, and the fmall quantity caught near it is far from being good, and fo bony, that none but the inhabitants can eat them without danger. Their badnefs in the neighbourhood of the city is probably owing to the brackifh water; but fome leagues above the city, the river affords a great fupply of what is very excellent. In fuch hot climates, however, they cannot be kept without falt; and it is feldom the fifthermen venture to carry any to the city, left, after all their labour, they fhould be obliged to throw them away.

The coafts and neighbouring ports abound in very delicious fifh, fome of which are carried to the city, as keeping better than the fpecies in the river; and thefe, together with feveral of the teftaceous kind, conftitute a confiderable part of the food of the inhabitants of Guayaquil. In the falt creek are taken very large and fine lobfters, of which they make delicious ragouts: and from Jambeli creek, on the coaft of Tumbez, are brought great quantities of oyfters, which, in every refpect, furpafs thofe of all the coafts from Panama to Peru, where there is alfo a great demand for them.

The fame caufe which drives from that part of the river near the city the fineft fifh, fome to the falt and others to the frefh waters, according to their refpective natures, renders good water very fcarce at Guayaquil, efpecially in fummer; none being to be had at a lefs diftance than four or five leagues up the river, according to the height of its waters. Many balzas are therefore employed in fetching water, and felling it to the inhabitants. During the winter, this trade is partly at a ftand, as, by the increase of the rivers, the water at Guayaquil is rendered fit for use.

Inftead of lard, as at Carthagena and other places, they commonly ufe, in dreffing their food at Guayaquil, beef fuet. But whether the climate will not permit the beafts to acquire a proper degree of fatnefs, whether the fuet itfelf be not good, or whether they are carelefs in feparating it from the tallow; the fmell and tafte of both are much the fame, which render their diffes extremely naufeous to ftrangers; and what is little better, they feafon all of them with Guinea pepper, which, though fmall, is fo very ftrong, that the fmell of it, when whole, fufficiently declares its furprifing activity; fo that perfons, not accuftomed to it, fuffer either way. If they eat, their mouths feem in a flame; if they forbear, they must endure hunger, till they have overcome their aversion to this feasoning; after which they think the Guinea pepper the finest ingredient in the world for giving a relish to their food.

The inhabitants of Guayaquil affect greater fplendour in their formal entertainments; but the method of them is not very agreeable to an European gueft. The first course confists of different kinds of fweetmeats, the fecond of high-feasoned ragouts; and thus they continue to ferve up an alternate fuccession of fweet and high-feasoned diffues. The common drink on these occasions is grape brandy, there called Aqua ardiente de Castilla, cordials and wine: of all which they drink freely during the entertainment, heightening the pleasure by the variety; but the Europeans generally prefer wine.

The cuftom of drinking punch has lately increafed confiderably in this city; and, when drunk in moderation, is found to agree very well with the conftitutions of this climate. Accordingly it has obtained greatly among perfons of diffinction, who generally drink a glafs of it at eleven, and again in the evening; thus allaying their thirft, and at the fame time correcting the water, which, befides the difagreeable tafte communicated to it by heat, promotes an exceflive perfpiration : and this cuftom is fo prevailing, that even the ladies punctually obferve it; and the quantity both of acid and fpirit being but fmall, it becomes equally wholefome and refrefhing.

CHAP. VIII. - Extent of the Juri/diction of Guayaquil.

THE moft northern part of the jurifdiction of Guayaquil begins at Cape Paffado, fo called from its lying 21' fouth of the equinoctial, and about half a degree north of the bay of Manta. From this cape it continues all along the coaft, including the ifle of Puna, to the town of Machala on the coaft of Tumbez, where it is terminated by the jurifdiction of Piura. From thence it runs away eaftward, and is bounded by that of Cuenca; and then, turning northwards along the weftern fkirts of the Andes, it terminates on thofe of Bamba and Chimbo. Its length, from north to fouth, is about fixty leagues, and its breadth, from eaft to weft, forty or forty-five; reckoning from the point of Santa Elena to the parts called Ojibar. Its whole country, like that in the neighbourhood of the city, is one continued plain, and in winter univerfally overflowed. It is divided into feven lieutenancies or departments, for each of which the corregidor appoints a lieutenant or deputy, who, however, muft be confirmed by the audience of Quito. Thefe departments are, Puerto Viejo, Punta de Santa Elena, Puna, Yaguache, Babahoyo, Baba, and Daule.

The lieutenancy de San Gregorio de Puerto Viejo is bounded northward by the government of Atacames, and fouthward by the lieutenancy of Santa Elena. Its capital of the fame name, though fmall, thinly peopled, and poor, enjoys the privileges of a city, and includes the towns of Monte Chrifto, Picoafa, Charapoto, and Xipijapa. Thefe have their particular priefts, who are likewife the fpiritual directors of all the fmaller villages in this diftrict.

The town of Monte Christo ftood at first in the bay of Manta, and was called by that name. It had then a confiderable commerce by means of vessels passing from Panama to the ports of Peru; but, having been pillaged and destroyed by fome foreign adventurers, who infested those feas, the inhabitants removed it to the foot of Monte Christo, where it now stands, and from whence it has its name.

Some tobacco is planted in this jurifdiction, but is not much efteemed; and the reft of its products, as wax, cotton, and pita, are barely fufficient to fupport its inha-

9

bitants,

bitants, though they are far from being numerous; occafioned by the general poverty which reigns through all its towns and villages. The kinds of timber natural to fuch hot and moift countries grow here in prodigious quantities.

Formerly along the coaft, and in the bay belonging to this lieutenancy, was a confiderable pearl fifhery; but it has been totally difcontinued for fome years; occafioned partly from the dangers the divers were exposed to, from the mantas and tintoreas already described; and partly from the poverty of the inhabitants of this country, who, being in general Indians and cafts, want ability to purchase Negroes for this occupation. The bay has probably its name from the great number of mantas in those parts, especially as the common employment of the inhabitants is the taking of that fifh, which they falt, and carry into the inland provinces. The Europeans cannot help admiring their dexterity in this kind of fifhery, which they carry on in the following manner: they throw into the water a log of wood, fuch as they use in making a balza, being about five or fix yards in length, and near a foot in diameter, and fufficient to bear the weight affigned it, which is a net lying across one end of it, while an Indian stands in an erect polition on the other; and, by help of a canalete or oar, puts off to fea, to the distance of half a league for more, where he shoots his net. Another Indian, who follows him on a fimilar log, takes hold of the rope fastened to one end of the net; and when the whole is extended, they both move towards the land, where their partners wait to draw the net afhore. And here one cannot help observing with astonishment the dexterity and agility of the Indians, in maintaining an equilibrium on round logs, where, by the continual agitations of the fea, they must be always changing their position, and making different motions with their body; and what still heightens the difficulty is, that he is obliged, at the fame time, to mind both his oar and the net, in drawing it towards the land. They are indeed excellent fwimmers; fo that if they happen (which is very feldom) to flip off, they are foon on the log again, and in their former posture; at least, they are in no danger of being shipwrecked.

I fhall place Punta de Santa Elena as the fecond lieutenancy, becaufe it joins to the fouth part of the former. It extends all along the weftern coaft from the ifles of Plata and Salango, to the fame Punta de Santa Elena; from thence it ftretches along the north coaft, formed by the bay of Guayaquil; comprehending in this extent the towns of Punta, Chongon, Morro, Colonche, and Chandui. At Chongon and Morro two priefts refide, to whofe parifhes the others belong. The lieutenant, invefted with the civil government, refides in the town of Punta, two leagues from the port, where there are indeed warehoufes, or rather fheds, for receiving falt and other goods, but no dwellinghoufes.

The port of Punta has fo many falt-works, that it fupplies the whole province of Quito and jurifdiction of Guayaquil. The falt is not the fineft, but remarkably compact, and anfwers very well the principal intention, that of falting flefh.

On the coaft belonging to this lieutenancy is found that exquifite purple, fo highly efteemed among the ancients; but the fifth from which it was taken, having been either unknown or forgotten, many moderns have imagined the fpecies to be extinct. This colour, however, is found in a fpecies of fhell-fifth growing on rocks wafted by the fea. They are fomething larger than a nut, and are replete with a juice, probably the blood, which, when expressed, is the true purple; for if a thread of cotton, or any thing of a fimilar kind, be dipt in this liquor, it becomes of a most vivid colour, which repeated washings are to far from obliterating, that they rather improve it; nor does it fade by wearing. The jurifdiction of the port of Nicoya, in the province of Guatemala, also affords this species of turbines, the juice of which is also used in dying cotton threads,

and, in feveral parts, for ribands, laces, and other ornaments. Stuffs dyed with this purple are also highly valued. This precious juice is extracted by different methods. Some take the fifh out of its fhell, and, laying it on the back of their hand, prefs it with a knife from the head to the tail, feparating that part of the body into which the compression has forced the juice, and throw away the reft. In this manner they proceed, till they have provided themfelves with a fufficient quantity. Then they draw the threads through the liquor, which is the whole process. But the purple tinge does not immediately appear, the juice being at first of a milky colour; it then changes to green; and, laftly, into this celebrated purple. Others purfue a different method in extracting the colour; for they neither kill the fifh, nor take it entirely out of its shell; but squeeze it so hard as to express a juice, with which they dye the thread, and afterwards replace the fifh on the rock whence it was taken. Some time after it undergoes a fecond operation; but without yielding fo much juice as at first; and at the third or fourth very little, by which means the fish is exhausted beyond recovery. In 1744, being in the lieutenancy of Santa Elena, I had the fatisfaction to fee this liquor extracted according to the first process, and some threads dyed with it. This purple is far from being fo common as fome authors have imagined; for, though the fifth increases, yet fo large a quantity is necessary to dye a few ounces of thread, that little of it is feen; and, indeed, its great price is partly owing to its fcarcity. Another circumstance worthy of observation, and which increases or diminishes the value, is the difference of weight and colour of the cotton dyed with it, according to the different hours of the day. I could not find any fatisfactory account of this property at Punta de Santa Elena, where the inhabitants, being lefs curious, have not carried their fpeculations fo far as to be acquainted with this remarkable fingularity; whereas at Nicoya it is fo well known, that the dealers in it, both buyers and fellers, are exactly acquainted with the times of its increase or decrease, so that one of the first preliminaries to a contract is, to fettle the time when it shall be weighed. From this alteration of the weight of the purple thread at Nicoya it may be inferred, that the fame happens at Punta de Santa Elena; the turbines at both places being exactly of the fame fpecies, and without the leaft visible difference in colour. Another very remarkable particular relating to its tinct, and which I have heard from perfons of undoubted veracity, is, that the colour of a thread of flax is very different from that of a thread of cotton. It would, therefore, be proper, to make repeated experiments, on threads of filk, flax, and wool.

Some, by faying that the fifh, from whence this dye is extracted, breeds in a fhell, by which either the flat or acaracolada or fpiral may be underftood; it may not be improper to remark that it is the laft fpecies, and, accordingly, the cotton tinged with this juice, is called Caracolillo. This department alfo abounds in fruits, cattle of all kinds, wax, and fifh; fo that the inhabitants have very profitable motives for induftry; accordingly it is very populous, and though it does not abound in towns, the number of inhabitants far exceeds that of the preceding government, and the harbour of Punta is much frequented by veffels, that is, by fuch as trade between Panama and the ports of Peru, in order to purchafe different kinds of provifions, as calves, kids, fowl, and other kinds, of which there is here a great plenty. Veffels belonging to the merchants of Guayaquil of two hundred tons, load here with falt; a trade which, from the cheapnefs of that commodity, turns to a very good account.

The next lieutenancy fouthward is Puna, an ifland in the mouth of Guayaquil river. It extends north-eaft and fouth-weft between fix and feven leagues, and is of a quadrilateral figure. According to an ancient tradition, its inhabitants were once between twelve and fourteen thousand : but, at prefent, it has only one fmall town, fituated at

VOL. XIV.

the

the head of its harbour in the north-east part; and the few inhabitants confist chiefly of casts, and some Spaniards, but very few Indians. To this lieutenancy has been annexed the town of Machala, on the coast of Tumbez, together with that of Naranjal, the landing-place of the river of the fame name, called also the Suya; near which is a road leading to the jurifdictions of Cuenca and Alausi. But neither of these towns is in a more flourishing condition than that on the island. In the latter refide both the lieutenant and prieft, to whom the others are subject, both in civil and ecclesiaftical affairs; Puna not only being the principal town, but great ships, by reason of the depth of its harbour, load there, which cannot be done at Guayaquil, on account of the fand in its river; while others come there to load with wood.

The jurifdictions of Machala and Manaranjol produce great quantities of cacao, and that of the former is effeemed the beft in all Guayaquil. In its neighbourhood, as in the ifland of Puna, are great numbers of mangles, or mangrove trees, whofe interwoven branches and thick trunks cover all those plains; which, lying low, are frequently overflowed. As this tree is little known in Europe, it must not be paffed over without a fhort defcription.

The mangrove is fo far different from other trees, that it requires a foil daily overflowed by the fea. Accordingly, when the water is ebbed away from the fpots where the mangroves thrive, they exhale very difagreeable effluvia from their muddy furface. This tree no fooner appears above the ground, than it divides itfelf into very knotty and difforted branches; and from each knot germinates a multitude of others, increasing fo as to form, when grown up, an impenetrable thicket. Nor is it poffible to difcern the fhoots belonging to the principal branches; for, befides this entangled labyrinth, those of the fifth or fixth production are equal in magnitude to those of the first, which is generally of an inch and a half or two inches in diameter; and all fo flexible, that the only method of fevering them is by fome edged tool. Though they extend themfelves nearly horizontally, yet the trunk and principal branches increase both in height and thicknefs. Its leaves are very fmall, in proportion to the branches, not being above an inch and a half or two inches in length, oval, thick, and of a pale green. The usual height of the principal stems of the mangrove is eighteen or twenty yards, ten or twelve inches in diameter, and covered with a thin, rough bark. But its wood is fo folid and heavy, that it finks in water, and, when ufed in fhips or veffels, is found very durable, being not fubject either to fplit or rot.*

The Indians here pay their annual tribute in the wood of the mangrove, which is ufed occafionally in fuch works as its nature is best adapted to.

The lieutenancy of Yaguache is at the mouth of the river of the fame name, which falls into that of Guayaquil on the fouth fide; and has its rife from the fkirts of the Cordillera, fouth of the river Bamba. Its jurifdiction contains three towns; the principal, that where the cuftom-houfe is erected, is San Jacinto de Yaguache; the two others are Noufa and Antonche. To thefe belong two priefts, one refiding at Yaguache, and the other at Noufa. Though thefe towns are but thinly inhabited, the farms and country have great numbers, particularly of the poorer fort.

The chief production of Yaguache is wood, and a little cacao: but cattle and cotton are the principal objects of their attention.

^{*} The mangrove floots out collateral branches, which bend down, take root, and put out others which do the fame, fo that one tree in a few years covers a large fpace of ground. Those ftems that are within the reach of high-water mark are generally covered with a small kind of oyster, called Mangrove-oysters, which are eaten by the natives. The bark of the tree is used to tan leather, in which it succeeds very well, but gives the leather a much higher colour than oak bark. A.

Babahoyo, a name fufficiently known in all th fe countries, it being the feat of the grand cuftom-houfe for every thing going into the Cordillera, or coming from thence, has a very large jurifdiction, in which, befides the principal town, are those of Ujiba, Caracol, Quilea, and Mangaches; the two laft border on the Cordillera, and are a confiderable diftance from Ujiba, where the prieft refides during the winter, removing in the fummer to Babahoyo, which, befides its fettled inhabitants, has always a great number of traders from other parts.

The country of this jurifdiction, being level and low, on the first fwellings of the rivers Caluma, Ujiba, and Caracol, is overflowed to a prodigious distance, though at different depths, particularly at Babahoyo, where the waters rife to the first flory of the houses, fo that during the winter it is entirely for faken.

The country of this jurifdiction, as well as that of Baba, contiguous to it, abounds in fuch numbers of cacao plantations, that many are neglected, and their fruit left to the monkies and other animals, which are thus happily provided for by the fpontaneous fertility of the ground, without any affiftance from agriculture. It also produces cotton, rice, Guinea pepper, and a great variety of fruits. It has likewife large droves of black cattle, horfes, and mules, which, during the time the country is under water, are kept in the mountains; but, as foon as the lands are dry, are driven down to fatten on the gamalotes, a plant of fuch luxuriance, as to cover entirely the ground; its height exceeds two yards and a half. It also grows fo thick, as to preclude all paffage, even along the paths made by the traders.

The blade of the gamalote refembles that of barley, but longer, broader, thicker, and rougher. The green is deep, but lively, and the ftalk diverified with knots, from which the leaves, which are ftrong, and fomething above two lines in diameter, have their origin. When the gamalote is at its full growth, the height of water during the floods, by rifing above its top, prefies it down, and rots it, fo that, when the waters ebb away, the earth feems covered with it; but at the first imprefion of the fun it floots again, and in a few days abounds in the fame plenty as before. One thing remarkable in it is, that, though it proves fo nourifling to the cattle of this diffrict, it is very noxious to those from the Cordillera, as has been often experienced.

Baba is one of the largeft lieutenancies of Guayaquil, reaching to the fkirts of the Cordillera, or the mountains of Anga Marca, belonging to the jurifdiction of Latacunga, or, according to the Indian pronunciation, Llatacunga. Befides the principal town of the fame name, it has others annexed to it, fo far as to be under one prieft, who, with the corregidor's lieutenant, refides continually at Baba. Formerly, the river of the fame name ran clofe by this town; but Don En Vinces having cut a canal for watering the cacao plantations on his cftate, the river inclining more to this courfe than its former, it was found impoflible to ftop it; fo that, leaving its original channel, it has ever fince continued to run in a courfe fome diftance from the town. The other two places are San Lorenzo and Palenque, both at a great diftance from the capital, and near the Cordillera, fo that their Indian inhabitants are but little civilized.

The cacao tree, which, as I have already obferved, abounds in this diffrict, inftead of being only four or five, according to fome authors, who poffibly faw it when very young, is generally not lefs than eighteen or twenty feet high. It begins from the ground to divide itfelf into four or five ftems, according to the vigour of the root, from whence they all proceed. They are generally between four and feven inches in diameter; but their first growth is in an oblique direction, fo that the branches are all expanded and feparated from one another. The length of the leaf is between four and fix inches, and its breadth three or four. It is very fmooth, foft, and terminates in a point, like that of the China orange tree, but with fome difference in colour, the former being of a dull green, and has nothing of the gloss observable on the latter; nor is the tree fo full of leaves as that of the orange. From the ftem, as well as the branches, grow the pods which contain the cacao. The first appearance is a white bloffom, not very large, whole piftil contains the embryo of the pod, which grows to the length of fix or feven inches, and four or five in breadth, refembling a cucumber in fhape; and ftriated in a longitudinal direction, but deeper than the cucumber. The pods are not precifely of the above dimensions, nor are they always proportionate to the stem or branch, to which they adhere in the form of excrefcences, fome being much fmaller : and it is not extraordinary to fee one of the least fize on the principal trunk, and one prodigioufly large near the extremity of a flender branch. But it is observed that, when two grow in contact, one of them attracts all the nutritive juice, and thrives on the decay of the other.

The colour of the pod while growing is green, nearly refembling that of the leaf, but when arrived at its full perfection, it gradually changes to a yellow. The fhell which covers it is thin, fmooth, and clear. When the fruit is arrived at its full growth, it is gathered ; and being cut into flices, its pulp appears white and juicy, with fmall feeds regularly arranged, and at that time of no greater confiftence than the reft of the pulp, but whiter, and contained by a very fine delicate membrane, full of liquor, refembling milk, but transparent, and fomething vifcid; at this time it may be eaten like any other Its tafte is a fweetifh acid; but in this country is thought to be promotive of fruit. The yellowness of the pod indicates that the cacao begins to feed on its fubfevers. stance, to acquire a greater confistence, and that the feeds begin to fill; the colour gradually fading till they are fully completed, when the dark-brown colour of the fhell, into which the yellow has deviated, indicates that it is a proper time to gather it. The thickness of the shell is now about two lines, and each feed found inclosed in one of the compartments formed by the transverse membranes of the pod. After gathering the fruit, it is opened, and the feeds taken out and laid on fkins kept for that purpofe, or more generally on vijahua leaves, and left in the air to dry. When fully dried, they are put into leather bags, fent to market, and fold by the carga or load, which is equal to eighty-one pounds; but the price is far from fixed, being fometimes fold for fix or eight rials per carga, though lefs than the charge of gathering: but the general price is between three and four dollars, and, at the time of the armadas, when the demand is very large, rifes in proportion.

This tree produces its fruit twice a year, and in the fame plenty and goodnefs. The quantity gathered throughout the whole jurifdiction of Guayaquil amounts at least to 50,000 cargas.

The cacao trees delight fo exceffively in water, that the ground where they are planted must be reduced to a mire, and, if not carefully supplied with water, they They must also be planted in the shade, or at least defended from the perdie. pendicular rays of the fun; accordingly, they are always placed near other larger trees, under the shelter of which they grow and flourish. No foil can be better adapted to the nature of these trees than that of Guayaquil, as it favours them in both respects; in the former, as confisting wholly of favannahs or wide plains, overflowed in winter, and in fummer plentifully watered by canals; and, with regard to the latter, it abounds in other trees, which afford them the requifite shelter.

All the care neceffary in the culture of this tree confifts in clearing the ground from the weeds and fhrubs abounding in fo wet a foil : and this is fo neceffary, that, if 12

neglected,

neglected, in a few years these vegetables will destroy the cacao plantations, by robbing the foil of all its nourishment.

The last lieutenancy to be defcribed, is that of Daule. The principal town is of the fame name, and washed by the river, to which it owes its appellation. It contains many spacious houses belonging to the inhabitants of Guayaquil. It is also the refidence of a lieutenant and a parish priest, having under their inspection the two towns of Santa Lucia and Valsar. Here are a great number of plantations of tobacco and fugar-canes, cacao, and cotton; together with large orchards of fruit-trees, and extensive corn-fields.

The river Daule, which, like that of Baba, difcharges itfelf into Guayaquil river, is very large, and on both a great trade is carried on with that city. By the former, it receives the great plenty and variety of fummer fruits, and a confiderable part of the plantanes, which conflitute the bread ufed there during the whole year. Though great quantities of tobacco grow in other parts of the jurifdiction of Guayaquil, yet none equals that of Daule.

The bufinefs of grazing is followed in all thefe lieutenancies; but more or lefs, in proportion to their extent, the nature of the foil, and the conveniency of driving the cattle to the mountains, beyond the reach of the inundations.

CHAP. IX. - Description of the River of Guayaquil, and of the Veffels trading on it.

THE river of Guayaquil being the channel of the commerce of that place, it will be proper to give fome account of it, in order to affift the reader in forming an idea of the trade carried on in that city.

The diftance of the navigable part of this river, from the city to the cuftom-houfe at Babahoyo, the place where the goods are landed, is, by those who have long frequented it, commonly divided into reaches, of which there are twenty, its courfe being wholly ferpentine; but to Caracol, the landing-place in winter, there are twenty-four reaches, the longest of which are the three nearest the city; and these may be about two leagues and a half in length, but the others not above one. Whence it may be inferred, on an average, that the diftance, measured on the furface of the river, between Guayaquil and the cuftom-houfe of Babahoyo, is twenty-four leagues and a half, and to Caracol twenty-eight and a half. The time requifite to perform this passage is very different, according to the feafon, and nature of the veffel. During the winter, a chata generally takes up eight days in going from Guayaquil to Caracol, being against the current of the river; whereas two days are fufficient to perform the paffage downwards. In fummer a light canoe goes up in three tides, and returns in little more than two; the fame may be faid of other veffels, the paffage downwards being always performed in much less time than the other, on account of the natural current of the river, in the reaches near the cuftom-houfe, where the ftrongeft flood only ftops the water from running downwards.

The diftance from Guayaquil to Ifla Verde, fituated at the mouth of the river in Puna bay, is by pilots computed at about fix leagues, and divided, like the other part, into reaches; and from Ifla Verde to Puna three leagues: fo that the whole diftance from Caracol, the moft inland part up the river, to that of Puna, is thirty-feven leagues and a half. Between Ifla Verde and Puna it widens fo prodigioufly, that the horizon towards the north and fouth is bounded by 'the fky, except in fome few parts northwards, where the plantations of mangroves are perceived. The mouth of the river at the Ifla Verde is about a league in breadth, and even fomething broader at Guayaquil, above which it contracts itfelf as it advances nearer the mountains, and forms other creeks, the mouth of one of which, called Eftero de Santay, faces the city; another, termed Lagartos, is near the cuftom-houfe at Babahoyo. Thefe are the largeft, and at the fame time extend to fuch a diftance from the principal river, as to form very confiderable iflands.

The tides, as we have before obferved, in fummer-time reach up to the cuftom-houfe, checking the velocity of the waters, and confequently caufing them to fwell; but, in winter, the current being ftronger and more rapid, this increase of the water is visible only in the reaches near Guayaquil; and in three or four different times of the year the great velocity of the current renders the tides imperceptible: the first of this feason happens about Christmas.

The principal caufe of the fwellings of this river arifes from the torrents rufhing down from the Cordillera into it. For though rain is frequent here, great part of the water is received by its lakes, or flagnates on the plains : fo that the increase of the river is entirely owing to the torrents from the mountains.

One particular inconvenience of these floods is, their shifting the banks of sand lying between the city and lsla Verde; so that no ships of any considerable Surden can go up with fastery, without continually sounding with the lead, unless care has been taken to mark the banks since their last change.

The borders of this river, like those of Yaguache, Baba, and Daule, as well as those of the creeks and canals, are decorated with country-feats, and cottages of poor people of all cafts, having here both the convenience of fifting and agriculture; and the intermediate fpaces filled with fuch a variety of thickets, that art would find it difficult to imitate the delightful landscape here exhibited by nature.

The principal and most uncommon materials used in buildings on these rivers, are canes, whole dimensions and other particulars shall be taken notice of in their place. These also form the inward parts, as walls, floors, and rails of the stairs; the larger houfes differ only in fome of the principal pieces, which are of wood. Their method of building is, to fix in earth, eight, ten, or twelve pieces of wood, more or lefs, according to the dimensions of the house, forked at the top, and of a proper length, all the apartments being on the first flory, without any ground floor. Beams are then laid acrofs on these forks, at the distance of four or five yards from the ground. On thefe beams canes are laid in fuch a manner as to form a kind of rafters, and over thefe boards of the fame canes a foot and a half in breadth, which form as firm and handfome a flooring as if of wood. The partitions of the feveral apartments are of the fame materials, but the outer walls are generally latticed, for the free admiffion of the air. The principal beams of the roof of large houses are of timber, the rafters of cane, with fmaller, in a transverse direction, and over these vijahua leaves.* Thus a houfe is built at very little expense, though containing all the neceffary conveniences. With regard to the poorer fort, every one's own labour fuffices to procure him a habitation. He goes up a creek in a fmall canoe, and from the first wood cuts down as many canes, vijahuas, and bejucos, t as he wants, and, bringing the whole to the fhore, he makes a balza or float, on which he loads his other materials, and falls down the river to the place where he intends to erect his cottage. After which, he begins his work, fastening with bejucos those parts which are usually nailed; and,

406

^{*} This leaf is three or four feet long, and about one broad. A.

⁺ A long pliant twig, used as a cord by the natives; described Book V. Ch. I. A.

in a few days, finishes it in the completest manner. Some of these cottages are almost equal in dimensions to those of timber.

The lower part, both of thefe houfes, as well as thole in the greater part of the jurifilition of Guayaquil (which are of the fame form), are expoled to all winds, being entirely open, without having any wall, or fence, except the pofts or flancheons by which the building is fupported. For whatever coft was expended on the ground floor, it would be wholly ufelefs in the winter, when all the country is turned to mud. Such hot fes, however, as fland beyond the reach of inundations, have ground floors, walled and finished like the other apartments, and ferve as warehouses for goods; but those within the inundations are built, as it were, in the air, the water having a free paffage under them. All the inhabitants have their canoes for paffing from one house to another, and are fo dexterious in the management of thefe fkilfs, that a little girl ventures alone in a boat fo finall and flight, that any one lefs fkilful would overfet in flepping into it, and without fear croffes rapid currents, which an expert failor, not accuftomed to them, would find very difficult.

The continual rains in winter, and the flightness of the materials with which these houses are utilt, render it necessary to repair them during the fummer; but these of the poorer fort, which are low, must be every year rebuilt, especially these parts which confist of cane, bejuco, and vijahua, while the principal stancheons, which form the foundation, still continue ferviceable, and able to receive the new materials.

From the houfes I proceed to give an account of the veffels, which (omitting the chatas and canoes as common) are called Balzas, i. e. rafts. The name fufficiently explains their conftruction, but not the method of managing them, which thefe Indians, ftrangers to the arts and fciences, have learned from neceffity.

Thefe Balzas, called by the Indians Jungadas, * are composed of five, feven, or nine beams of a fort of wood, which, though known here only by the name of Balza, the Indians of Darien called Puero; and, in all appearance, is the ferula of the Latins, mentioned by Columella; Pliny takes notice of two species of it, the leffer by the Greeks called Nartechia, and the larger Narthea, which grows to a great height. Nebrija calls it in Spanish Canna Beja or Canna Heja. Don George Juan, who faw it growing in Malta, found no other difference betwixt it and the Balza or Puero, only the Canna Beja, called ferula by the Maltefe, is much finaller. The Balza is a whitish foft wood, and fo very light, that a boy can easily carry a log of three or four yards in length and a foot in diameter. Yet, of this wood are formed the Janjades or Balzas, already mentioned. Over part of it is a strong tilt formed of reeds. Instead of a mast, the fail is holfted on two poles or spectred in the fame manner.

Balzas are not only ufed on rivers, but fmall voyages are made at fea in them, and fometimes they go as far as Paita. Their dimensions being different, they are also applied to different ufes; fome of them being fishing Balzas; fome carry all kinds of goods from the custom-house to Guayaquil, and from thence to Puna, the Salto de Tumbez, and Paita; and others, of a more curious and elegant construction, ferve for removing families to their estates and country-houses, having the fame convenience as on shore, not being the least agitated on the river; and that they have sufficient room for accommodations, may be inferred from the length of the beams, which are twelve or thirteen toises and about two feet or more in diameter: so that the nine

* They are the fame that are called Catamorans in the Eaft Indies. A.

beams

beams of which they confift, form a breadth of between twenty and twenty-four Paris feet; and proportional in those of feven, or any other number of beams.

Thefe beams are fastened or lashed together by bejucos, and fo fecurely, that with the crofs-pieces at each end, which are also lashed with all possible strength, they result the rapidity of the currents in their voyages to the coast of Tumbez and Paita. The Indians are fo skilful in fecuring them, that they never loosen, notwithstanding the continual agitation; though by their neglect in examining the condition of the bejucos, whether they are not rotten or worn, fo as to require others, there are fome melancholy instances of Balzas, which, in bad weather, have separated, and, by that means, the cargo lost, and the passengers drowned. With regard to the Indians, they never fail of getting on one of the beams, which is sufficient for them to make their way to the next port. One or two unfortunate accidents of this kind happened even while we were in the jurifdiction of Quito, purely from the favage careless of the Indians.

The thickeft beam of those which compose the Balza, is placed to as to project bejond the other in its after-part; and to this are lashed the first beams on each fide, and thus, fucceffively, till the whole are fecured; that in the middle being the principal piece, and thence the number of beams is always odd. The larger fort of Balzas generally carry between four and five hundred quintals, without being damaged by the proximity of the water; for the waves of the sea never run over the Balza; neither does the water splash up between the beams, the Balza always following the motion of the water.

Hitherto we have only mentioned the conftruction and the uses they are applied to; but the greateft fingularity of this floating vehicle is, that it fails, tacks, and works as well in contrary winds, as thips with a keel, and makes very little lee-way. This advantage it derives from another method of fteering than by a rudder; namely, by fome boards, three or four yards in length, and half a yard in breadth, called Guaras, which are placed vertically, both in the head and ftern between the main beams, and by thrufting fome of these deep in the water, and raising others, they bear away, luff up, tack, lie to, and perform all the other motions of a regular fhip: an invention hitherto unknown to the moft intelligent nations of Europe, and of which even the Indians know only the mechanifm, their uncultivated minds having never examined into the rationale of it. Had this method of fteering been fooner known in Europe, it would have alleviated the diftress of many a shipwreck, by faving numbers of lives; as in 1730, the Genovefa, one of His Majefty's frigates, being loft on the Vibora, the fhip's company made a raft; but committing themfelves to the waves, without any means of directing their courfe, they only added fome melancholy minutes to the term of their existence. Such affecting inflances induced me to explain the reason and foundation of this method of fteering, in order to render it of use in fuch calamitous junctures; and, that I may perform it with the greater accuracy, I shall make use of a short memoir, drawn up by Don George Juan.

The direction, fays he, in which a fhip moves before the wind, is perpendicular to the fail, as Mod. Renau, in the *Theorie de Manœuvres*, chap. ii. art. 1. *Bernoulli*, cap. i. art. 4. *Pitot*, fect. ii. art. 13. have demonstrated. And re-action being contrary and equal to the action, the force with which the water oppofes the motion of the vetfel, will be applied in a perpendicular direction to the fail, and continued from leeward to windward, impelling with more force a greater body than a fmaller, in proportion to the fuperficies, and the fquares of the fines of the angle of incidence, fuppofing their velocities equal. Whence it follows, that a Guara being fhoved down in the the fore-part of the veffel, must make her luff up; and by taking it out, she will bear away or fall off. Likewise on a guara's being shoved down at the stern, she will bear away; and by taking it out of the water, the balza will luff, or keep nearer to the wind. Such is the method used by the Indians in steering the balzas; and sometimes they use five or fix guaras, to prevent the balza from making lee-way; it being evident, that the more they are under water, the greater resistance the fide of the veffel meets with; the guaras performing the office of lee-boards, used in fm.ll veffels. The method of steering by these guaras is so easy and simple, that when once the balza is put in her proper course, one only is made use of, raising or lowering it as accidents require; and thus the balza is always kept in her intended direction.

We have before obferved, that this river and its creeks abound in fifh, which for fome time in the year afford employment for the Indians and Mulattos inhabiting its banks, and for which they prepare towards the end of fummer, having then fown and reaped the produce of their little farms. All their preparatives confift in examining their balzas, giving them the neceffary repairs, and putting up a frefh tilt of vijahua leaves. This being finished, they take on board the neceffary quantity of falt, harpoons, and darts. With regard to their provision, it confiss only of maize, plantanes, and hung-beef. Every thing being ready, they put on board the balzas, their canoes, their families, and the little furniture they are masters of. With regard to the cattle and horses, of which every one has a few, they are driven up to winter in the mountains.

The Indians now fleer away to the mouth of fome creek, where they expect to take a large quantity of fifh, and flay there during the whole time of the fifhery, unlefs they are difappointed in their expectations; in which cafe they fleer away to another, till they have taken a fufficient quantity, when they return to their former habitations; but not without taking with them vijahua leaves, bejucos, and canes, for making the neceffary repairs. When the communication is opened with the provinces of the Cordilleras, and the cattle begin to return into the plains, they carry their fifh to the cuftom-houfe of Babahoyo, where they fell it; and with the produce, purchafe baize, tucuyo, and other fluffs, for clothing themfelves and families.

Their method of fifting is thus: Having moored their balza near the mouth of a creek, they take their canoes, with fome harpoons and fpears, and on fight of a fifh make towards it, till they arrive at a proper diftance, when they throw their fpear at it with fuch dexterity, that they feldom mifs; and if the place abounds in fifh, they load their canoes in three or four hours, when they return to their balzas to falt and cure them. Sometimes, efpecially in places where the creeks form a kind of lake, they make use of a certain herb called Barbasco, which they chew, mix with some bait, and fcatter about on the water. The juice of this herb is fo ftrong, that the fifh on eating a very little of it become inebriated, fo as to float on the furface of the water, when the Indians have no other trouble than to take them up. This juice is actually fatal to the fmaller fifh, and the larger do not recover for fome time; and even thefe, if they have eaten a confiderable quantity, perifh. It is natural to think, that fifh caught in this manner must be prejudicial to health: but experience proves the contrary, and accordingly the most timorous make no difficulty of eating them. Their next method of fifting is with nets; when they form themfelves into companies, for the better management of them.

The largeft fort of fifh caught here is called Bagre, fome of which are a yard and a half long; but flabby, and of an ill tafte, fo that they are never eaten frefh. The Robalo, a fort of large trout, is the most palatable; but being only taken in the vol. XIV.

creeks a great way above Guayaquil, the diftance will not admit their being brought to that city.

The increase of fish in this river is greatly hindered by the prodigious numbers of alligators, an amphibious creature living both in the rivers, and the adjacent plains. though it is not often known to go far from the banks of the river. When tired with fishing, they leave the water to bask themselves in the fun, and then appear more like logs of half rotten wood thrown ashore by the current, than living creatures; but upon perceiving any veffel near them, they immediately throw themfelves into the water. Some are of fo monftrous a fize as to exceed five yards in length. During the time they lie bafking on the fhore, they keep their huge mouths wide open, till filled with mofchitos, flies, and other infects, when they fuddenly thut their jaws and fwallow their prey. Whatever may have been written with regard to the fiercenefs and rapacity of this animal, I and all our company know, from experience, they avoid a man, and on the approach of any one, immediately plunge into the water. Their whole body is covered with fcales impenetrable to a mufket-ball, unlefs it happens to hit them in the belly near the fore legs; the only part vulnerable.

The alligator is an oviparous creature. The temale makes a large hole in the fand near the brink of a river, and there deposits her eggs; which are as white as those of a hen, but much more folid. She generally lays about a hundred, continuing in the fame place till they are all deposited, which is about a day or two. She then covers them with the fand; and the better to conceal them, rolls herfelf, not only over her precious depositum, but to a confiderable distance. After this precaution, she returns to the water till natural inftinct informs her that it is time to deliver her young from their confinement; when the comes to the fpot, followed by the male, and tearing up the fand, begins breaking the eggs, but fo carefully, that fcarce a fingle one is injured; and a whole fwarm of little alligators are feen crawling about. The female then takes them on her neck and back, in order to remove them into the water; but the watchful gallinazos make use of this opportunity to deprive her of fome; and even the male alligator, which indeed comes for no other end, devours what he can, till the female has reached the water with the few remaining; for all those which either fall from her back, or do not fwim, she herself eats; so that of such a formidable brood, happily not more than four or five efcape.

The gallinazos, mentioned in our account of Carthagena, are the most inveterate enemies of the alligators, or rather extremely fond of their eggs, in finding which they make ufe of uncommon addrefs. These birds often make it their whole bufiness to watch the females during the fummer, the feafon when they lay their eggs, the fands on the fides of the river not being then covered with water. The gallinazo perches on fome tree, where it conceals itself among the branches, and there filently watches the female alligator, till fhe has laid her eggs and retires, pleafed that fhe has concealed them beyond difcovery. But fhe is no fooner under the water, than the gallinazo darts down on the repolitory, and with its beak, claws, and wings, tears up the fand, and devours the eggs, leaving only the fhells. This banquet would indeed richly reward its long patience, did not a multitude of gallinazos from all parts, join the fortunate difcoverer and fhare in the fpoil. I have often been entertained with this ftratagem of the gallinazos, in paffing from Guayaquil to the cuftom-houfe of Babahoyo; and my curiofity once led me to take fome of the eggs, which those who frequent this river, particularly the Mulattos, make no difficulty of eating, when fresh. Here we mult remark the methods used by Providence in diminishing the number of these destructive creatures, not only by the gallinazos, but even by the males themfelves.

felves. Indeed, neither the river nor the neighbouring fields would otherwife be fufficient to contain them; for, notwithstanding the ravages of these two infatiable enemies, their numbers can hardly be imagined.

These alligators are the great deftroyers of the fish in this river, it being their most fafe and general food; nor are they wanting in address to fatisfy their defires; eight or ten, as it were by compact, draw up at the mouth of a river or creek, whilst others go a confiderable distance up the river, and chafe the fish downwards, by which none of any bigness escape them. The alligators being unable to eat under water, on feizing a fish, raife their heads above the furface, and by degrees draw the fish from their jaws, and chew it for deglutition. After fatisfying their appetite, they retire to reft on the banks of the river.

When they cannot find fifh to appeale their hunger, they betake themfelves to the meadows bordering on the banks, and devour calves and colts; and, in order to be more fecure, take the opportunity of the night, that they may furprife them in their fleep; and it is obferved, that those alligators which have once tafted flefh, become fo fond of it, as never to take up with fifh but in cafes of neceflity. There are even too many melancholy inftances of their devouring the human fpecies, efpecially children, who from the inattention natural to their age, have been without doors after it is dark ; and though at no great diftance, thefe voracious animals have dared to attack them, and having once feized them, to make fure of their prey againft that affiftance which the cries of the victim never fail to bring, haften into the water, where they immediately drown it, and then return to the furface, and devour it at leifure.

Their voracity has alfo been felt by the boatmen, whom, by inconfiderately fleeping with one of their arms or legs hanging over the fide of the boat, thefe animals have feized, and drawn the whole body into the water. Alligators who have once feafted on human flefh, are known to be the moft dangerous, and become, as it were, inflamed with an infatiable defire of repeating the fame delicious repart. The inhabitants of those places where they abound, are very industrious in catching and deftroying them. Their usual method is by a cafonate, or piece of hard wood fharpened at both ends, and baited with the lungs of fome animal. This cafonate they fasten to a thong, the end of which is fecured on the fhore. The alligator on feeing the lungs floating on the water, fnaps at the bait, and thus both points of the wood enter his jaws, in fuch a manner that he can neither flut nor open his mouth. He is then dragged afhore, where he violently endeavours to refcue himfelf, while the Indians bait him like a bull, knowing that the greateft damage he can do, is to throw down fuch as for want of care or agility, do not keep out of his reach.

The form of this animal fo nearly refembles that of the lagarto or lizard, that here they are commonly called by that name; but there is fome difference in the fhape of the head, which in this creature is long, and towards the extremity fiender, gradually forming a fnout like that of a hog, and when in the river, is generally above the furface of the water; a fufficient demonstration, that the refpiration of a groffer air is neceffary to it. The mandibles of this creature have each a row of very ftrong and pointed teeth, to which fome writers have attributed particular virtues; but all I can fay to this is, that they are fuch as I and my companions, notwithftanding all our enquiries to attain a complete knowledge of every particular, could never hear any fatisfactory account of.

3 G 2

CHAP. X. — Of the Commerce carried on by means of the City and River of Guayaquil, betwixt the Provinces of Peru and Terra Firma, and the Coaft of New Spain.

THE commerce of Guayaquil may be divided into two parts: one reciprocal, being that of the products and manufactures of its jurifdiction; the other transitory, its port being the place where the goods from the provinces of Peru, Terra Firma, and Gautemala, configned to the mountains, are landed; and on the other hand, those from the mountains, defigned for the abovementioned provinces, are brought hither and shipped for their respective ports. And as these two branches are very different, I shall first treat particularly of its reciprocal commerce.

The cacao, one of its principal products, is chiefly exported to Panama, the ports of Sonfonate, el Realejo, and other ports of New Spain; and alfo to those of Peru, though the quantity fent to the latter is but fmall. It is fomething fingular, that in this city and jurifdiction, where cocao grows in fuch plenty, little or no use should be made of it.

Timber, which may be efteemed the fecond article of its commerce, is chiefly fent to Callao, though a little is fold to the places between Guayaquil and that port. All the expense of it here is the charge of felling, carrying it to the next creek or river, and floating it down to Guayaquil; where, or at Puna, it is shipped for the ports it is configned to.

Though both thefe branches of trade are very advantageous to Guayaquil, as may be eafily imagined, from the prodigious quantities exported; yet the trade of falt is not inferior to either, though the principal markets to which this is fent, are only the inland towns in the province of Quito. To thefe may be added cotton, rice, and fifh, both falted and dried; the two first of which deferve to be mentioned, as they are exported both to the maritime and inland provinces.

The fourth and laft article of the commerce of this jurifdiction, is the trade in horned cattle, mules, and colts, of which great numbers are bred in the extensive favannahs of this province. These turn to good account in the provinces of the mountains, where there is not a fufficiency to answer the necessary demands.

Befides these four capital articles, there are others, though fingly of little confequence, yet jointly are equal to any one of the former, as tobacco, wax, Guinea pepper, drugs, and lana de ceibo, by which great numbers of the lower class of people acquire a comfortable fubfistence.

The lana de ceibo, or ceibo wool, is the product of a very high and tufted tree of that name. The trunk is ftraight, and covered with a fmooth bark; the leaf round and of a middling fize. At the proper feafon the tree makes a very beautiful appearance, being covered with white bloffoms: and in each of thefe is formed a pod, which encreafes to about an inch and a half or two inches in length, and one in thicknefs. In this pod the lana or wool is contained. When thoroughly ripe and dry, the pod opens, and the filamentous matter or wool gradually fpreads itfelf into a tuft refembling cotton, but of a reddifh caft. This wool is much more foft and delicate to the touch than cotton itfelf, and the filaments fo very tender and fine, that the natives here think it cannot be fpun; but I am perfuaded that this is entirely owing to their ignorance : and if a method be ever difcovered of fpinning it, its finenefs will entitle it rather to be called ceibo filk than wool. The only ufe they have hitherto applied it to, is to fill matraffes; and in this particular, it muft be allowed to have no equal, both with regard regard to its natural foftnefs, and its rifing fo, when laid in the fun, as even to ftretch the covering of the mattrafs; nor does it fink on being brought into the fhade, unlefs accompanied with dampnefs, which immediately compreffes it. This wool is here thought to be of an extreme cold quality, which is abundantly fufficient to hinder it from being generally ufed, though great numbers of perfons of rank, and tenderly brought up, have never flept on any thing elfe, but without any injury to their health.

The goods imported into this jurifdiction from Peru, in return for the above-mentioned commodities, are wine, brandy, oil, and dried fruits. From Quito it receives bays, tucuyos, flour, papas, bacon, hams, cheefe, and other goods of that kind. From Panama, European goods purchafed at the fairs. The chief commodities it receives from New Spain are iron, found in that country, but much inferior to that of Europe, being brittle and vitreous. It, however, ferves for fuch ufes where malleability is of no great importance, but is rarely ufed in building fhips; alfo, naphtha, and tar for the ufe of fhipping. From the fame coaft, as well as from Peru, they have alfo cordage; though the laft article, together with European iron, the owners of fhips import on their own account; and therefore make no part of the commerce.

The transitory commerce is in quantity much more confiderable than that of the preceding, as it confilts of the reciprocal exchange between the large kingdoms of Quito and Lima, of their refpective commodities both natural and factitious. Lima fends the products of its vineyards and olive yards; and Quito furnishes cloth, bays, tucuyos, ferges, hats, stockings, and other woollen goods; but indigo being necessary for increasing the beauty of the colours, and none of it growing in the province of Quito, the merchants of Guayaquil import it from New Spain, and fend it to the Quito manufacturers.

Summer is the proper feafon for carrying on these branches of commerce; becaufe then the manufactures of the mountains can be brought down to Guayaquil, and the goods fent from other parts carried up to the mountainous parts. But the river of Guayaquil is never without veffels loading with goods of that jurifdiction, the fea here being always open. The profits refulting from this large and constant commerce could alone have preferved it from a total defertion, after being fo frequently pillaged by pirates, and wasted by fire. And it is owing to the advantages resulting from this commerce, that we now behold it large, flourishing, and magnificent, as if it had enjoyed an uninterrupted prosperity from its very foundation.

BOOK V.

JOURNEY FROM GUAYAQUIL TO THE CITY OF QUITO.

CHAP. I. - Paffage from Guayaquil to the Town of Caracol, and from thence to Quito.

O^N receiving advice that the mules, provided by the corregidor of Guaranda, were on the road to Caracol, we immediately embarked at Guayaquil, on the 3d of May 1736, on board a large chata: but the ufual impediment of the current, and feveral unfortunate accidents, rendered the paffage fo very long, that we did not land at Caracol before the 11th. The tortures we received on the river from the mofchitos were beyond imagination. We had provided ourfelves with guetres, and mofchito cloths; but to very little purpofe. The whole day we were in continual motion to keep them off; but at night our torments were exceffive. Our gloves were indeed fome defence to our hands, but our faces were entirely exposed, nor were our clothes a sufficient defence for the rest of our bodies; for their stings, menetrating through the cloth, caufed a very painful and fiery itching. The most difmal night we spent in this paffage was when we came to an anchor near a large and handfome houfe, but uninhabited; for we had no fooner feated ourfelves in it, than we were attacked on all fides with innumerable fwarms of mofchitos; fo that we were fo far from having any reft there, that it was impossible for a person, fusceptible of feeling, to be one moment quiet. Those who had covered themselves with their moschito cloths, after taking the greatest care that none of these malignant infects were contained in them, found themfelves in a moment fo attacked on all fides, that they were obliged foon to return to the place they had quitted. Those who were in the house, hoping that they should find fome relief in the open fields, ventured out, though in danger of fuffering in a more terrible manner from the ferpents ; but were foon convinced of their miltake ; it being impoffible to determine which was the most supportable place, within the moschito cloth, without it, or in the open fields. In fhort, no expedient was of any use against their numbers. The fmoke of the trees we burnt, to difperfe these infernal infects, befides almost choking us, feemed rather to augment than diminish their multitudes. At day-break, we could not without concern look upon each other. Our faces were fwelled, and our hands covered with painful tumours, which fufficiently indicated the condition of the other parts of our bodies exposed to the attacks of those infects. The following night we took up our quarters in a houfe inhabited, but not free from mofchitos; though in much lefs numbers than before. On informing our hoft of the deplorable manner in which we had fpent the preceding night, he gravely told us, that the house we fo greatly complained of had been forfaken on account of its being the purgatory of a foul. To which, one of our company wittily answered, that it was much more natural to think that it was forfaken on account of its being a purgatory for the body.

The mules being arrived at Caracol, we fet out on the 14th of May, and, after travelling four leagues, through favannahs, woods of plantain, and cacao-trees, we arrived at the river Ojibar; and continued our journey, during the whole day, along its banks, fording it no lefs than nine times, though with no fmall danger, from its rapidity, breadth, depth, and rocky bottom; and, about three or four in the afternoon, we halted at a place called Puerto de Mufchitos.

All the road from Caracol to the Ojibar is fo deep and boggy that the beafts at every ftcp funk almost up to their bellies; but along the banks of that river we found it much more firm and commodious. The name of the place where we were to take up our lodging that night fufficiently indicates its nature. The house had been for fome time forfaken, like that already mentioned on Guayaquil river, and become a neft of mofchitos of all kinds; fo that it was impossible to determine which was the worst. Some, to avoid the tortures of these infects, stripped themselves, and went into the river, keeping only their heads above water; but the face being the only part exposed, was immediately covered with them; fo that those who had recourse to this expedient, were foon forced to deliver up their whole bodies to these tormenting creatures.

On the 15th we continued our journey through a very thick foreft, the end of which brought us once more to the banks of the fame river, which we again forded four times, and and rather with more danger than at firft. About five, we halted on its banks, at a place called Caluma, or the Indian poft. Here was no houfe for lodging in, nor had we feen one during the whole day's journey; but this inconvenience was in fome meafure removed by the furprifing dexterity of our Indians, who, running into the woods, foon returned with branches of trees and vijahua leaves, with which, in lefs than an hour, they erected feveral huts large enough to contain our whole company; and fo well covered, that the rain, which came on very violently, did not penetrate them. *

The thermometer at Caluma, on the 16th, at fix in the morning, was at one thousand and fixteen; and we were ourfelves fenfible that the air began to grow cool. At half an hour after eight in the morning we began our journey, and at noon paffed by a place called Mamarumi, or mother of ftone, where there is an inconceivably beautiful cafcade. The rock from which the water precipitates itfelf is nearly perpendicular, and fifty toifes in height, and on both fides bordered with lofty and fpreading trees. The clearnefs of the water dazzles the fight, which is, however, charmed with its luftre as it falls from the precipice; after which it continues its courfe in a bed along a fmall defcent, and is croffed by the road. Thefe cataracts are by the Indians called Paccha, and by the Spaniards of the country Chorrera. From hence we continued our journey; and after croffing the river twice on bridges, but with equal danger as in fording it, we arrived at two in the evening at a place called Tarigagua, where we refted in a large ftructure of timber, covered with vijahua leaves, built for our reception. Indeed we were no lefs fatigued with this day's journey than with any of the preceding; fome parts of it being over dreadful precipices, and the road in others to narrow, as hardly to afford a paffage for the mules, that it was impossible to avoid frequently striking against the trees and rocks; few of us therefore reached Tarigagua without feveral bruifes.

It must not be thought ftrange that I should fay the bridges are equally dangerous with the fords; for these ftructures, all of wood, and very long, shake in passing them; besides, their breadth is not above three feet, and without any rail; fo that one false step precipitates the mule into the torrent, where it is inevitably lost; accidents, according to the report of our guides not uncommon. These bridges, by the rotting of the wood under water, are annually repaired towards winter, the only feason when they are used; the rivers during the fummer being fordable.

When a perfon of diffunction, as a prefident, a bifhop, &c. is on a journey from Caracol or Babahoyo, the corregidor of Guaranda difpatches Indians for building cottages at the ufual refting places, like that we found at Tarigagua; and thefe being left ftanding, ferve afterwards for other paffengers, till the rains defiroy them. When thefe are thrown down, travellers muft content themfelves with the huts which their Indian guides build with wonderful difpatch.

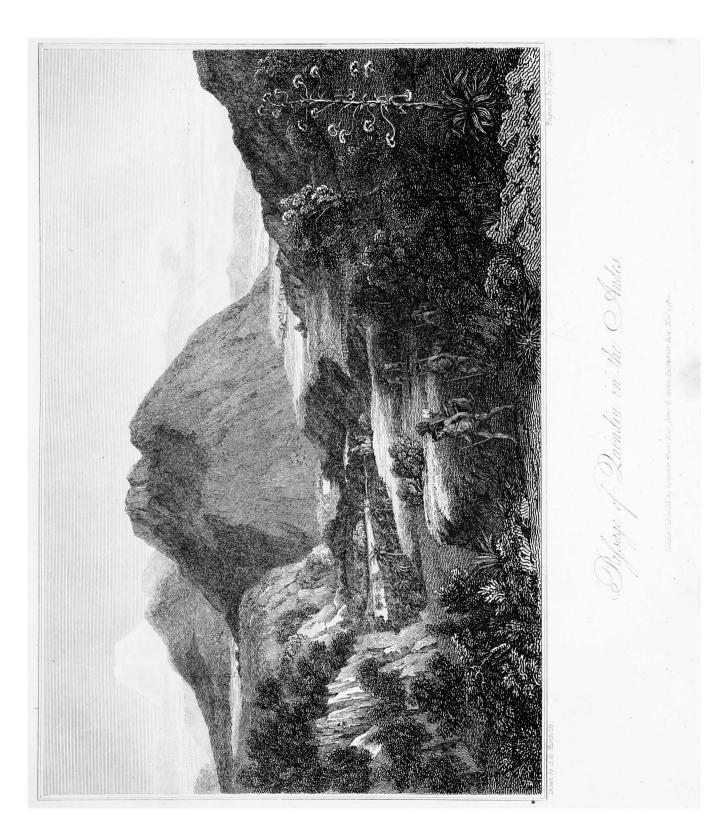

At Tarigagua, on the 17th, at fix in the morning, the thermometer flood at $1014\frac{1}{4}$. And having been for fome time accuftomed to hot climates, we now fenfibly felt the cold. It is remarkable, that we here often fee inflances of the effects of two oppofite temperatures, in two perfons happening to meet, one of them coming from Guayaquil, and the other from the mountains: the latter finding the heat fo great that he is fcarce able to bear any clothes, while the former wraps himfelf up in all the garments he can procure. The one is fo delighted with the warmth of the water of the river, that he bathes in it; the other thinks it fo cold, that he avoids being fpattered by it. Nor is the

^{*} The natives when they travel, erect new huts every night in this manner, except they have the conveniency of tying their hammock up in trees, by which means they fave the trouble of a watch and fire all night to keep off the wild beafts.

cafe very different even in the fame perfon, who, after a journey to the mountains, is returning to Guayaquil, or vice versa, provided the journey and return be made at the fame feafon of the year. This fenfible difference proceeds only from the change naturally felt at leaving a climate to which one has been accustomed, and coming into another of an opposite temperature; and thus two perfons, one used to a cold climate. like that of the mountains, the other to a hot, like that of Guayaquil, must, at coming into an intermediate temperature, as at Tarigagua, feel an equal difference; one with regard to heat, and the other with regard to cold; which demonstrates that famous opinion-that the fenfes are fubject to as many apparent alterations, as the fenfations are various in those who feel them. For the impressions of objects are different, according to the different difpolition of the fenses; and the organs of two persons differently dif. poled are differently affected. At a quarter past nine in the morning we began to afcend the mountain of San Antonio, the foot of which is at Tarigagua; and, at one. came to a place called by the Indians Guamac, or Crofs of Canes. Here is a fmall but inclining plain; and being told that it was half way up the acclivity, and our beafts requiring reft, we halted here.

The ruggedness of the road from Tarigagua leading up this mountain is not eafily described. It gave us more trouble and fatigue, befides the dangers we were every moment exposed to, than all we had experienced in our former journeys. In fome parts the declivity is fo great that the mules can fcarce keep their footing, and in others the acclivity is equally difficult. In many places the road is fo narrow that the mules have fcarce room to fet their feet; and in others a continued feries of precipices. Befides, thefe roads, or rather paths, are full of holes, or camelones, near three quarters of a yard deep, in which the mules put their fore and hind feet; fo that fometimes they draw their bellies and riders' legs along the ground. Indeed these holes ferve as fteps, without which the precipices would be in a great meafure impracticable. But fhould the creature happen to put his foot between two of these holes, or not place it right, the rider falls, and, if on the fide of the precipice, inevitably perifhes. It may perhaps be faid, that it would be much fafer to perform this part of the journey on foot : but how can any perfon be fure always of placing his feet directly on the eminences between the holes; and the leaft falfe ftep throws him up to the waift in a flimy mud, with which all the holes are full; and then he will find it very difficult either to proceed or return back.

Thefe holes, or camelones, as they are called, render all this road very toilfome and dangerous, being as it were fo many obftacles to the poor mules; though the danger is even greater in those parts where they are wanting. For as the tracks are extremely fteep and flippery, from the foil, which is chalky and continually wet; fo they would be quite impracticable, did not the Indians go before, and dig little trenches acrofs the road, with fmall fpades which they carry with them for this purpofe; and thus both the difficulty and danger of these craggy paths are greatly leffened. This work is continual, every drove requiring a repetition of it; for in lefs than a night the rain utterly deftroys all the trenches cut by feveral hands the preceding day. The trouble of having people going before to mend the road; the pains arising from the many falls and bruifes; and the difagreeablenels of feeing one's felf entirely covered with dirt, and wet to the fkin, might be the more cheerfully fupported, were they not augmented by the fight of fuch frightful precipices, and deep abyffes, as muft fill the traveller's mind with terror. For, without the leaft exaggeration, it may be faid, that in travelling this road, the most refolute tremble.

The manner of defcending from these heights is not less difficult and dangerous. In order to underftand this, it is neceffary to obferve, that in those parts of the mountains, the exceflive freepnefs will not admit of the camelones being lafting; for the waters, by continually foftening the earth, wash them away. On one fide are steep eminences, and on the other frightful abyfles; and as they generally follow the direction of the mountain, the road, inflead of lying in a level, forms two or three fleep eminences and declivities, in the diftance of two or three hundred yards : and thefe are the parts where no camelones can be lafting. The mules themfelves are fenfible of the caution requifite in thefe defcents; for, coming to the top of an eminence, they ftop, and having placed their fore feet close together, as in a posture of stopping themselves, they also put their hinder feet together, but a little forwards, as if going to lie down. In this attitude, having as it were taken a furvey of the road, they flide down with the fwiftness of a meteor. All the rider has to do is to keep himfelf fast in the faddle without checking his beaft; for the leaft motion is fufficient to diforder the equilibrium of the mule, in which cafe they both unavoidably perifh. The addrefs of thefe creatures is here truly wonderful; for, in this rapid motion, when they feem to have loft all government of themfelves, they follow exactly the different windings of the road, as if they had before accurately reconnoitred, and previoufly fettled in their minds, the route they were to follow, and taken every precaution for their fafety, amidft fo many irregularities. There would indeed otherwife be no poffibility of travelling over fuch places, where the fafety of the rider depends on the experience and address of his beaft.

But the longeft practice of travelling thefe roads cannot entirely free them from a kind of dread or horror which appears when they arrive at the top of a fteep declivity. For they ftop without being checked by the rider; and if he inadvertently endeavours to fpur them on, they continue immoveable; nor will they ftir from the place till they have put themfelves in the above-mentioned pofture. Now it is that they feem to be actuated by reafon; for they not only attentively view the road, but tremble and fnort at the danger, which, if the rider be not accuftomed to thefe emotions, cannot fail of filling him with terrible ideas. The Indians go before, and place themfelves along the fides of the mountain, holding by the roots of trees, to animate the beafts with fhouts, till they at once ftart down the declivity.

There are indeed fome places where these declivities are not on the fides of precipices; but the road is fo narrow and hollow, and the fides nearly perpendicular, that the danger is almost equal to the former; for the track being extremely narrow, and the road fcarce wide enough to admit the mule with its rider, if the former falls, the latter must be neceffarily crussed; and for want of room to disengage himself, generally has a leg or an arm broken, if he escapes with life. It is really wonderful to confider these mules, after having overcome the first emotions of their fear, and are going to flide down the declivity, with what exactness they ftretch out their fore-legs, that by preferving the equilibrium they may not fall on one fide; yet at a proper distance make, with their body, that gentle inclination neceffary to follow the feveral windings of the road; and, lastly, their address in ftopping themselves at the end of their impetuous career. Certainly the human species themselves could not show more prudence and conduct. Some mules, after being long used to these journeys, acquire a kind of reputation for their skill and fafety, and accordingly are highly valued.

The worft feafons for thefe journeys, though difficult and dangerous at all times, are the beginnings of fummer and winter; the rain then caufing fuch dreadful torrents, that in fome places the roads are covered with water; and in others fo damaged, that there is no poffibility of paffing, but by fending Indians before to mend them; though VOL. XIV. 3 H after all their labour, which must be done in haste, and when those people think them both fase and easy, they are such as an European stranger would willingly avoid.

Befides, the natural difficulty of all the roads among the mountains is increafed by the neglect of them, which is greater than could eafily be conceived. If a tree, for inftance, happens to fall down across the road, and stop up the passage, no perfon will be at the pains to remove it; and though all paffing that way are put to no fmall difficulty by fuch an obstacle, it is fuffered to continue; neither the government, nor those who frequent the road, taking any care to have it drawn away. Some of thefe trees are indeed fo large, that their diameter is not lefs than a yard and a half, and, confequently, fill up the whole paffage; in which cafe, the Indians hew away part of the trunk, and affift the mules to leap over what remains; but, in order to this, they mult be unloaded; and, after prodigious labour, they at last furmount the difficulty; though not without great lofs of time, and damage to the goods: when, pleafed with having got over the obflacle themfelves, they leave the tree in the condition they found it; fo that those who follow are obliged to undergo the fame fatigue and trouble. Thus the road, to the great detriment of trade, remains encumbered till time has deftroyed the tree. Nor is it only the roads over San Antonio, and other mountains between Guayaquil and the Cordillera, that are thus neglected; the cafe is general all over this country, efpecially where they lead over mountains, and through the forefts.

On the 18th, at fix in the morning, the thermometer at Cruz de Canos was at 1010, and after travelling along a road no better than the day before, we arrived at a place, at the end of the acclivity of the mountain, by the Indians called Pucara, which fignifies a gate or narrow pafs of a mountain; it alfo fignifies a fortified place, and poffibly derived its name from its narrownefs and the natural ftrength of its fituation. We now began to defeend with more eafe towards the province of Chimbo, though the road was not much better than the former. Here we were met by the corregidor of Guaranda or Chimbo, attended by the provincial alcalde, and the moft eminent perfons of the town. After complimenting us in the moft cordial manner on our arrival, we proceeded together, and within a league of the town were met by the prieft, a Dominican, accompanied by feveral of his order, and a great number of the inhabitants, who alfo left the town on the fame friendly occafion; and, to heighten the ceremony, had brought with them a troop of cholos, or Indian boys.

Thefe cholos were dreffed in blue, girded round their wafte with fafhes, on their heads a kind of turban, and in their hands they carried flags. This little corps was divided into two or three companies, and went before us dancing, and finging fome words in their language, which, as we were told, expressed the pleasure they received from the fight of fuch perfons arrived fafe in their country. In this manner our cavalcade entered the town, on which all the bells in the place were rung, and every house refounded with the noise of trumpets, tabors, and pipes.

On exprefing to the corregidor our furprife at this reception, as a compliment far above our rank, he informed us, that it was not at all fingular, it being no more than what was commonly practifed when perfons of any appearance enter the town; and that there was no finall emulation between the feveral towns, in paying these congratulations.

After we had paffed the mountains beyond Pacara, the whole country, within the reach of the eye, during a paffage of two leagues, was a level and open plain, without trees or mountains, covered with fields of wheat, barley, maize, and other grain, whofe verdure, different from that of the mountain, naturally gave us great pleafure; our fight for near a twelvemonth having been converfant only with the products of hot

and moist countries, very foreign to these, which nearly refemble those of Europe, and excited in our minds the pleasing idea of our native soil.

The corregidor entertained us in his houfe at Guaranda till the 21st of the fame month, when we continued our journey to Quito. The thermometer was for three days fucceffively at $1004\frac{1}{2}$.

On the 22d, we began to crofs the defert of Chimborazo, leaving the mountain of that name on the left, and travelling over different eminences and heights, most of which were of fand, the fnow for a great diffance forming, as it were, the fides of the mountain. At half an hour after five in the evening, we arrived at a place called Rumi Machai, that is, a ftony cave, an appellation derived from a vast cavity in a rock, and which is the only lodging travellers find here.

This day's journey was not without its trouble; for, though we had nothing to fear from precipices, or dangerous paffes, like those in the road to Guaranda, yet we fuffered not a little from the cold of that defert, then increased by the violence of the wind. Soon after we had passed the large fandy plain, and being thus got over the feverest part of the defert, we came to the ruins of an ancient palace of Yncas, fituated in a valley between two mountains; but these ruins are little more than the foundations of the walls.

On the 23d, at three quarters after five in the morning, the thermometer was at 1000, or the freezing point, and, accordingly, we found the whole country covered with a hoar froft; and the hut in which we lay had ice on it. At nine in the morning we fet out, ftill keeping along the fide of Chimborazo. At two, in the afternoon, we arrived at Mocha, a fmall, mean place; but where we were obliged to pass the night.

On the 24th, at fix in the morning, the thermometer was at 1006; and at nine we fet out for Hambato, which we reached at one in the afternoon, after paffing feveral torrents, breaches, or chafms of the mountain Carguairafo, another mountain covered with fnow, a little north of Chimborazo. Among these chafms is one without water, the earth remaining dry to the depth of twelve feet. This chafm was caused by a violent earthquake, which will be fpoken of in its place.

On the 25th, the thermometer at Hambato, at half an hour after five in the morning, flood at 1010, and on the 26th, at fix in the morning, at $1009\frac{2}{3}$. This day, having paffed the river of Hambato, and afterwards that of St. Miguel, by help of a wooden bridge, we arrived at Latacunga.

On the 27th, at fix in the morning, the thermometer was at 1007, when leaving Latacunga we reached in the evening the town of Mula-Halo, having in the way forded a river called Alaques.

On the 28th, the liquor of the thermometer was at the fame height as at Latacunga, and we proceeded on our journey, arriving in the evening at the manfionhoule or villa called Chi Shinche. The first part of this day's journey was over a large plain, at the end of which we had the pleasure of passing by a structure that belonged to the Pagan Indians, being a palace of the Yncas. It is called Callo, and gave name to the plain. We afterwards came to an acclivity, at the top of which we entered on the plain of Tiopullo, not less in extent than the first; and at the bottom, towards the north, is the house where we were entertained that night.

On the 29th, the thermometer, at fix in the morning, was at $1003\frac{3}{4}$. We fet out the earlier, as this was to be our laft journey. A road croffing feveral breaches and beaten tracks, brought us to a fpacious plain called Tura-Bamba, that is, a muddy plain; at the other extremity of which ftands the city of Quito, where we arrived at

five

five in the evening. The prefident of the province was Don Dionefio de Alzedo y Herrera, who, befides providing apartments for us in the palace of the Audencia, entertained us the first three days with great fplendour, during which we were visited by the bishop, the auditors, the canons, the regidores, and all other perfons of any diftinction, who feemed to vie with each other in their civilities towards us.

In order to form an adequate idea of this country, it will not be amifs, after being fo particular in defcribing the difagreeable parts, and the many dangers to which travellers are expoled, to add a defcription of the most remarkable productions of nature. The lands between the custom-house of Babahoyo, or Caracol, and Guaranda, are of two kinds: the first, which extends to Tarigagua, is entirely level; and the fecond, which begins at that part, wholly mountainous. But both, and even two leagues beyond Pucara, are full of thick forests of various kinds of large trees, differing in the foliage, the disposition of their branches, and the fize of their trunks. The mountains, which form this chain of the Andes, are, on the west fide, covered with woods; but on the east entirely bare. Among these mountains is the fource of that river which, being increasted on all fides by brooks, makes fo grand an appearance between Caracol and Guayaquil, and proves fo advantageous to the commerce of the country.

In the level part of this woody extent are a great number of animals and birds, of the fame kind with those defcribed in our account of Carthagena, except that to the last may be added wild peacocks, bustards, pheafants, and a few others, which are here in fuch abundance, that, did they not always rest on the tops of the trees, where, either from their enormous height, or being covered with leaves, they are fecure, a traveller, with a good fowling-piece and ammunition, might at any time procure himself an elegant repass. But these forests are also terribly infessed with stands and monkeys, particularly a kind called Marimondas, which are fo very large, that, when standing on their hind legs, they are little less than fix feet high. They are black, and, in every respect, very ugly; but easily tamed. None of the forests are without them; but they feem most common in those of Guayaquil.

Among the vegetable productions, I fhall felect three, which to me feemed worthy of a particular defcription; namely, the cana, vijahua, and the bejuco; as they are not only the materials of which the houfes in the jurifdiction of Guayaquil are built, but alfo applied to various other ufes.

The canas, or canes, are remarkable both for their length and thickness, and the water contained in their tubes. Their ufual length is between fix and eight toifes; and though there is a difference in their fize, the largeft do not exceed fix inches diameter. The wood or fide of the tube is about fix lines in diameter; fo that, when the cana is opened, it forms a board near a foot and a half in breadth; and hence it will not appear strange, that houses should be built of fuch materials. From the time of their first appearance, till they attain their full perfection, when they are either cut down, or of themfelves begin to dry, most of their tubes contain a quantity of water; but with this remarkable difference, that at full moon they are entirely, or very nearly, full; and with the decrease of the moon the water ebbs, till at the conjunction little or none is to be found. I have myfelf cut them at all feafons, fo that I here advance nothing but what I know to be true from frequent experience. I have also observed that the water, during its decreafe, appears turbid, but about the time of the full moon it is as clear as crystal. The Indians add another particular, that the water is not found in all the joints, one having water, and another not, alternately. All I can fay to this fingularity is, that on opening a joint which happens to be empty, the two contiguous ones have water; and this is commonly the cafe in almost all the canes. This water is faid

to

to be an excellent prefervative against the ill confequence of any bruifes; at least it is drunk as such by all who come from the mountains, where such accidents are unavoidable.

The canes being cut, they are left to dry, or, as they fay here, to be cured; whence they acquire fuch a degree of ftrength, that they ferve either for rafters, beams, flooring, or even mafts for balzas. Ships which load with cacao are alfo ceiled with them, to preferve the timbers from the great heat of that fruit. They are alfo used as poles for litters, and in an infinite number of other particulars.

The vijahua is a leaf generally five feet in length, and two and a half in breadth. They grow wild, and without any ftem. The principal rib in the middle, is between four and five lines in breadth, but all the other parts of the leaf are perfectly foft and fmooth : the under fide is green, and the upper white, covered with a very fine white and vifcid down. Befides the common use of it in covering houses, it also ferves for packing up falt, fish, and other goods fent to the mountains; as it fecures them from the rain. They are also, in these defert places, of fingular use for running up huts on any exigency.

The bejucos are a kind of ligneous cordage, and of two kinds; one growing from the earth, and twining round trees; the other flrike their roots into certain trees, and from thence derive their nourifhment. Both kinds, after growing to a great height, incline again to the earth, on which they creep till they meet with another tree, to the top of which they climb as before, and then again renew their inclination towards the earth; and thus form a labyrinth of ligatures. Some are even feen extended from the top of one tree to another, like a cord. They are fo remarkably flexile, that no bending or twifting can break them. But if not cut at the proper time, they grow of an unwieldy bignefs. The flendereft of them are about four or five lines in diameter, but the most common fize is between fix and eight; though there are others much thicker, but of little or no ufe, on account of the hardnefs contracted in their long growth. The chief ufe of them is for lashing, tying, or fastening different things together; and, by twisting feveral of them in the nature of ropes, they make cables and hawfers for the balzas and fmall vessels; and are found by experience to last a long time in the water.

In thefe forefts alfo grows a tree, called very properly Matapalo, i. e. kill-timber. It is of itfelf a weak tree; but, growing near another of confiderable bulk, and coming into contact with it, fhoots above it, when, expanding its branches, it deprives its neighbour of the rays of the fun. Nor is this all; for, as this imbibes the juices of the earth, the other withers and dies. After which, it becomes lord of the foil, and increafes to fuch a bulk, that very large canoes are made of it; for which its wood is, of all others, the beft adapted, being very light and fibrous.

CHAP. II. — Difficulties attending our making the neceffary Observations for measuring the Length of an Arch of the Meridian, and the Manner of our Living during the Operations.

ALL the progrefs made during one whole year, which we fpent in coming to Quito, was the furmounting the difficulties of the paffage, and at length reaching that country where we were to enter on the principal part of our commiffion. Nor will even this appear a fmall matter, if the great diffance and diverfity of climates be confidered. A few of the first days after our arrival were fpent in making proper returns for the civilities ties we had received from all perfons of rank; after which, we began to deliberate on the beft methods of performing our work; and the rather, as M. Bouguer and de la Condamine were now arrived. The former reached Quito on the 10th of June, by the fame road of Guaranda; and the latter on the 4th of the fame month, having taken his route by the river of Emeralds, in the government of Atacames.

Our first operation was, to measure a piece of ground, which was to be the base of the whole work; and this we finished during the remainder of the current year. But it proved a very difficult and fatiguing operation, from the heat of the fun, and the winds and rains, which continually incommoded us. The plain made choice of for this bafe is fituated two hundred and forty nine toiles lower than Quito, and four leagues to the north-east of that city. It is called the plain of Yaruqui, from a village of that name near it. This plain was particularly chosen, as the best adapted to our operations; for though there are feveral others in this diffrict, yet all of them lay at too great a diffance from the direction of our bale. The quality, disposition, and lower situation, all contribute to render it lefs cold than Quito. Eaftward it is defended by the lofty Cordillera of Guamani and Pambamarca, and weftward by that of Pichincha. The foil is entirely fand ; fo that, befides the heat naturally refulting from the direct rays of the fun. it is increafed by the rays being reverberated by the two Cordilleras; hence it is alfo exposed to violent tempests of thunder, lightning, and rain; but, being quite open towards the north and fouth, fuch dreadful whirlwinds form here, that the whole interval is filled with columns of fand, carried up by the rapidity and gyrations of violent eddy winds, which fometimes produce fatal confequences: one melancholy inftance happened while we were there; an Indian, being caught in the centre of one of thefe blafts, died on the fpot. It is not, indeed, at all ftrange, that the quantity of fand in one of thefe columns flould totally flop all refpiration in any living creature, who has the misfortune of being involved in it.

Our daily labour was, to measure the length of this plain in a horizontal direction, and, at the same time, by means of a level, to correct the inequalities of the ground; beginning early in the morning, and continuing to purfue our task closely till evening, unless interrupted by extreme bad weather; when we retired to a tent always pitched for that purpose, as well as for a retreat at noon, when the heat of the sum became too great for us, after the fatigue of the morning.

We at first intended to have formed our base in the plain of Cayambe, fituated twelve leagues to the north of Quito. Accordingly, the company first repaired to this plain, to view it more attentively. In this place we lost M. Couplet, on the 17th of September 1736, after only two days illness. He was indeed flightly indisposed when we fet out from Quito; but, being of a strong constitution, his zeal for the fervice would not permit him to be absent at our first essay. On his arrival, however, his distemper rose to such a height, that he had only two days to prepare for his passage into eternity; but we had the fatisfaction to see he performed his part with exemplary devotion. This almost such a fatisfaction to fee he performed his age, was the more alarming, as none of us could discover the nature of his difease.

The menfuration of the bafe was fucceeded by obferving the angles, both horizontal and vertical, of the first triangles we intended to form; but many of them were not purfued, the form and disposition of the feries being afterwards altered to very great advantage. In order to this, M.Verguin, with fome others, was fent to draw a geopraphical map of the parts fouth of Quito; whilst M. Bouguer did the fame with regard to the northern parts; a task we found absolutely necessary, in order to determine the points where the fignals fignals fhould be placed, fo as to form the most regular triangles, and whose fides should not be intercepted by higher mountains.

During thefe operations, M. de la Condamine went to Lima, in order to procure money on recommendatory letters of credit, which he had brought from France, for defraying the expences of the company, till remittances arrived; and Don George Juan followed him, in order to confer with the viceroy of Peru, for amicably determining fome differences which had arifen with the new prefident.

Thefe two gentlemen, having happily terminated their refpective affairs, returned to Quito about the middle of June, when both M. Bouguer and those who furveyed the fouthern parts had finished their plans. It was now determined to continue the feries of triangles to the fouth of Quito; and the company accordingly divided themfelves into two bodies, confifting of French and Spaniards, and each retired to the part affigned him; Don George Juan and M. Godin, who were at the head of one party, went to the mountain of Pambamarca; while M. Bouguer, De la Condamine, and myfelf, together with our affiftants, climbed up to the higheft fummit of Pichincha. Both parties fuffered not a little, both from the feverity of the cold, and the impetuofity of the winds, which on thefe heights blew with inceffant violence; and thefe difficulties were the more painful to us, as we had been little ufed to fuch fenfations. Thus in the torrid zone, nearly under the equinoctial, where it is natural to fuppofe we had most to fear from the heat, our greatest pain was caused by the excessiveness of the cold, the intenfenefs of which may be conjectured from the following experiments made by the thermometer, carefully sheltered from the wind, on the top of Pichincha; the freezing point being at 1000.

On the 15th of August, 1737, at twelve at noon, the liquor was at the height of 1003. At four in the evening, at 1001 $\frac{1}{2}$. At fix in the evening, at 998 $\frac{1}{2}$.

On the 16th of August, at fix in the morning, at 997. At ten in the forenoon, at 1005. At twelve at noon, at 1008. At five in the evening, at $1001\frac{1}{2}$. At fix in the evening, at $999\frac{1}{2}$.

On the 17th, at three quarters after five in the morning, at 996. At nine in the morning, at 1001. At three quarters after twelve, at 1010. At a quarter after two in the afternoon, at $1012\frac{1}{4}$. At fix in the evening, at 999. And at ten in the evening, at 998.

Our first scheme for shelter and lodging, in these uncomfortable regions, was, to pitch a field-tent for each company; but on Pichincha this could not be done, from the narrownefs of the fummit; and we were obliged to be contented with a hut, fo fmall, that we could hardly all creep into it. Nor will this appear ftrange, if the reader confiders the bad difpolition and fmallnefs of the place, it being one of the loftieft crags of a rocky mountain, one hundred toifes above the higheft part of the defert of Pichincha. Such was the fituation of our manfion, which, like all the other adjacent parts, foon became covered with ice and fnow. The afcent up this flupendous rock, from the bafe, or the place where the mules could come, to our habitation, was fo craggy, as only to be climbed on foot, and to perform it, coft us four hours continual labour and pain, from the violent efforts of the body, and the fubtility of the air; the latter being fuch, as to render refpiration difficult. It was my misfortune, when I climbed fomething above half way, to be fo overcome, that I fell down, and remained a long time without fenfe or motion; and, as I was told, with all the appearances of death in my face. Nor was I able to proceed after coming to myfelf, but was obliged to return to the foot of the rock, where our fervants and inftruments remained. The next day I renewed the attempt of climbing the rock; though probably

bably I should have had no better success than before, had not some Indians affisted me in the most steep and difficult places.

The ftrange manner of living which we were reduced to, may not, perhaps, prove unentertaining to the reader; and therefore I shall, as a specimen of it, give a successful account of what we suffered on Pichincha. For this defert, both with regard to the operations we performed there, and its inconveniences, differing very little from others, an idea may be very easily formed of the fatigues, hardships, and dangers, to which we were continually exposed. The principal difference between the several deferts, confissed in their greater or leffer distance from places where we could procure provisions; and in the inclemency of the weather, which was proportionate to the height of the mountains, and the feason of the year when we visited them.

We generally kept within our hut. Indeed, we were obliged to do this, both on account of the intenfeneis of the cold, the violence of the wind, and our being continually involved in fo thick a fog, that an object at fix or eight paces was hardly difcernible. When the fog cleared up, the clouds, by their gravity, moved nearer to the furface of the earth, and on all fides furrounded the mountain to a vast distance. reprefenting the fea, with our rock like an ifland in the centre of it. When this happened, we heard the horrid noifes of the tempefts, which then difcharged themfelves on Quito and the neighbouring country. We faw the lightnings iffue from the clouds, and heard the thunders roll far beneath us; and whilft the lower parts were involved in tempests of thunder and rain, we enjoyed a delightful ferenity; the wind was abated, the fky clear, and the enlivening rays of the fun moderated the feverity of the cold. But our circumstances were very different when the clouds role; their thickness rendered refpiration difficult; the fnow and hail fell continually, and the wind returned with all its violence; fo that it was impoffible entirely to overcome the fears of being, together with our hut, blown down the precipice on whofe edge it was built, or of being buried under it by the daily accumulations of ice and fnow.

The wind was often fo violent in thefe regions, that its velocity dazzed the fight; whilft our fears were increafed by the dreadful concufions of the precipice by the fall of enormous fragments of rocks. Thefe crafhes were the more alarming, as no other noifes are heard in thefe deferts. And, during the night, our reft, which we fo greatly wanted, was frequently diffurbed by fuch fudden founds. When the weather was any thing fair with us, and the clouds gathered about fome of the other mountains which had a connection with our obfervations, fo that we could not make all the ufe we defired of this interval of good weather, we left our hut, to exercife ourfelves, in order to keep us warm. Sometimes we defcended to fome fmall diftance, and at others amufed ourfelves with rolling large fragments of rocks down the precipice ; and thefe many times required the joint ftrength of us all, though we often faw the fame performed by the mere force of the wind. But we always took care, in our excursions, not to go too far, but that on the leaft appearance of the clouds gathering about our cottage, which often happened very fuddenly, we could regain our fheiter. The door of our hut was fastened with thongs of leather, and on the infide not the fmallest crevice was left unftopped; befides which, it was very compactly covered with ftraw. But, notwithftanding all our care, the wind penetrated through. The days were often little better than the nights; and all the light we enjoyed was that of a lamp or two, which we kept burning, that we might diffinguish one another, and improve our time as much as poffible in reading. Though our hut was fmall, and crowded with inhabitants, befides the heat of the lamps, yet the intenfeness of the cold was fuch, that every one of us was obliged to have a chafing difh of coals. These precautions would have

424

have rendered the rigour of the climate fupportable, had not the imminent danger of perifhing by being blown down the precipice roufed us, every time it fnowed, to encounter the feverity of the outward air, and fally out with fhovels, to free the roof of our hut from the maffes of fnow which were gathering on it. Nor would it, without this precaution, have been able to fupport the weight. We were not, indeed, without fervants and Indians; but they were fo benumbed with the cold, that it was with great difficulty we could get them out of a fmall tent, where they kept a continual fire. So that all we could obtain from them was, to take their turns in this labour; and even then they went very unwillingly about it, and confequently performed it flowly.

It may be eafily conceived what we fuffered from the afperities of fuch a climate. Our feet were fwelled, and fo tender, that we could not even bear the heat, and walking was attended with extreme pain. Our hands were covered with chilblains; our lips fwelled and chopped; fo that every motion, in fpeaking or the like, drew blood; confequently we were obliged to a first taciturnity, and but little difpofed to laugh, an extension of the lips producing fiffures, very painful for two or three days together.

Our common food in this inhofpitable region was a little rice boiled with fome flefh or fowl, which we procured from Quito; and, inflead of fluid water, our pot was filled with ice : we had the fame refource with regard to what we drank; and, while we were eating, every one was obliged to keep his plate over a chafing-difh of coals, to prevent his provisions from freezing. The fame was done with regard to the water. At first we imagined, that drinking ftrong liquors would diffuse a heat through the body, and confequently render it lefs fensible of the painful fharpnefs of the cold; but, to our furprife, we felt no manner of ftrength in them, nor were they any greater prefervative against the cold than common water. For this reason, together with the apprehension that they might prove detrimental to our health, befides the danger of contracting an ill habit, we difcontinued their ufe, having recourfe to them but very feldom, and then fparingly. We frequently gave a finall quantity to our Indians, together with part of the provisions which were continually fent us from Quito, befides a daily falary of four times as much as they ufually earn.

But, notwithftanding all thefe encouragements, we found it impoffible to keep the Indians together. On their first feeling the rigours of the climate, their thoughts were immediately turned on deferting us. The first instance we had of this kind was fo unexpected, that, had not one of a better difposition than the reft flaid with us, and acquainted us of their defign, it might have proved of very bad confequence. The affair was this: there being on the top of the rock no room for pitching a tent for them, they ufed every evening to retire to a cave at the foot of the mountain, where, befides a natural diminution of the cold, they could keep a continual fire, and confequently enjoyed more comfortable quarters than their mafters. Before they withdrew at night, they faftened on the outfide the door of our hut, which was fo low that it was impoffible to go in or out without ftooping; and as every night the hail and fnow which had fallen formed a wall against the door, it was the business of one or two to come up early and remove this obstruction, that, when we pleafed, we might open the door. For though our Negro fervants were lodged in a little tent, their hands and feet were fo covered with chilblains, that they would rather have fuffered themfelves to have been killed than The Indians therefore came conftantly up to difpatch this work betwixt nine move. and ten in the morning; but we had not been there above four or five days, when we were not a little alarmed to fee ten, eleven, and twelve come, without any news of our VOL. XIV. labourers,

labourers, when we were relieved by the honeft fervant mentioned above, who had withftood the feduction of his countrymen, and informed us of the defertion of the four others. After great difficulty, he opened a way for us to come out, when we all fell to clearing our habitation from the maffes of fnow. We then fent the Indian to the corregidor of Quito with advice of our condition, who, with equal difpatch, fent others, threatening to chaftife them feverely if they were wanting in their duty.

But the fear of punifhment was not fufficient to induce them to fupport the rigour of our fituation; for within two days we miffed them. On this fecond defertion, the corregidor, to prevent other inconveniences, fent four Indians under the care of an alcalde, and gave orders for their being relieved every fourth day.

Twenty-three tedious days we fpent on this rock, viz. to the 6th of September, and even without any poflibility of finifhing our obfervations of the angles; for, when it was fair and clear weather with us, the others, on whofe fummits were erected the fignals which formed the triangles for meafuring the degrees of the meridian, were hid in clouds; and when (as we conjectured, for we could never plainly difcern them) thofe were clear, Pichincha was involved in clouds. It was therefore neceffary to erect our fignals in a lower fituation, and in a more favourable region. This, however, did not produce any change in our habitation till December, when, having finished the obfervations which particularly concerned Pichincha, we proceeded to others; but with no abatement either of inconveniences, cold or fatigue, the places where we made all our obfervations being neceffarily on the highest parts of the deferts; fo that the only respite, in which we enjoyed fome little ease, was during the fhort interval of passing from one to the other.

In all our flations fubfequent to that on Pinchincha, during our fatiguing menfuration of the degrees of the meridian, each company lodged in a field-tent, which, though fmall, we found lefs inconvenient than our Pinchincha hut, though at the fame time we had more trouble, being oftener obliged to clear it from the fnow, as the weight of it would otherwife have demolifhed the tent. At first, indeed, we pitched it in the most fheltered places; but, on taking a refolution that the tents themfelves fhould ferve for fignals, to prevent the inconvenience of those of wood, we removed them to a more expofed fituation, where the impetuofity of the winds fometimes tore up the piquets, and blew them down. Then we were not a little pleafed with our having brought fupernumerary tents, and with our dexterity in pitching another inflead of that which the wind had torn away. Indeed, without this precaution, we fhould have been in the utmost danger of perifhing. In the defert of Afuay we particularly experienced the benefit of this expedient; three tents belonging to our company being obliged to be pitched one after another, till at last they all became unfit for use, and two stout poles were broken. In this terrible condition our only refource was to quit the poft, which was next to the fignal of Sinafaguan, and fhelter ourfelves in a breach or chafm. The two companies were both at that time on this defert, fo that the fufferings of both were equal. The Indians who attended us, not willing to bear the feverity of the cold, and difgufted with the frequent labour of clearing the tent from the fnow, at the first ravages of the wind, deferted us. Thus we were obliged to perform every thing ourfelves, till others were fent us from a feat about three leagues diftant at the bottom of the mountain.

While we were thus labouring under a variety of difficulties from the wind, fnow, froft, and the cold, which we here found more fevere than in any other part; forfaken by our Indians, little or no provifions, a fcarcity of fuel, and in a manner defitiute of fhelter, the good prieft of Cannar, a town fituated at the foot of these Cordilleras, fouthwest from the fignal of Sinafaguan, about five leagues from it, and the road very diffi-

426

cult,

cult, was offering his prayers for us; for he, and all the Spaniards of the town, from the blacknefs of the clouds, gave us over for loft; fo that, after finifhing our obfervations, we paffed through the town, they viewed us with aftonifhment, and received us with the moft cordial figns of delight, adding their congratulations, as if we had, amidft the moft threatening dangers, obtained a glorious victory: and, doubtlefs, our operations muft appear to them a very extraordinary performance, if we confider the inexpreffible horror with which they view those places where we had paffed fo many days.

It was at first determined to erect fignals of wood in the form of a pyramid; but to render our flay in the piercing colds of thefe regions as fhort as possible, we abandoned that intention, of which there would have been no end; because, after remaining feveral days in the densest parts of the clouds, when a clear interval happened, the fignals could not be distinguished: fome the winds had blown down, and others had been carried away by the Indians who tended their cattle on the fides of the mountains, for the fake of the timber and ropes. To remedy which, the only expedient was to make the very tents in which we lodged ferve for fignals; for the orders of the magisfrates, and threatenings of the priest, were of little confequence in such a defert country, where it was alposs impossible to discover the delinquents.

The deferts of the mountains of Pambamarca and Pichincha were the noviciates, in which we were inured to the fevere life we led from the beginning of August 1737 to the end of July 1739. During which time, our company occupied thirty-five deferts, and that of Don George Juan, thirty-two, the particulars of which shall be enumerated, together with the names of all those on which we erected fignals for forming the triangles: in all which the inconveniences were the fame, except that they became lefs fenfible, in proportion as our bodies became inured to fatigue, and naturalized to the inclemencies of those regions, fo that in time we were reconciled to a continual folitude, coarfe provisions, and often a fcarcity of thefe. The diversity of temperatures did not in the least affect us, when we defcended from the intenfe cold of one of those deferts into the plains and valleys, where the heat, though but moderate, feemed exceffive to those coming from fuch frozen regions. Laftly, without any concern, we encountered the dangers unavoidable among those steep precipices, and a great variety of others to which we were continually exposed. The little cabins of the Indians, and the stalls for cattle scattered up and down on the fkirts of the mountains, and where we used to lodge in our paffage from one defert to another, were to us fpacious palaces; mean villages appeared like fplendid cities, and the converfation of a prieft, and two or three of his companions, charmed us like the banquet of Xenophon: the little markets held in those towns, when we happened to pass through them on a Sunday, feemed to us as if filled with all the variety of Seville fair. Thus the leaft object became magnified, when we defcended for two or three days from our exile, which in fome places lafted fifty days fucceffively; and it must be owned, that there were particular occasions when our fufferings were fuch that nothing could have fupported us under them, and animated us to perfevere, but that honour and fidelity which jointly confpired to induce both companies, whatever fhould be the confequence, not to leave imperfect a work fo long defired by all civilized nations, and fo particularly countenanced by the two powerful monarchs our fovereigns.

It may not be amifs here to inform the reader of the different opinions conceived by the neighbouring inhabitants, with regard to our enterprife. Some admired our refolution, others could not tell what construction to put upon our perfeverance; and even those of the best parts and education among them were utterly at a loss what to think. They made it their business to examine the Indians concerning the life we led, but the

312

anfwers

anfwers they received only tended to increase their doubts and aftonishment. They faw that those people, though naturally hardy, robust, and inured to fatigues, could not be prevailed upon, notwithstanding the encouragement of double pay, to continue any time with us. The ferenity in which we lived on those dreaded places was not unknown to them; and they faw with what tranquillity and conftancy we paffed from one scene of folitude and labour to another. This to them appeared fo ftrange, that they were at a lofs what to attribute it to. Some confidered us as little better than lunatics, others more fagacioufly imputed the whole to covetoufnefs, and that we were certainly endeavouring to difcover fome rich minerals by particular methods of our own invention; others again fuspected that we dealt in magic; but all were involved in a labyrinth of confusion with regard to the nature of our defign. And the more they reflected on it, the greater was their perplexity, being unable to difcover any thing proportionate to the pains and hardfhips we underwent. And even when we informed them of the real motive of this expedition, which caufed fo much aftonifhment, their ignorance of its importance would not fuffer them to give credit to what we faid; fufpecting that we concealed, under the veil of an incomprehenfible chimera, our real practices, of which, as I have already obferved, they had no good opinion.

Among feveral pleafant adventures which this occafioned, I fhall only mention two, both of which are still fresh in my memory; and may ferve to illustrate the strange ideas thefe ignorant people formed of us. While we were at the fignal of Vengotafin, erected on a defert at no great diftance from the town of Latacunga, about a league from the place where we had pitched our field-tent was a cow-houfe, where we conftantly paffed the night; for the afcent not being remarkably difficult, we could every morning, in fair weather, return foon enough to the tent to begin our obfervations. One morning as we were paifing to the fignal, we faw at a diffance three or four Indians, in appearance on their knees; and we found indeed, on our approaching nearer, that this was their real pofture; we also observed that their hands were joined, and that they uttered words in their language with the greateft fervour and the moft fupplicant accent; but by the polition of their eyes, it was evident that we were the perfons whom they thus addreffed. We feveral times made figns for them to rife, but they ftill kept their pofture till we were got at a confiderable diftance. We had fcarce begun to prepare our inftruments within the tent, when we were alarmed with a repetition of the fame fupplicant vociferations. On going out to know the caufe, we found the fame Indians again on their knees before the tent; nor were we able, by all the figns we could make, to raife them from that pofture. There fortunately happened at that time to be with us a fervant who underftood both the Indian and Spanish languages; and having directed him to afk thefe poor people what they wanted of us, we were informed that the eldest of them was the father of the others, and that his afs being either firayed or ftolen, he came to us, as perfons who knew every thing, to entreat us to commiferate his great lofs, and put him in a method of recovering his beaft. This simplicity of the Indians afforded us no fmall entertainment; and though we did all we could, by means of our interpreter, to undeceive them, we found they were equally tenacious of this ftrange error as of genuflexion; and would ftill believe, that nothing was hid from us'; till having wearied themfelves with thefe clamorous vociferations, and finding we took no notice of them, they retired, with all the marks of extreme forrow that we would not condefcend to inform them where they might find the afs; and with a firm perfuafion that our refufal proceeded from ill-nature, and not from ignorance, 6

The

The other adventure I shall mention, happened to myself in particular, and not with fimple and ignorant Indian peafants, but with one of the principal inhabitants of Cuenca. While the whole company were on the mountain of Bueran, not far from the town of Cannar, I received a meffage from the prieft of that place, informing me, that two Jefuits of my acquaintance were passing that way, and, if I was defirous of feeing them, I might find them at his houfe. As I was cheerfully defcending the mountain to enjoy this pleafing invitation, I happened to be overtaken by a gentleman of Cuenca, who was going to take a view of his lands in that jurifdiction, and had obferved me coming from our tent. He was, it feems, acquainted with my name, though he had never feen me; but obferving me dreffed in the garb of the Meftizos, and the loweft clafs of people, the only habit in which we could perform our operations, he took me for one of the fervants, and began to examine me; and I was determined not to undeceive him till he had finished. Among other things, he told me, that neither he nor any body elfe would believe, that the afcertaining the figure and magnitude of the earth, as we pretended, could ever induce us to lead fuch a difinal and uncouth life; that, however we might deny it, we had doubtlefs difcovered many rich minerals on those lofty deferts; adding, that perfons in his circumftances were not to be fatisfied with fine words. Here I laboured to remove the prejudices he entertained against our operations; but all I could fay only tended to confirm him in his notion; and, at parting, he added, that doubtlefs, by our profound knowledge in the magic art, we might make much greater discoveries than those who were ignorant of it. These opinions were blended with others equally abfurd and ridiculous; but I cand it impoffible to undeceive him, and accordingly left him to enjoy his own notions.

Our feries of triangles in the fouth part being finished, and a fecond bale meafured by each company, to prove the truth of our work, we began our aftronomical obfervations; but our inftruments not being perfectly adapted to that intention, we were obliged, in the month of December of the fame year, to return to Quito, in order to conftruct another, on whofe accuracy we could fafely rely; and this employed us till the first of August of the following year 1740; when, without any farther loss of time, we again repaired to Cuenca, and immediately began our obfervations ; but thefe being very tedious, were not finished before the end of September; the atmosphere of that country being very unfavourable to aftronomical obfervations. For, in the deferts, the clouds in which we were fo frequently involved hindered us from difcerning the other fignals; and in the city, over which they foread a kind of perpetual pavilion, they hid the ftars from us while they paffed the meridian; but patience and refolution, infpired by the importance of our enterprife, having enabled us at last to perform our task on the fouth fide of the equator, we prepared for our journey to the north of it, in order to make the aftronomical obfervations at the other extremity of the arch of the meridian, and thus put the finishing hand to our work: but this was for some time retarded by an accident of importance which called us to Lima.

In December 1743, the reafons which detained us at Lima, Guayaquil, and in Chili, no longer fubfifting, we returned to Quito in January 1744, when Don George Juan and I prolonged the arch of the meridian four triangles, by which it was extended to the place where M. Godin, in 1740, had made the fecond aftronomical obfervation, and which he now repeated, and finished in the month of May 1744.

Meffrs. Bouguer and M. de la Condamine having at that time finished the feveral parts affigned to them, had left Quito, in order to return to France; the former by the way of Carthagena, and the latter by the river of the Amazons; but the rest of the company remained there fome time; fome for fear of being taken by the enemy, fome for want want of the means to defray the charges neceffary in fo long a journey, and others on account of their having contracted fome obligations, and were unwilling to leave the country till they could difcharge them. So that in the former only the natural defire of returning to their country prevailed, in order there to repose themfelves after such a feries of labours and hardfhips, by which the health and vigour of all were in some measure impaired.

CHAP. III. — The Names of the Deferts and other Places where the Signals were erected for forming the Series of Triangles for measuring an Arch of the Meridian.

IN order to gratify the curiofity of the reader with regard to our operations, I fhall mention in feparate articles, the places where each company made their obfervations, and the time they were obliged to remain there; omitting a detail of circumftances, many of which would be little more than a paraphrafe on the fubject of the preceding chapter. Nor fhall I here include those flations used in the year 1736, after measuring the base of Yaruqui, both on its extremities and in the deferts of Pambamarca and Yllahalo; for the disposition of the triangles being afterwards altered, they were repeated. Therefore, confidering them as not used at that time, I shall begin with those flations in which no fuch circumftances happened, and range them in the order they were occupied.

Deferts on which the Signals were erected for the Operations conducted by M. de la Condamine and myfelf.

I. — SIGNAL on the Defert of Pichincha.

The fignal was at first erected on the highest fummit of Pichincha, but afterwards removed to another station at the foot of the pic; the top having been afterwards found not to be the most proper place. We began our observations on this mountain on the 14th of August 1737, but could not finish them before the beginning of December following.

II. — THE Signal on Oyambaro, the South Extremity of the Bafe of Yaruqui.

On the 2cth of December 1737, we removed to Oyambaro; and finished our obfervations neceffary to be made there on the 29th of the fame month.

III. — SIGNAL on Caraburu, the Northern Extremity of the Bafe of Yaruqui.

On the 30th of December we paffed to Caraburu, and continued there till the 24th of January 1738. This long ftay was partly occasioned by the badness of the weather, and partly by the want of fignals.

IV. — SIGNAL on the Defert of Pambamarca.

On this defert of Pambamarca, where we had before been in 1736, on finishing the measurement at Yaruqui, a fecond fignal was erected here, and we went up the 26th of January 1738, where we remained till the 8th of February; and though we had not here the difficulties of the ice and fnow to ftruggle with, as on Pichincha and other fubfequent fubfequent flations, yet we were extremely incommoded by the velocity of the winds, which were fo violent that it was difficult to fland; and, notwithflanding the best fhelter possible to be procured, we often found it very difficult to keep the inftrument fleady; which, of confequence, greatly increased the difficulty of making the observations with the necessary accuracy.

V. — SIGNAL on the Mountain of Tanlagua.

On the 12th of February we afcended the mountain of Tanlagua; and having the next day finished our observations, returned. If this mountain be but small in comparison of others in this Cordillera, and thus faved us the many inconveniencies of a loss of the second state of the second

VI. — SIGNAL on the Plain of Changalli.

On the 17th of March we removed to the fignal of Changalli, and finished the neceffary observations on the 20th. We spent the time here very comfortably. The fignal was erected on a plain, where neither the air nor weather molested us; and being lodged in a farm-house near the fignal, and not far from the town of Pintac, we had all the necessfary conveniencies of life, the want of which we often severely felt in the deferts. These comforts did not, however, in the least abate our diligence to avail ourfelves of every instant when the fignals on the mountains were not concealed in clouds. But one circumstance which lengthened our stay was, that some of the fignals were wanting, having been blown down by the wind; it was therefore refolved, that for the future the field-tents should ferve for fignals. And, accordingly, we afterwards constantly purfued this method.

VII. - SIGNAL on the Defert of Pucaguaico, on the Side of the Mountain Catopaxi.

This mountain we afcended the 21ft of March, and on the 4th of April were obliged to return, after in vain endeavouring to finish our observations. For, not to mention our own fufferings, the frost and show, together with the winds, which blew so violently that they seemed endeavouring to tear up that dreadful volcano by its roots, rendered the making observations absolutely impracticable. Such is indeed the rigour of this climate, that the very beasts avoid it; nor could our mules be kept at the place where we, at first, ordered the Indians to take care of them; so that they were obliged to wander in fearch of a milder air, and sometimes to such a distance that we had often no small trouble in finding them.

At Pucaguaico we however faw the neceffity of either erecting the fignal further to the fouth, or fetting up another in the intermediate fpace. Several confultations were held, to determine on the best method; but, as other things were neceffary to be done before we came to a conclusion, the operations were fuspended, and the interval spent in making observations on the velocity of found, and other physical subjects. Every thing being ready for renewing our operations, we a fecond time ascended Pucaguaico

on

on the 16th of August, and it was our good fortune by the 22d to have finished all our necessary operations.

VIII. — SIGNAL on the Defert Corazon.

On the 12th of July, before we had finished our operations at the station of Pucaguaico, we ascended to the defert Corazon, where we staid till the 9th of August. This mountain is nearly of the same height with that of Pichincha; and its lostiest fummit, like that of the former, a rock of confiderable altitude. At the foot of this rock the fignal was erected; and thus our station nearly refembled that of Pichincha. There was indeed this confiderable difference, that our sufferings from the winds, frost, and shows, were confiderably lefs.

IX. — SIGNAL on Papa-urco.

It had been determined that Papa-urco fhould be the place where the intermediate fignal betwixt those of Pucaguaico and Vengotafin should be erected. This mountain, which is of a middling height, we ascended the 11th of August, and continued on it till the 16th, when we returned to Pucaguaico; so that this easy mountain was a kind of refting-place between the two painful stations of Corazon and Pucaguaico.

X. — SIGNAL on the Mountain of Milin;

Whofe height is nearly the fame with that of the Papa-urco. We afcended it on the 23d of August, and by the 29th had finished the necessary observations.

XI. - SIGNAL on the Mountain Vengotafin.

The mountain of Vengotafin is not rewarkably high, but our flay on it was longer than we at first imagined; for, after finishing our observations on the 4th of September, fome difficulties which arose with regard to the position of the following fignal towards the fouth detained us till the 18th. However, the town of Latacunga being contiguous to the skirts of this mountain, and having several farms in its neighbourhood, we were at no loss for many conveniencies of which we were destitute in several other stations.

XII. - SIGNAL on the Mountain of Chalapu.

Our flay on this mountain was fhorter than on any other in the whole feries of triangles; for we continued only part of four days, going up the 20th and coming down the 23d. It is none of the higheft mountains, and has in its neighbourhood the town of Hambato, and its fkirts diversified with feats and farms; but the aclivity is fo fteep, that the fafeft way is to afcend it on foot.

XIII. SIGNAL of Chichichoco.

The fignal of Chichichoco was erected on the fide of the mountain of that name, which is a branch of the famous fnowy mountain of Carguairafo. Here we ftayed only from the 24th to the 29th of September. Though the fpot where we placed the fignal was of a very inconfiderable height when compared with that of the other mountains, yet, from its proximity to Carguairafo, when the wind blew from that quarter, it was confiderably cold, but not comparable to that we felt on the deferts, where every part part was covered with ice, hail, or fnow. The day we left this place, while our Indians were loading the mules, and we in the tent ready to fet out on our journey, an earthquake was felt, which reached four leagues round the country. Our tent rocked from fide to fide, in conformity to the undulating motion observed in the earth; this shock was only one of the fmall concussions frequent in those parts.

XIV. - SIGNAL of Mulmul.

This fignal, and the three following, occafioned feveral journeys from one to another; as, for the greater accuracy of the obfervations, auxiliary triangles were to be formed, in order to verify the diffances refulting from the principal. The difficulty alfo of reciprocally diffinguifhing fome fignals from others, obliged us to change their pofition, till they flood in proper places; and confequently laid us under a neceffity of going often from one flation to another. On the 8th of November, having finifhed all our obfervations, the company removed to Riobamba, where I myfelf had been confined ever fince the 20th of October, with a critical difeafe, which at first attacked me at Chichichoco, and increasing at Mulmul, I was obliged to remain in a cow-house on that mountain, from whence I was removed to Riobamba; and this accident hindered me from being prefent at the fignals XV. XVI. and XVII. which were those of Guayama, Limal, and Nabuso.

XVIII. — SIGNAL of Sifa-pongo.

At the fignal of Sifa-pongo we continued from the 9th to the end of November; and here the trigonometrical obfervations were intermitted till Don George Juan and M. Godin returned from Quito, to which city they repaired in order to take fome meafures neceffary for the continuation of the work. But, that this interval might not be loft, M. Bouguer proposed to make fome experiments, in order to demonstrate the fyftem of attraction. The place he made choice of for these experiments was the mountain of Chimborazo. In this station, and the following, of the fandy defert of the fame mountain, we fuffered more than on any other.

XIX. — SIGNAL of Lalangufo.

On the defert of Lalanguso, our observations were continued from the 24th to the 31st of January 1739.

XX. — SIGNAL on the Defert of Chufay.

The flation on the defert of Chufay was one of the moft tedious in the whole feries of triangles, being unavoidably detained on this difagreeable mountain from the 3d of February to the 24th of March. This delay was occafioned by the difficulty of pitching on proper places for erecting the fucceeding fignals, that they might fland in full view, be eafily diffinguifhed one from another, and form regular triangles. This was indeed a difficult tafk, the lofty fummits of the mountains of the Cordillera of Azuay, where they were to be placed, intercepting each other from our fight. The tedioufnefs of this flation was increafed by the rigour of the weather, the ftrength of the winds, and its great diffance from any place where we could procure convenient fhelter and refreshments.

VOL. XIV.

ULLOA'S VOYAGE TO SOUTH AMERICA.

XXI. - SIGNAL on the Defert of Tialoma.

On the defert of Tialoma we continued from the 26th of March to the 25th of April, but had little, except the length of the time, to complain of.

XXII.-SIGNAL on the Defert of Sinafaguan.

We arrived at the defert of Sinafaguan on the 27th of April, and left it on the 9th of May, the only clear day we had during our ftay; but as we have already mentioned our fufferings on this defert, it will be unneceffary to repeat them here.

XXIII. - SIGNAL on the Defert of Bueran.

We continued on the defert of Bueran from the 10th of May to the 1ft of June; but, befides the fmall height of the mountain, the town of Cannar being only two leagues diftant from it, we were in want of nothing. The temperature of the air was alfo much more mild than on the other deferts; befides, we had the great fatisfaction of relieving our folitude by going to hear mafs on Sundays, and other days of precept, in the town. Thefe comforts had, however, fome allay; for while we continued on this defert, the animals, cottages, and Indians, fuffered three times in a very melancholy manner by tempefts of lightning, which fell on the neighbouring plains; all thofe countries, efpecially the defert of Burgay, which borders on that of Bueran, being fubject to terrible ftorms.

XXIV. --- SIGNAL on the Defert of Yafuay.

Our obfervations at the fignal of Yafuay were not finished till the 16th of July; there being a neceffity, before we could conclude them, to pitch on the most convenient place for meafuring a fecond bafe, in order to prove the accuracy of all the preceding geometrical operations; and, after fixing on a proper fpot, to determine where the fignals between Yafuay and the bafe could be most properly placed. In order to this, we went to Cuenca, and from thence proceeded to the plains of Talqui and los Bannos. At laft it was determined that the bafe fhould be meafured in the former, by which the refult of the triangles was to be verified by my company, and that of the other in the plain of Los Bannos. The requisite fignals alfo were erected; and we returned to the defert of Yafuay, where we continued our obfervations, which employed us from the 7th to the 16th of July. Though this mountain is one of the higheft in the whole territory of Cuenca, and the afcent fo fteep that there is no going up but on foot, nor even by that method without great labour, yet the cold is far from being fo intolerable as on Sinafaguan and the deferts north of that mountain. So that we cheerfully fupported the inconveniences of this ftation.

XXV. - SIGNAL on the Mountain of Borma.

This mountain is but low, as are all the others in the neighbourhood of Cuenca, fo that here we were not impeded by any cloudy fummits. It was also our good fortune that Yafuay, contrary to our apprehensions, was clear and visible the whole 19th of July; fo that we finished our observations in two days agreeably.

XXVI. XXVII. XXVIII. XXIX. - SIGNALS of Pugin, Pillachiquir, Alparupafca, and Chinan.

The two laft being the north and fouth extremities of the bafe of Talqui, the four flations of Pugin, Pillachiquir, Alparupaſca, and Chinan did not require our attendance; for being near the bafe of Talqui, we daily went from the farm-houles where we lodged, and obferved the angles, except that of Pillachiquir, to which, on account of its greater diftance than that of the other fignals, there was a neceflity for our vifiting; but happily concluding our obfervations the fame day we reached it, there was no reafon for our longer ftay.

XXX. XXXI. -- SIGNALS of Guanacauri, and the Tower of the great Church of Cuenca.

The feries of triangles, except the two laft at the extremities of the fecond bafe, being finished, it was necessary to form other triangles, in order to fix the place of the observatory where, when the geometrical observations were finished, the astronomical were to begin. Those which fell to my lot, were a fignal on the mountain of Guanacauri, and the tower of the great church of Cuenca; and these angles were taken at the fame time the astronomical observations were making.

At the north extremity of the arch of the meridian new triangles were afterwards formed, as we have already obferved in the foregoing chapter. This rendered it neceffary for us to make choice of different places on these mountains for erecting other fignals in order to form these triangles. The fame order which had been followed during the whole feries of menfuration, that each perfon should take two angles of every triangle, was observed here; and those assigned to me were the following :

XXXII. XXXIII. XXXIV. XXXV. — SIGNALS on Guapulo, the Mountain of Campanario, and those of Cosin, and Mira.

The obfervations to be made at thefe four flations could not be finished till those alarming reasons which called us to Lima and Chili no longer subfished, and we were returned to Quito. The work at the first and last flations was dispatched without the neceffity of lodging there; for, being near Quito and the village of Mira, when the weather promised us a favourable opportunity, it was only an easy ride; but we found it very different with regard to the flations of Campanario and Cosin. However, we left all the four at the fame time, namely, on the 23d of May 1744; the day when Don George and myself put the finishing hand to the astronomical observations which we had re-assumed on the 14th of February of the fame year; and thus the whole process relative to the menfuration of an arch of the meridian was concluded.

Signals erected on Deferts, &c. where the Observations were conducted by Mr. Godin and Don George Juan.

The flations immediately fubfequent to the admeasurement of the base of Yaruqui, in the year 1736, and afterwards not made use of, as we have already observed, were common to both companies; the method which was afterwards followed, for every one to observe two angles in all the triangles, not having been thought of; though it both shortened the work, and, at the same time, rendered it much easier: fo that Don George

3 K 2

Juan

Juan and Mr. Godin were on the deferts of Yllahalo and Pambamarca, at the fame time with Meff. Bouguer and Condamine and myfelf.

I. II. - SIGNALS on the Extremities of the Bafe of Yaruqui.

In order to make the neceffary observations relating to these two fignals, they left Quito on the 20th of August 1737, and had completely finished them by the 27th.

III. — SIGNAL on the Defert of Pambamarca..

After they had concluded all the neceffary obfervations at the extremities of the bafe, they went without delay to the defert of Pambamarca, and completely finished their operations by the first of September.

IV. — SIGNAL on the Mountain of Tanlagua.

Having finished their observations on the defert, they came down to the little town of Quenche, in that neighbourhood, in order to proceed from thence to Tanlagua; but the Indians, who were to accompany them, being no ftrangers to the extreme feverity of the weather on that defert, difcouraged by their recent fufferings on Pambamarca, and knowing they fhould ftill fuffer more on Tanlagua, were not to be found; and the lowest class of inhabitants in the town, apprehending that they should be sent on this painful fervice, alfo left their habitations and abfconded; fo that the joint endeavours of the alcalde and prieft to difcover them proved ineffectual; and after a delay of two whole days, the curate, with great difficulty, prevailed on the facriftan, and other Indians employed in the fervice of the church, to accompany them, and take care of the loaded mules as far as the farm-houfe of Tanlagua, where they arrived the 5th of September. The next day they began to afcend the mountain, which, being very fleep, took them up a whole day in climbing it. But this being more than the Indians were able to perform, as they carried the field-tents, baggage, and inftruments, they were obliged to ftop half way; fo that those on the top were under a necessity of paffing the night there without any shelter; and a hard frost coming on, they were almost perished with cold; for they were fo greatly affected by it, that they had no use of their limbs till they returned to a warmer air. After all these hardships, the gentlemen could not finish their obfervations, fome of the fignals being wanting, having either been blown down by the winds, or carried away by the Indian herdfmen: fo that, during the interval, while perfons were employed in erecting others, they returned to Quito, and applied themselves to examine the divisions of the quadrants. These operations, being very tedious, employed them till the month of December, when, all the fignals which were wanting being replaced, they again, on the 20th of December, repaired to their post at Tanlagua; and on the 27th finished the observations necessary to be made at that flation.

V. - SIGNAL on the Mountain of Guapulo.

The fignal of Guapulo being erected on a mountain of no great height, and in the neighbourhood of Quito, their refidence was not neceffary; for, by fetting out from the city at day-break, they could reach the field tent, where the inftruments were left, early in the morning. These journeys repeated every day, and though every moment of time was improved to the greatest advantage, it was the 24th of January 1738 before

436

they finished the observations, with that accurate precision fo confpicuous in all their operations.

VI. — SIGNAL on the Cordillera and Defert of Guamani.

They were obliged to make two journeys to the mountain of Guamani, the fignal having been first misplaced, so as not to be seen from that erected on Corazon; and confequently there was a necessity for removing it. And though, in order to do this, they ascended the mountain on the 28th of January, they found it necessary to return thither on the 7th of February, when they were fortunate enough to finish every thing remaining the very next day.

VII. — SIGNAL on the Defert of Corazon.

This mountain also the gentlemen were obliged to visit twice; the first journey was on the 20th of January, and the second on the 12th of March 1738.

VIII. - SIGNAL of Limpie-pongo, on the Defert of Cotopaxi.

They went up to the defert of Cotopaxi on the 16th of March, and remained there till the 31ft; when they observed that the fignal of Guamani was not visible from thence, and therefore it was necessary to erect another in the intermediate space; which being completed on the 9th of August, they again repaired to the fignal of Limpiepongo, on Cotopaxi; where they finished all their operations by the 13th of the fame month, and left every thing in exact order. In ascending the mountain in this fecond journey, the mule on which Don George Juan rode fell down a breach four or five toises deep, but providentially without receiving the least hurt.

As they had been obliged to erect another fignal between those of Guamani and Limpie-pongo, in order to continue the feries of triangles; fo there was also a neceffity for returning to some stations, to observe again the angles which had before been determined. These operations, together with the experiments on the velocity of sound, and the observations at the new signal, filled up the interval from the time the operations were sufference on Limpie-pongo, till they returned to finish them.

IX. — SIGNAL on the Defert of Chinchulagua.

The operations of the fignal of Chinchulagua, erected on the defert of the fame name, were completed on the 8th of August; but a doubt arising with regard to one of the angles observed, for the greater certainty, they returned to this station, and again examined the angle in question, after they had finished their observations at Limpiepongo.

X. — SIGNAL on the Mountain of Papa-urco.

After verifying the obfervation on Chinchulagua, they removed to the fignal of Papa-urco, and finished their observations in the fame month of August. Here they for some time fuspended their operations, being called to Quito on affairs of importance, relating to the French academicians.

XI. — SIGNAL on the Mountain of Milin.

The affairs which had required M. Godin's prefence at Quito being terminated within the month, they returned, on the 1st of September, to make the neceffary obfervations tions at the fignal of Milin, where they continued till the 7th, when they left it, having completely finished their operations.

XII. - SIGNAL on the Defert of Chulapu.

From Milin they proceeded to the defert of Chulapu, where they remained till the 18th of September, when they had finished all their observations. Till this fignal, exclusive, each company had observed the three angles of all the triangles; both because they differed from one another, and to prove by this precision the errors in the divisions of the quadrants, before observed by other methods. But from this fignal, inclusive, each company observed two angles only of the other triangles, as had been agreed on.

XIII. — SIGNAL in Jivicatfu.

In Jivicatfu they remained from the 18th to the 26th of September. This flation was one of the most agreeable; for, besides the height on which the fignal was erected, the temperature of the air, and the cheerful aspect of the country, the town of Pilaro was in the neighbourhood, so that they wanted for nothing.

XIV. XV. - SIGNALS on the Deferts of Mulmul and Guayama.

Thefe two deferts are placed together, becaufe their fummits are united by gentle eminences; on one of which is a cow-houfe, ufed by the Indians when they go in fearch of their cattle, which feed on the fides of this mountain. In this cow-houfe Don George Juan, M. Godin, and their attendants, took up their quarters on the 3cth of September, and every morning, when the weather was favourable, repaired to the fignal erected on one or other of the eminences. But the diftance between the two flations being very fmall, and the obfervations made there requiring to be verified by thofe of other auxiliary triangles, it was abfolutely neceffary to determine exactly the flations where thefe triangles were to be formed; and to remain there till the diftances were fettled, and the obfervations relating to them concluded; which operations, notwithftanding the greateft diligence was ufed, employed them till the 20th of October.

Every thing at the two preceding flations being finished, they repaired to the village of Riobamba, determining to continue their work without interruption; but meeting with fome difficulties concerning the most advantageous position of the subsequent triangles, and money beginning to grow short with our whole fociety, both Spaniards and French, it was thought necessary to make use of the interval while the proper places for erecting the fignals were determining, to procure supplies. Accordingly, M. Godin and Don George Juan again fet out from Riobamba for Quito on the 7th of November; but it was the 2d of February following before we had the pleasure of congratulating them on their return, the former having been feized with a fever, which brought him very low, and detained them a considerable time at Quito.

XVI. XVII. - SIGNALS on Amula and Sifa-pongo.

The observations necessary at the fignal of Amula were finished before the journey to Quito; and from the 2d of February 1739, when they returned to Riobamba, till the 19th, they were employed in those relating to Sifa-pongo.

XVIII.

438

XVIII. — SIGNAL on the Mountain of Sefgum.

On the mountain of Sefgum they had occasion to ftay only from the 20th to the 23d of February. For this fignal flood on the declivity of a mountain, and they vigilantly employed every moment when the other deferts were free from those clouds in which they are usually involved.

XIX. — SIGNAL on the Defert of Senegualap.

The obfervations at the fignal of Senegualap detained them from the 23d of February to the 13th of March. The length of the time was indeed the most difagreeable part, as otherwife they did not place this among the worst stations they had met with during their course of observations.

XX. — SIGNAL on the Defert of Chufay.

From Senegualap they proceeded to the defert of Chufay, a flation which gave thefe gentlemen no lefs trouble than it had done us. Our company had no concern with the flation on this defert; for according to the alternative eftablished between the two companies, that of Senegualap was the place to which we were to repair. But after finishing the observations at Lalanguso, being uneasy at the long flay of M. Godin and Don George Juan at Quito, to divert our thoughts by fome laborious employment, we divided our company into two, in order to profecute the menfuration, till those gentlemen returned. Accordingly, M. Bouguer, at the head of one detachment, went to the fignal of Senegualap, and M. de la Condamine and myself repaired to that of Chufay. But M. Godin and Don George Juan joining us there, we returned to our proper company, and the operations were continued in the order agreed on.

XXI. — SIGNAL on the Defert of Sinafaguan.

This defert was one of those common to both companies; and that of Don George Juan remained on it till the 29th of May, when the observations of both were finished. Thus every member of the two companies equally shared in the fatigues of the operations, and in the hardships unavoidable in such dreary regions.

XXII. - SIGNAL on the Defert of Quinoaloma.

The defert of Quinoaloma, like the former, may be claffed among the most difagreeable flations in the whole feries; for though they repaired hither from Sinafaguan, it was the 31st of the fame month before they could finish the observations relating tothis fignal.

In their road from Quinoaloma they paffed through the town of Azogues; where leaving their inftruments and baggage, they went to Cuenca, to furvey the plains of Talqui and Los Bannos, in order to make choice of one of them for meafuring the bafe; and having pitched on the latter, and confulted with us relating to the fignals wanting, they returned to the town of Azogues.

XXIII. — SIGNAL on the Defert of Yafuay.

On the 15th of June they proceeded to the defert of Yafuay, and continued there till the 11th of July; when, having finished their observations, they returned to Cuenca, where they employed themselves in measuring the base on the plain of Los 8 Bannos, Bannos, and in beginning the aftronomical obfervations. This they profecuted with inceffant diligence till the 10th of December following, when, in order to continue them with the greater precifion and certainty, a new inftrument became neceffary, and for this purpofe they repaired to Quito.

XXIV. XXV. XXVI. XXVII. — SIGNALS of Namarelte, Guanacauri, Los Bannos, and the Tower of the great Church of Cuenca.

Whilf they were making the aftronomical obfervations at Cuenca, they alfo, by unwearied diligence, finished those relating to the geometrical mensuration at the four stations of Namarelte, Guanacauri, Los Bannos, and the tower of the great church of Cuenca. The first three stations were to connect the base (which reached from Guanacauri to Los Bannos) with the feries of triangles; and the last ferved for the obfervatory jointly with the base. The observations at all these were completely finished at this time; for though the next year we found it necessary to go to Cuenca to repeat the astronomical observations, yet-all the operations relating to the geometrical mensurations were accurately finished at this time.

XXVIII. XXIX. XXX. XXXI. XXXII. — Signals on the Mountains of Guapulo, Pambamarca, Campanario, Cuicocha, and Mira.

In the year 1744, when we returned to the province of Quito, in order to conclude the whole work, having conquered the difficulties which obliged us to intermit the aftronomical obfervations, as we have already obferved, Don George Juan added fix flations to the feries of triangles, there being a neceffity for repeating the obfervations of Guapulo and Pambamarca, in order to extend the feries of triangles farther to the northward, and of his repairing again to the mountains of Campanario and Cuicocha. Here, and at Pambamarca, he was obliged to remain amidft all the inconveniences and hardfhips of those dreadful regions, till he had completed the neceffary obfervations; all which he bore with great magnanimity; but at those of Guapulo and Mira, which ferved to connect the observatory, those inconveniences were avoided; but as the observations at the last flation were jointly performed by both companies, the particulars of them have been already mentioned.

CHAP. IV. — Defcription of the City of Quito.

AS in the preceding defcriptions of the feveral cities and towns, I have not fwelled the accounts with chronological and hiftorical remarks, I fhall obferve the fame method with regard to Quito, and only give an accurate account of the prefent flate of this country, the manners and cuftoms of the inhabitants, and the fituation of the feveral places; that fuch as know them only by name, may avoid those dangerous errors which too often refult from forming a judgment of things without a thorough knowledge of them. It may not, however, be amils to premife, that this province was fubjected to the empire of Peru, by Tupac-Inga-Yupanqui, the eleventh Ynca.

Garcilafo, in his hiftory of the Yncas of Peru, the beft guide we can follow on this fubject, obferves, that this conqueft was made by the army of that emperor, commanded by his eldeft fon Hueyna-Capac, who alfo fucceeded him in the empire. Hueyna-Capac, among other natural children, had one called Ata-Hualpa, by a daughter of the laft

440

laft king of Quito; and being extremely fond of him, on account of his many amiable qualities and accomplifhments, in order to procure him an honourable fettlement, prevailed on his legitimate and eldeft fon Huafcar to allow him to hold the kingdom of Quito as a fief of the empire; it being an invariable law, that all conquefts were to be perpetually annexed to the empire, and not alienated from it on any account whatever. Thus Hueyna-Capac enjoyed the fatisfaction of feeing his favourite a fovereign of large dominions. But on the death of his father, this prince, of whom fuch great hopes had been conceived, ungratefully rebelled, feized on the empire, imprifoned his brother, and foon after put him to a violent death. His profperity was, however, but of fhort continuance; for he fuffered the fame fate by order of Don Francisco Pizarro, who had fent Sebastian de Belalcazar to make a conquest of the kingdom of Quito. He routed the Indians wherever they ventured to face him; and having foon, by a feries of victories, made himfelf mafter of the kingdom, and in the year 1534, rebuilt the capital, which had fuffered extremely from inteftine commotions, called it San Francifco de Quito, a name it still retains, though it was not till feven years after that the title of city was conferred upon it.

We found, from accurate observations, that the city of Quito is fituated in the latitude of 0° 13' 33" fouth, and in 298° 15 45" of longitude from the meridian of Teneriffe. It stands in the inland parts of the continent of South America, and on the eaftern fkirts of the Weft Cordillera of the Andes. Its diftance from the coaft of the South Sea is about thirty-five leagues weft. Contiguous to it, on the north-weft, is the mountain and defert of Pichincha, not lefs famous among strangers for its great height, than among the natives for the great riches it has been imagined to contain ever fince the times of idolatry; and this only from a vague and unfupported tradition. The city is built on the acclivity of that mountain, and furrounded by others of a middling height, among the breaches, or guaycos, as they are called here, which form the eminences of Pichincha. Some of thefe breaches are of a confiderable depth, and run quite through it, fo that great part of the buildings ftand upon arches. This renders the ftreets irregular and extremely uneven, fome being built on the afcents, defcents, and fummits of the breaches. This city, with regard to magnitude, may be compared to one of the fecond order in Europe; but the unevennels of its fituation is a great difadvantage to its appearance.

Near it are two fpacious plains; one on the fouth called Turu-bamba, three leagues in length; and the other on the north, termed Inna-Quito, about two leagues in extent. Both are interfperfed with feats and cultivated lands, which greatly add to the profpect from the city, being continually covered with a lively verdure, and the neighbouring plains and hills always enamelled with flowers, there being here a perpetual fpring. This fcene is beautifully diversified with large numbers of cattle feeding on the eminences, though the luxuriancy of the foil is fuch, that they cannot confume all the herbage.

These two plains contract as they approach the city, and, at their junction, form a neck of land, covered with those eminences on which part of Quito stands. It may, perhaps, appear strange, that, notwithstanding two such beautiful and extensive plains are so near the city, a situation so very inconvenient should be preferred to either. But the first founders feem to have had less regard for convenience and beauty, than for preferving the remembrance of their conquest, by building on the fite of the ancient capital of the Indians, who made choice of so fuch places for erecting their towns; probably from their being better adapted to defence. Befides, the Spaniards, during the infancy of their conquest, little imagined this place would ever increase to its prefert magnitude. Quito, however, was formerly in a much more flourishing condition than

VOL. XIV.

At

at prefent; the number of its inhabitants being confiderably decreafed, particularly the Indians, whole ftreets of whofe huts are now forfaken, and in ruins.

South-weft from Quito, on the neck of land belonging to the plain of Turu-bamba, is an eminence called Panecillo, or the Little Loaf, from its figure refembling a fugar loaf. Its height is not above a hundred toifes, and between it and the mountains covering the eaft part of the city is a very narrow road. From the fouth and weft fides of the Panecillo iffue feveral ftreams of excellent water; and from the eminences of Pichincha feveral brooks flow down the breaches, and, by means of conduits and pipes, plentifully fupply the whole city with water; whilft the remainder, joining in one ftream, forms a river called Machangara, which wafhes the fouth parts of the city, and is croffed over by a ftone bridge.

Pichincha, in the Pagan times, was a volcano, and even fome fiery eruptions have been known fince the conqueft. The mouth, or aperture, was in a pic nearly of the fame height with that on which we took our flation; and the top of it is now covered with fand and calcined matter. At prefent no fire is ejected, nor does there any fmoke iffue from it. But fometimes the inhabitants are alarmed by dreadful noifes, caufed by winds confined in its bowels, which cannot fail of recalling to their minds the terrible deftruction formerly caufed by its eructations, when the whole city and neighbouring country were often, as it were, buried under a deluge of afhes, and the light of the fun totally intercepted, for three or four days fucceffively, by impenetrable clouds of duft. In the centre of the plain of Inna-Quito is a place called Rumibamba, i. e. a flony plain, being full of large fragments of rocks thrown thither by the ejections of the mountain. We have already obferved, that the higheft part of Pichincha is covered with ice and fnow, confiderable quantities of which are brought down to the city, and mixed with the liquors drunk by people of fafhion.

The principal fquare in Quito has four fides, in one of which stands the cathedral, and in the oppofite the epifcopal palace; the third fide is taken up by the town-houfe, and the fourth by the palace of the audience. It is very fpacious, and has in the centre an elegant fountain. It is indeed rather disfigured than adorned by the palace of the audience; which, inftead of being kept in repair conformable to the dignity of government, the greatest part of it has been fuffered to fall into ruins, and only a few halls and offices taken any care of; fo that even the outward walls continually threaten to demolish the parts now standing. The four streets terminating at the angles of the fquare are ftraight, broad, and handfome; but at the diftance of three or four quadras (or the diftance between every two corners, or ftacks of building, and which here confifts of about a hundred yards, more or lefs) begin the troublefome declivities. This inequality deprives the inhabitants of the ufe of coaches, or any other wheel-carriage. Perfons of rank, however, to diffinguish themfelves, are attended by a fervant carrying a large umbrella : and ladies of the first quality are carried in fedans. Except the four ftreets above-mentioned, all the reft are crooked, and deftitute both of fymmetry and order. Some of them are croffed by breaches, and the houfes fland on the fides of their winding courfe and irregular projections. Thus fome parts of the city are fituated at the bottom of those breaches, while others stand on their fummits. The principal ftreets are paved ; but those which are not, are almost impaffable after rain, which is here very common.

Befides the principal fquare, there are two others very fpacious, together with feveral that are fmaller. In these the greatest part of the convents are fituated, and make a handfome appearance; the fronts and portals being adorned with all the embellishments of architecture, particularly the convent of the order of Franciscans, which, being wholly of free-stone, must have cost a prodigious sum; and indeed the just free-stone, proportions, proportions, the difposition of the parts, the elegant taste and execution of the work, render it equal to most of the admired buildings in Europe.

The principal houfes are large; fome of them have fpacious and well-contrived apartments, though none are above one ftory in height, which is feldom without a balcony toward the ftreet; but their doors and windows, particularly thofe within, are very low and narrow, following in thefe particulars the old cuftom of the Indians, who conftantly built their houfes among breaches and inequalities, and were alfo careful to make the doors very narrow. The Spaniards plead in defence of this cuftom, that the apartments are freer from wind; but be that as it may, I am inclined to think that this peculiarity owed its origin to a blind imitation of the Indians.

The materials made use of in building at Quito are adobes, or unburnt bricks, and clay; and to the making of the former the earth is fo well adapted, that they last a long time, provided they are defended from the rain. They are cemented or joined together by a certain fubstance called fangagua, a species of mortar of uncommon hardness, used by the ancient Indians for building houses and walls of all kinds, several remains being still to be seen near the city, and in many other parts of the kingdom, notwithstanding the remarkable inclemency of the weather; a fufficient proof of its strength and duration.

The city is divided into feven parifhes, the Sagrario, St. Sebaftian, St. Barbaria, St. Roque, St. Mark, St. Prifca, and St. Blaize. The cathedral, befides the richnefs of its furniture, is fplendidly adorned with tapeftry hangings and other coftly decorations; but in this refpect the other parifh-churches are fo mean as to have fcarce neceffaries for performing divine worfhip. Some of them are without pavement, and with every other mark of poverty. The chapel del Sagrario is very large, wholly of ftone, and its architecture executed in an elegant tafte; nor is the difpolition of the infide inferior to the beauty of its external appearance.

The convents of monks in Quito are thofe of the Auguftines, Dominicans, and the Fathers of Mercy, which are the heads of provinces; but befides thefe, there is another of Francifcan Recollects, another of Dominicans, and another of the Fathers of Mercy. In this city is alfo a college of Jefuits; two colleges for feculars, one called St. Lewis, of which the Jefuits have the direction; and the other St. Ferdinand, and is under the care of the Dominicans. In the first are twelve royal exhibitions for the fons of auditors and other officers of the crown. It has alfo an university under the patronage of St. Gregory. That of the fecond is a royal foundation, and dedicated to St. Thomas; the falaries of the profeffors are paid by the crown. Some of the chairs in this college are filled by graduates, as thofe appropriated to the canon and civil law, and phyfic; but the latter has been long vacant for want of a profeffor, though the degrees would be dispensed with. The Franciscan convent has a college, called San Buena Ventura, for the religious of its order; and, though under the fame roof with the convent, has a different government and economy.

Quito has alfo feveral nunneries, as that of the Conception, the orders of St. Clare, St. Catharine, and two of bare-footed Therefians. Of these one was originally founded in the town of Latacunga; but having, together with the place itself, been destroyed by an earthquake, the nuns removed to Quito, where they have ever fince continued.

The college of Jefuits, as well as all the convents of monks, are very large, well built, and very fplendid. The churches alfo, though the architecture of fome is not modern, are fpacious, and magnificently decorated, effectially on folemn feftivals, when it is amazing to behold the vaft quantities of wrought plate, rich hangings, and coffly ornaments, which heighten the folemnity of worfhip, and increase the reputation of these churches for magnificence. If those of the nunneries do not, on those occasions, exhibit

3L 2

fuch an amazing quantity of riches, they exceed them in elegance and delicacy. It is quite otherwife in the parifh-churches, where poverty is confpicuous, even on the most folemn occasions; though this is partly imputed to those who have the care of them.

Here is alfo an hofpital, with feparate wards for men and women; and though its revenues are not large, yet by a proper economy they are made to anfwer all the neceffary expences. It was formerly under the direction of particular perfons of the city, who, to the great detriment of the poor, neglected their duty, and fome even embezzled part of the money received: but it is now under the care of the order of our Lady of Bethlehem, and by the attention of thefe fathers, every thing has put on a different afpect, the whole convent and infirmary having been rebuilt, and a church erected, which, though fmall, is very beautiful and finely decorated.

This order of our Lady of Bethlehem has been lately founded under the name of a congregation, and had its origin in the province of Guatemala. The name of the founder was Pedro de San Jofeph Betaneur, a native of the town of Chafna (or Villa Fuerte) on the illand of Teneriffe, in the year 1626. After his death, which happened in the year 1667, his congregation was approved of by a bull of Clement X. dated the 16th of May 1672, and ftill more formally in another of 1674. In 1687, Innocent XI. erected it into a community of regulars, fince when it has begun to increase in these countries as a religious order. It had indeed before paffed from Guatemala to Mexico, and from thence, in the year 1671, to Lima, where the fathers had the care of the hofpital del Carmen. In the city of St. Miguel de Piura, they took poffeffion of the hofpital of St. Ann in the year 1678, and that of St. Sebaftian in Truxillo in 1680; and their probity and diligence in difcharging thefe trufts induced other places to felect them as directors of their hospitals, and among the reft the city of Quito; where, notwithstanding they have been only a few years, they have repaired all former abufes, and put the hospital on a better footing than it had ever known before.

The fathers of this order go bare-footed, and wear a habit of a dark-brown colour, nearly refembling that of the Capuchins, which order they alfo imitate in not fhaving their beards. On one fide of their cloak is an image of our Lady of Bethlehem. Every fixth year they meet to choofe a general, which ceremony is performed alternately at Mexico and Lima.

Among the courts, whofe feffions are held at Quito, the principal is that of the Royal Audience, which was established there in the year 1563, and confists of a prefident (who is also governor of the province with regard to matters of law), four auditors, who are at the fame time civil and criminal judges, and a royal fifcal, fo called, as, befides the causes brought before the Audience, he also takes cognizance of every thing relating to the revenue of the crown. Befides this, there is also another fifcal, called Protector de los Indios (Protector of the Indians), who folicits for them, and when injured pleads in their defence. The jurifdiction of this court extends to the utmost limits of the province, with no other appeal than to the Council of the Indies, and this only in case of a rejection of a petition, or flagrant injuffice.

The next is the Exchequer, or chamber of finances, the chief officers of which are an accomptant, a treafurer, and a royal fifcal. The revenues paid into the receipt of this court are, the tributes of the Indians of this jurifdiction and those of Otabalo, Villa de San Miguel de Ibara, Latacunga, Chimbo, and Riobamba; as alfo the taxes levied in those parts, and the produce of the customs at Babahoyo, Yaquache, and Caracol: which fums are annually distributed, partly to Carthagena and Santa Martha, for paying the falaries of the prefidents, fifcals, corregidors, together with the stippends of the priefts,

priefts, and the governors of Maynas and Quijos; partly for the officers of the Commandries, and partly for the caciques of the villages.

The Tribunal de Cruzada, or Croifade, has a commiffary, who is generally fome dignitary of the church; and a treafurer, who is also the accomptant, through whole hands every thing pafles relating to the Croifade.

Here is allo a treafury for the effects of perfons deceafed; an infitution long fince eftablished all over the Indies, for receiving the goods of those whose lawful heirs were in Spain, that thus they might be fecured from those accidents to which, from disconfigure, or negligence, they would be liable in private hands, and fecurely kept for the perfons to which they belong: an infitution originally very excellent, but now greatly abused, great defalcations being made in the estates before they are restored to their proper owners.

Befides these tribunals, here is a commission of the inquisition, with an alguazil major, and familiars appointed by the holy office at Lima.

The Corporation confifts of a corregidor, two ordinary alcaldes chofen annually, and regidores. Thefe fuperintend the election of the alcaldes, which is attended with no fmall diffurbance in this city, perfons of all ranks being divided into the two parties of Creoles, and Europeans or Chapitones, to the great detriment of private repofe and fociability. This affembly alfo nominates the alcalde major of the Indians, who muft be a governor of one of the Indian towns within five leagues of the city, and has under him other inferior alcaldes, for the civil government of it; and this alcalde major, together with the others, are little more than the alguazils, or officers of the corregidor or ordinary alcaldes of the city, though at firft they were invefted with much greater power. Befides thefe, here are others called alcaldes de harrieros, whofe bufinefs it is to provide mules, &c. for travellers; and though all thefe are fubordinate to the alcalde major, yet he has very little authority over them.

The cathedral chapter confifts of the bifhop, dean, archdeacon, chanter, treafurer, a doctoral, a penitentiary, a magistral, three canons by prefentation, four prebends, and two demi-prebends, with the following revenues. That of the bifhop 24,000 dollars; the dean 2,500; the four fucceeding dignities 2,000 each; the canons 1,500 each; the prebends 600, and the demi-prebends 420. This church was erected into a cathedral in the year 1545, and, among other feftivals, are celebrated in it, with amazing magnificence, those of Corpus Christi, and the Conception of our Lady, when all the courts, offices, and perfons of eminence, never fail to affift. But the fingular pomp of the proceffion of the hoft in the former, and the dances of the Indians, muft not be omitted. Every house of the ftreets through which it passes are adorned with rich hangings; and fuperb triumphal arches are erected, with altars at flated diffances, and higher than the houfes, on which, as on the triumphal arches, the fpectator fees with admiration immense quantities of wrought plate, and jewels, disposed in such an elegant manner as to render the whole even more pleafing than the aftonifhing quantity of This fplendor, together with the magnificent dreffes of the perfons who affift at riches. the proceffion, render the whole extremely folemn, and the pomp and decorum are both continued to the end of the ceremony.

With regard to the dances, it is a cuftom, both among the parifhes of Quito and all those of the mountains, for the prieft, a month before the celebration of the feafts, to felect a number of Indians who are to be the dancers. These immediately begin to practife the dances they used before their conversion to christianity. The music is a pipe and tabor, and the most extraordinary of their motions fome awkward capers; in short, the whole is little to the taste of an European. Within a few days of the folem-

nity,

nity, they drefs themfelves in a doublet, a fhirt, and a woman's petticoat, adorned in the fineft manner poffible. Over their flockings they wear a kind of pinked bufkins, on which are faftened a great number of bells. Their head and face they cover with a kind of mafk, formed of ribbands of feveral colours. Dreffed in this fantaftical garb, they proudly call themfelves angels, unite in companies of eight or ten, and fpend the whole day in roving about the ftreets, highly delighted with the jingling of their bells; and frequently ftop and dance, to gain the applaufes of the ignorant multitude, who are ftrangers to elegant dancing. But what is really furprifing, is, that without any pay, or view of intereft, unlefs they think it a religious duty, they continue this exercife a whole fortnight before the grand feftival, and a month after it, without minding either their labour or their families; rambling about, and dancing the whole day, without being either tired or difgufted, though the number of their admirers daily decreafe, and the applaufe is turned into ridicule.

The fame drefs is worn by them in other processions, and at the bull-feasts, when they are excused from labour, and therefore highly pleased with them.

The corporation and cathedral chapter keep, by vow, two annual feftivals in honour of two images of the Virgin, which are placed in the villages of Guapulo and Quinche, belonging to this jurifdiction. They are brought with great folemnity to Quito, where a feftival is celebrated, with great magnificence and rejoicing, and is fucceeded by nine days' devotion, the Audience and other courts affifting at the feftival. The ftatues are afterwards returned with the fame folemnity to their refpective churches, the first of which is one league from Quito, and the other fix. Thefe feftivals are held in commemoration of the mercy and affiftance vouchfafed by the Holy Virgin at the time of an earthquake and terrible ejections from Pichincha, by which Latacunga, Hambato, and a great part of Riobamba, were utterly deftroyed; while the prayers offered up at Quito to the holy Virgin, induced her to interpole in fo fingular a manner, that not the least misfortune attended this city, though apparently in equal danger with those which fuffered.

CHAP. V. - Of the Inhabitants of Quito.

THIS city is very populous, and has, among its inhabitants, fome families of high rank and diffinction; though their number is but fmall confidering its extent, the poorer clafs bearing here too great a proportion. The former are the defcendants either of the original conquerors, or of prefidents, auditors, or other perfons of character, who at different times came over from Spain invefted with fome lucrative poft, and have ftill preferved their luftre, both of wealth and defcent, by intermarriages, without intermixing with meaner families though famous for their riches.

The commonalty may be divided into four class; Spaniards or Whites, Mestizos, Indians or Natives, and Negroes, with their progeny. These last are not proportionally fo numerous as in the other parts of the Indies; occasioned by its being fomething inconvenient to bring Negroes to Quito, and the different kinds of agriculture being generally performed by Indians.

The name of Spaniard here has a different meaning from that of Chapitone or European, as properly fignifying a perfon defcended from a Spaniard without a mixture of blood. Many Meftizos, from the advantage of a fresh complexion, appear to be Spaniards more than those who are fo in reality; and from only this fortuitous advantage are

T

accounted

446

accounted as fuch. The Whites, according to this conftruction of the word, may be confidered as one-fixth part of the inhabitants.

The Mestizos are the descendants of Spaniards and Indians, and are to be confidered here in the fame different degrees between the Negroes and Whites, as before at Carthagena; but with this difference, that at Quito the degrees of Mestizos are not carried fo far back; for, even in the fecond or third generations, when they acquire the European colour, they are confidered as Spaniards. The complexion of the Meftizos is fwarthy and reddifh, but not of that red common in the fair Mulattos. This is the first degree, or the immediate iffue of a Spaniard and Indian. Some are, however, equally tawny with the Indians themfelves, though they are diffinguished from them by their beards: while others on the contrary, have fo fine a complexion that they might pals for Whites, were it not for fome figns that betray them, when viewed attentively. Among thefe, the most remarkable is the lowness of the forehead, which often leaves but a fmall fpace between their hair and eye-brows; at the fame time the hair grows remarkably forward on the temples, extending to the lower part of the ear. Befides, the hair itfelf is harfh, lank, coarfe, and very black; their nofe very fmall, thin, and has a little rifing on the middle, from whence it forms a fmall curve, terminating in a point, bending towards the upper lip. Thefe marks, befides fome dark fpots on the body, are fo conftant and invariable, as to make it very difficult to conceal the fallacy of their complexion. The Meftizos may be reckoned a third part of the inhabitants.

The next class is the Indians, who form about another third; and the others, who are about one-fixth, are the Cafts. Thefe four claffes, according to the moft authentic accounts taken from the parish register, amount to between 50 and 60,000 perfons, of all ages, fexes, and ranks. If among these classes the Spaniards, as is natural to think, are the most eminent for riches, rank, and power, it must at the fame time be owned, however melancholy the truth may appear, they are in proportion the most poor, miferable and diftreffed; for they refufe to apply themfelves to any mechanical bufinefs, confidering it as a difgrace to that quality they fo highly value themfelves upon, which confifts in not being black, brown, or of a copper-colour. The Meftizos, whofe pride is regulated by prudence, readily apply themfelves to arts and trades, but chufe those of the greatest repute, as painting, sculpture, and the like, leaving the meaner fort to the Indians. They are observed to excel in all, particularly painting and fculpture; in the former a Mestizo, called Miguel de Santiago, acquired great reputation, fome of his works being ftill preferved and highly valued, while others were carried even to Rome, where they were honoured with the unanimous applaufes of the virtuofi. They are remarkably ready and excellent at imitation, copying being indeed best adapted to their phlegmatic genius. And what renders their exquisite performances ftill more admirable, is, that they are defittute of many of the inftruments and tools requifite to perform them with any tolerable degree of accuracy. But, with thefe talents, they are to exceffively indolent and flothful, that, inftead of working, they often loiter about the streets during the whole day. The Indians, who are generally shoemakers, bricklayers, weavers, and the like, are not more industrious. Of these the most active and tractable are the barbers and phlebotomist, who in their respective callings, are equal to the most expert hands in Europe. The shoemakers, on the other hand, diftinguish themselves by such supineness and sloth, that very often you have no other way left to obtain the fhoes you have befpoke, than to procure materials, feize on the Indian, and lock him up till they are finished. This is indeed partly owing to a wrong cuftom of paying for the work before it is done; and when the Indian has once

once got the money, he fpends it all in chicha *, fo that while it lafts he is never fober; and it is natural to think that it will not be eafy afterwards to prevail on him to work for what he has fpent.

The drefs here differs from that ufed in Spain, but lefs fo with the men than of the women. The former, who wear a black cloak, have under it a long coat, reaching down to their knees, with a clofe fleeve, open at the fides, without folds; and along the feams of the body, as well as those of the fleeves, are button-holes, and two rows of buttons, for ornament. In every other particular, people of fortune affect great magnificence in their drefs, wearing very commonly the fineft gold and filver tiffues.

The Meftizos in general wear blue cloth, manufactured in this country. And though the lowest class of Spaniards are very ambitious of diffinguishing themselves from them, either by the colour or fashion of the clothes, little difference is to be observed.

The most fingular drefs, with regard to its meannefs, is that of the Indians, which confifts only of white cotton drawers, made either from the fluffs of the country, or from others brought from Europe. They come down to the calf of the leg, where they hang loofe, and are edged with a lace fuitable to the fluff. The ufe of a fhirt is fupplied by a black cotton frock, wove by the natives. It is made in the form of a fack, with three openings at the bottom, one in the middle for the head, and the others at the corners for the arms, and thus cover their naked bodies down to the knees. Over this is a capifayo, a kind of ferge cloak, having a hole in the middle for putting the head through, and a hat made by the natives. This is their general drefs, and which they never lay afide, not even while they fleep. And ufe has fo inured them to the weather, that without any additional clothing or covering for their legs or , feet, they travel in the coldeft parts with the fame readinefs as in the warmeft.

The Indians who have acquired fome fortune, particularly the barbers and phlebotomifts, are very careful to diltinguifh themfelves from their countrymen, both by the finenefs of their drawers, and alfo by wearing a fhirt, though without fleeves. Round the neck of the fhirt they wear a lace four or five fingers in breadth, hanging entirely round like a kind of ruff or band. One favourite piece of finery is filver or gold buckles for their fhoes; but they wear no flockings or other coverings on their legs. Inftead of the mean capifayo, they wear a cloak of fine cloth, and often adorned with gold or filver lace.

The drefs of the ladies of the first rank confists of a petticoat already defcribed in our account of Guayaquil. On the upper parts of their body they wear a shift, on that a loofe jacket laced, and over all a kind of bays, but made into no form, being worn just as cut from the piece. Every part of their drefs is, as it were, covered with lace; and those which they wear on days of ceremony are always of the richest stuffs, with a profusion of ornaments. Their hair is generally made up in trefs, which they form into a kind of cross, on the nape of the neck; tying a rich ribband, called balaca, twice round their heads, and with the ends form a kind of rofe at their temples. These rofes are elegantly intermixed with diamonds and flowers. When they go to church, they fometimes wear a full petticoat; but the most usual drefs on these occasions is the veil.

The Mestizo women affect to dress in the fame manner as the Spanish, though they cannot equal them in the richness of their stuffs. The meaner fort go barefooted. Two kinds of dresses are worn by the Indian women; but both of them made in the same plain manner with those worn by the men: the whole consisting of a short petticoat, and a veil of American bays. The dress of the lowest class of Indian women is in effect

* A kind of beer or ale made of maize, and very intoxicating.

only

only a bag of the fame make and ftuff as the frocks of the men, and called Anaco. This they fasten on the shoulders with two large pins, called Tupu or Topo. The only particular in which it differs from the frock is, that it is fomething longer, reaching down to the calf of the leg, and fastened round the waist with a kind of girdle. Instead of a veil, they wear about their neck a piece of the fame coarfe ftuff dyed black, and called Lliella; but their arms and legs are wholly naked. Such is the habit with which the lower class of Indian women are contented.

The caciqueffes, or Indian women, who are married to the alcaldes majors, governors, and others, are careful to diffinguifh themfelves from the common people by their habits, which is a mixture of the two former, being a petticoat of bays adorned with ribbands; over this, inftead of the anaco, they wear a kind of black manteau, called Afco. It is wholly open on one fide, plaited from top to bottom, and generally fastened round the waist with a girdle. Instead of the fcanty lliella which the common Indian women wear hanging from their fhoulders, thefe appear in one much fuller, and all over plaited, hanging down from the back part of their head almost to the bottom of the petticoat. This they fasten before with a large filver bodkin, called alfo Tupu, like those used in the anaco. Their head-dress is a piece of fine linen curiously plaited, and the end hanging down behind : this they call Colla, and is worn both for diffinction and ornament, and to preferve them from the heat of the fun; and those ladies, that their fuperiority may not be called in queftion, never appear abroad without floes. This drefs, together with that univerfally worn by Indians, men and women, is the fame with that used in the time of the Yncas, for the propriety of diftinguishing the feveral claffes. The Caciques at prefent use no other than that of the more wealthy Meftizos, namely, the cloak and hat; but the floes are what chiefly diffinguish them from the common Indians.

The men, both Creoles and Spaniards, are well made, of a proper flature, and of a lively and agreeable countenance. The Meftizos in general are alfo well made, often taller than the ordinary fize, very robuft, and have an agreeable air. The Indians, both men and women, are generally low, but well proportioned, and very ftrong; though more natural defects are to be observed among them than in the other claffes of the human fpecies: fome are remarkably fhort, fome ideots, dumb and blind, and others deficient in fome of their limbs. Their hair is generally thick and long, which they wear loofe on their fhoulders, never tying or tucking it up, even when they go to fleep. But the Indian women plait theirs behind with ribband, and the part before they cut a little above the eye-brows from one ear to another; which form of hair they cull Urcu, and are fo fond of this natural ornament, that the greatest affront possible to be offered to an Indian of either fex, is to cut off their hair; for whatever corporal punifhment their mafters think proper to inflict on them, they bear with a dutiful tranquillity; but this is a difgrace they never forgive; and accordingly it was found neceffary for the government to interpofe, and limit this punifhment to the most enormous The colour of their hair is generally a deep black; it is lank, harfh, and crimes. coarfe as that of horfes. The Meftizos, on the other hand, by way of diftinguishing themfelves from the Indians, cut off their hair; but the women do not in this refpect follow the example of their hufbands. The Indians have no beard; and the greateft alteration occafioned by their arriving at the years of maturity, is only a few ftraggling hairs on the chin, but io fhort and thin as never to require the affiftance of the razor; nor have either males or females any indications of the age of puberty.

The youths of family are here inftructed in philosophy and divinity, and some proneed to the fludy of the civil law, but follow that proteffion with reluctance. In these VOL. XIV. 3 M

fciences

fciences they demonstrate a great deal of judgment and vivacity, but are very deficient in historical and political knowledge, as well as other fciences, which improve the kuman understanding, and carry it to a certain degree of perfection not otherwise attainable. This is, however, their misfortune, not their fault; being owing to the want of proper perfons to instruct them; for with regard to those who visit this country on commercial affairs, their minds have generally another turn, and their whole time is devoted to acquire riches. Thus after feven or eight years of fcholastic instruction, their knowledge is very limited; though endowed with genius capable of making the greatest progress in the fciences.

In the women of rank here, their beauty is blended with a graceful carriage and an amiable temper; qualities indeed common to the whole fex in this part of America. Their children are always educated under their own eyes, though little to their advantage, their extreme fondnefs preventing them from feeing those vices which so often bring youth to ruin and infamy; nor is it uncommon for them to endeavour to hide the vices of the fon from the knowledge of the father; and in cafe of detection, to interpose passion properly in defence of their favourite, in order to prevent his being properly corrected.

This country is obferved to abound more in women than men; a circumftance the more remarkable, as those caufes which in Europe induce men to leave their country, namely, travelling, commerce, and war, can hardly be faid to fubfift here. Numbers of families may be found in this country, that have a great variety of daughters, but not one fon among them. Nature alfo in the male fex, efpecially those who have been tenderly brought up, begins to decay at the age of thirty; whereas the females rather enjoy a more confirmed ftate of health and vigour. The caufe of this may, in a great measure, be owing to the climate; food may allo contribute to it; but the principal caufe, I make no doubt, is their early intemperance and voluptuoufnefs; this debilitates the ftomach, fo that the organs of digeftion cannot perform their proper office; and accordingly many conftantly eject their victuals an hour or two after their meals. Whether this be owing to a cuftom now become natural, or forced, the day they fail of fuch ejection, they are fure to find themfelves indifpofed. But amidft all their weak-neffes and indifpofitions they live the general time, and many even arrive at a very advanced age.

The only employment of perfons of rank, who are not ecclefialtics, is from time to time to vifit their effates or chacaras, where they refide during the time of harveft; but very few of them ever apply themfelves to commerce, indolently permitting that lucrative branch to be poffetied entirely by the Chapitones or Europeans, who travel about the country, and purfue their intereft with great affiduity. Within the city, however, fome few Creoles and Meftizos fo far overcome their indolent difpositions as to keep fhops.

The want of proper employments, together with the floth fo natural to the inhabitants of this country, and the great neglect of education in the common people, are the natural parents of that fondnefs fo remarkable in thefe parts for balls and entertainments; and thefe at Quito are both very frequent, and carried to fuch a degree of licentioufnefs and audacity, as cannot be thought of without deteftation; not to mention the many tumults and quarrels which thence derive their origin. But fuch brutality may be confidered as the natural confequence of the rum and chicha, which on thefe occafions are drunk in enormous quantities. It muft, however, be remembered, that no perfon of any rank or character is even feen at thefe meetings, their feltivity being conducted with the ftricteft decency and decorum.

450

Rum is commonly drunk here by perfons of all ranks, though very moderately by those of fashion; particularly at entertainments, when it is made into a kind of cordial. They prefer it to wine, which they fay difagrees with them. The Chapitones also accustom themselves to this liquor; wine, which is brought from Lima, being very fcarce and dear. Their favourite liquor is brandy, brought also from Lima, and is less inflammative than rum. The diforders arising from the excessive use of fpirituous liquors are chiefly feen among the Mestizos, who are continually drinking while they are masters of any money. The lower class of women, among the Creoles and Mestizos, are also addicted to the fame species of debauchery, and drink excessively.

Another common liquor in this country is the mate, which anfwers to tea in the East Indies, though the method of preparing and drinking it is fomething different. It is made from an herb, which, in all thefe parts of America is known by the name of Paraguay, as being the produce of that country. Some of it is put into a calabash tipped with filver, called here Mate or Totumo, with a fufficient quantity of fugar, and fome cold water, to macerate it. After it has continued in this manner fome time, the calabafh is filled with boiling water, and the herb being reduced to a powder, they drink the liquor through a pipe fixed in the calabafh, and having a ftrainer before the end of it. In this manner the calabafh is filled feveral times with water and fresh supplies of fugar, till the herb fubfides to the bottom, a fufficient indication that a fresh quantity is wanting. It is also usual to fqueeze into the liquor a few drops of the juice of lemons or Seville oranges, mixed with fome perfumes from odoriferous flowers. This is their ufual drink in the morning fafting, and many ufe it alfo as their evening regale. I have nothing to object against the falubrity and use of this liquor; but the manner of drinking it is certainly very indelicate, the whole company drinking fucceflively through the fame pipe. Thus the mate is carried feveral times round the company, till all are fatiffied. The Chapitones make very little use of it; but among the Creoles it is the higheft enjoyment; fo that even when they travel, they never fail to carry with them a fufficient quantity of it. This may indeed be owing in fome measure to the dispatch and facility with which it is prepared; but till they have taken their dofe of mate, they never eat.

There is no vice to which idlenefs is not a preliminary; nor is floth ever unaccompanied with fome vice or other. What muft then be the flate of morality in a country where the greateft part of the people have no work, employment, or calling, to occupy their thoughts; nor any idea of intellectual entertainment? The prevalence of drunkennefs has been already mentioned, and the deftructive vice of gaming is equally common. But in the latter, perfons of rank and opulence, whofe example is always followed, have led the way; and their inferiors have univerfally followed in their deftructive paths, to the ruin of families, and the breach of conjugal affection; fome lofing their flocks in trade, others the very clothes from their backs, and afterwards thofe belonging to their wives, rifking the latter to recover their own. This propenfity in the Indians for gaming has by fome been imputed to caufes, in which I can perceive no manner of relation. To me it plainly appears owing to the leifure of fome, who know not how to fpend their time, and to the natural floth and idlenefs of others.

The common people and Indians are greatly addicted to theft, in which it must be owned they are very artful and dextrous. The domeftics also, cannot be faid to be entirely free from this fault, which is attended with the inconvenience of referve and fulpicion on the part of their master. The Mestizos do not want for audacity in any kind of theft or robbery, though in themselves arrant cowards. Thus, even at an uuseassonable hour, they will not venture to attack any one in the street; but their

common practice is, to fnatch off the perfon's hat, and immediately feek their fafety in their flight ; fo that, before the perfon robbed can recover himfelf, the thief is out of fight. However triffing this may feem, yet fometimes the capture is very confiderable; the hats generally worn by perfons of any rank, and even by the wealthy citizens when dreffed in their cloaks, are of white beaver, and of themfelves worth fifteen or twenty dollars, or more, of the Quito currency, befides a hatband of gold or filver-lace, faftened with a gold buckle fet with diamonds or emeralds. It is very rare that any fuch thing as a robbery on the highway is heard of; and even these may be rather accounted housebreaking, as they are either committed by the carriers themselves or their fervants. In order to execute their most remarkable pieces of villany within the city, they fet fire, during the darkness of the night, to the doors of fuch shops or warehouses, where they flatter themselves with the hopes of finding fome specie; and having made a hole fufficiently large for a man to creep through, one of them enters the houfe, while the others stand before the hole to conceal their accomplice, and to receive what he hands out to them. In order to prevent fuch practices, the principal traders are at the expence of keeping a guard, which patroles all night through the ftreets where attempts of this kind are most to be apprehended; and thus the shops are secured; for, in cafe any houfe or fhop is broke open, the commander of the guard is obliged to make good the damage received.

Neither the Indians, Meftizos, nor any of the loweft clafs of people, think the taking any eatables a robbery; and the Indians have a particular rule of conduct in their operations, namely, if one of them happens to be in a room where there are feveral vefiels of filver, or other valuable effects, he advances flowly, and with the utmoft circumfpection, and ufually takes only one piece, and that the leaft valuable, imagining that it will not be fo foon miffed as if he had taken one of greater price. If detected in the fact, he refolutely denies it, with a yanga, a very expressive word in his language, and now often ufed by the Spaniards of this country, fignifying that it was done without any neceffity, without any profit, without any bad intention. It is indeed a word of fuch extent in difculpating, that there is no crime to which it is not applicable with regard to the acquittal of the delinquent. If he has not been feen in the very fact, be the circumftances ever fo plain againft him, the theft can never be afcertained, no Indian having ever been known to confefs.

In Quito, and in all the towns and villages of its province, different dialects are fpoken, Spanifh being no lefs common than the Inga. The Creoles, in particular, ufe the latter equally with the former; but both are confiderably adulterated with borrowed words and exprefions. The first language generally fpoken by children is the Inga; the nurfes being Indians, many of whom do not understand a word of Spanifh. Thus, the children being first ufed to the Indian pronunciation, the imprefion is fo strong on their minds, that few can be taught to speak the Spanifh language before they are five or fix years old; and the corruption adheres so strongly to them, that they speak a jargon composed of both; an impropriety which also gains ground among the Europeans, and even perfons of rank, when once they begin to understand the language of the country. But what is still more inconvenient, they use improper words; so that a Spaniard himself, not accustomed to their dialect, has often need of an interpreter.

The fumptuous manner of performing the laft offices to the dead, mentioned in the defcription of Carthagena, is frugal and fimple, if compared to that ufed at Quito and all its jurifdiction. Their oftentation is fo enormous in this particular, that many families of credit are ruined by a prepofterous emulation of excelling others. The inhabitants may therefore be properly faid to toil, fcheme, and endure the greateft labour and fatigue,

ratigue, merely to enable their fucceffors to bury them in a pompous manner. The deceased must have died in very mean circumstances indeed, if all the religious communities, together with the chapter of the cathedral, are not invited to his funeral, and during the procession the bells tolled in all the churches. After the body is committed to the earth, the oblequies are performed in the fame expensive manner, befides the anniverfary which is folemnized at the end of the year. Another remarkable inftance of their vanity is, never to bury in their own parifh church; fo that any one feen to be buried in that manner may be concluded to have been of the loweft clafs, and to have died wretchedly poor. The cuftom of making an offering either at the obfequies or anniverfary, is still observed, and generally confists of wine, bread, beasts, or fowls, according to the ability or inclination of the furvivor.

Though Quito cannot be compared to the other cities in these parts for riches, yet it is far removed from poverty. It appears from feveral particulars, to have been in a much more flourishing flate; but at prefent, though it has many fubstantial inhabitants, yet few of them are of diftinguished wealth, which, in general, confists in landed estates, applied to feveral uses, as I shall show in the sequel. Here are also no very splendid fortunes raifed by trade. Confequently it may be inferred, that the city is neither famous for riches, nor remarkable for poverty. Here are indeed confiderable eftates, though their produce is not at all equal to their extent: but the commerce, though fmall, is continual. It must also be observed, to the credit of this city, that the more wealthy families have large quantities of plate, which is daily made use of; and indeed, through the feveral claffes, their tables are never destitute of one piece of plate at leaft.

CHAP. VI. — Of the Temperature of the Air at Quito; Diftinction between Winter and Summer; Inconveniences, Advantages, and Distempers.

TO form a right judgment of the happy temperature of the air of Quito, experience must be made use of, to correct the errors which would arise from mere speculation; as without that unerring guide, or the information of hiftory, who would imagine, that in the centre of the torrid zone, or rather under the equinoctial, not only the heat is very tolerable, but even, in fome parts, the cold painful; and that others enjoy all the delights and advantages of a perpetual fpring, their fields being always covered with verdure, and enamelled with flowers of the most lively colours! The mildness of the climate, free from the extremes of cold and heat, and the conftant equality of the nights and days, render a country pleafant and fertile, which uninformed reafon would, from its fituation, conclude to be uninhabitable: Nature has here fcattered her bleffings with fo liberal a hand, that this country furpaffes those of the temperate zones, where the vicifitudes of winter and fummer, and the change from heat to cold, caufe the extremes of both to be more fenfibly felt.

The method taken by Nature to render this country a delightful habitation, confifts in an affemblage of circumftances, of which, if any were wanting, it would either be utterly uninhabitable, or fubject to the greateft inconveniences. But by this extraordinary affemblage, the effect of the rays of the fun is averted, and the heat of that glorious planet moderated. The principal circumftance in this affemblage is its elevated fituation above the furface of the lea; or, rather, of the whole earth; and thus, not only the reflection of the heat is diminished, but by the elevation of this country, the winds are more fubtile, congelation more natural, and the heat abated. These are fuchnaturak natural effects as muft doubtlefs be attributed to its fituation; and is the only circumflance from whence fuch prodigies of nature, as are obferved here, can proceed. In one part are mountains of a flupendous height and magnitude, having their fummits covered with fnow; on the other, volcanoes flaming within, while their fummits, chafms, and apertures, are involved in ice. The plains are temperate; the breaches and valleys hot; and, laftly, according to the difposition of the country, its high or low fituation, we find all the variety of gradations of temperature, possible to be conceived between the two extremes of heat and cold.

Quito is fo happily fituated, that neither the heat nor cold is troublefome, though the extremes of both may be felt in its neighbourhood; a fingularity fufficiently demonfitrated by the following thermometrical experiments. On the 31ft of May 1736, the liquor in the thermometer flood at 1011; at half an hour after twelve at noon, at 1014; on the first of June, at fix in the morning, at 1011; and, at noon, at 1012 $\frac{1}{2}$. But what renders this equality ftill more delightful, is, that it is constant throughout the whole year, the difference between the leafons being fcarce perceptible. Thus the mornings are cool, the remainder of the day warm, and the nights of an agreeable temperature. Hence the reafon is plain, why the inhabitants of Quito make no difference in their drefs during the whole year; fome wearing filks or light ftuffs, at the fame time others are drefied in garments of fubstantial cloth; and the former as little incommoded by the cold as the latter are by heat.

The winds are healthy, and blow continually, but never with any violence. Their ufual fituations are north and fouth, though they fometimes fhift to other quarters, without any regard to the feafon of the year. Their inceffant permanence, notwithflanding their conftant variations, preferves the country from any violent or even difagreeable impreflions of the rays of the fun. So that, were it not for fome inconveniences to which this country is fubject, it might be confidered as the most happy fpot on the whole earth. But when these disagreeable incidents are confidered, all its beauties are buried in obfcurity; for here are dreadful and amazing tempefts of thunder and lightning, and the ftill more destructive fubterraneous earthquakes, which often furprife the inhabitants in the midst of fecurity. The whole morning, till one or two in the afternoon, the weather is generally extremely delightful; a bright fun, ferene and clear fky, are commonly feen; but afterwards the vapours begin to rife, the whole atmosphere is covered with black clouds, which bring on fuch dreadful tempefts of thunder and lightning, that all the neighbouring mountains tremble, and the city too often feels their dreadful effects. Laftly, the clouds difcharge themfelves in fuch impetuous torrents of rain, that in a very fhort time the ftreets appear like rivers, and the fquares, though fituated on a flope, like ·lakes. This dreadful fcene generally continues till near fun-fet, when the weather clears up, and Nature again puts on the beautiful appearance of the morning. Sometimes, indeed, the rains continue all the night, and they have been known to last three or four days fucceffively.

On the other hand, this general courfe of the weather has its exceptions, three, four, or fix, or even eight fine days fucceeding each other; though, after raining fix or eight days in the manner above mentioned, it is rare that any falls during the two or three fucceeding. But, from the most judicious observations, it may be concluded, that these intervals of fine or foul weather make up only one fifth of the days of the year.

The diffinction of winter and fummer confifts in a very minute difference obfervable between the one and the other. The interval between the month of September, and April, May, or June, is here called the winter feafon; and the other months compose the fummer. In the former feafon the rain chiefly prevails, and in the fecond the inhabitants frequently enjoy intervals of fine weather; but whenever the rains are difcontinued

8

for

for above a fortnight, the inhabitants are in the utmost confernation, and public prayers are offered up for their return. On the other hand, when they continue any time without intermiflion, the like fears return, and the churches are again crowded with fupplicants for obtaining fine weather. For a long drought here is productive of dangerous distempers; and a continual rain, without any intervals of fun-fhine, destroys the fruits of the earth: thus the inhabitants are under a continual anxiety. Besides the advantages of the rains for moderating the intense rays of the fun, they are also of the greatest benefit in cleansing the ftreets and squares of the city, which by the filthiness of the common people at all hours, are every where full of ordure.

Earthquakes cannot be accounted a lefs terrible circumstance than any of the former; and if not fo frequent as in other cities of these parts, they are far from being uncommon, and often very violent. While we continued in this city and its jurisdiction, I particularly remember two, when feveral county-feats and farm-houses were thrown down, and the greater part of the numerous inhabitants buried in ruins.

It is doubtlefs to fome unknown quality of the temperature of the air, that the city owes one remarkable convenience, which cannot fail of greatly recommending it: namely, being totally free from mofchitos or other infects of that kind, which almost render life a burthen in hot countries. They are not known to the inhabitants; even a flea is feldom feen here; nor are the people molested with venomous reptiles. In fhort, the only troublefome infect is the pique or nigua, whose noxious effects have been already treated of.

Though the plague or peftilence, in its proper fenfe, be not known here, no inftance of its ravages having appeared in any part of America, yet there are fome diftempers which have many fymptoms of it, but concealed under the names of malignant fpotted fevers and pleurifies; and thefe generally fweep away fuch prodigious numbers, that, when they prevail, the city may with propriety be faid to be vifited with a peftilential contagion. Another difeafe common here is that called mal del valle, or vicho; a diftemper fo general, that, at the first attack of any malady, they make use of medicines adapted to the cure of it, from its ufually feizing a perfon two or three days after a fever. But M. de Juffieu often obferved, that the remedies were generally administered to perfons not at all affected by the diftemper, which, in his opinion, is a gangrene in the rectum; a difeafe very common in that climate, and confequently at the first attack all means fhould be used to prevent its progrefs. Perfons who labour under a flux are most liable to that malady; but the inhabitants of this country being firmly perfuaded that there can be no diffemper that is not accompanied with the vicho, the cure is never delayed. The operation must be attended with no fmall pain, as a peffary, composed of gun-powder, Guinea-pepper, and a lemon peeled, is infinuated into the anus, and changed two or three times a day, till the patient is judged to be out of danger.

The venereal difeafe is here fo common, that few perfons are free from it, though its effects are much more violent in fome than in others; and many are afflicted with it, without any of its external fymptoms. Even little children, incapable by their age of having contracted it actively, have been known to be attacked in the fame manner by it as perfons who have acquired it by their debauchery. Accordingly there is no reafon for caution in concealing this diftemper, its commonnels effacing the difgrace that in other countries attends it. The principal caufe of its prevalence is, negligence in the cure. For the climate favours the operations of the medicines, and the natural temperature of the air checks the malignity of the virus more than in other countries. And hence few are falivated for it, or will undergo the trouble of a radical cure. This difeafe difeafe must naturally be thought in fome measure to shorten their lives; though it is not uncommon to see performs live seventy years or more, without ever having been entirely free from that distemper, either hereditary, or contracted in their early youth.

During the continuance of the north and north-east winds, which are the coldest from passing over the frosty deferts, the inhabitants are afflicted with very painful catarrhs, called Pechugueras. The air is then something difagreeable, the mornings being so cold as to require warmer clothing; but the sun soon disperses this inconvenience.

As the peftilence, whole ravages among the human fpecies in Europe, and other parts, are fo dreadful, is unknown both at Quito and throughout all America, fo is alfo the madnefs in dogs. And though they have fome idea of the peftilence, and call thofe difeafes fimilar in their effects by that name, they are entirely ignorant of the canine madnefs; and exprefs their aftonifhment when an European relates the melancholy effects of it. Thofe inhabitants, on the other hand, are here fubject to a diftemper unknown in Europe, and may be compared to the fmall-pox, which few or none efcape; but having once got through it, they have nothing more to apprehend from that quarter. This diftemper is one of thofe called pefte; and its fymptoms are convulfions in every part of the body, a continual endeavour to bite, delirium, vomiting blood; and thofe whofe conflitutions are not capable of fupporting the conflicts of the diftemper, perifh. But this is not peculiar to Quito, being equally common throughout all South America.

CHAP. VII. — Fertility of the Territories of Quito, and the common Food of its Inhabitants.

THOUGH an account of the fruits fhould naturally fucceed that of the climate, I determined, on account of their variety, and their being different in different parts, to defer a circumstantial description, till I come to treat more particularly of each of the jurifdictions. So that I shall here only take a transient view of the perennial beauty and pleafantnefs of the country; which has hardly its equal in any part of the known world: the equability of its air exempts it from any fenfible changes, whereby the plants, corn, and trees, are ftripped of their verdure and ornaments, their vegetative powers checked, and themfelves reduced to a torpid inactivity. The fertility of this country, if fully defcribed, would appear to many incredible, did not the confideration of the equality and benignity of the climate inforce its probability. For both the degrees of cold and heat are here to happily determined, that the moisture continues, and the earth feldom fails of being cherished by the fertilizing beams of the fun, fome part of every.day; and therefore it is no wonder that this country fhould enjoy a greater degree of fertility than those where the fame causes do not concur; especially if we confider, that there is no fenfible difference throughout the year; fo that the fruits and beauties of the feveral feafons are here feen at the fame time. The curious European obferves, with a pleafing admiration, that whilft fome herbs of the field are fading, others of the fame kind are fpringing up; and whilft fome flowers are lofing their beauty, others are blowing, to continue the enamelled profpect. When the fruits have obtained their maturity, and the leaves begin to change their colour, fresh leaves, blossons, and fruits, are feen in their proper gradations on the fame tree.

The fame inceffant fertility is confpicuous in the corn, both reaping and fowing being carried on at the fame time. That corn which has been recently fown is coming

up;

up; that which has been longer fown is in its blade, and the more advanced begins to bloffom. So that the declivities of the neighbouring hills exhibit all the beauties of the four feafons at one fingle view.

Though all this is generally feen, yet there is a fettled time for the grand harveft. But fometimes the most favourable feafon for fowing in one place, is a month or two after that of another, though their diftance is not more than three or four leagues; and the time for another at the fame diftance not then arrived. Thus, in different fpots, fometimes in one and the fame, fowing and reaping are performed throughout the whole year, the forwardness or retardment naturally arising from the different fituations, as mountains, rifing grounds, plains, valleys, and breaches; and the temperature being different in each of thefe, the times for performing the feveral operations of husbandry must also differ. Nor is this any contradiction to what I have before advanced, as will be feen in the following account of the jurifdiction.

This remarkable fecundity of the foil is naturally productive of excellent fruits and corn of every kind, as is evident from the delicacy of the beef, veal, mutton, pork, and poultry of Quito. Here is also wheat bread in fufficient plenty; but the fault is, that the Indian women, whole bufinels it is to make it, are ignorant of the beft methods both of kneading and baking it; for the wheat of itfelf is excellent, and the bread baked in private houfes equal to any in the known world. The beef, which is not inferior to that of Europe, is fold in the markets by the quarter of the hundred for four rials of that country money, and the buyer has the liberty of choofing what part Mutton is fold either by the half or quarter of a fheep; and when fat, he pleafes. and in its prime, the whole carcafe is worth about five or fix rials. Other fpecies of provisions are fold by the lump, without weight or measure, and the price regulated by cuftom.

The only commodity of which there is here any fcarcity is pulfe; but this deficiency is fupplied by roots, the principal of which are the camates, arucachas, yucas, ocas, and papas; the three former are the natives of hot countries, and cultivated in the plantations of fugar canes, and fuch fpots are called vallies, or yungas, though thefe names have different fenfes, the former fignifying plains in a bottom, and the latter those on the fides of the Cordillera; but both in a hotter exposure. In these are produced the plantains, guincos, Guinea-pepper, chirimogas, aguacates, granadillas, pinas, guayabas, and others natural to fuch climates, as I have already obferved in other countries. The colder parts produce pears, peaches, nectarines, quaitambos, aurimelos, apricots, melons, and water-melons; the laft have a particular feafon, but the others abound equally throughout the whole year. The parts which cannot be denominated either hot or cold, produce frutillas, or Peru ftrawberries, and apples. The fucculent fruits, which require a warm climate, are in great plenty throughout the whole year. as China and Seville oranges, citrons, lemons, limes, cidras, and toronjas. Thefe trees are full of bloffoms and fruit all the year round, equally with those which are natives of this climate. These fruits abundantly supply the tables of the inhabitants, where they are always the first ferved up, and the last taken away. Besides the beautiful contrast they form with the other difhes, they are also used for increasing the pleafure of the palate, it being a cuftom among the people of rank here, to eat them alternately with their other food, of which there is always a great variety.

The chirimoyas, aguacates, guabas, granadillas, and Peruvian strawberries, being fruits of which, as well as of the ocos and papas, I have not yet given any defcription, I shall here give the reader a brief account of them. The chirimoya is univerfally allowed to be the most delicious of any known fruit either of India or Europe. Its VOL. XIV. 3 N

dimensions

dimenfions are various, being from one to five inches in diameter. Its figure is imperfectly round, being flatted towards the ftalk; where it forms a kind of navel; but all the other parts nearly circular. It is covered with a thin foft fhell, but adhering fo clofely to the pulp, as not to be feparated without a knife. The outward coat, during its growth, is of a dark green, but on attaining its full maturity becomes fomewhat lighter. This coat is variegated with prominent veins, forming a kind of network all over it. The pulp is white, intermixed with feveral almost imperceptible fibres, concentring in the core, which extends from the hollow of the excrefeence to the opposite fide. As they have their origin near the former, fo in that part they are larger and more diftinct. The flesh contains a large quantity of juice refembling honey, and its tafte fweet mixed with a gentle acid, but of a most exquisite flavour. The feeds are formed in feveral parts of the flesh, and are about feven lines in length, and three or four in breadth. They are also fomewhat flat, and fituated longitudinally.

The tree is high and tufted, the ftem large and round, but with fome inequalities; full of elliptic leaves, terminating in a point. The length is about three inches and a half, and the breadth two or two and a half. But what is very remarkable in this tree is, that it every year fheds and renews its leaves. The bloffom, in which is the embryo of the fruit, differs very little from the leaves in colour, which is a darkifh green; but when arrived to its full maturity is of a yellowifh green. It refembles a caper in figure, but fomething larger, and composed of four petals. It is far from being beautiful; but this deficiency is abundantly fupplied by its incomparable fragrancy. This tree is observed to be very parfimonious in its bloffoms, producing only fuch as would ripen into fruits, did not the extravagant pathon of the ladies, for the excellence of the odour, induce them to purchafe the bloffoms at any rate.

The aguacate, which in Lima and other parts of Peru is known by the ancient Indian name Plata, may also be classed among the choiceft fruits of this country. Its figure in fome measure refembles the calabashes of which fnuff-boxes are made; that is, the lower part is round, and tapers away gradually towards the ftalk; from whence to its bafe the length is ufually between three and five inches. It is covered with a very thin, gloffy, fmooth shell, which, when the fruit is thoroughly ripe, is detached from the pulp. The colour, both during its growth and when arrived at perfection, is green, but turns fomething paler as it ripens; the pulp is folid, but yields to the preffure of the finger; the colour white, tinged with green, and the tafte fo infipid as to require falt to give it an agreeable relifh. It is fibrous, but fome more fo than others. The ftone of this fruit is two inches long, one and a half in thicknefs, and terminates in a point. The tafte is four. It may be opened with a knife, and confifts of two lobes, between which may be diffinely perceived the germ of the tree. Within the fhell is a very thin tegument, which feparates it from the pulp, though fometimes the tegument adheres to the pulp, and at other times to the fhell. The tree is lofty and full of branches; the leaf, both in dimension and figure, fomething different from that of the chirimoya.

In the province of Quito they give the name of guabas to a fruit, which, in all the other parts of Peru, is called by its Indian name Pacaes. It confifts of a pod like that of the algarobo, a little flat on both fides. Its ufual length is about a foot, though there are different fizes, fome larger and fome fmaller, according to the country where they grow. Its outward colour is a dark green, and covered with a down, which feels fmooth when ftroked downwards, and rough when the hand is moved in the contrary direction, as in velvet. The pod, opened longitudinally, is found

9

divided into feveral cells, each containing a certain fpungy medulla, very light, and equal to cotton in whitenefs. In this are inclosed fome black feeds of a very difproportionate fize, the medulla, whofe juice is fweet and cooling, not being above a line and a half in thicknefs round each feed.

The granadilla refembles a hen's egg in fhape, but larger. The outfide of the fhell is fmooth and gloffy, and of a faint carnation colour, and the infide white and foft. It is about a line and a half in thicknefs, and pretty hard. This fhell contains a vifcous and liquid fubftance, full of very fmall and delicate grains lefs hard than thofe of the pomegranate. This medullary fubftance is feparated from the fhell, by an extreme fine and transparent membrane. This fruit is of a delightful fweetnefs, blended with acidity, very cordial and refreshing, and fo wholefome that there is no danger in indulging the appetite. The two former are also of the fame innocent quality. The granadilla is not the produce of a tree, but of a plant, the bloffom of which refembles the passion-flower, * and of a most delicate fragrance. But we must observe a remarkable fingularity in the fruits of this country, namely, that they do not ripen on the trees, like those of Europe, but must be gathered and kept fome time; for if fuffered to hang on the trees they would decay.

The last of the fruits I shall mention is the fruilla, or Peru strawberry, very different from that of Europe in fize; for though generally not above an inch in length, and two-thirds of an inch in thickness, they are much larger in other parts of Peru. Their taste, though juicy and not unpalatable, is not equal to those of Europe. The whole difference between the plant and that known in Spain confists in its leaves being somewhat larger.

The papas are natives of a cold climate; and being common in feveral parts of Europe, where they are known by the name of potatoes, all I fhall fay of them is, that they are a favourite food with the inhabitants of these countries, who eat them instead of bread, nor is there a made dish or ragout in which they are not an ingredient. The Creoles prefer them to any kind of meat, or even fowl. A particular dish is made of them, and ferved up at the best tables, called Locro; and is always the last, that water may be drank after it, which they look upon as otherwise unwholesome. This root is the chief food of the lower class; and they find it fo nutritive and strengthening, that they are not desirous of more folid food.

The oca is a root about two or three inches in length, and about half an inch, or fomething more, in thicknefs, though not every where equal, having a kind of knots where they twift and wreath themfelves. This root is covered with a very thin and transparent fkin, whose colour is in fome yellow, in fome red, and others orange. It is eaten either boiled or roafted, and has nearly the fame tafte as a chefnut; with this difference, however, common to all the fruits of America, that the fweetnefs predominates. It is both pickled and preferved, the latter being what the Americans are very fond of. This root is alfo an ingredient in many made diffes. The plant is fmall, like the camote, yucas, and others already defcribed.

With regard to the corn of this country, there is no neceffity for enumerating the fpecies, they being the fame with those known in Spain. The maize and barley are used by the poor people, and particularly by the Indians, in making bread. They have feveral methods of preparing the maize; one is by parching, which they call Camea. They also make from this grain a drink called Chica, used by the Indians in

* This is the identical paffion-flower, which in England never bears any fruit, the climate being too cold. A.

3 N 2

the

the times of the Yncas, and still very common. The method of making it is this: they fleep the maize in water till it begins to fprout, when they fpread it in the fun. where it is thoroughly dried; after which they roaft and grind it, and of the flour they make a decoction of what ftrength they pleafe. It is then put into jars or cafks, with a proportional quantity of water. On the fecond or third day it begins to ferment, and when that is completed, which is in two or three days more, they efteem it fit for drinking. It is reckoned very cooling; and that it is inebriating, is fufficiently evident from the Indians : those people have indeed to little government of themselves, that they never give over till they have emptied the cafk. Its tafte is not unlike cyder; but feems in fome measure to require the dispatch of the Indians, turning four in feven or eight days after the fermentation is completed. Befides its fuppofed quality of being cooling, it is, among other medical properties, confeffedly diuretic; and to the use of this liquor the Indians are fuppofed to be indebted for their being ftrangers to the ftrangury or gravel. It is also not furprifing that those people who drink it, without any other food than cancha, mote, and muchea, are, with the help of this liquor, healthy. ftrong, and robuft.

Maize boiled till the grains begin to fplit, when it is called Mote, ferves for food to the Indians, the poor people, and fervants in families, who being habituated to it, prefer it to bread.

Maize, before it is ripe called Chogllos, is fold in the ear, and among the poorer fort of inhabitants effeemed a great dainty.

Befides the grains of the fame fpecies with those in Spain, this country has one peculiar to itfelf, and very well deferving to be ranked among the most palatable foods; but ftill more valuable for its being one of the prefervatives against all kinds of abfceffes and imposthumes. This useful species of grain, here called Quinoa, refembles a lentil in shape, but much lefs, and very white. When boiled it opens, and out of it comes a spiral fibre, which appears like a small worm, but whiter than the husk of the grain. It is an annual plant, being fowed and reaped every year. The stem is about three or four feet in height, and has a large pointed leaf, fomething like that of the malloro; the flower is of a deep red, and five or fix inches in length, and in it are contained the grains or feed. The quinoa is eaten boiled like rice, and has a very pleasant tafte; and the water in which it has been boiled, is often used as an apozem. The quinoa is used in external applications, in order to which it is ground and boiled to a proper confistence; and applied to the part affected, from which it foon extracts all corrupt humours occafioned by a contustion.

Befides domestic animals, here are great numbers of rabbits caught on the deferts. The partridges are not very plenty, and rather refemble a quail than those of Europe. Turtle-doves abound here, greatly owing to the indolence of the inhabitants in not endeavouring to take them.

But one of the principal foods ufed by the inhabitants is cheefe, of which it is computed that the quantity annually confumed amounts to between feventy and eighty thousand dollars of that country money. It is used in various manners, and is the chief ingredient in many diffes. The neighbourhood of Quito also affords excellent butter, and of which there is a great confumption, but falls far short of that of cheefe.

The fondnels of these people for fweetmeats exceeds every thing I have ever mentioned of other countries; and this neceffarily occasions a great confumption of fugar and honey. One method of indulging this appetite is, to fqueeze the juice out of the fugar canes, let it fettle, and curdle it, out of which they make fmall cakes, which they call raspaduras. This is so highly valued by the lower class, that with a flice of it, and

460

another of bread and cheefe, they make as hearty a meal as the rich with all their variety of difhes. Thus it appears, that if there be fome difference between the foods used here and those of Spain, the difference in their preparing them is still greater.

CHAP. VIII. - Of the Commerce of the Province of Quito.

FROM the two preceding chapters, a fufficient judgment may be formed of the products and manufactures in the province of Quito, which are the fources of its commerce. The perfons who are the chief conductors of this commerce, are the Europeans or Chapitones; fome fettled here, and others coming occafionally. The latter purchafe the country goods, and fell those of Europe. The manufactures of this province, as we have already noticed, are only cottons, fome white called Tucuyos, and others ftriped bays and cloths, which meet with a good market at Lima for fupplying all the inward provinces of Peru. The returns are made partly in filver, partly in gold and filver thread fringes made in that city; wine, brandy, oil, copper, tin, lead, and quickfilver. The mafters of the manufactures either fell their goods to the traders, or employ them as their factors.

On the arrival of the galleons at Carthagena, the traders refort thither either by the way of Popayan or that of Santa Fé, to purchase European goods, which, at their return, they confign to their correspondents all over the province.

The products of the earth are chiefly confumed within the province, except the wheat produced in the jurifdiction of Riobamba and Chimbo, part of which are fent to Guayaquil. But this is a trade carried on only by Meftizos and poor people. It would indeed admit of great improvements, were not the freights fo exceflively high, that the trouble and expence of carrying them from Guayaquil to other countries, where there is a fcarcity of them, renders it impoffible to get a living profit.

Goods, manufactured by the public, or wove by private Indians, are, together with fome kinds of provisions, fent to the jurifdiction of Barbacoas; and this is the commerce in which the Chapitones make the first effay of their abilities for trade. These provisions are exchanged for gold, found in that country, and which is afterwards fent to Lima, where it bears a greater price. Their stuffs also find a vent in the governments of Popayan and Santa Fé; and this commerce is perpetually carried on; but the only return in the tiempo muerto, or absence of the galleons, is gold, which, like that from Barbacoas, is fent to Lima.

The coaft of New Spain fupplies this province with indigo, of which there is a very large confumption at the manufactories, blue being univerfally the colour which this people affect in their apparel. They also import, by way of Guayaquil, iron and steel both from Europe and the coast of Guatemala; and though it fetches so high a price, that a quintal of iron fells for above a hundred dollars, and the same quantity of steel for a hundred and fifty, there is a continual demand in order to supply the peafants with the necessary instruments of agriculture.

The inland, or reciprocal commerce, confifts in the confumption of the products of one jurifdiction in another; and is a conftant incentive to induftry among the inhabitants of the villages, and the lower clafs. Those of the province of Chimbo purchase home-made tucuyos and bags in those of Riobamba and Quito, in order to vend them at Guayaquil, bringing thence, in return, falt, fish, and cotton; the latter of which, being wove in the looms of Quito, is again fent to Guayaquil in stuffs. The jurifdictions tions of Riobamba, Alaufi and Cuenca, by means of the warehoufes at Yaguache and Noranjal, carry on a confiderable trade with Guayaquil.

This trade in the manufactures of that country, which confift only of three forts, cloth, bags, and linen, is attended with confiderable profit to the traders, and advantage to the country, as all the poor people, who are remarkably numerous, and perfons of fubftance, except those of the capital, wear the goods manufactured in the country; those of Europe being fo prodigiously dear, that only Spaniards of large fortune, and perfons of the highest diffinction, can afford to purchase them. The quantity of cloth and stuffs wove in this country, and all by Indians, either in the public manufactures or their own houses, appears from hence to be prodigiously great : and to this, in a great measure, is owing the happy state of this province; the masters and traders foon raising fortunes, and the fervants and dependents contented with the fruits of their industry.

BOOK VI.

DESCRIPTION OF THE PROVINCE OF QUITO.

CHAP. I. - Extent of the Province of Quito, and the Jurisdiction of its Audience.

IN the five preceding books, we have endeavoured, as far as the nature of the fubject would permit, to follow the order which the feries of our voyage required; and we flatter ourfelves it will appear, that, though our principal attention was directed to the aftronomical obfervations, we have not omitted any interefting particular, relating to the towns and provinces through which we paffed. We were always perfuaded, that if the former tended to the improvement of fcience, and was agreeable to thofe who profefs it; the latter might prove ufeful to hiftorians, and be acceptable to thofe who apply themfelves to the ftudy of the conflitution, ftate, cuftoms, and genius of nations. We clofed the fifth book with an account of the city of Quito; this we fhall employ in treating of the province, which is equally an object of curiofity; and we are enabled to gratify the reader in the most fatisfactory manner, having, in the courfe of our obfervations, not only furveyed its whole extent, but, by our long ftay, obtained the acquaintance of many perfons of undoubted judgment and veracity, on whom we could rely for particulars not to be known from ocular infpection. So that we have fufficient reafons for warranting the truth of the contents of this hiftory.

The large province of Quito, at the time when the Spaniards first fettled in it, was annexed to the kingdom of Peru, and continued fo till the year 1718, when a new viceroyalty being erected at Santa Fé de Bogota, the capital of the new kingdom of Granada, it was diffmembered from Peru, and annexed to Granada. At the fame time the audience of Quito was fupprefied, together with that of Panama, in the kingdom of Terra Firma; though the latter continued dependent on the viceroys of Lima. The intention in this frugal fcheme was, that the falaries of the great number of officers in both, which ceafed on this abolition, fhould be applied to the fupport of the new viceroyalty, in order to prevent any additional burden on the royal revenue; a confequence otherwife

otherwife unavoidable. But experience has fhown the impropriety and infufficiency of this meafure; and that the tribunals abolifhed were of indifpenfable neceffity in their respective cities; an insupportable detriment resulting to the inhabitants from the vaft diftance of the audiences affigned them ; which were, Lima for the kingdom of Terra Firma, and those of the province of Quito, were to apply for justice to the audience of Santa Fé. And as the amount of all the falaries fupprefied, befides the prejudicing many families, was not fufficient to fupport the dignity of a viceroy, new ideas fucceeded; and rather than keep it up at the expence of the royal revenue, the viceroyalty was suppreffed, and things placed again on their ancient footing in the year 1722: the officers were reftored to their former pofts which they had fo worthily filled, and the audiences have continued the fame as before. But the motives for erecting a new viceroyalty at Santa Fé being confelledly of the greatest importance, its restitution was again brought on the carpet; and the great difficulty of fupporting it, without detriment either to the public or the audiences, the fuppreffion of which had been fo detrimental to the inhabitants, being overcome, the dignity of viceroyalty was again erected in the year 1739, Don Sebastian de Eslaba, lieutenant-general, being appointed the first viceroy, and arrived in the beginning of the year 1740 to take pofferfion of his government; which included the whole kingdom of Terra Firma and the province of Quito.

This province is bounded on the north by that of Santa Fé de Bogota, and includes part of the government of Papayan; on the fouth it is limited by the governments of Peru and Chachapoyas; eaftward it extends over the whole government of Maynas, and the river of the Amazons, to the meridian of demarcation, or that which divides the dominions of Spain and Portugal. Its western boundary is the fea, from the coast of Machala, in the gulf of Puna, to the coaft of the government of Atacames and the jurifdiction of Barbaçoas, in the bay of Gorgona. Its greateft breadth from north to fouth is about 200 leagues; and its length, from eaft to welt, the whole extent from Cape de Santa Elena, in the fouth-fea, to the meridian above mentioned ; which, by the most accurate computation, is 600 leagues. But a very great part of these vast dominions are, it must be owned, either inhabited by nations of favage Indians, or have not hitherto been thoroughly peopled by the Spaniards, if indeed they have been fufficiently known. All the parts that can properly be faid to be peopled, and actually fubject to the Spanish government, are those intercepted by the two Cordilleras of the Andes, which, in comparifon to the extent of the country, may be termed a ftreet or lane, extending from the jurifdiction of the town of St. Miguel de Ibarra to that of Loga; the country from hence to the government of Popayan, and alfo that comprehended between the weftern Cordillera and the fea. With this limitation the extent of the jurifdictions from eaft to weft will be fifteen leagues or fomething more, being the diffance intercepted between the two Cordilleras. But to this must be added the countries comprehended in the governments of Jaen de Bracamoros, which borders on the jurifdiction of Loja, and the extremity of the whole province, and fituated on the eaft fide of the eaftern Cordillera: and, to the northward, the government of Quixos, and that of Maynas to the eaftward of it; but feparated by large tracts of land inhabited by wild Indians; and on the north fide of the province from that of Papayan; though the latter is properly a diffinct province from that of Quito. Thus on the weft fide of that interval between the two Cordilleras, lies the lately erected government of Atacames, and the jurifdiction of Guayaquil: on the eaft fide, the three governments above mentioned; and on the north, that of Papayan.

This province, exclusive of these five governments, confists of nine jurifdictions, which in that country are called provinces, that of Quito being subdivided into as many others others as there are governments and jurifdictions; which it is neceffary for the reader to observe, in order to avoid any perplexity or mistake, when a jurisdiction happens to be called a province; though I shall be careful to avoid it as much as possible. The jurifdictions in the province of Quito, beginning with the most northern, are the following :---

- I. The town of San Miguel de Ibarra.
- II. The village of Otabala.
- III. The city of Quito.
- IV. The affiento of Latacunga.V. The town of Riobamba.
- VI. The affiento of Chimbo, or Guaranda.
- VII. The city of Guayaquil.
- VIII. The city of Cuenca.
- IX. The city of Loja.

Of these nine jurifdictions I shall give a fuccinct account in this and the following chapter, and then proceed to the governments.

I. The town of San Miguel de Ibarra, is the capital of the jurifdiction of that name, which alfo contains eight principal villages or parishes, the names of which are,

I. Mira.	V. Salinas.
II. Pimanpiro.	VI. Tumbabiro.
III. Carangue.	VII. Quilca.
IV. San Antonio de Carangue.	VIII. Ĉaguafqui.

This jurifdiction formerly included that of Otabalo,; but, on account of its too enor. mous extent, it was prudently divided into two.

The town of San Miguel de Ibarra stands on the extremity of a very large plain or meadow, at a fmall diftance from a chain of mountains to the eaftward of it, and betwixt two rivers, which keep this whole plain in a perpetual verdure. The foil is foft and moift, which not only renders the houfes damp, but alfo caufes the foundations of their buildings often to fink. It is moderately large, with ftraight broad ftreets, and the greatest part of the houses of stone, or unburnt bricks, and all tiled. The town is furrounded by fuburbs inhabited by the Indians, whofe cottages make the fame appearance as in all other mean places; but the houfes are neat and uniform, though they are but low, having only a ground floor, except those in the fquare, which have one ftory. The parish church is a large and elegant structure, and of the same mate-rials as the houses. It is also well ornamented. This town has convents of Franciscans, Dominicans, the Fathers of Mercy, a college of Jesuits, and a nunnery of the order of the Conception. Its inhabitants, of all ages, fects, and claffes, are computed at ten or twelve thoufand fouls.

Within the limits of this jurifdiction is the lake of Yagarchoca, famous for being the fepulchre of the inhabitants of Otabalo, on its being taken by Huayna-Capac, the twelfth Ynca, who, inftead of fhewing clemency to their magnanimity, being irritated at the noble refiftance they made, ordered them all to be beheaded, both those who had quietly furrendered, and those taken in arms, and their bodies thrown into the lake; and from the water of the lake being tinged of a bloody hue, it acquired its prefent name, which fignifies a lake of blood.

The air is very mild, lefs cold than that of Quito, and at the fame time the heat is not at all inconvenient. The temperature of the air is different in all the villages of this jurifdiction, but in moft warm, on account of their low fituation. Thefe parts are all over this country called Valles, as I have already obferved; and the names of thofe in the jurifdiction of San Miguel de Ibarra are Chotar Carpuela, and feveral others. Moft of the farms in them have plantations of fugar canes, and mills for extracting the juice, from whence they make great quantities of fugar, and very white : fome are planted with the fruits common in a hot climate; and in others cotton only is cultivated, and to the greateft perfection.

The fugar canes do not ripen here fo late as in Quito; but they may be committed at any time to the mill, there being no neceflity for cutting them at any precife time, retaining all their goodnefs, even when fuffered to fland two or three months after they are ripe; fo that they are cut every quarter, and the mills by that means kept at work the whole year.

The farms fituated in a lefs hot part are employed for cultivating maize, wheat, and barley, in the fame manner as in the jurifdiction of Otabalo, and which we fhall explain in its proper place. Here are alfo large numbers of goats, but not many fheep; and though the manufactures here are not fo numerous as in Otabalo, yet the Indians weave a confiderable quantity of cloth and cotton.

In the neighbourhood of the village of Salinas are falt mines, which, befides the home confumption, fupply the countries to the northward of it. This falt has fome mixture of nitre; and though it may thence be concluded to be lefs wholefome, yet it is attended with no ill confequence to those who are accuftomed to it; but not answering the intention in falting, that from Guayaquil is used instead of it.

Within the diftrict of the village of Mira are great numbers of wild affes, which increafe very faft, and are not eafily caught. The owners of the grounds where they are bred fuffer all perfons to take as many as they can, on paying a fmall acknowledgment in proportion to the number of days their fport has lafted. The manner of catching them is as follows: a number of perfons go on horfeback, and are attended by Indians on foot. When arrived at the proper places, they form a circle, in order to drive them into fome valley, where, at full fpeed, they throw the noofe, and halter them; for thefe creatures, on finding themfelves inclofed, make very furious efforts to efcape, and if only one forces his way through, they all follow with an irrefiftible impetuofity. But when the hunters have noofed them, they throw them down, and fecure them with fetters, and thus leave them till the hunting is over; when, in order to bring them away with the greater facility, they pair them with tame beafts: but this is not eafily performed; for thefe affes are fo remarkably fierce, that they often hurt the perfons who undertake to manage them. They have all the fwiftness of hors; and neither acclivities nor precipices retard them in their career : when attacked, they defend themfelves with their heels and mouth, with fuch activity that, without flackening their pace, they often main their purfuers: but the most remarkable property in these creatures is, that after carrying the first load, their celerity leaves them, their dangerous ferocity is lost, and they foon contract the flupid look and dullness peculiar to the afinine species. It is alfo obfervable, that thefe creatures will not permit a horfe to live among them; and if one of them happens to ftray into the places where they feed, they all fall upon him, and, without giving him the liberty of flying from them, they bite and kick him till they leave him dead on the fpot. They are very troublefome neighbours, making a most horrid noife; for whenever one or two of them begin to bray, they are answered in the

VOL. XIV.

fame

fame vociferous manner by all within the reach of the found, which is greatly increafed and prolonged by the repercuffions of the valleys and breaches of the mountains.

II. The jurifdiction joining on the fouth to that of St. Miguel de Ibarra, is called Otabalo, in the jurifdiction of which are the following eight principal villages or parifhes:

I. Cayambe.	V. Cotacache.
II. Tabacundo.	VI. San Pablo.
III. Otabalo.	VII. Tocache.
IV. Atontaqui.	VIII. Urququi.

The parifh of Otabalo is well fituated, and fo large and populous that it is faid to contain eighteen or twenty thousand fouls, and among them a confiderable number of Spaniards. But the inhabitants of all the other villages are universally Indians.

The lands of this jurifdiction are laid out in plantations like those of the former, except that here are not fuch great numbers of fugar mills; but this is compensated by its great fuperiority in manufactures, a confequence refulting from the multitude of Indians refiding in its villages, who feem to have an innate inclination to weaving; for befides the fluffs made at the common manufactories, fuch Indians as are not Mitayos, or who are independent, make, on their own account, a variety of goods, as cottons, carpets, pavilions for beds, quilts in damask work, wholly of cotton, either white, blue, or variegated with different colours; but all in great repute, both in the province of Quito and other parts, where they are fold to great advantage.

The method of fowing wheat and barley in this jurifdiction is very different from that ufed in any of the former; for, inftead of fcattering the feeds, as is commonly practifed, they divide the ground, after it is plowed, into feveral parts by furrows, and along the fides of them they make little holes a foot diftant from one another, putting five or fix corns into each. However tedious this may be, it is abundantly made up to the farmer by the uncommon increase, which is usually above a hundred fold.

This jurifdiction has a great number of fluds of horfes, and multitudes of black cattle, from whofe milk large quantities of cheefe are made. This country is happily fituated for pafture, being every where watered with an infinite number of rivulets. It has alfo large flocks of fheep, though thefe feem to be neglected, in comparison of the others.

The village of Cayambe fands in the middle of a fpacious plain, at the end of which is the foot of the mountain Cayamburo, one of the largest mountains of the Cordilleras in this part of the country, being equal in height to that of Chimborazo, and its fummits covered with fnow and ice. Its altitude is fo much greater than the reft between it and Quito, that it may be plainly feen from that city. The vicinity of this mountain renders the whole plain of Cayambe cold, which is increafed by the violence and continuance of the winds. In the territories of this jurifdiction are two lakes, one called San Pablo, from a village of that name on its banks; it is a league in length, and about half a league in breadth. This lake is every where furrounded with a fpecies of rufhes, called there Totoral, among which are vaft flocks of wild geefe and gallaretes. This lake receives its water from the mountain of Mojanda, and from it iffues one of the branches of the Rio Blanco. The other lake, which has nearly the fame dimensions as the former, is called Cuichocha, and is fituated in a plain on the fide of a mountain of the fame name. Near the middle of this are two iflands, both which abound with wild cuyes, a fpecies of rabbits and deer, which often fwim to main land; but, when purfued by the hunters, difappoint them by gaining the lake, and fwimming back to their retreat.

Several fmall fifh are found in this lake, refembling the cray-fifh, but without retreat. They are called, by the inhabitants of the adjacent country, prennadillas, and a fhell. are fent in the pickle to Quito, where they are the more efteemed, as being the only fresh-water fish that can be bought in that city. Nor are these caught in any great quantities, though they are alfo found in the lake of San Pablo.

III. The jurifdiction of Quito confifts of the following twenty-five parifhes, befides those in the city :

 I. St. Juan Evangelifta. II. Santa Maria Magdalena. III. Chilogalle. IV. Cono-coto. V. Zambiza. VI. Pintac. VII. Sangolqui. VIII. Amaguana. IX. Guapulo. X. Cumbaya. XI. Co-collao. 	 XIV. El Quinche. XV. Guayllabamba. XVI. Machacha. XVII. Aloafio. XVIII. Aloa. XIX. Yumbicho. XX. Alangafi. XXI. Pomafque. XXII. San Antonio de Lulum-bamba. XXIII. Perucho. XXIV. Cola-cali.
XI. Co-collao. XII. Puembo, and Piío. XIII. Yaruqui.	XXIV. Cola-cali. XXV. Tumbaco.

This jurifdiction, though called Cinco Leguas, five leagues, extends, in fome parts, a great deal farther, and the lands are as it were covered with plantations, fome fituated in the plains, fome in the capacious breaches, and others on the fummit of the mountains; and all producing according to the quality, fituation, and exposure of the ground. Those on the temperate plains yield plentiful harvests of maize; those at the bottoms of deep breaches, being in a hot temperature, are planted with fugar canes, from whence they extract great quantities of fugar and rum. From the fruits peculiar to fuch a temperature are made a variety of fweetmeats, here called Rayados; and of which there is a great confumption among the inhabitants.

The fugar cane ripens very flowly in this jurifdiction; for though the plantations enjoy a hot air, yet it is not of that degree of heat requisite to its speedy maturity; fo that it is three years after they are planted, before they are fit to be cut. Nor are they ever cut but once, the fecond crop only producing the foca or germ, which ferves for re-planting.

The guarapo, which we have had occafion to mention, is nothing more than the juice of the cane, as it flows from the mill, and afterwards fuffered to ferment. It is very pleafant, its tafte being a fweetifh acidity, and at the fame time very wholefome; but inebriating if drunk to excefs. This liquor is a favourite regale among the vulgar.

The plantations near the fummits of the mountains, from their having a variety of temperatures, produce wheat, barley, pot-herbs of all kinds, and potatoes.

Above these plantations are fed numerous flocks of sheep, producing that wool, which, from the feveral operations it undergoes, affords employment for fuch multitudes of people. Some farmers make it their fole bufinefs to breed cows, principally for the advantages they derive from their milk in making cheefe and butter. In other farm-houfes you fee various occupations carried on at the fame time, namely, the breeding of cattle, agriculture, and manufactures, particularly of cloth, bays, and ferges.

467

From

ULLOA'S VOYAGE TO SOUTH AMERICA.

From what has been faid, it is evident that neither this, nor the preceding jurifdiction, has any general temperature, the degree of cold and heat depending on the fituation ; and that to this difference is owing the delightful, and even profitable variety of all kinds of fruits and grains, each finding here a temperature agreeable to its nature. Accordingly, in travelling only half a day, you pals from a climate where the heat fufficiently indicates that you are in the torrid zone, to another where you feel all the horrors of winter. And what is ftill more fingular, and may be effeemed an advantage, no change occurs during the whole year; the temperate parts never feeling the vicifitudes of cold and heat. This, however, muft be allowed not to hold precifely with regard to the mountainous parts, the coldnefs of which is encreafed by the violence of the winds, or a change of weather, called tiempo de paramos, when the clouds involve the greateft part of thefe mountains, and precipitate themfelves in a fleet; at which time the cold becomes intolerable: and on the other hand, when thofe frigorific clouds are difperfed, and the wind allayed, fo that the rays of the fun reach the earth, they feel the comfortable heat of his cheering beams.

Moft of thefe villages are built with very little regularity. The principal part of them is the church and parfonage, which they call the convent, from the priefts being all formerly religious. Thefe ftructures have fome appearance of decency: but the other parts of the village confift of a number of huts with mud walls, fcattered all over the country, where every one has his fpot of ground, which he tills for his fubfiftence. A great part, and in fome villages the whole of the inhabitants are Indians, who live there when out of place; though in fome parts the inhabitants are Meftizos, and here and there a Spanifh family; but thefe are extremely poor.

IV. The first jurifdiction to the fouthward of that of Quito, is the affiento of Latacunga. The word Affiento implies a place lefs than a town, but larger than a village. This place ftands in a wide plain, having on the eaft fide the eaftern Cordillera of the Andes, from whence projects a very high mountain, and at a small distance from its foot is fituated Latacunga, in $0^{\circ} 55' 14'' 30'''$, fouth latitude. On the welt fide of it is a river, which, though fometimes fordable, on an increase of the waters must be paffed over by the bridge. This affiento is large and regular; the ftreets broad and ftraight; the houfes of ftone, arched, and well contrived: but on account of the dangerous confequences to often refulting from earthquakes, without any ftory. This precaution the inhabitants were taught by a dreadful destruction of all the buildings, on the 20th of June 1698. This terrible concuffion was general all over the province of Quito; and its effects, as we fhall flow in the fequel, in many other places, equally melancholy. Out of fix hundred ftone houfes, the number of which this affiento then confifted, only a part of one, and the church of the Jefuits, were left flanding; and even thefe were fo greatly damaged, that there was a neceffity for pulling them down. But the greatest misfortune was, that most of the inhabitants were buried under their ruins, the earthquake beginning at one in the morning, a time of general filence and fecurity, and continuing its concufiions, at fhort intervals, the greatest part of the day.

The ftone of which the houfes and churches are built, is a kind of pumice, or fpongy ftone, ejected from volcanoes, inexhauftible quarries of it being found in the neighbourhood. It is fo light that it will fwim in water, and from its great porofity the lime cements the different pieces very ftrongly together; whence, and from their lownefs, the houfes are now enabled to fupport themfelves during a concuffion, much better than before the earthquake, when few were without a ftory; and if they fhould be unfortunately thrown down, the crufh in all probability would be much lefs fatal.

The

The jurifdiction contains thefe principal villages :

I. Zichios Mayor. X. San Miguel de Molleambato. II. Zichios Menor. XI. Saquifili. III. Yungas, or Colorados. XII. Pugili. IV. Yfilimbi, XIII. Tanicuchi. V. Chifa-Halo, or Toacafo. XIV. Cuzubamba. VI. Pillaro. XV. Tifaleo. VII. San Phelipe. XVI. Angamarca. VIII. Mula-Halo. XVII. Pila-Halo. IX. Alaquez.

The air of this affiento is the colder, from the place being only fix leagues from the mountain of Cotopaxi, which, as it is not lefs in height and extent than those of Chimborazo and Cayamburo, fo it is, like them, covered with ice and fnow. The combuftible fubftances within the bowels of this mountain, first declared themfelves in the year 1533, when Sebaftian and Belalcazar, who undertook the conqueft of this province, had entered it, and proved very favourable to the enterprife. For the Indians, poffeffed with the truth of a prediction of their priefts, that, on the burfting of this volcano, they would be deprived of their country, and reduced under the government of an unknown prince, were fo ftruck with the concurrence of the burfting of this volcano, and the invafion of a foreign army, that the fpirit, which univerfally began to flow itfelf in the preparatives every where made for a vigorous refiftance, entirely left them, and the whole province eafily conquered, all its caciques fubmitting to the King of Spain. The large plain in which this affiento ftands is full of rocks, ejected at that fuppofed ominous eruption, and fome of them to the diftance of five leagues from its roots. In the year 1743, while we were on the coaft of Chili, a fecond eruption happened, the particulars of which we fhall relate in another place.

The temperature of the air is very different in the feveral villages of this jurifdiction; being hot in those lying in the valleys; temperate in those fituated on the plains; whilft the air in those bordering on the mountains, like that of the affiento, is cold, and fometimes to an exceflive degree. The villages are in general larger, and more populous than those of the other jurifdictions in the fame province. Their inhabitants are Indians, Meftizos, and a few Spaniards.

Befides the parifh church, which is ferved by two priefts, one for the Spaniards, and the other for the Indians, this affiento has convents of Franciscans, Augustines, Dominicans, the Fathers of Mercy, and a college of Jesuits. The churches of these religious are well built, decently ornamented, and kept very neat. The inhabitants, by the nearest computation, amount to between ten and twelve thousand, chiefly Spaniards and Mestizos. Among the former are several families of eminent rank and easy circumstances, and of such virtues and accomplishments as add a lustre to their happy fituation. The Indians, as at Quito, live in a separate quarter adjoining to the country.

In this affiento all kinds of trades and mechanic arts are carried on; and, as in all the other parts of this jurifdiction, it has a confiderable number of manufactories of cloth, bays, and tucuyos. Great quantities of pork are falted here for exportation to Quito, Guayaquil, and Riobamba, being highly effecemed for the peculiar flavour given to it in the pickling, and which it ever after retains. All the neighbouring country is fowed with clover, and interfperfed with plantations of willows, whofe perpetual verdure gives a cheerful afpect to the country, and heightens the pleafantnefs of the affiento.

The Indians of Pugili and Saquifili are noted for making earthen ware, as jars, pans, pitchers, &c. which are greatly valued all over the province of Quito. The clay of which they are made is of a lively red, very fine, and emits a kind of fragrancy, and the work-manship very neat and ingenious.

V. The next jurifdiction fouthwards is Riobamba, the capital of which is the town of the fame name. Its jurifdiction is divided into two departments; the corregidor, who refides at Riobamba, appointing a deputy, who lives at the affiento of Hambato, fituated between the capital and Latacunga. In the first department are the following principal villages:

I.	Calpi.	Х.	Pungala.
II.	Lican.		Lito.
III.	Yaruquiz.	XII.	Guano.
IV.	San Luis.	XIII.	Hilapo.
	Cajabamba.	XIV.	Guanando.
	San Andres.	XV.	Penipe.
	Puni.		Cubijis.
	Chambo.	XVII.	Cevadas.
IX.	Quimia.	XVIII.	Palactanga.

The department of the affiento of Hamberto has, in its jurifdiction, fix principal villages :

I.	Ifambo.	IV. Pelileo.
	Quifupincha.	V. Patate.
III.	Quero.	VI. Santa Rofa de Pilaguin.

This affiento ftands in the latitude of $1^{\circ} 41' 40''$ fouth, and 22' weft, of the city of Quito. In 1533 it was an Indian town, of which Sebaftian de Belalcazar having made himfelf mafter, the following year Marshal Diego de Almagro laid the foundation of the prefent affiento. It ftands in a very large plain furrounded by mountains; particularly on the north fide, which is bounded by Chimborazo, from the foot of which it is at no great distance. On the fouth fide is a lake called Colta, about a league in length and three quarters of a league in breadth, where there are great numbers of wild geefe and gallaretas; and its banks covered with plantations.

The principal fquare and ftreets are very regular, ftraight, and airy; the houfes of a light ftone, but fomething heavier than the pumice made use of at Latacunga. Some, especially those in and near the square, have a ftory; but the others are universally without any, being built low, on account of the earthquakes which this place has often felt, particularly that already mentioned of 1698, when many of its houses and public buildings were thrown down. The Indians who inhabited this place, and all those to the fouthward in this jurifdiction, before their conversion to Christianity, were known by the name of Puruayes; and are to this day diftinguished from all the other Indians in the whole province.

Befides the great church, here is another called St. Sebaftian, with convents of the fame orders as at Latacunga, and a nunnery of the Conception; contributions are fill

raifed

raifed for the use of the hospital, though it is in so ruinous a condition as not to admit of patients.

On the weft fide of the affiento is a river cut into fmall channels or trenches, for watering the adjacent fields; by which means they are rendered fo remarkably fertile, that they produce clover the whole year.

The inhabitants, according to an accurate calculation, amount to between fixteen and twenty thoufand fouls. The manners and cuftoms here are nearly the fame with thofe at Quito; the greateft part of the families of diffinction in that city owing their origin to this place. For at the beginning of the conquefts, many of the eminent families which came from Spain fettled here at the conclusion of the war, and have been very careful not to diminish either the lustre of their families, or their wealth, by promifcuous alliances, marrying only into one another.

The magiftracy confifts of regidores, who are always perfons of the first diffinction, and from among those are annually chosen the ordinary alcaldes; with this fingularity, that the validity of the election depends on its being unanimous, a fingle vote rendering it void. Befides, the perfon thus elected is either confirmed or rejected by the townsfmen; a privilege known in no other part of the whole province.

The air is colder here than at Quito, owing in a great meafure to the neighbourhood of the mountain of Chimborazo; and, when the wind blows from that quarter, the weather is fo fharp, that the rich families leave the town, and retire to their eftates, fituated in a warmer air, though at no great diffance. This uncomfortable feafon generally lafts from December to June, the north and north-weft winds then principally prevailing. It is, however, in a great meafure, free from those violent showers and tempests to common at Quito, that fometimes for many days successively it enjoys ferene and delightful weather; and the same may be faid of the greatest part of its jurifdiction.

Here are many plantations, or farms, and moft of them confiderable; and for the number and largenefs of its manufactories, it furpaffes every other part of this province; though the Indians feem born with an inclination for weaving, particularly those of the village of Guana, who are famed for their manufactures of worfted flockings, and it is indeed the only place in the whole province where they are made. This industrious disposition probably gave rife to the large flocks of sheep in this jurifdiction, whence these manufactories are never in want of wool. The foil is very fertile, producing all kinds of grain and pulse in abundance. And here is most frequently feen what I have elsewhere observed, that in one part the husbandmen are fowing, in another reaping; the landscape also elegantly adorned with fuch an enchanting variety of colours as painting cannot express.

In this jurifdiction is a large plain lying fouth of the town of Tiocaxas, and famous for a battle between the Spaniards commanded by Belalcazar and the Puruayes Indians, before their courage had been deprefied by the ominous explosion of the mountain. Both armies fought with great obstinacy, though neither gained the victory.

The affiento of Hambato ftands in a wide plain at the bottom of a mountain. On the north fide of it runs a large river, over which a bridge has been built, it being never fordable on account of its depth and extreme rapidity. It is finely fituated, and in extent and populoufnefs nearly equal to Latacunga, the number of its inhabitants amounting to eight or nine thoufand. The houfes are of unburnt bricks, well contrived, and make a good appearance. With regard to their lownefs, it is owing to a difcreet precaution against the melancholy shocks of earthquakes. It has a parishchurch, two chapels of ease, and a convent of Franciscans. The earthquake which made made fuch terrible havock in the affiento of Latacunga, proved alfo fatal to this. The earth near it opened in feveral places, of which there ftill remains an aftonifhing monument on the fouth fide of the affiento, being a chafm four or five feet broad, and about a league in length, north and fouth. And on the north fide of the river are feveral openings of the fame kind. The horror of the fhock was greatly increased by terrible eruptions from Mount Carguairafo, from whence a muddy torrent, formed of afhes, cinders, and fnow melted by the flames from the aperture, precipitated down the fides of the mountain, overflowing the fields, fweeping away the cattle, and every other object, by its violence. A track of this impetuous current is ftill to be feen on the fouth fide of the affiento.

The inhabitants in their manners and cuftoms refemble those of Quito; but with regard to families of diffinction, it is much inferior to Riobamba. Courage is an innate quality of the natives, but blended with fuch vices, that both their neighbours, and the inhabitants of the other parts of the province, will have no concerns with them, except those absolutely neceffary; and, in all dealings with them, take care to guard equally against their deceit and violence.

This jurifdiction in feveral of its products and manufactures excels all the reft: one of which is bread, particularly that made at the affiento, which is famous all over the province; and accordingly it is fent to Quito, and other parts, without lofing any thing of its goodnefs by length of time. The Indian inhabitants of the village of Quero make all forts of cabinet work, for which there is a great demand all over the province, as, befides the goodnefs of the workmanfhip, this is the only place where goods of this kind are made. The jurifdiction of Patate is equally famous for the plenty of fugar canes, and the goodnefs of the fugar made from them, being of the fineft fort. That of Santa Rofa de Pilaguin, which, with its fields, lies on the fide of Carguairafo, is famous for the particular goodnefs of its barley, as the diftrict bordering on the affiento is for the exquifitenefs of its fruits; and to this diftrict Quito owes moft of the European kinds fold in that city, the temperature of the air being peculiarly adapted to the perfection of thofe fruits.

VL. On the weft fide of the jurifdiction of Riobamba, between it and Guayaquil, lies that of Chimbo, whofe jurifdiction confifts of an affiento and feven villages: the former, being the capital, is called Chimbo, and was the refidence of the corregidor, till it was thought proper, for the conveniency of commerce, to remove it to Guaranda. This affiento does not contain above eighty families; fome of which are Spaniards, but all poor. The names of the villages are,

I. San Lorenzo.	V. Guaranda.
II. Afaneoto.	VI. Guanujo.
III. Chapacoto.	VII. Tomabelas.
IV. San Miguel.	

The most confiderable of their villages is that Guaranda, though the inhabitants are generally Mestizos; there are some Indians, but very few Spaniards.

The jurifdiction of Chimbo, being the first of the Serrania, or ridge of mountains, bordering on that of Guayaquil, carries on, by means of innumerable droves of mules, the whole trade of Quito and the other provinces, by the way of Guayaquil, carrying the bales of cloth, and stuffs, together with the meal, corn, and other products of the country, from the former to the latter; and returning with wine, brandy, falt, cotton, fish, oil, and other goods wanted in the provinces of the mountains. This traffic traffic is of inconceivable benefit to the inhabitants; but it can only be carried on during the fummer, the roads in the winter being absolutely impracticable to beafts of any kind. This intermiftion of trade they call ' Cerrarfe la Montana,' the flutting up of the mountains.

The temperature of the air at Guaranda, and that of the greatest part of the jurifdiction of Chimbo, from the proximity of Chimborazo, fo often mentioned for its frigorific effects, is very cold. The country is large and fertile, like those already mentioned; but the haçiendas, or farms, are in general appropriated to the breeding of mules; a few only being fown with different fpecies of grain.

VII. The jurifdiction of Guayaquil is the laft; but this has been already treated of at large.

CHAP. II. - Sequel of the Account of the Jurifdictions in the Province of Quito.

VIII. THE jurifdiction bordering on the fouthern parts of Riobamba is that of Cuenca, whole capital is the city of the fame name, founded in the year 1557, by Gil Ramirez Davalos. Its jurifdiction is divided into two departments, of which the capital is one, and that of Alaufi the other; the last reaches to Riobamba, and is governed by a deputy of the corregidor. Befides the affiento, it contains only the four following villages:

I.	Chumche.	III.	Cibambe.
II.	Guafuntos.	IV.	Ticfan.

But that of the city of Cuenca includes ten:

I. Azogues.	VI. Paccha.
II. Atuncanar.	VII. Gualafeo.
III. Giron.	VIII. Paute.
IV. Canary-bamba.	IX. Delec.
V. Espiritu.	X. Molleturo.

The city of Cuenca lies in 2° 53' 49" fouth latitude, and 29' 25" weft of the meridian of Quito. It stands in a very spacious plain, along which, at about half a league to the northward of the city, runs a little river called Machangara; and close to the fouth fide of the city runs another, known by the name of Matadero. Befides thefe, at the diftance of a quarter of a league, runs another called Yanuncay; and at about the fame diftance is another termed Los Banos, from a village of that name, through which it flows. All these rivers are at some feasons fordable; but at others can only be croffed with fafety over the bridges.

The plain in which this city stands reaches about fix leagues from north to fouth; and the four rivers, whofe courfes are nearly in the fame direction, form, at a small distance, by the conflux of their streams, a very large river. To the fouth of the city is another plain of about two leagues in extent, and, with its great variety of regular plantations of trees, and other rural improvements, makes a very delightful appearance all the year round.

This city may be claffed among those of the fourth order. Its ftreets are ftraight, and of a convenient breadth; the houfes of unburnt bricks, tiled, and many of them VOL. XIV.

ζ₽

have

have one ftory, the owners, from a ridiculous affectation of grandeur, preferring elegance to fecurity. The fuburbs, inhabited by the Indians, are, as ufual, mean and regular. Several streams of water, by great labour, are brought from the above rivers, and flow through the ftreets; fo that the city is plentifully supplied; and for its admirable fituation, and the fertility of the foil, it might be rendered the paradife, not only of the province of Quito, but of all Peru; few cities being capable to boaft of fo many advantages as concentre here ; but, either from fupineness or ignorance, they are far from being duly improved. One circumstance, which adds a fingular beauty to its fituation, is, that the mountains are not fo high as to intercept the view of a beautiful country; but at a proper diftance they rife again to their flupendous height, as is feen in the mountain Azuay, which divides this jurifdiction from that of Alaufi.

Cuenca contains three parishes; that of the great church confists of Spaniards and Mellizos; the two others, which are called San Blas and San Sebastian, are for the Indians. Here are convents of Franciscans, Dominicans, Augustines, and the Fathers of Mercy; a college of Jefuits, and two nunneries, one of the Conception, and the other of Santa Terefa. Here is also an hospital, but through ill management now almoft in ruins.

The magiftracy is composed of regidores and ordinary alcaldes, which, according to the general cuftom, are chosen annually, and at their head is the corregidor. Here is a chamber of finances, under the direction of an accomptant and treasurer. It was formerly kept in the city of Sevilla del Oro, a jurifdiction, and the capital of the department of Macas; but on the lofs of the city of Logrono, the village of Cuambaya and other places, it was removed to Loja, and fince to Cuenca. The revenues paid into it confift of the tribute of the Indians of this department, together with that of Alaufi, the jurifdiction of Loja, and the government of Jean de Bracamoros; the duties on provisions, and the customs collected at Naranjal.

The inhabitants here, though of the fame claffes with thofe of Quito, differ fomething in their genius and manners; particularly in a most fhameful indolence, which feems fo natural to them, that they have a ftrange averfion to all kinds of work; the vulgar are alfo rude, vindictive, and, in fhort, wicked in every fenfe. From this general reproach, the women muft, however, be excepted, being remarkable for an uncommon fpirit of industry; as if they were determined to atone for the indolence of the other fex. They fpin and weave bays, which, for their goodnefs, and efpecially the brilliancy of the colours, are famous in every part of Peru. They also weave fome tucuyos; and make bargains with the merchants or traders. They buy and fell; and, in fhort, manage entirely that little commerce by which their families are fupported; whilft their hufbands, brothers, and fathers, give themfelves up to floth and idlenefs, with all its infamous concomitants. The whole number of inhabitants of this city is computed at twenty or thirty thousand fouls; and both those of the city and of the jurifdiction are commonly known by the general name of Morlacos.

The pleafures arising from the fertility of the foil are increased by the mildness of the climate, the liquor of the thermometer fluctuating the whole year between 1013 and 1015; fo that the cold is very little felt, and the heat very fupportable. With regard to rains, and tempefts of thunder and lightning, they are as common here as at Quito. In calm weather, the fky is ferene, and the inhabitants healthy; nor are malignant fevers and pleurifies, though common to the whole province, fo often known as at Quito. The country is finely interfperfed with farm-houfes and plantations of fugar canes; fome parts are cultivated for corn, and others applied to the feeding of fheep and horned cattle, from the last of which they make great quantities of cheefe, not inferior

inferior to that of Europe; and accordingly there is a very confiderable demand for it all over these parts.

The village of Atun-canar, or Great-canar, is famous for its extensive corn fields, and the rich harveft they afford. It is also remarkable for the riches concealed in its mountains, the bravery of its ancient inhabitants, and their unfhaken loyalty to Ynca Tupac-Yupangui, to whom, when his army intended for this country was arrived near the frontiers, fenfible of their inability of making any effectual reliftance, they fubinitied, and paid him all the honours which denoted a voluntary fubjection; and thefe marks of loyalty fo prepoffeffed the emperor in their favour, that, to encourage them to cherifh fuch good difpofitions, he ordered feveral magnificent temples, fplendid palaces, and forts, all of ftone, to be built here, in the manner of those of Cusco, and the infide of the walls to be plated over with gold. And of thefe works fome monuments ftill remain in a fort and palace, and of which neither time nor accidents have obliterated their aftonifhing magnificence; a defcription will be given of both in another These works had such happy effects on the grateful inhabitants, that they fell place. at laft victims to their loyalty; for, having fided with the Ynca Huefcar, their lawful fovereign, against his brother Ata Huallpa, and the former losing a decifive battle, the conqueror inhumanly abufed his victory, by deftroying those unhappy perfons who had done no more than their duty, no lefs than 60,000 of them being maffacred in cold blood.

These Indians were united with the Guafantos, and those of Pamallacta, in which district are still to be seen the ruins of another fort, built by the Yncas. The intimacy between the inhabitants of these countries was so remarkable, that they were all called Canarejos, that under one name they might form one body.

The affiento of Alaufi, the chief place of the fecond department, is not very populous, though among its inhabitants are fome Spanish families of the first rank. The other inhabitants are Mestizos and Indians, but both classes in mean circumstances. The parochial church is the only ecclesiastical structure; nor has this the ornaments which decency requires.

The village of Ticfan, which ftood in this department, was totally deftroyed by an earthquake, and the inhabitants removed to a fafer fituation. The marks of thefe dreadful convultions of nature are ftill vitible in feveral chafms among the mountains, many being two or three feet broad, a convincing proof of the violent concuffions in the bowels of the earth at the time of that cataftrophe. The temperature of the air is here fomething colder than at Cuenca; but not in a degree fufficient to leften the exuberant fertility of the foil.

Among the great variety of mines in the jurifdiction of Cuenca, and which I fhall confider more at large in the fequel, thofe of gold and filver, according to the common opinion, are not the leaft numerous. Report has indeed magnified them to fuch a degree, that, to prove the aftonifhing quantity of thofe metals, the inhabitants relate the following flory, the truth of which I do not pretend to warrant. It exhibits indeed an inftance fo contrary to the common order of things, as to be fcarce reconcileable to reafon. I fhall, however, venture to relate it, becaufe, if the reader fhould think it incredible, it will at leaft ferve to convey an idea of the riches fuppofed to be concealed in the bowels of the mountains.

Between the valleys of Chugui-pata, which extend from the village and jurifdiction of Los Azogues fouthward, and that of Poute running eaftward along the banks of the fame name, are feveral eminences which divide the two plains, and among thefe, one higher than the reft, called Supay-urco, a name faid to have been given it on the

3 P 2

following

following account. An inhabitant of the province of Estramadura in Spain, from the extremity of his diftrefs, abandoned himfelf to defpair; and, in the phrenzy of his wild imagination, fometimes implored the affiftance of Satan, and fometimes curfed the moment that gave birth to his wretched being, and was for laying violent hands upon himfelf. The devil, taking advantage of his condition, appeared to him, but in a drefs which fufficiently concealed his nature, and courteoufly afked the caufe of his exceffive melancholy; and, being informed that it was owing to an unhappy change of circumstances, from a plentiful fortune to the most extreme poverty, the devil, with a cheerful air, told him, that he would show him a spot from whence he might have what quantity of gold he pleafed, the mine being abfolutely inexhaustible. The Spaniard embraced the offer with the greatest transport of joy; and concluding that it would at leaft prove a journey of fome days, purchafed, with the penurious remains of his fubstance, a few loaves, which he packed up in his wallet; and, his mind being fomething eafier from these flattering promises, laid himself down to rest till the time appointed, when he was to call upon his guide. But when he awaked, he found himfelf in a country abfolutely unknown, the plain of Chiquipata lying before him, and himfelf reclined on the eminence of Supay-urco. His aftonishment, at viewing fuch multitudes of ftrange objects, can be much better conceived than expressed. For fome time indeed he doubted whether they were real or illufive, till tired with uncertainties, and, determined to know in what country he was, he directed his way to a houfe of fome figure, which he faw at a diftance. This happened fortunately to belong to a Spaniard, who was a native of the fame province of Eftramadura; and being informed by his fervants that a ftranger of the fame country was at the gate, the mafter, pleafing himfelf with the hopes of hearing fome news from his native land, ordered him to be brought in, received him with great marks of friendship, and, being at breakfaft, made him fit down with him, and began to enter on the pleafing inquiry after his friends and relations; but his guest taking out one of his loaves, which the gentleman knew was baked in Spain, and finding it quite new, was fo loft in aftonifhment, that he forgot both his breakfaft and relations, infifting (though afraid to hear) that his apparent countryman fhould inform him how it was poffible to make fo long a voyage in fo fhort a time. The other readily fatisfying his defire, they both agreed that this must have been an action of that enemy to mankind, who had brought the poor Spaniard thither to enrich himfelf from the treafures concealed in the bowels of the hill on which he had laid him; and, ever fince, it has been called Supay-urco, or the Devil's Hill. This flory is well known throughout all the jurifdiction of Cuenca, even the children are acquainted with it; and father Manuel Rodriguez, in his "Hiftoria del Maranon, y Amazonas, lib. ii. cap. 4." mentions it. From all which, it may be inferred; that it is, in reality, of as ancient a date as the inhabitants of Cuenca pretend; that it has defcended through a long feries of time without alteration; and from this ftory, though deftitute of proof, the notion that this hill contains an inexhauftible treafure had its rife.

IX. The laft jurifdiction of the province of Quito, on this fide, is that of Loja, the capital of which is called by the fame name, and was founded in the year 1546, by Captain Alonfo de Mercadillo. It refembles, in extent, form, and buildings, the city of Cuenca; but the temperature of the air is confiderably hotter. In its diffrict are the following fourteen villages:

I. Saraguro and Ona. II. San Juan del Valle. III. Zaruma.

IV. Yuluc.V. Guachanana.VI. Gonzanama.

VII. Cariumanga.

VII.	Cariumanga.	XI. San Lucas de Amboca.
VIII.	Zororonga.	XII. El Sifne.
IX.	Dominguillo.	XIII. Malacatos.
X.	Catacocha.	XIV. San Pedro del Valle.

LOJA, befides two churches, has feveral convents, a nunnery, a college of Jesuits, and an hospital.

In the territory of this jurifdiction is produced that famous fpecific for intermitting fevers, known by the name of Cascarilla de Loja, or Quinquina. Of this specific there are different kinds, one of which is more efficacious than the others. M. de Juffieu, whom I have already had occafion to mention more than once, being fent to make botanical obfervations, and take care of the health of the academicians, took the trouble of making a journey to Loja, purely to examine the tree which produces it; and in a full defcription, which he drew up for the fatisfaction of botanifts and other curious perfons, enters, with his known tkill and accuracy, into a very minute diffinction of the feveral fpecies, and enumerates the fmalleft circumstances. At the fame time, he was pleafed to inform the corregidor of the differences, and to inftruct the Indians employed in cutting it to diffinguifh each fpecies, that the beft fort only might be fent unmixed to Europe. Nor was this all; he farther inftructed them how to make an extract of it, and prevailed on the inhabitants of that territory to use it, where its virtues had till that time been neglected, though intermitting fevers are there as common as in any other parts. Before he undeceived them, the natives imagined that it was exported to Europe only as an ingredient in dyeing; and, though they were not entirely ignorant of its virtues, they made no use of it, little imagining that a fimple of fo hot a nature could be good for them. But this ingenious phyfician convinced them of their miltake by many happy effects; fo that, now, it is generally used in all kinds of fevers: and perfons of undoubted veracity, who have fince vifited Loja, have given me very pleafing accounts of its falutary effects.

The tree which produces the cafcarilla is not of the largeft fize, its ufual height being about two toifes and a half, and the body and branches of a proportionate thicknefs. In this, however, there is fome difference, and in that confifts the goodnefs of the cafcarilla, the largeft branches not yielding the beft. There is alfo a difference both in the bloffom and feed. The Indians, in order to take off the cafcarilla or cortex, cut down the tree; after which, they bark it, and dry the quinquina. There are here large and thick forefts of this tree; but notwithftanding this, there is a very fenfible diminution of them, occafioned by the Indians not fowing the feed; thofe which grow fpontaneoufly not being by any means equal to thofe which have been cut down.

In the jurifdiction of Cuenca have alfo been difcovered many woody parts, in which this valuable tree is found : and when I was in that country, a prieft at Cuenca procured a large quantity of cafcarilla, and fent it to Panama, the only place from whence it is exported. This inflance, together with his affurances that it was of the fame kind with that of Loja, induced feveral of the inhabitants of Cuenca to attempt the difcovery, and were foon convinced that the jurifdiction contained large forefts of this tree, which had been neglected by them, whilf their neighbours reaped no fmall advantages from it.

The jurifdiction of Loja has also a very great advantage from breeding the cochineal, and which intelligent perfons reckon of equal goodness with that of Oaxaca in New Spain; but the inhabitants are so far from applying themselves to the breeding of that infect, sufficient to supply the demands of a particular trade, that they breed no more than what they imagine will be fufficient for the dyers in that and the neighbouring jurifdiction of Cuenca. To this elegant and lafting colour it is probably owing that the bays of Cuenca, and the carpets of Loja, are preferred to all others: though the beauty of the colours may in fome meafure proceed from the fuperior fkill of the workmen of Loja and Cuenca, over those of Quito and other parts of the province where the fame goods are manufactured. The cochineal is also bred in the department of Hambato, though without any conftant gatherings of that infect. It is not, however, to be doubted, but that a more careful attention would ensure them the fame fucces in great as in fmall quantities.

Having mentioned this infect, fo highly valued in every part of the world for the incomparable beauty of its red, which it equally communicates to wool, filk, linen, and cotton, it may be expected that I fhould give fome farther account of it; and as I fhould be forry to difappoint any rational curiofity of my readers, and at the fame time to infert any thing that is not ftrictly true, I was unwilling to rely wholly on my own experience; together with the accounts I procured at Loja and Hambato, efpecially as Oaxaca is the principal place where this infect is produced, I made it my bufinefs to confult perfons well acquainted with the fubject, and received the following account, in which they all unanimoufly agreed.

The cochineal is bred on a plant known in Oaxaca, and all those parts where it abounds, by the name of Nospal*, or Nopalleca, the Indian fig-tree, which, except in the difference of the foliage, refembles the tunos, fo common in the kingdom of Andalusia. The leaf of the tuna being broad, flat, and prickly; and that of the nopal, oblong, with feveral eminences; and instead of spines, has a fine fmooth membrane, of a fine permanent and lively green.

The method of planting the nopal is by making rows of holes, about half a yard deep, and about two yards diftant from one another. In each of these holes is placed one or two leaves of the nopal, in a flat position, and then covered with earth. This leaf foon after fhoots up into a fingle ftem, which during its growth divides into feveral branches, and thefe fucceffively produce fresh leaves, the largest being nearest to the ftem, which is full of knots, as are also the branches, and from these the leaves have their origin. The usual height of this plant is about three yards, which it feldom exceeds. The feafon when the nopal difplays all its beauty and vigour is, like that of other plants, from the fpring to the autumn, which at Oaxaca, and other parts of North America, is at the fame time as in Spain. Its bloffom is fmall, of a bright red, and in the fhape of a bud, from the centre of which proceeds the tuna, a name given to its fruit; and as this increases, the bloffom fades, till at length it falls. When the tuna, or fig, is ripe, the outward fkin becomes white; but the pulp is fo fully impregnated with a deep red, that it tinges of a blood colour the urine of those who eat it; a circumftance of no fmall uneafinefs to those who are unacquainted with this particular. Few fruits, however, are either more wholefome or pleafant.

The ground where the nopal is intended to be planted muft be carefully cleanfed from all kinds of weeds, as they drain the foil of those juices which the nopal requires. Also after the cochineal is taken from the plant, which is never done till the infects are arrived at perfection, all the fuperfluous leaves are plucked off, that they may be fucceeded by others the following year. For it must be observed, that the

cochineal

^{*} This plant is called by botanists, Opuntia maxima, folio oblongo rotundo majore, spinulis obtusis mollibus et innocentibus obsito, flore striis rubris variegato. Sloane's Catalogue.

cochineal which are bred on young plants thrive much better, and are of a finer quality, than those produced on fuch as have flood fome years.

The cochineal was formerly imagined to be a fruit or feed of fome particular plant; an error which probably arofe from an ignorance of the manner in which it is propagated; but, at prefent, every one is convinced of its being an infect, agreeably to its name, fignifying a wood-loufe, which generally breeds in damp places, efpecially in gardens. These infects, by rolling themselves up, form a little ball, fomething lefs than a pea, and in fome places are known by the name of Baquilas de San Anton, i.e. St. Anthony's little cows: and fuch is the figure of the cochineal, except that it has not the faculty of rolling itself up; and its magnitude, when at its full growth, does not exceed that of a tick, common in dogs and other animals.

Thefe infects breed and are nourifhed on the nopals, where their eggs are placed among the leaves; the juice of the plant, which is their fole nourifhment, becomes converted into their fubftance; when, inftead of being thin and waterifh, and, to all outward appearance, of little or no ufe, it is rendered a moft beautiful crimfon colour. The plant is in May or June in its moft vigorous flate, and at this favourable feafon the eggs are depofited; and in the flort fpace of two months, from an animalcule, the infect grows up to the fize above-mentioned: but its infant flate is expofed to a variety of dangers; the violent blafts of the north wind fweep away the eggs from the foliage of the plant: and, what is equally fatal to their tender conftitutions, flowers, fogs, and frofts, often attack them and deitroy the leaves, leaving the careful cultivator this only refource, namely, that of making fires at certain diffances, and filling the air with fmoke, which frequently preferve them from the fatal effects of the inclemency of the weather.

The breeding of cochineal is alfo greatly obftructed by birds of different kinds, which are very fond of thefe infects; and the fame danger is to be apprehended from the worms, &c. which are found among the plantations of nopals: fo that, unlefs conflant care be taken to fright the birds away from the plantation, and to clear the ground of those various kinds of vermin which multiply fo fast in it, the owner will be greatly difappointed in his expectations.

When the infects are at their full growth, they are gathered and put into pots of earthen ware; but great attention is requifite to prevent them from getting out, as in that cafe great numbers of them would be loft : though there is no danger of it, where they are at liberty on the nopal leaves, those being their natural habitation, and where they enjoy a plenty of delicious food; for though they often remove from one leaf to another, they never quit the plant; nor is it uncommon to fee the leaves entirely covered with them, effectively when they are arrived at maturity. When they have been confined fome time in these pots, they are killed and put into bags. The Indians have three different methods of killing thefe infects; one by hot water, another by fire, and a third by the rays of the fun; and to these are owing the feveral gradations of the colour, which in fome is dark, and in others bright; but all require a certain degree of heat. Those, therefore, who use hot water are very careful to give it the requifite heat, and that the quantity of water be proportioned to the number of infects. The method of killing them by fire, is to put them on fhovels into an oven, moderately heated for that intention; the fine quality of the cochineal depending on its not being over-dried at the time of killing the infects: and it mult be owned, that among the feveral ways made use of to deftroy this valuable creature, that of the rays of the fun feems to bid faireft for performing it in the most perfect manner.

Befides

Befides the precaution requifite in killing the cochineal, in order to preferve its quality, it is equally neceffary to know when it is in a proper flate for being removed from the leaves of the nopal; but, as experience only can teach the cultivator this neceffary criterion, no fixed rule can be laid down. Accordingly, in these provinces where the cultivation of these infects is chiefly carried on, those gathered by Indians of one village differ from those gathered in another; and even those gathered by one perfon in the fame village are often different from those gathered by another; every individual adhering to his own method.

The cochineal infect may in fome circumftances be compared to the filk worm, particularly in the manner of depofiting its eggs. The infects deftined for this particular are taken at a proper time of their growth, and put into a box well clofed, and lined with a coarfe cloth, that none of them be loft. In this confinement they lay their eggs and die. The box is kept clofe fhut till the time of placing the eggs on the nopal, when, if any motion is perceived, it is a fufficient indication that the animalcule has life, though the egg is fo minute as hardly to be perceived; and this is the feed placed on the foliage of the nopal, and the quantity contained in the fhell of a hen's egg is fufficient for covering a whole plant. It is remarkable that this infect does not, or at leaft in any vifible manner, injure the plant; but extracts its nourifhment from the moft fucculent juice, which it fucks by means of its probofcis through the fine teguments of the leaves.

The principal countries where the cochineal infects are bred, are Oaxaca, Flafcala, Ceulula, Nueva Gallicia, and Chiapa in the kingdom of New Spain; and Hambato, Loja, and Tucuman in Peru. And though the nopal thrives equally in all, yet it is only in Oaxaca that they are gathered in large quantities, and form a branch of commerce, the cultivation of thefe little creatures being there the chief employment of the Indians; whereas in others, where the inhabitants take but little trouble in their cultivation, they breed wild, and thofe gathered in them are accordingly called Grana Sylveftria*. Not that either the infects or nopals are of different fpecies; for with regard to the difadvantageous difference between the colour of the wild cochineal and that of Oaxaca, it does not proceed from a difference of fpecies, but for want of a proper care in its improvement; and were the culture every alike, this difference would no longer fubfift. But the Indians neglect it, either becaufe no commerce of that kind has been opened among them; or from an averfion to the trouble and attention requifite to bring thofe infects to perfection; or, laftly, from the apprehenfion that the fruits of all their time and care may be deftroyed by one of the above-mentioned accidents.

The temperature best adapted to the production of this infect cannot be precifely determined, there being in Oaxaca, as well as in the province of Quito, parts of very different temperatures, some hot, some temperate, and others cold; yet all breed the cochineal. It is, however, very probable, that the most proper climate is the temperate and dry; because in these the nopal thrives the best. And agreeably to this observation it is remarked, that Hambato and Loja are the countries in the province of Quito where they most abound; though they are also seen in other parts, where both the heat and cold are greater.

Here I cannot help obferving, that Andalufia in Spain appears to me extremely well fituated for breeding cochineal, both from the nature of the climate, and the plantation of fig trees, which there attain fo great perfection. Here alfo neither frofts, fogs, or fnows, are to be apprehended, particularly in fpring; and the happy medium between cold and heat is, as I have before obferved, that which this creature is particularly fond of.

^{*} This wild cochineal is generally known in England by the name of cochineal meftique.

The inhabitants of Loja, who are known all over this province by the name of Lojanos, do not exceed ten thousand fouls, though formerly, when the city was in its greatest prosperity, they were much more numerous. Their character is much better than that of the inhabitants of Cuenca; and besides their affinity in customs and tempers to the other villages, they cannot be branded with the character of being flothful. In this jurifdiction, fuch numerous droves of horned cattle and mules are bred, that it supplies the others of this province, and that of Piura in Valles. The carpets also manufactured here are of such remarkable fineness, that they find a ready fale wherever they are fent.

The corregidor of Loja is also governor of Yaguarfongo, and principal alcalde of the mines of Zaruma; and, as fuch, a chair of flate is placed for him at all public folemnities of the church, where he is prefent; a diffinguishing honour allowed only to the prefidents or governors of those provinces. The post of governor of Yaguarfongo is at prefent a mere title without any jurifdiction; part of the villages which formed it being lost by the revolt of the Indians, and the others added to the government of Jaen; fo that the corregidor of Loja enjoys only those honours intended to continue the remembrance of that government.

The town of Zeruma, in the jurifdiction of which are those mines of gold I shall mention in another part, has prefented the corregidor of Loja with the title of its alcalde major. It was one of the first towns founded in this province, and at the fame time one of the most opulent; but is at prefent in a mean condition, owing chiefly to the decay of its mines, on which account most of the Spanish families have retired, fome to Cuenca, and others to Loja; fo that at prefent its inhabitants are faid not to exceed fix thousand. The declension of these mines, which is not fo much to be imputed to a fcarcity of metal, as to the negligence of those concerned in working them, has been difadvantageous to the whole department of Loja; and consequently diminished the number of its inhabitants.

Having thus defcribed those nine jurifdictions which form the most wealthy part of the province of Quito, I shall, in the following chapters, treat of the governments.

CHAP. III. — Account of the Governments of Popayan and Atacames, belonging to the Province of Quito.

WE have already given a just account of every thing worthy notice in the jurifdictions within the audience of Quito. To render the narrative complete, it is neceflary that we now proceed to the governments within the limits of that audience, as they jointly form the vaft country of the province of Quito. And though they generally give the name of province to every government, and even to the departments into which both are fubdivided, we shall not here follow this vulgar acceptation, it being in reality founded only on the difference of the notions of Indians who formerly inhabited this country, every one being governed by its curaca, or defpotic fovereign. Thefe nations the Yncas fubdued, and obliged them to receive the laws of their empire; but the curacas were confirmed in all those hereditary rights of fovereignty compatible with the fupreme prerogative. Were we indeed to use the name of province in this fense, every village must be called fo; for it may be eafily shown, that in the time of heathenism, every village had its particular curaca: and fometimes, as in Valles, in this jurifdiction of Popayan, in Maynas, and the Maragnon, there was not only a curaca in each VOL. XIV. 3 Q village,

village, with all the appendages of government, but the inhabitants fpoke a different language, had different laws and cuftoms, and lived totally independent of each other. But thefe villages and ancient provinces being now comprehended under the jurifdiction of one fingle tribunal; and thofe which before were under a multitude of curacas acknowledging one fovereign, and composing one province, where juffice is administered to them in the name of the prince; and the governments being in juridical affairs dependent on the audience of Quito, they can only be confidered as parts of its province. It is therefore requisite, in order to form a proper idea of this country, that I should treat of them in the fame circumstantial manner I have already observed in describing the jurifdictions.

I. The first government in the province of Quito, and which terminates it on the north, is that of Popayan. It is not indeed wholly dependent on it, being divided into two jurifdictions, of which that on the north and east belong to the audience of Santa Fé, or the new kingdom of Granada, Quito having only those parts lying towards the fouth and west; fo that, without omitting any thing remarkable in the whole government, I shall be a little more explicit in my account of the department belonging to Quito.

The conquest of the whole country now containing the government of Popayan, or at least the greater part of it, was performed by that famous commander Sebastian de Belalcazar, who being governor of the province of Quito, where he had fettled a perfect tranquillity, and finished the building of that city, being informed that on the north fide of his government lay a country of great extent, and richer than the parts he already poffeffed, prompted by that fpirit which had animated the Spaniards to extend their reputation by a feries of amazing conquests in this part of the globe, he fet out on his enterprife in 1536, at the head of three hundred Spaniards; and after feveral fharp encounters with the Indians of Pasto, who first opposed his march, he proceeded in his conquefts, and reduced the two principal curacas of that country, Calambas and Popayan (after whom both the country and chief town were called), two brothers equally refpected for their power and military talents. This defeat opened him a paffage to future conquefts; and the neighbouring nations, terrified at the fuccefs of those illustrious warriors, fubmitted to the King of Spain. Belalcazar, after thefe exploits, in the profecution of his conquefts, had feveral other encounters with Indians, fired with the difdain of fubmitting to a foreign yoke. His conquefts were, however, at laft fo rapid, that at the close of the fame year he pitched his camp in the centre of that country, where the mildness of the climate, the fertility of the foil, and falubrity of the air, conspired to induce him to render it the feat of the Spanish government. Accordingly, in 1537, he laid the foundation of the first city, which still retains the name of Popayan; and whilst the place was building, he, to keep his people in exercise, and prevent the Indians he had conquered from forming themfelves into a new army, or carrying on any clandeftine correspondence with those whom his arms had not reached, fent out detachments different ways, with orders to march into the neighbouring countries, that they might prevent the rifing of fome, and reduce others to obedience.

Belalcazar had fcarce finished his new town, when the officers of these corps, on their return made fuch a report of the riches and fertility of the country, that he determined to view it in person, increase the number of towns, and by that means secure the possible fion of it. Accordingly he continued his march to Cali, where he built a town, which ftill retains the same name, though in a different country; for after it was finished in the country of the Gorrones Indians, captain Miguel Munoz foon after removed it, on account of the unhealthines of the air. Belalcazar founded also another town, called Santa Santa Fé de Antioquia; and, charmed with the fertility and richness of the country, he proceeded to people it every where.

Nor was this all; for Belalcazar, in order to enhance the glory and importance of this country, was very defirous of making a road from Quito to the North Sea, as he had before done to the Pacific Ocean. Among the difcoveries made by his captains whilft he was employed in fuperintending the building of Popayan, one was, that at no great diftance from that place were two of the principal fources of the great river Magdalena; whence he conceived they might eafily find a paffage to the North Sea. This opinion the general had the pleafure of finding unanimoufly agreed to, which induced him to make every difposition for the fecurity and welfare of his conquefts, being determined to return by way of that river to Spain, in order to folicit the title of governor of the country which he had difcovered, conquered, and peopled. Accordingly the title was conferred on him, and in his government were comprehended all the territories then confidered as within his conquefts; but in the year 1730 the country of Choco was feparated from it, and made a particular government, though the order was not carried into execution till the year 1735. This part, belonging to the province of the new kingdom of Granada, does not come within our defcription.

The city of Popayan, one of the most ancient in these parts, that title having been granted it on the fifth of July 1538, stands in a large plain, having on the north fide an uninterrupted prospect of the country. Its latitude is 2° 28' north; lies about two degrees east of the meridian of Quito, on the east fide of a mountain of a middling height called M, from the resemblance it bears to that letter; and, being covered with a variety of trees, affords an entertaining prospect; the west fide is also diversified with stand eminences.

The city is moderately large, with broad, ftraight, level ftreets; and, though not every where paved, are equally convenient, the foot-path near the houfes being paved in all parts; and the middle of the ftreets, being composed of a hard fmall gravel, is never dirty in rainy weather, nor dufty in the great droughts of this climate; hence the middle of the ftreets are more convenient for walking than even the pavement itfelf.

The houfes are built of unburnt bricks, as at Quito, and entirely of the fame conftruction: all the houfes of note have a ftory; but the others only a ground floor. An idea of the largeness and convenience of the offices and apartments may be formed by their outward appearance, as well as the magnificence of the furniture, which is all brought from Europe; the expence of which must be enormously great, as, befide the long voyage, there is a necessity for bringing it a prodigious distance by land carriage, and fubject to unknown dangers in these countries.

The church was erected into a cathedral in the year 1547, and is the only parochial church in the city. Not that its extent is too fmall for maintaining others; but, having originally been the only church, the prebends could never be brought to allow of its being fubdivided, and part of its revenues applied to the fupport of other parifhes. Here are alfo convents of Francifcans, Dominicans, and Augustines, with a college of Jefuits; all of them having churches. In the latter is alfo a grammar fchool. The plan of an university, under the direction of the fame fathers, is in fuch forwardness, that the charter is already granted. The number of religious belonging to each of thefe convents is but fmall, fome of them amounting to no more than fix or eight. It is, however, very different with regard to one of the nunneries, that of the Incarnation, the profeffed nuns being between forty and fifty; but the whole number, nuns, feculars, and fervants included, exceeds four hundred. The other nunnery is of the order of

3Q2

Santa

Santa Terefa. All thefe convents and their churches are pretty large; and if the latter do not dazzle the fight with the fplendor of their ornaments, they do not want any which decency requires. Here was formerly a convent of bare-footed Carmelites, built on a fpacious plain, near the top of the mountain of M, from whence, on account of the fharpnefs of the winds, the fathers fome time after removed to the foot of the mountain. But they were alfo foon difgufted with their new fituation; the dry and falted fifh, falads, and fuch like, being the only particulars which this country affords, fuitable to the perpetual abftinence of their order; and accordingly they again retired to their original fituation, chufing rather to fuffer the inclemency of the weather, than be confined to difagreeable food. This was the cafe of another convent of the fame order founded at Latacunga, where there is alfo no frefh fifh of any fort to be had. It muft, however, be obferved, that the Terefian convents, who are under the fame vow of abftinence, are not difcouraged by thefe inconveniences; nor is there a fingle inftance of any deficiency in the appointed number of nuns.

From the mountain of M iffues a river, which by running through the city, befides other conveniences, carries away all its foil. Two bridges are erected over it, one of ftone, and the other of wood. The name of this river is del Molino. Its waters have a particular medicinal virtue, which they are thought to derive from the many briars through which they flow. In this mountain is alfo a fpring of very charming water; but, not being fufficient to fupply the whole city, it is conveyed to the nunneries, and the houfes of men of rank. A little above a league to the north of Popayan runs the river Cauca. It is very large and deep, its current rapid, and fubject to dangerous fwellings in the months of June, July, and Auguft; the feafon when the horrors of the mountains of Cuanacas, where it has its fource, are at their height; fo that the paffage of it is extremely dangerous, as many travellers, rafhly expofing themfelves to the intenfenefs of its cold, amidft thick fnows and violent winds, have fatally experienced.

The inhabitants of Popayan and Quito differ very fenfibly in their cafts; for, as at Quito, and the other towns and villages of its jurifdictions, the moft numerous clafs of people is that of the cafts which fprung from the intermarriages of Spaniards and Indians, fo at Popayan, Carthagena, and other parts where Negroes abound, the lower clafs confifts of cafts refulting from the marriages of the Whites and Negroes; but very few Indian cafts. This is owing to the great multitude of Negro flaves kept as labourers at the plantations in the country, the mines, and to do the fervile offices in the city: fo that the number of Indians here are very few, compared with the other parts of the province. This government has, however, many large villages of them; and it is only in the capital, and other Spanifh towns, that they are fo greatly out-numbered by the Negroes.

The inhabitants of Popayan are computed at between twenty and twenty-five thoufand; and among thefe are many Spanish families, particularly fixty, known to have been originally defeended from very noble families in Spain. It is worth observing here, that, whilst other towns fee their inhabitants constantly decreasing, Popayan may boast of a daily increase. This has indeed nothing mysterious in it; the many gold mines worked all over its jurifdiction, afford employment to the indigent, and, confequently, occasion a great refort of people to these parts.

Popayan is the conftant refidence of the governor; whofe office being purely civil, it is not requifite, as in many others, that he fhould be acquainted with military affairs. Within the jurifdiction of his government, all matters, civil, political, and military, are under his direction. He is also the chief magistrate of the city; the others are the two ordinary ordinary alcaldes, chofen annually, and a proper number of regidores, the conftitution being the fame as in other cities.

Here is a chamber of finances, into which are paid the feveral branches of the royal revenue; as the tribute of the Indians, the duties on goods, the fifth of the metals, and the like.

The ecclefiaftical chapter is composed of the bishop, whose revenue is fettled at fix thousand dollars annually; the dean, who has five hundred; the archdeacon, chanter, rector, and treasurer, who have each four hundred. This see is a fuffragan of the archbishoprick of Santa Fé de Bogota.

Popayan, lying within the jurifdiction of the inquifition of Carthagena, has a commiffary from thence. Here is also another of the Croifade; but the authority of these two judges extends not beyond the diocefe, which is far lefs than that of the government, a confiderable part of it belonging to the archbishoprick of Quito.

The jurifdiction of the government of Popayan reaches fouthward to the river Mayo, and to Ipiales, where it borders on the jurifdiction of the town of San Miguel de Ibarra; north-east it terminates with the province of Antioquia, the last of its provinces, and contiguous to that of Santa Fé; and, northward, borders on the government of Carthagena. Its ancient western bounds were the South Sea, but it has fince been fo contracted by the new government of Choco, that the territory of Barbacoas is the only part of it which reaches to the fea; eaftward it fpreads itself to the fources of the river Coqueta, which are also thought to be those of the river Oronoco and Negro: its extent is not precifely determined : but a probable conjecture may be made, that from eaft to weft it is about eighty leagues, and little lefs from north to fouth. This jurifdiction being fo large, and containing many towns and villages, is divided into feveral departments, over each of which the principal governor nominates a deputy for the administration of juffice, and introduces them to the audience to which they belong, where his nomination is confirmed; a circumftance neceffary to procure them all the weight and fecurity in the feveral departments which are conferred on them. Those which form the government of Popayan are,

I.	Santiago di Cali.	VII.	Almaguer.
II.	Santa Fé de Antioquia.	VIII.	Caloto.
III.	Las Quatro Ciudades.	IX.	San Juan de Pafto.
IV.	Timana.	Х.	El Rapofo.
۰V.	Guadalajara de Buga.		Barbacoas.
VI.	S. Sebaftian de la Plata.		

In each of these departments, besides the chief town, are several others very large and well peopled; and great numbers of seats and farm-houses, where the number of people employed gives them the appearance of villages rather than private dwellings.

Of the above-mentioned departments, those towards the north and east of the city of Popayan, as Santa Fé de Antioquia, Las Quatro Ciudades, Timana, and S. Sebastian de la Plata, belong to the audience and province of Santa Fé; the others lying nearer to Quito belong to its province; and those of San Juan de Pasto, and Barbacoas, are within its diocefe.

The departments of Cali and Buga, lying betwixt the governments of Popayan and Choco, thrive, as being the channel of the commerce which is carried on continually betwixt betwixt thefe two governments : whereas it is otherwife with that of Almaguer, from the fmallnefs of its jurifdiction, and the little traffic there. That of Caloto, as its extent is confiderable, fo is it rich, and abounds in the products of the earth, the foil being fertile, and the country every where interfperfed with farms. That of El Rapofo is on the fame happy footing as the two firft. That of Pafto is alfo large, but lefs wealthy. Barbacoas is very fmall; and in fuch a general want of provifions, that, except a few roots and grains peculiar to hot and moilt climates, it is fupplied with every thing from other provinces.

The temperature of this government is entirely the fame as that already fpoken of in the other parts of the province of Quito; that is, it varies according to the fituation of places; fome being more cold than hot, others the reverfe; and fome, throughout the whole year, enjoy a continual fpring, as particularly Popayan the capital. The like may be faid of the foil, which exuberantly produces the grains and fruits proper to its fituation: and the farms breed great numbers of horned cattle and fheep, for the confumption of the towns and country people: and in the territory of Pafto graziery is a very profitable article, large herds and flocks being driven to Quito, where they always find a good market. The jurifdiction of Popayan is more fubject to tempefts of thunder and lightning, and earthquakes, than even Quito; though in the latter, as we have obferved, they are fo very frequent. No longer ago than 1735, at one in the afternoon on the fecond of February, the greateft part of the town was ruined by one. This remarkable frequency of tempefts and earthquakes, in the country of Popayan, may be conjectured to proceed from the great number of mines, in which it exceeds all the others within the province of Quito.

But of all the parts in this jurifdiction Caloto is accounted to be the most fubject to tempests of thunder and lightning; this has brought into vogue Caloto bells, which not a few perfons use, being firmly perfuaded that they have a fpecial virtue against lightning. And, indeed, fo many frories are told on this head, that one is at a lofs Without giving credit to, or abfolutely rejecting all that is reported, what to believe. leaving every one to the free decifion of his own judgment, I fhall only relate the moft received opinion here. The town of Caloto, the territory of which contains a great number of Indians, of a nation called Paezes, was formerly very large, but those Indians fuddenly affaulting it, foon forced their way in, fet fire to the houfes, and maffacred the inhabitants : among the flain was the prieft of the parish, who was particularly the object of their rage, as preaching the Gofpel, with which they were fenfible their favage manner of living did not agree, exposing the folly and wickedness of their idolatry, and laying before them the turpitude of their vices. Even the bell of the church could not escape their rancour, as by its found it reminded them of their duty to come and receive divine inftruction. After many fruitlefs endeavours to break it, they thought they could do nothing better than to bury it under ground, that, by the fight of it, they might never be put in mind of the precepts of the Gofpel, which tended to abridge them of their liberty. On the news of their revolt, the Spaniards in the neighbourhood of Caloto armed; and, having taken a fmart revenge of the infurgents in a battle, they rebuilt the town, and having taken up the bell, they placed it in the fteeple of the new church; fince which, the inhabitants, to their great joy and aftonifhment, obferved, that, when a tempeft appeared brooding in the air, the tolling of the bell difperfed it; and if the weather did not every where grow clear and fair, at least the tempest discharged itself in some other part. The news of this miracle fpreading every where, great folicitations were made for procuring pieces of it to make clappers for little bells, in order to enjoy the benefit of its virtue, which, in a country where

where tempests are both so dreadful and frequent, must be of the highest advantage. And to this Caloto owes its reputation for bells.

In the valleys of Neyba, and others within the jurifdiction of Popayan, is a very remarkable infect, particularly famous for the power of the fmall quantity of venom in it. This infect, which is fhaped like a fpider, is much lefs than a bug. Its common name is coya, but others call it coyba; its colour is of a fiery red, and, like fpiders, it is generally found in the corners of walls, and among the herbage. Its venom is of fuch a malignity, that, on fqueezing the infect, if any happen to fall on the fkin of either man or beaft, it immediately penetrates into the flefh, and caufes large tumours, which are foon fucceeded by death. The only remedy hitherto known is, on the first appearance of a fwelling, to finge the party all over the body with the flame of ftraw, or long grafs, growing in those plains. In order to this, the Indians of that country lay hold of the patient, fome by the feet, and others by the hands, and with great dexterity perform the operation, after which the perfon is reckoned to be out of danger. But it is to be obferved, that though this infect be fo very noxious, yet fqueezing it between the palms of the hands is attended with no bad confequence; from whence the plain inference is, that the callus, usual on the hands of most people, prevents the venom from reaching the blood. Accordingly the Indian muleteers, to pleafe the curiofity of the paffengers, fqueeze them betwixt the palms of their hands, though unqueftionably, fhould a perfon of a delicate hand make a trial, the effects would be the fame as on any other part of the body*.

Nature is equally admirable in her works, and in her care of them. Man is endued with difcernment, knowledge, and obfervation, that he may avoid whatever is hurtful to his being; and the irrational fpecies receive the like notices from inftinct, and are The people who travel along these valleys, where they not lefs observant than man. are fo much in danger of these coyas, according to the warning before given them by the Indians who attend them, though they feel fomething ftinging them or crawling on their neck or face, are careful not to fcratch the part, nor even fo much as lift up their hands to it, the coya being of fuch a delicate texture that it would immediately burft; and as there is no danger whilft they do not eject the humour in them, the perfon acquaints fome one of the company with what he feels, and points to the place; if it be a coya, the other blows it away. The beafts, who are not capable of fuch warning, are yet by inftinct taught a precaution against the danger which may refult from these infects in the paftures; for before they offer to touch the herbage, they blow on it with all their force in order to difperfe any of those pernicious vermin; and when their fmell acquaints them that they are near a neft of coyas, they immediately leap back and run to fome other part. Thus they fecure themfelves from the venom of thefe infects, though fometimes a mule, after all its blowing, has been known to take in fome with its pasture, on which, after swelling to a frightful degree, they have expired on the fpot.

Among the plants of the country of Popayan, in the jurifdiction of Timana, grows the cuca or coca, an herb fo efteemed by the Indians in fome provinces of Peru, that they would part with any kind of provifions, the moft valuable metals, gems, or any thing elfe, rather than want it. It grows on a weak ftem, which for fupport twifts itfelf round another ftronger vegetable, like the vine. Its leaf is about an inch and a half, or two inches in length, and extremelyfmooth; the ufe the Indians make of it is for chewing, mixing it with a kind of chalk

^{*} The Brazilians fay, oil and falt is a certain cure for the poifon of the coyba. A.

or whitch earth called mambi. They put into their mouth a few cuca leaves, and a fuitable portion of mambi, and, chewing these together, at first tpit out the faliva which that manducation causes, but afterwards swallow it; and thus move it from one fide of the mouth to the other, till its substance be quite drained; then it is thrown away, but it amediately replaced by fresh leaves. This herb is so nutritive and invigorating, that they labour whole days without any thing else, and on the want of it they find a decay in their ftrength: they also add, that it preferves the teeth found, and fortifies the flomach.

In the fouthern provinces of Peru great quantities of it are produced, being cultivated by the Indians; but that growing wild in the neighbourhood of Cufco is accounted the beft of any. It makes no fmall article in trade, particularly vaft quantities of it are carried to the mine towns, that the owners of the mines may have wherewithal to furnish the Indians, who otherwife could not be brought to work, or would not have ftrength to go through it.

This coca is exactly the fame with the betel of the Eaft Indies. The plant, the leaf, the manner of ufing it, its qualities, are all the fame : and the eaftern nations are no lefs fond of their betel than the Indians of Peru and Popayan are of their coca; but in the other parts of the province of Quito, as it is not produced, fo neither is it ufed.

In Pafto, one of the moft fouthern diftricts of Popayan, are certain trees which yield a refin called mopa-mopa; and of this is made a varnifh, which, befides its exquifite beauty, will bear boiling water, and even acids. The method of applying it is, to diffolve fome of the refin in one's mouth, and then wet the pencil with it; afterwards it is dipped in the colour which is to be laid on, and when dried has all the luftre of the Chinefe laque, but with this fuperior quality, that it never wears off, nor becomes moift, though rubbed with fpittle. The cabinets, tables, &c. made by the Indians of this country, and thus varnifhed, are carried to Quito, where they are highly valued.

Popayan is one of the beft trading countries within the province of Quito, as all the vaft variety of Spanish goods from Carthagena are configned thither and forwarded to Quito; and great numbers of traders go their rounds through the feveral jurifdictions, to the great conveniency of the towns and villages, which thus supply themselves. Besides this transitory commerce, it has another reciprocal with Quito, to which it exports horned cattle and mules, and receives in return cloths and bays. Its active commerce confists in dried beef, falted pork, roll-tobacco, hogs'-lard, rum, cotton, pita, ribbons, and other small wares, which are brought to Choco, and there exchanged for gold; sugar and fnuff are imported from Santa Fé and fent to Quito; and the returns to Santa Fé are home-made cloths and bays. Here is also another traffic, which confists in bartering filver for gold; for, there being an abundance of the latter, and a fcarcity of the former, filver is brought to exchange for gold, of which great profit is made by converting it into doubloons : the like is also practifed at Choco and Barbacoas, which are in the fame cafe as to metals.

Popayan being the centre of all these feveral kinds of commerce, the most wealthy perfons of the whole jurifdiction are here, and five or fix of its inhabitants are reckoned to be masters of above 100,000 dollars; twenty to be worth betwixt 40 and 80,000, befides many of smaller, yet handsome, fortunes: and this exclusive of their farms and mines, with which this country abounds. The former are the same with those I have had occasion to mention in the other parts of this province, according to the quality of the temperature.

West of the western Cordillera of the Andes, is the government of Atacames, which on this quarter borders on the jurifdictions of the corregmientos of Quito and the town

438

of San Miguel de Ibarra; northward on the department of Barbacoas in the government of Popayan; its western boundary is the South Sea; and southward it joins the territory of Guayaquil. Thus it reaches along the coaft from the island of Tumaco, and the house of Husmal, which lie in one degree and a half north latitude, to the bay of Caracas, and the mountains of Balfamo, in 34' fouth latitude.

The country of this jurifdiction lay a long time uncultivated; and if not wholly, at least the greatest part of it, unknown; for, after its conquest by Sebastian de Belalcazar, the peopling of it was neglected, either becaufe the Spaniards were more intent in regulating their conquefts than in improving what they had got, or because the country did not feem to them fo proper for a fettlement as the fierra or mountainous parts; or perhaps they judged it barren and unhealthy. And though care was taken to furnish Quito with priest, to preferve its Indian inhabitants in an adherence to those precious truths they had embraced; yet it was with the total neglect of that improvement of the country, which was feen in all the other parts where the Spaniards had fettled. Thus there people, though Christians by profession, remain in that rusticity and favageness natural to men who are out of the way of rational conversation and commerce to civilize them; an Indian only coming now and then from their woods with aji, achote, and fruits, to fell at Quito, where they feem ftruck with amazement at the fight of fuch a concourse of people at one place; it being indeed far beyond what could be imagined by fuch as feldom or never came to any diftance from their poor cottages, difperfed and flut up in the woods, and living among the wild beafts.

Though the country of Atacames lay thus neglected for fome years after the introduction of the Christian religion, and its inhabitants had performed homage to the King of Spain; yet the importance of making fettlements here, and cultivating the ground, for facilitating the commerce betwixt the province of Quito and the kingdom of Terra Firma, was not unknown, as thereby an end would be put to the inconveniences of carrying it on by the way of Guayaquil; which being a great circuit, the trade fuffered in many particulars; and indeed could not long have fubfifted, without making a fettlement of Spaniards in Atacames; as thus the way would be much florter for the commerce betwixt Terra Firma and Quito, which now conveniently fupplies it with provisions of all kinds, and receives European goods in return.

Purfuant to thefe views, Paul Durango Delgadillo was, in the year 1621, appointed governor of Atacames and Rio de las Efmaraldas. He had fome years before entered into a contract with the Marquis de Montes Claros, for opening a way from the town of San Miguel de Ibarra to the river Santiago, one of those which traversed the country belonging to the jurifdiction of this government; and likewife to people and cultivate it. But failing of fulfilling the agreement, though he was not wanting in endeavours, the government in the year 1626 was taken from him, and conferred on Francifco Perez Menacho, who however had no better fuccefs than he who had been difplaced.

After thefe two, came Juan Vincencio Justiniani in the fame character; but he, feeing the infuperable difficulties according to the methods of his predeceffors, confidently offered to make the way by the river Mira, but alfo failed in the execution; and Don Hernando de Soto Calderon, who began it in the year 1713, and rather more fanguine in his affurances of fuccefs than the former, allo difappointed the general expectation; and thus the fo much defired communication of the province of Quito and the kingdom of Terra Firma remained as it was till the year 1735, when Don Pedro Vincente Maldonado, being invefted with the fame powers as his predeceffors, furpaffed them in execution; and in 1741 laid open a direct communication betwixt Quito and the Rio de las Efmaraldas; and having verified his proceeding before the audiences, and obtained

VOL. XIV.

3 R

obtained their approbation, he returned to Spain, to folicit the confirmation of his employment as governor, and the rewards specified in the contract. On the favourable report of the supreme council of the Indies, His Majesty, in 1746, confirmed him as governor of that country, which, in 1747, was formally erected into a government, by the commission then given to the above gentleman, who by his skill and resolution had fo well deferved it.

The towns within the government of Atacames are at prefent but fmall and poor, having hitherto lain out of the way of traffic, and the country but little cultivated. However, this governor takes fuch meafures for the improvement of it, that already the face of things begins to alter greatly for the better; and the fertility of the foil will naturally invite fettlers, and the communication being opened through it betwixt the kingdom of Terra Firma and the province of Quito, will caufe a circulation of money. In the mean time this government contains twenty towns, five of which are on the feacoaft, and ftand the first in the following lift: the others are inland places:

I.	Tumáco.	XI. Tambillo.
II.	Tola.	XII. Niguas.
III.	San Matheo de Efmeraldas.	XIII. Cachillàcta.
ťV.	Atacàmes.	XIV. Mindo:
v.	La Canoa.	XV. Yàmbe.
VI.	Lachas.	XVI. Cocanìguas.
VII.	Cayàpas.	XVII. Canfa Coto.
VIII.		XVIII. Santa Domingo.
	Gualéa.	XIX. San Miguel.
X.	Nanegàl.	XX. Nono.

The inhabitants of the five towns are Spaniards, Meftizos, Negroes, and Cafts, which fprung from these three species. Those of the other fifteen are in general Indians, having few Spaniards, Mulattos, or Negroes, among them. With the spiritual concerns eleven priests are invested, who continually reside in the great towns, and occafionally visit the others, where are chapels of ease.

The temperature of Atacames is like that of Guayaquil, and accordingly produces the fame kinds of vegetables, grains, and fruits, though fome of them to a much greater perfection; for, by lying higher, it is not fubject to the inundations proceeding from the fwelling of rivers: and thus the cacao, in its plantations and forefts, having all the moifture that plant delights in, without being drowned, is much fuperior to the other in fize, oilinefs, and delicacy of flavour. It likewife produces in great abundance vanillas, achote, farfaparilla, and indigo; alfo a great deal of wax is made here : and the forefts are fo thick fet with trees of a furprifing bulk and loftinefs, as to be impenetrable; and thefe trees, as in the forefts of Guayaquil, are of an infinite variety; fome fitter for land works, others for naval ufes, and fome excellent for both.

CHAP. IV. — Defcription of the Governments of Quixos and Macas; with an Account of Jean de Bracamoros, the Difcovery and Conquest of it.

NEXT to the government of Popayan, which has been treated of in the foregoing chapter. follow those of Quixos and Macas, on the east fide of the Cordillera of the Andee; it is divided into two districts, Quixos being the north part of the government, and

and Macas the fouth, with the country of Camelos lying betwixt them. As their fituation and other circumftances require that each fhould be treated diffinctly, I fhall begin with Quixos, which on the north fide borders on the jurifdiction of Popayan; eaftward it reaches to the river Aguarico, and weftward is feparated from the jurifdictions of Quito, Latacunga, and the town of San Miguel de Ibarra, by the Cordilleras of Cotopaxi and Cayamburo. The first discovery of the country of Quixos is owing to Gonzalo Diaz de Pineda, in the year 1536, who, among the officers fent from Popayan by Sebaftian de Belalcazar, to trace the course of the river of Magdalena, and take a furvey of the country adjacent to that which had been conquered, was appointed to make difcoveries in these parts, which he performed with great care and dispatch; and finding it to abound in gold, and caffia trees, he returned to his commander; and on his report, Gonzalo Pizarro, in the year 1539, at that time governor of Quito, marched to it with a defign of reconnoitring its whole extent, and making fettlements. But, his expedition mifcarrying, the conquest of this country, though from Pineda's report very defirable, was fulpended till the year 1549, when the Marquis de Canete, Viceroy of Peru, gave a commission to Gil Ramirez Davalos, a man of undaunted courage when interest was in view, for reducing the Indians and making fettlements in the country; which he accordingly accomplished, and founded the town of Baeza, the capital of the government, in the year 1559; and it was foon followed by other towns and villages, ftill exifting; but with very little improvement beyond their first state.

The town of Baeza, though the moft ancient of the country, and long the refidence of the governors, has always remained very fmall, which is owing to the building of the two cities of Avila and Archidona, ftill fubfifting, and at that time the chief object of the attention of the fettlers, Baeza being left as firft built; and thefe, fo far from having increafed fuitably to the title of cities, which was given them at their foundation, remain on their firft footing. The caufe of the low flate of the places here is the nature of the country, which, in air, fertility, and other enjoyments of life, being inferior to that of Quito, few fettle here who can live in the other. Baeza is indeed extremely declined, confifting only of eight or nine thatched houfes, with about twenty inhabitants of all ages, fo that from the capital it is become annexed to the parifh of Papallacta, in which town refides the prieft, who has befides under his care another town called Mafpu. This decay was no more than a confequence of the removal of the governor, who of late has refided at Archidona.

The city of Archidona is a fmall place, lying in one degree and a few minutes fouth of the equinoctial, and about one degree fifty minutes eaft of the meridian of Quito. The houfes are of wood, covered with ftraw, and the whole number of its inhabitants is reckoned at betwixt 650 and 700, confifting of Spaniards, Indians, Meftizos, and Mulattos ; it has only one prieft, under whofe care are alfo three other towns, called Mifagualli, Tena, and Napo ; the laft receives its name from the river on the borders of which it ftands ; and this fituation proved its ruin on the 30th of November 1744, when, by the explosion of the Volcano, or Cotopaxi, of which a more particular account shall be given in another place, this river became fo fwelled by the torrents of melted fnow and ice, that it entirely bore down the town of Napo, and the houfes were carried along by the impetuofity of the current.

The city of Avila, but very much below that title, ftands on $0^{\circ} 44''$ S. lat. and near $2^{\circ} 20''$ E. of Quito. It is fo much lefs than the former, that its inhabitants fcarce amount to 300 of both fexes. Its houfes are built of the fame materials. It has also a

prieft,

prieft, whose ecclesiaftical jurifdiction comprehends fix towns, some of them in largeness and number of inhabitants not inferior to the city. These are,

I.	La Conception.	IV. Motte.
	Loreto.	V. Cota Pini.
III.	San Salvador.	VI. Santa Rofa.

The foregoing towns conftitute the chief part of this government; but it alfo includes the towns of the miffion of Sucumbios, the chief of which is San Miguel. At the beginning of this century they were ten, but are now reduced to thefe five:

- I. San Diego de los Palmares.
- II. San Francisco de los Curiquaxes.
- III. San Joseph de los Abuccèes.
- IV. San Chriftoval de los Yaguages.
- V. San Pedro de Alcantara de la Cocao, or Nariguera.

The inhabitants of the two cities, and the villages in the dependencies, and those of Baeza, are obliged to be conftantly upon their guard against the infidel Indians, who frequently commit depredations among their houfes and plantations. They compose different and numerous nations; and are fo difperfed all over the country, that every village is under continual apprehensions from those which live in its neighbourhood : and when an action happens between the inhabitants and those Indians to the advantage of the former, all they get by it is to return quietly to their dwellings with a few prifoners, no booty being to be had from a people who live without any fettlement; and from mere favageness make no account of those things in which the bulk of mankind place their happinefs. Their method in thefe incurfions is, after an interval of apparent quiet and fubmiffion, to fteal up to the Spanish fettlements at a time when they have reafon to conclude that the inhabitants are off their guard; and if their intent be anfwered, they fall to pillaging and plundering; and, having got what is nearest at hand, retire with all speed. This perpetual danger may also be reckoned among the caufes which have hitherto kept the government in fuch low circumftances.

The temperature of all this country is hot and very moift. The rains are almost continual; fo that the only difference betwixt it, Guayaquil, and Porto Bello, is, that the fummer is not fo long : but the diftempers and inconveniencies of the climate are the fame. The country is covered with thick woods; and in thefe are fome trees of a prodigious magnitude. In the fouth and weft part of the jurifdiction of Quixos is the canela or cinnamon-tree, which, as I have before obferved, being difcovered by Gonzalo Diaz de Pineda, he, from them, called the country Canelos, which name it still retains. A great quantity of it is cut for the necessary confumption, both in the province of Quito and in Valles. The quality of this cinnamon does not come up to that of the East Indies; but in every other particular very much refembles it; the fmell, its circumference, and thicknefs, being nearly the fame: the colour is fomething browner, the great difference lying in the tafte, that of Quixos being more pungent, and without the exquisite flavour of that of the East Indies. The leaf is the fame, and has all the delicate fmell of the bark; but the flower and feed furpafs even thole of India; the former particularly is of an incomparable fragrancy, from the abundance 2

492

abundance of aromatic parts it contains; and this favours an opinion, that the trees duly cultivated might be made in every refpect equal to those of the island of Ceylon.

The other products in the island of Quixos are the very fame with those in all the other lands in the fame climate as this government. The like may be faid of fruits, roots, and grains, as wheat, barley, and others, which, requiring a cold air, feldom thrive much in any of an opposite quality.

The other diffrict of Macas is bounded on the eaft by the government of Maynes; fouthward by that of Bracamoros and Yaguarfongo; and weftward, the eaft Cordiffera of the Andes divides it from the jurifdiction of Rio Bamba and Cuenca. Its chief town bears the fplendid title of the city of Mucas, being the common name given to the whole country. And this is better known than its proper ancient name of Sevilla del Oro. It lies in $2^{\circ} 30''$ S. lat., and 40'' E. of Quito. Its houfes, which do not exceed one hundred and thirty, are built of timber, and thatched. Its inhabitants are reckoned at about one thoufand two hundred; but thefe, and it is the fame all over this diftrict, are generally Meftizos with Spaniards. The other towns belonging to this jurifdiction are :

I.	San Miguel de Narbaes.	V.	Zuna.
II.	Barahonas.	VI.	Payra.
III.	Yuquipa.	VII.	Copueno.
IV.	Juan Lopez.	VIII.	Aguayos.

The fpiritual government of them all is lodged in two priefts; one of whom refiding in the city has the care of the four firft : and to the latter, who lives at Zuna, belong that town and the three others. At the conqueft, and for fome time after, this country was very populous, and, in honour of the great riches drawn from its capital, was diftinguifhed by the name of Sevilla del Oro; but at prefent only the memory of its former opulence remains. Such an extreme declenfion proceeded from an infurrection of the natives, who, after fwearing allegiance to the King of Spain, took arms, and made themfelves mafters of the city of Logrono, and a town called Guamboya, both in the fame jurifdiction, and very rich. Thefe devaftations have fo difcouraged any further fettlement there, that the whole country lies as a wafte; no money goes current in it, and the only way the wretched inhabitants have to provide themfelves with neceffaries is by bartering their home products.

The nearnefs of Macas to the Cordillera of the Andes caufes a fenfible difference betwixt its temperature and that of Quixos: for though it be alfo a woody country, the diverfity betwixt the two most diffant feafons of the year is manifest; and as its territory is different from that of the jurifdiction of Quito, fo the variety in the periods of the feafon is alfo great. Thus winter begins here in April, and last till September, which is the time of fummer betwixt the Cordilleras: and at Macas the fine feafon is in September, and is the more delightful on account of the winds which are then mostly northward : and thus charged with the frigorific particles which they have fwept away from the fnowy mountains over which they have passed. The atmosphere is clear; the fky ferene; the earth clothed in its various beauties; and the inhabitants, gladdened by fuch pleasing objects, rejoice that the horrors of winter are passed, as they are no lefs dreadful and detrimental here than at Guayaquil.

In grains and other products which require a hot and moift temperature, the country is very fruitful; but one of the chief occupations of the country people here, is the culture of tobacco, which, being of an excellent kind, is exported in rolls all over

Peru.

Peru. Sugar canes also thrive well here; and confequently cotton. But the dread of the wild Indians, who have often ravaged their country, difcourages them from planting any more than what just fuffices for prefent use; they being here in the fame unhappy fituation as in Quixos, the villages having in their neighbourhood bands of those favage Indians; and when they imagine them to be furthest off, are often fuddenly allaulted by them, fo that they must be ready at every instant to take arms.

Among the infinite variety of trees which crowd the woods of this country, one of the most remarkable is the ftorax, the gum of which is of a most exquisite fragrancy; but is rare, the trees growing in places at some diffance from the villages; and it is dangerous going to them, by reason of the favage Indians, who lie in wait like wild beasts. The like may be faid with regard to the mines of Polvos Azules, or Ultramarine, from which, by reason of that danger, very little is brought; but a finer colour cannot be imagined. *

The territory belonging to Macas alfo produces cinnamon-trees, which, as the Reverend Don Juan Jofeph de Lozay Acuna, prieft of Zuna, a perfon of eminent learning, and perfectly verfed in natural hiftory, told me, is of a fuperior quality to that of Ceylon, here known by the name of Spanish cinnamon; and this was confirmed to me by many other perfons of judgment. This cinnamon visibly differs from that of Quixos, which, as the fame perfon informed me, proceeds from the full exposure of the Maca trees to the fun, its rays not being intercepted by the foliage of any other trees near them; and thefe alfo are at a diffance from the roots of other trees, which deprive them of part of the nourifhment neceffary to bring it to perfection. And this opinion is confirmed by a cinnamon tree planted either accidentally or by defign, near the city of Macas, the bark of which, and especially the blosson, in its taste, fragrancy and aromatic power, far exceeds that of the East Indies.

Great quantities of copal are brought from Macas, alfo wild wax; but the latter of little value, for, befides being reddifh, it never indurates; and the fmell of it, when made into candles, and thefe lighted, is very ftrong and difagreeable; and that of Guayaquil and Valles no better. Indeed all the wax in those countries cannot come into competition with those of Europe; though it must be observed, that there is no fmall difference in the bee, which in this country is much larger, and its colour inclinable to black. However, it might be made fomething better, if the inhabitants were acquainted with the art of cleansing and working it as in Europe; and if it could not be brought to equal the European, a greater consistence might be given to it, which would be no fmall advantage.

The government, which on the fouth limits the jurifdiction of the audience of Quito, and follows next to Macas, is that of Jaen, which was difcovered and fubdued by Pedro de Vargara in the year 1538, whom Hernando Pizarro had appointed to command in that expedition. Afterwards Juan de Salinas entered the country, with the title of governor of it; and he having by his courage and courtefy reduced the Indians, and ingratiated himfelf with them, a more formal fettlement was made, and feveral towns built, which are ftill exifting, though in no better condition than those of Macas and Quixos. Some ftill retain the appellation of city, not that their largeness, number of inhabitants, or wealth, become the title, but on account of the privileges annexed to it.

At the time of the conqueft this government was known by the names of Igualfongo and Pacamoros, fince corrupted into Yaguarfongo and Bracamoros; the names of the

* Probably mountain blue, an ore of copper. Ultramarine is, from the lapis lazuli, unknown in America.

govern-

government conferred on Juan de Salinas. And thus they continued to be called for many years, till the Indians of both territories in a fudden revolt deftroyed the principal towns. Those which were spared, after passing near an age in wretchedness and barbarism, happily recovered themselves, became united to the city of Jaen, as part of a government, with the title of Jaen de Bracamoros; and the title of governor of Yaguarsongo, was as before related, kept up by being annexed to the corregidor of Loja.

The town of Jaen, with the addition of Pacamoros, or Bracamoros, from the reunion of the towns of that country to it, was founded in the year 1549, by Diego Palomino. It ftands in the jurifdiction of Chaca-Inga, belonging to the province of Chuquimayo, and is the refidence of the governor. It is fituated on the north flore of the river Chinchipe, at its conflux into the Maranon. It lies in about 5° 25' fouth latitude, and its longitude may be conjectured to be very little diftant from the meridian of Quito, if not under it. The account given of the mean condition of the cities of Macas and Quixos alfo fuits Jaen. We must however observe, that it is much more populous, its inhabitants being, of all ages and fexes, computed at three or four thoufand; though thefe, for the most part, are Mestizos, with some Indians, but very few Spaniards.

Juan de Salinas likewife found in his government of Yaguarfongo three other cities, ftill fubfifting, but finall, mean, and defencelefs, like Jaen. Their names are Valladolid, Loyola, and Saniago de las Montagnas: the laft borders on the government of Minas, and is only feparated from its capital, the city of Borja, by the Pongo de Manceriche. In this country of Jaen de Bracamoros are feveral finall villages:

I. San Jofeph.	VI. Chinchipe.
II. Chito.	VII. Chyrinos.
III. Sànder.	VIII. Pomàca.
IV. Charape.	IN. Tomependa.
V. Pucarà.	X. Chucùnga.

The inhabitants of which are mostly Indians, with fome Mestizos, but no great number of either.

Though Jaen ftands on the bank of the river Chinchipe, and fo near the Maranon, yet the latter is not navigable up to it: fo that those who are to embark on it, go by land from Jaen to Chuchunga, a small place on another river of that name, and in $25^{\circ} 29'$ latitude, whence they fall down into the Maranon. This town, which may be accounted the port for Jaen, lies four days journey from the city, which is the method of calculating the diffances here; the difficulties of the road increasing them far beyond what they are in reality, that not feldom that which on good ground might be travelled in an hour or two, takes up a half and fometimes a whole day.

The climate of Jaen, and the fame may be faid of the whole jurifdiction of this government, is like that of Quixos, except that the rains are neither fo lafting nor violent; and, like that of Macas, it enjoys fome interval of fummer; when the heats, tempefts, and all the inconveniences of winter, abate. The foil is fruitful in all the grains and products agreeable to its temperature. The country is full of wild trees, particularly the cacao, the fruit of which, befides the exuberance of it on all the trees, is equal to that cultivated in plantations; but is of little ufe here for want of confumption: and the carriage of it to diftant parts would be attended with fuch charges as to prejudice its fale. Thus the fruits rot on the trees, or are eaten by monkeys or other creatures.

At the time of its first difcovery, and the fucceeding conquest, this country was in great repute for its riches; and not undefervedly, vast quantities of gold being brought from it. But these gains were foon brought to a period by the revolt of the Indians, though in the opinion of many, who look upon those people to be a part of the human species no less than themselves, the infurrection was owing to the excessive rigour of the Spaniards, in making them work in the mines under infupportable fatigues. At prefent, all the gold collected here is by Indians washing the fands of the rivers during the time of the inundations; and thus find gold dust, or small grains of gold, with which they pay the tributes, and purchase necessaries; and they make so little account of this metal, that though by a proper industry they might get a confiderable quantity, it is only the poorest Indians that live near the fettlements who practife it; as for the independent Indians, they give themselves no concern about it.

The jurifdiction of this government produces in particular vaft quantities of tobacco; the cultivation of it indeed is the chief occupation of all the inhabitants. After fteeping the plant in hot mead, or decoctions of fragrant herbs, in order to improve its flavour, and the better to preferve its ftrength, it is dried, and tied up in the form of a fauciffon, each of a hundred leaves. Thus it is exported into Peru, all over the province of Quito, and the kingdom of Chili, where no other is ufed for fmoking, in cornets of paper, according to the cuftom of all thefe countries. This great vogue it owes to the manner of preparing the leaves, which gives it a particular relifh, and a ftrength to its fmoke, that is very agreeable to thofe who are fond of that amufement. The country alfo produces a great deal of cotton; likewife large breeds of mules; and thefe three articles conflitute the advantageous traffic which this government carries on with the jurifdiction of its province and the other parts of Peru.

In the countries of Jaen de Bracamoros, Quixos, and Macas, are feen great numbers of those wild animals, a description of which has been given in treating of other countries of a like climate. But thefe, befides tigers, are infefted with baftard lions, bears, dantas or grand beftias an animal of the bignefs of a bullock, and very fwift, its colour generally white, and its fkin very much valued for making buff leather; in the middle of its head is a horn bending inward). Those three kinds of wild beasts are unknown in the other countries; and that they are known here, is owing to the proximity to the Cordilleras, where they breed, as in a cold climate adapted to their nature: whence they fometimes come down into the neighbouring countries; but without this circumstance of lying fo near the mountains, they would never be feen. Among the reptiles in the country is themaca, a fnake which the Indians diftinguish by the name of Curi-Mullinvo, having a fhining fpotted fkin like that of the tiger, Curi in the Indian language fignifying gold; it is wholly covered with fcales, and makes a frightful appearance, its head being out of all proportion to the body, and has two rows of teeth, and fangs like those of a large dog. The wild Indians, as an oftentatious mark of their intrepidity, and to give them a more terrible appearance, paint on their targets figures of this fnake, the bite of which is incurable; and wherever it has feized, it never less go its hold ; which the Indians would also intimate by their device.

CHAP.

CHAP. V. - Government of Maynas, and of the River Maranon, or that of the Amazons; its Difcovery, Courfe, and that of the Rivers running into it.

HAVING treated of the governments of Popayan and Jean de Bracamoros, which are the northern limits of the province of Quito; as allo of Atacames, which is its weftern boundary; I now proceed to the government of Maynas, the eaftern limit of its jurifdiction. This is particularly entitled to a feparate and fuccinct defcription, as the great river Maranon flows through it.

The government of Maynas lies contiguous to those of Quixos and Jean de Bracamoros, towards the eaft. In its territories are the fources of those rivers, which, after rapidly traverfing a vaft extent, form, by their conflux, the famous river of the Amazons, known allo by the name of Maranon. The fhores of this and many rivers which pay it the tribute of their waters, environ and pervade the government of Maynas. Its limits, both towards the north and fouth, are little known, being extended far among the countries of infidel Indians; fo that all the account which can be expected is from the miffionaries employed in the conversion and spiritual government of the wild nations which inhabit it. Eaftward it joins the poffeffions of the Portuguefe, from which it is feparated by the famous line of demarcation, the boundary between the Spanish and Portuguefe poffeffions.

Were I to confine myfelf in general to the extent of the government of Maynas, my defcription would be very imperfect, and want the nobleft object of the reader's curiofity, a defcription of the river of the Amazons; a fubject no lefs entertaining than unknown; and the more difficult of obtaining a thorough knowledge of, from its lying fo very remote. This defcription I fhall divide into the three following heads, which fhall contain its fource, and the principal rivers whereof it is composed; its courfe through the vaft tracts of land it waters; its first difcoveries, and the fubsequent voyages made on it; in order to give an adequate idea of this prince of rivers; and at the fame time a more circumftantial account of the government of Maynas.

I. - Of the Source of the River Maranon, and of the many others which compose it.

As, among the great number of roots by which nourifhment is conveyed to a flately tree, it is difficult, from the great length of fome, and the magnitude of others, to determine precifely that from which the product is derived; fo the fame perplexity occurs in discovering the spring of the river Maranon; all the provinces of Peru as it were emulating each other in fending it fupplies for its increase, together with many torrents which precipitate themfelves from the Cordilleras, and, encreafed by the fnow and ice, join to form a kind of fea of that which at first hardly deferves the name of a river.

The fources by which this river is increafed are fo numerous, that very properly every one which iffues out of the eaftern Cordillera of the Andes, from the government of Popayan, where the river Caqueta or Yupura has its fource, to the province of Guanuco, within thirty leagues of Lima, may be reckoned among the number. For all the ftreams that run eastward from this chain of mountains, widening as they advance from the fource by the conflux of others, form those mighty rivers, which afterwards unite in the Maranon; and though fome traverse a larger distance from their fource, yet others, which rife nearer, by receiving in their fhort courfe a greater num-3 S

VOL. XIV.

ber

ber of brooks, and, confequently, difcharging a quantity of water, may have an equal claim to be called the principal fource. But without confidently determining this intricate point, I fhall first confider the fources of those which run into it from the more remote diffances, and next, those which precipitate themselves down feveral cafcades formed by the crags of the Andes, and, after being augmented by others it receives, join the Maranon in a more copious stream; leaving it to the reader to determine which is the original fource.

The most received opinion, concerning the remotest fource of the river Maranon, is that which places it in the jurifdiction of Tarma, iffuing from the lake of Lauricocha, near the city of Guanuco, in 11° fouth latitude, whence it directs its course fouth almost to 12° through the country belonging to this jurifdiction; and, forming infenfibly a circuit, flows eaftward through the country of Juaxa; where, after being precipitated from the east fide of the Cordillera of the Andes, proceeds northward ; and, leaving the jurifdictions of Mayabamba and Chacha-poyas, it continues its courfe to the city of Jaen, the latitude of which, in the foregoing chapter, has been placed in 5° 21'. There, by a fecond circuit, it runs towards the east in a continual direction ; till at length it falls into the ocean, where its mouth is of fuch an enormous breadth, that it reaches from the equinoctial to beyond the first degree of north latitude. Its distance from Lauricocha lake to Jaen, its windings included, is about two hundred leagues; and this city being 30° to the weft of its mouth, is fix hundred leagues from it, which, with the feveral circuits and windings, may, without excefs, be computed at nine hundred fuch leagues: fo that its whole courfe, from Lauricocha to its influx into the ocean, is at least one thousand one hundred leagues.

Yet the branch which illues from Lauricocha is not the only one flowing from these parts into the Maranon; nor is it the most fouthern river which difcharges its waters into that of the Amazons; for, fouth of that lake, not far from Alangara, is the fource of the river which paffes through Guamanga. Alfo in the jurifdictions of Vilcas and Andaguaylas are two others, which, after running for fome time feparately, unite their ftreams, and difcharge themfelves into the river ifluing from the lake Lauricocha. Another rifes in the province of Chinbi-Vilcas. And, laftly, one still farther to the fouth, is the river Apurimac, which, directing its courfe to the northward, paffes through the country of Cufco, not far from Lima-Tambo; and after being joined by others, falls into the Maranon about one hundred and twenty leagues east of the junction of the latter with the river Santiago. But here it is of fuch a width and depth, as to leave a doubt whether it infinuates itfelf into the Maranon, or the Maranon pays tribute to the Ucayale, as it is called in that part; fince at the conflux its impetuofity forces the former to alter the straight direction of its course, and form a curve. Some will have the Ucayale to be the true Maranon, and found their opinion on the remotenefs of its fource, and the quantity of its waters, which equals at leaft, if it does not exceed, that of Lauricocha.

In the fpace intercepted between the junction of the Maranon and the river Santiago, are the Pongo de Manzeriche, and the mouth of the river Ucayale; and about midway betwixt them the river Guallaga, which has alfo its fource in the Cordilleras, eaft of the province of Guamanga, and falls into the Maranon. One of the rivers contributing to its increafe has its rife in the mountains of Moyo-Bamba; and on its banks, in the middle of its courfe towards the Gualaga, ftands a finall village called Llamas; which, according to the moft credible accounts, was the place where Pedro de Orfica embarked with his people on his expedition for the difcovery of the Maranon, and the conqueft of the adjacent countries.

Eastward

Eaftward of Ucayale, the Maranon receives the river Yabari, and afterwards four others, namely, the Yutay, Yurua, Tefe, and Coari; all running from the fouth, where they have their fource nearly in the fame Cordilleras as that of the Ucayale; but the countries through which the latter paffes being inhabited by wild Indians, and confequently but little known to the Spaniards, its courfe, till its junction with the Maranon, cannot be afcertained: and it is only from vague accounts of fome Indians, that in certain months of the year it is navigable. There is indeed a tradition of voyages made upon it, and by which it was perceived to run very near the provinces of Peru.

Beyond the Rio Coari, eaftward, the Cuchibara, alfo called the Purus, joins the Maranon; and after that likewife the Madera, one of the largeft rivers that unite their waters with it. In 1741, the Portuguefe failed up it, till they found themfelves not far from Santa Cruz de la Sierra, betwixt 17° and 18° of fouth latitude. From this river downwards, the Maranon is known among the Portuguefe by the name of the river of the Amazons: upwards they give it the name of the river of Solimoes. Within a fmall diftance follows the river of Topayos, likewife very confiderable; and which has its fource among the mines of Brazil. After thefe, it is further joined by the rivers Zingu, Dos Bocas, Tocantines, and Muju, all iffuing from the mines and mountains of Brazil; and on the eaftern fhore of the latter ftands the city of Gran Para.

Having thus given an account of the most distant branches of the stately river of Maranon, and of the principal ones which join it from the fouth, I proceed to those, the fources of which are nearer, iffuing from the Cordilleras, and which immediately run into the eastern direction; and also those which join it from the north.

In the mountains and Cordilleras of Loja and Zamora rife feveral little rivers, the conflux of which forms that of Santiago; and from these of Cuenca, others which unite in the Paute : but this, on its union with the former, loses its name, being abforbed by the Santiago, (fo called from a city of that name) near which it joins the two others from Lauricocha and Apurimac. The river Morona issues from the losty deferts of Sangay; and passing very near the city of Macas, runs in a fouth-east course, till it loses itself in the principal channel of the Maranon; which happens at the distance of about twenty leagues east of Borja, the capital of the government of Maynas.

In the mountains of the jurifdiction of Riobamba, those of Latacunga, and the town of San Miguel de Ibarra, are the fources of the rivers Pastaza and Tigre; and from Cotopaxi and its Cordillera issue the first branches of the rivers Coca and Napo. These, though their fources are at no remarkable distance, run to a great extent before they join; and retaining the name of Napo, fall into the Maranon, after a course of above two hundred leagues in a direct line from east to west, with some, though infensible, inclinations to the fouth. This is the river which father Christopher de Acuna, who will be mentioned hereafter, takes for the true Maranon, to which, as exceeding all the rest in largeness, the others may be faid to add their waters.

From the mountains of the jurifdiction of San Miguel de Ibarra, and those of Pasto, iffues the river Putu-mayo, called alfo Ica, which, after running fouth-east and east about three hundred leagues, joins the Maranon much more eastward than the river Napo: lastly, in the jurifdiction of Popayan, the river Caqueta has its origin, which becomes divided into two branches; the western, called Yupura, difembogues itself into the Maranon like another Nile, through feven or eight mouths, and these are at fuch a distance, that the intermediate space betwixt the first and the last is not less than one hundred leagues; and the other, which runs to the eastward, is not less famous under the name of Negro. M. de la Condamine, in the narrative of his voyage, confirms the opinion of its being one of the communications betwixt the $3 \le 2$ Oronoque Oronoque and Maranon; and corroborates his affertion, by the authority of a map composed by father John Ferreira, rector of the college of Jesuits in the city of Gran Para; in which he observes, that in the year 1744, a flying camp of Portuguese, posted on the banks of the Negro, having embarked on that river, went up it, till they found themfelves near the Spanish miffions on the river Oronoque, and meeting with the fuperior of them, returned with him to the flying camp on the river Negro, without going a ftep by land; on which, the author makes this remark, that the river Caqueta, (already mentioned, and fo called from a fmall place by which it paffes, near its fource) iffuing from Mocoa, a country joining eaftward to Almaguar in the jurifdiction of Popayan, after running eastward with a small declension towards the fouth, divides itself into two branches; one of which declining a little more fouthward, forms the river Yupura, and after feparating into feveral arms, runs, as we have noted above, into the Maranon, through feven or eight mouths; and the other, after a courfe eastward, fubdivides itself into two branches, one of which, running north-east, joins the Oronoque; and the other, in a fouth-east direction, is the river Negro. This fubdivision in the branches of large rivers, and their oppofite courfes, though fomething extraordinary, is not deftitute of probability; for a river flowing through a country every way level, may very naturally divide into two or more branches, in those parts where it meets with any inclination, though almost infensible, in the ground. If this declivity be not very great, and the river large and deep, it will eafily become navigable every where, with a free paffage from one arm into the other. And in this manner the marfhes are formed in a level country, as we have particularly remarked in the coaft of Tumbez: for the fea-water on the flood running into these various mouths, which fometimes are twenty leagues diftant or more, a veffel enters one arm by the favour of the tide; but coming to a place where the foil rifes, the ftream runs against her, being the water which the fame flood had impelled through another channel. Thus the ebb caufes the waters to feparate at that point; and each portion of water takes the fame courfe at going out as at its entrance; yet the place where the feparation is made is not left dry. But even though the place where the waters of the river Caqueta are feparated fhould not be level, or nearly horizontal, but lie on a confiderable declivity, yet if this fall be equal on both fides, one part of the waters may take its courfe to the Oronoque, and the other to the Negro, without any other confequence than that the great rapidity would render them impracticable to navigation; but this has nothing to do with the division of the waters, it being no more than forming an island either large or small.

From the province of Quito there are three ways to the river Maranon; but all extremely troublefome and fatiguing, from the nature of the climate, and being full of rocks, that a great part of the diftance muft be travelled on foot; for being fo little frequented, no care has been taken to mend them, whence they are even more dangerous than the others in South America, of which we have given a defcription.

The first of these roads, which is the nearest to the town of Quito, runs through Baza and Archidona; where you embark on the river Napo. The fecond is by Hambato and Papate, at the foot of the mountain of Tunguragua; and from thence the road lies through the country of Canelos, watered by the river Bobonaza, which joining the Pastaza, both discharge themselves into the Maranon. The third lies through Cuenca, Loja, Valladolid, and Jaen, from whence at the village of Chuchunga, which is as it were its port, this river becomes navigable; and here all embark who are either going to Manas, or a longer voyage on this river. Of the three, this alone is practicable to beasts; but the tediousness of the distance from Quito renders it the least frequented; for the missionaries, who take these journeys oftener than any other fet of

500

4

men,

men, in order to avoid its circuit, and the danger of the paſs of Manzeriche, preſer the difficulties and dangers to the others.

In the long courfe of this river from Chuchunga, are fome parts where the banks, contracting themfelves, form ftreights, which, from the rapidity of the waters, are dangerous to pafs. In others, by a fudden turn of its direction, the waters are violently carried against the rocks; and in their repercussion, form dangerous whirlpools, the apparent fmoothness of which is no less dangerous than the rapidity in the ftreights. Among these, one of the most dangerous is that betwixt Santiago de las Montanas and Borja, called Pongo de Manzeriche; the first word of which fignifies a door or entrance, and by the Indians is applied to all narrow places; the fecond is the name of the adjacent country.

The Spaniards who have paffed this ftreight make the breadth of it to be no more than twenty-five yards, and its length three leagues; and that, without any other help than merely the current of the water, they were carried through it in a quarter of an hour. If this be true, they muft move at the rate of twelve leagues an hour; a moft aftonifhing velocity! But M. de la Condamine, who examined it with particular attention, and to whofe judgment the greateft deference is due, is of opinion, that the breadth of the Pongo, even in its narroweft part, is twenty-five toifes; and the length of the Pongo about two leagues, reckoning from the place where the fhores begin to approach, as far as the city of Borga. And this diftance he was carried in fifty-feven minutes. He obferves alfo, that the wind was contrary; and confequently his balza did not go fo far as the current would otherwife have carried her; fo that, making allowance for this obftruction, the current may be ftated at two leagues and a half, or at three leagues an hour.

The breadth and depth of this river is anfwerable to its vaft length; and in the pongos or ftreights, and other parts where its breadth is contracted, its depth is augmented proportionally. And hence many are deceived by the appearance of other rivers which join it, their breadth caufing them to be taken for the real Maranon; but the mind is foon convinced of its error, by obferving the little increafe which the Maranon receives from the influx of them. This large river, by continuing its courfe without any visible change in its breadth or rapidity, demonstrates that the others, though before the object of altonifhment, are not comparable with it. In other parts it difplays its whole grandeur; dividing itfelf into feveral large branches, including a multitude of iflands, particularly in the intermediate fpace between the mouth of the Napo and that of the Coari, which lies fomething to the weftward of the river Negro; where, dividing itfelf into many branches, it forms an infinite number of islands. Betwixt the miffion of Peba, which is at prefent the laft of the Spanish, and that of San Pablo the first of the Portuguese, M. de la Condamine, and Don Pedro Maldonado, having measured the breadth of fome of these branches, found them nearly equal to nine hundred toifes, that is, almost a fea league. At the influx of the river of Chuchunga, the place where the Maranon becomes navigable, and where M. de la Condamine first embarked on it, he found its breadth to be one hundred and thirty five toifes : and though this was near its beginning, the lead did not reach the bottom at twenty-eight toiles, notwithstanding this founding was made at a great diftance from the middle of the river.

The illands formed by the Maranon eaft of the Napo, terminate at the river Coari, where it again reunites its waters, and flows in one ftream : but here its breadth is from one thousand to twelve hundred toiles, or near half a league; and here the fame ingenious gentleman, after taking all possible precautions against the current, as he had before at the mouth of the river Chuchunga, founded, but found no bottom with one hundred hundred and three fathom of line. The river Negro, at the diftance of two leagues from its mouth, meafured twelve hundred toifes in breadth, which being nearly equal to that of the principal river, and fome of those we have named, Ucayale, the Madera, and others, were found to be nearly of the fame width.

About one hundred leagues below the mouth of the river Negro, the fhores of the Maranon begin to approach each other near the efflux of the river Trumbetas, which part is called the Effrecho de Pauxis, where, as alfo at the pofts of Peru, Curupa and Macapa, along its banks, and on these east of the rivers Negro and Popayos, the Portuguese have forts. At the Estrecho de Pauxis, where the breadth of the river is near nine hundred toifes, the effect of the tides may be perceived ; though the diftance from the fea-coafts be not lefs than two hundred leagues. This effect confifts in the waters, which, without any change in the direction of their courfe, decreafe in their velocity, and gradually fwell over their banks. The flux and reflux are constant every twelve hours, with the natural differences of time. But M. de la Condamine, with his ufual accuracy, as may be feen in the narrative of his own voyage, obferved that the flux and reflux perceived in the ocean, on any certain day and hour, is different from that which is felt at the fame day or hour, in the intermediate fpace between the mouth of the river and Pauxis, being rather the effect of the tides of the preceding days; proportional to the diftance of the place from the river's mouth; for as the water of one tide cannot flow two hundred leagues within the twelve hours, it follows, that having produced its effect to a determined diffance during the fpace of one day, and renewing it in the following by the impulse of the fucceeding tides, it moves through that long space with the usual alternation in the hours of flood and ebb; and in feveral parts there hours coincide with those of the flux and reflux of the ocean.

After flowing through fuch a vaft extent of country, receiving the tribute of other rivers precipitated from the Cordilleras, or gliding in a more gentle courfe from remote provinces; after forming many circuits, cataracts, and ftreights; dividing itfelf into various branches, forming a multitude of iflands of different magnitudes, the Maranon at length, from the mouth of the river Xingu, directs its course north-east and enlarging its channel in a prodigious manner, as it were to facilitate its difcharge into the ocean, forms in this aftonishing space leveral very large and fertile islands; of which the chief is that of Joanes or Marayo, formed by a branch of the great river which feparates from it twenty-five leagues below the mouth of the Xingu; and directing its courfe to the fouthward, in a direction opposite to that of the principal ftream, opens a communication between the Maranon and the river of Dos Bocas, which has before received the waters of the Guanapu and Pacayas, and flows into it through a mouth of above two leagues in breadth. Thefe are afterwards joined by the river Tocantines; the outlet of which is still broader than the former, and at a still greater distance : the river of Muju, on the eaftern fide of which stands the city of Gran Para, difcharges its waters into the fame ftream; and it afterwards receives the river Capi, which washes the city of the fame name.

The river of Dos Bocas, after joining that of Tagipuru, runs eaftward, forming an arch as far as the river of Tocantines, from which it continues north-eaft like the Maranon, leaving in the middle the island of Joanes, which is nearly of a triangular figure, except the fouth fide about one hundred and fifty leagues in length, and forms the arch of a circle. This island divides the Maranon into the two mouths, by which that river difembogues itfelf into the fea. The principal of these two mouths from Cape Maguari in this island, and the North Cape, is about forty-five leagues broad; and that of the channel

channel of Tagipuri, as likewife of the rivers which have joined it, from the fame Cape Maguari to Tigioca point, is twelve leagues.

This river, which exceeds any one mentioned either in facred or profane hiftory, has three names; and is equally known by them all, each implying its flupendous majefty, and importing its fuperiority to any other in Europe, Africa, or Afia. And this feems to have been intended by the fingularity of its having three different names; each of them enigmatically comprehending those of the most famous in the other three parts of the world; the Danube in Europe, the Ganges in Afia, and the Nile in Africa.

The names which express the grandeur of this river are the Maranon, the Amazons, and the Orellana. But it is not known with certainty that either of them was the original, before its difference by the Spaniards, given it by the Indians, though probably it was not without many; for as various nations inhabited its banks, it was natural for every one to call it by a particular name, or at least to make use of that which had been previously given it. But either the first Spaniards who failed on it neglected this enquiry, or the former names became confounded with others given it fince that epocha, fo that now no vestiges of them remain.

The general opinion prefers, in point of antiquity, that of Maranon, though fome authors will have it posterior to the two others; but we conceive they are millaken, both in their affertion, and in the caufe of that name. They fuppofe that it was first given to this river by the Spaniards, who failed down it under the conduct of Pedro de Orfua, in 1560 or 1559; whereas it had been known by that name many years before: for Pedro Martyr in his Decades, fpeaking of the difcovery of the coaft of Brazil, in the year 1500, by Vincente Yanez Pinzon, relates, among other things, that they came to a river called Maranon. This book was printed in the year 1516, long before Gonzalo Pizarro undertook the difcovery of the river, and conqueft of the adjacent nations who inhabited its banks; or Francisco de Orellana had failed on it. This demonstrates the antiquity of the name of Maranon; but leaves us under the fame difficulties with regard to its date and etymology. Some, following Augustine de Zarate, attribute the origin of this name to a Spanish commander called Maranan, from whom, as being the first that difplayed the Spanifh enfign on this river, it was thence called after his own name. But this opinion is rather fpecious than folid, being founded only on the fimilarity of the names, a very exceptionable inference, especially as no mention is made of any fuch officer in any hiftory published of these discoveries and conquests; whence it feems natural to conclude, that Zarate, on hearing that the river was called Maranon, inferred that the name was taken from fome perfon of eminence who had made an expedition on it. For had he known any thing further, he doubtlefs would have enriched his hiftory with fome of the adventures of the difcovery of it; for if he had not thought them fufficiently intereffing, it is fomething ftrange that all the Spanish historians should be in the fame way of thinking, and concur to fupprefs the memory of a Spaniard whofe name was thought worthy to be given to the most diftinguished river in the world. But what carries along with it a much greater air of probability is, that Vincente Yanez Pinzon, upon his arrival in the river, heard it called by the Indians who inhabited its iflands and banks, Maranon, or fome name of a fimilar found ; and thence Vincente Yanez concluded that its name was Maranon. Hence it is undeniable, that the preference in antiquity belongs to the name of Maranon; and that this name was not given it by Orlua or his men, in allufion to fome feuds and confusions among them, called in Spanish, maranas, or from being bewildered among the great number of islands, forming enmaranado, or an intricate labyrinth of channels, according to the opinion of fome hiltorians.

The

The fecond name is that of the river of the Amazons, which was given it by Francifco Orellana, from the troops of women who made part of the body of Indians who oppofed his paffage, and who were not inferior either in courage, or the dexterous use of the bow, to the men; fo that, instead of landing where he intended, he was obliged to keep at a distance from the shore, and often in the middle of the channel, to be out of their reach. However, on his return to Spain, and laying before the ministry an account of his proceedings, and of the female warriors that opposed him, he was by patent created governor of these parts, in recompense, as it was expressed, for his having subdued the Amazons; and ever fince the river has been called by that name.

Some have indeed doubted whether the Maranon and the Amazons were the fame river; and many feem to be ftrongly perfuaded, that they were really different. But this opinion proceeds only from the river's not having been completely reconnoitred till the clofe of the laft century.

This particular of the Amazons is confirmed by all writers, who have given a fuccinct account of the river, and Orellana's expedition; and though this proof is abundantly fufficient, if not of its reality, at least of its probability, it is additionally confirmed by the tradition ftill fubfifting among the natives, which we may believe on the authority of one of the most eminent geniules the province of Quito ever produced; I mean Don Pedro Maldonado, who was a native of the town of \widetilde{R} iobamba, but lived at Quito, and whofe performances are well known in the republic of letters. In 1743, this gentleman and M. de la Condamine agreed to return to Europe in company, by the way of the river Maranon; and among their other inquiries towards a complete knowledge of it, and the countries through which it flows, they did not forget the famous Amazons; and were informed by fome old Indians, that it was an undoubted truth that there had formerly been feveral communities of women, who formed a kind of republic, without admitting any men into the government; and that one of these female states still subfisted, but had withdrawn from the banks of the river to a confiderable diftance up the country; adding, that they had often feen fome of these females warriors in their country. M. de la Condamine, in the narrative of his voyage down this river, printed at Paris in the year 1745, and who had all the rational curiofity of his fellow-traveller Don Pedro Maldonado, relates fome of the facts told him by the Indians, concerning the Amazons whom they had feen. But I shall only here infert what historians have faid on this head, leaving every one to give what degree of credit he pleafes to the adventure of Orellana, and the actual existence of the Amazons.

Some who are firmly perfuaded of the truth of the adventure of the Amazons with Orellana, and believe that their valour might be equal to that of the men, in defence of their country and families, will not hear of a female republic feparated from the intercourfe of men. They fay, and not without fufficient reafon, that the women who fo gallantly oppofed Orellana were of the Yurimagua nation, at that time the moft powerful tribe inhabiting the banks of the Maranon, and particularly celebrated for their courage. It is therefore, fay they, very natural to think that the women fhould, in fome degree, inherit the general valour of their hufbands, and join them in oppofing an invader, from whom they imagined they had every thing to fear, which might inflame their ardour; as likewife from an emulation of military glory, of which there are undeniable inflances in the other parts of the Indies.

The third and laft name is that of the Orellana, defervedly given to it in honour of Francifco de Orellana, the first who failed on it, furveyed a great part of it, and had feveral encounters with the Indians who lived in its islands or along its banks. Some have been at a great deal of pains to affign certain distances through its long courfe, and

504

to appropriate to each of thefe one of the three names. Thus they call Orellana all that fpace from the part where this officer failed down in his armed fhip till it joins the Maranon. The name of Amazons begins at the influx of another river, at the mouth of which Orellana met with a ftout refiftance from the women or Amazons; and this name reaches to the fea: and laftly, the name of Maranon comprehends the river from its fource a confiderable way beyond the Pongo downwards all along the part of the defcent of this river through Peru, alleging that this was the part through which Pedro de Orfua entered the river; fupporting their opinion by a derivation, to which we cannot fubfcribe, namely, that he gave it this name on account of the difturbances which hap-pened among his men. The truth is, that the Maranon, the Amazons, and the Orellana, are one individual river; and that what is meant by each of thefe names, is the vaft common channel into which those many rivers fall, which contribute to its greatness; and that to the original name of Maranon the two others have been added for the caufes already mentioned. The Portuguese have been the most strenuous supporters of this opinion, calling it by no other name than that of the Amazons, and transferring that of Maranon to one of the captainfhips of Brazil, lying betwixt Grand Para and Siara; and whofe capital is the city of San Luis del Maranon.

II. — Account of the first Discoveries, and of the most famous Expeditions on the Maranon, in order to obtain a more adequate Idea of this famous River.

After this account of the courfe and names of this river, I fhall proceed to the difcovery of it, and the most remarkable voyages made thereon. Vincente Yanez Pinzon, one of those who had accompanied the Admiral Don Christopher Columbus in his first voyage, was the perfon who difcovered the mouth through which this river, as I have before taken notice, difcharges itfelf into the ocean. This adventurer, at his own expence, in 1499, fitted out four ships, discoveries being the reigning taste of that time. With this view he steered for the Canary Islands; and after passing by those of Cape de Verd, continued his courfe directly west, till on the 26th of January, in the year 1500, he had fight of land; and called it Cabo de Confolacion, having just weathered a most violent storm. This promontory is now called Cabo de San Augustin. Here he landed; and, after taking a view of the country, coafted along it northward; fometimes he loft fight of it, when on a fudden he found himfelf in a fresh-water fea, out of which he fupplied himfelf with what he wanted; and being determined to trace it to its fource, he failed upwards, and came to the mouth of the river Maranon, where the iflands made a most charming appearance. Here he staid fome time, carrying on a friendly traffic with the Indians, who were courteous and humane to thefe strangers. He continued advancing up the river, new countries appearing still as he failed further.

To this maritime difcovery fucceeded that by land in the year 1540, under the conduct of Gonzalo Pizarro, who was commiffioned for this enterprife by his brother the Marquis Don Francifco Pizarro, on the report which Gonzalo Dias de Pineda had made of the country of La Canela, in the year 1536; at the fame time making him governor of Quito. Gonzalo Pizarro arrived at the country of Los Canelos; and following the courfe of a river, either the Napo or Coca, it is not certain which, though more probably the first, met with unfurmountable difficulties and hardships; and feeing himfelf destitute of provisions of every kind, and that his people, by feeding on the buds and rinds of trees, fnakes, and other creatures, wasted away one after another, he determined to build a vessel, in order to feek provisions at the

VOL. XIV.

3 T

place

place where this river joined another; the Indians having informed him that there he would meet with a great plenty. The command of this veffel he gave to Francifco de Orellana, his lieutenant-general and confident, recommending to him all the diligence and punctuality which their extremity required. After failing eighty leagues Orellana arrived at the junction of the two rivers, but met with nothing of what he had been fent for ; being difappointed in the provisions he fought, the trees not bearing any fruit, or the Indians having already gathered it. His return to Pizarro feemed very difficult, if not impracticable, on account of the rapidity of the current; befides, he could not think of returning, without bringing with him that relief to earneftly expected; to that, after long debating the matter with himfelf, he determined, without the privity of his companions, to fail with the current to the fea. But this could not long remain a fecret, the hoifting the fails fufficiently demonftrating his intentions; and fome vehemently opposing fuch a defertion, as they called it, were near coming to blows. But at length Orellana, by plaufible reafons and magnificent promifes, pacified them; and the opposition ceasing, he continued his voyage, after fetting afhore Hernando Sanchez de Vargas to perifh with hunger, as being the ring-leader of the malcontents; and perfifting in his invectives against Orellana's project.

Pizarro, furprifed at having no account of Orellana, marched by land to the place where he had ordered him, and near it met with Hernando Sanchez de Vargas, who acquainted him with the whole affair of the veffel; at which Pizarro feeing himfelf without refource, a confiderable part of his men dead, the other fo exhaufted with fatigue and hunger that they dropt down as they marched, and those in the best state reduced to mere ikeletons; he determined to return to Quito, which, after fatigues and hardfhips even greater than the former, he at laft reached with a handful of men in the year 1542, having only reconnoitred fome rivers, and the adjacent country; a fervice difproportionate to the lofs of fo many men, and the miferies fuffered in this enterprife.

This was the first expedition of any confequence, to make different of the river Maranon: and if the fuccels of Pizarro was not equal to his force and zeal, he was at leaft the inftrument of its being entirely accomplified by another; and to his refolution in prefling forward through difficulties and dangers, and by his expedient of building the armed veffel, must, in some measure, be attributed the happy event of Orellana's voyage, who, with a conftancy which showed him worthy of his general's favour, reconnoitred the famous river of the Amazons through its whole extent, the adjacent country, its innumerable islands, and the multitude and difference of nations inhabiting its banks. But this remarkable expedition deferves a more particular detail.

Orellana began to fail down the river in the year 1541; and in his progrefs through the feveral nations along its banks, entered into a friendly conference with many, having prevailed upon them to acknowledge the fovereignty of the Kings of Spain formally, and with the confent of the caciques took possession of it. Others, not fo docile, endeavoured to oppofe, with a large fleet of canoes, his further navigation: and with these he had feveral sharp encounters. In one Indian nation bravery was fo general, that the women fought with no lefs intrepidity than the men; and by their dexterity showed that they were trained up to the exercise of arms. This occasioned Orellana to call them Amazons; which name also passed to the river. The scene of this action, according to Orellana's own account, and the defcription of the place, is thought to have been at fome diftance below the junction of the Negro and Maranon. Thus

Thus he continued his voyage till the 26th of August, in the fame year; when, having passed a prodigious number of islands, he faw himself in the ocean. He now proceeded to the isle of Cubagua, or, according to others, to that of La Trinidad, with a defign of going to Spain, to folicit for a patent as governor of these countries. The distance he failed on this river, according to his own computation, was eighteen hundred leagues.

This difcovery was followed by another, but not fo complete; it was undertaken in the year 1559 or 1560, under Pedro de Orfua, by commission from the Marquis de Canete, viceroy at Peru, who at the fame time conferred on him the title of governor of all his conquests. But the first news of Orfua was, that he and the greatest part of his men were killed in an ambuscade by the Indians; a catastrophe entirely owing to his own ill conduct, which destroyed the great armament made for this enterprise, and created an aversion to design liable to fuch dangers.

In the year 1602, the Reverend Raphael Ferrer, a Jefuit, having undertaken the miffion of Cofanes, paffed down the Maranon, and attentively furveyed the country as far as the conflux of the two rivers where Orellana had left Hernando Sanchez de Vargas; and at his return to Quito gave a very circumftantial account of what he had feen, and the different nations he had difcovered.

Another, but fortuitous, view of the river was taken in 1616. Twenty Spanish foldiers, quartered in Santiago de las Montanas, in the province of Yaguarfongo, purfued a company of Indians, who, after murdering fome of their countrymen in the city, fled up the country, and embarked on the Maranon in their cances. The foldiers, in falling down the river, came to the nation of the Maynas, who received them in a friendly manner; and after fome difcourse flowed a disposition of submitting to the King of Spain, and defired missionaries might be fent them. The foldiers, on their return to Santiago, having made a report of the good inclination of the Maynas, and their defire of being instructed in the Christian religion, an account was fent to the Prince of Esquiloche, viceroy of Peru: and in 1618, Don Diego Baca de Vega was appointed governor of Maynas and Maranon; and may be faid to have been in reality the first, as neither Pizarro, Orellana, nor Orfua, though invested with the title, were ever in possibility the title.

This expedition was performed in 1635 and 1636, and was fucceeded by that of two Francifcans, with others of the fame order, who fet out from Quito with a determined zeal for propagating Chriftianity among the nations on the Maranon. But many of them, unable to fupport themfelves under the fatigues and hardfhips natural in fuch a country, and difcouraged with the little fruit their good defires produced, after wandering among mountains, woods, and deferts, returned to Quito, leaving only two, Dominico de Brieda and Andrew de Toledo, both lay-brothers. Thefe, either from a religious zeal, or naturally more brave and hardy, or of greater curiofity, ventured to penetrate further into thofe dreary waftes. They were indeed attended by fix foldiers, remaining of a whole company who had been fent, under Captain Juan de Palacio, for the fafeguard of the miffionaries; but fo many of them had returned with the religious to Quito, that thefe fix and the captain were all that remained : and that officer, a few days after, loft his life in an action againft the Indians.

The fix foldiers and two lay-brothers, however, continued with undaunted refolution to travel through countries inhabited by favages, unknown, and full of precipices on all fides; at length they committed themfelves to the ftream, in a kind of launch; and after many fatigues, hardfhips, and here and there a rencounter, reached the city

3 T 2

of Para, at that time dependent on, or united with, the captainfhip of the Maranon, the governor of which refided at San Louis, whither they went, and gave him an account of what they had observed in this navigation.

At that time the crown of Portugal was annexed to Spain; and the governor of the captainfhip, or Maranon, for the fovereign of both kingdoms, was Jacome Reymundo de Norona, who, zealous for the improvement of this difcovery, as of the higheft importance to his Prince, fitted out a fleet of canoes, under the command of Captain Texera, to go up the river, and furvey the country with greater form and accuracy. This flotilla departed from the neighbourhood of Para, on the 28th of October 1637, with the two religious on board; and after an inceffant fatigue in making way againft the ftream, they arrived at Pahamino on the 24th of June 1638. This place belongs to the jurifdiction of the government of Quixos; whence Texera, with the foldiers and the two religious, went to Quito, where he gave an account of the expedition to the audiencia, which transmitted the particulars to the Count de Chinchon, Viceroy of Peru; and he, agreeably to the zeal he had always manifested for enlarging His Majefty's dominions, held a council about making more particular discoveries along the stores of that river.

Among other things, the Count de Chinchon gave orders, that the Portuguefe flotilla fhould return to Para; and with it fent fome intelligent perfons, whofe zeal might be depended on, with orders to take an accurate furvey of the river and its banks; and after difcharging this commiffion, to proceed to Spain, and make a report of their expedition to the council of the Indies, in order to be laid before His Majefty, that meafures might in confequence be taken for fecuring the conqueft of thefe nations. The perfons chosen were, the Reverend Fathers Chriftopher de Accuna and Andrez de Artieda, Jefuits, and perfons every way equal to the fervice. They left Quito on the 16th of February 1039; and having embarked with the armadilla, after a voyage of ten months, they arrived at Gran Para on the 12th of December, whence, according to their inftructions, they paffed over to Spain, and completely acquitted themfelves of the truft repofed in them.

At the end of the last century, another expedition was undertaken, for making difcoveries on the Maranon; but at that time it was already fo well known, that most of the adjacent lands had been improved by the miffions which the Jefuits had fettled there: and the government of Manas now includes many nations, who, on the fervent preaching of the Jefuits, having embraced Chriftianity, vowed obedience to the Kings of Spain; and a happy alteration was feen in their morals and cuftoms. The banks of this river, where before only wild Indians were feen living in the manner of beafts, were now turned into plantations and regular towns, the inhabitants of which fhewed that they were not defititute of reason and humanity. These improvements were in a great meafure owing to Father Samuel Fritz, who, in 1686, preached the Golpel among those people, and in a flort time was the inftrument of the conversion of many nations : but the continual fatigues and hardships, both by land and water, affected his health to fuch a degree, that he was obliged to fet out for Para in January 1689, and arrived there on the 11th of September of the fame year. Here he remained in a difagreeable inactivity, till his health was reftored, and fome affairs fettled which required inftructions from the court of Lifbon.

July the 8th 1691, Father Fritz left Para, in order to return to his miffion, which then reached from the mouth of the river Napo to fome diftance beyond the Negro, and included the Omaguas, Yurimaguas, Ayfuares, and many other adjacent nations, the most numerous of the whole river. October the 13th, in the fame year, he

11

508

returned

returned to the town of Nueftra Senora de las Nieves, the capital of the Yurimagua nation; and having vifited the reft under his charge, to the number of forty-one, all large and populous, he went, on other public affairs, to the town of Laguna, the capital of all the miffions on the Maranon, where the fuperior refided; and afterwards repaired to the city of Lima, in order to communicate to the Count de Moncloa, at that time viceroy, a full account of all those countries. This last journey he undertook by the way of the rivers Guallaga, Patanapura, Moyobamba, Chachapoyas, Caxamarca, Truxillo, and Lima.

The affairs which brought this indefatigable miffionary to Lima, where he was received with great honour, being finished; Father Fritz, in August 1693, fet out, on his return to his miffions, by the way of the city of Jaen de Bracamoros, with a view of reconnoitring the courfe and fituation of the rivers which, from those fouthern parts, fall into the Maranon. By the help of these additional lights, he drew a map of that river, which was engraved at Quito, in the year 1707: and though it had not all the accuracy which could be defired, the father being without instruments for observing the latitudes and longitudes of the chief places, taking the course of the rivers, and determining the distances; yet it was received with very great applause, as being the only one in which were laid down the fource and direction of all the rivers which join the Maranon, and the whole course of the latter till its junction with the ocean.

III. Account of the Conquest, Missions, and Nations, established on the Maranon.

The difcovery of this famous river, and the furvey of the adjacent countries and nations, was followed by the conqueft of the nations who inhabited its banks and iflands. The mifcarriage of the expedition under Gonzalo Pizarro has already been mentioned: Orellana was not more fortunate; when, purfuant to the grant of the government, he returned to fettle in it; and Orfua's fate was ftill more deplorable, perifhing himfelf, with the greateft part of his followers. But we are now to fpeak of the more fuccefsful enterprize of Don Diego Baca de Vega, whom we have already mentioned, but in a curfory manner.

The government of Maynas, and the Maranon, having been conferred on De Vega: confident of the good difpolitions of the Maynas Indians, as it had been carefully cultivated, fince its first commencement with the Santiago foldiers, he entered the country with a little colony, and founded the city of San Francisco de Borga, in 1634, as the capital of the whole government; a title which it justly deferved, for being the first erected in that vaft country; and alfo on account of the friendship which the Indians had fhewn for the Spaniards ever fince their first arrival. The new governor being a perfon of judgment and penetration, was not long in obferving that these nations were rather to be governed by moderation and gentlenefs, with a proper firmnefs to create respect, than by rigour or austerity : and accordingly informed the audiencia of Quito and the Jefuits of their difposition. Missionaries were accordingly sent them, in the perfons of Gafpar de Cuxia and Lucas de Cuebas, who came to Maynas in the year 1637; and their preaching had fuch remarkable fuccefs, that, being not of themfelves fufficient for inftructing the multitudes of new converts, they fent to Quito for affiftance: and thus the number of miffions continually increased, and whole nations reforted from their forests in fearch of the light of the Gospel. By this means the King's dominions were extended, every profelyte with joy acknowledging himfelf in his

his new state a subject of the King of Spain, as he owed to his bounty the inestimable felicity of his conversion.

Thus the miffions and the number of towns increased together, and the propagation of the Christian religion in those remote countries, and the aggrandifement of the Spanish monarchy, went hand in hand. But the most distinguished æra of these progreffions was the year 1686, by the zeal and activity of Father Fritz, whom we have had occafion before to mention with honour: he went directly among the nation of the Omaguas, who having by the Cocamas Indians been informed of the mildness and wifdom with which the miffionaries taught them to live under just and wholefome laws. and a police hitherto unknown among them; together with the many happy effects it had produced in those nations which had conformed to their instructions; animated with these pleasing relations, they fent, in 1681, a deputation to the town of Laguna, belonging to Cocamas, where Father Lorenzo Lucero, fuperior of the miffions, refided, entreating him to fend among them perfons for their instruction : but the father at that time was not in a capacity of complying with their request, all the missionaries being employed elfewhere. He therefore difmiffed them, with commending their good intentions; promifing them, that he would fend to Quito for a proper perfon to inftruct them in those falutary doctrines embraced by the other nations.

The Omaguas, full of anxiety, did not give Father Lorenzo Lucero time to neglect his promife; for, on hearing that new miffionaries, and among them Father Samuel Fritz, were just arrived at Laguna from Quito, the fame deputation returned to request the immediate performance of the promife; and having the greatest reason to expect it would be complied with, great part of the people came in canoes to the town of Laguna, as a testimony of respect to Father Fritz, in order to conduct him to their country, where they treated him with fuch veneration, that in his progrefs through the towns they would not fuffer him to walk, but carried him on their fhoulders; an honour which the caciques referved to themfelves alone. The effects of his preaching were answerable to these marks of ardour and esteem, so that in a short time the whole nation was brought to a ferious profession of Christianity, deploring their former ignorance and brutality, and forming themfelves into a political community, under laws calculated for the happiness of fociety. And their example so influenced feveral other adjacent nations, that the Yurimaguas, Afuares, Banomas, and others, unanimoufly and voluntarily came and addreffed themfelves to Father Fritz, defiring him to inftruct them how to live in the fame order and regularity as the Omaguas. Thus whole nations, on embracing Christianity, fubmitted to the fovereignty of the Spanish monarchs: and all the countries from the Napo to a confiderable diffance below the Negro, were reduced without the least force throughout the whole extent of the government of Maynas: and fuch, at the end of the last century, was the number of the nations thus converted, that Father Fritz, though without indulging himfelf in any refpite, was not able to vifit every fingle town and village within the compass of a year, exclusively of the nations under the care of other missionaries, as those of the Maynas, Xebaros, Cocamas, Panos, Chamicuros, Aguanos, Muniches, Otanabes, Roamaynas, Gaes, and many more. The other miffions were in the fame flourishing condition.

The city of San Francisco de Borja, which we have already mentioned as the capital of Maynas, stands in $4^{\circ} 28''$ S. lat. and $1^{\circ} 54''$ E. of the meridian of Quito: but of its largeness and appearance we can only add, that it refembles the cities of the government of Jaen: and its inhabitants, though confissing of Mestizos and Indians, and the place is the refidence of the governor of Maynes and Maranon, yet they are not equal in number to those of Jaen de Bracamaros. The principal town of the missions, and

510

in which the fuperior is obliged to refide, is Santiago de la Laguna, lying on the eaftern bank of the river Guallaga. The places which at prefent compose those missions in the government of Maynas, and diocefe of Quito, are:

On the River Napo.

I. San Bartholome de Necoya.

II. San Pedra de Aguarico.

XXIII. Nuefta Senora de las Nieves.

XXIV. San Francisco Regis del Baradero.

Befides these towns, which have existed for some time, there are several others yet in their infancy; and the Indians, by whom they are inhabited, of different nations from those above-mentioned : likewife many others, both large and populous; fome on the banks of the rivers which fall into the Maranon, and others up the country. Many Many of the inhabitants of both nations hold a friendly intercourfe with the Spanish miffionaries, and with the inhabitants of the Chriftian villages, with whom they traffic. as well as with the Spaniards and Meftizos, fettled at Borja and Laguna. All thefe nations of Indians have fome refemblance in their cuftoms; but in their languages very different, every one feeming to have a particular dialect, though there are fome of a nearer affinity than others to the general language of Peru. The most difficult to be pronounced is that of the Yameos Indians : while, on the other hand, none is fo eafy and agreeable to the ear as that of the Omaguas: and the genius and tempers of these two nations were found to be as different as their language. Thus the Omaguas, even before their fubmiffion, gave many furprizing proofs of the clearnefs of their intellects; but were furpaffed by the Yurimaguas, both in wit and penetration. The former lived in villages under fome kind of government, peacefully obeying their They were less barbarous; their manners less turbulent and curacas or chiefs. corrupt than those of most other Indians. The Yurimaguas formed a kind of republic; and had fome laws which were ftrictly obferved, and the breach of them punifhed in an exemplary manner. But in police the preference doubtlefs belongs to the Omaguas: for, befides living in fociety, there was an appearance of decency among them, their nudities being covered, which by others were totally neglected. This difposition in those two nations for making approaches, however small, to civil customs and a rational life, not a little contributed to the fpeedy progrefs of their conversion. They were more eafily convinced, from the light of nature, of the truth and propriety of the doctrines preached by the miffionaries; and were convinced, that happinels, both public and private, was intimately connected with an uniform obfervance of fuch precepts. inftead of the innumerable evils refulting from the manner of living hitherto practifed by them.

Among the variety of fingular cuftoms prevailing in these nations, one cannot help being furprifed at the odd tafte of the Omaguas, a people otherwise fo fensible, who, to render their children what they call beautiful, flat the fore and hind parts of the head, which gives them a monftrous appearance; for the forehead grows upwards in proportion as it is flatted; fo that the diftance from the rifing of the nose, to the beginning of the hair, exceeds that from the lower part of the nose to the bottom of the chin : and the fame is observable in the back part of the head. The fides also are very narrow, from a natural confequence of the preffure; as thus the parts preffed, inftead of fpreading, conformably to the common course of nature, grows upwards. This practice is of great antiquity among them; and kept up fo ftrictly, that they make a jeft of other nations, calling them calabash heads.

In order to give children this beautiful flatnefs, the upper part of the head is put, foon after the birth, betwixt two pieces of board; and repeated, from time to time, till they have brought it to the fashionable form.

Another nation of thefe Indians, affecting a ftriking appearance, make feveral holes in both their upper and under lips, both fides of the cartilage of their nofe, their chins, and jaws, and in thefe they flick fine feathers, or little arrows, eight or nine inches long. The reader's own imagination will fufficiently paint the ftrange appearance they muft make with thefe decorations. Others place a great beauty in long ears; and accordingly extend them by art to fuch a degree, that in fome the inferior lobe touches the fhoulder: and they value themfelves on the nickname of long ears, which has been given them in ridicule. The method they make ufe of to extend their ears, is this: they bore a hole in the lobe, and faften to it a fmall weight, which they from time to time increafe, till the ear is ftretched to nearly the length abovementioned: mentioned: and as the lobe increases in length, fo likewife does it in magnitude. Others paint fome parts of their bodies; fome the whole. All have fomething peculiar in their modes and customs, but generally of fuch a nature, that Europeans wonder how they could ever enter the thoughts of rational creatures.*

After defcribing this great river, and giving an account of the villages and nations near its banks, I fhall proceed to fome other particularities relating to it; as the extraordinary fpecies of fifh found in its waters, and likewife the birds and other animals feen in the adjacent countries through which it flows. Among the various kinds of fish, are two of an amphibious nature; the caymans or alligators, and the tortoife, which fwarm on the fhores and iflands. Its tortoifes, for tafte, are preferred to those of the fea. Another remarkable fifh here is the pexe-buey, or fea-cow, fo called from its refembling the land quadruped of that name. This is one of the largest fpecies known in the river, being generally three or four yards in length, and of a proportional thicknefs: the flefh is very palatable, and, according to fome, has pretty much the tafte of beef. It feeds on the herbage growing along the flore, but the ftructure of its body does not admit of its coming out of the water. The female has dugs for fuckling its young; and whatever fome may have faid of any farther refemblance to the terrestrial species of that name, it has neither horns nor legs. It has indeed two fins, which ferve equally for fwimming, and fupporting itfelf on the banks whilft feeding. The general method of the Indians for fifting, is with inebriating herbs, like that I have mentioned on the river Guayaquil. On fome occafions they make use of arrows dipped in poifon, of fuch an activity, that the flighteft wound immediately kills the fifh. This is also their method of hunting; and in both they are fo very expert and active, that they are very feldom known to mifs their aim. This powerful venom is principally the juice of a bejuco, near fix fingers broad, and flat on both fides, of a brownish colour, and growing in very damp marshy places. In order to prepare the poifon, they cut it into pieces, which they bruife and boil in water. On taking it off the fire, they add to it a particular ingredient which caufes a coagulation. With this they rub the point of their arrows; and when dry, for want of fresh unction, they moiften it with their fpittle : the quality of it is fo frigorific, that it immediately repels all the blood to the heart, where the veffels burft, being unable to contain fuch a torrent as fuddenly rufhes into them. But what is most furprifing here, is, that the creature thus killed, and its coagulated blood, are eaten without any inconveniency. The most powerful antidote to this venom is, immediately to eat fugar: but this fpecific, though often falutary, is not infallible, as feveral melancholy inftances have demonstrated.

The borders and parts adjacent to this famous river, as well as those contiguous to the others which discharge their waters into it, abound with large and lofty trees, the wood of which is of different colours; fome white, others of a dark brown; fome red, or veined with variety of colours. Some of another species diffil balfams of an exquifite fragrancy, or rare and medicinal gums; others are noted for their delicious and falubrious fruits. Among these the wild cacoa, by the mere goodness of the foil, without any culture, grows in the greatest plenty, and yields fruit of a goodness equal to that in the jurifdiction of Jean and Quixos. Here also are gathered great quantities of farfaparilla, vanillas, and a bark called Declavo, or cloves: for though it refembles

VOL. XIV.

cinnamon

^{*} Another remarkable cuftom is, that of their tying their privities in a bladder before they go into the water. A.

cinnamon in appearance, except its colour, which is fomething darker, its tafte and fmell are very different, being nearly the fame with that of the East India clove.

As to quadrupeds, birds, reptiles, and infects, they are nearly the fame, and in as great numbers as those already mentioned in the description of other hot countries. One reptile of a very extraordinary nature, and known only here and in the provinces of New Spain, I shall, as a conclusion of my account of the Maranon, add a description of.

In the countries watered by that vaft river, is bred a ferpent of a frightful magnitude, and moft deleterious nature. Some, in order to give an idea of its largenefs, affirm, that it will fwallow any beaft whole; and that this has been the miferable end of many a man. But what feems ftill a greater wonder, is the attractive quality attributed to its breath, which irrefiftibly draws any creature to it, which happens to be within the fphere of its attraction : but this, I muft own, feems to furpafs all belief. The Indians call it jacumama, i. e. mother of water : for as it delights in lakes and marfhy places, it may, in fome fenfe, be confidered as amphibious. I have taken a great deal of pains to inquire into this particular ; and all I can fay is, that the reptile's magnitude is really furprifing. Some perfons, whofe veracity is not to be queftioned, and who have feen it in the provinces of New Spain, agreed in their account of the enormous corpulency of this ferpent ; but, with regard to its attractive quality, could fay nothing decifive.*

Sufpending, therefore, for the prefent, all positive judgment, without giving entire credit to all the qualities vulgarly attributed to this animal, especially the more fuspected, as not improbably flowing from altonifhment, which frequently adopts absurdities, it being impossible, in fo great a perturbation, to confult reason; let me be indulged, with fome variation of the accidents, to investigate the cause, in order to come at the knowledge of its properties, which it is difficult to ascertain, unless supported by undoubted experiments. Not that I would offer my opinion as a decisive rule: I defire that the judgment of others may declare for that which appears most conformable to truth. I would also further acquaint the reader, that I only speak from the testimony of those who have seen this famous server, having never myself had an opportunity of examining it with my own eyes.

First, it is faid, that this ferpent, in the length and thickness of its body, very much refembles the trunk of an old tree, whose roots have for some time ceased to convey the usual nourishment; and that on every part of it grows a kind of moss, like that seen on the bark of wild trees. This is accounted for by the dust and mud adhering to it; and alternately moss most and dried by the water and sun. This forms a flight crust over the thick scales; and this crust is increased by the fluggishness and flow motion of the ferpent; which, unless when forced by hunger to go in quest of food, continues

motionlefs:

^{*} I have feen three of thefe ferpents killed; out of the body of one of them was taken a hog about ten ftone in weight. The largeft was about eleven feet long, and twenty-three inches in circumference; the fmalleft about nine feet long, and nineteen in circumference. They generally lie coiled up, and wait till their prey paffes near enough to be feized. As they are not eafily diftinguifhed from the large rotten wood (which lies about in plenty in thefe parts), they have opportunities enough to feize their prey and fatiate their hunger. The Indians watch this opportunity, and when they have half gorged their prey, kill them without danger. As I was walking in the woods one day, attended by two Indians and a Negro boy, we were within ten yards of one of thefe ferpents, when the Negro cried out, Cobra, Senhor ! Cobra, Senhor ! on which it made away into a neighbouring thicket, which concealed from our fight the moft hideous creature I at that time had ever feen. In its motion, which was flow and peculiar to that ferpent, it appeared like a ferpentine log, with two bright gems for eyes, placed within three or four inches from the end which was fartheft from us, from which rays of azure light feemed to dart. A.

motionlefs in one place for feveral days together; and even then its motion is almost imperceptible, leaving a track like that of a log of timber drawn along the ground.

Its breath is afferted to be of fuch a nature as to caufe a kind of drunkennefs or ftupidity in man or beaft, which has the misfortune of being within the bounds of its activity; and thus caufes the animal involuntarily to move till it unhappily comes within the reach of the ferpent, which immediately fwallows it. This is the vulgar report : and it is added, that the only method of averting the danger, is, on first feeling the breath, to cut it, that is, to ftop it by the interpofition of another body, which haftily intervening, cuts the current of the blaft and diffipates it. Thus the perfon, who was moving on to certain deftruction, is enabled to take another path, and avoid the fatal catastrophe. These particulars, if thoroughly confidered, seem mere fables: as indeed the learned M. de la Condamine intimates; and the very circumftances with which they are decorated, increase their improbability.

But, in my opinion, with a little alteration in the circumstances, what feems to shock credibility, will appear natural and founded on truth.

That its breath is of fuch a quality as to produce a kind of inebriation in those whom it reaches, is far from being impoffible; the urine of the fox is well known to have the fame effect; and the breath of the whale is frequently attended with fuch an infupportable factor as to bring on a diforder in the brain. I therefore fee no manner of difficulty in admitting, that the breath of this ferpent may be of that intoxicating quality attributed to it; and may be confidered as an expedient for catching its prey, as otherwife the creature, from the flow movement of its body, would be utterly incapable of providing itfelf with food ; whereas, by this deleterious fmell, the animal may be thrown into fuch horror and perplexity, as to be unable to move, but remain fixed like a ftatue, or faint away, whilft the fnake gradually approaches and feizes it. As to what is related of cutting the breath, and that the danger is limited to the direction in which the ferpent breathes; thefe are tales which, to believe, would imply an utter ignorance of the origin and progrefs of odours. In fhort, the vulgar errors, propagated by these rude nations, have gained credit among the Spaniards, merely becaufe none has had the curiofity or refolution to put them to the teft of experience.

CHAP. VI. - Of the Genius, Customs, and Manners of the Indians, who are Natives of the Province of Quito.

THE fubject of this chapter, and its circumstances, are of fuch a nature, that, if what ancient hiftories deliver concerning them fhould recur to the memory, they will appear totally different. Indeed the difproportion between what I read, and what I am going to relate, is fo remarkable, that, on a retrofpect towards past times, I am utterly at a lofs to account for the univerfal change of things; efpecially when furrounded by fuch vifible monuments of the industry, polity, and laws of the Indians of Peru, that it would be madnefs to queftion the truth of the accounts that have been given of them; for the ruins of these ancient works are still amazing. On the other hand, I can hardly credit my own eyes, when I behold that nation involved, as it were, in Cimmerian darknefs, rude, indocile, and living in a barbarifm little better than those who have their dwelling among the waftes, precipices, and forefts. But what is still more difficult to conceive is, how these people, whose former wisdom is conspicuous in the equity of their laws, and the establishment of a government fo fingular as that under which they live, fhould at prefent fhew no traces of that genius and capacity which formed

formed fo excellent an economy, and fo beautiful a fyftem of focial duties : though undoubtedly they are the fame people, and ftill retain fome of their ancient cuftoms and manners. Leaving, therefore, this intricate fubject to be inveftigated by farther inquiries, I fhall proceed to give an account of the prefent Indians, their genius, cuftoms, and qualities, according to the beft information I could obtain from a commerce with those people of all ranks, during ten years. Some particulars in this narrative will demonstrate that they ftill retain a few sparks of the industry and capacity of the ancient Indians of Peru; whilst others will shew that they are utterly defitute of the knowledge of certain fciences which were common among their ancestors; and that they are equally degenerated from their wisdom in making laws, and their regular obfervance of them.

It is no eafy tafk to exhibit a true picture of the cuftoms and inclinations of the Indians, and precifely difplay their genius and real turn of mind; for if confidered as part of the human fpecies, the narrow limits of their underftanding feem to clafh with the dignity of the foul; and fuch is their flupidity, that, in fome particulars, one can fcarce forbear entertaining an idea that they are really beafts, and even defitute of that inftinct we obferve in the brute creation. While in other refpects, a more comprehenfive judgment, better-digefted fchemes, and conducted with greater fubtilty, are not to be found than among thefe people. This difparity may miflead the most difcerning perfon: for, fhould he form his judgment from their first actions, he must neceffarily conclude them to be a people of the greatest penetration and vivacity. But when he reflects on their rudeness, the abfurdity of their opinions, and their beaftly manner of living, his ideas must take a different turn, and reprefent them in a degree little above brutes.

Such is the difposition of the Indians, that if their indifference to temporal things did not extend itfelf also to the eternal, they might be faid to equal the happiness of the golden age, of which the ancient poets have given fuch enchanting descriptions. They possible a tranquillity immutable, either by fortunate or unfortunate events. In their mean apparel they are as contented as the monarch clothed with the moss filendid inventions of luxury; and fo far are they from entertaining a defire for better or more comfortable clothing, that they give themselves no manner of concern about lengthening their own, though half their bodies continue naked. They shew the like diffegard for riches; and even that authority or grandeur within their reach is so little the object of their ambition, that, to all appearance, it is the fame thing to an Indian, whether he be created an alcalde, or forced to perform the office of a common executioner.

And thus reciprocal effeem among them is neither heightened nor leffened by fuch circumftances. The fame moderation appears in their food, never defiring more than what fuffices; and they enjoy their coarfe fimple diet with the fame complacency as others do their well-furnifhed tables. Nor do I indeed queftion but if they had their choice of either, they would prefer the latter; but at the fame time they flew fo little concern for the enjoyments of life, as nearly approaches to a total contempt of them: in flort, the moft fimple, mean, and eafieft preparation feems beft adapted to their humour.

Nothing can move them, or alter their minds; even intereft here lofes all its power; it being common for them to decline doing fome little act of fervice, though offered a very confiderable reward. Fear cannot ftimulate, refpect induce, nor punifhment compel them. They are indeed of a very fingular turn; proof against every attempt to rouse them from their natural indolence, in which they feem to look down with contempt on the wifest of mortals: fo firmly bigoted to their own gross ignorance, that the wifest wifest measures to improve their understanding have been rendered abortive; fo fond of their simplicity and indolence, that all the efforts and attention of the most vigilant have miscarried. But in order to give a clearer idea of their tempers, we shall relate fome particular instances of their genius and customs; as otherwise it will be impossible to draw their true character.

The Indians' are in general remarkably flow, but very perfevering; and this has given rife to a proverb, when any thing of little value in itfelf requires a great deal of time and patience, "That it is only fit to be done by an Indian." In weaving carpets, curtains, quilts, and other fluffs, being unacquainted with any better method, at paffing the woof they have the patience every time to count the threads one by one, fo that two or three years is requifite to finish a fingle piece. This flowness undoubtedly is not entirely to be attributed to the genius of the nation; it flows in fome measure from the want of a method better adapted to difpatch: and perhaps, with proper inftructions, they would make confiderable progreffes, as they readily comprehend whatever is fhewn them relating to mechanics; of this the antiquities still remaining in the province of Quito, and over all Peru, are undeniable testimonies. But of these more will be faid in the sequel. This indifference and dilatorinefs of the Indians is blended with floth, its natural companion; and their floth is of fuch a nature, that neither their own intereft, nor their duty to their mafters, can prevail on them to undertake any work. Whatever therefore is of abfolute neceffity to be done, the care of it is left to the Indian women. Thefe fpin, and make the half-fhirts and drawers, which conflitute the whole apparel of their hufbands. They cook the matalotage, or food, univerfally used among them; they grind the bacley for machca, roaft the maize for the camcha, and brew the chicha; in the mean time, unlefs the mafter has been fortunate enough to get the better of the hufband's floth, and taken him to work, he fits fquatting on his hams (being the ufual pofture of all the Indians), and looks on his wife while the is doing the neceffary work of the family; but, unlefs to drink, he never moves from the fire-fide, till obliged to come to table, or wait on his acquaintance. The only domestic fervice they do, is to plough their chacarita, or little fpot of land, in order to its being fown; but the latter, together with the reft of the culture, makes another part, which is also done by the will and children. When they are once fettled in the above pofture, no reward can make them ftir; fo that if a traveller has loft his way, and happens to come to any of thefe cottages, they hide themfelves, and charge their wives to fay that they are not at home; when the whole labour confifts in accompanying the traveller a quarter of a league, or perhaps lefs, to put him in his way : and for this fmall fervice he would get a rial, or half a rial at leaft. Should the paffenger alight and enter the cottage, the Indian would still be fafe; for, having no light but what comes through a hole in the door, he could not be discovered : and even if he should see the Indian, neither entreaties nor offers would prevail on the flothful wretch to ftir a ftep with him : and it is the fame if they are to be employed in any other bufinefs.

That the Indians may perform the works appointed by their mafters, and for which they are properly paid, it will be of little fignification to fhew them their tafk; the mafter muft have his eye continually upon them: for whenever he turns his back, the Indian immediately leaves off working. The only thing in which they flew a lively fenfation and alacrity, is for parties of pleafure, rejoicings, entertainments, and efpecially dancings. But in all thefe the liquor muft circulate brifkly, which feems to be their fupreme enjoyment. With this they begin the day, and continue drinking till they are entirely deprived both of fenfe and motion.

Such

Such is their propenfity to intemperance, that they are not reftrained by any dignity of character; the cacique and the alcalde never fail to be of the company at all entertainments, and drink like the reft, till the chicha has quite overcome them. It is worth notice, that the Indian women, whether maids or married, and alfo the young men before they are of an age to contract matrimony, entirely abftain from this vice; it being a maxim among them, that drunkennefs is only the privilege of mafters of families, as being perfons who, when they are unable to take care of themfelves, have others to take care of them.

Their manner of celebrating any folemnity is too fingular to be omitted: the perfon who gives the entertainment invites all his acquaintance, and provides chicha fufficient for the number of his guests, at the rate of a jug for each; and this jug holds about two gallons. In the court of the houfe, if it be a large town, or before the cottage, if in a village, a table is placed, and covered with a tucuyo carpet, only used on fuch festivities. The eatables confift wholly of camcha, and fome wild herbs boiled. When the guefts meet, one or two leaves of these herbs, with ten or twelve grains of camcha, finish the repart. Immediately the women prefent themfelves with calabafhes or round totumos, called pilches, full of chica, for their hufbands; and repeat it till their fpirits are raifed : then one of them plays on a pipe and tabor, whilf others dance, as they call it, though it is no more than moving confuledly from one fide to the other, without measure or order. Some of the beft voices among the Indian women fing in their own language. Thus their mirth continues while kept up by the liquor, which, as I have faid before, is the foul of all their meetings. Another odd circumstance is, that those who do not dance, fquat themfelves down in their ufual pofture, till it comes to their turn. The table ferves only for flate, there being nothing on it to eat, nor do the guefts fit down When tired with intemperance, they all lie down together, without minding at it. whether near the wife of another, or their own fifter, daughter, or more diftant relation; fo fhocking are the exceffes to which they give themfelves up on thefe folemnities, which are fometimes continued three or four days, till the priefts find themfelves obliged to go in perfon, throw away all the chica, and difperfe the Indians, left they fhould buy more.

The day after the feftival is called Concho, which fignifies the day for drinking off the remains of the preceding: with thefe they begin; and if not fufficient to complete their revel, every one of the guefts runs home to his houfe, and fetches a jug, or they club for more. This occafions a new concho for the next day; and thus, if left to themfelves, from day to day, till either no more chica is to be had, or they left without money or credit.

Their burials are likewife folemnized with exceflive drinking. The houfe of mourning is filled with jugs of chica; and not for the folace of the mourners and their vifitors alone: the latter go out into the ftreets, and invite all of their nation who happen to pass by, whether married or fingle of both fexes, to come in and drink to the honour of the deceased; and to this invitation they will take no denial. The ceremony lasts four or five days, and fometimes more, ftrong liquor being their fupreme wish, and the great object of all their labours.

If the Indians are thus exceffively addicted to intemperance, gaming is a fault with which they cannot be charged, though thefe two vices are generally feen together. They feem to have no manner of inclination for play; nor have they above one kind, and that of great antiquity, among them; this they call pafa, i. e. a hundred, as he wins who first gets that number. They play at it with two instruments; one a spread eagle of wood with ten holes on each fide, being tens, and are marked with pegs,

518

to denote every man's gettings; the other is a bone in the manner of a die, cut with feven faces, one of which has a particular mark, and is called guayro. The other five tell according to the number of them, and the laft is a blank. The way of playing is only to tofs up the bone; and the marks on the upper furface are fo many got. But the guayro goes for ten; and the like number is loft if the blank fide appears. Though this game is peculiar to the Indians, it is very little ufed except at their revels.

The common food of the Indians, as before obferved, is maize made into camcha or mote, and machca; the manner of preparing the latter is, to roaft the grain, and then reduce it to a flour; and this, without any other apparatus or ingredient, they eat by fpoonfuls: two or three of which, and a draught of chicha, or, when that is wanting, of water, completes their repaft. When they fet out on a journey, their whole viaticum is a little bag, which they call gucrita, full of this meal, and a fpoon. And this fuffices for a journey of fifty or a hundred leagues. When hungry, or fatigued, they ftop at fome place where chicha is to be had, or at fome water; where, after taking a fpoonful of their meal into their mouth, they keep it fome time, in order the more eafily to fwallow it; and with two or three fuch fpoonfuls, well diluted with chicha, or, if that is not to be had, with water, they fet forward as cheerfully as if rifen from a feaft.

Their habitations, as may be imagined, are very fmall; confifting of a little cottage, in the middle of which is their fire-place. Here both they, and the animals they breed, live promifcuoufly. They have a particular fondnefs for dogs; and never are without three or four little curs in their hut: a hog or two, a little poultry, and cuyes, with fome earthen ware, as pots and jugs, and the cotton which their wives fpin, conflitute the whole inventory of an Indian's effects. Their beds confift of two or three fheepfkins, without pillows or any thing elfe; and on thefe they fleep in their ufual fquatting pofture: and as they never undrefs, appear always in the fame garb.

Though the Indian women breed fowl and other domeftic animals in their cottages, they never eat them: and even conceive fuch a fondnefs for them that they will not even fell them, much lefs kill them with their own hands; fo that if a ftranger, who is obliged to pafs the night in one of their cottages, offers ever fo much money for a fowl, they refufe to part with it, and he finds himfelf under the neceffity of killing the fowl himfelf. At this his landlady fhrieks, diffolves in tears, and wrings her hands, as if it had been an only fon; till, feeing the mifchief paft remedy, fhe wipes her eyes, and quietly takes what the traveller offers her.

Many of them in their journeys take their whole family with them; the women carrying on their fhoulders fuch children as are unable to walk. The cottages in the mean time are flut up; and there being no furniture to lofe, a ftring, or thong of leather, ferves for a lock: their animals, if the journey is to laft for feveral days, they carry to the cottage of fome neighbour or acquaintance: if otherwife, their curs are left guardians of the whole; and thefe difcharge their truft with fuch care, that they will fly at any one, except their mafters, who offers to come near the cottage. And here it is worth obferving, that dogs bred by Spaniards and Meftizos have fuch a hatred to the Indians, that, if one of them approaches a houfe where he is not very well known, they fall upon him, and, if not called off, tear him to pieces: on the other hand, the dogs of Indian breed are animated with the fame rage againft the Spaniards and Meftizos; and, like the former, fcent them at a diffance.

The Indians, except those brought up in cities or towns, fpeak no language but their own, called Quichua, which was established by the Yncas, with an order for its being propagated all over the vast empire, that all their subjects might be able to understand each other; and therefore was diffinguished by the name of the Yncas language. Some underftand the Spanish, and speak it; yet very few have the good-nature to answer in it, though they know, at the fame time, that the perfon with whom they are conversing cannot understand them in Quichua. Nor is it of any confequence to defire and prefs them to explain themselves in Spanish, for this they absolutely refuse: whereas it is quite otherwise with the Indians born and bred in the towns; for, if spoken to in their own language, they are fure to answer in the Spanish.

Superstition is general among them; and they all, more or lefs, pretend to fortunetelling. This weakness is also of a long standing among them; and which neither the remonstrances of the priests, nor their own experience, can radically cure. Thus they employ artifices, fuppoled charms, and strange compositions, in order to obtain some vifionary happiness for the fuccess of a favourite scheme, or other weighty concern. In these prestiges their minds are so infatuated, that, to bring them to a fight of the folly and wickedness of fuch practices, and folidly to embrace the Christian religion, is a work of the greatest difficulty. And even when they have embraced it, are fo fuperficial and fickle, that, if they attend divine fervice on Sundays and holidays, it is merely from fear of punifhment; for otherwife there would be fcarce one Indian, especially of the meaner fort, among the whole congregation. Pertinent to this, I shall relate, among many other inftances, the following flory, told me by a prieft. An Indian had, for fome time, abfented himfelf from the fervice of the church; and the prieft being informed that it was owing to his drinking early in the morning, on the following Sunday, when he had been particularly ordered to make his appearance, charged him with his fault, and directed that he fhould receive fome lafhes, the ufual punifhment of fuch delinquents, be their age or fex what it will, and perhaps the beft adapted to their flupidity. After undergoing the punifhment, he turned about to the prieft, and thanked him for having chaftifed him according to his deferts; to which the prieft replied with fome words of exhortation to him, and the audience in general, that they would never omit any duty of Christianity. But he had no fooner done, than the poor Indian stepped up to him, and defired that he would order him a like number of lafhes for the next Sunday, having made an appointment for a drinking match, fo that he should not be prefent. This may ferve as a fpecimen of the little impreffion made on them, notwithftanding all the affiduity of the miffionaries; and that though continually inftructed, from the first dawnings of reason till the day of their death, they are found to continue in a strange ignorance of the most effential points of religion. Their indifference here is fo very deplorable, that they may be faid to give themfelves no more concern about their fouls than about their bodies, and though I with pleafure allow, that there are many who, in the culture of their minds, fanctity of manners, and delicacy of confcience, equal the most wife and circumspect; yet the bulk of them, either by that grofs ignorance which clouds their intellects, and renders them infenfible of their eternal concerns, or their natural depravity, are hardened against religious exhortations. For though they readily grant every thing that is faid to them, and never offer to make the leaft objection; yet they fecretly harbour fufpicions of fome evil defign, and leave room for mental refervations, which fpoil all. I am little inclined to lay any falfe charge to this or any nation, and efpecially with regard to fuch an important fubject : and in confirmation of what I have faid, fhall relate fome further particulars.

Every Sunday in the year, the doctrinal priefts inftruct their parifh in the articles of Chriftianity with indefatigable zeal: alfo, when any Indian is fick, they never fail to vifit and exhort him to prepare for a comfortable paffage into eternity, adding whatever they judge may conduce to the opening the eyes of his understanding; pathetically expatiating on the juffice and mercy of God, the nature of death, the certainty of an approaching approaching judgment, and his prefent danger. After fpeaking thus a confiderable time, without a word from the patient, or the leaft fign of emotion in his countenance, the good man proceeds to remind him of his fins, and exhorts him to a fincere repentance, and to implore the mercy of his Creator; as otherwife, his foul will be punifhed to all eternity. The Indian at length anfwers, with a ferene faintnefs, "So it will be, father :" meaning, that things will happen as he has predicted; but does not underftand in what thefe threatened fufferings confift. I have often heard priefts of thofe towns, and men of parts and learning, talk with great concern on this fubject. Hence it is that there are very few Indians to whom the holy eucharift is adminifered; nor would thofe of the houfe, where a fick perfon lies, ever give notice of it to the prieft, were they not afraid of the punifhment which the law in thefe cafes inflicts; and even as it is, they often neglect this duty, and the patient dies without receiving the facrament.

In their marriages, they run counter to the fentiments of all nations, efteeming what others deteft; a virgin being never the object of their choice: for they look on it as a fure fign, that she who has not been known to others, can have nothing pleafing about her.

After a young man has afked the object of his affections of her father, and obtained his confent, they immediately begin to live together as man and wife, and affift the father-in-law in cultivating his chacara. At the end of three or four months, and often of a year, he leaves his bride, without ceremony, and perhaps for the wild reafon above mentioned : and even expoftulates with the father-in-law, that he fhould endeavour to deceive him, by impofing upon him his daughter, whom nobody elfe had thought worthy of making his bedfellow. But if nothing of this happens, after paffing three or four months in this commerce, which they call Amanarfe, i. e. to habituate one's felf, they then marry: and this cuftom is still very common, having hitherto proved too ftrong for the joint endeavours of the whole body of the clergy to extirpate. Accordingly, the first question at the ceremony of marriage is, whether they are Amannados, in order to abfolve them of that fin before they receive the nuptial benediction. They look upon no marriage to be legal which is not folemn, and according to them the whole confifts in the nuptial benediction, which must be given them at the time they join their hands, as otherwife, on any caprice, they feparate: and it is to no purpose to go about to perfuade them that they were married; nor will any punifhment have the least effect. For as it does not imply any infamy, the intention is loft. It is the fame thing with them to be exposed to the public derifion and infults, as to be ordered to fhew their skill in dancing on a festival; the thing which, of all others, they most delight in. They are indeed fensible of corporal punishments during the time they are inflicting, but immediately afterwards are as placid and eafy as if they had not been touched. This occasions many things to be connived at in them, and other means of prevention ufed.

It is not uncommon among them to change their wives, without any other preliminary or agreement, than having been familiar with the wife of another. The former wife, together with the injured hufband, concert a revenge; and if reproached for fuch a proceeding, they cheerfully anfwer, that they had ferved them only as they deferved; and it avails little to feparate them, as they foon find means to return to the fame manner of living. Incefts are very common among them, both as the confequence of their monftrous drunkennefs, already mentioned, and from their making no diffinction between honour and infamy, whereby their brutal appetites are under no reftraint.

VOL. XIV.

3 X

If the foregoing tempers or cuftoms appear ftrange, their behaviour at confession is not lefs fo : for, befides having but a flender acquaintance with the Spanish language. they have no form to direct them in it. On their coming to the confession, which is always at his fummons, he is obliged to inftruct them in what they are going about, and with them repeat the Confiteor from one end to the other. For if he ftops, the Indian alfo remains filent. Having gone through this, it is not enough for the prieft to afk him, whether he has committed this or that fault; but if it be one of the common fort. he must affirm that he has committed it, otherwife the Indian would deny every thing. The priest further is obliged to tell him, that he well knows he has committed the fin, and he has proofs of it. Then the Indian, being thus pressed, answers, with great aftonifhment, that it is fo : and, imagining the prieft really endued with fome fuper. natural knowledge, adds circumftances which had not been afked him. It is not only difficult to bring them to declare their faults, but even to keep them from denying them, though publicly committed, and equally to to prevail on them to determine the number; this being only to be obtained by fineffes; and then little ftrefs is to be laid on what they fay. The natural dread, which more or lefs rifes in all men at the approach of death, is what the Indians are lefs fufceptible of than any other people. Their contempt of those evils which make the ftrongest impressions on the minds of men, is fuch, that they view the approach of death without perturbation : and the pain of the diftemper affects them more than the danger of it. This I have often heard from feveral of the priefts : and their words are confirmed by daily inflances. For when the priefts perform the laft offices to dying perfons, their answers are delivered with that composite and ferenity, as leave no doubt but the inward ftate of their mind corresponds with thefe external appearances, being the principle and caufe of them. The like is even feen in those whom their crimes have brought to die by the hands of justice; and among many other examples, I happened myfelf to be an eye-witnefs of one. Whilft I was at Quito, two malefactors were to be executed; one a Meftizo or Mulatto, and the other an Indian: both having been brought into the prifon-chapel, I went to fee them the night before the execution. The former was attended by feveral priefts, who, in Spanifh, exhorted him to die like a Christian, and shew a becoming fervour in his love to God, faith, and contrition, and a deteftation for the crimes he had committed. On which, his afpect and whole deportment flewed a fenfe of his condition. The Indian had alfo ecclefialtics about him, performing, in his own language, the like kind offices. But to all appearance he was lefs concerned even than those about him, and feemed rather to be tilling a chacura, or tending a herd, than on the eve of eternity. His appetite was fo far from leaving him, as was the cafe of his companion, that he was more eager, and after difpatching his own, would have cleared his fellow fufferer's plate; fo that they were obliged to use fome force to prevent his eating to excess on fuch an exigency. He talked to the fpectators with that eafe and tranquillity, as if only going to take a fhort journey. He answered to the exhortations without the least confusion: when he was ordered to kneel, he did fo. The prayers and acts of devotion he alfo repeated word for word; but all the time rolling his eyes about, like a fportive child, whofe weak age is diverted by trifling objects. Thus he behaved till brought to the gibbet, where his companion had been carried before him : nor did he fhew the leaft alteration even in the awful moment. And this, to a civilized European fo ftrange, is no more than what is common among the Indians of thefe parts. .

This indifference with regard to death, or intrepidity, if we may term it fo, fhews itfelf upon many other occasions, particularly in the alacrity and resolution with which they face themfelves before a bull, with no other view than for the bull to run full at

him,

- 3

him, and tofs him fo high in the air, that any other than an Indian would be killed by the fall. He however rifes without receiving any hurt, and is highly delighted with the victory, as he calls it, over the bull; though the victory feems to lie on the bull's fide. When they fight in a body against others, they fall on, without any regard to fuperiority of numbers, or who drops, or is wounded of their party. An action which in a civilized nation is counted the height of courage, is here merely the effect of barbarifm and want of thought. They are very dextrous in haltering a bull at full fpeed; and, as they fear no danger, attack him with what we fhould call great temerity. With the fame dexterity they hunt bears: and a fingle Indian, with only a horfe and his noofe, never fails of getting the better of all the cunning and rage of this furious animal. This noofe is made of cow hide, fo thin as not to be feized by the beaft's paws, and yet fo ftrong as not to be broken by the ftruggles of the creature. On perceiving the bear, they immediately make towards him, whilft he fets up in order to feize the horfe. But the Indian being come within a proper diffance, throws the noofe about the creature's neck : then, with furprifing celerity having taken two or three turns with the other end about the faddle, claps fpurs to his horfe : in the mean time the bear, unable to keep pace with the horfe, and ftruggling to clear himfelf of the noofe, is choaked. This is confidered as an achievement of admirable dexterity and bravery; and may be frequently feen in the province of Alaufi, near the eaftern Cordillera, where thefe animals abound.

A great part of the rufficity in the minds of the Indians mult be imputed to the want of culture; for they, who in fome parts have enjoyed that advantage, are found to be no lefs rational than other men; and if they do not attain to all the politenefs of civilized nations, they at leaft think properly. The Indians of the miffion of Paraguay are, among others, remarkable inftances of this; where, by the zeal, addrefs, and exemplary piety of the Jesuits, a regular well-governed republic of rational men has been eftablished : and the people, from an ambulatory and favage manner of living, have been reduced to order, reafon, and religion. One of the most effectual means for this was, the fetting up fchools for inftructing the young Indians in Spanish, in which they alfo inftruct their converts; and those who are observed to be of a fuitable genius, are taught Latin. In all the villages of the miffions are fchools for learning, not only to read and write, but alfo mechanic trades; and the artificers here are not inferior to those of Europe. These Indians, in their customs and intellects, are a different fort of people from those before mentioned. They have a knowledge of things; a clear difcernment of the turpitude of vice, and the amiableness of virtue; and act up to these fentiments: not that they have any natural advantage over the other: for I have observed throughout this whole kingdom, that the Indians of its feveral provinces through which I travelled are alike. And those of Quito are not more deficient in their understandings, than those of Valles or Lima : nor are these more acute or fagacious than the natives of Chili and Arauco.

Without going out of the province of Quito, we have a general inftance in confirmation of what I have advanced. For all the Indians brought up to the Spanish language are far more acute and fensible than those who have spent their lives in little villages; and their behaviour more conformable to the dictates of a rational creature. They are men of abilities and skill, and have divested themselves of many of their errors. Whence they are called Ladinos, i. e. knowing men; and if they retain any of the culpable practices of the former, it is from the infection of intercourse, or from a mission notion that they should keep them up as transmitted to them from their ancestors. Among these are chiefly diftinguished the barber-furgeons, who bleed with fuch dexte-

3 X 2

523

rity, that in the opinion of Monf. de Juffieu and Monf. Seniergues, furgeons to the French academists, they equal the most famous in Europe; and their intercourse with perfons of a liberal education enlightens their understanding, fo that they diftinguish themfelves to great advantage among their countrymen. It feems to me unquestionable, that if in villages care was taken to instruct the Indians in Spanish, conformable to the laws of the Indies, befides other acquirements, this people would have the benefit of converfing more frequently with the Spaniards, which would greatly improve their reafon, and give them a knowledge of many things for which they have no word in their language. Accordingly it is obferved that the Cholos (a name given to the Indian boys) becoming acquainted with the Spanish language, improve fo much in knowledge, that they look on their countrymen as favages, and take upon themfelves the appellation of Ladinos.

I am very far from imagining that the Spanish language itself has the virtue of improving the intellects of the Indians; but only, that rational conversation with the Spaniards would lead them to a knowledge of many things: and confequently they might be brought to a greater purity of faith and practice. Whereas the convertation among themselves must be very low and confined: and what they have with the Spanish traders who understand their language, turns wholly on traffick. But if they understood the Spanish, they would daily receive new lights by conversing with travellers whom they attend, as well as from the inhabitants of the cities, their mafters, the priefts, the corregidors, and others; and thus become more industrious and tractable, and acquainted with the nature of things of which before they had not fo much as an idea.

Are not the differences and advantages evident among ourfelves, betwixt a young man whofe flock of learning is his natural language, and him who is acquainted with others? What a fuperiority of knowledge, difcernment, and facility in the latter! Hence we may form fome idea of the abject flate of the human mind among rude country people, who cannot exchange a word with a ftranger, and never ftir out of their village: whereas, when any one happens to go to a neighbouring town, he returns home with enlarged knowledge, and entertains all the village with his narratives : but if he had not underftood the language spoken in it, he would have been little the better, nor able to relate the ftrange things he faw and heard. This is the very cafe of the Indians; and I am of opinion, that to teach them the Spanish tongue would be the beft means of improving their reason, and confequently of making them better members of fociety : and that my fuperiors thought fo, appears from the ordinances relating to America.

The Indians in general are robuft, and of a good conftitution. And though the venereal diftemper is fo common in this country, it is feldom known among them: the principal caufe of which unquestionably lies in the quality of the juices of their body not being fusceptible of the venom of this diftemper. Many however attribute it to a quality in the chicha, their common drink. The difeafe which makes the greatest havock among them is the fmall-pox: which is fo fatal that few efcape it. Accordingly it is looked upon in this country as a peftilence. This diffemper is not continual as in other nations, feven or eight years, or more, paffing without its being heard of; but when it prevails, towns and villages are foon thinned of their inhabitants. This defolation is owing partly to the malignity of the difeafe, and partly to the want of phyficians and nurses. Accordingly, on being feized with this diftemper, they immediately fend for the priest to confess; and die for want of remedy and relief. The like happens in all other diffempers; and were they frequent, would be equally fatal, thele thefe poor creatures dying for want of proper treatment and affiftance; as is evident from the Creoles, who are alfo attacked by the diftempers of the country. Some of the latter indeed die as well as of the former; but many more recover, having attendance and a proper diet: whereas the Indians are in want of every thing. What their houfes and apparel are, has already been feen. Their bed is the fame in health and ficknefs; and all the change in their food is in the manner of taking ic, not in the fpecies itfelf: for, however ill they may be, all they have is a fmall draught of machca diffolved in chicha; fo that, if any one does get the better of a diftemper, it is more owing to the happinefs of his conftitution, than any relief he receives.

They are also fubject to the bicho, or mal del valle; but this is foon cured. Sometimes, though feldom, they are also feized with tabardillos, or spotted fevers, for which they have an expeditious but fingular cure. They lay the patient near the fire, on the two sheep-skins which compose his bed; and close by him place a jug of chicha. The heat of the fever, and that of the fire increasing the other, cause in him such a thirst, that he is incessfully drinking; whereby the eruptions are augmented, and the next morning he is either in a fair way of recovery, or so bad as to be carried off in a day or two.

They who either efcape, or recover from, thefe diftempers, reach to an advanced age; and both fexes afford many inftances of remarkable longevity. I myfelf have known feveral, who, at the age of a hundred, were ftill robuft and active; which unqueftionably muft, in fome meafure, be attributed to the conftant famenefs and fimplicity of their food. But I muft obferve, that, befides the different kinds already mentioned, they alfo eat a great deal of falt with agi, gathering the pods of it; and having put fome falt in the mouth, they bite the agi, and afterwards eat fome machca or camcha: and thus they continue taking one after another, till they are fatisfied. They are fo fond of falt in this manner of eating it, that they prefer a pod or two of agi with fome falt to any other food.

After this account of the genius, cuftoms, and qualities of the Indians, it will not be improper to fpeak a word or two of their diversions and occupations, premifing, that this account does not extend to fuch Indians as live in cities and towns, or that occupy any public office or trade, they being looked upon as ufeful to the public, and live independently. Others in the kingdom of Quito are employed in the manufactories, the plantations, or in breeding of cattle. In order to this, the villages are annually to furnish those places with a number of Indians, to whom their master pays wages as fettled by the equity of the King: and at the end of the year they return to their villages, and are replaced by others. This repartition is called Mita. And though these alterations should by order take place in the manufactories, yet it is not fo: for being occupations of which none are capable but fuch as have been properly trained up, the Indian families, which are admitted, fettle there, and the fons are inftructed in weaving, from one generation to another. The earnings of thefe are larger than those of the other Indians, as their trade requires greater skill and capacity. Besides the yearly wages paid them by those whom they ferve, they have also a quantity of land, and cattle given them to improve. They live in cottages built near the manfionhouse, fo that every one of these forms a kind of village; some of which consist of above an hundred and fifty families.

CHAP. VII. — An hiftorical Account of the most remarkable Mountains and Paramos, or Deferts, in the Cordilleras of the Andes; the Rivers which have their Sources in these Mountains, and the Methods of passing them.

I NOW come to the most remarkable paramos, or deferts, of the kingdom of Quito, and the rivers flowing through that country, which, among many other natural curiofities, is peculiarly remarkable for the disposition of the ground, and its prodigious maffes of fnow, that exceed all comparison.

It has been before obferved, that all the dependencies of the jurifdictions of this province are fituated betwixt the two Cordilleras of the Andes; and that the air is more or lefs cold according to the height of the mountains, and the ground more or lefs arid. Thefe arid tracts are called Paramos, or deferts; for though all the Cordilleras are dry or arid, fome of them are much more fo than others; for the continual fnows and froft render them abfolutely uninhabitable, even by the beafts; nor is there a fingle plant to be found upon them.

Some of these mountains, seemingly as it were founded on others, rife to a most astonishing height, and are covered with snow even to their summits. The latter we shall more particularly treat of, as they are the most remarkable and curious objects.

The paramo of Afuay, formed by the junction of the two Cordilleras, is not of this clafs; for, though remarkable for its exceflive coldnefs and aridity, its height does not exceed that of the Cordilleras in general, and is much lower than that of Pichincha and Corazon. Its height is the degree of the climate, where a continual congelation or freezing commences; and as the mountains exceed this height, fo are they perpetually covered with ice and fnow; that from a determined point above Carabucu for inftance, or the furface of the fea, the congelation is found at the fame height in all the mountains. From barometrical experiments made at Pucaguayco, on the mountain Cotopaxi, the height of the mercury was 16 inches $5\frac{1}{8}$ lines; whence we determined the height of that place to be 102; toifes above the plain of Carabucu, and that of the latter above the fuperficies of the fea about 1268. Thus the height of Pucaguayco, above the furface of the fea, is 2291 toifes. The fignal which we placed on this mountain was thirty or forty toifes above the ice, or point of continual congelation; and the perpendicular height from the commencement of this point to the fummit of the mountain, we found, from fome geometrical obfervations made for that purpofe, to be about 880 toifes. Thus the fummit of Cotopaxi is elevated 3126 toifes above the furface of the fea, or fomething above three geographical miles; and 639 toifes higher than the top of Pichincha. These are mountains I intend to speak of; and the height of them all, confidering the greatness of it, may be faid to be nearly equal.

In thefe Cordilleras, the most fouthern mountain is that of Mecas, more properly called Sanguay, though in this country better known by the former, lying in the jurifdiction of the fame name. It is of a prodigious height, and the far greateft part of the whole furface covered with fnow. From its fummit iffues a continual fire, attended with explosions, which are plainly heard at Pintac, a village belonging to the jurifdiction of Quito, and near forty leagues distant from the mountain; and, when the wind is fair, the noife is heard even at Quito itfelf. The country adjacent to this volcano is totally barren, being covered with cinders ejected by it. In this Pacamo, the river Sangay has its fource. This river cannot be faid to be fmall, but after its junction with another, called the Upano, forms the Payra, a large river which discharges itfelf into the Maranon. In the fame eaftern Cordillera, about fix leagues welt of the town of Riobamba, is a very high mountain, with two crefts, and both of them covered with fnow; that on the north is called Collanes, and that on the fouth Altar; but the fpace covered with fnow is much lefs than that of Sangay and others of this clafs, its height being proportionally lefs.

North of the fame town, and about feven leagues diftant, is the mountain of Tunguragua, of a conical figure, and equally fteep on all fides. The ground, at its bafis, is fomething lower than that of the Cordillera, efpecially on the north fide, where it feems to rife from the plain on which the villages are fituated. On this fide, in a finall plain betwixt its fkirts and the Cordillera, has been built the village of Bannos, fo called from its hot medicinal baths, to which there is a great refort from all parts of this jurifdiction. South of Cuenca, and not far from another village, called Bannos alfo, belonging to this jurifdiction, are other hot waters on the fummit of an eminence, gufhing out through feveral apertures of four or five inches diameter, and of a heat which hardens eggs fooner than water boiling over the fire. Thefe feveral ftreams unite and form a rivulet, the ftones and banks of which are tinged with yellow, and the water is of a brackifh tafte. The upper part of this finall eminence is full of crevices, through which iffues a continual fmoke : a fufficient indication of its containing great quantities of fulphurous and nitrous fubftances.

North of Riobamba, inclining fome degrees to the weft, is the mountain of Chimborazo, by the fide of which lies the road from Quito to Guayaquil. At first great numbers of the Spaniards perished in passing the valt and dangerous deferts on its declivity; but being at prefent better acquainted with them, and inured to the climate, fuch misfortunes are feldom heard of; especially as very few take this road, unless there is the greatest appearance of two or three days of calm and ferene weather.

North of this mountain stands that of Carguayrafo, which has been already taken notice of.

North of Latacunga, and about five leagues diftant from it, is Cotopaxi, which, towards the north-weft and fouth, extends itfelf beyond all the others; and which, as I have before obferved, became a volcano at the time of the Spaniards first arrival in this country. In 1743, a new eruption happened, having been fome days preceded by a continual rumbling in its bowels. An aperture was made in its fummit, and three about the fame height near the middle of its declivity, at that time buried under prodigious maffes of fnow. The ignited fubftances ejected on that occafion, mixed with a prodigious quantity of ice and fnow, melting amidft the flames, were carried down with fuch aftonifhing rapidity, that in an inftant the plain, from Callo to Latacunga, was overflowed; and, befides its ravages in bearing down houfes of the Indians and other poor inhabitants, great numbers of people loft their lives. The river of Latacunga was the channel of this terrible flood, till, being too fmall for receiving fuch a prodigious current, it overflowed the adjacent country like a vaft lake near the town, and carried away all the buildings within its reach. The inhabitants retired to a fpot of higher ground behind their town, of which those parts which flood within the limits of the current were totally deftroyed. The dread of still greater devastations did not fubfide in three days, during which the volcano ejected cinders, while torrents of melted ice and fnow poured down its fides. The fire lafted feveral days, and was accompanied with terrible roarings of the wind rufhing through the volcano, and greatly exceeded the great rumblings before heard in its bowels. At laft all was quiet, neither fire nor fmoke were feen, nor was there any noife to be heard till the following year, 1744; when, in the month of May, the flames increased, and forced their paffage

paffage through feveral other parts on the fides of the mountain; fo that in clear nights, the flames being reflected by the transparent ice, formed a very grand and beautiful illumination. November the 30th, it ejected fuch prodigious quantities of fire and ignited fubftances, that an inundation equal to the former foon enfued; fo that the inhabitants of Latacunga gave themfelves over for loft. And we ought to acknowledge the Divine protection, that it did not rage when we visited it, having occasion twice to continue fome time on its declivity, as we have already shewn in the third enapter of the fifth book.

Five leagues to the weft of this mountain ftands that of Illinifa, whofe fummit is alfo bifid, and conftantly covered with fnow. From it feveral rivulets derive their fource; of which those flowing from the northern declivity continue that direction: as those from the fouthern fide alfo run fouthward. The latter pay their tribute to the northern ocean, through the large river of the Amazons; while the former difcharge themfelves into the South Sea, by the river of Emeralds.

North of Cotopaxi is another fnowy mountain called Chinculagua, fomething lefs than the former, though even that is not to be compared to the others.

The mountain of Cayamburo, which is one of the first magnitude, lies north, fome degrees easterly, from Quito, at the distance of about eleven leagues from that city. There is neither appearance nor tradition of its having ever been a volcano. Several rivers iffue from it, of which those from the west and north run either into the river of Emeralds or that of Mira, but all fall into the South Sea; while these from the east discharge themselves into the river of the Amazons.

Befides the torrents which precipitate themfelves from the fnowy mountains, others have their fource in the lower parts of the Cordilleras, and at their conflux form very large and noble rivers, which either pay the tribute to the north or fouth feas, as we fhall hereafter obferve.

All the fprings iffuing from the mountains in the neighbourhood of Cuenca, on the weft and fouth fide as far as Talqui, with those of the eastern Cordillera, and northward as far as the Parama de Burgay, unite at about half a league eastward of a chapel called Jadan, under the care of the curate of Paute, where forming a river, and passing near the village from which it has its name, discharges itself into the river of the Amazons. It is fo deep at Paute as not to be fordable, though very wide there.

From the mountains of Afuay, Bueran, and the adjacent hills on the fouth, is formed a very confiderable river, over which are feveral bridges. It is called Cannar, from that town being the only one in its courfe; which it continues by Yocon to the bay of Guayaquil.

The north parts of the Paramo of Afuay alfo gave rife to many ftreams, which, uniting with others coming from Mount Senegaulap, and the weftern fide of the eaftern Cordillera, form the river Alaufi, which difcharges itfelf into the fame bay.

On the higheft part of the Paramo de Tioloma, and near the fignal one erected on this mountain for forming our feries of triangles, are four lakes, the three neareft it being lefs than the other, which is about half a league in length, and called Coley; and the others, which are not greatly inferior, Pichabinnac, Pubillu, and Mactallan. From thefe is formed the river Cebadas, which runs near the village of that name, and is joined by another arifing from the fprings on the Paramo of Lalangufo, and the ftreams from the Colta lake, after which, inclining a little from the north towards the eaft, paffes by Pungala; and about a league from the village of Puni, is joined by the river Bamba, which has its fource in the Parambo of Sifapongo. Near the town of Cobigies is another, which flows from the mountain of Chimborazo, and which which, after directing its courfe northward, till it is in an eaft and weft direction with the mountain of Tunguragua, it winds to the eaft, and adds its water to those of the river of the Amazons. At the town of Penipe, it is so deep and rapid as only to be croffed over a bridge made of bujucos. Also before it reaches the town of Los Bannos, it is increased by the rivers Latacunga and Bato, together with all the ftreams from both the Cordilleras, those from the fouthern fummit of Elenis, and the fouthern fide of Ruminavi and Cotopaxi.

The ftreams flowing from the north fummit of Elenifa, I have already mentioned to run northward; and with thefe all from the fame Cordillera unite, together with those iffuing from the north and west fides of the mountain Ruminavi, those of Pafuchua; and from this junction rifes the river Amaguanna. The two laft mountains ftand north and fouth from each other, in an intermediate fpace of the Cordilleras. From the north fide of Cotopaxi the Paramo of Chinchulagua, which is also covered with fnow, and the Cordillera de Guamani, other ftreams have their rife, and from their conflux is formed the river Ichubamba, which, running northward, joins the Amaguanna, a little to the north of Cono-Coto. Afterwards it receives the rivulets iffuing from the eaftern Cordillera, and changes its name to that of Guayllabamba. The waters which have their fource in the weftern part of Cayamburo, and the fouthern part of Moxanda, form another river called Pifque, which first runs towards the weft, and joining the Guayllabamba, takes the name of Alchipichi, which, a little to the north of St. Antonio, in the jurifdiction of Quito, is fo broad and rapid, that there is no paffing it but in a tarabita, which we fhall prefently defcribe. From hence it continues its courfe northwards, and at laft falls into the river of Emeralds.

The mountain of Majanda ftands in the interval between the Cordilleras; and though it has only one fide as it were, it is divided into two fummits, one eaftward and the other weftward; and from both these runs a small Cordillera, which, afterwards joining, inclose this valley.

From the fide of the mountain iffue two large torrents, which meet in the lake of St. Pablo: from whence flows a river, which, being joined by others from the fprings of the weftern Cordillera, form one ftream, and after being increased by another brook from the heights of Oezillo, give rife to the river which washes the town of St. Miguel de Ibarra; after which it takes the name of Mira, and discharges itself into the South Sea, a little to the north of the river of Emeralds.

When the rivers are too deep to be forded, bridges are made at the most frequented places. Of these there are two kinds besides those of stone, which are very few : the former of wood, which are the most common; and the latter of bujucos. With regard to the first, they choose a place where the river is very narrow, and has on each fide high rocks. They confift of only four long beams laid close together over the precipice, and form a path about a yard and a half in breadth, being just fufficient for a man to pass over on horseback; and custom has rendered these bridges to natural to them, that they pass them without any apprehension. The second, or those formed of bujucos, are only used where the breadth of the river will not admit of any beams to be laid across. In the construction of these, several bujucos are twisted together, so as to form a kind of large cable of the length required. Six of these are carried from one fide of the river to the other, two of which are confiderably higher than the other four. On the latter are laid flicks in a transverse direction, and, over these, branches of trees, as a flooring; the former are fastened to the four which form the bridge, and by that means ferve as rails for the fecurity of the paffenger, who would otherwife be in no small danger from the continual ofcillation. The bejuco bridges in this country are VOL. XIV. 3 X only

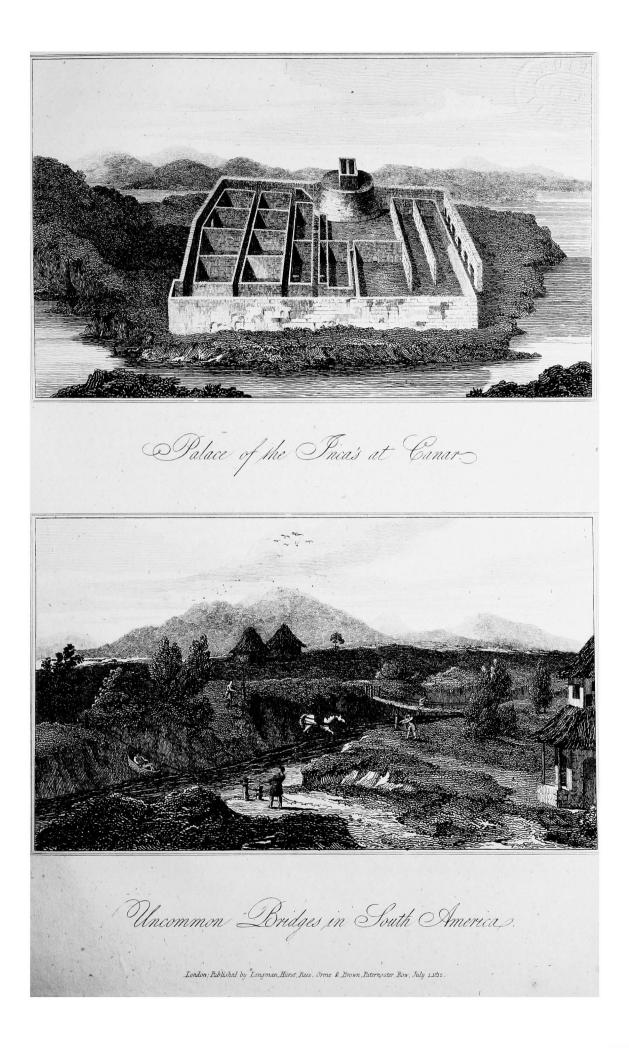

only for men, the nules fivin over the rivers; in order to which, when their loading is taken off, they are drove haro the water near half a longue above the bridge, that they may reach the opposite thore near it, the rapidity of the fiveau carrying them to great a diffance. In the mean time, the budians carry over the booling on their theulders. On fome rivers of Peru there are bejuen bridges to large, that droves of loaded mules path over them; particularly the river Apurimac, which is the thoroughfare of all the constance carried on between Lima, Cufco, La Plata, and other pasts to the fouthward.

Some rivers, initead of a bejue bridge, are paffed by means of a tarabita; as is the cafe with regard to that of Alchipichi. This machine ferves not only to carry over perfons and loade, but alk the bealts themselves, the rapidity of the litream, and the monthrous itones continually rolling along it, rendering it impracticable for them to fivin over.

The tarabita is only a tingle rope index or begue, or turning of an ox's hide, and confifting of feveral fillends, and about fix or eight inches in thickness. This rope is extended from one fide of the river to the other, failened on each bank to firong polls. On one fide is a kind of which, or which, to firaighten or flocken the tarabita to the degree required. From the tarabita hangs a kind of leathern hammock capable of holding a man; and is fulpended by a clue at each end. A rope is alfo failened to either clue, and extended to each fide of the river, for drawing the hammock to the fide intended. A path at its first fetting oil lends it quickly to the other fide.

For carrying over the scales, two tarabitas are necefility, one for each fide of the river, and the ropes are much thicker and flacker. On this rope is only one clue, which is of wood, and by which the beaft is fulfpended, being fecured with girts round the beliy, neck, and legs. When this is performed, the creature is flowed off, and immediately landed on the opposite fide. Such as are accuftomed to be carried over in this manner, never make the leaft motion, and even come of themfelves to have the girts faftened round them; but it is with great difficulty they are first brought to fusiler the girts to be put round their bodies, and when they find themfelves fulfpended, kick and fling, during their flort paffage, in a most terrible manner. The river of Alchipichi may well excite terror in a young traveller, being between thirty and forty fathoms from flore to flore; and its perpendicular height, above the furface of the water, twenty-five fathoms.

The words of this country are fuitable to the bridges; for though there are large plains between Quito and the river Bamba, and the greateft part of the road between the river Bamba and Alaufi, and even to the north of that city, lies along the mountains, yet thefe are interrupted by fruitful breaches, the acclivities and declivities of which are not only of a great length and very troublefome, but alfo dangerous. In fome places there is a necellity for travelling along tracts on the declivities of mounrains, which are fometimes fo narrow as hardly to allow room for the feet of the beaft; part of its body, and that of the rider, being perpendicular over a torrent fifty or fixty fathoms beneath the road. So that certainly nothing but abidute neceffity, there being no other road, and long cultom, can get the better of that horror which mult affect the perfon at the fight of fuch imminent danger; and there are too many inflances of travellers lofing their effects, if not lives, their whole dependance being on the fure foot of the mule. This danger is indeed, in fome meafure, compenfated by the fecurity of the roads; fo that we fee here what none of the civilized nations can boalt of, namely, fingle perfons travelling, unarmed, with a great charge of gold and filver, but equally fafe as if firongly guarded If the traveller happens to be fatigued

in a defert, he lays him down, and fleeps without the least apprehension of danger. Or if he takes up his lodgings in a tambo, or inn, he fleeps with the fame fecurity, though the doors are always open : nor is he ever molefted on the road. This is a convenience fo favourable to commerce and intercourfe, that it were greatly to be wifhed the fame fecurity could be established in the other parts of the world.

CHAP. VIII. - Continuation of the Account of the Paramos, or Deferts; with an Account of the Beasts, Birds, and other Particulars of this Province.

TO conclude my obfervations on the Paramos, which it was neceffary to interrupt, in order to give a fhort account of the rivers, bridges, and roads, I fhall obferve, that thefe parts not being of a height fufficient to expose them to an eternal frost, they are covered with a kind of rufh refembling the genifta Hifpanica, but much more foft and flexible. It is about half or three quarters of a yard in height, and, when of its full magnitude, its colour is like that of dried genifta Hifpanica. But where the fnow remains fome time on the ground without melting, none of these plants growing in habitable climates are found. There are indeed others, though few, and even these never exceed a certain height. Above this tract, nothing is feen but stract and fand all the way up to the beginning of the ice.

In thefe parts, where the above rufh is the principal product, the foil is as little adapted to cultivation; but produces a tree, which the inhabitants call Quinual, the nature of which very well fuits the roughness of the climate. It is of middling height, tufted, and the timber ftrong; its leaf of a long, oval form, thick, and of a deep green Though it bears the fame name as the grain called Quinua, of which we have colour. fpoken elfewhere, and which grows in great plenty, the latter is not, however, the production of this tree; nor has the plant, on which it grows, any thing in common with it.

The climate proper for quinua is alfo adapted to the produce of a little plant, which the Indians call Palo de Luz. It is commonly about the height of two feet, confifting of ftalks which grow out of the ground, and proceed from the fame root. Thefe ftems are ftraight, and fmooth up to the top, from which grow little branches with very fmall leaves. All of thefe nearly rife to the fame height, except the outer ones, which are of a lefs fize: it is cut close to the ground, where it is about three lines in diameter; and being kindled whilft green, gives a light equal to that of a torch, and, with care taken to fnuff it, lafts till the whole plant is burnt.

In the fame place grows also the achupalla, confisting of feveral stalks, fomething refembling those of the fabilla; and as the new shoot up, the most outward grow old and dry, and form a kind of trunk, with a great number of horizontal leaves, hollow in the middle; and this, when not very large, is eatable like that of the palmitos.

Towards the extremity of the part where the rufh grows, and the cold begins to increafe, is found the vegetable called Puchugchu, with round leaves growing together fo as to reprefent a very fmooth bulb, having nothing in them but the roots: and as thefe increase, the outward case of leaves dilates into the form of a round loaf, usually a foot or two in height, and the fame in diameter : on this account, they are also called Loaves or Onions. When in their vigour, they are of fo hardy a nature, that a ftamp with a man's foot, or the tread of a mule, makes no impression on them; but when once fully ripe, they are eafily broken. In the middle ftate, betwixt the full ftrength of their refiftance and the decay of their roots by age, they have an elastic quality, yielding

3 Y 2

yielding with a tremulous motion to the preffure of the foot, and on its being taken off, recover their form.

In the places where the puchugchu thrives beft, alfo grows the canchalagua, the virtues of which are well known in Europe. The form of this is like a very thin rufh or ftraw; bears no leaves, but has a few fmall feeds at its extremity. It is medicinal, and particularly ufeful as a febrifuge; its tafte is bitter, which it eafily communicates either by infufion or decoction. In this country, it is chiefly ufed as a fweetener of the blood, though thought to be of a hot quality. It grows in great quantities, and is found both among the puchugchu, and in other parts on the heath, where the cold is lefs intenfe.

Another plant, not lefs valuable for its virtues, and growing chiefly in those dreadful deferts where, either from the feverity of the cold or perpetual fnows, or from the badnefs of the foil, nothing elfe is produced, is found the fo celebrated calaguala ; its height is about fix or eight inches, and naturally fpreads itfelf in thin ftems along the fand, or climbs up the rocks. Thefe branches, in their form, refemble the fibril of the roots of the other plants, being not above two or three lines in their greateft thicknefs, round, and full of little knots, where they bend round like the tendrils of a vine. They have a thin pellicle of a loofe texture, which of itfelf feparates when the plant dries. The most fingular virtue of this plant is for all kinds of imposthumes, internal or external, which it discuffes and heals in a very little time. The manner of adminiftering it is by decoction, of which a very little ferves; or, after bruifing it, to infufe it in wine, and take it fasting for three or four days, and no longer, its good effects in that time being ufually confpicuous; and being extremely hot, it might prove perni-cious, if taken in greater quantity than abfolutely neceffary; for which reason only, three or four pieces, each about an inch and a half in length, are used for the infusion, and with fuch fort of wine as will beft correct its bitternefs. Though this excellent herb grows in most of those frozen deserts, yet the best is that in the fouthern province of Peru. The leaves are very fmall, and the few it bears grow contiguous to the ftem.

The paramos, or barren heaths, likewife yield the contrayerva, which makes a part of the materia medica in Europe, and is confidered as an excellent alexipharmic. This is alfo a creeping plant, with a leaf, of about three or four inches in length, and a little more than one in breadth, thick, the back part of it exceeding foft to the touch, and of a deep green. The other fide is alfo fmooth, but of a light green. On its ftem grows a large bloffom, confifting of many flowers inclining to a violet colour : but neither thefe nor the other flowers, which grow in great abundance in thefe countries, according to its feveral climates, are much efteemed; fo that, when wanted, the readieft way is to fend and have them cut from the plant.

Though the feverity of the air on the deferts is fuch, that all animals cannot live there, yet they afford many beafts of venery, which feed on the ftraw or rufh peculiar to those parts; and fome of these creatures are met with on the highest mountains, where the cold is intolerable to the human species. Among the rufhes are bred great numbers of rabbits, and some foxes, both which, in their appearance and qualities, refemble those of Carthagena and other parts of the Indies.

The only birds known in those rigorous places are partridges, condors, and zumbadores or hummers. The partridges differ fomething from those of Europe; they nearly refemble the quail, and are very fcarce.

The condor is the largeft bird in thefe parts of the world; its colour and appearance refemble those of the galinazos, and fometimes it foars from the higheft mountains fo

532

as to be almost out of fight: and by its being feldom feen in low places, a fubtile air feems best to agree with it; though some, which have been tamed when young, live in the villages and plantations. Like the galinazos, they are extremely carnivorous, and are known frequently to seize and fly away with lambs that feed on the heaths: of this I happened to see an inflance, in my way down from the fignal of Lalanguso toward the plantation of Pul, lying near the bottom of those mountains. Observing, on a hill adjoining to that where I was, a flock of sheep in great confusion, I faw one of these condors flying upwards from it with a lamb betwixt its claws; and, when at some height, dropt it; then, following it, took it up, and let it fall a fecond time, when it winged its way out of fight, for fear of the Indians, who, at the cries of the boys and barkings of the dogs, were running towards the place.

In fome deferts this bird is common; and, as it preys on the flocks, the Indians are not wanting in their endeavours to catch them. One of the ways is, to kill a cow, or other beaft, when of no further ufe, and to rub the flefh with the juice of fome potent herbs, which they afterwards carry away: for otherwife the bird, fenfible of them by natural inftinct, would not touch the flefh. Further, to take off the fmell, they bury the flefh till it becomes putrid, and then expofe it; when the condors, allured by the fmell of the carcafe, haften and greedily feed on it, till the herbs operate fo as to render them quite fenfelefs and incapable of motion : the Indians feize the opportunity, and deftroy them. They likewife catch them with fprings laid near fome flefh : but fuch is the force of this bird, that, with a ftroke of its wing, it fometimes knocks down the man who approaches it. Their wing alfo ferves them as a fhield, by which they ward off blows, without receiving any hurt.

The zumbador, or hummer, is a night bird, peculiar to the mountainous deferts; and they are feldom feen, though frequently heard, both by the finging, and a ftrange humming made in the air by the rapidity of their flight, and which may be heard at the diftance of fifty toifes; and when near, is louder than that of a rocket. Their finging may indeed be called a kind of cry, refembling that of night-birds. In moonlight nights, when they more frequently make their appearance, we have often watched to fee their fize and the celerity of their motion; and though they paffed very near us, we never were able to form any idea of their magnitude; all that we could fee, was a white line which they formed in their flight through the air; and this was plainly perceivable, when at no great diffance. We promifed the Indians a reward if they would procure us one; but all they could do was to procure a young one, fcarce fledged, though it was then of the fize of a partridge, and all over fpeckled with dark and light brown; the bill was proportionate and ftrait; the aperture of the noftrils much larger than ufual, the tail fmall, and the wings of a proper fize for the body. According to our Indians, it is with the noftrils that it makes fuch a loud humming. This may, in fome measure, contribute to it; but the effect feems much too great for fuch an inftrument; especially as at the time of the humming it also uses its voice.

Among the valleys and plains formed by thefe mountains, are many marfhy places, occafioned by the great variety of fmall ftreams of water; and in thefe breed great numbers of a bird called Canclon, a name perfectly expressive of its manner of finging. It very much refembles the bandurria, though the species be different: it exceeds the bigness of a large goose, has a long thick neck, and a head something refembling that bird. The bill is straight and thick, and its legs and feet thick and strong. The outward feathers of the wing are of a dark brown, those of the infide of a pure white; but the other parts of the body spotted. At the meeting of the wings they have two spurs, projecting to the length of an inch and a half, as their defence. The male and female are infeparable, whether flying, or on the ground, where they mostly keep themfelves, felves, never taking flight except acrofs a valley, or when purfued. The flefh eats very well, after being kept three or four days to leffen its natural toughnefs. Thefe birds are alfo found in places lefs cold than the mountainous deferts; but here, indeed, they are fomething different, having on the forehead a kind of cartilaginous horn; but both thefe and the other fpecies have a creft on their head.

The gardens of all kinds in the villages are much frequented by a bird very remark. able both for its fmallnefs and the vivid colours of its feathers. It is generally called Picaflores, or flower-pecker, from its hovering over them, and fucking their juices without lacerating or fo much as difordering them. Its proper name is Quinde, though it is alfo known by those of Rabilargo and Silongero, and in England by that of humming-bird. Its whole body, with its plumage, does not exceed the bignefs of a middle-fized nutmeg; the tail is ufually near three times the length of the whole body, yet has but few feathers; its neck is fhort; the head proportioned, with a very brifk eye; the bill long and flender, white at the beginning and black at the end : the wings are also long and narrow. Most of the body is green, spotted with yellow and blue. Some are higher coloured than others; and all are variegated with ftreaks, as it were, of gold. Of this bird, alfo, there are various species, diffinguished by their fize and This is thought to be the fmallest of all known birds; the female lays but colours. two eggs at a time, and those no bigger than peas. They build in trees, and the coarfest materials of their nefts are the fineft ftraws they can pick up.

In the parts of this country, which are neither taken up by mountains nor forefts, only tame animals are met with; whence it is probable, that formerly its native fpecies were but very few; most of these having been introduced by the Spaniards, except the llama, to which the Indians added the name of runa, to denote an Indian fheep, that beaft being now underftood by the runa-llama; though, properly, llama is a general name importing beaft, in oppofition to the human fpecies. This animal, in feveral particulars, refembles the camel : as in the fhape of its neck, head, and fome other parts; but has no bunch, and is much fmaller; cloven-footed, and different in colour: for though moft of them are brown, fome are white, others black, and others of different colours : its pace refembles that of a camel, and its height equal to that of an afs betwixt an year and two The Indians use them as beafts of carriage; and they answer very well for any old. load under a hundred weight. They chiefly abound in the jurifdiction of Riobamba, there being fcarce an Indian who has not one for carrying on his little traffick from one village to another. Anciently the Indians used to eat the flesh of them, and still continue to make that use of those which are past labour. They fay there is no difference betwixt it and mutton, except that the former is fomething fweeter; it is a very docile creature, and eafily kept. Its whole defence is, to eject from its noftrils fome vifcofities, which is faid to give the itch to any on which they fall; fo that the Indians, who firmly believe this, are very cautious of provoking the llama.

In the fouthern provinces of Peru, namely, in Cufco, La Paz, La Plata, and the adjacent parts, are two other animals, not very different from the llama : thefe are the vicuna and the guanaco; the only difference between them being, that the vicuna is fomething fmaller, its wool fhorter and finer, and brown all over the body, except the belly, which is whitifh. The guanaco, on the contrary, is much larger, its wool long and harfh; but the fhape of both is pretty near alike. Thefe laft are of great fervice in the mines, carrying metals in fuch rugged roads as would be impracticable to any other beaft.

In the houfes is bred a creature called chucha; but in the other fouthern provinces it is known by the Indian name of muca-muca; it refembles a rat, but confiderably bigger, with a long fnout, not unlike that of a hog; the feet and tail are exactly the fame

as those of a rat, but the hair is longer and black. In the lower part of its belly, from the beginning of the flomach to the natural orifice of the fex, runs a fort of bag, formed of two membranous fkins, which growing from the lower ribs, and joining in the middle, follow the conformation of the belly, which they inclose: in the middle of it is an aperture extending about two-thirds of its length, and which the creature opens and fhuts at pleafure by means of muscles, doubtless formed by nature for this purpose. After bringing forth her young, the deposits them in this bag, and carries them as a fecond pregnancy till they are fit for weaning; fhe then relaxes the mufcles, and the voung come out as a fecond brood. Monfieur de Juffieu and M. Seniergues, when at Quito, made an experiment, at which Don George Juan and I were both prefent. The dam had been dead three days, and began to fmell very difagreeably; the orifice of the bag remained ftill fhut, but the young ones we found full of life within, each with a teat in his mouth, from which, at the time we took them off, fome fmall drops of milk came out. The male I never faw: but was told that it was of the fame bignets and shape as the female, except the bag; the testicles of this creature are of an enormous difproportion, being of the fize of a hen's egg. It is a very fierce enemy to all tame birds, and does a great deal of damage in the maize fields. The Indians eat the flefh, and fay it is not at all difagreeable : but few Europeans have much veneration for their tafte or cookery.

CHAP. IX. — Phanomena observed in the mountainous Deserts and other Parts of this Province. Hunting Matches. Dexterity of the American Horses.

TO the before-mentioned particulars of the mountainous deferts, I shall subjoin the phenomena feen there, as fubjects equally meriting the curiofity of a rational reader. At first we were greatly furprifed with two, on account of their novelty; but frequent obfervations rendered them familiar. One we faw in Pambamarca on our first ascent thither; it was a triple circular iris. At break of day the whole mountain was encompaffed with very thick clouds, which the rifing of the fun difperfed fo far as to leave only fome vapours of a tenuity not cognizable by the fight: on the oppofite fide to that where the fun rofe, and about ten toifes diftant from the place where we were ftanding, we faw, as in a looking-glafs, the image of each of us, the head being as it were the centre of three concentric iris's; the last or most external colours of one touched the first of the following; and at some distance from them all, was a fourth arch entirely white. These were perpendicular to the horizon; and as the perfon moved, the phenomenon moved alfo in the fame difpofition and order. But what was most remarkable, though we were fix or feven together, every one faw the phenomenon with regard himfelf, and not that relating to others. The diameter of the arches gradually altered with the afcent of the fun above the horizon; and the phenomenon itfelf, after continuing a long time, infenfibly vanished. In the beginning, the diameter of the inward iris, taken from its laft colour, was about five degrees and a half, and that of the white arch, which circumfcribed the others, not lefs than fixty-feven degrees. At the beginning of the phenomenon, the arches feemed of an oval or elliptitical figure, like the difk of the fun, and afterwards became perfectly circular. Each of the least was of a red colour, bordered with an orange, and the last followed by a bright yellow, which degenerated into a ftraw colour; and this turned to a green. But in all, the external colour remained red.

On the mountains we also had frequently the pleafure of feeing arches formed by the light of the moon; particularly one on the 4th of April 1738, about eight at night, on

the

the plain of Turubamba. But the most fingular was one feen by Don George Juan, on the mountain of Quinoa-loma, on the 22d of May 1739, at eight at night. Thefe arches were entirely white, without the mixture of any other colour, and formed along the flope or fide of a mountain. That which Don George Juan faw confisted of three arches, touching in the fame point : the diameter of the inner arch was fixty degrees; and the breadth of the white mark, or delineation, took up a fpace of five degrees; the two others were, in every refpect, of the fame dimensions.

The atmosphere, and the exhalations from the foil, feem more adapted than in any other place for kindling the vapours; meteors being here more frequent, and often very large, last longer, and are nearer the earth, than the like phenomena seen in other parts. One of these inflammations, of a very extraordinary largeness, was seen at Quito whils we were there. I cannot exactly determine the date of its appearance, the paper on which I had wrote an account of it being lost, when I was taken by the English: but the particulars, which I remember, are as follow:

About nine at night, a globe of fire appeared to rife from the fide of Mount Pichincha; and fo large, that it fpread a light all over the part of the city facing that mountain. The houfe where I lodged looking that way, I was furprized with an extraordinary light darting through the crevices of the window flutters. On this appearance, and the buftle of the people in the ftreets, I haftened to the window, and came time enough to fee it in the middle of its career, which continued from weft to fouth, till I loft fight of it, being intercepted by the mountain of Panecillo, which lies in that quarter. It was round, and its apparent diameter about a foot. I faid that it feemed to rife from the fides of Pichincha: for to judge from its courfe, it was behind that mountain where this congeries of inflammable matter was kindled. In the firft half of its vifible courfe, it emitted a prodigious effulgency, then gradually began to grow dim, fo that at its occultation behind the Panecillo, its light was very faint.

I fhall conclude this chapter with an account of the manner of hunting, which is the only diversion in the country, and in which they passion and intrepidity delight. Indeed the most remarkable circumstance in it is the ardour and intrepidity of the hunters; and which a stranger, at first, will naturally confider as mere rashness, till he fees perfons of the greatest prudence, after having made one fingle trial, join in these parties, trusting entirely to their horses; fo that it is rather to be termed a dextrous and manly exercise, and proves the superiority both of the riders and horses to the most celebrated in Europe; and that the boasted fleetness of the latter is dullness, when compared to the celerity with which those of America run over mountains and precipices.

The hunting is performed by a great number of people, who are divided into two claffes, one on horfeback, the other on foot, who are generally Indians. The bufinefs of the latter is, to roufe the beaft, and that of the others, to hunt it. They all, at break of day, repair to the place appointed, which is generally on the fummit of the paramos. Every one brings his greyhound; and the horfemen place themfelves on the higheft peaks, whilft those on foot range about the breaches, making a hideous noise in order to ftart the deer. Thus the company extend themfelves three or four leagues, or more, according to their numbers. On the ftarting of any game, the horfe which first perceives it fets off; and the rider, being unable to guide or ftop him, purfues the chace fometimes down fuch a steep flope, that a man on foot, with the greatest care, could hardly keep his legs; from thence up a dangerous afcent, or alongside of a mountain, that a perfon, not used to this exercise, would think it much fafer to throw himself out of the faddle, than commit his life to the precipitate ardour of the horfe. Thus

Thus they continue till they come up with the game, or till, after following it four or five leagues, the horfes tire. Those in the other stations, on perceiving one horfe on its fpeed, immediately ftart; and thus the whole company are foon in motion; fome haftening to meet the beaft, and others following the chace; fo that in fuch multitudes it is very feldom his good fortune to escape. The horses here do not wait for the riders to animate them; they fet forward immediately on feeing another on full fpeed on a different mountain, or at the fhouts of the huntfmen, or cries of the dogs, though at ever fo great a diftance, or even by obferving in a dog the leaft motion that he fcents the game. One fuch circumstance is fufficient for these horses and it then becomes prudence in the rider to give him his way, and at the fame time to let him feel the four to carry him over the precipices. But, at the fame time, let him be very attentive to keep the faddle; for on fuch declivities the leaft neglect throws the rider over the horfe's head: the confequence of which, either by the fall, or by being trampled upon, is generally fatal. These horses are called paramos, being backed and exercised in running over fuch dangerous places. Their ufual pace is trotting. There is indeed another fpecies called aguilillas, equally remarkable for their fwiftnefs and fecurity. Though the aguilillas only pace, they equal the longest trot of the others: and some of them are fo fleet, that no other horfe can match them even at full gallop. I once was mafter of one of this kind; and which, though none of the racers, often carried me in twenty-nine minutes from Callao to Lima, which is two meafured leagues and a half, though notwithftanding great part of the road was very bad and ftony; and in twenty-eight or twenty-nine minutes brought me back again, without ever taking off the bridle. This I can affert from my own experience. These horses are very feldom known to gallop or trot; and it is a very difficult matter even to bring them to it by teaching, though the trotting horfes foon come into pacing. The pace of the aguilillas is by lifting up the fore and hind leg of the fame fide at once; but inftead of putting the hinder foot in the place where the fore foot was, as is the ufual way of other pacing horfes, they advance it farther, equal to that on the contrary fide, or fomething beyond it; that thus, in each motion, they advance twice the fpace of the common horfes. Befides, they are very quick in their motions, and remarkably eafy to the rider.

Other horfes, not of this breed, are taught the fame manner of pacing, and perform it with eafe and expedition, as those in whom it is a natural quality : neither species are handfome, but very gentle and docile; full of spirit and intrepidity.

CHAP. X. — A flort Account of the many Silver and Gold Mines in the Province of Quito; and the Method of extracting the Metal.

THE chief riches of the kingdom of Peru, and the greatest part of the Spanish poffeffions on the continent, being the mines, which spread their ramifications through the whole extent of these countries; that province is justly accounted the most valuable where the mines are most numerous, or at least, where the greatest quantity of metal is procured. The fertility of the foil, the exuberant harvests with which the labourer's toil is rewarded, would lose much of their advantage, had not the precious contents in the bowels of the earth exercised the ingenuity of the miner. The fertile pastures which so richly cover the country, are disregarded, if the stones upon trial are not found to answer the avidity of the artists: and the plentiful productions of the earth, which are in reality the most excellent gifts of nature, for the support and comfort of human life, are undervalued and slighted, unless the mountains contain rich veins of a fine filver.

VOL. XIV.

Thus,

Thus, contrary to the nature of things, the name of rich is bestowed on that province where most mines are worked, though fo entirely destitute of the other more necessary products, that the great number of people employed in the mines are under a neceffity of being fupplied from other parts: and those provinces, whose pastures are covered with flocks and herds, whole fields yield plentiful harvefts, and their trees bend beneath rich fruits, under the fertilizing influence of a benign climate, but deftitute of mines, or forgotten through neglect, are looked upon as poor; and indeed, except in the plentiful furface of the earth, make no wealthy appearance. This is the cafe here; and the reafon of it is evident : those countries are as staples for filver and gold, which are taken from the bowels of the earth only to be fent into diftant nations with all poffible diligence, their native country being that where they make the least flay: and the fame practice is observed to be carried on, no lefs eagerly, throughout every town and village in the Indies: for, as they cannot well do without European goods, the gold and filver of America must be paid in exchange for them.

In a province where no mines are worked, the fertility of the foil, and goodnefs of its products are neglected; for the fcarcity of money reduces them to fuch a low price. that the husbandman, for want of an incentive to any affiduous industry, instead of fowing and planting all he could, confults only what he may vend according to the common confumption, befides what is neceffary for the fupport of his family. And as the whole return of what he receives for his fruits and grain, even when he is fo fortunate as to export any, goes away again in exchange for European goods, the fcarcity of money ftill continues, and he is fo poor as fometimes poffibly to want even neceffaries. It is otherwife in provinces abounding with mines; for thefe being the objects of the attention and labours of its inhabitants, there is a continual circulation of money. What is carried out, is replaced by that drawn from the mines. Nor are they even in want of European goods, or the produce of the more fertile countries, plenty of traders from all parts reforting to places near the mines, as the original feats of gold and filver. But that province where the richnefs of the mines and of the foil concenter, is doubtlefs preferable to those where nature has given only one of these advantages. Quito may juftly be claffed among the former, being that province which of all Peru is the moft fertile in grain and fruits; the most populous, and epecially in Spaniards; abounds , most in cattle; has the most manufactures, and excels in them; and in mines, if not the richeft, yet equal to any of the others, on which nature has poured out thefe her choiceft favours. But it feems as if nature, unwilling to diftinguish this by an absolute happinefs, has denied it a fuitable concourfe of people, that it might not at once have a full enjoyment of all the benefits lavifhed on it, there being no reafon which can difculpate the inhabitants of Quito in the neglect of the mines. For though the number of them difcovered be very great, and afford a very probable conjecture that the Cordilleras must contain many more; yet very few are worked, particularly within these jurifdictions. Thus the riches of the country lie buried, and without them the fertility of the foil cannot fupply their want; fo as to fpread through the province an opulence like that observable in the other provinces of Peru, where, by the circulation of filver, there is an universal appearance of affluence, gaiety, and splendour.

Of the great number of mines within the province of Quito, fome were formerly worked which at prefent are abandoned. The country then was fenfible of its advantage; and the remembrance of the general opulence of those times, refulting from the riches taken out of the mines, still fubfists. Not only the capital, but the towns and villages were then very populous: and many of its inhabitants were famous all over Peru for their prodigious wealth. The rich mines within the jurifdiction of Mecas, 11 were

538

were irrecoverably loft by a revolt of the Indians; and in process of time the very remembrance of their fituation was obliterated. The mines of Zaruma have been abandoned, the art of working the ore being loft, for want of a fufficient number of people to apply themfelves to it : and the fame decline is now feen all over the province. The fertility, as natural to the climate, still continues in all its plenty: but scarce the fhadow of its former luftre and magnificence remains; and that enormous wealth, in which it gloried is now no more. For if its products and manufactures bring in confiderable quantities of filver from Lima and Valles, all is expended on European goods; to that, as I obferved, little of that gold and filver, to common in the more fouthern provinces, is to be feen here.

The only part of the province of Quito, which, under this unhappy change, preferves its ancient opulence, is the department within the government of Popayan, which throughout abounds in gold mines, and great numbers of them are still worked. To gratify the curious, I shall give an account of the principal, and the manner of working the gold ore; as it is different from that used in the mines of Caxa; after which, I fhall mention the other mines known within that province.

Every part of the jurifdiction of Popayan abounds in mines of gold; and though in fome departments more are worked than in others, yet they all yield gold: and new mines are daily difcovered and worked; which, under all the inclemencies of the air, in fome parts fills its towns with inhabitants. Among the departments belonging to the province of Quito, the richeft in gold are those of Cali, Buga, Almaguar, and Barbacoas, fome of its mines being always more or lefs worked; and with this fingular advantage in its gold, of never being mixed with any heterogeneous body; confequently no mercury is requifite in extracting it.

The gold mines in these parts are not Caxa mines, as those of filver and many of gold are; that is, they are not contained and confined as it were betwixt two natural walls: but the gold is found difperfed and mixed with the earth and gravel; as fands are found mingled with earths of different fpecies. Thus the whole difficulty confifts in feparating the grains of gold from the earth; and this is very eafily done, though otherwife it would be impracticable, by running conduits of water. This method is alfo equally neceffary in the Caxa mines, where the filver and gold are intimately united with other bodies, as, after having gone through the operation of the quickfilver, which their quality renders indifpenfable, it is wafhed in order to feparate the remaining filth. After the laft operation the amalgama is pure, confifting entirely of quickfilver, and gold or filver, according to the fpecies which has been worked.

The manner, throughout the whole jurifdiction of Popayan, for extracting the gold, is, to dig the ore out of the earth, and lay it in a large cocha, or refervoir made for that purpofe; and when this is filled, water is conveyed into it through a conduit: they then vigoroufly ftir the whole, which foon turns to a mud, and the lighteft parts are conveyed away through another conduit, which ferves as a drain; and this work is continued till only the most ponderous parts, as little stones, fand, and the gold, remain at the bottom. The next part of the progress is, to go into the cocha with wooden buckets made for this purpofe, in which they take up the fediment; then moving them circularly and uniformly, at the fame time changing the waters, the lefs ponderous parts are leparated; and at last the gold remains at the bottom of the bucket, clear from all mixture. It is generally found in grains as fmall as those of fand; and for that reafon called oro en polvo; though fometimes pepitas, or feeds, are found among it, of different fizes, but generally they run fmall. The water iffuing from this cocha is ftopped in another contrived a little beneath it, and there undergoes a like operation; in order to

to fecure any fmall particles of gold, which, from their extreme fmallnefs might be carried off by the current of the water being mixed with earth and other fubftances: and laftly, this water is paffed into a third cocha: but the favings here are generally inconfiderable.

This is the method practifed in all the mines belonging to the jurifdiction of Popayan. The labourers are Negro flaves, purchafed by the owners; and whilft fome are employed in wafhing, others bring earth; fo that the wafhers are kept in continual employment. The finenefs of this gold is generally of twenty-two carats; fometimes more, even to twenty-three; fometimes indeed it is under, though very feldom below twenty-one.

In the diffrict of Choco are many mines of Lavadero, or wash gold, like those we have just defcribed. There are also fome, where mercury must be used, the gold being enveloped in other metallic bodies, stones, and bitumens. Several of the mines have been abandoned on account of the platina; a substance of such resistance, that, when struck on an anvil of steel, it is not easy to be structed in or is it calcinable; so that the metal enclosed within this obdurate body, could not be extracted without infinite labour and charge. In some of these mines the gold is found mixed with the metal called tumbaga, or copper, and equal to that of the Eass; but its most remarkable quality is, that it produces no verdigrease, nor is corroded by any acids, as common copper is well known to be.

The gold taken out of all these lavaderos, or mines, in the province of Quito, is partly circulated in it: but after no long stay, like the other gold of these countries, goes away to Lima; yet these circulations, however temporary, preferve it from that decay which other parts have felt. A large quantity of this gold is carried to Santa Fé or Carthagena, fo that Quito sees very little of it.

In the district of the town of Zaruma, within the jurifdiction of Loxa, are feveral gold mines worked; and though of no great finenels, being only betwixt fixteen and eighteen carats, they are fo rich, that, when refined to twenty carats, they prove more advantageous to the miners than those where the gold is naturally of that finenes, but lefs abundant. Antiently it was ufual to work veins, but the inhabitants are now fo indolent, that most of them are neglected. These ores are worked with quickfilver, and all the mines here are Caxa mines. Of the fame kind alfo are other gold mines within the jurifdiction of the government of Jaen Bracamoros, which, about eighty or a hundred years ago, yielded great quantities of metal. But the Indians of thofe parts, encouraged by the fuccefs of their brethren of Macas, having revolted, the fituation of them was entirely forgotten; and no care has fince been taken to fearch after them. The gold extracted from these mines, though not so fine as that of Popayan, far exceeded the Zaruma gold. The Indians still extract fome fmall quantities, when abfolute neceffity drives them to this refource for paying the tribute. In order to this, they go to fome brook or river, and there wait till it overflows its bank, then wash the fands till they have procured a fufficient quantity to answer their prefent peceffity; then they immediately leave off, not thinking it worth while to fatigue themfelves any longer, about it. Several mines discovered all over this province, have undergone the fame fate. One of these was in the jurifdiction of the town of Latacunga, near the village of Angamarca; the owner of which was an inhabitant of the village called Sanabria. The quantity of metal he procured from it was fo great, that in order to lofe no time, he caufed it to be worked day and night, and had for that purpofe a great number of Negro flaves, who laboured in the night; and the Indians continued the work in the day time. But in the height of his profperity, the mine in a violent ftorm gave way, and

and funk to low, that though frequent fearches have been made after it, the vein could not be found. At last, in the year 1743, a perfon difcovered it by an accident of the fame nature that had destroyed it; a violent tempest happened, during which, a torrent of water gushed out through the former entrance of the mine. The person, interpreting this accident as a providential indication, immediately undertook the working of it; and it has fully answered his expectations.

Within the jurifdiction of this province are many other mines, which appear to have been worked at different times, and to have yielded a great quantity of metal. The nature of the country feems best adapted to gold mines; though there are feveral filver veins, which appear to be very rich, and accordingly an account of them is entered in the feveral revenue offices, and in the records of the audience of Quito. Some have been lately worked, though with little encouragement; of this number may be faid to be that of Guacaya, in the jurifdiction of Zicchos, on the frontiers of Latacunga; and another likewife of filver, about two leagues from the former. Both were worked fome time, but never beyond the furface of the earth, the undertakers not having a fufficient flock of their own to work them in form; and the affiftance they folicited was denied. The most celebrated filver mine in all this district, is that called Sarapullo, about eighteen leagues from the fame town of Zicchos. This alfo was opened, but difcontinued through the inftability of the undertaker, and the want of proper affiftance.

In the other jurifdiction, as well as in that of Latacunga, are all the indications of rich mines, though the number of them difcovered is much lefs. The mountain of Pichincha is, by the inhabitants of Quito, thought to contain immenfe treasures; and the grains of gold, found in the fands of the waters which iffue from it, greatly countenance the opinion; though there is not the leaft veftige all over the mountain, that formerly any mine was discovered or worked there. But the latter is no great objection : as the disruptions caufed by ftorms, or procefs of time, are fuch as fometimes might entirely choak them up, and cover them fo as to leave no traces of their existence; and a suitable diligence and care have not been used for the discovery of any. Besides this mountain, its whole Cordillera, together with the eaftern chain of Guamani, and many other parts, equally abound with the like appearances of rich mines.

In the diffricts of Otabalo, and the town of San Miguel de Ibarra, in the territories of the village of Cayambe, along the fides and eminences of the vaft mountain Cayamburo, are still remaining fome monuments in confirmation of the tradition, that, before the conquest, mines were worked there, which yielded a vast quantity of metal. Among feveral mountains near the village of Mira, famed for their antient riches, is one called Pachon, from which an inhabitant of that village is certainly known to have collected, a few years ago, a vast fortune. None of these are worked : a particular, nothing ftrange to him who fees how the mines lately difcovered are neglected, though their quality is fufficiently known.

The whole country of Pallactanga, in the jurifdiction of the town of Riobamba, is full of mines of gold and filver: and the whole jurifdiction abounds with them to luch a degree, that one perfon with whom I was acquainted in that town, and who, by his civilities to us and the French academicians, feemed to have a foul fuitable to his opulence, had entered, on his own account, at the mine office of Quito, eighteen veins of gold and filver, and all of a good quality. The ore of one of these veins, by the miners called Negrillos, being affayed at Lima, in 1728, it appeared, from a certificate of Don Juan Antonio de la Mota Torres, that it produced eighty marks of filver per cheft; a very aftonishing circumstance, the usual produce in rich mines being only eight or ten

ten marks per cheft, each cheft containing fifty quintals of ore. This is the cafe of Potofi and Lipes, which, after the expence of carrying the ore to other places, in order to its being refined, and other charges, not only anfwers them all at ten marks per cheft, but the furplus is then very confiderable. There are likewife other mines where, after being refined, a cheft yields only five or fix marks of filver, and in fome only three; which yet will bear the expence of refining, being in a cheap country, where great numbers of people are willing to work for low wages. Befides the riches contained in the mountains belonging to the jurifdiction of Cuenca, though this refts only on an old Indian tradition, feveral mines have lately been difcovered and worked, but not with the care requifite to reap all the advantages they offer. One of these was in the diffrict of Alaufi, at about fix leagues from a plantation called Sufna; the owner of which, during the intervals of rural labour, used to employ his Indians and Negroes in taking out the ore, which he found to be very rich; but for want of a fufficient fund to profecute this work, and at the fame time not neglect his plantation, he never was able to get from the mine that immenfe quantity of filver which its richnefs feemed to promife, if worked in form. All that country is indeed fo full of mines, that with an industrious turn in the minds of the inhabitants, they would be found in number and richnefs to equal those which have proved the fources of fuch infinite wealth to the fouthern provinces of Peru; but it is far otherwife. This fupineness is thought to be owing to the great plenty; and confequently a low rate of all kinds of provisions: for the inhabitants, having all they defire for little or nothing, cannot be prevailed on to flave in digging the earth for gold; whence the inhabitants of the cities and towns are hindered from acquiring large fortunes, and confequently encreafing them by undertaking to work more mines. Add to this the prejudice, or rather apprehenfion of the difficulties; which are thought fo great, that when a perfon expresses his intention of working in fome mine, others look upon him as a man running headlong to his destruction, and who risks certain ruin for remote and uncertain hopes. They endeavour therefore to divert him from his purpole; and if they cannot fucceed in this, they fly from him as if they were afraid left he fhould communicate the infection to them. It is not therefore ftrange that thefe mines, fo rich in all appearance, fhould be neglected, and no perfon found defirous of reaping the great advantages which would doubtless refult from working them. This occupation, for want of being fufficiently acquainted with it, is univerfally dreaded : whereas in the fouthern provinces of Quito it is quite otherwife; the celebrated miners being men of great power, vaft fortunes, and the most eminent families in the country. Besides which, are great numbers of other miners of more limited circumstances, all eagerly embracing any opportunity of employing their fubstance in undertaking mines.

The governments of Quijos and Majos are no lefs abundant in mines than the jurifdictions of Quito; those in Jaen are of infinite richness; and those of Maynas and Atacames not inferior to them. With regard to the first, it is very well known, that the Indians on the banks of the Maranon, by washing the fands of fome of the rivers running into it, procure what gold they want, though their defires in this point are as moderate as the avidity of other nations are infatiable. This gold is an evident fign that the adjacent country abounds in mines. As to the fecond, experience has shewn that the borders of the rivers of Santiago and Mira are full of veins of gold, the Mulattos and Mession fupplying themselves with that metal by washing the fands. But neither of them have applied themselves to discover the original veins. Besides gold and filver mines, the province of Quito has also those of other metals, and quarries of fine ftone: but these are utterly disregarded by the inhabitants. Yet this province could

could not attain the complete poffeffion of its riches, if to the mines of gold and filver, nature had not added those materials which are neceffary in extracting the treasures they contain, and in the other fervices of life: nor could this country be properly faid to be rich in mines, if it afforded only those of gold and filver; but nature, that there might be no deficiency in her gift, hath alfo furnished it with mines of azogue or quickfilver, which are found in the fouthern extremity of the province, near a village of the fame name belonging to the jurildiction of Cuenca. Formerly the quickfilver for the gold and filver mines was furnished from hence; but this has been suppressed; fo that at prefent only those of Guanca Velica are allowed to be worked: by which means a ftop has been put to those frauds discovered in the payments of the fifths; the miners, inftead of applying to the mine offices within their department, or the principal ftaple, fupplying themfelves with contraband mercury. And the end has been fully anfwered with regard to the revenue; frauds being now much more difficult, and confequently lefs frequent, fince the quickfilver can be had only from one mine, than when feveral were open. But at the fame time it is certain, that this prohibition was the principal caufe of the decay of the filver mines in the province of Quito: and had the cafe been duly examined, many other remedies might have been found to prevent these clandestine practices, befides an absolute obstruction to fo great a part of the riches of that country.

It is the opinion of fome naturalifts, and the marks of it are indeed very evident, that the ground on which the city of Cuenca ftands, is entirely an iron mine, its veins fhewing themfelves in the chafms of fome breaches; and the pieces taken out of the floughs prove it beyond difpute, not only by their colour and weight, but by being attracted by the magnet, when reduced to fmall pieces; and many intelligent perfons in thefe fpecies of mines affirm, that it not only is an iron-mine, but alfo of extreme richnefs; though this has not been afcertained by experiment.

It is alfo equally unquefitonable, that, were it pollible to turn the indultry of the inhabitants into this channel, mines of copper, tin, and lead, might alfo be difcovered, though no fuch thing is at prefent known. But it is natural to fuppofe, that, where there are fo many mines of the most precious metals, those of copper and lead are not wanting. In the next chapter, I shall give fome account of other mines; together with the quarries of curious stone, and feveral ancient monuments of antiquity, that nothing may be wanting towards the complete knowledge of this province, from which Spain derives fuch great advantages.

CHAP. XI. — Monuments of the ancient Indians, in the Jurifliction of Quito. — Account of the feveral Gems and Quarries found near that City.

THE ancient inhabitants of Peru were far enough from carrying the fciences to any perfection, before the conqueft of the country by the Spaniards. They were not deftitute of all knowledge of them; but it was fo faint and languid, that it was far from being fufficient for cultivating their minds. They had alfo fome glimmerings of the mechanic arts; but their fimplicity, or want of tafte, was fo remarkable, that, unlefs forced by abfolute neceffity, they never departed from the models before them. The progrefs and improvements they made were owing to induftry, the common directrefs of mankind. A clofe application fupplied the want of fcience. Hence, after a long feries of time, and exceffive labour, they raifed works, not fo totally void of art and beauty, but that fome particulars raife the admiration of an attentive fpectator. Such for inftance, were fome of those ftructures, of which we have ftill fuperb ruins, in which, which, confidering the magnitude of the works, and the few tools they were mafters of, their contrivance and ingenuity are really admirable. And the work itfelf, though deflitute of European fymmetry, elegance, and disposition, is furprising, even in the very performance of it.

These Indians raifed works both for the convenience and veneration of posterity. With thefe the plains, eminences, or leffer mountains, are covered ; like the Egyptians, they had an extreme paffion for rendering their burial-places remarkable. If the latter erected aftonishing pyramids, in the centre of which their embalmed bodies were depofited; the Indians, having laid a body without burial in the place it was to reft in. environed it with ftones and bricks as a tomb; and the dependents, relations, and intimate acquaintance of the deceased, threw fo much earth on it as to form a tumulus or eminence which they called Guaca. The figure of these is not precisely pyramidical; the Indians feeming rather to have affected the imitation of nature in mountains and eminences. Their usual height is about eight or ten toifes, and their length betwixt twenty and twenty-five, and the breadth fomething lefs; though there are others much larger. I have already observed, that these monuments are very common all over this country; but they are most numerous within the jurisdiction of the town of Cayambe, its plains being, as it were, covered with them. The reafon of this is, that formerly here was one of their principal temples, which they imagined must communicate a facred quality to all the circumjacent country, and thence it was chosen for the burialplace of the kings and caciques of Quito; and, in imitation of them, the caciques of all thefe villages were alfo interred there.

The remarkable difference in the magnitude of these monuments feems to indicate, that the guacas were always fuitable to the character, dignity, or riches of the perfon interred; as indeed the great number of vaffals under fome of the most potent caciques, concurring to raife a guaca over his body, it must certainly be confiderably larger than that of a private Indian, whole guaca was raifed only by his family and a few acquaintance : with them also were buried their furniture, and many of their inftruments, both of gold, copper, ftone, and earth : and thefe now are the objects of the curiofity or avarice of the Spaniards inhabiting the country; that many of them make it a great part of their business to break up those guacas, in expectation of finding fomething valuable: and, mifled by finding fome pieces of gold here and there, they fo devote themfelves to this fearch, as to fpend in it both their fubstance and time : though it must be owned, that many, after a long perfeverance under difappointments, have at length met with rich returns for all their labour and expence. Two inftances of this kind happened while we were in the country; the first guaca had been opened near the village of Cayambe, in the plain of Pefillo, a little before our arrival at Quito; and out of it were taken a confiderable quantity of gold utenfils; fome of which we faw in the revenue-office, having been brought there as equivalents for the fifths. The fecond was more recently difcovered in the jurifdiction of Pastos, by a Dominican friar, who, from a turn of genius for antiquities, had laid out very large fums in this amufement; and at last met with a guaca in which he is faid to have found great riches. This is certain, that he fent fome valuable pieces to the provincial of his order, and other perfons at Quito. The contents of most of them confift only of the skeleton of the perfon interred; the earthen vessels in which he used to drink chica, now called Guaqueros; fome copper axes, looking-glaffes of the yncaftone, and things of that kind, being of little or no value, except for their great antiquity, and their being the works of a rude illiterate people.

The

The manner of opening the guacas is, to cut the lower part at right angles, the vertical and horizontal line meeting in the centre, where the corpfe and its furniture are found.

The flone mirrors taken out of the guacas are of two forts; one of the ynca-flone, and the other of the gallinazo-flone: the former is not transparent, of a lead colour, but foft; they are generally of a circular form, and one of the furfaces flat, with all the fmoothnels of a crystal looking-glafs; the other oval and fomething, fpherical, and the polifh not fo fine. They are of various fizes, but generally of three or four inches diameter, though I faw one of a foot and a half; its principal furface was concave, and greatly enlarged objects; nor could its polifh be exceeded by the beft workmen among us. The great fault of this flone is, its having feveral veins and flaws, which, befides the difadvantage to the furface of the mirror, render it liable to be broken by any little accident. Many are inclined to think that it is not natural, but artificial. There are, it must indeed be owned, fome appearances of this, but not fufficient for conviction. Among the breaches in this country, fome quarries of them are found; and quantities continue to be taken out, though no longer worked for the use the Indians made of them. This does not, however, abfolutely contradict the fusion of them, in order to heighten their quality, or caft them into a regular form.

The gallinazo-ftone is extremely hard, but as brittle as flint : it is fo called from its black colour, in allufion to the colour of the bird of that name, and is in fome meafure diaphanous. This the Indians worked equally on both fides, and reduced it into a circular figure. On the upper part they drilled a hole for a ftring to hang it by; the furfaces were as fmooth as those of the former, and very exactly reflect objects. The mirrors made of this ftone were of different kinds, fome plain, fome concave, and others convex. I have feen them of all kinds : and, from the delicacy of the workmanship, one would have thought these people had been furnished with all kinds of inftruments, and completely skilled in optics. Some quarries of this stone are likewise met with ; but they are entirely neglected, though its transparency, colour, and hardness, besides its having no flaws or veins, render it very beautiful.

The copper axes of the Indians differ very little in their fhape from ours: and it appears that these were the inftruments with which they performed most of their works: for if not the only, they are the most common edge-tools found among them; and the whole apparent difference betwixt those they use, confists only in fize and shape: for though they all refemble an axe, the edge in some is more circular than in others. Some have a concave edge, others a point on the opposite fide, and a fluted handle. These inftruments were not all of copper, some having been found of gallinazo, and of another stone fomething refembling the flint, but less hard and pure. Of this stone, and that of the gallinazo, are feveral points, supposed to have been heads of stores, as these were their two chief inftruments or weapons: for, had they used any other, some would doubtles have been found among the infinite number of guacas which have been opened.

The guaqueros, or drinking-veffels, are of a very fine black earth: but the place where they were made is utterly unknown. They are round, and with a handle in the middle, the mouth on one fide, and on the other the head of an Indian, whofe features are fo naturally expressed, that very few of our workmen could equal it. Others, though of the fame form, are of a red earth. Befides which, there are found larger and smaller veffels of both kinds of earth used in making and keeping the chicha.

Among the gold pieces are the nofe-jewels, which in form refemble the foot of a chalice, and very little lefs: these were appended to the septum, which divides the two vol. xiv.

noftrils. There are alfo found collars, bracelets, and ear-pendants, refembling the nofe-jewels: but all thefe are no thicker than paper: the idols, which are at full length, are every where hollow within; and as they are all of one piece, without any mark of foldering, the method they ufed in making them is not eafily conceived. If it be faid that they were caft, ftill the difficulty remains how the mould could be of fuch a fragility as to be taken away without damaging works, which, in all their parts, are fo extremely thin.

The maize has ever been the delight of the Indians; for, befides being their food, their favourite liquor chicha was made of it; the Indian artifts therefore ufed to fhew their skill in making ears of it in a kind of very hard stone; and so perfect was the refemblance, that they could hardly be diftinguished by the eye from nature ; efpecially as the colour was imitated to the greatest perfection; fome reprefented the yellow maize, fome the white; and in others, the grains feemed as if finoke-dried by the length of time they had been kept in their houses. The most furprising circumstance of the whole is, the manner of their working, which, when we confider their want of inftruments, and wretched form of those they had, appears an inexplicable mystery: for either they worked with copper tools, a mettle little able to refift the hardness of ftones; or, to give the nice polifh confpicuous on their works, other ftones must have been ufed for tools. But the labour, time, and patience, requifite to make only a hole in the gallinazos, as was made in the mirrours; and much more to give their furfaces fuch a fmoothnefs and polifh, that they are not to be diftinguished from the finest glass, muft have been prodigious. Thefe are works which the moft ingenious of our artifts would be extremely at a lofs to produce, if they were allowed only pieces of copper and ftones, without any other tools or materials. It is the greatest proof of the ingenuity of these people, that by mere dint of genius, and unaffisted by information, they fhould attain to fuch contrivances and fuch a delicacy of workmanship.

Yet all that we have faid is furpafied by the ingenuity of the Indians in working emeralds, with which they were fupplied from the coaft of Manta, and the countries dependent on the government of Atacames, Coaquis or Quaques. But thefe mines are now entirely loft, very probably through negligence. Thefe curious emeralds are found in the tombs of the Indians of Manta and Acatames: and are, in beauty, fize, and hardnefs, fuperior to those found in the jurifdiction of Santa Fé; but what chiefly raifes the admiration of the connoiffeur is, to find them worked, fome in fpherical, fome cylindrical, fome conical, and of various other figures; and all with a perfect accuracy. But the unfurmountable difficulty here is, to explain how they could work a ftone of fuch hardnefs; it being evident, that fteel and iron were utterly unknown to them. They pierced emeralds, and other gems, with all the delicacy of the prefent times, furnifhed with fo many tools : and the direction of the hole is alfo very observable; in fome it pafies through the diamet r; in others, only to the centre of the ftone, and coming out at its circumference they formed triangles at a fmall diffance from one another : and thus the figure of the ftone, to give it relief, was varied with the direction of the holes.

After this account of the guacas of thefe idolatrous nations, the cuftom which equally prevailed among the fouthern nations of Peru, I proceed to their fuperb edifices, whether temples, palaces, or fortreffes: and though those in the kingdom of Quito are not the most flately and magnificent, the court and refidence of the yncas having been in the province of Cusco; yet fome of the former fufficiently denote the grandeur of the Indians who then inhabited it, and their fondness for fuch edifices; intending as it

546

were

were to hide the rufticity of their architecture under richnefs and magnificence which they profulely beltowed on their edifices, whether of brick or ftone.

The greatest part of one of these works is still existing, near the town of Cayambe, being a temple built of unbaked bricks. It stands on an eminence of some height; its figure is perfectly circular, and its diameter eight toises. Of this fareful enothing now remains but the walls, which are in good condition; and about two toises and a half in height, and four or five feet in thickness. The cement of the bricks is of the fame earth with that of which they are made : and the hardness of them may be conceived, from remaining so long in a good condition exposed to the injuries of weather, having no cover.

Befides the ancient tradition that this ftructure was one of the temples of those times, the manner of its conftruction countenances fuch a conjecture: for its circular form, without any separation in the infide, shews it to have been a place of public refort, and not any habitation. The smallness of the door renders it probable, that, though the yncas entered into their palaces in the chairs in which they were carried, as will be seen hereafter, this place they entered on foot, in token of veneration; the dimensions of the door not admitting of any other manner. And, as I have before observed, that one of the principal temples was not far from hence, this was probably the very structure.

At the extremity of the plain which runs northward from Latacunga, are ftill feen the walls of a palace of the yncas of Quito; and is ftill called by its ancient name Callo. At prefent it ferves for the manfion-houfe of a plantation belonging to the Augustines at Quito. If it wants the beauty and grandeur which characterife the works of the ancient Egyptians, Greeks, Romans, and other nations versed in the fine arts; yet, if we make proper allowance for the rusticity of the Indians, and compare this with their other buildings, the dignity of the prince will be abundantly confpicuous, in the prodigious magnitude of the materials, and the magnificence of the ftructure. You enter it through a paffage five or fix toises in length, leading into a court, round which are three fpacious faloons, filling the three other fides of its squares. Each of these faloons has several compartments; and behind that which faces the entrance, are feveral small buildings, which feem to have been offices, except one; and this, from the many divisions in it, was, in all probability, a menagerie. Though the principal parts still continue, the ancient work is fomething disfigured, dwellings having been lately built among them, and alterations made in the chief apartments.

This palace is entirely of ftone, equal in hardnefs to flint; and the colour almoft black. They are exceedingly well cut, and joined fo curioufly, that the point of a knife, or even fo much as a piece of the fineft paper cannot be put betwixt them; fo that they only fhew the walls to be of different ftones, and not one entire composition, but no cement is perceivable. The ftones without are all of a convex figure, but at the entrance of the door are plane. But there is a visible inequality, both in the ftones and in their courfes, which gives a more fingular air to the work; for a fmall ftone is immediately followed by one large and ill-fquared, and that above is made to fit the mequalities of the other two, and at the fame time fill up all the interflices between the projections and irregularity of their faces; and this in fuch perfection, that, whatfoever way they are viewed, all parts appear joined with the fame exactnefs. The height of thefe walls is about two toifes high, and their breadth at the bottom about three or four feet, but run narrowing upwards, where the aperture is only two feet and a half. The doors of the palaces, where the yncas refided, were made of fuch a height, to

allow

allow room for the chairs in which the monarch was carried on men's fhoulders into his apartment, the only place in which his feet touched the ground. It is not known whether this or the other palaces of the yncas had any flories, nor how they were roofed: for those we examined were either open, or had been roofed by the Spaniards: but it is highly probable that they covered them with boards, in the form of a terrace, that is, fupported by beams laid across: for in the walls there is nothing near the ground that affords room for a conjecture, that they ever supported any roofs: on this horizontal roof they contrived fome flope for carrying off the waters. The reason of contracting their doors at the top was, that the lintel might be of one flone; for they had no idea either of arches or of key-flones, as may be concluded from no such works occurring among all their edifices.

About fifty toifes north of this palace, fronting its entrance, is a mountain, the more fingular as being in the midft of a plain : its height is betwixt twenty-five and thirty toifes, and fo exactly, on every fide, formed with the conical roundnefs of a fugarloaf, that it feems to owe its form to induftry ; efpecially as the end of its flope on all fides forms exactly with the ground the fame angle in every part. And what feems to confirm this opinion is, that guacas, or maufoleums, of prodigious magnitude, were greatly affected by the Indians in thofe times. Hence the common opinion, that it is artificial, and that the earth was taken out of the breach north of it, where a little river runs, does not feem improbable. But this is no more than conjecture, not being founded on any evident proof. In all appearance this eminence, now called Panecillo de Callo, ferved as a watch tower, commanding an uninterrupted view of the country, in order to provide for the fafety of the prince on any fudden alarm of an invafion, of which they were under continual apprehenfions, as will appear from the account of their fortrefles.

About two leagues north-eaft of the town of Atun-Canar, or great Canar, is a fortrefs or palace of the yncas. It is the most entire, the largest, and best built in all the kingdom. Clofe by its entrance runs a little river, and the back part of it terminates in a high and thick wall at the flope of a mountain. In the middle of it is a kind of oval tower, about two toifes high from the ground within the fort, but without it rifes fix or eight above that of the hill. In the middle of the tower is a fquare of four walls; which, on the fide facing the country, leave no passage; and all its angles touch the circumference of the oval. On the oppofite fide only, is a very narrow pass, answering to the inward part of the tower. In the middle of this square is an apartment of two fmall rooms, without any communication, and the doors of them opposite to the space which separates them. In the fides towards the country are loop-holes; and in critical times it was made a court of guard. From the outfide of this oval tower, a wall is extended on the left fide about forty toifes, and about twenty-five on the right; this wall was continued in a great number of irregular angles, and enclosed a large fpot of ground. It had only one entrance, which was in the fide opposite to the tower, and facing the last angle on the right near the rivulet. From this gate or entrance was a paffage, just broad enough for two perfons to walk abreaft, and at the wall turned fhort off towards the tower, but always of the fame breadth. After this it winded towards the breach, and widened fo as to form a parade before the tower. In these passages, at the distance of every two or three paces, one sees niches formed within the wall, like fentry-boxes; and on the other fide two doors, which were entrances to the fame number of foldiers de logis, and feem to have ferved the corps of the garrifon for barracks. In the inner fquare, to the left of the tower, were feveral apartments, of which the height, disposition, and doors, are a sufficient proof that

that this was once the Prince's palace. All the walls being full of hollows, refembling cupboards, in which, as likewife in the two chambers of the tower, the niches, and along the paffages, were ftone pegs, with a head betwixt fix and eight inches long, and three or four in diameter: the use of these probably was for hanging up their arms.

The whole main wall on the flope of the mountain, and defcending laterally from the oval tower, is very thick, and the outfide perpendicular. Within is a large rampart, and on it a parapet of an unufual height; and though the rampart reached quite round the wall, there was only one afcent to it, which was adjoining to the oval tower. The outward and inward walls are all of the fame kind of ftone, very hard and wellpolifhed: and difpofed like those of Callo. The apartments also were without ceiling or flooring, like those of the above-mentioned palace.

At Pomallacta, within the jurifdiction of the town of Guafuntos, are fome rudera of another fortrefs like the former : and it is a common opinion here, that there was a fubterraneous communication between thefe two fortifications; but this does not feem at all probable. For befides the diftance of fix leagues, the ground is very uneven, and interrupted by fome of the fmaller branches of the Cordilleras, breaches, and brooks. The inhabitants are, however, very tenacious of their opinion : and fome affirm, that a few years before our arrival in the country, a perfon entered this fubterraneous paffage at the fort of Canar, but, his light going out, he was obliged to return. They farther fay, that the entrance is within the fort at the foot of the tower, where indeed there is a final! low door, but now choaked up with earth; and was doubtlefs for fome ufe. But this does not imply that it led to the other fortrefs, as, befides a great quantity of lights, there muft alfo have been here and there vent-holes or fpiracles, which, confidering the mountains, is utterly impracticable.

Many other walls and ruins are feen all over the country, both in the plains, on the fides of the hills, and on their fummits; but most in defert places, and without any veftige of a town or village near them; and except these three, they are either of adoves or unknown stone, without any arrangement. The more irregular are thought to be the works of Indians before they were reduced by the yncas: but those of Callo, and the other two fortress, by their superior symmetry, shew that they are of a later date, and built under the direction of the yncas, who applied themselves with exemplary attention to promote necessary arts throughout all their conquess; possibly from this political view, that the people, fensible of the happy change, might be the better super subsection. All these remains of antique edifices the Indians call Inca perca, the Yncas walls.

Another Indian method of fortification, and of which there are full fome remains, was, to dig three or four ranges of moats quite round the tops of fuch mountains, as, though high and fteep, were not fubject to frofts: and every one on the infide ftrengthened by a parapet, whence they could fafely annoy the enemy. Thefe they called Pucuras; and within the laft range of moats they built barracks for the garrifon. Thefe kinds of forts were fo common, that one fcarce meets with a mountain without them. On the peaks of Pambamarca, are three or four; and one of them on the place where we fixed our fignal for the meridian triangles. In like manner we found them on almost all the other mountains; and the outward moat of circumvallation was above a league in extent. The breadth and depth of each was alike; but in refpect of one another, there was not the fame uniformity, fome of them having a breadth of two toifes and even more, and others not one; and the like difference is obfervable in their depth. It was, however, their conftant care to make

the

the inward bank at least three or four feet higher than the outward, to have the greater advantage over the affailants.

The junction and polifh fo much admired in all the remaining ftone-works of the Indians, plainly fhew, that they made use of fome ftones to polifh others, by rubbing them together; it being highly improbable that they could bring them to fuch perfection with the few and awkward tools they used: as for the working of iron, they were undoubtedly ftrangers to it, there being many mines of that metal in this country, and not one of them with any marks of having ever been touched. And no iron was found among them at the arrival of the Spaniards. But, on they contrary, they fhewed an extreme fondness for any thing made of that metal.

I have already mentioned the quarries, or mines, producing the two kinds of ftone of which the Indians made their mirrors; and which were those most esteemed. There are likewife quarries of other ftones, which, in a country where gold and filver mines do not abound, would be thought valuable. Of these one is in the plain of Talqui, fouth of Cuenca; out of which are taken very large and beautiful blocks of white and very clear alabafter. Its only fault is its foftnefs: yet that is not fuch as to hinder all kinds of works from being made of it; or rather, its eafinefs contributes to their perfection : nor is there any danger of large flakes flying off, which often fpoil an entire piece. The only quarries of this ftone are near Cuenca; but those of rock crystal I have feen in many parts, from whence I have had fome very large, clear, and tranfparent pieces, and of a remarkable hardnefs: but, as it is not effeemed here, no ufe is made of it; fo that what is found is purely by accident. In the fame jurifdiction of Cuenca, and about two leagues north-weft of the city, not far from the villages of Racan and Saanfay, is a fmall mountain, entirely covered with flints; mostly black, fome of a reddifh caft, and others whitifh. But, being ftrangers to the manner of cutting and filing them for fire-arms, the people make no ufe of them: and on fome occafions, flints, either for mufkets or piftols, have been fold at Cuenca, Quito, and all over the country, for two rials each; but one is the common price of them, being brought from Europe. Confequently, as there is here a whole quarry of them, their exorbitant price is wholly owing to a want of industry, as this would in a short time render them as expert at cutting flints as the Europeans.

After the mines of metals, and the quarries of large flones, it would be improper to omit the gems found in this province. I have already obferved, that the jurifdiction of Atacames and Manta formerly abounded in emeralds of a finenefs furpaffing those of the mines of Santa Fé. Not a fmall number of them was deftroyed by an error of the first Spaniards, who came hither, imagining that, if they were real gems, they would stand the stroke of a hammer on an anvil. The loss of the mines of Atacames, and the neglect of many others of gold and silver, was in some measure compensated by the difcovery of feveral in the jurifdiction of Cuenca; but which have been but little improved, though they exhibit the most inviting figns of their great riches, namely, fragments of rubies; and which, intelligent perfons fay, are very fine. These are ufually found among the fands of a rapid river, not far from the village of Azogues. The Indians, and others, frequently make it their bufinefs to go and wafh those fands, where they find fmall fparks, about the bignefs of a lentil, and fometimes larger; and it is not to be queftioned but thefe are washed away by the continual allifion of the water in its paffage along the mine. But the inhabitants, content with this piddling work, do not trouble themfelves to trace the origin of the mine; though there is all the appearance in the world that it would turn to very good account. I myfelf, when I was

I was at that village, faw fome of these sparks in their natural state; and both their colour and hardness fufficiently shewed that they were of a very fine fort.

Another kind of ftone is found in great plenty all over this country. It is of a fine green, and harder than alabaster, though not pellucid: but no more valued than any of the former; except that a few toys or utenfils are made of it.

Here are also fome mines of fulphur, and fome parts afford vitriol; but no farther known than as Nature has placed them in view; not only the improvement of them being entirely neglected, but fcarcely any notice taken of those which lie on the furface of the ground; either because the inhabitants stand in no need of those minerals, or from their strong aversion to any thing that requires labour.

North of Quito, betwixt two plantations, at the foot of mount Anlagua, one of which bears the fame name, and the other that of Courogal, runs a very large river, which petrifies any wood, leaves, &c. thrown into it. I have had whole branches thus petrified; and the porofity of the ftem, the fibres of the rind, even the finalleft veins of the leaves, and the meander of its fibril, equally differnable as when field cut from the tree. I have alfo had large pieces of timber petrified, which at first fight appeared to be wood thoroughly dried; no visible alteration having been made in them, except in colour.

With all thefe appearances, I cannot think that the wood, leaves, and the like, which are put into the river, are really turned into ftone of fuch a hardness as that I experienced: but as the appearance is undeniable, I shall offer an explanation of this supposed transmutation.

It muft be obferved, that the rocks and all the parts which this river wafhes, are covered with a cruft of hardnefs little inferior to that of the main rock; and this increafes its volume, and diffinguithes itfelf from the original rock, which is fomething yellowifh. The inference I would draw from hence is, that the water of the river is mixed with petrifying, vifcid, and glutinous particles, which adhere to the body they furround: and as by their extreme fubtility they infinuate themfelves through its pores, they fill the place of the fibres, which the water infenfibly rots off and feparates, till at length all that was leaf or wood gives way to that petrifying matter; which fill retains the imprefion of the parts of the original, with its feveral veins, fibres, and ramifications. For at the time of its infinuation, the ducts of the wood, or leaves, ferve for a kind of mould, by which it naturally takes the entire figure of the body into which it has obtruded itfelf.

An obfervation I made with fome branches confirms me in this opinion: for, having opened them, I found fome leaves and bits of wood, which fnapped on breaking; and the infide was as large as real ftone, the texture only remaining of its first fubftance. But in others, the parts confolidated by the ftony matter fnapped; and the fibres, not having yet undergone a total corruption, retained the appearance of wood, though fome were more rotten and decayed than others. I had alfo fome leaves, the furface of which was only covered with a very fine lapideous tegument, but within were entire leaves, except here and there a little mark of decay.

It is to be obferved, that this matter much more eafly faftens on any corruptible fubftance, than on the more compact and folid, as fromes, and the like: the reafon of which is, that in one it meets with pores, in which it fixes itfelf; but having no fuch hold on the harder bodies, it is foon wafned off by the agreetion of the water; that if now and then fuch crufts are feen on fromes, they never make any fecticite addition to their volume, though forme excrement is now confpicuous from the difference of the colour; that of the petrified leaves, both within and without, is of a pale yellow; and the the fame prevails in the ftems: though in these always with a mixture of that of the wood itself when dry.

Though all the jurifdictions of the kingdom of Quito, from north to fouth, are not molefted by the vicinity of wild Indians, yet it is the misfortune of the governments of Quixos and Macas, Jean and Maynas, to be furrounded and intermixed with those barbarians; fo that, by only paffing the eaftern Cordillera of the Andes, towards that part you ufually meet with them : and from fome parts of those eminences the fmoke of their cottages may be feen. This fight is most frequently beheld from the mountain on the back of the town of Cayambe; and all along to the northward, from the village of Mira, within the jurifdiction of the town of San Miguel di Ibarra. The fportfmen, when hunting on those hills, often fee the fmoke both on this fide and likewife on the fame Cordillera, from the jurifdiction of Riobamba, to that of Cuenca. The village of Mira has often been furprifed with the fudden appearance of fome of thefe Indians; but they have as fuddenly turned back, and with the fame hafte they came. It is not uncommon for Indians of these jurifdictions, from a fondness for floth and licentioufnefs, to leave their houfes and go over to the favages; as among them they may, without controul, follow their natural idolatry, and give themfelves up to drunkenness and all manner of vice; and, what they think a fupreme happiness, be ferved and attended by women, whole office it is to take care of and fupport them : all their occupation being hunting, whenever compelled by neceffity, or induced by a fud-den fit of industry. Thus they live in a debasement of human nature; without laws or religion; in the moft infamous brutality; ftrangers to moderation; and without the least controul or restraint on their excesses.

PART II.

ACCOUNT OF PERU AND CHILI.

BOOK VII.

Account of our Journey to Lima; with a Description of the Towns and Settlements on the Road, and of the City of Lima.

CHAP. I. - Journey from Quito to Truxillo.

THE accidents to which human enterprizes and attempts are generally exposed, direct, with an inconftant but wonderful harmony, the feries of our actions and adventures, and introduce among them a great variety of alterations and changes. It is this variety which, in vegetation, embellishes nature, and equally displays the glory and wisdom of the Supreme Creator in the political and rational world; where we admire the furprising diversity of events, the infinity of human actions, and the different schemes and confequences in politics, the fucceffive chain of which renders history to delightful, and. and, to a reflecting mind, fo inftructive. The inconftancy fo often feen in things the most folid and ftable, is generally one of the most powerful obstacles to the advantages which might otherwife be derived from works of any duration. However great they are, either in reality, or idea, the perfection of them is not only impeded by the vicifitudes of time, and the inconstancy of things, but they even decline, and fall into ruins: fome, through want of proper fupport and encouragement; while others, from the mind being wearied out by delays, difficulties, and a thousand embarrafiments, are abandoned; the imagination being no longer able to pursue its magnificent fcheme.

To meafure fome degrees of the meridian near the equator, the principal intention of our voyage, if confidered only in idea, and abstractedly from the difficulties which attended its execution, must appear easy, and as requiring no great length of time; but experience convinced us, that a work of fuch importance to the improvement of fcience, and the interest of all nations, was not to be performed without delays, difficulties, and dangers, which demanded attention, accuracy, and perfeverance. Besides the difficulties neceffarily attending the requisite accuracy of these observations, the delays we were obliged to make in order to take them in the most favourable feasions, the intervening clouds, the Paramos, and disposition of the ground, were fo many obstacles to our making any tolerable dispatch; and these delays filled us with apprehensions, that if any other accidents should happen, the whole design would be rendered abortive, or at least, fuffer a long interruption.

It has already been obferved, that while we were at Cuenca, finishing our astronomical obfervations in that extremity of the arch of the meridian, we unexpectedly received a letter from the Marquis de Villa Garcia, viceroy of Peru, defiring us to come with all speed to his capital : any delay on our part might have been improper; and we were folicitous not to merit an accusation of the least remissness in His Majesty's fervice. Thus we were under a neceflity of fuspending our observations for fome time *; though all that remained was the fecond astronomical observation, northward, where the feries of our triangles terminated.

The occafion of this delay arofe from an account, received by the viceroy, that war being declared between Spain and England, the latter was fending a confiderable fleet on fome fecret defigns into those feas. Several precautions had been taken to defeat any attempt; and the viceroy, being pleafed to conceive that we might be of fome use to him in acquitting himfelf with honour on this occasion, committed to us the execution of fome of his measures; giving us to understand, that the choice he made of us, was the most convincing proof of the high opinion he entertained of our abilities; and indeed our obligations were the greater, as the distance of four hundred leagues had not obliterated us from his remembrance, of which he now gave us so honourable a proof.

On the 24th of September 1740, the viceroy's letter was delivered to us, and we immediately repaired to Quito, in order to furnish ourfelves with necessaries for the journey.

Every thing being performed, we fet out from that city on the 30th of October, and determined to go by Guaranda and Guayaquil; for, though there is a road by land through Cuenca and Loja, yet the other feemed to us the most expeditious, as the ways are neither fo bad, nor mules and other beafts of carriage fo difficult to be met with. The long ftays in villages were here alfo little to be apprehended, which are frequently rendered neceffary in the other road by inundations, rivers, and precipices.

* Book V. Chap. II.

VOL. XIV.

Qn

On the 30th of October we reached the Bodegas, or warehoufes, of Babayoho, where, taking a canoe, we went down the river to Gayaquil; and embarking on board a fmall fhip bound for Puna, we anchored in that port November the 3d. At this place we hired a large balza, which brought us through the gulph to Machala. For though the ufual route is by the Salto de Tumbez, we were obliged to alter our courfe, the pilot not being well acquainted with the entrance of a creek, through which you pafs to the Salta.

On the 5th, in the morning, our balza landed us on the coaft of Machala, from whence we travelled by land to the town, the diffance being about two fhort leagues. The next day we fent away our baggage in a large canoe to the Salto de Tumbez; going myfelf in the fame canoe, being difabled by a fall the preceding day. Don George Juan, with the fervants, followed on horfeback : the whole country being level, is every where full of falt marfhes, and overflows at high-water, fo that the track is not fufficient for two to go abreaft.

The Salto, where I arrived on the 7th at night, is a place which ferves as a kind of harbour for boats and fmall veffels. It is fituated at the head of fome creeks, particularly that of the Jambeli, between fourteen and fixteen leagues from the coaft, but entirely deflitute of inhabitants, no frefh water being found in any part of the adjacent country; fo that it only ferves for landing goods configned to Tumbez, where they are carried on mules, kept there for this purpole; and in this its whole trade confifts. The Salto is uninhabited; nor does it afford the leaft fhelter, all the goods brought thither being deposited in a fmall fquare; and, as rain is feldom or ever known here, there is little danger of their receiving any damage before they are carried to Tumbez.

Here, as along the fides of all the creeks, the mangrove-trees ftand very thick, with their roots and branches fo interwoven as to be abfolutely impenetrable; though the fwarms of mufchitos are alone fufficient to difcourage any one from going among them. The only defence against these infects is, to pitch a tent, till the beafts are loaded, and you again move forward. The more inland parts, where the tides do not reach, are covered with forests of fmaller trees, and contain great quantities of deer; but, at the fame time, are infested with tigers; fo that, if the continual stinging of the mufchitos deprives travellers of their rest, it also prevents their being furprised by the tigers, of the fury of which there are many melancholy examples.

On the 9th, in the morning, I arrived at the town of Tumbez, fituated feven leagues from the Salto; the whole country through which the road lies is entirely wafte, part of it being overflowed by the tides, and the other part dead fands, which reflect the rays of the fun fo intenfely, as to render it neceffary, in general, to perform this journey in the night; for travelling feven leagues thither, and as many back, without either water or fodder, is much too laborious for the mules to undergo in the day-time. A drove of mules, therefore, never fets out from Tumbez for the Salto, till an account arrives, generally by one of the failors belonging to the veffel, of the goods being landed, and every thing in readinefs; as it would otherwife be loft labour, it being impofible that the mules fhould make any ftay there.

Don George Juan had reached Tumbez on the 8th, and, though he did every thing in his power to provide mules for continuing our journey, we were obliged to wait there fome time longer. Nor could we make any advantage of our ftay here, except to obferve the latitude, which we did on the ninth with a quadrant, and found it to be $3^{\circ} 13' 16''$ fouth.

Near Tumbez is a river of the fame name, which difcharges itfelf into the bay of Guayaquil, almost opposite to the island of St. Clare. Barks, boats, balzas, and canoes,

may go up and down this river, being three fathoms deep and twenty-five broad; but it is dangerous going up it in the winter feafon, the impetuofity of its current being then increafed by torrents from the mountains. At a little diftance from the Cordillera, on one fide of the banks of the river, ftands the town of Tumbez in a very fandy plain, interfperfed with fome fmall eminences. The town confifts only of feventy houfes, built of cane, and thatched, fcattered up and down without any order or fymmetry. In thefe houfes are about one hundred and fifty families of Meftizos, Indians, Mulattoes, and a few Spaniards. There are befides thefe other families living along the banks of the river, who having the conveniency of watering their grounds, continually employ themfelves in rural occupations.

The heat is exceffive; nor have they here any rain for feveral years fucceffively; but when it begins to fall, it continues during the winter. The whole country from the town of Tumbez to Lima, contained between the foot of the Cordillera and the fea, is known by the name of Valles, which we mention here, as it will often occur in the remaining parts of this narrative.

Tumbez was the place where, in the year 1526, the Spaniards first landed in these parts of South America, under the command of Don Francisco Pizarro; and where he entered into feveral friendly conferences with the princes of the country, but vasials to the Yncas. If the Indians were surprized at the fight of the Spaniards, the latter were equally fo at the prodigious riches which they every where faw, and the largeness of the palaces, castles, and temples; of all of which, though built of store, no vestiges are now remaining.

Along the delightful banks of this river, as far as the water is conveyed, maize, and all other fruits and vegetables that are natives of a hot climate, are produced in the greateft plenty; and in the more diftant parts, which are defitiute of this advantage, grows a kind of leguminous tree, called algarrobale, producing a bean, which ferves as food for all kinds of cattle. It refembles almost that known in Spain by the name of Valencia; its pod being about five or fix inches long, and only four lines broad, of a whitish colour, intermixed with veins of a faint yellow. It proves a very ftrengthening food to beasts of labour, and is used in fattening those for the flaughter, which hence acquire a tafte remarkably delicious.

On the 14th I arrived at the town of Piura, where I was obliged to wait fome time for Don George Juan, during which I entirely recovered from the indifposition I before laboured under from my fall.

Here I experienced the efficacy of the Calaguala, which I happily found not to fall flort of the great reputation it has acquired in feveral parts of Europe.

From the town of Tumbez to the city of Piura is fixty-two leagues, which we performed in fifty-four hours, exclusive of those we refted; fo that the mules, which always travel one constant pace, go fomething above a league an hour. To the town of Amotape, the only inhabited place in the whole road, is forty-eight leagues; the remaining part is one continued defart. At leaving Tumbez, its river is croffed in balzas, after which, for about two leagues, the road lies through thickets of algarrobale, and other trees, at the end of which the road runs along the fea-coast to Mancora, twenty-four leagues from Tumbez. In order to travel this road, an opportunity at low water must be taken for croffing a place called Malpass, about fix leagues from Tumbez; for being a high steep rock, washed by the fea during the flood, and the top of it impassable from the many chass and precipices, there is a necessity of passing between the fea and its basis, which is about half a league in length : and this must be done before the flood returns, which foon covers this narrow way, though it is very fase at low water. During

the

the remainder of this journey, it is equally neceffary to confult the tide; for the whole country being fandy, the mules would, from their finking fo deep in it, be tired the first league or two. Accordingly travellers generally keep along the fhore, which being washed by the breaking of the waves, the fand is more compact and firm, and confequently much easier to the beafts. During the winter, there runs through Mancora a fmall rivulet of fresh water, to the great relief of the mules; but in summer the little remaining in its course is fo brackish, that nothing but absolute necessity can render it The banks of this rivulet are fo fertile by its water, that it produces fuch tolerable. numbers of large algarrobales, as to form a fhady foreft.

From Mancora, the road for fourteen leagues runs between barren mountains, at fome distance from the coast, with very troublesome ascents and declivities, as far as the breach of Parinnas, where the fame cautions are to be obferved as at Mancora, and is the fecond ftage; from whence the road lies over a fandy plain ten leagues in length, to the town of Amotape, and at some distance from the coast.

This town, which stands in 4° 51' 43" fouth latitude, is an appendix to the parish of Tumbez, belonging to its lieutenancy, and in the jurifdiction of Piura. The houfes are about thirty in number, and composed of the fame materials with those of Tumbez; but the inhabitants are only Indians and Mestizos. A quarter of a league from it is a river of the fame name, and whofe waters are of fuch prodigious use to the country, that it is every where cultivated, and divided into fields, producing plenty of the feveral grains, esculent vegetables, and fruits, natural to a hot climate; but like Tumbez, is infefted with moschitos. This river in fummer may be forded; but in winter, when the torrents defcend from the mountains, it must be crossed in a balza, the rapidity of its current being then confiderably increased. There is a neceffity for passing it in going to Piura, and after this for about four leagues the road lies through woods of lofty algarrobales. These woods terminate on a fandy plain, where even the most experienced drivers and Indians fometimes lofe their way, the wind levelling those hills of fand which ferved as marks, and effacing all the tracks formerly made; fo that in travelling this country, the only direction is the fun in the day-time, and the ftars in the night; and the Indians being little acquainted with the fituation of thefe objects, are often bewildered, and exposed to the greatest hardships before they can again find their way.

From what has been faid, the difficulties of travelling this road may be conceived. Befides, as far as Amotape, not only all kinds of provisions must be carried, but even water, and the requifites for kindling a fire, unlefs your provision confifts of cold meat. In this last stage is a mine of cope, a kind of mineral tar, great quantities of which are carried to Callao, and other ports, being used in ships instead of naphtha, but has the ill quality of burning the cordage; its cheapnefs, however, induces them to ufe it mixed with naphtha.

The city of Piura, which is at prefent the capital of its jurifdiction, was the first Spanish fettlement in Peru. It was founded in the year 1531 by Don Francisco Pizarro, who alfo built the first church in it. This city was originally called San Miguel de Piura, and ftood in the valley of Targafala, from whence, on account of the badness of the air, it was removed to its prefent fituation, which is on a fandy plain. The latitude of it is 5° 11' 1" fouth, and the variation of the needle we observed to be 8° 13' easterly. The houfes are either of bricks dried in the fun, or a kind of reeds called quinchas, and few of them have any ftory. Here the corregidor refides, whofe jurifdiction extends on one fide along Valles, and on the other among the mountains. Here is an office for the royal revenue, under an accountant or treasurer, who relieve each other every fix months,

555

months, one refiding at the port of Paita, and the other in this place: at the former for receiving the duties on imports for goods landed there, and alfo for preventing a contraband trade; and at the latter for receiving the revenues and merchandizes on goods configned from the mountains to Loja, or going from Tumbez to Lima.

This city contains near fifteen hundred inhabitants; and among these fome families of rank, besides other Spaniards, Mestizos, Indians, and Mulattoes. The climate is hot and very dry, rains being feldomer known here than at Tumbez : notwithstanding which it is very healthy. It has a river of great advantage to the inhabitants as well as the adjacent country, the foil of which is fandy, and therefore easier penetrated by the water; and being level, the water is conveyed to different parts by canals. But in the fummer the river is absolutely destitute of water, the little which descends from the mountains being absorbed before it reaches the city; fo that the inhabitants have no other method of procuring water, but by digging wells in the bed of the river, the depth of which must be proportioned to the length of time the drought has continued.

Piura has an hofpital under the care of the Bethlemites; and though patients afflicted with all kinds of diftempers are admitted, it is particularly famous for the cure of the French difeafe, which is not a little forwarded by the nature of the climate. Accordingly there is here a great refort of perfons infected with that infamous diftemper; and are reftored to their former health by a lefs quantity of a fpecific than is ufed in other countries, and alfo with greater eafe and expedition.

As the whole territory of this jurifdiction within Valles produces only the algarroba, maize, cotton, grain, a few fruits and efculent vegetables, most of the inhabitants apply themfelves to the breeding of goats, great numbers of which are continually fold for flaughter, and from their fat they make foap, for which they are fure of a good market at Lima, Quito, and Panama; their skins are dreffed into leather called Cordovan, and for which there is also a great demand at the above cities. Another branch of its commerce is the Cabuya, or Pita, a kind of plant from whence a very fine and strong thread is made; and which abounds in the mountainous parts of its jurifdiction. Great advantages are also made from their mules; as all the goods fent from Quito to Lima, and also those coming from Spain, and landed at the port of Paita, cannot be forwarded to the places they are configned to but by the mules of this province; and from the immense quantity of goods coming from all parts, fome idea may be formed of the number of beafts employed in this trade, which continues more or less throughout the year, but is prodigious when the rivers are shallow.

Don George Juan being arrived at Piura, every thing was got ready with the utmost dispatch, and on the 21st we continued our journey. The next day we reached the town of Sechura, ten leagues distant from Piura, according to the time we were travelling it. The whole country between these two places is a level fandy defart.

Though the badnefs and danger of the roads in Peru fcarce admit of any other method of travelling than on mules, yet from Piura to Lima there is a conveniency of going in litters. Thefe inftead of poles are fulpended on two large canes, like those of Guayaquil, and are hung in fuch a manner as not to touch the water in fording rivers, nor ftrike against the rocks in the afcents or defcents of difficult roads.

As the mules hired at Piura perform the whole journey to Lima, without being relieved, and in this great diftance, are many long defarts to be croffed, the natural fatigue of the diftance, increafed by the fandinefs of the roads, render fome intervals of reft abfolutely neceffary, effectially at Sechura, becaufe on leaving that town we enter the great defart of the fame name. We tarried here two days; during which we obferved the latitude, and found it $5^{\circ} 32' 33^{\frac{1}{2}''}$ S.

ULLOA'S VOYAGE TO SOUTH AMERICA.

The original fituation of this town was contiguous to the fea, at a fmall diftance from a point called Aguja; but being destroyed by an inundation, it was thought proper to build the prefent town of Sechura about a league diftance from the coaft. near a river of the fame name, and which is fubject to the fame alterations as that of Piura; for at the time we croffed it no water was to be feen; whereas from the months of February or March till August or September, its water is fo deep, and the current fo ftrong, as to be paffed only in balzas; as we found in our fecond and third journey to Lima. When the river is dry, the inhabitants make ufe of the above-mentioned expedient of digging wells in its beds, where they indeed find water but very thick and brackifh. Sechura contains about two hundred houfes of cane, and a large and handfome brick church ; the inhabitants are all Indians, and confift of near four hundred families, who are all employed either as drivers of the mules or fifhermen. The houfes of all thefe towns are quite fimple; the walls confifting only of common canes and reeds, fixed a little way in the ground, with flat roofs of the fame materials, rain being hardly ever known here; fo that they have fufficient light and air, both the rays of the fun and wind eafily find a paffage. The Indian inhabitants of this place use a different language from that common in the other towns both of Quito and Peru; and this is frequently the cafe in great part of Valles. Nor is it only their language which diftinguishes them, but even their accent; for befides their enunciation, which is a kind of melancholy finging, they contract half of their laft words, as if they wanted breath to pronounce them.

The drefs of the Indian women in these parts, confifts only of an anaco, like that of the women of Quito, except its being of fuch a length as to trail upon the ground. It is also much larger, but without fleeves, nor is it tied round them with a girdle. In walking they take it up a little, and hold it under their arms. Their head-drefs confifts of cotton cloth laced or embroidered with different colours; but the widows wear black. The condition of every one may be known by their manner of dreffing their hair, maids and widows dividing it into two plaited locks, one hanging on each fhoulder, whilft married women braid all their hair in one. They are very induftrious, and ufually employed in weaving napkins of cotton and the like. The men drefs in the Spanish manner; and confequently wear shoes; but the women none. They are naturally haughty, of very good understandings, and differ in fome customs from those of Quito. They are a proof of what has been observed (Book VI. Chap. VI.) with regard to the great improvement they receive from a knowledge of the Spanish language ; and accordingly it is fpoken here as fluently as their own. They have genius, and generally fucceed in whatever they apply themfelves to. They are neither fo fuperftitious, nor fo exceffively given to vice as the others; fo that except in their colour and other natural appearances, they may be faid to differ greatly from them; and even in their propenfity to intemperance, and other popular cuftoms of the Indians, a certain moderation and love of order is confpicuous among thefe. But to avoid tedious repetitions, I shall conclude with observing, that all the Indians of Valles from Tumbez to Lima are industrious, intelligent, and civilized beyond what is generally imagined.

The town of Sechura is the last in the jurifdiction of Piura, and its inhabitants not only refuse to furnish passengers with mules, but also will not fuffer any perfon of whatever rank, to continue his journey, without producing the corregidor's paffport. The intention of this strictness is to suppress all abuses in trade; for there being besides this road which leads to the defart, only one other called the Rodeo; one of them must be taken; if that of the defart, mules must be hired at Sechura for carrying water for the use of the loaded mules when they have performed half their journey. 10 This

558

This water is put into large callebafhes, or fkins, and for every four loaded mules one mule loaded with water is allowed, and alfo one for the two mules carrying the litter. When they travel on horfeback, the riders carry their water in large bags or wallets made for that purpofe; and every one of the paffengers, whether in the litter or on horfeback, provides himfelf with what quantity he thinks fufficient, as during the whole journey nothing is feen but fand, and hills of it formed by the wind, and here and there maffes of falt; but neither fprig, herb, flower, or any other verdure.

On the 24th we left Sechura, and croffed the defart, making only fome fhort ftops for the eafe of our beafts, to that we arrived the next day at five in the evening at the town of Morrope, twenty-eight or thirty leagues diftance from Sechura, though falfely computed more by the natives. The extent and uniform afpect of this plain, together with the continual motion of the fand which foon effaces all tracks, often bewilders the most experienced guides, who, however, shew their skill in soon recovering the right way; for which they make use of two expedients: first, to observe to keep the wind directly in their face; and the reverfe upon their return; for the fouth winds being conftant here, this rule cannot deceive them: fecond, to take up a handful of fand at different diffances, and fmell to it; for as the excrements of the mules impregnate the fand more or lefs, they determine which is the true road by the fcent of it. Those who are not well acquainted with these parts, expose themselves to great danger, by ftopping to reft or fleep; for when they again fet forward, they find themfelves unable to determine the right road; and when they once have loft the true direction, it is a remarkable inftance of Providence if they do not perifh with fatigue or diffrefs, of which there are many melancholy inftances.

The town of Morrope confifts of between feventy and eighty houfes, built like thofe in the preceding towns; and contains about one hundred and fixty families, all Indians. Near it runs a river called Pozuelos, fubject to the fame changes as those above-mentioned: though the lands bordering on its banks are cultivated, and adorned with trees. The inftinct of the beafts ufed to this road is really furprifing; for even at the diffance of four leagues, they fmell its water, and become fo impatient that it would be difficult to ftop them: accordingly they purfue themfelves the fhortest road, and perform the remainder of the journey with remarkable cheerfulness and difpatch.

On the 26th we left Morrope, and arrived at Lambayeque, four leagues from it : and being obliged to continue there all the 27th, we obferved its latitude, and found it 6° 41' 37" fouth. This place confifts of about one thoufand five hundred houfes, built fome of bricks, others of bajareques, the middle of the walls being of cane, and plaiftered over, both on the infide and outfide, with clay : the meaneft confift entirely of cane, and are the habitations of the Indians. The number of inhabitants amount to about three thoufand, and among them, fome confiderable and opulent families; but the generality are poor Spaniards, Mulattoes, Meftizos, and Indians. The parifh-church is built of ftone, large and beautiful, and the ornaments fplendid. It has four chapels called ramos, with an equal number of priefts, who take care of the fpiritual concerns of the Indians, and alfo attend, by turns, on the other inhabitants.

The reafon why this town is fo populous is, that the families which formerly inhabited the city of Sana, on its being facked in 1685, by Edward Davis, an English adventurer, removed hither; being under a farther neceffity of changing their dwelling from a fudden inundation of the river of the fame name, by which every thing that had efcaped the ravages of the English was destroyed. It is the refidence of a corregidor, having under his jurifdiction, befides many other towns, that of Morrope. One of the two officers of the revenue appointed for Truxillo, refides here. A river called Lambayeque, eque, washes this place; which, when the waters are high, as they were when we arrived here, is croffed over a wooden bridge; but at other times may be forded, and often is quite dry.

The neighbourhood of Lambayeque, as far as the industry of its inhabitants have improved it, by canals cut from the river, abounds in feveral kinds of vegetables and fruits; fome of the fame kind with those known in Europe, and others of the Creole kind, being European fruits planted there, but which have undergone confiderable alterations from the climate. About ten leagues from it are espaliers of vines, from the grapes of which they make wine, but neither fo good, nor in fuch plenty as in other parts of Peru. Many of the poor people here employ themselves in works of cotton, as embroidered handkerchiefs, quilts, mantelets, and the like.

On the 28th we left Lambayeque, and having paffed through the town of Monfefu, about four or five leagues diftant from it, we halted near the fea-coaft, at a place called Las Lagunas, or the Fens; these contain fresh water left in them by the overflowings of the river Sana. On the 29th we forded the river Xequetepeque, leaving the town of that name at the distance of about a quarter of a league, and in the evening arrived at the town of St. Pedro, twenty leagues from Lambayeque, and the last place in its jurifdiction. By observation we found its latitude to be 7° 25' 49" fouth.

St. Pedro confifts of about one hundred and thirty baxareque houfes, and is inhabited by one hundred and twenty Indian families, thirty of whites and Meftizos, and twelve of Mulattoes. Here is a convent of Augustines, though it feldom confists of above three perfons, the prior, the prieft of the town, and his curate. Its river is called Pacafmayo, and all its territories produce grain and fruits in abundance. A great part of the road from Lambayeque to St. Pedro, lies along the fhore, not indeed at an equal, but never at a great diffance from it.

On the 30th of November we paffed through the town of Payjan, which is the first in the jurifdiction of Truxillo, and on the first of December we reached that of Chocope, thirteen or fourteen leagues distant from St. Pedro. We found its latitude to be 7° 46' 40" fouth. The adjacent country being watered by the river called Chicama, distributed to it by canals, produces the greatest plenty of sugar canes, grapes, fruits of different kinds, both European and Creole: and particularly maize, which is the general grain used in all Valles. From the banks of the river Lambayeque to this place, sugar canes flourish near all the other rivers, but none of them equal, either in goodness or quantity, those near the river Chicama.

Chocope confifts of betwixt eighty and ninety baxareque houfes, covered with earth. The inhabitants, who are between fixty and feventy families, are chiefly Spaniards, with fome of the other cafts; but not above twenty or twenty-five of Indians. Its church is built of bricks, and both large and decent. They report here, as fomething very remarkable, that in the year 1726, there was a continual rain of forty nights, beginning conftantly at four or five in the evening, and ceafing at the fame hour next morning, the fky being clear all the reft of the day. This unexpected event entirely ruined the houfes, and even the brick church, fo that only fome fragments of its walls remained. What greatly aftonifhed the inhabitants was, that during the whole time the foutherly winds not only continued the fame, but blew with fo much force, that they raifed the fand, though thoroughly wet. Two years after a like phenomenon was feen for about eleven or twelve days, but was not attended with the fame deftructive violence as the former. Since which time nothing of this kind has happened, nor had any thing like it been remembered for many years before.

CHAP.

CHAP. II. - Our Arrival at Truxillo; a Defcription of that City, and the Continuance of our Journey to Lima.

WITHOUT flaying any longer at Chocope than is usual for refting the beafts, we continued our journey, and arrived at the city of Truxillo, eleven leagues diffant, and, according to our obfervations, in 8° 6' 3" fouth latitude. This city was built in the year 1535, by Don Francisco Pizarro, in the valley of Chimo. Its situation is pleafant, notwithstanding the fandy foil, the universal defect of all the towns in Valles. It is furrounded by a brick wall, and its circuit entitles it to be claffed among cities of the third order. It flands about half a league from the fea, and two leagues to the northward of it is the port of Guanchaco, the channel of its maritime commerce. The houfes make a creditable appearance. The generality are of bricks, decorated with ftately balconies, and fuperb porticos; but the other of baxareques. Both are however low, on account of the frequent earthquakes; few have fo much as one ftory. The corregidor of the whole department refides in this city; and alfo a bifhop (whole diocefe begins at Tumbez) with a chapter confifting of three dignitaries, namely, the dean, arch-deacon, and chanter; four canons, and two prebendaries. Here is an office of revenue, conducted by an accomptant and treafurer; one of whom, as I have already obferved, refides at Lambayeque. Convents of feveral orders are established here; a college of Jesuits, an hospital of our Lady of Bethlehem, and two nunneries, one of the order of St. Clare, and the other of St. Terefa.

The inhabitants confift of Spaniards, Indians, and all the other cafts. Among the former are feveral very rich and diftinguifhed families. All in general are very civil and friendly, and regular in their conduct. The women in their drefs and cuftoms follow nearly those of Lima, an account of which will be given in the fequel. Great number of chaifes are feen here, there not being a family of any credit without one; as the fandy foil is very troublefome in walking.

In this climate, there is a fenfible difference between winter and fummer, the former being attended with cold, and the latter with exceflive heat. The country of this whole valley is extremely fruitful, abounding with fugar canes, maize, fruits and garden ftuff; and with vineyards and olive yards. The parts of the country neareft the mountains produce wheat, barley, and other grain; fo that the inhabitants enjoy not only a plenty of all kinds of provisions, but alfo make confiderable exports to Panama, efpecially of wheat and fugars. This remarkable fertility has been improved to the great embellifhment of the country; fo that the city is furrounded by feveral groves, and delightful walks of trees. The gardens alfo are well cultivated, and make a very beautiful appearance; which with a continual ferene fky, prove not lefs agreeable to travellers than to the inhabitants.

About a league from the city is a river, whofe waters are conducted by various canals, through this delightful country. We forded it on the 4th when we left Truxillo; and on the 5th, after paffing through Moche, we came to Biru, ten leagues from Truxillo. The pafs of the corregidor of Truxillo must be produced to the alcalde of Moche, for without this, as before at Sechura, no perfon would be admitted to continue his journey.

Biru, which lies in 8° 24' 59" fouth latitude, confifts of fifty baxareque houfes, inhabited by feventy families, of Spaniards, Indians, Mulattoes, and Mestizos. About half a league to the northward of it is a rivulet, from which are cut feveral trenches for watering the grounds. Accordingly the lands are equally fertile with those of Truxillo,

VOL. XIV.

and

and the fame may be faid of the other fettlements farther up the river. This place we left the fame day, travelling fometimes along the fhore, fometimes at a league diffance from it.

On the 6th we halted in a defert place called Tambo de Chao, and afterwards came to the banks of the river Santa; which having paffed by means of the Chimbadores, we entered the town of the fame name, which lies at about a quarter of a league from it, and fifteen from Biru. The road being chiefly over vaft fandy plains intercepted between two hills.

The river Santa, at the place where it is usually forded, is near a quarter of a league in breadth, forming five principal streams, which run during the whole year with great rapidity. It is always forded, and for this purpole perfons make it their businels to attend with very high horfes, trained up to ftem the current, which is always very ftrong. They are called Chimbadores; and must have an exact knowledge of the fords, in order to guide the loaded mules in their paffage, as otherwife the fording this river would be fcarce practicable, the floods often shifting the beds of the river; fo that even the Chimbadores themfelves are not always fafe; for the fords being fuddenly changed in one of the ftreams, they are carried out of their depth by the current, and irretrievably loft. During the winter feafon, in the mountains, it often fwells to fuch a height, as not to be forded for feveral days, and the paffengers are obliged to wait the fall of the waters, efpecially if they have with them any goods; for those who travel without baggage may, by going fix or eight leagues above the town, pafs over it on balzas made of calabashes; though even here not without danger, for if the balza happens to meet any ftrong current, it is fwept away by its rapidity, and carried into the fea. When we forded it, the waters were very low, notwithstanding which, we found, from three feveral experiments made on its banks, that the velocity of the current was thirty-five toifes in twenty-nine feconds and a half; fo that the current runs 4271 toifes, or a league and a half in an hour. This velocity does not indeed equal what M. de la Condamine mentions in the narrative of his voyage down the river Maranon, or that of the Amazons, at the Pango, or strait of Manceriche. But doubtles when the river Santa is at its ufual height, it exceeds even the celerity of the Pango: at the time of making our obfervations, it was at its loweft.

The latitude of the town of Santa Miria de la Parrilla, for fo it is called, we determined by an obfervation of fome ftars, not having an opportunity of doing it by the fun, and found it 8° 57' 36" S. It was first built on the fea coast, from which it is now fomething above half a league distant. It was large, populous, the refidence of a corregidor, and had feveral convents. But in 1685, being pillaged and destroyed by the above-mentioned English adventurer, its inhabitants abandoned it, and fuch as were not able to remove to a place of greater fecurity, fettled in the place where it now stands. The whole number of houses in it at prefent does not exceed thirty; and of these the best are only of baxareque, and the others of straw. These houses are inhabited with about fifty poor families confisting of Indians, Mulattoes and Mestizos.

During our obfervations, we were entertained with a fight of a large ignited exhalation, or globe of fire in the air, like that mentioned in the firft volume of this work, though not fo large, and lefs effulgent. Its direction was continued for a confiderable time towards the weft, till having reached the fea coaft, it difappeared with an explosion like that of cannon. Those who had not feen it were alarmed, and imagining it to be a cannon fired by fome ship arrived in the port, ran to arms, and hastened on horfeback to the shore, in order to oppose the landing of the enemy. But finding all quiet, they returned to the town, only leaving fome centinels to fend advice, if any thing extraor-

562

I

dinary

dinary fhould happen. These igneous phænomena are so far from being uncommon all over Valles, that they are seen at all times of the night, and some of them remarkably large, luminous, and continuing a confiderable time.

This town and its neighbourhood are terribly infefted with mofchitos. There are indeed fome parts of the year when their numbers decrease, and fometimes, though very feldom, none are to be feen: but they generally continue during the whole year. The country from Piura upwards is free from this troublefome infect, except fome particular towns, fituated near rivers; but they fwarm no where in fuch intolerable numbers as at Santa.

Leaving this town on the 8th, we proceeded to Guaca-Tambo, a plantation fo called, eight leagues diftant from Santa; and contiguous to it is the Tambo, an inn built by the Yncas for the use of travellers. It has a shed for the convenience of passengers, and a rivulet running near it.

On the 9th, we came to another plantation known by the name of Manchan, within a league of which we paffed through a village called Cafma la Baxa, having a church, with not more than ten or twelve houfes. Half way betwixt this and Manchan is another rivulet. The latter plantation is about eight leagues diftant from the former. From Manchan on the 10th, we travelled over those ftony hills called the Culebras, extremely troublefome, particularly to the litters, and on the following day, being the 11th, we entered Guarmey, fixteen leagues from Manchan; and after travelling about three leagues further we reached the Pascana, or refting place, erected instead of a Tambo or inn, and called the Tambo de Culebras. The town of Guarmey is but so fmall and inconfiderable, confisting only of forty houses, and these no better than the preceding. They are inhabited by about feventy families, few of which are Spaniards. Its latitude is 10° 3' 53" fouth. The corregidor has obtained leave to refide here continually, probably to be free from the intolerable plague of the moschitos at Santa, where formerly was his refidence.

On the 13th we proceeded from hence to a place called Callejones, travelling over thirteen leagues of very bad road, being either fandy plains, or craggy eminences. Among the latter is one, not a little dangerous, called Salto del Frayle, or the Friar's leap. It is an entire rock, very high, and towards the fea almost perpendicular. There is however no other way, though the precipice cannot be viewed without horror; and even the mules themfelves feem afraid of it by the great caution with which they take their fteps. On the following day we reached Guamanmayo, a hamlet at fome distance from the river Barranca, and belonging to the town of Pativirca, about eight leagues from the Callejones. This town is the last in the jurifdiction of Santa or Guarmey.

Patavirca confifts only of fifty or fixty houfes, and a proportional number of inhabitants: among whom are fome Spanish families, but very few Indians. Near the fea coast, which is about three quarters of a league from Guamanmayo, are still remaining fome huge walls of unburnt bricks; being the ruins of an antient Indian structure; and its magnitude confirms the tradition of the natives, that it was one of the palaces of the antient caciques, or princes; and doubtles its situation is excellently adapted to that purpose, having on one fide a most fertile and delightful country, and on the other, the refreshing prospect of the sea.

On the 15th we proceeded to the banks of the river Barranca, about a quarter of a league diftant. We eafily forded it, under the direction of Chimbadores. It was now very low, and divided into three branches, but being full of ftones is always dangerous. About a league further is the town of Barranca, where the jurifdiction of

Guaura

Guaura begins. The town is populous, and many of its inhabitants Spaniards, though the houfes do not exceed fixty or feventy. The fame day we reached Guaura, which from Guamanmayo makes a diffance of nine leagues.

This town confiits only of one fingle ftreet, about a quarter of a league in length, and contains about one hundred and fifty or two hundred houfes, fome of which are of bricks, others of baxareques, befides a few Indian huts.

This town has a parifh church, and a convent of Francifcans. Near it you pafs by a plantation, extending above a league on each fide of the road, which is every where extremely delightful; the country eaftward, as far as the eye can reach, being covered with fugar canes, and weftward divided into fields of corn, maize, and other fpecies of grain. Nor are these elegant improvements confined to the neighbourhood of the town, but the whole valley, which is very large, makes the fame beautiful appearance.

At the fouth end of the town of Guaura, ftands a large tower, with a gate, and over it a kind of redoubt. This tower is erected before a ftone bridge, under which runs Guaura river; and fo near to the town that it wafhes the foundations of the houfes, but without any damage, being a rock. From the river is a fuburb which extends above half a league, but the houfes are not contiguous to each other; and the groves and gardens with which they are intermixed, render the road very pleafant. By a folar obfervation, we found the latitude of Guaura to be 11° 3' 36" fouth. The fky is clear, and the temperature of the air healthy and regular. For though it is not without a fenfible difference in the feafons, yet the cold of the winter, and the heats of fummer, are both eafily fupportable.

In proceeding on our journey from Guarmey we met with a great many remains of the edifices of the Yncas. Some were the walls of palaces; others, as it were large dykes by the fides of fpacious high-ways; and others fortreffes, or caftles, properly fituated for checking the inroads of enemies. One of the latter monuments ftands about two or three leagues north of Pativirca, not far from a river. It is the ruins of a fort, and fituated on the top of an eminence at a fmall diffance from the fea; but the veftiges only of the walls are now remaining.

From Guaura we came to the town of Chancay; and though the diftance between this is reckoned only twelve leagues, we concluded, by the time we were travelling, it to be at leaft fourteen. From an obfervation we found its latitude 11° 33' 47" S. The town confifts of about three hundred houfes, and Indian huts; is very populous, and among other inhabitants can boaft of many Spanish families, and fome of diffinguished rank. Befides its parish church, here is a convent of the order of St. Francis, and an hospital chiefly supported by the benevolence of the inhabitants. It is the capital of the jurisdiction of its name, and belongs to that of Guaura. The corregidor, whose usual refidence is at Chancay, appoints a deputy for Guaura. The adjacent country is naturally very fertile, and every where well watered by canals cut from the river Passawo, which runs about a league and a half to the southward of the town. These parts are every where south maize, for the purpose of fattening hogs, in which article is carried on a very confiderable trade; the city of Lima being furnished from hence.

We left Chancay the 17th; and after travelling a league beyond the river Paffamayo, which we forded, arrived at the tambo of the fame name, fituated at the foot of a mountain of fand, exceeding troublefome, both on account of its length, fteepnefs, and difficulty in walking; fo that it is generally paffed in the night, the foil not being then fo fatiguing.

From thence on the 18th we reached Tambo de Ynca, and after travelling twelve leagues from the town of Chancay, we had at length the pleafure of entering the city of Lima.

From the diftances carefully fet down during the whole courfe of the journey, it appears that from Tumbez to Piura is fixty-two leagues, from Piura to Truxillo eightynine, and from Truxillo to Lima one hundred and thirteen; in all two hundred and fixty-four leagues. The greateft part of this long journey is generally performed by night; for the whole country being one continued fand, the reflection of the fun's rays is fo violent, that the mules would be overcome by the heat; befides the want of water, herbage, and the like. Accordingly the road all along, is rather diftinguifhed by the bones of the mules which have funk under their burdens, than by any track or path. For notwithftanding they are continually paffing and re-paffing throughout the whole year, the winds quickly efface all the prints of their feet. This country is alfo fo bare, that when a fmall herb or fpring happens to be difcovered, it is a fure fign of being in the neighbourhood of houfes. For thefe ftand near rivers, the moifture of which fertilizes thefe arid waftes, fo that they produce that verdure not to be feen in the uninhabited parts : as they are fuch merely from their being defitiute of water ; without which no creature can fubfift, nor any lands be improved.

In the towns we met with plenty of all neceffary provisions; as flesh, fowl, bread, fruits, and wine; all extremely good, and at a reafonable price; but the traveller is obliged to drefs his meat himfelf, if he has not fervants of his own to do it for him; for in the greatest parts of the towns he will not meet with any one inclinable to do him that piece of fervice, except in the larger cities where the masters of inns furnish the table. In the little towns, the inns, or rather lodging-houses, afford nothing but shelter; fo that travellers are not only put to the inconvenience of carrying water, wood and provisions, from one town to another, but also all kinds of kitchen utenfils. Besides tame fowl, pigeons, peacocks and geefe, which are to be purchased in the meaness to maize and the feeds of trees, and multiply exceedingly; fo that shooting them is the usual diversion of travellers while they continue in any town; but except these, and fome species of fmall birds, no others are to be had during the whole journey. On the other hand, no ravenous beafts, or venomous reptiles, are found here.

The diffribution of waters by means of canals, which extend the benefit of the rivers to diffant parts of the country, owes its origin to the royal care and attention of the Yncas; who, among other marks of their zeal for promoting the happine's of their fubjects, taught them by this method, to procure from the earth, whatever was neceffary either for their fubfiftence, or pleafure. Among thefe rivers, many are entirely dry or very low, when the waters ceafe to flow from the mountains; but others, as those of Santa Baranca, Guaura, and Paffamayo, continue to run with a full ftream during the greateft drought.

The ufual time when the water begins to increafe in thefe rivers is the beginning of January or February, and continues till June, which is the winter among the mountains; and, on the contrary, the fummer in Valles; in the former it rains, while in the latter the fun darts a violent heat, and the fouth winds are fcarce felt. From June the waters begin to decreafe, and in November or December the rivers are at their loweft ebb, or quite dry; and this is the winter feason in Valles, and the fummer in the mountains. So remarkable a difference is there in the temperature of the air, though at fo finall a diffance.

CHAP III. - Account of the City of Lima, the Capital of Peru.

FORTUITOUS events may fometimes, by their happy confequences, be claffed among premeditated defigns. Such was the unforefeen caufe which called us to Peru; for otherwife the hiftory of our voyage would have been deprived of a great many remarkable and inftructive particulars; as our obfervations would have been limited to the province of Quito. But by this invitation of the viceroy of Peru, we are now enabled to lead the reader into that large and luxuriant field, the fertile province of Lima, and the fplendid city of that name, fo justly made the capital of Peru, and the queen of all the cities in South America. It will also appear that our work would have fuffered a great imperfection, and the reader confequently difappointed in finding no account of those magnificent particulars, which his curiofity had doubtless promifed itfelf, from a defcription of this famous city, and an accurate knowledge of the capital province. Nor would it have been any fmall mortification to ourfelves, to have loft the opportunity of contemplating those noble objects, which fo greatly increase the value of our work, though already enriched with fuch aftronomical obfervations and nautical remarks, as we hope will prove agreeable to the intelligent reader. At the fame time it opens a method of extending our refearches into the other more diftant countries, for the farther utility and ornament of this voyage; which, as it was founded on the moft noble principles, fhould be conducted and clofed with an uniform dignity.

My defign however is not to reprefent Lima in its prefent fituation, as I fhould then, inflead of noble and magnificent objects, introduce the moft melancholy and fhocking fcenes; ruinated palaces, churches, towers, and other ftately works of art, together with the inferior buildings of which this opulent city confifted, now thrown into ruin and confusion, by the tremendous earthquake of October the 28th, 1746; the affecting account of which reached Europe with the fwiftness which usually attends unfortunate advices, and concerning which, we fhall be more particular in another place. I fhall not therefore defcribe Lima, as wasted by this terrible convulsion of nature; but as the emporium of this part of America, and endeavour to give the reader an idea of its former glory, magnificence, opulence, and other particulars which rendered it fo famous in the world, before it fuffered under this fatal catastrophe; the recollection of which cannot fail of being painful to every lover of his country, and every perfon of humanity.

The city of Lima, or as it is also called the city of the Kings, was, according to Garcilaso, in his hiftory of the Yncas, founded by Don Francisco Pizarro, on the feast of the Epiphany, 1535; though others affirm that the first stone was not laid till the 18th of January that year; and the latter opinion is confirmed by the act, or record of its foundation, still preferved in the archives of that city. It is fituated in the spacious and delightful valley of Rimac, an Indian word, and the true name of the city itself, from a corrupt pronunciation of which word the Spaniards have derived Lima. Rimac is the name by which both the valley and the river are still called. This appellation is derived from an idol to which the native Indians used to offer facrifice, as did also the Yncas, after they had extended their empire hither; and as it was supposed to return answers to the prayers addressed to it, they called it by way of diffinction Rimac, or, he who speaks. Lima, according to several observations we made for that purpose, stands in the latitude of $12^{\circ} 2' 31''$. The variation of the needle of $9^{\circ} 2' 30''$ eafterly.

Its fituation is one of the moft advantageous that can be imagined; for being in the centre of that fpacious valley, it commands the whole without any difficulty. Northward, though at a confiderable diffance, is the Cordillera, or chain of the Andes; from whence fome hills project into the valley, the nearest of which to the city are those of St. Christopher and Amancaes. The perpendicular height of the former, according to a geometrical menfuration performed by Don George Juan, and M. de la Condamine in 1737, is one hundred and thirty-four toifes; but Father Fevillée makes it one hundred and thirty-fix toifes and one foot, which difference doubtles proceeds from not having measured with equal exactness, the base on which both founded their calculations. The height of the Amancaes, is little less than the former, and fituated about a quarter of a league from the city.

The river, which is of the fame name, washes the walls of Lima, and when not increafed by the torrents from the mountains is eafily forded; but at other times, befides the increase of its breadth, its depth and rapidity render fording imposfible ; and accordingly a very elegant and spacious stone bridge is built over it, having at one end a gate, the beautiful architecture over which is equal to the other parts of this ufeful fructure. This gate forms the entrance into the city, and leads to the grand fquare, which is very large and finely ornamented. In the centre is a fountain, equally remarkable for its grandeur and capacity. In the centre is a bronze statue of Fame, and on the angles are four fmall basons. The water is ejected through the trumpet of the ftatue, and alfo through the mouths of eight lions which furround it, and greatly heighten the beauty of this work. The east fide of the square is filled by the cathedral and the archiepifcopal palace, whofe height furpafies the other buildings in the city. Its principal foundations, and the bases of its columns and pilasters, together with the capital front which faces the weft, are of freeftone; the infide refembles that of Seville, but not fo large. The outfide is adorned with a very magnificent facade or frontifpiece, rifing into two lofty towers, and in the centre is the grand portal. Round the whole runs a grand gallery, with a balustrade of wood, refembling brass in colour, and at proper diftances are feveral pyramids, which greatly augment the magnificence of the structure. In the north fide of the fquare is the viceroy's palace, in which are the feveral courts of juffice, together with the offices of revenue, and the state prifon. This was formerly a very remarkable building, both with regard to its largeness and architecture, but the greatest part of it being thrown down by the dreadful earthquake with which the city was vifited, October 20th, 1687, it now confifts only of fome of the lower apartments erected on a terras, and is used as the refidence of the viceroy and his family.

On the weft fide which faces the cathedral, is the council-houfe, and the city prifon; the fouth fide is filled with private houfes, having only one ftory; but the fronts being of ftone, their uniformity, porticoes, and elegance, are a great embellifhment to the fquare, each fide of which is eighty toifes.

The form of the city is triangular, the bafe, or longeft fide, extending along the banks of the river. Its length is 1920 toifes, or exactly two-thirds of a league. Its greateft breadth from north to fouth, that is, from the bridge to the angle oppofite to the bafe, is 1080 toifes, or two-fifths of a league. It is furrounded with a brick well, which anfwers its original intention, but is without any manner of regularity. This work was begun and finished by the Duke de la Plata, in the year 1685. It is flanked with thirty-four bastions, but without platforms or embrasfures; the intention of it being merely to inclose the city, and render it capable of fustaining any fudden attack of the Indians. It has, in its whole circumference, feven gates and three posterns. On the fide of the river oppofite to the city is a fuburb, called St. Lazaro, which has, within thefe few years, greatly increafed. All the ftreets of this fuburb, like thofe of the city, are broad, parallel, or at right angles, fome running from north to fouth, and others from eaft to weft, forming fquares of houfes, each one hundred and fifty yards in front, the ufual dimensions of all thefe quadras or fquares in this country, whereas thofe of Quito are only one hundred. The ftreets are paved, and along them run ftreams of water, conducted from the river a little above the city; and being arched over contribute to its cleanlinefs, without the least inconveniency.

The houfes, though for the most part low, are commodious, and make a good appearance. They are all of baxareque and quincha. They appear indeed to be compoled of more folid materials, both with regard to the thickness of the principal walls, and the imitation of cornices on them; and that they may the better fupport themfelves under the shocks of earthquakes, of which this city has had fo many dreadful instances, the principal parts are of wood, mortifed into the rafters of the roof, and those which ferve for walls are lined both within and without with wild canes, and chaglias or ofiers; fo that the timber-work is totally enclosed. These ofiers are plaiftered over with clay, and whitewashed, but the fronts painted in imitation of free-stone. They afterwards add cornices and porticos which are also painted of a stone colour. Thus the whole front impofes on the fight, and strangers suppose them to be built of those materials which they only imitate. The roofs are flat, and covered only fo far as is neceffary to keep out the wind and intercept the rays of the fun. The pieces of timber, of which the roofs are formed, and which on the infide are decorated with elegant mouldings and other ornaments, are covered with clay to preferve them from the fun. This flender covering is fufficient, as no violent rains are ever known here. Thus the houses are in less danger than if built of more compact materials; for the whole building yields to the motions of the earthquakes, and the foundations which are connected with the feveral parts of the building follow the fame motion; and by that means are not fo eafily thrown down.

The wild canes, which ferve for the inner parts of the walls, refemble in length and bignefs those known in Europe, but without any cavity. The wood of them is very folid, and little fubject to rot. The chaglla is also a kind of fhrub growing wild in the forests and on the banks of rivers. It is strong and flexible like the ofier. These are the materials of which the houses in all the towns of Valles mentioned in the preceding chapter, are built.

Towards the eaft and weft parts of the city, but within the walls, are a great many fruit and kitchen gardens; and most of the principal houses have gardens for entertainment, being continually refreshed with water by means of the canals.

The whole city is divided into the five following parifhes: 1. Sagrario, which has three priefts. -2. St. Ann, and 3. St. Sebastian, each having two priefts. -4. St. Marcelo, and 5. St. Lazaro, each of which has one prieft only. The parifh of the latter extends itfelf five leagues, namely, to the valley of Carabaillo, and to it belong the many large plantations in that fpace; chapels are therefore erected for celebrating mass on days of precept, that the people may perform their duty without the fatigue and trouble of travelling to Lima. Here are also two chapels of ease: that of St. Salvador, in the parish of St. Ann; and that of the Orphans, in the Sagrario. There is also in the Cercado, one of the quarters of the town, a parish of Indians, under the care of the Jefuits.

The convents here are very numerous; four Dominicans, viz. La Cafa grande, Recolleccion de la Magdalena, the college of St. Thomas appropriated to literature,

568

and

and Santa Rofa. Three of Franciscans, viz. Cafa Grande, Recoletos de Nuestra Senora de los Angeles, or Guadalupe, and Los Descalzos de San Diego: the latter is in the fuburb of San Lazaro. Three of the order of Augustin, namely, Cafa Grande; the feminary of San Ildefonso, a literary college; and the noviciate at Nuestra Senora de Guia. Three also belong to the order of Mercy, namely, the Cafa Principal, the college of St. Pedro Nolasco, and a Recolleccion, called Bethlehem.

The Jefuits have fix colleges or houfes, which are those of St. Paul, their principal college; St. Martin, a college for fecular fludents; St. Anthony, a noviciate; the Houfe of Poffeffion, or Defamparados, under the invocation of Nueftra Senora de los Dolores; a college in the Circado, where the Indians are inftructed in the precepts of religion; and that of the Chacarilla, appointed for the exercises of St. Ignatius; and accordingly all feculars, on their defire to perform them, are admitted. They are also allowed the liberty of beginning when most convenient for themfelves, and are handfomely entertained by the college during the eight days of their continuance. But it must be observed, that of all these convents, the Cafas Grandes are now the most confiderable; the others, besides being fmall, have but few members, and fmall revenues.

Befides the preceding nineteen convents and colleges, here are alfo an oratory of St. Philip Neri; a monaftery of the order of St. Benedict, with the title of Nueftra Senora de Monferrat, the abbé of which is commonly the only member, and fent from Spain; and though this foundation is one of the moft ancient in the whole city, its revenue is hardly fufficient to fupport any more: a convent called Nueftra Senora de la Buena Muerte, or the order of that name, generally known by the name of Agonizantes. This order founded an hofpital in the city, in 1715, under the particular direction of the Fathers Juan Mugnos, and Juan Fernandez, who, with a lay brother of the fame order having in 1736 obtained a licence from the council of the Indies, went from Spain and founded a convent of community in every form. In the fuburb of St. Lazaro is alfo a convent of St. Francis de Paula, a modern foundation, under the name of Nueftra Senora del Scorro.

There are alfo in Lima three other charitable foundations, namely, St. Juan de Dios, ferved by the religious of that order, and appropriated to the relief of perfons recovering from ficknefs; and two of Bethlemites; one of which, being the Cafa Grande, is without the city, and founded for the relief of fick Indians, who are taken care of in Santa Anna; and the other within the city, called that of the Incurables, being appropriated to perfons labouring under difeafes of that nature. The latter, as we have already obferved,* was founded fo early as the year 1671. This opulent city has alfo nine other hofpitals, each appropriated to fome peculiar charity : —

1. San Andres, a royal foundation admitting only Spaniards.

2. San Pedro, for poor ecclefiaftics.

3. El Efpiritu Santo, for mariners, and supported by the ships belonging to these feas, their crews being properly affessed for that purpose.

4. St. Bartholome, for the negroes.

5. Senora Santa Anna, for the Indians.

6. San Pedro de Alcantara, for women.

7. Another for that use, under the care of the Bethlemite fathers, erected before their Casa Grande.

* Chap. IV. Lib. V.

VOL. XIV.

4 D

8. La

8. La Caridad, alfo for women.

9. San Lazaro, for the lepers, which, with those already enumerated, make twelve.

Here are also fourteen nunneries, the number of perfons in which would be fufficient to people a fmall town. The five first are regulars, and the other nine recollects:

1. La Encarnation. — 2. La Conception. — 3. Santa Cathalina. — 4. Santa Clara. — 5. La Trinidad. — 6. El Carmen. — 7. Santa Terefa, ò El Carmen baxo. — 8. Las Defcalzas de San Jofeph. — 9. Las Capuchinas. — 10. Las Nazarenas. — 11. Las Mercidarias. — 12. Santa Rofa. — 13. Las Trinitarias Defcalzas. — 14. Las Monjas del Prado.

Laftly, Here are four other conventual houfes, where fome few of the fifters are not reclufes, though most of them observe that rule. These houses are :

1. Santa Rofa de Viterbo. — 2. Nuestra Senora del Patrocinio. — 3. Nuestra Senora de Capacabana, for Indian ladies. — 4. San Joseph.

The laft is a retreat for women who defire to be divorced from their hufbands. There is alfo a houfe conftituted in the manner of convents, for poor women, and under the direction of an ecclefiaftic appointed by the archbifhop, who is alfo their chaplain.

The most numerous of all these nunneries are the Incarnation, Conception, Santa Clara, and Santa Cathalina. The others are indeed not fo large; but the Recollects, in the rectitude and austerity of their lives, are an example to the whole city.

Here is alfo an orphan-houfe, divided into two colleges, one for the boys, and the other for the girls; befides feveral chapels, in different parts of the city: but the following lift will fhew at once, the parifhes, hofpitals, churches, and monafteries of Lima, which was always no lefs confpicuous with regard to a zeal for religion than for fplendour.

List of the Parishes, Convents of each Order, Hospitals, Nunneries, and Conventual Houses in Limu.

Parishes, fix.

Convents of San Domingo, four. — Of San Francis, three. — Of San Augustin, three. — Of La Merced, three.

Colleges of Jefuits, fix.

Oratory of St. Philip Neri, one.

Monastery of Benedictins, one. — Of San Francisco de Paula, one. — Of Agonizantes, one. — Of San Juan de Dios, one. — Of Bethlemites, two.

Nunneries of Regulars, five. - Of Recollects, nine.

Conventual Houfes, four. — Houfes for poor women, one. — Orphan houfe, one. — Hofpitals, twelve.

All the churches, both conventual and parochial, and alfo the chapels, are large, conftructed partly of ftone, and adorned with paintings and other decorations of great value; particularly the cathedral, the churches of St. Dominic, St. Francis, St. Auguftin, the Fathers of Mercy, and that of the Jefuits, are fo fplentidly decorated, as to furpafs defcription, an idea being only to be formed by the fight. The riches and pomp of this city, efpecially on folemn feftivals, are aftonifhing. The altars, from

their

57°

their very bafes to the borders of the paintings, are covered with maffive filver, wrought into various kinds of ornaments. The walls alfo of the churches are hung with velvet, or tapeftry of equal value, adorned with gold and filver fringes; all which, in this country, is remarkably dear; and on thefe are fplendid pieces of plate, in various figures. If the eye be directed from the pillars, walls, and ceiling, to the lower part of the church, it is equally dazzled with glittering objects, prefenting themfelves on all fides : among which are candlefticks of maffive filver, fix or feven feet high, placed in two rows along the nave of the church : emboffed tables of the fame metal, fupporting fmaller candlefticks; and in the intervals betwixt them pedeftals on which ftand the ftatues of angels. In fine, the whole church is covered with plate, or fomething equal to it in value; fo that divine fervice, in thefe churches, is performed with a magnificence fcarce to be imagined; and the ornaments, even on common days, with regard to their quantity and richnefs, exceed thofe which many cities of Europe pride themfelves with difplaying on the moft common occafions.

If fuch immenfe riches are beftowed on the body of the church, how can imagination itfelf form an idea of those more immediately used in divine worship, such as the facred vessels, the chalices, oftensoriums, &c. in the richness of which there is a fort of emulation between the feveral churches? In these the gold is covered with diamonds, pearls, and precious stones, fo as to dazzle the eye of the spectator. The gold and filver stuffs for vestments and other decorations, are always of the richest and most valuable among those brought over by the register stores. In fine, whatever is employed in ornamenting the churches, is always the richest of the kind possible to be procured.

The principal convents are very large, with convenient and airy apartments. Some parts of them, as the outward walls which inclose them, are of unburnt brick; but the building itfelf of quinchas or baxareques. The roofs of many are arched with brick, others only with quinchas; but of fuch curious architecture, as entirely to conceal the materials; fo that the frontifpieces and principal gates have a majeftic appearance. The columns, friezes, flatues, and cornices, are of wood, finely carved, but fo nearly imitating the colour and appearance of flone, as only to be difcovered by the touch. This ingenious imitation does not proceed from parfimony, but neceffity; in order to avoid as much as poffible the dreadful devaftations of earthquakes, which will not admit of ftructures built of pondrous materials.

The churches are decorated with fmall cupolas of a very pretty appearance: and though they are all of wood, the fight cannot diffinguifh them from ftone. The towers are of ftone from the foundation the height of a toile and a half, or two toiles, and from thence to the roof of the church of brick, but the remainder of wood painted of a freeftone colour, terminating in a ftatue, or image, alluding to the name of the church. The height of these may be nearly known from that of St. Dominic, which by a geometrical menfuration, we found to be between fifty and fixty yards; a height which, though fmall in proportion to the largeness of the ftructure, is a neceffary caution, both with regard to the fhocks of earthquakes, and the weight of the bells, which, in fize and number, exceed those of Spain, and, on a general ringing, produce a very agreeable harmony.

All the convents are furnished with water from the city, though not from that of the rivulets, which, as we before observed, run through the streets in covered channels; but brought from a spring by means of pipes: while, on the other hand, both the monasteries and nunneries are each obliged to maintain a sountain in the street, for the public use of poor people, who have not the conveniency of water in their houses.

4D 2

The viceroys, whofe power extends over all Peru, ufually refide at Lima: but the province and audience of Quito has been lately detached from it; as we have observed in our account of that province. This government is triennial, though, at the expiration of that term, the fovereign may prolong it. This office is of fuch importance, that the viceroy enjoys all the privileges of royalty. He is abfolute in all affairs, whether political, military, civil, criminal, or relating to the revenue, having under him offices and tribunals for executing the feveral branches of government; fo that the grandeur of this employment is in every particular equal to the title. For the fafety of his perfon, and the dignity of his office, he has two bodies of guards; one of horfe confifting of one hundred and fixty private men, a captain, and a lieutenant : their uniform is blue, turned up with red, and laced with filver. This troop confifts entirely of picked men, and all Spaniards. The captain's post is effeemed very honourable. These do duty at the principal gate of the palace; and when the viceroy goes abroad, he is at-tended by a piquet-guard confifting of eight of these troopers. The second is that of the halberdiers, confifting of fifty men, all Spaniards, dreffed in a blue uniform, and crimfon velvet waiftcoats laced with gold. Thefe do duty in the rooms leading to the chamber of audience, and private apartments. They also attend the viceroy when he appears in public, or vifits the offices and tribunals. The only officer of this body is a captain, whole post is also reckoned very eminent. Both captains are nominated by the viceroy. Befides thefe, there is another guard within the palace, confifting of one hundred private men, a captain, lieutenant, and fub-lieutenant; being a detachment from the garrifon of Callao. Thefe are occafionally employed in executing the governor's orders, and the decrees of the tribunals, after they have received the fanction of his affent.

The viceroy, befides affifting at the courts of juffice, and the councils relating both to the finances and war, gives every day public audience to all forts of perfons; for which purpofe, there are in the palace three very grand and fpacious rooms. In the first, which is adorned with the portraits of all the viceroys, he receives the Indians and other cafts. In the fecond, he gives audience to the Spaniards; and, in the third, where under a rich canopy are placed the pictures of the King and Queen then reigning, he receives those ladies who defire to fpeak to him in private without being known.

The affairs relating to the government are expedited by a fecretary of flate, with an affiftant, properly qualified for fuch an arduous post. From this office are iffued the orders for paffports, which must be had from every corregidor in his jurifdiction. The fecretary has also the power of filling all juridical employments as they become vacant, for the term of two years; as also those of the magistracy, who, at the expiration of their term, have not been replaced by others of His Majefty's nomination. In a word, this office may be faid to be the channel by which all affairs relating both to war and government are tranfacted.

All caufes relating to juffice are tried in the court called the Audiencia, from the decrees of which there is no appeal to the fupreme council of the Indies, unlefs after notorious injuffice, or a fecond trial; as the viceroy himfelf prefides in it. The audiencia, which is the chief court at Lima, is composed of eight auditors or judges, and a fiscal for civil causes. This court is held in the viceroy's palace, in the three faloons appropriated to it. In one the deliberations are held, and in the other two, the caufes are tried either publicly or privately, the fenior judge always prefiding. Criminal caufes are tried in a fourth apartment, the judges being four alcaldes of the court, and a criminal

572

criminal fiscal. There is also a fiscal protector of the Indians, and some supernumeraries.

Next to the tribunal of audience is the chamber of accounts, confifting of a commiffioner, five chief accountants, two receivers, and two directors, with other inferior officers belonging to each clafs. Here all corregidors, intrufted to collect the revenue, pass their accounts. Here also the distributions and managements of the royal revenue are regulated.

Laftly, the royal treafury, under a treafurer, accountant, and agent, who have the fuperintendance of all His Majefty's revenue of what kind foever; fince whatever revenue arifes from the other parts of this province is remitted to Lima as the capital of the kingdom.

The corporation of Lima confifts of regidores or aldermen, and alfere zreal, or fheriff, and two alcaldes, or royal judges; all being noblemen of the first diffinction in the city. These have the direction of the police, and the ordinary administration of justice. The alcaldes prefide alternately every month; for, by a particular privilege of this city, the jurifdiction of its corregidor extends only to the Indians.

Here is a court for the effects of deceafed perfons, which takes cognizance of the goods of those dying intestate, and without lawful heir; and likewife of those entrusted with the effects of other perfons. Its confists of a judge, who is generally one of the auditors, a counfellor, and an accountant.

The next tribunal is that of commerce, or the confulado. Its principal officers are a prefident and two confuls. All who are entered in the lift of merchants are members of it, and have a vote in the choice of thefe officers, who, with an affeffor, decide all commercial diffutes and proceffes, by the fame rule as the confulados at Cadiz and Bilboa.

Lima has alfo a corregidor, whofe jurifdiction extends to all Indians both within the city and five leagues round it. The principal places in this jurifdiction are Surco, Los Chorillos, Miraflores, La Magdalena, Lurigancho, Late, Pachacama, and Lurin, together with the Indian inhabitants of the two fuburbs of Callao, called New and Old Pitipiti. The infinite number of Indians who inhabited this valley before and at the time of the conqueft, are now reduced to the few inhabitants of the above-mentioned places; and have only two caziques, namely, thofe of Miraflores and Surco, and thefe in fuch low circumftances, as to teach mufic at Lima for fubfiftence.

The cathedral chapter, befides the archbifhop, confifts of the dean, archdeacon, chanter, treafurer, and rector, four canons by fuffrage, five by prefentation, fix prebendaries, and fix femi-prebendaries; but the ecclefiaftical tribunal confifts only of the archbifhop and his chancellor. His fuffragans are the bifhops of Panama, Quito, Truxillo, Guamanga, Arequipa, Cuzco, St. Jago, and Conception; the two laft are in the kingdom of Chili.

The tribunal of inquifition confifts of two inquifitors and a fifcal, who, like the fubordinate officers are nominated by the inquifitor-general; and, in cafe of a vacancy, filled up by the fupreme council of the inquifition.

The tribunal of the Cruzada is conducted by a fub-delegate commiffary, an acountant, and treafurer, with other inferior officers. But the dean or fenior judge of the audience, generally affifts at its deliberations.

Laftly, here is also a mint with its proper officers, where gold and filver are coined.

In the univerfity and colleges, the happy geniufes of the natives are improved by divine and human learning, and, as we fhall fhew in the fequel, foon give elegant fpecimens cimens of their future acquifitions. They are in this much more indebted to nature than either to art or to their own application; and if they do not equally diftinguifh themfelves in other fludies, it is not for want of talents, but of proper perfons to inftruct them in the neceffary elements. For by their ready comprehension of whatever is taught them we may conclude, that their abilities are equal to other improvements. The chief of thefe feminaries is the university of St. Mark, and the colleges of St. Toribio, St. Martin, and St. Philip. In the former are chairs for all the fciences, and filled by fuffrage; a method always favourable for perfons of learning and understanding. Some of thefe professions have, notwithstanding the vast distance, gained the applause of the literati of Europe.

The univerfity makes a flately appearance without, and its infide is decorated with fuitable ornaments. It has a large fquare couft, with a handfome vaulted piazza round it. Along the fides are the halls, where lectures are read; and in one of its angles is the theatre for the public arts, adorned with the portraits of the feveral great men who had their education in this feat of learning, in frames finely ornamented with fculpture, and richly gilded; as are alfo the two rows of feats which extend entirely round the theatre.

From what has been faid it fufficiently appears, that Lima is not only large, magnificent, and diftinguifhed, as the capital of the kingdom, by the refidence of the viceroy, and the fuperior courts and offices, but alfo that it has an acknowledged fuperiority over the other cities in these parts from the public nurferies erected for the advancement of learning and the fciences.

The richnefs of the churches, and the fplendour with which divine fervice is performed, we have already defcribed. The magnificence of its inhabitants and of its public folemnities are proportional, and difplayed with a dignity peculiar to minds inflamed with a defire of honour, and who value themfelves on celebrating the principal folemnities in a manner which diffinguishes Lima from the other cities of its kingdom; though the latter are not wanting in their endeavours to vie with their capital.

Of all the folemnities obferved in America, the public entrance of the viceroy is the moft fplendid; and in which the amazing pomp of Lima is particularly difplayed. Nothing is feen but rich coaches and calafhes, laces, jewels, and fplendid equipages, in which the nobility carry their emulation to an aftonifhing height. In a word, this ceremony is fo remarkable, that I flatter myfelf the reader will not be difpleafed at the defcription.

CHAP. IV. — Of the Public Entrance of the Viceroy at Lima; his Reception, and the chief annual Solemnities.

ON the landing of the viceroy at Paita, two hundred and four leagues from Lima, he fends a perfon of great diffinction, generally fome officer of his retinue, to Lima, with the character of an ambaffador; and, by a memoir, informs his predeceffor of his arrival, in conformity to His Majefty's orders, who had been pleafed to confer on him the government of that kingdom. On this ambaffador's arrival at Lima, the late viceroy fends a meffenger to compliment him on his fafe arrival; and on difmiffing the ambaffador, prefents him with fome jewel of great value, and a jurifdiction or two which happen at that time to be vacant, together with an indulgence of officiating by deputy, if most agreeable to him. The corregidor of Piura receives the new viceroy at Paita, and provides litters, mules, and every other neceffary for the viceroy and his retinue, as far as the next jurifdiction. He alfo orders booths to be built at the halting-places in the deferts; attends him in perfon, and defrays all the expences, till relieved by the next corregidor. Being at length arrived at Lima, he proceeds, as it were incognito, through the city to Callao, about two leagues and a half diftant. In this place he is received and acknowledged by one of the ordinary alcaldes of Lima, appointed for that purpofe, and alfo by the military officers. He is lodged in the viceroy's palace, which on this occafion is adorned with aftonifhing magnificence. The next day all the courts, fecular and ecclefiaftical, wait on him from Lima, and he receives them under a canopy in the following order. The audiencia, the chamber of accounts, the cathedral chapter, the magiftracy, the confulado, the inquifition, the tribunal de Cruzada, the fuperiors of the religious orders, the colleges, and other perfons of eminence. On this day the judges attend the viceroy to an entertainment given by the alcalde; and all perfons of note take a pride in doing the like to his attendants. At night there is a play, to which the ladies are admitted veiled, and in their ufual drefs, to fee the new viceroy.

The fecond day after his arrival at Callao, he goes in a coach provided for him by the city, to the chapel de la Legua, fo called from its being about half-way between Callao and Lima, where he is met by the late viceroy, and both alighting from their coaches, the latter delivers to him a truncheon as the enfign of the government of the kingdom. After this, and the ufual compliments, they feparate.

If the new viceroy intends to make his public entry into Lima in a few days, he returns to Callao, where he ftays till the day appointed; but as a longer fpace is generally allowed for the many preparatives neceffary to fuch a ceremony, he continues his journey to Lima, and takes up his refidence in his palace, the fitting up of which on this occafion is committed to the junior auditor, and the ordinary alcalde.

On the day of public entry, the ftreets are cleaned, and hung with tapeftry, and magnificent triumphal arches erected at proper diftances. At two in the afternoon the viceroy goes privately to the church belonging to the monaftery of Montferrat, which is feparated by an arch and a gate from the ftreet, where the cavalcade is to begin. As foon as all who are to affift in the proceffion are affembled, the viceroy and his retinue mount on horfes, provided by the city for this ceremony, and the gates being thrown open, the proceffion begins in the following order :

The militia; the colleges; the univerfity, with the profeffors in their proper habits; the chamber of accompts; the audiencia on horfes, with trappings; the magiftracy, in crimfon velvet robes, lined with brocade of the fame colour, and a particular kind of caps on their heads, a drefs only ufed on this occafion. Some members of the corporation who walk on foot, fupport the canopy over the viceroy; and the two ordinary alcaldes, which are in the fame drefs, and walk in the proceffion, act as equerries, holding the bridle of his horfe. This part of the ceremony, though prohibited by the laws of the Indians, is ftill performed in the manner I have defcribed; for the cuftom being of great antiquity, the magiftrates have not thought proper to alter it, that the refpect to the viceroy might not fuffer any diminution, and no perfon has yet ventured to be the first in refufing to comply with it.

This proceffion is of confiderable length, the viceroy paffing through feveral ftreets till he comes to the great fquare, in which the whole company draw up facing the cathedral, where he alights, and is received by the archbifhop and chapter. Te Deum is then fung before the viceroy, and the officers placed in their refpective feats; after which he again mounts his horfe, and proceeds to the palace gate, where he is received by the audiencia, and conducted to an apartment in which a fplendid collation is provided, as are alfo others for the nobility in the antichambers. On the morning of the following day he returns to the cathedral in his coach, with the retinue and pomp ufual in folemn feftivals and public ceremonies. He is preceded by the whole troop of horfe-guards, the members of the feveral tribunals in their coaches, and after them the viceroy himfelf with his family, the company of halberdiers bringing up the rear. On this occafion all the riches and ornaments of the church are difplayed; the archbifhop celebrates in his pontifical robes the mafs of thankfgiving; and the fermon is preached by one of the beft orators of the chapter. From hence the viceroy returns to the palace attended by all the nobility, who omit nothing to make a fplendid figure on thefe occafions. In the evening of this, and the two following days, the collations are repeated, with all the plenty and delicacy imaginable. To increafe the feftivity, all women of credit have free accefs to the halls, galleries, and gardens of the palace, when they are fond of fhewing the difpolitions of their genius, either by the vivacity of repartees, or fpirited converfations, in which they often filence ftrangers of very ready wit.

This flow and ceremony is fucceeded by bull-feafts at the city's expence, which continue five days; the three first for the viceroy, and the two latter in compliment to the ambaffador who brought advice of his arrival, and the great honour conferred on him by the fovereign in the government of this kingdom.

This ambaffador, who, as I before obferved, is always a perfon of eminent quality, makes alfo a public entrance into Lima on horfeback on the day of his arrival, and the nobility being informed of his approach, go out to receive and conduct him to the palace, from whence they carry him to the lodgings prepared for him. This ceremony ufed to be immediately followed by feafts and public diversions; but in order to avoid that inconvenience, just when the city is every where busied in preparing for the reception of the viceroy, they are deferred, and given at one and the fame time, as above recited.

The bull-feafts are fucceeded by that ceremony, in which the univerfity, the colleges, the convents and nunneries, acknowledged him as their viceroyal protector. This is alfo accompanied with great fplendour, and valuable prizes are beftowed on thofe who make the most ingenious compositions in his praife. These ceremonies, which greatly heighten the magnificence of this city, are fo little known in Europe, that I shall be excused for enlarging on them.

They are begun by the univerfity, and the rector prepares a poetical conteft, adapted to difplay either the wit or learning of the competitors. After publishing the themes, and the prizes to be given to those who best handle the subjects they have chosen, he waits on the viceroy to know when he will be pleased to honour the university with his prefence; and, the time being fixed, every part of the principal court is adorned with the utmost magnificence. The prizes, which are placed in order, distinguish themselves by their richness, while the pillars and columns are hung with emblematical devices, or pertinent apophthegms on polished shields, furrounded by the most beautiful mouldings.

The reception is in the following order. On the viceroy's entering the court, he is conducted to the rectorial chair, which, on this occasion, glitters with the magnificence of an Eastern throne. Opposite to it fits the rector, or, in his absence, one of the most eminent members of that learned body, who makes a speech, in which he expresses the fatisfaction the whole university feels in such a patron. After this the viceroy returns to his palace, where, the day following, the rector presents him with a book, containing the poetical contest, bound in velvet, and plated at the corners with gold, accompanied with some elegant piece of furniture, whose value is never less than eight hundred or a thousand crowns.

576

The principal end of the univerfity in this ceremony being to ingratiate itfelf with the viceroy and his family, the rector contrives that the poetical pieces which gain the prizes be made in the name of the principal perfons of his family, and accordingly the most diftinguished prizes are prefented to them; and there being twelve subjects in the contest, there are three prizes for each, of which the two inferior fall to those members whose compositions are most approved of. These prizes are pieces of plate, valuable both for their weight and workmanship.

The univerfity is followed by the colleges of St. Philip and St. Martin, with the fame ceremonies, except the poetical contest.

Next follow the religious orders, according to the antiquity of their foundation in the Indies. These prefent to the viceroy the best these maintained by students at the public acts.

The viceroy is prefent at them all, and each difputant pays him fome elegant compliment, before he enters on his fubject.

The fuperiors of the nunneries fend him their congratulatory compliments, and when he is pleafed in return to vifit them, they entertain him with a very fine concert of mufic, of which the vocal parts are truly charming; and at his retiring they prefent him with fome of the chief curiofities which their refpective inflitutes allow to be made by them.

Befides thefe feftivities and ceremonies, which are indeed the most remarkable, there are alfo others, fome of which are annual, in which the riches and liberality of the inhabitants are no lefs confpicuous. Particularly on New-year's day, at the election of alcaldes, who being afterwards confirmed by the viceroy, appear publicly on horfeback the fame evening, and ride on each fide of him, in very magnificent habits ornamented with jewels, and the furniture of their horfes perfectly answerable. This cavalcade is very pompous, being preceded by the two companies of horfe-guards, the halberdiers, followed by the members of the tribunals in their coaches, the viceroy's retinue, and the nobility of both fexes.

On Twelfth day in the morning, and the preceding evening, the viceroy rides on horfeback through the town, with the royal ftandard carried in great pomp before him. This is performed in commemoration of the building of the city, which, as we have already obferved, was begun on this day; folemn vefpers are fung in the cathedral, and a mafs celebrated; and the ceremony is concluded with a cavalcade, like that on Newyear's day.

The alcaldes chofen for the current year give public entertainments in their houfes, each three nights fucceffively; but that the feafts of one might not interfere with thofe of another, and occafion refertments, they agree for one to hold his feafts the three days immediately fucceeding the election, and the other on Twelfth day and the two following. Thus each has a great number of guefts, and the entertainments are more fplendid and fumptuous. The other feafts in the courfe of the year are not inferior to thefe either with regard to numbers or expence; at leaft the number of them must excite a high idea of the wealth and magnificence of Lima.

CHAP. V. - Of the Inhabitants of Lima.

HAVING, in our accounts of feveral towns through which we paffed to Lima, included alfo the inhabitants, we fhall obferve the fame rule with regard to Lima; for though amidft fuch an infinite variety of cuftoms, there is always fome refemblance bevol. xiv. 4 E tween tween those of neighbouring people, yet the difference is also confiderable, and no where more fo than on this continent, where it doubtless arises from the great diffance between the feveral towns; and, confequently, I may fay, from the different geniuses and dispofitions of the people. And though Lima is the capital of the country, it will appear that it is not a model to other places, with regard to drefs, customs, and manner of living.

The inhabitants of Lima are composed of whites, or Spaniards, Negroes, Indians, Mestizos, and other casts, proceeding from the mixture of all three.

The Spanish families are very numerous; Lima according to the lowest computation, containing fixteen or eighteen thoufand whites. Among thefe are reckoned a third or fourth part of the most distinguished nobility of Peru; and many of these dignified with the ftyle of ancient or modern Caftilians, among which are no lefs than forty-five counts and marquifes. The number of knights belonging to the feveral military orders is alfo very confiderable. Befides thefe are many families no lefs refpectable, and living in equal fplendour; particularly twenty-four gentlemen of large effates, but without titles, though most of them have ancient feats, a proof of the antiquity of their families. One of these traces, with undeniable certainty, his descent from the Yncas. The name of this family is Ampuero, fo called from one of the Spanish commanders at the conquest of this country, who married a Coya, or daughter of the Ynca. To this family the kings of Spain have been pleafed to grant feveral diftinguishing honours and privileges, as marks of its great quality: and many of the most eminent families in the city have defired intermarriages with it. All those families live in a manner becoming their rank, having effates equal to their generous difpositions, keeping a great number of flaves and other domeftics, and those who affect making the greatest figure have coaches, while others content themfelves with calafhes or chaifes, which are here fo common, that no family of any fubstance is without one. It must be owned that these carriages are more neceffary here than in other cities, on account of the numberlefs droves of mules which continually pass through Lima, and cover the ftreets with their dung, which being foon dried by the fun and the wind, turns to a naufeous dirt, fcarce fupportable to those who walk on foot. These chaifes, which are drawn by a mule, and guided by a driver, have only two wheels, with two feats opposite to each other, fo that on occasion they will hold four perfons. They are very flight and airy; but on account of the gildings and other decorations, fometimes coft eight hundred or a thoufand crowns. The number of them is faid to amount to five or fix thousand; and that of coaches is also very confiderable, though not equal to the former. The funds to fupport thefe expences, which in other parts would ruin families, are their large eftates and plantations, civil and military employments, or commerce, which is here accounted no derogation to families of the greatest distinction; but by this commerce is not to be understood the buying and felling by retail or in fhops, every one trading proportional to his character and fubftance. Hence families are preferved from those difasters too common in Spain, where titles are frequently found without a fortune capable of fupporting their dignity. Commerce is fo far from being confidered as a difgrace at Lima, that the greatest fortunes have been raifed by it; those on the contrary, being rather defpifed, who not being bleffed with a fufficient eftate, through indolence, neglect to have recourfe to it for improving their fortunes. This cuftom, or refource, which was established there without any determinate end, being introduced by a vain defire of the first Spaniards to acquire wealth, is now the real fupport of that fplendour in which those families live; and whatever repugnance these military gentlemen might originally have to commerce,

it was

it was immediately removed by a royal proclamation, by which it was declared that commerce in the Indies fhould not exclude from nobility or the military orders; a very wife meafure, and of which Spain would be ftill more fenfible, were it extended to all its dependencies.

At Lima, as at Quito, and all Spanish America, some of the eminent families have been long fince fettled there, whilst the prosperity of others is of a later date; for being the centre of the whole commerce of Peru, a greater number of Europeans refort to it, than to any other city; fome for trade, and others from being invested in Spain with confiderable employments: among both are perfons of the greatest merit; and though many after they have finished their respective affairs, return home, yet the major part, induced by the fertility of the foil, and the goodness of the climate, remain at Lima, and marry young ladies remarkable equally for the gifts of fortune as those of nature; and thus new families are continually fettled.

The Negroes, Mulattoes, and their defcendants, form the greater number of the inhabitants; and of thefe are the greateft part of the mechanics; though here the Europeans alfo follow the fame occupations, which are not at Lima reckoned difgraceful to them, as they are at Quito; for gain being here the universal paffion, the inhabitants pursue it by means of any trade, without regard to its being followed by Mulattoes, interest here preponderating against any other confideration.

The third, and last class of inhabitants, are Indians and Meftizos, but these are very fmall in proportion to the largeness of the city, and the multitudes of the second class. They are employed in agriculture, in making earthenware, and bringing all kinds of provisions to market, domestic fervices being performed by Negroes and Mulattoes, either flaves or free, though generally by the former.

The ufual drefs of the men differs very little from that worn in Spain, nor is the diftinction between the feveral claffes very great; for the ufe of all forts of cloth being allowed, every one wears what he can purchafe. So that it is not uncommon to fee a Mulatto, or any other mechanic, dreffed in a tiffue equal to any thing that can be worn by a more opulent perfor. They all greatly affect fine cloaths, and it may be faid without exaggeration, the fineft fluffs made in countries, where induftry is always inventing fomething new, are more generally feen at Lima than in any other place; vanity and oftentation not being reftrained by cuftom or law. Thus the great quantities brought in the galleons and register fhips, notwithftanding they fell here prodigioufly above their prime coft in Europe, the richeft of them are ufed as cloaths, and worn with a careleffnefs little fuitable to their extravagant price; but in this article the men are greatly exceeded by the women, whofe paffion for drefs is fuch as to deferve a more particular account.

In the choice of laces, the women carry their tafte to a prodigious excess; nor is this an emulation confined to perfons of quality, but has fpread through all ranks, except the loweft clafs of Negroes. The laces are fewed to their linen, which is of the fineft fort, though very little of it is feen, the greateft part of it, efpecially in fome dreffes, being always covered with lace; fo that the little which appears feems rather for ornament than ufe. Thefe laces too muft be all of Flanders manufacture, no woman of rank condefcending to look on any other.

Their drefs is very different from the European, which the cuftom of the country alone can render excufable; indeed to Spaniards at their first coming over it appears extremely indecent. Their drefs confists of a pair of shoes, a shift, a petticoat of dimity, an open petticoat, and a jacket, which in summer is of linen, in winter of stuff. To this, fome add a mantelette, that the former may hang loofe. The difference between this drefs and that worn at Quito, though confifting of the fame pieces, is, that at Lima it is much fhorter, the petticoat, which is ufually tied below the waift, not reaching lower than the calf of the leg, from whence, nearly to the ancle, hangs a border of very fine lace, fewed to the bottom of the under petticoat; through which the ends of their garters are difcovered, embroidered with gold or filver, and fometimes fet with pearls; but the latter is not common. The upper petticoat, which is of velvet, or fome rich ftuff, is fringed all round, and not lefs crowded with ornaments than those defcribed in the first volume of this work. But be the ornaments what they will, whether of fringe, lace, or ribands, they are always exquisitely fine. The shift fleeves, which are a yard and a half in length, and two yards in width, when worn for ornament, are covered with rolls of lace, variegated in fuch a manner as to render the whole truly elegant. Over the fhift is worn the jacket, the fleeves of which are exceffively large, of a circular figure, and confift of rows of lace, or flips of cambric or lawn, with lace difpofed betwixt each, as are alfo the fhift fleeves, even of those who do not affect extraordinary ornament. The body of the jacket is tied on the fhoulders with ribands fastened to the back of their ftays; and the round fleeves of it being tucked up to the fhoulders, are fo difpofed together with those of the shift, as to form what may be termed four wings. If the jacket be not buttoned or clasped before, it is agreeably fastened on the fhoulders; and indeed the whole drefs makes a most elegant figure. They who use a close vest, fasten it with clasps, but wear over it the loose jacket already described. In the fummer they have a kind of veil, the ftuff and fashion of which is like that of the fhift and body of the veft, of the finest cambric or lawn, richly laced; but in winter the veil worn in their houfes is of bays; when they go abroad full dreffed, it is adorned like the fleeves. They also use brown bays, finely laced and fringed, and bordered with flips of black velvet. Over the petticoat is an apron of the fame ftuff as the fleeves of the jacket, hanging down to the bottom of it. From hence fome idea may be formed of the expence of a drefs, where the much greater part of the ftuff is merely for ornament; nor will it appear strange, that the marriage shift should cost a thoufand crowns, and fometimes more.

One particular on which the women here extremely value themfelves, is the fize of their feet, a fmall foot being efteemed one of the chief beauties; and this is the principal fault they find with the Spanish ladies, who have much larger feet than those of Lima. From their infancy they are accustomed to wear strait shoes, that their feet may not grow beyond the fize which they efteem beautiful; fome of them do not exceed five inches and a half, or fix inches in length, and in women of a fmall flature they are still lefs. Their shoes have little or no sole, one piece of cordovan serving both for that and the upper leather, and of an equal breadth and roundnefs at the toe and heel, fo as to form a fort of long figure of 8: but the foot not complying with the figure, brings it to a greater regularity. These shoes are always fastened with diamond buckles, or fomething very brilliant in proportion to the ability of the wearer, being worn lefs for use than ornament; for the shoes are made in such a manner, that they never loofen of themfelves, nor do the buckles hinder their being taken off. It is unufual to fet these buckles with pearls, a particular to be accounted for only from their being fo lavifh of them in the other ornaments of drefs, as to confider them of too little value. The fhoemakers, who are no ftrangers to the foible of the fex, take great care to make them in a manner very little calculated for fervice. The ufual price is three half-crowns a pair; those embroidered with gold or filver cost from eight to ten crowns. The latter latter however, are but little worn, the encumbrance of embroidery being fuited rather to enlarge than diminifh the appearance of a fmall foot. *

They are fond of white filk flockings, made extremely thin, that the leg may appear the more fhapely; the greateft part of which is exposed to view. These trifles often afford very fprightly fallies of wit in their animadversions on the drefs of others.

Hitherto we have confidered only the more common drefs of thefe ladies ; the reader will conceive a ftill higher idea of their magnificence, when he is informed of the ornaments with which they are decorated in their vifits, and upon public occafions. We fhall begin with their manner of dreffing the hair, which being naturally black, and capable of reaching below their waifts, they difpofe in fuch a manner as to appear perfectly graceful. They tie it up behind in fix braided locks, through which a golden bodkin, a little bent, is inferted, and having a clufter of diamonds at each end. On this the locks are fufpended fo as to touch the fhoulder. On the front and upper part of the head they wear diamond aigrets, and the hair is formed into little curls, hanging from the forehead to the middle of the ear, with a large black patch of velvet on each temple. Their ear-rings are of brilliants, intermixed with tufts of black filk, covered with pearls, refembling thofe already defcribed. Thefe are fo common an ornament, that befides their necklaces, they alfo wear about their neck rofaries, the beads of which are of pearls, either feparate or fet in clufters to the fize of a large filbert ; and thofe which form the crofs are ftill larger.

Befides diamong rings, necklaces, girdles, and bracelets, all very curious both with regard to water and fize, many ladies wear other jewels fet in gold, or for fingularity's fake, in tombago. Laftly, from their girdle before is fufpended a large round jewel enriched with diamonds: much more fuperb than their bracelets, or other ornaments. A lady covered with the moft expensive lace inftead of linen, and glittering from head to foot with jewels, is fuppofed to be dreffed at the expence of not lefs than thirty or forty thoufand crowns; a fplendour flill the more aftonifhing, as it is fo very common.

A fondnefs for expence in thefe people, does not confine itielf to rich apparel; it appears no lefs in the ftrange neglect, and the fmall value, they feem to fet upon them, by wearing them in a manner the most carelefs, and by that means bringing upon themfelves fresh expences in repairing the old or purchasing new jewels; especially pearls, on account of their fragility.

The most common of the two kinds of dreffes worn when they go abroad, is the veil and long petticoat; the other is a round petticoat and mantelette : the former for church, the latter for taking the air, and diversions; but both in the prevailing taste for expence, being richly embroidered with filver or gold.

The long petticoat is particularly worn on Holy Thurfday; as on that day they vifit the churches, attended by two or three female Negro or Mulatto flaves, dreffed in an uniform like pages. †

With regard to the perfons of the women of Lima, they are in general, of a middling flature, handfome, genteel, and of very fair complexions without the help of art; the

^{*} All those who can afford them wear shoes made in the European manner, but with heels of wrought filver; the tinkling of which, added to the smallness of their feet, has really, at least to the weatherbeaten fealor, something captivating. A.

beaten fealor, fomething captivating. A. † The lower clafs of women, whofe whole flock of apparel feldom confifts of more than two camifas (fhifts) and a faya (petticoat), wear bracelets, rofaries, and fmall golden images about their necks and arms, to the intrinfic value of fifty or fixty crowns, and to them of much greater value, having coft near that fum in benediction from the priefts, without which the images, &c. would be effcemed pollutions. A.

beauty of their hair has been already mentioned, but they have ufually an enchanting luftre and dignity in their eyes.

These perfonal charms are heightened by those of the mind; clear and comprehenfive intellects: an easiness of behaviour, so well tempered, that whilst it invites love, it commands respect: the charms of their conversation are beyond expression; their ideas just, their expressions pure, their manner inimitably graceful. These are the allurements by which great numbers of Europeans, forgetting the fair prospects they have at home, are induced to marry and fettle here.

One material objection against them is, that being too well acquainted with their own excellences, they are tainted with a haughtinefs, which will fearce floop to the will of their hufbands. Yet by their address and infinuating compliance, they fo far gain the afeendancy over them, as to be left to their own diferetion. There may, indeed, a few exceptions be found; but these possibly are rather owing to a want of capacity. Another objection may be made to their being more expensive than other ladies; but this arises from the exorbitant price of fluffs, laces, and other commodities, in this country. And with regard to the independence they affect, it is no more than a custom long established in the country. To which may be added, that being natives, and their hufbands generally foreigners, it is very natural, that the latter should not enjoy all that authority, founded on laws superior to custom; and hence this error remains uncorrected. The hufbands conform to the manners of the country, as their character is not in the least affected thereby; and this complaifance is rewarded by the difference of the world.

They are fo exceffively fond of perfumes, that they always carry ambergrife about them; putting it behind their ears, and other parts of the body; and alfo in feveral parts of their clothes. Not content with the natural fragrancy of flowers, which are alfo a favourite ornament, they fcatter perfumes even on their nofegays. The moft beautiful flowers they place in their hair, and others, which are moft valuable for their odour, they flick in their fleeves; the effluvia therefore iffuing from thefe ladies, the reader will conceive to reach to no inconfiderable diftance. The flower moft in ufe is the chirimoya, of mean appearance, but of exquifite fcent.

To this paffion for flowers it is owing, that the grand fquare, every morning, on account of the vaft quantity of beautiful vegetables brought thither, has the appearance of a fpacious garden. The fmell and the fight are there fufficiently gratified. The ladies refort thither in their calafhes, and if their fancy happens to be pleafed, they make but little difficulty with regard to the price. A ftranger has the pleafure of feeing affembled here not only the ladies, but every body of rank whofe health and avocations will admit of it.

The lower claffes of women, even to the very Negroes, affect, according to their abilities, to imitate their betters, not only in the fathion of their drefs, but alfo in the richnefs of it. None here are feen without fhoes as at Quito, but they are made of fo fmall a fize, in order to diminifh the natural bignefs of the feet, that they muft give infinite uneafinefs in the wearing. A defire of being diftinguifhed by an elegant drefs is univerfal. Their linen is always flarched to a great degree, in order to difplay the coftly patterns of their laces. After this univerfal paffion, their next care, and indeed a much more commendable one, is cleanlinefs; of which the uncommon neatnefs of their houfes are fufficient inflances.

They are naturally gay, fprightly, and jocofe, without levity; remarkably fond of mufic; fo that even among the loweft you are entertained with pleafing and agreeable fongs;

fongs; for the gratification of this paffion, they have in general good voices, and fome of them are heard with admiration. They are very fond of balls, where they diftinguish themselves equally by the gracefulness and agility of their motions. In fine, the reigning paffions of the fair at Lima, are shew, mirth, and festivity.

The natural vivacity and penetration of the inhabitants of Lina, both men and women, are greatly improved by conversing with perfons of learning reforting thither from Spain. The cuftom of forming fmall affemblies, has also a great tendency to improve their minds, and give them a ready and happy manner of expression, from an emulation to diffinguish themselves in these engaging accomplishments.

Though the natives have too great a fhare of pride, they are not wanting in docility when proper methods are taken. They inftantly flew their reluctance to obey a command given with haughtinefs; but, when delivered with mildnefs and affability, equally obfequious and fubmiffive. They are charmed with gentlenefs of manners; and a few inftances of kindnefs make a lafting impreffion on their minds. They are remarkably brave, and of fuch unblemifhed honour, as never to diffemble an affront received, or give one to others; fo that they live together in a cheerful and focial manner. The Mulattoes being lefs civilized, and having but flender notions of the turpitude of vice, and the importance of virtue, are haughty, turbulent, and quarrelfome. Yet the mifchievous confequences of thefe vices are lefs common, than might naturally be expected in fuch a populous city.

The manners and difpositions of the nobility, correspond with their rank and fortune. Courtefy fhines in all their actions, and their complaifance to ftrangers is without limits. The reception they give them, is equally free from flattery and a haughty referve; fo that all the Europeans, whether they visit them out of curiofity or from commercial motives, are charmed with their probity, politeness, candour, and magnificence.

CHAP. VI. — Of the Climate of the City of Lima, and the whole Country of Valles: and the Divisions of the Seafons.

THE temperature of the air of Lima, and its alterations, would be greatly injured by an inference drawn from what is felt in the fame degree of north latitude; as Lima would from hence be concluded another Carthagena; the latitude of both cities, one in the northern and the other in the fouthern hemifphere, differing but very little; whereas in fact it is quite the reverfe. For as that of Carthagena is hot to a degree of inconvenience, this of Lima is perfectly agreeable. And though the difference of the four feafons are fenfible, all of them are moderate, and none of them troublefome.

Spring begins towards the clofe of the year, that is, towards the end of November, or beginning of December. But this is to be underflood only of the heavens, as then the vapours which filled the atmosphere during the winter fubfide, the fun to the great joy of the inhabitants again appears, and the country now begins to revive, which during the abfence of his rays had continued in a flate of languor. This is fucceeded by fummer, which, though hot from the perpendicular direction of the fun's rays, is far from being infupportable; the heat, which would indeed otherwife be exceffive, being moderated by the fouth winds, which at this feafon always blow, though with no great force. At the latter end of June, or the beginning of July, the winter begins, and continues till November or December, the autumn intervening between between both. About this time the fouth winds begin to blow ftronger, and bring the cold with them; not indeed equal to that in countries where fnow and ice are known, but fo keen that the light dreffes are laid by, and cloth or other warm ftuffs worn.

There are two caufes of the cold felt in this country, and nature, wife in all her ways, provides others which produce the fame effect at Quito. The first caufe of cold at Lima is the winds, which paffing over the frozen climes of the fouth pole, bring hither part of the frigorific particles from those gelid regions; but as a fufficient quantity of these could not be brought over fuch an immense fpace as lies between the frozen and torrid zones of its hemisphere, nature has provided another expedient; during the winter, the earth is covered with fo thick a fog, as totally to intercept the rays of the fun; and the winds, by being propagated under the shelter of this fog, retain the particles they contracted in the frozen zone. Nor is this fog confined to the country of Lima: it extends, with the fame density, northward through all the country of Valles, at the fame time filling the atmosphere of the fea; as will be shewn hereafter.

This fog feldom fails daily to cover the earth, with a denfity that obfcures objects at any diffance. About ten or eleven it begins to rife, but without being totally difperfed, though it is then no impediment to the fight, intercepting only the rays of the fun by day, and by night those of the ftars, the fky being continually covered whatever height the vapours float in the atmosphere. Sometimes, indeed, they are fo far disperfed as to admit of feeing the disk of the fun, but still precluding the heat of his rays.

It is not unworthy obfervation on this head, that at the diftance of only two or three leagues, the vapours are much more diffipated from noon to evening than in the city, the fun fully appearing fo as to moderate the coldnefs of the air. Alfo at Callao, which is only two leagues and a half from Lima, the winter is much more mild, and the air clearer, during that feafon; for the days at Lima are very melancholy and difagreeable, not only on account of the darknefs, but frequently during the whole day the vapours continue in the fame degree of denfity and pofition, without breaking, or being elevated above the earth.

It is in this feafon only that the vapours diffolve into a very fmall mift or dew, which they call garua, and thus every where equally moiftens the earth; by which means all those hills, which during the other part of the year offer nothing to the fight but rocks and waftes, are cloathed with verdure, and enamelled with flowers of the most beautiful colours, to the great joy of the inhabitants, who, as foon as the feverity of winter is abated, refort into the country, which exhibits fo elegant an appearance.* These garuas or dews never fall in quantities fufficient to damage the roads, or incommode the traveller; a very thin ftuff will not foon be wet through; but the continuance of the mist during the whole winter, without being exhaled by the fun, renders the most arid and barren parts fertile. For the fame reason they turn the disagreeable dust in the streets of Lima into a mud, which is rather more offensive.

584

^{* 1} cannot understand what the Author means here by "feverity of the winter," unlefs he would fo denominate the most pleafant time of the year; for during this time, while the fun's rays are cut off by the mists, there is a continual fpring: and plants and herbs recruit their strength to endure the perpendicular rays of the fun, which break through the mists about the middle of November. A.

The winds which prevail during the winter, are nearly, though not exactly, fouth ; fometimes fhifting a little to the fouth-east between which and the fouth they always blow.* This we obferved to have conftantly happened during the two winters we fpent in this country, one at Lima, and the other at Callao; the former in the year 1742, and the latter in 1743. The first was one of the most fevere that had been felt, and the cold general in all that part of America to Cape Horn. In Chili, Baldivia, and Chiloe, the cold was proportionable to the latitudes; and at Lima it occasioned conftipations and fluxions, which fwept away fuch numbers that it feemed to refemble a pestilence. And though diforders of this kind are very common in the winter feason, they are rarely attended with the danger which then accompanied them.

The extraordinary fingularity obferved in the kingdom of Peru, namely, that it never rains; or to fpeak more properly, that the clouds do not convert themfelves into formal fhowers, has induced many naturalists to enquire into the caufe : but in their folutions of this difficulty they have varied, and invented feveral hypothefes to account for fo ftrange an effect. Some attribute it to the conftancy of the fouth winds, concluding, that as they are inceffant, they propel the vapours rifing from the fea, to the fame point; and thus by never refting in any part, as no opposite winds blow during the whole year to check their courfe, there is not time fufficient for the mifts to collect themfelves, and, by an increafe of gravity, to defcend in the manner of rain. Others have attributed it to the natural cold brought by the fouth winds, which continue the atmosphere in a certain degree of heat during the whole year, and thus increase the magnitude of the particles of the air, which with the nitrous effluvia acquired in its paffage over the furface of the fea, together with those of the feveral minerals with which this country abounds, leften its velocity, and confequently its power of uniting the vapours fo as to form drops whole gravity is greater than that of the air. To this we may add, that the rays of the fun not exerting a force fufficient for uniting and putting them in motion, the heat being greatly leffened by the coldness of the wind, the fog cannot be converted into drops of rain. For while the weight of the cloud does not exceed that of the air, by which it is fupported, it cannot precipitate.

I fhall not cenfure this, or any other hypothefis, formed for explaining the above phenomenon, not being certain that I have myfelf difcovered the true caufe; I fhall however give the reader my thoughts, and leave them to the difcuffion of philofophers. In order to this I fhall lay down fome preliminary principles, which may ferve as a foundation to those who fhall apply themselves to difcover the true caufe of this phenomenon, with fome inftructions for judging of the feveral hypothefes that have been formed on this extraordinary fubject.

I. It is to be fuppofed, that throughout the whole country of Valles, no other winds are known during the whole year, than the foutherly, that is, between the fouth and fouth-eaft, and this not only on the land, but alfo to a certain diffance at fea; it evidently appearing that the winds are limited between the fouth and fouth-eaft. It is therefore very ftrange that fome writers fhould affert that they are confined between the fouth and fouth-weft, as this is abfolutely falfe. There are indeed intervals when thefe winds are fcarcely felt, and an air, though extremely finall, feems to come from the north, and which forms the fog. 2. In winter the fouth wind blows harder than in fummer, efpecially near the furface of the earth: 3. Though no formal rain is ever

known

^{*} The wind here blows fouth by eaft to fouth by weft, but generally about fouth-fouth-eaft from June to December. A.

VOL. XIV.

known in the country of Valles, there are wetting fogs called garuas, which continue the greatest part of the winter; but are never feen in fummer. 4. When the garuas fall, it is observed that the clouds, mist, or vapours, which rife from the earth, remain almost contiguous to its furface; and the fame fog which is converted into a garua, begins by a moist air, till the humidity gradually increasing to its greatest condentation, the fmall drops which fall are eafily diftinguishable. This is fo natural, that it is known in all other countries fubject to any degree of cold, and, confequently, not to be wondered at in this.

I give the name of cloud, mift, or vapours, to that which produces the garua or fmall rain; for though there may be fome accidental diftinctions between these three kinds, they are not fuch as caufe any material difference : the fog being only the vapour condenfed more than when it first rose; and the cloud only a fog elevated to a greater height, and still more condensed than the former : fo that in reality they may all be confidered as one and the fame thing, differing only in degrees of denfity, and therefore it is of little importance whatever name it is called by.

5. The rays of the fun during the fummer, caufe a prodigious heat all over Valles, and the more fo as they are received upon a fandy foil, whence they are ftrongly reverberated, the winds being at the fame time very weak. Hence it appears, that the fecond hypothefis above related, is not founded on truth; for if the force or agitation of the fouth winds be the caufe which hinders the vapours from rifing to the height neceffary for forming rain, this caufe generally ceafing in the fummer, the rain might be expected to defcend; whereas quite the reverfe happens, the garuas being then much lefs common. 6. Particular times have been known when the nature of the country departing as it were from its ufual courfe, formal fhowers have fallen, as we have already mentioned (chap. i.) in defcribing the towns of Chocope, Truxillo, Tumbez, and other places; but with this fingularity, that the winds continued at fouth, and blew much ftronger during the time of the rain, than is ufual either in winter or fummer.

Thefe fix preliminary principles are fo common to this climate, that they may be applied to all the places mentioned in this chapter; and are the only guides that mult be followed in determining the true caufe why it does not rain in Peru as in Europe, or, more properly, as is common in the torrid zone.

It will readily be granted, that the wind blows more ftrongly in fome regions of the atmosphere than in others, experience itself having fufficiently proved this to be fact; as on high mountains, along whole fummits a ftrong wind is felt, when at the foot hardly any can be perceived; at leaft, we found this to be the cafe in all the mountains of the Cordilleras, one of the greatest inconveniences to us being the strength of the And, indeed, this is every where fo common, that any perfon may be convinwind. ced of it by only afcending a high tower, then he will foon perceive the difference between the ftrength of the wind at the top and at the bottom. I am not ignorant that fome have endeavoured to prove, that on the land this proceeds from the inequalities of its furface, which hinder the winds from blowing in the plains or low countries with that force which is felt on eminences; but the fame thing happening at fea, as experience has abundantly proved, it appears beyond difpute, that the furface is not the place where the wind exerts its greatest force. This being granted, it may be confidently afferted, that the fouth winds blow with the greateft force in a portion of the atmofphere at fome diftance from the earth; but not generally higher than that in which the rain is formed; or where the aqueous particles unite fo as to form drops of any fenfible gravity or magnitude. In this country, therefore, the clouds or vapours elevated above

3

above this fpace, that is, those which have the greatest degree of altitude, move with a much lefs velocity than the winds under them. Nor is it uncommon in other climates, befides that of Valles, for these clouds to move in a direction contrary to the more denfe ones below it. Thus it appears to me, that without the danger of advancing irregular fuppofitions, the fpace of the atmosphere, where the winds generally blow with the greatest force, is that where the large drops, commonly called rain, are formed.

Now, in order to explain the fingularity of this remarkable phenomenon, I conceive that, in fummer, when the atmosphere is most rarefied, the fun, by the influence of his rays, proportionally elevates the vapours of the earth, and gives them a greater degree of rarefaction; for his beams being then in a more perpendicular direction to the earth, they have the power of raifing them to a greater height. These vapours, on their touching the lower part of the atmosphere, where the winds blow with the greateft force, are carried away before they can rife to the height required for uniting into drops, and, confequently, no rain can be formed. For, as the vapours iffue from the earth, they are wafted along the lower region of the atmosphere, without any ftop; and the winds blowing always from the fouth, and the vapours being rarefied proportionally to the heat of the fun, its too great activity hinders them from uniting. Hence, in fummer, the atmosphere is clear, or free from vapours.

In winter, the rays of the fun being lefs perpendicular to the furface of the earth, the atmosphere becomes confiderably more condensed, but the winds from the fouth much more fo, as being loaded with the frigorific particles from the frozen zone, which particles it communicates to the vapours as they iffue from the earth, and, confequently, renders them much more condenfed than in fummer : hence they are hindered from rifing with the fame celerity as before.

To thefe must be added two other reasons; one, that the rays of the sun for want of fufficient activity diffipates the vapours lefs, fo that they rife much flower. The other, that the region where the wind has its greatest velocity being, in this feason, near the earth, will not admit of their rifing to any height; and thus they continue contiguous to its furface, where they still follow the fame direction, and form the moist fog then felt: and having lefs fpace to dilate themfelves than at a greater height, they, confequently, fooner come into contact, and when fufficiently condenfed, defcend in a garua.

In the middle of the day the garna ceafes, being then difperfed, which proceeds from the fun's rarefying the atmosphere, whence the vapours ascend and remain fufpended at a greater height, and thus they are rendered more tenuious; and being raifed to a region where they have more room to dilate, they are fo far difperfed as to become imperceptible.

After all, it must be owned, that both in summer and winter, some vapours must furmount the difficulty of the wind in that region where its velocity is greateft, and, getting above it, afcend to a greater height; though not indeed in the very part where they first reached this current of wind, but at some distance from it : fo that these vapours are to be confidered, on one hand, as yielding to the current of the air, and, on the other, as afcending in proportion to the rarefaction they have received from the rays of the fun. Hence it follows, that these vapours cannot be those which are most condenfed, as the difficulty of rifing is always proportional to the degree of condenfation; and, at the fame time, their magnitude would render them more fusceptible of the impulse of the wind. So that these consequently being the most subtile or tenuious, on having paffed that region, the celerity with which they were before carried upwards is decreafed.

4F 2

decreafed, and great numbers of them being united, form that lofty mift which is feen after the cloud is totally diffipated. This mift cannot be converted into rain; for, having paffed above the region proper for its formation, all the parts become congealed, and their weight can never be increafed fufficiently to overcome the refiftance of the air which fupports them; for the quantity of those which have overcome this obstacle being inconfiderable, they cannot be united with a fufficient quantity of others to withfland the continual diffipation occasioned by the action of the rays of the fun. Nor can they defcend in either fnow or hail, as might be expected from their prefent flate. Befides following always, though with lefs velocity, the current of the wind, any fuch concretion of them as to form a thick cloud is prevented : for, as we have already obferved, these mifts are fo tenuious, as to afford in the day-time a confused view of the difk of the fun, and of the flars in the night.

In order to render the premifes agreeable to obfervation, one difficulty still remains, namely, that thefe lofty mifts are feen only in winter, and not in fummer. But this, in my opinion, must naturally be the confequence; for, befides the general reafon, that the ilronger influence of the rays of the fun difperfes them, it proceeds from the increase of the force of the winds during the winter, in a region nearer the earth than in fummer; and the nearer the lower part of this region is to the furface of the earth, the nearer alfo will be the upper part; while, on the contrary, in the fummer, the higher the lower part of this current of air is, the higher will be alfo its upper part; and. as we must suppose, with all philosophers, that the vapours of the earth can afcend only to that height, where the gravity of the particles of the vapours are equal to those of the air; and the rapidity of the wind extending in fummer to these limits, they are confequently involved in its violent impulfe; and thence there cannot be fuch a multitude of conglomerations as to form the mift fo common in winter; for the winds in this feafon ftrongly blowing through a region nearer the earth, the agitation in the upper parts is proportionally lefs. And this current of air being below the region to which vapours can afcend, the fpace intercepted between the upper part of this current and the part to which vapours rife, becomes filled with them. All this feems natural, and is confirmed by experience; for, in winter, the fouth winds are ftronger on the land than in fummer. But as a further proof may be thought neceffary, I have added the following:

It has been faid that, in the town of Chocope, two very hard and continual rains have happened; and that the fame thing is more frequently feen at Tumbez, and other towns of those parts, after fome years of continual drought, which feems ftrange; for that being in the country of Valles, and not at all different from Lima, no rain would naturally be expected there. Two causes for this, however, have occurred to me, one of them flowing from the other. I shall begin with the first as productive of the fecond.

From what has been faid, it may be inferred, that in a country or climate, where one and the fame wind perpetually prevails, there can be no formal rain; and, in order to form it, either the wind must entirely cease, or an opposite wind must arise, which, by checking the course of the vapours, brings them into contact with those lately exhaled from the earth, and causes them to condense in proportion as they rise by the attraction of the fun, till being rendered heavier than the air by which they were supported, they descend in drops of water.

On reconfidering the circumftances of what happened at Chocope, it will appear, that during the whole day, the fky was clear, and that it was not before five in the evening that the rain began, and with it the violence of the wind. It fhould also be observed,

588

that in the time of the brifas in those climates where they are periodical, they blow ftrongest between the fetting and rifing of the fun; and this happening in September and the following months, forms the fummer in Valles, when they enjoy clear days and a lucid atmosphere. This was the cafe at Chocope at the time of that rain; for, though the inhabitants did not precifely mention the fealon in which that event happened, yet the feveral particulars related, efpecially that the fouth winds then prevailed with an uncommon force, fufficiently indicate that it was in the fummer; as this would not have been at all remarkable in winter, when they are very variable and fometimes ftormy. It may therefore be fafely concluded, that these events happened during the fummer; and, by way of corollary, that the brifas being ftronger than ufual, and advancing fo far on the continent as even to reach the fouth winds, they were overpowered by them, and fhifted their point; but the fucceeding fouth winds rendering it impoffible to return in the fame place, they left their former region, and blew in a current nearer the earth. By which means, the vapours which had been exhaling during the whole day, after being carried by the ftrongest current of wind to a certain distance. afcended to the region where the brifas prevailed; and being there repelled by them, had time to condense; for being within that region where the rain is formed, or where many imperceptible drops compose one of a large magnitude and gravity, and being more minutely divided by the influence of the fun, they continued to afcend, till that power ceafing by the fetting of the fun, they again condenfed, and their weight becoming too heavy to be fupported in the air, they defcended in rain, which was the more violent, as the vapours were ftrongly repulfed by the brifas. At the dawn, thefe winds, as ufual, began to decreafe, and the rain gradually leffened. The fouth winds blew all day as before; and there being then in the atmosphere no other winds to oppose them, they carried with them the vapours as they exhaled, and the atmosphere continued clear and ferene.

This happened at Chocope, fituated at a much greater diffance from the parts to which the brifas extend than Tumbez, Piura, Sechura, and other towns where this is more frequent, as being nearer the equinoctial : notwithftanding, no brifas or north winds are felt in that part of the atmosphere near the furface of the earth. So that it is probable, or rather indeed evident from experience, that the north winds at the time they prevail, more eafily reach to the countries nearest the equinoctial, than to those at a greater diffance, though not fo as to be felt in the atmosphere near the earth, but in a more elevated region. Confequently, it is natural for rains to be more frequent in the former than in the latter, where these winds very feldom reach, whether in that part of the atmosphere contiguous to the earth, or another, which being more diffant from it they blow there more violently.

I at first declared against any positive affertion, that the opinion I have now laid before the reader is founded on fuch undoubted physical principles, that no other can be advanced more conformable to phænomena; it being difficult immediately to fix on causes which agreeing with all circumstances, leaves the mind entirely fatisfied: and as all within the reach of human perfpicuity cannot be accommodated to every particular, as entire conviction requires, let it fuffice that I have here delivered my thoughts; leaving the naturalists at full liberty to investigate the true cause, and when discovered, to reject my hypothesis. *

^{*} A more probable conjecture is, that the vapours which arife in the great South Sea, and are brought into this neighbourhood by the fouth wind (where they would naturally condenfe into clouds and fall in flowers), are attracted by the Cordilleras, whole tops are generally enveloped in clouds frightful to behold, which fpend themfelves in tremendous tempefts, even flaking the foundations of those lofty mountains. A.

As rain is feldom or never feen at Lima, fo that place is alfo equally free from tempefts; that fo thofe who have neither vifited the mountains nor travelled into other parts; as Guayaquil or Chili, are abfolute ftrangers to thunder and lightning; nothing of that kind being known here. Accordingly, the inhabitants are extremely terrified when they first hear the former or fee the latter. But it is very remarkable, that what is here entirely unknown, should be fo common at thirty leagues distant, or even lefs, to the east of Lima; it being no farther to the mountains, where violent rains and tempefts are as frequent as at Quito. The winds, though fettled in the above-mentioned points, are fubject to variations, but almost imperceptible, as we shall explain. They are also very gentle, and even in the feverest winters, never known to do any damage by their violence; fo that if this country was free from other inconveniences and evils, its inhabitants could have nothing to defire, in order to render their lives truly agreeable. But with these fignal advantages, nature has blended inconveniences, which greatly diminish their value, and reduce this country even below those on which nature has not bestowed fuch great riches and fertility.

It has been obferved, that the winds generally prevailing in Valles, throughout the whole year, comes from the fouth; but this admits of fome exceptions, which, without any effential alteration, implies that fometimes the winds come from the north, but fo very faint, as fcarcely to move the vanes of the fhips, and confift only of a very weak agitation of the air, juft fufficient to indicate that the wind is changed from the fouth. This change is regularly in winter, and with it the fog immediately begins, which in fome meafure feems to coincide with what has been offered with regard to the reafon why fhowers are unknown at Lima. This breath of wind is fo particular, that from the very inftant it begins, and before the wind is condenfed, the inhabitants are unhappily fenfible of it by violent head-aches, fo as eafily to know what fort of weather is coming on before they ftir out of their chambers.

CHAP. VII. — Inconveniencies, Diftempers, and Evils, to which the City of Lima is fubject; particularly Earthquakes.

ONE of the inconveniences of Lima, during the fummer, is that of being tormented with fleas and bugs, from which the utmost care is not fufficient to free the inhabitants. Their prodigious increase is partly owing to the dust of that dung, with which the ftreets are continually covered; and partly to the flatness of the roofs, where the fame dust, wasted thither by the winds, produce these troubless of the roofs, which are continually dropping through the crevices of the boards into the apartments, and by that means render it impossible for the inhabitants, notwithstanding all their pains, to keep their houses free from them. The moschitos are very troubless, but much less fo than the former.

The next, and indeed a most dreadful circumstance, is that of earthquakes, to which this country is fo subject, that the inhabitants are under continual apprehensions of being, from their suddenness and violence, buried in the ruins of their own houses. Several deplorable inftances of this kind have happened in this unfortunate city; and lately proved the total deftruction of all its buildings. These terrible concussions of nature are not regular, either with regard to their continuance or violence. But the interval between them is never of a length sufficient to obliterate the remembrance of them. In the year 1742, I had the curiosity to observe the distance of time between those which happened successively for a certain space. 1. On the 9th of May, at three quarters

590

quarters after nine in the morning. 2. The 19th of the fame month, at midnight, 3. The 27th, at thirty-five minutes after three in the evening. 4. The 12th of June, at three quarters palt five in the morning. 5. The 14th of October, at nine at night; all which I carefully noted. And it must be observed, that these concustions were the most confiderable, and lasted near a minute; particularly that of the 27th of May, which continued near two minutes, beginning with one violent shock, and gradually terminating in tremulous motions. Between these above noted were several others, which I omitted, as being neither so lasting nor violent.

Thefe earthquakes, though fo fudden, have their prefages, one of the principal of which is, a rumbling noife in the bowels of the earth, about a minute before the fhocks are felt; and this noife does not continue in the place where it was first produced, but feems to pervade all the adjacent fubterraneous parts. This is followed by difmal howlings of the dogs, which feem to have the first perception of the approaching danger. The beafts of burden paffing the streets, stop, and, by a natural instinct, fpread open their legs, the better to fecure themfelves from falling. On thefe portents the terrified inhabitants fly from their houfes into the ftreets with fuch precipitation, that if it happens in he night, they appear quite naked; fear and the urgency of the danger, banifhing at once all fenfe of decency. Thus the ftreets exhibit fuch odd and fingular figures, that might even afford matter for diversion, were it possible in fo ter-The fudden concourfe is accompanied with the cries of children rible a moment. waked out of their fleep, blended with the lamentations of the women, whole agonizing prayers to the faints increafe the common fear and confusion: the men alfo are too much affected to refrain from giving vent to their terror; fo that the whole city exhibits one dreadful scene of consternation and horror. Nor does this end with the shock, none venturing to return to their houfes through fear of a repetition, which frequently demolifhes those buildings which had been weakened by the first.

My attention to fet down the exact time of the above-mentioned flocks, taught me, that they happen indifferently at half-ebb or half-flood, but never at high or low water: which fufficiently confutes what fome have confidently advanced, namely, that earthquakes always happen during the fix hours of ebb, but never during the flood: becaufe this favours the hypothefis they have advanced to account for their origin and caufes; an hypothefis which, in my opinion, does not fufficiently correspond with obfervations, as to recommend itfelf to the affent of intelligent perfons.

The nature of this country is fo adapted to earthquakes, that all ages have feen their terrible devaftations: and that nothing may be wanting to fatisfy the curiofity of the reader, I shall introduce the account of that which laid this large and splendid city totally in ruins, with a short narrative of the most remarkable that have been felt in latter ages.

1. The first concussion fince the establishment of the Spaniards in these parts, happened in 1582, a few years after the foundation of Lima; but the damage was much less than in fome of the fucceeding, being chiefly confined to the city of Arequipa, which being fituated near that spot, where the motion of the earth was most violent, the greatest part of it was destroyed.

2. On the 9th of July 1586, Lima was visited with another earthquake, and so violent, that even to this time it is solemnly commemorated on the day of the visitation of Elizabeth.

3. In 1609, another like the former happened.

4. On the 27th of November 1630, fuch prodigious damage was done in the city by an earthquake, and the entire ruin of it apprehended, that in acknowledgment of its deliverance, a feftival, called Nuestra Senora del Milagro, is annually celebrated on that day.

5. In the year 1655, on the 3d of November, the most stately edifices, and a great number of houses, were thrown down by an earthquake; the inhabitants fled into the country, and remained there several days, to avoid the danger they were threatened with in the city.

6. On the 17th of June 1678, another earthquake happened, by which feveral houfes were deftroyed, and the churches confiderably damaged.

7. One of the moft dreadful of which we have any account, was that of the 20th of October 1687. It began at four in the morning, with the deftruction of feveral public edifices and houfes, whereby great numbers of perfons perifhed; but this was little more than a prefage of what was to follow, and preferved the greateft part of the inhabitants from being buried under the ruins of the city. The flock was repeated at fix in the morning, with fuch impetuous concuffions, that whatever had withflood the firft, was now laid in ruins; and the inhabitants thought themfelves very fortunate in being only fpectators of the general devaftation from the ftreets and fquares, to which they had directed their flight on the firft warning. During this fecond concuffion the fea retired confiderably from its bounds, and returning in mountainous waves, totally overwhelmed Callao, and the neighbouring parts, together with the miferable inhabitants.

8. On the 29th of September 1697, this place was visited by another terrible earthquake.

9. On the 14th of July 1699, a great number of houses were destroyed by another concussion.

. 10. The 6th of February 1716, a like difafter.

11. On the 8th of January 1725, another.

12. On the 2d of December 1732, was another earthquake at one in the morning.

13, 14, 15. In the years 1690, 1734, and 1745, three others happened, but neither violent nor lafting. But all these were less terrible than the last, as will appear from the following account of it.

16. On the 28th of October, 1746, at half an hour after ten at night, five hours and three quarters before the full of the moon, the concuffions began with fuch violence, that in little more than three minutes, the greatest part, if not all the buildings, great and small, in the whole city, were destroyed, burying under their ruins those inhabitants who had not made sufficient halte into the streets and squares; the only places of fastery in these terrible convulsions of nature. At length the horrible effects of this short shock ceased : but the tranquillity was of short duration; concussions returning with such frequent repetitions, that the inhabitants, according to the account fent of it, computed two hundred in the first twenty-four hours: and to the 24th of February of the following year, 1747, when the narrative was dated, no less than four hundred and fifty shocks were observed, some of which, if less lasting, were equal to the first in violence.

The fort of Callao, at the very fame hour, funk into the like ruins; but what it fuffered from the earthquake in its buildings, was inconfiderable, when compared with the terrible cataftrophe which followed; for the fea, as is ufual on fuch occafions, receding to a confiderable diftance, returned in mountainous waves foaming with the violence of the agitation, and fuddenly turned Callao and the neighbouring country, into a fea. This was not, however, totally performed by the first fwell of the waves;

592

for the fea, retiring further, returned with ftill more impetuofity; the ftupendous water covering both the walls and other buildings of the place; fo that whatever had efcaped the first, was now totally overwhelmed by those terrible mountains of waves, and nothing remained except a piece of the wall of the fort of Santa Cruz, as a memorial of this terrible devastation. There were then twenty-three ships and vessels, great and small, in the harbour, of which nineteen were absolutely funk, and the other four, among which was a frigate called St. Firmin, carried by the force of the waves to a great diffance up the country.

This terrible inundation extended to other ports on the coaft, as Cavallos and Guanape; and the towns of Chancay, Guara, and the valleys Della Baranca, Sape, and Pativilca, underwent the fame fate as the city of Lima. The number of perfons who perifhed in the ruin of that city, before the 31ft of the fame month of October, according to the bodies found, amounted to thirteen hundred, befides the maimed and wounded, many of which lived only a fhort time in torture. At Callao, where the number of inhabitants amounted to about four thoufand, two hundred only efcaped; and twenty-two of thefe by means of the above-mentioned fragment of a wall.

According to an account fent to Lima after this accident, a volcano in Lucanas burft forth the fame night and ejected fuch quantities of water, that the whole country was overflowed; and in the mountain near Patas, called Converfiones de Caxamarquilla, three other volcanoes burft, difcharging frightful torrents of water; like that of Carguayraffo, mentioned in the first part of this work.

Some days before this deplorable event, fubterraneous noifes were heard at Lima, fometimes refembling the bellowing of oxen, and at others the difcharges of artillery. And even after the earthquake they were ftill heard during the filence of the night; a convincing proof that the inflammable matter was not totally exhausted, nor the cause of the subfolutely removed.

The frequent earthquakes to which South America, particularly Lima, and all the country of Valles, is fubject, opens a field for enquiry not lefs ample than that juft mentioned, concerning their caufe. Many hypothefes have been formed by philofophers; but the generality, and with the greateft appearance of truth, agree in deducing them principally from the violent force of the air contained in fulphureous fub-ftances and other minerals, and alfo that confined in the pores of the earth; which being comprefied by the incumbent load, make a very violent refiftance. This is fo far from implying any contradiction, that befides being countenanced by reafon it is alfo confirmed by experience. But the apparent difficulty confifts in explaining how the vents of the earth become again filled with air, after one concuffion has happened; it being natural to think, that the quantity which ftruggled for vent, was thereby difcharged, and that a long interval of time was neceffary before another could be produced. Alfo why fome countries are more fubject to thefe terrible convulfions than others. Though this fubject has been treated of by feveral authors, I think it my duty here to deliver the opinion which to me feems moft probable.

Éxperience has fufficiently fhewed, efpecially in this country, by the many volcanoes in the Cordilleras which pass through it, that the bursting of a new burning mountain causes a violent earthquake, so as totally to destroy all the towns within its reach; as happened at the opening of the volcano in the desert of Carguagoazo, as mentioned before. This tremulous motion, which we may properly call an earthquake, does not so use a least, the motion it causes in the earth is comparatively but shall. Whence it is inferred that an aperture being once made, however the sources in the bowels of

VOL. XIV.

the

the mountain may take fire, the convultion of the earth is feldom or never felt a fecond time. The reafon of which is, that the fudden reiteration of this accident greatly augments the volume of the air by rarefaction; and as it finds an eafy paffage without labouring in the bowels of the earth for a vent, no other concuffion is produced than what muft follow from the eruption of a great quantity of air through an aperture too narrow for its volume.

The formation of volcanoes is now well known; and that they owe their origin to fulphureous, nitrous, and other combuftible fubftances in the bowels of the earth; for thefe being intermixed, and, as it were, turned into a kind of pafte by the fubterraneous waters, ferment to a certain degree, when they take fire; and by dilating the contiguous wind or air, and alfo that within their pores, fo that its volume is prodigioufly increafed beyond what it was before the inflammation, it produces the fame effect as gunpowder when fired in the narrow fpace of a mine, but with this difference, that powder on being fired immediately difappears, whereas the volcano being once ignited, continues fo till all the oleaginous and fulphureous particles contained in the mountain are confumed.

Volcanoes are of two kinds, contracted and dilated. The former are found where a great quantity of inflammable matter is confined in fmall fpace; the latter where thefe combustibles are fcattered at a confiderable diftance from one another. The first are chiefly contained in the bowels of mountains, which may be confidered as the natural depofitaries of these fubftances. The fecond may be confidered as ramifications, which, though proceeding from the former, are, however, independent, extending themfelves under the plains, and traverfing them in feveral directions. This being admitted, it will appear, that in whatever country volcanoes, or depositaries of these fubstances, are very common, the plains will be more diversified with thefe ramifications; for we are not to imagine that it is only within the bofoms of mountains that fubftances of this nature exift, and that they are not diffeminated through all the parts of the adjacent region. Thus the country now under confideration, abounding in these igneous substances more than any other, must by the continual inflammation which neceffarily follows their natural preparation for it, be more exposed to earthquakes.

Befides the fuggeftions of natural reafon, that a country containing many volcanoes muft alfo be every where veined with ramifications of correspondent fubftances, it is confirmed by experiment in Peru; where we find almost universally mines of nitre, fulphur, vitriol, falt, bitumen, and other inflammatory fubftances, which fufficiently confirm the truth of these inferences.

The foil both of Quito and Valles, particularly the latter, is hollow and fpongy, fo as to be fuller of cavities and pores than is ufually feen in that of other countries, and confequently abounds with fubterranean waters. Befides which, as I fhall prefently fhew more at large, the waters, from the ice continually melting on the mountains, being filtrated through thefe pores during their defcent, penetrate deep into the cavities of the earth, and during their fubterranean courfe, moiften, and turn into a kind of pafte, thofe fulphureous and nitrous fubftances ; and though they are not here in fuch prodigious quantities as in volcanoes, yet they are fufficient, from their inflammatory quality, to rarefy the air contained in them, which, eafily incorporating itfelf with that confined in the innumerable pores, cavities, or veins of the earth, comprefies it by its greater expanfion, and at the fame time rarefies it by its heat; but the cavities being too narrow to admit of its proper dilatation, it ftruggles for a vent, and thefe efforts fhake all the contiguous parts; till at laft, where it finds the leaft refiftance, it forces itfelf a paffage, which fometimes clofes again by the tremulous motion it occafions, and at others continues open, as may be feen in different parts of all thefe countries. When, on account

of

of the refiftance being equal, it finds a paffage in feveral parts, the chafms or fiffures are generally finaller, fo that rarely any veftiges remain after the concuffion. At other times, when the fubterranean cavities are fo large as to form fubterranean caverns, they not only rend the earth, and at every flock leave it full of difruptions, but alfo caufe it to fink into fpacious hollows, as I particularly obferved near the town of Guaranda, a place in the jurifdiction of Chimbo, in the province of Quito; where, in the year 1744, all the ground on the one fide of the chafm funk near a yard, the other fide rifing in the fame proportion, though with fome inequalities on both fides.

The loud fubterranean noifes preceding earthquakes, and which imitate thunder at a distance, feem to correspond with the above-mentioned cause and formation of earthquakes, as they can only proceed from the rarefaction of the air on the ignition of the explosive fubstances; which being impetuously propagated through all the caverns of the earth, propelling and at the same time dilating what is contained in them, till all the cavities being pervaded, and no vent found, the efforts for a further dilatation begin, and form the concussion with which it terminates.

It must be observed that at the time when the air, which had been confined within the earth, burfts through it, neither the light nor fire emitted from the chafms are feen. The reason is, that this light and fire exist only at the inftant when the matter becomes inflamed, and the air fpreading itfelf through all the veins, the light is extinguifhed by its dilatation, and becomes afterwards imperceptible. It is neceffary to fuppofe that there must be fome, though a short interval, between the inflammation and effect. Neither is the flame permanent, the fubftance ignited not containing those folid and oleaginous particulars which fupply the volcanoes. Befides, they are not in fufficient quantity to afcend from the fubterraneous caverns where they took fire, to the fuperficies of the earth. Farther, this not being the place where the matter was originally contained, but that where it has forced a paffage for the quantity of air which its rarefaction augmented, the first light is lost among the meanders of its course, and therefore not to be feen when the wind violently forces a paffage. There have, however, been inftances when the light has been feen, though much oftener the fmoke; but this is generally loft in the clouds of duft afcending at the time of the concuffion.

The flocks are repeated at intervals, of a few days, fometimes of a few hours; proceeding from the matter being difperfed in different places, and each in a different degree of aptitude for inflammation, one part kindling after another fucceflively, as each is more or lefs prepared. Hence proceed allo the different violence of the flocks and the different intervals of time. For the quantity first inflamed increases by its heat other inflammable portions of matter; whence a part which would not have been ignited till after fome days, by means of this adventitious fire, becomes fo within a few hours. The fecond flocks are more violent, and caufe a greater destruction than the first; for the fire of the portion of matter which is first inflamed, though in itself fmall, is fufficient to accelerate the fermentation of a much larger quantity, and confequently must be attended with more powerful effects.

Though the fummer here, as we have already obferved, is confiderably warm, yet it is not productive of venomous creatures, which in this country are not known; and the fame may be faid of all Valles, though there are fome parts, as Tumbez and Piura, where the heat is nearly equal to that at Guayaquil. This fingularity can therefore proceed from no other caufe than the natural drought of the climate.

The diftempers most common at Lima are malignant, intermittent, and catarrhous fevers, pleurifies, and constipations; and these rage continually in the city. The small-

рох

pox is alfo known here as at Quito, but is not annual, though, when it prevails, great numbers are fwept away by it.

Convultions are likewife very common, and no lefs fatal. This diforder, though unknown at Quito, is frequent all over Valles, but more dangerous in fome parts than others. Something has already been faid of this diftemper in our account of Carthagena, but a more circumftantial defcription of it was referved for this place.

This diftemper is divided into two kinds, the common or partial, and the malignant or arched convultions. They both come on when nature is ftruggling in the crifis of fome acute diftemper, but with this important difference, that those attacked with the former often recover, though the greater part die on the third or fourth day, the term of its duration : while those who have the misfortune of being attacked by the latter, fink under it in two or three days, it being very extraordinary to recover, and is therefore termed malignant.

The fpains or convultions confift in a total inactivity of the mufcles, and a confriction of the nerves of the whole body, beginning with those of the head; and these nerves being the channels which convey nourithment to the body, and this nourithment being precluded by the conftriction of its conduits, they all fucceflively fuffer; the mufcles, by having loft their activity, cannot affift in the motion of the nerves, and these being confiringed, can no longer perform their office. Add to this a pungent humour difperfing itself through all the membranes of the body, and causing infupportable pains; fo that the groaning patient labours under inconceivable tortures, which are still increased on his being moved, though with the greatest care and gentleness, from one fide to the other. The throat is fo contracted that nothing can be conveyed into the flomach. The jaws are also fometimes fo closely locked, as impossible to be opened : thus the miferable patient lies without motion, and tortured in every part of his body, till nature quite exhausted, falls a victim to this deleterious diftemper.

In the partial kind, the pulfe is more affected than in the diftemper which preceded it, and commonly abates the violence of a fever. But in the malignant kind it augments, the circulations being quickened; and whether it be the effect of the humour impetuoufly circulating through every part, or of the pain proceeding from the laceration of the membranes and abrading the mufcles, the patient falls into a lethargy, but which does not remove the torturing fenfation of thefe punctures, often fo infupportable, that the miferable patient violently turns himfelf, and thus augments his agonies, as evidently appears from his piercing cries and groans.

The malignant and arched fpafm, even in the first ftage, is fo violent as to caufe a contraction of the nerves of the vertebræ from the brain downwards; and as the diftemper increases, and the malignant humour acquires great activity, the nerves become more and more constricted, that the body of the patient, contrary to nature, inclines backward into an arch, and all the bones become diflocated. However terrible the pains refulting from hence may seem, they are still increased by those of the other species of convulsions, when the violence is such that the patient usually loses all sensation, and falls into a total inaction, not having breath to utter his complaints.

It is common at the beginning of this diftemper to be totally convulfed, fo that every part of the patient is affected, and, during the continuance, is, as it were, deprived of all fenfation. Their return is more frequent and lafting as the diftemper increases, till toture becomes entirely spent, when the lethargy fits succeed, and it is generally in one of these that the patient breathes his last.

The usual method of treating this diffemper is by keeping both the bed and the chamber very clofe, even with a fire in it, that the pores being opened by the heat, the tran-

fpiration

fpiration may be more copious. Laxative clyfters are often injected to mollify the contractions of the inteftines, and other internal parts. External applications are alfo applied to foften the parts, and open the ducts by which nature may evacuate the morbid humour: for the fame intention and to check its progrefs, cordials and diuretic draughts are prefcribed, and alfo the bath; but the latter only at the beginning of the first ftage of the diftemper; for if it is found to increase on the fecond day, bathing is no longer ordered.

The women of Lima are subject to a distemper, extremely painful, very contagious, and almost incurable; namely, a cancer in the matrix, which even at the beginning is attended with fuch excruciating pains, that their lives are one continued feries of groans and complaints. During its progrefs, they difcharge great quantities of morbid humours, become attenuated, fall into a flate of languor, which gradually puts a period to their lives. It ufually continues fome years, with intervals of eafe, during which, if the evacuations do not entirely ceafe, they are confiderably intermitted; the pains feem over, and they are capable of dreffing themfelves and walking abroad : but the difeafe fuddenly returns with double violence, and the patient becomes totally difabled. This diftemper comes on fo imperceptibly, as not to be indicated either by the countenance or pulfe, till at its height; and fuch is the contagion of it, that it is contracted only by fitting in the fame chair commonly used by an infected perfon, or wearing her cloaths; but it has not been known to affect the men, hufbands ufually living with their wives till the laft ftage of the diftemper. Two caufes are affigned for this malady; their exceffive ufe of perfumes, which they always carry about them, and may doubtlefs contribute greatly to promote it : the other a continual riding in their calafhes; but this does not feem to be of fo much confequence as the former. For then the most diffinguished of the fair fex in other countries, who ride in coaches, and even ufe the more violent exercife of the horfe, would not be exempt from it.

Slow or hectic fevers alfo prevail greatly in these countries, and are likewise contagious, but more from a want of proper care in the furniture and apparel of the person infected, than any malignancy of the climate.

The venereal difeafe is equally common in this country as in those we have already mentioned; it is indeed general in all that part of America; and as little attention is given to it till arrived to a great height, the general custom in all those parts, a repetition here would be needlefs.

CHAP. VIII. — Fertility of the Territories of Lima, and the Manner of cultivating the Soil.

IT is natural to think that a country, where rain is feldom or ever known, muft of neceffity be totally barren, whereas the country of Lima enjoys a fertility to be envied, producing all kinds of grain, and a prodigious variety of fruits. Here industry and art fupply that moifture which the clouds feem to withhold; and the foil is by this means rendered remarkably fruitful, amidit a continual drought.

It has already been obferved, that one of the principal cares of the Yncas was the cutting and difpoing in the most advantageous mannet trenches or fmall canals, in order to conduct the waters of the rivers to nourifh every part, and render large fields capable of producing grain. The Spaniards finding these useful works ready executed to their hands, took care to keep them in the fame order; and by these are watered the space fields of wheat and barley, large meadows, plantations of fugar-canes and olive-trees vineyards vineyards, and gardens of all kinds, all yielding uncommon plenty. Lima differs from Quito, where the fruits of the earth have no determined feafons; but here the harvefts are gathered in, and the trees drop their leaves, according to their refpective natures; for thofe which grow fpontaneoufly in a hot climate, though the livelinefs of their verdure fades, their leaves do not fall off till others fupply their place. The bloffoms alfo have their refpective times, and are correspondently fucceeded by fruits; fo that this country refembles those of the temperate zones, no lefs in the product and feafons of corn, bloffoms, fruits, and flowers, than in the difference of winter and fummer.

Before the earthquake in 1687, when this city fuffered in fo deplorable a manner, the harvests of wheat and barley were fufficient to fupply the wants of the country without any importation, especially of wheat; but by this convulsion of nature, the foil was fo vitiated, that the wheat rotted foon after it was fown, occafioned, probably, by the vaft clouds of fulphureous particles then exhaled, and the prodigious quantities of nitrous effluvia diffused through it. This obliged the owners of the lands to apply them to other uses, and accordingly many of them were turned into meadows of clover, plantations of fugar-canes, and other vegetables, which they found not fubject to the fame misfortune. After the land had continued forty years in this ftate of fterility, the hufbandmen began to perceive fuch alteration in the foil, as promifed a fpeedy return to its former goodnefs. Accordingly fome trials were fuccefsfully made with wheat, and by degrees that grain was found to thrive as before that dreadful event. But whether it be from the other plants, which have been cultivated in those parts, or from any miltruft of the hufbandmen, the fame quantity has not been fown as before. It is natural to think that the late dreadful earthquake must have had the fame pernicious effects on the foil; though by means of the eftablishment of the corn trade with Chili fince that time, the confequences will not be fo fenfibly felt. The fields in the neighbourhood of Lima are chiefly fown with clover, of which there is here a confumption not to be paralleled in any other place: it being the common fodder for all beafts, particularly the mules and horfes, of which there is an inconceivable number.

The other parts of the country are taken up with plantations already mentioned, among which those of canes are not the least, and yield an excellent kind of fugar. All these fields and plantations are cultivated by negro flaves, purchased for this fervice; and the same is seen in the other improved parts of Valles.

The olive plantations appear like thick forefts; for befides the height, magnitude, and fulnefs of leaves of thefe trees, in all which they exceed thofe of Spain, they are never pruned, by which means their branches become fo interwoven, that the light cannot penetrate through their foliage. The plough is not ufed here; the only cultivation they require, being to clear the holes made at the foot of each for receiving the water, to keep the trenches open which convey it, and every three or four years to cut down all fhoots or cions, in order to form paffages for gathering the fruit. With this fmall trouble the inhabitants have an uncommon plenty of the fineft olives, which they either commit to the prefs for oil, or pickle, they being particularly adapted to the latter, both with regard to their beauty, largenefs, and flavour. Their oil is much preferable to that of Spain.

The country contiguous to the city is covered with gardens, producing all the herbs and fruits known in Spain, and of the fame goodnefs and beauty, befides those common to America; all which flourish here in a very uncommon degree; fo that none of the parts of Peru, at least fuch as we visited, are to be compared with those of the

neighbour-

neighbourhood of Lima, where every place is covered with fruits and efculent vegetables.

It also enjoys another fingular advantage, the whole year being, as it were, fummer with regard to the plenty and freshness of fruits; for the feasons of the year varying alternately in Valles and the mountains, when the time of fruits is over in Valles, it begins on the skirts of the mountains; and the distance from Lima being not above twenty-five or thirty leagues, they are brought thither, and by this means the city is constantly supplied with fruits, except a few, as grapes, melons, and water-melons, which requiring a hot climate, do not come to perfection in the mountains.

The grapes are of various kinds; and among them, one called the Italian, very large and delicious. The vines extend themfelves on the furface of the ground, which is very well adapted to fupport them, being either ftony or full of fand. Thefe vines are pruned and watered at proper times, and thrive remarkably without any other care.

No other culture is beftowed on those defigned for wine, for both at Ica, Pifco, Nafca, and all other parts where they grow, they are formed into efpaliers. None of the grapes near Lima are used in making wine, the demand for them in other respects being too large.

The foil is ftony and fandy, that is, confifting of fmooth flints or pebbles, which are fo numerous that as other foils are entirely fand, rock, or earth, this is wholly of the above ftones; and in fome parts prove very inconvenient to travellers, whether in a carriage or on horfeback. The arable lands have a ftratum of about a foot or two of earth, but below that the whole confifts entirely of ftones. From this circumftance, the fimilarity of all the neighbouring coafts, and the bottom of the fea, this whole fpace may be concluded to have been formerly covered by the ocean, to the diftance of three or four leagues, or even farther, beyond its prefent limits. This is particularly obfervable in a bay about five leagues north of Callao, called Marques, where in all appearance, not many years fince, the fea covered above half a league of what is now Terra Firma, and the extent of a league and a half along the coaft.

The rocks in the most inland part of this bay are perforated and fmoothed like those washed by the waves; a fufficient proof that the fea formed these large cavities, and undermined fuch prodigious masses as lie on the ground, by its continual elifions; and it feems natural to think that the like must have happened in the country contiguous to Lima, and that parts, confisting of pebbles like those at the bottom of the adjacent fea, were formerly covered by the water.

Another fingularity in this arid country is, the abundance of fprings, water being found every where with little labour, by digging only four or five feet below the furface. This may arife from two caufes; the one, that the earth, being, from its composition, very fpungy, the water of the fea easily infinuates itfelf to a great distance, and is filtrated in passing through its pores. The other, that the many torrents, after defcending from the mountains, foon lose themselves in these plains, but continue their course along the fubterranean veins of the earth; for this stony quality of the foil from the nature of the store cannot extend to any great depth, and underneath it the stratum is hard and compact; consequently the water must be conveyed to the most porous parts, which being the store, it there precipitates into a subterranean course, leaving the subterranean very, the inhabitants procure a sufficient quantity

* Chap. I. of this Part.

of water by digging wells in the beds over which their waters run in the winter: others might be paffed without being known, but the bottom confifting entirely of pebbles, wherever the beaft fet their feet, the water immediately oozes out. The reafon of this is, that the water at that time runs a little below the furface, and I do not doubt but the fame will be found in all Valles, though at different depths in different places.

This plenty of fubterraneous ftreams is doubtlefs of great advantage to the fertility of the country, particularly with regard to the larger plants, whofe roots ftrike deepeft; and this feems a bountiful indulgence of the wife Author of Nature, who, to provide against the fterility which would certainly affect these countries from a want of water, has fent a fupply from the mountains, either in open rivers or fubterraneous canals.

The lands in the jurifdiction of Chancay, like the other parts of the coafts of Peru, are manured with the dung of certain fea birds, which abound here in a very extraordinary manner. These they call guanoes, and the dung guano, the Indian name for excrement in general. These birds, after spending the whole day in catching their food in the fea, repair at night to reft on the iflands near the coaft, and their number being fo great as entirely to cover the ground, they leave a proportionable quantity of excrement or dung. This is dried by the heat of the fun into a cruft, and is daily increasing, fo that notwithstanding great quantities are taken away, it is never exhausted. Some will have this guano to be only earth endowed with the quality of raifing a ferment in the foil with which it is mixed. This opinion is founded on the prodigious quantities carried off from those islands, and on the experiment made by digging or boring, by which the appearance at a certain depth, was the fame as at the fuperficies; whence it is concluded, that the earth is naturally endowed with the heating quality of dung or guano. This would feem lefs improbable, did not both its appearance and fmell prove it to be the excrement in queftion. I was in thefe iflands when feveral barks came to load with it; when the infupportable fmell left me no room to doubt of the nature of their cargo. I do not however pretend to deny, but that it may be mixed with earth, or that the most fuperficial part of the earth does not contract the like virtue, fo as to produce the fame effect. But however it be, this is the manure ufed in the fields fowed with maize, and with proper waterings is found greatly to fertilize the foil, a little of it being put clofe to every ftem, and immediately watered. It is also of use in fields of other grain, except wheat and barley, and, confequently, prodigious quantities of it yearly used in agriculture.

Befides the orchards, fields, and gardens, with which this country is fo delightfully variegated, there are other parts where nature itfelf fpontaneoufly furnifhes beautiful profpects for the inhabitants, and plenty of excellent food for their cattle; particularly the hills of St. Chriftopher and Amancaes, whofe perpetual verdure, diverfified in fpring with elegant flowers, feems to invite the neighbouring inhabitants to a nearer enjoyment of the beauties it prefents at a diffance to their view. The parts in the neighbourhood of the city, to the diffance of fix or eight leagues, offer the like entertainment; and accordingly many families refort thither for the change of air, and the tranquillity of rural amufement. The hills called Amancaes, already mentioned, have their name from a certain flower growing on them. It is yellow, and of the campanula form, with four pointed leaves. Its colour is remarkably brilliant, and in that wholly confifts its value, being totally void of fragrancy.

Befides these delightful retreats, the city has a public walk in the suburb of St. Lazaro, called Alameda, confisting of rows of orange and lemon trees; along the banks of

12

the

600

the river is another, called the Acho, to which there is a daily refort of coaches and calashes.

The only monuments of antiquity remaining in the neighbourhood of Lima, are the guacas, or fepulchres of the Indians, and fome walls, which were built on both fides of the roads, and are frequently feen all over this country. But three leagues north-east of the city, in a valley called Guachipa, are still standing the walls of a large town. Through ignorance I did not vifit them whilft I was at Lima : the account of them, however, which the ingenious Marquis de Valde Lyrios was pleafed to give me, may be equally relied on, as if related from my own knowledge; especially as he took a very accurate furvey of the whole. He observed, that the streets were very narrow; that the walls of the houfes, which in common with all the buildings of that time were without roofs, were only of mud, and that each house confisted of three fmall fquare apartments. The doors towards the ftreet, were not fo high as the general ftature of a man, but the walls wanted little of three yards. Among all the houfes which composed this large town, fituated at the foot of a mountain, is one, whose walls overlook all the others, and thence it is concluded to have belonged to the cacique or prince; though its ruinous condition renders it impoffible to determine abfolutely. The inhabitants of this valley, where the fruitful fields are watered from the river Rimac, at no great diftance from thefe ruins, call them Old Caxamarca, though it cannot now be difcovered whether that was the real name of the town in the times of paganifm. For there neither remains any memorial of fuch tradition, nor any mention of it in the hiftories of that kingdom, written by Garcilazo and Herrera; fo that all we know is, that the epithet Old is now applied to it by way of diffinction from the prefent town of Caxamarca.

One aftonifhing particular in the walls of this town, and in all others in the neighbouring valleys, is, that though built on the furface of the earth, without any foundation, they have withftood those violent earthquakes which overthrew the more folid buildings of Lima and other large towns erected in the Spanish manner: having received no other damage than what naturally refults from being forfaken, or what the drivers have done who make it a refting place for their cattle in the road to Lima.

From the conftruction of thefe houles it- may be inferred, that long experience has inftructed the natives, that in parts fo fubject to earthquakes, it was improper to lay a foundation in order to ftrengthen the walls; and tradition informs us, that when the newly-conquered Indians faw the Spaniards dig foundations for lofty buildings, they laughed at them, telling them they were digging their own fepulchres; intimating, that the earthquakes would bury them under the ruins of their houfes. It is indeed a melancholy proof of pride and obfinacy, that after having the prudent example of the Indians before their eyes, the total ruin of the city, at four different times, in lefs than the fpace of two hundred years, has not been able entirely to eradicate the deftructive paffion for airy and elegant buildings, though thefe neceffarily require large and lofty walls, which muft have a foundation proportioned to the magnitude of the ftructure, and the weight they are to fupport.

CHAP. IX. - Of the Plenty and different Kinds of Provisions at Lima.

THE fertility of the foil, the goodnefs of the climate, and the convenient fituation of Lima, concur to maintain in it a conftant plenty. The fruits and herbs have been vol. xiv. 4 H already mentioned; it remains that we confider the meat and fifh with which it is allo equally provided.

The bread at Lima is incontestably the best in all this part of America, both with regard to its colour and tafte, the goodness of the corn being improved by the manner of working it; and at the fame time fo reafonable, that the inhabitants ufe no other. It is of three kinds: one called Criollo, the crumb of which is very light and fpongy; the fecond, French bread; and the last, foft bread. It is kneaded by negroes employed by the bakers, many of whom are very rich, and their fhops always well provided. Befides their own flaves, the bakers are also obliged to receive any delivered up to them by their mafters to work as a punifhment; and for thefe, befides finding the flaves in provisions, they pay the mafter the usual wages in money or in bread. This punifhment is the feverest that can be inflicted on them, and, indeed, all the hardfhips and cruelties of the galleys are lefs than what thefe wretches are obliged to They are forced to work the whole day, and part of the night, with undergo. little food and lefs fleep; fo that in a few days the most vigorous and stubborn flave becomes weak and fubmiffive, and proftrates himfelf before his mafter, with tears, intreaties, and promifes of amendment on being removed from that place, the dread of which is doubtlefs of the greateft ufe in awing the vaft number of flaves, both within and without the city.

Their mutton is the most common food, and is very palatable from the nitrous paftures where the sheep are fattened. The beef also is good, but little eaten except by the Europeans, so that two or three beasts supply the city for a week. Here is also plenty of poultry, partridges, turtle-doves, &c. Pork is also in great abundance, though not equally delicate with that of Carthagena. The lard is used in dreffing all kinds of distance whether of fless or fish, oil being only used in falads and the like. This method of cookery is faid to have had its rise when the country afforded no oil, and has been continued to the prefent time, notwithstanding it is now produced in great quantities. Antonia de Rivero, an inhabitant of Lima, in the year 1660, planted the first olive-tree ever feen in Peru.

From the mountains are often fent, by way of prefent, frozen calves; being killed there, and left two or three days on the heaths to freeze; after which they are carried to Lima, where they may be kept any time required, without the leaft tendency to putrefaction.

Of fifh there is ftill a greater variety daily brought from the neighbouring parts of Chorillos, Callao, and Ancon, the Indian inhabitants of which make fifhing their whole bufinefs. The most palatable are the corbinas, and the pege reyes, or king's fifh; but those in the greatest plenty, and at the fame time very palatable, are the anchovies. The corbinas, and the king's fifh, infinitely excel those of Spain; the latter is also remarkable for its fize, being generally fix or feven Paris inches in length; yet even these are thought to be surpassed by those caught in Buenos Ayres river. It is a falt-water fifh, but very little different from that caught in the rivers of Spain. The river of Lima affords a fort of prawns, two or three inches in length, but those should rather be called cray-fifh.

The whole coafts abound with fuch fhoals of anchovies, as exceed all comparison; and befides the vaft quantities caught by fifthermen, they are the chief food of innumerable flights of birds, with which all those islands abound, and commonly called guanoes, possibly from the guano or dung mentioned in the preceding chapter; many of them are indeed alcatraces, a kind of gull, though all comprehended under the generical hame of guanoes. A little after the appearance of the fun, they rife from those islands

602

iflands in fuch large and thick flights as totally to cover them, and fly towards the fea for an hour or two, without any vifible decreafe of their number. When at fome diftance from the land they divide themfelves, and begin their fifting in a very entertaining manner. They fly in a circle at a confiderable height above the water, and, on feeing a fifth, they dart down with their beak foremost and their wings closed with fuch force, that the agitation of the water is feen at a distance; after which, they rife again into the air, and devour the fifth. Sometimes they remain a confiderable time under water, and rife at fome distance from the place where they fell, doubtless because the fifth has endeavoured to escape, thus disputing celerity with them in their own element. They are continually feen in the place they frequent, fome watching in gyrations, fome darting down, others rifing with their prey; while their great numbers render this confusion diverting to the spectator. When they are either tired or fatisfied, they alight upon the waves, and, at fun-fet, forming themselves into one body, withdraw to the islands where they pass the night.

At the port of Callao it is obferved, that all the birds which reft on those islands to the north of it, in the morning universally fly towards the fouth in quest of prey, returning in the evening to their place of reft; when the middle of the flight is over the harbour, neither the beginning nor end can be seen, and the whole flock take up two or three hours in passing over.

Though fhell-fifh are very fcarce along this coaft, fome are found near Callao; particularly a kind, the fhell of which refembles that of a muscle, though much larger. The fish itself has more the appearance of an oyster, and much the fame taste.

The wines at Lima are of different forts, white, red, and dark red : and of each fort fome are very generous and delicious. They are imported from the coafts of Nafca, Pifco, Lucumba, and Chili; but the latter produces the beft, and among them fome mufcadel. The wine of Nafca is white, and has the leaft demand of any, being inferior to the others, both in quality and tafte. That from Pifco has the greateft fale; and, from the fame place, come all the brandies, either ufed at Lima or exported; no rum being either made or ufed here.

Moft of the dried fruits are brought from Chili; and, by means of the trade carried on between the two kingdoms, Lima is fupplied with all manner of fruits known in Spain, as almonds, walnuts, filberts, pears, apples, &c. fo that their tables cannot, in this refpect, fail of plenty and elegance, having at one time the fruits of the different feafons, both of America and Europe. But amidft this plenty, every thing is very dear, the price being four or five times as much as at Quito, bread only excepted. Wine, oil, and dried fruits, are fome of the cheapeft. The poor clafs, however, as the negroes and other cafts, live tolerably well, fifh, which is little effecemed by the opulent, felling at a low price; the fame may be faid of mutton and beef, with regard to the inhabitants of this country in general.*

Sweetmeats are also here in the fame plenty as in the other parts of South America, though feldom eaten, except as deferts, and even then very moderately. Instead of chocolate, mate or Paraguay tea is generally used, and prepared twice a day. Though this has here the defect already observed, it is better prepared than in any other part.

CHAP.

^{*} A quarter of their best beef may be bought for eight rials (3s. 7d. sterling); the hide of a beast being, commonly, of more value than the carcase. A.

CHAP. X. - Trade and Commerce of Lima.

THE city of Lima could not have attained to fuch fplendour, if, befides being the capital of Peru, it had not been alfo the general ftaple of the kingdom. But as it is the refidence of the government and chief tribunals, fo it is alfo the common factory for commerce of every kind, and the centre of the products and manufactures of the other provinces, together with those of Europe, brought over in the galleons or register-fhips; and from hence they are distributed through the vast extent of these kingdoms, whose wants are fupplied from Lima, as their common mother. At the head of this commerce is the tribunal Del Confulado, which appoints commissation resisted in the other cities of its dependencies, extending through all Peru.

All the wealth of the fouthern provinces is brought to Lima, where it is embarked on board the fleet, which, at the time of the galleons, fails from Callao to Panama. The proprietors of the treafure commit it to the merchants of Lima, who traffic at the fair with this and their own flock. The fame fleet returns to the harbour of Paita, where the European merchandizes of value purchafed at Porto Bello fair are landed, in order to avoid the delay of failing to Callao, and fent by land to Lima, on droves of mules; but those of lefs value are carried thither by the fame flips.

On the arrival of these commodities at Lima, the merchants remit to their correspondents fuch parts as they had a commission to purchase, referving the rest in warehouses to dispose of on their own account to traders, who at this time refort to Lima, or fend them to their factors in the inland provinces, who remit the returns in money or bills of exchange to their principals at Lima. These confignments are repeated till they have disposed of their whole stock. Thus the cargo of a shotilla lasts a confiderable time, there being no immediate vent for the whole.

The produce of the fales in the inland parts of the kingdom, is fent to Lima in bars of filver, and pignas *, and is coined at the mint in this city. Thus the traders have not only a great profit in the fale of their goods, but alfo in the returns of their filver, which they take at a lower rate than is allowed them for it. All thefe fales may be confidered as an exchange of one commodity for another; for he who fells the goods agrees both with regard to their price, at the rate in which he is to take the filver bars, or pignas; and thus two fpecies of trade are tranfacted at the fame time, one on a fale of goods, and the other of filver.

The remittances fent to Lima during the interval between the flotillas, are laid out in manufactures of the country, great quantities of which come from the province of Quito; and this trade is carried on in all refpects like the former; for the confumption of them being equal or rather larger, they are not lefs neceffary here than in Europe, being worn by all the lower clafs of people, who cannot afford the price of the European fluffs; and the generality of traders who come to Lima purchafe fluffs of both kinds, that they may be provided with affortments for cuftomers of all ranks.

Befides this commerce, which is the most confiderable, and transacted wholly by means of this city, Lima has also its particular trade with the kingdoms both of North and South America. The most confiderable commodity received from the former is fnuff, which is brought from the Havannah to Mexico, and after being there improved, is forwarded to Lima, and from thence fent into the other provinces. This trade is

carried

^{*} Pignas are porous light maffes of filver, being an amalgam of mercury and duft taken out of the mines.

carried on nearly in the fame manner as that of Panama; but those who deal in this commodity, never trouble themselves with any other except perfumes, as ambergrife, musk, &c. and porcelain ware. Some of these traders are settled at Lima; others refide there occasionally, but are in general factors to the merchants at Mexico. Lima also receives from the ports of New Spain naphtha, tar, iron, and some indigo for dyeing.

The kingdom of Terra Firma fends to Lima leaf-tobacco, and pearls, which here meet with a good market; for befides the great numbers worn by the ladies, no mulatto woman is without fome ornament or other made of them. During a free affiento of negroes, this commerce is always carried by way of Panama, and to a confiderable amount.

The ladies, and indeed women of all ranks, have a very ancient cuftom, namely, the carrying in their mouths a limpion, or cleanfer, of tobacco. The first intention of this was to keep the teeth clean, as the name itfelf intimates. Thefe limpions are fmall rolls of tobacco, four inches in length, and nine lines in diameter, and tied with a thread, which they untwift as the limpion waftes. One end of this they put into their mouth, and after chewing it for fome time, rub the teeth with it, and thus keep them always clean and white. The lower class of people, who generally pervert the best things, carry this cuftom to fuch excefs, as to keep continually in their mouths a roll of tobacco, an inch and a half in diameter; affecting to diftinguish themselves by the largeness of their limpions, though it absolutely disfigures them. This custom, together with that of fmoaking, which is equally common among the men, occafions a great demand for leaf-tobacco. The limpions are made of Guayaquil tobacco mixed with fome of that brought from the Havannah to Panama; but that used in fmoaking comes from Santa Mayobamba, Jaen de Bracamaros, Llulla, and Chillaos, where it grows in the greatest plenty, and is best adapted to that purpose.

All the timber ufed in building houfes, refitting fhips, or building fmall barks at Callao, is brought from Guayaquil, together with the cacao; but the confumption of the latter is here very fmall, the Paraguay tea being more generally ufed. The timber trade is carried on by the mafters of fhips, who bring it hither on their own account, as we have already obferved in defcribing Guayaquil, and, depositing it in store-houfes at Callao, fell it as opportunity offers.

The coafts of Nafca and Pifco fend to Lima wine, brandy, raifins, olives, and oil: and the kingdom of Chili, wheat, flour, lard, leather, cordage, wines, dried fruits, and fome gold. Befides thefe, all forts of goods are alfo laid up at Callao, in ftorehoufes built for that purpofe; fome on account of the owners who remit them, others for mafters of fhips who purchafe them on the fpot where they grow, or are made. Every Monday during the whole year there is a fair at Callao, whither the proprietors and dealers refort from all parts; and the goods are carried, according to the buyers' direction, on droves of mules kept there for that purpofe by the mafters of the warehoufes, and whofe profit wholly confifts in the hire of thefe beafts.

The provisions brought to Lima are not only fufficient to fupply its numerous inhabitants, but great quantities of all kinds are fent to Quito, and its jurifdiction, to Valles, and Panama. Copper and tin in bars are brought from Coquimbo; from the mountains De Caxamarca and Chacapoyas, canvas made of cotton for fails and other fluffs of that kind, and alfo of Pita: cordovan leather, and foap, are made all over Valles*.

From

^{*} Their cotton canvas is not above four inches wide, fo that fail-making in this part of America is very sedious; but their fails made of this narrow canvas are very firong and lafting. A.

From the fouthern provinces, as Plata, Oruro, Potofi, and Cufco, is fent Vicuna wool for making hats, and fome ftuffs of a peculiar finenefs. Laftly, from Paraguay the herb called by that name is fent, of which there is an amazing confumption, it being fent from Lima among the other provinces, as far as Quito. There is no province in Peru, which does not remit to Lima its products and manufactures, and fupplies itfelf from hence with the neceffary commodities. Thus Lima is the emporium to which people refort from all parts; and trade being always in a conftant circulation, befides the continual refort of ftrangers, the families of rank are enabled to fupport the expences of that fplendour I have already mentioned; for, without fuch continual affiftance, they muft either contract their expences, or fall victims to their oftentation.

It would naturally be imagined that by a commerce fo extensive and important, many vaft fortunes must be acquired, especially as every branch of it is attended with great profits; but if there are fome who actually do acquire great riches, neither their number nor opulence are equal to what might be expected; for by a narrow infpection, there will hardly be found above ten or fifteen houses of trade, exclusive of immoveables, as lands and offices, whofe flock in money and goods amounts to five or fix hundred thousand crowns; and to one that exceeds this fum, there are more that fall short of it. Many poffess from one to three hundred thousand crowns, and these are indeed the perfons who compose the main body of trade. Befides these there are great numbers of inferior traders, whole capitals do not exceed fifty or a hundred thouland crowns. The paucity of immenfe fortunes amidft fuch advantages is doubtfefs owing to the enormous expences; whence, though their gains are great, they can hardly fupport their credit; fo that after paying the fortunes of their daughters, and the establishing their fons, the wealth of most families terminates with the life of him who raifed it, being divided into as many fmall flocks as he had dependents; unlefs fome, either by induftry or good fortune, improve the portion they obtained by inheritance.

The inhabitants of Lima have a natural difposition and aptitude for commerce, and the city may be confidered as an academy to which great numbers repair to perfect themfelves in the various arts of trade. They both penetrate into the fineffes of the feller, and artfully draw the purchafer into their views. They are bleffed with a remarkable talent of perfuasion, at the fame time that they are incapable of being perfuaded, as well as of artfully eluding objections. They affect to flight what they are most defirous of purchafing, and by that means often make very advantageous bargains, which none can obtain from them. But after all these precautions and fineffes in buying and felling, for which they are fo diftinguished, none are more punctual and honourable in performing their contracts.

Befides the fhops where fluffs and goods of that kind are fold, there are others for fnuff; and in thefe may be purchafed the wrought plate, which is bought in the cities near the mines, where it is made.

The wholefale traders, who have large warehoufes, are not above keeping fhops where they fell by retail, which is reckoned no difgrace; and thus they gain that profit which they muft otherwife allow to others. And from this indulgence granted to every branch of commerce, it flourifhes very greatly. There are, however, many families, who, as I have already obferved, fupport a proper fplendor entirely by the revenue of their eftates, without joining in the cares and hurry of commerce. But a greater number with eftates, add the advantages of commerce, in order to preferve them. Thefe, however, deal only at the fairs of the galleons, and in other large branches of commerce ; and find the benefit of having abandoned those fcruples brought by their ancestors from Spain, namely, that trade would tarnish the luftre of their nobility.

CHAP.

CHAP. XI. - Extent of the Jurifdiction of the Viceroy of Peru: together with the Audiences and Diocefes of that Kingdom.

THE foregoing accounts naturally lead to the extent of the audience of Lima, and the jurifdiction of the viceroy of Peru. But fuch a particular defcription as I have already given of Quito, requiring a perfonal knowledge of all its provinces, and jurifdictions, and alfo a particular work, from the extensiveness of the subject, I shall confine myself to fome principal accounts, but which will convey an adequate idea of the vaft dominions of this country. In order to this I have confulted feveral perfons, fome of which have been vefted with high employments here, and others whole commendable curiofity, as natives of this country, had prompted them to acquire an exact knowledge of it. This was a refource of abfolute neceffity; no opportunity having offered of vifiting the inland parts of these countries; and the accounts we received of them at Lima, were not to be depended upon, with that confidence neceffary to their being inferted here; for confidering the vaft diftance between the capital and fome provinces, it is no wonder they are but little known at Lima. The reader will therefore indulge me in giving a fuperficial account of fome; for according to the method in which I began to write the hiftory, we fhall infert fuch particulars only as are authentic; it being undoubtedly more advantageous to fay a little with truth, than to engage in prolix and uncertain particulars.

In order the better to defcribe the countries governed by the viceroy of Peru, without departing from the plan hitherto obferved, I shall divide the whole jurifdiction of its government into those audiences of which it confists; these into the dioces they contain; and the dioces into jurifdictions under a corregidor.

The viceroyalty of Peru in South America, extends over those vast countries, included in the jurifdictions of the audience of Lima, Los Charcas, and Chili; and in these are comprehended the governments of Santa Cruz de la Sierra, Paraguay, Tucuman, and Buenos Ayres. Though these three provinces and the kingdom of Chili have particular governors invested with all the authority agreeable to fuch a character, and as fuch are absolute in political, civil, and military affairs, yet, in some cases, are subordinate to the viceroy; for inftance, on the death of any inferior governor, the vacancy is fupplied by him. Before the erection of the viceroyalty of the new kingdom of Granada in 1739, that of Peru, as we have already observed, extended to the countries of the two audiences of Terra Firma and Quito; but those being then separated from it, the bounds of it on the north were the jurifdiction of Piura, which extends to those of Guayaquil and Loxa, and that of Chacapayas, which joins to the government of Jaen de Bracamoros. Thus the viceroyalty of Peru begins at the bay of Guayaquil, at the coast of Tumbez, in 3° 25' fouth latitude, and reaches to the land of Magellan in 50°, confequently it extends one thousand and twelve fea leagues. Eastward it partly terminates on Brazil, being bounded by the celebrated line, or meridian of demarkation, or that which feparates the dominions of Spain and Portugal, and on the coaft of the North Sea: and on the weft is terminated by the South Sea.

The audience of Lima, erected in the year 1542, though it was the year 1544 before any feffion was held in that city, contains within its jurifdiction one archbishoprick, and four bishoprics, viz.

The archbishopric of Lima, and the bishoprics of Truxillo, Guamanga, Cusco, and Arequipa.

607

The

The archbishopric of Lima, to which the precedence in every respect belongs, shall be the subject of this chapter. It contains fourteen jurisdictions, which I shall treat of in the order of their situation, beginning with those nearess the capital, and concluding with those which are most remote: the same method shall also be observed in the other dioceses.

I.	The Curcado or circuit of Lima.	IX.	Yauyos.
II.	Chancay.	Х.	Caxatambo.
	Santa.	XI.	Sarma.
IV.	Canta.	XII.	Jouxa.
v.	Canete.	XIII.	Conchucos.
VI.	Ica, Pifco, and Nafca.	XIV.	Guyalas.
VII.	Guarachia.	XV.	Guamalies.
VIII.	Guanuco.		

I. II. III. The jurifdictions of Lima, Chancay, and Santa have been already defcribed in Chap. III.

IV. The jurifdiction of Canta begins at the diffance of five leagues north-north-eaft of Lima, where it terminates on the curcado of that city. It extends above thirty leagues, and the greater part of them taken up by the first branch of the Cordillera of the Andes; fo that the temperature of the air is different in different parts of the country; that part which lies low or among the valleys being hot, those on the fkirts of the mountains, which are also intermixed with some plains, temperate; and those in the upper parts of the mountains cold. This difference of air is of great advantage both to the fruits of the earth and paftures; for by appropriating every fpecies to its proper degree of heat, the produce is large, and exceedingly good. Among all the fruits the papa is particularly diftinguished, and the roots carried to Lima, where they meet with a good market. The valt fields of bombon, part of which belongs to this jurifdiction, are by their high fituation always cold; yet they afford pasture for innumerable flocks of fheep. These extensive tracts of land are divided into haciendas, or estates belonging to noble families of Lima. At Guamantanga, one of the towns in this jurifdiction, is a miraculous crucifix, devoutly worfhipped; the inhabitants of Lima, and the neighbouring country, go thither in pilgrimage at Whitfuntide to affift at a feftival, inftituted particularly in honour of it.

V. The town of Canete is the capital of the jurifdiction of its name. Its jurifdiction begins at the diffance of fix leagues fouth from Lima, and extends along the coaft in the fame rhumb above thirty leagues. The temperature of the air in this jurifdiction is the fame with that in the valleys of Lima; and the country being watered by a large river, and other leffer ftreams, produced vaft quantities of wheat and maize. Great part of the lands are planted with canes, from whence they extract an excellent fugar. These profitable tracts of land belong alfo to noble families. In the neighbourhood of Chilca, fituated about ten leagues from Lima, is found faltpetre of which gunpowder is made at that city. Befides these advantages it has a good fifhery, which affords a comfortable fubfiftence to the Indian inhabitants of the towns, particularly those fituated near the fea-coaft: together with plenty of fruits, pulfe, and poultry, the breeding of which is another occupation of the Indians; whence a large trade is carried on between, this jurifdiction and Lima.

VI. Ica, Pifco, and Nafca, are three towns which denominate this jurifdiction; one part of it runs along the coaft fouthward, and its territories extend above fixty leagues;

3

-

but

608

but are intermixed with fome deferts, and the country being fandy, thofe parts which are beyond the reach of the trenches cut from the rivers are generally barren. I fay generally, becaufe there are fome tracts, which, without the benefit of an artificial watering, are planted with vines, and produce excellent grapes, the roots being fupplied with molfture from the internal humidity of the earth. Great quantities of wines are made from them, and chiefly exported to Callao, and from thence to Guayaquil and Panama; alfo to Guamanga, and other inland provinces: they alfo extract from thefe wines great quantities of brandy. Some parts of this jurifdiction are planted with olive-trees, which produce excellent fruit either for eating or oil. The fields, which are watered by the trenches, yield an uncommon plenty of wheat, maize, and fruits. The jurifdiction of Ica is remarkable for fpacious woods of algarrobales or carob-trees, with the fruit of which the inhabitants feed vaft numbers of affes, for the ufes of egriculture. The Indians who live near the fea apply themfelves to fifhing, and after falting carry it to the towns among the mountains, where they never fail of a good market.

VII. The jurifdiction of Guarachia contains the first chain and part of the fecond of the mountains, extending itfelf along these chains above forty leagues. This province begins about fix leagues east of Lima. From the disposition of its parts, those places only which lie in the valley, and in the breaches of the mountains, are inhabited; and these are very fertile, producing great quantities of fruit, wheat, barley, maize, and other grain. In its mountains are feveral filver mines, though but few of them are wrought, being none of the richeft.

VIII. Guanuco is a city and the capital of its jurifdiction, which begins forty leagues north-eaft of Lima. This city was formerly one of the principal in thefe kingdoms, and the fettlement of fome of the first conquerors; but at prefent in fo ruinous a condition, that the principal houfes where thefe great men lived remain as it were only monuments of its former opulence. The other parts of it can hardly be compared to an Indian town. The temperature of the air in the greatest part of its territories is very pure and mild; and the foil fruitful. Several kinds of fweetmeats and jellies are made here, and fold to other provinces.

IX. The jurifdiction of Yauyos begins twenty leagues fouth-east from Lima, and takes up part of the first and second chain of the Cordilleras; confequently the temperature of the air is different in different parts. The greatest length of this jurifdiction is about thirty leagues, and abounds in fruit, wheat, barley, maize, &c. whils other parts are continually clothed with versure, and feed numerous herds and flocks for the markets of Lima; and used are the most confiderable articles of its commerce.

X. The jurifdiction of Caxatamb, which begins thirty-five leagues north of Lima, extends about twenty leagues, and partly among the mountains, whence the temperature of the air is various; but the whole territory is very fertile in grain. It has also fome filver mines, which are worked, and the Indians have manufactures of bays, which make part of the trade of this jurifdiction.

XI. The jurifdiction of Sarma is one of the largeft in this archbishopric. It begins forty leagues north-east from Lima, and terminates eastward on a tract of land inhabited by wild Indians, called Maran-cochas, who often make inroads into the territories of this jurifdiction. The difference of the air in its feveral parts, renders it capable of producing all kinds of grain and fruits, which the inhabitants are not wanting to improve. The temperate parts are fown with wheat, barley, maize, and other grain; while the colder parts afford pasture to infinite numbers of cattle of all kinds. This province is also rich in filver mines; and as many of them are worked, they spread affluence all over the country. Besides these important fources of commerce, and that

VOL. XIV.

of

of the cattle, the making of bays and other coarfe ftuffs, profitably employ great numbers of Indians in most of its towns.

XII. The jurifdiction of Jouxa borders on the fouthern extremity of the former, and begins about forty leagues eaft of Lima, and extends forty more along the fpacious valleys and plains between the two Cordilleras of the Andes. In the middle of it runs a large river, called alfo Jouxa, the fource of which is in the lake of Chincay-Choca, in the province of Sarma. It is alfo one of the branches of the river of the Amazons. The whole jurifdiction of this province is divided into two parts by the river, and in both are feveral handfome towns, well inhabited by Spaniards, Meftizos, and Indians. The foil produces plenty of wheat and other grain, together with a great variety of fruits. It has alfo a confiderable fhare of trade, being the great road to the provinces of Cufco, Paz, Plata, and others to the fouthward, here called Tiera de Ariba, or the Upper Country. Like the former, it borders eaftward on the wild Indians of the mountains, but among which the order of St. Francis has eftablifhed feveral miffions, the first being in the town of Ocopa. Within its dependances are feveral filver mines, fome of which being worked, greatly increafe the riches of this province.

XIII. The jurifdiction of Conchucos begins forty leagues north-north-eaft of Lima, and extends along the center of the Cordillera; fo that its air is different according to the height of the fituation of its feveral parts, the mildeft of which produce all kinds of grain and fruits, and the others, where the effects of the cold checks this fertility, afford pafture for cattle of all kinds. In this jurifdiction are great numbers of looms; the principal occupation of the Indians being feveral kinds of woollen manufactures, and thefe conftitute the greateft part of its commerce with other provinces.

XIV. The province of Guyalas, like the former, extends along the center of the Cordillera, beginning fifty leagues from Lima, and in the fame direction as the other; this jurifdiction is large, and has different temperatures of air. The low parts produce grain and fruits, the upper abound in cattle and fheep, which form the greatest branch of their trade.

XV. The laft is that of Guamalies, which, like the former, is fituated in the center of the Cordillera, confequently its air very different. This jurifdiction begins eighty leagues north-eaft of Lima, and its fituation being rather cold than temperate, few places are fertile in its whole extent, which is above forty leagues. The Indian inhabitants of the towns apply themfelves to weaving, and make a great variety of bays, ferges, and other ftuffs, with which they carry on a very confiderable trade with the other provinces, defitute of fuch manufactures.

The preceding provinces, together with the following in the audience of Lima, as in those belonging to Charcas, are full of towns, villages and hamlets, inhabited by Spaniards, Mestizos, and Indians; but with some difference, the number of Spaniards being greater in some, and in others that of the Indians. Many of them are indeed folely inhabited by the latter. The distance from the capital of the province, especially to the towns situated on its frontiers, being so great, as to render it impossible for the corregidor to discharge his office every where with the necessary punctuality and attention, the province is divided into several districts, consisting of three or four towns, more or lefs, according to their largeness and distance; and over these is placed a delegate.

Every fettlement of any confequence maintains a prieft; and fo commendable is their provision in this respect, that fometimes two, three, or more fmall places join to fupport one, either alone or with a curate; fo that fome ecclessifics have distant fettlements under their care. These incumbents are either securates or regulars, according to the right acquired by each of these classes, as having been employed in the converfion of the Indians immediately after the conquest.

CHAP. XII. — Of the Provinces in the Diocefes of Truxillo, Guamanga, Cufco, and Arequipa.

NORTH of the archiepifcopal diocefe of Lima, lies the bifhopric of Truxillo, and with it terminates on that fide both the jurifdiction of that audience, and the viceroyalty of Peru: but the whole extent of this diocefe is not under the jurifdiction of this audience, nor of that of the viceroy: for it alfo includes the government of Jaen de Bracamoros, which, as we have already obferved, belongs to the province and audience of Quito. We fhall therefore exclude it, and only give an account of the feven jurifdictions in the diocefe of Truxillo belonging to the viceroyalty of Peru, and the audience of Lima.

Jurifdictions in the diocefe of Truxillo:

I. Truxillo.	V. Chachapayas.
II. Sana.	VI. Llulia, and Chilloas.
III. Piura.	VII. Pataz, or Caxamarquilla.

IV. Caxamarca.

I. II. III. A fufficient account having already been given (Chap. I. II.) of the jurifdictions of Truxillo, Sana, and Piura, it only remains to fpeak of the other four.

IV. Caxamarca lies to the eaftward of Truxillo, and its jurifdiction extends along a vaft interval betwixt the two Cordilleras of the Andes. It enjoys a fertility of all kinds of corn, fruits, and efculent vegetables; alfo cattle, fheep, and efpecially hogs, of which they fell vaft numbers to the farmers in the valleys, who, after fattening them with maize, fend them to the markets in the great towns; particularly the farmers of the valley of Chincay and others, who derive a confiderable trade in thefe creatures at Lima, Truxillo, and other flourifhing places. The Indians throughout this jurifdiction weave cotton for fhips' fails, bed-curtains, quilts, and other ufes, which are fent into the other provinces. Here are alfo fome filver mines, but of little confequence.

V. On the fame fide, but more towards the eaft, lies the jurifdiction of Chachapayas. Its temperature is hot, being without the Cordilleras, and to the eaftward its territories have a low fituation. It is of great extent, but very thinly inhabited ; and the products of the earth only fuch as naturally flourish in fuch a climate. The Indians here are very ingenious in making cottons, particularly tapeftry, which, for the livelines of the colours and delicacy of the work, make an elegant appearance; these, together with the fail-cloth, bring great profits to this country, being highly valued in the other provinces.

VI. South of Chachapayas, and alfo on the eaft fide of the Cordillera of the Andes, lies the jurifdiction of Llulla and Chilloas, which is low, warm and moift, and covered with wooks, fo that great parts of it are uninhabited. It borders on the river of Mayabamba, which, beginning its courfe from these fouthern provinces of Peru, forms the river of the Amazons, as we have already observed. The principal commodity of this country is tobacco, which, with a particular kind of almonds called andes, and a few other fruits natural to its climate, form the commerce carried on by this province with the others.

VII.

VII. The laft jurifdiction of this diocefe is that of Pataz, or Caxamarquilla. From its different fituations it has a variety of products; but is particularly remarkable for gold mines; its chief commerce confifting in exchanging that metal for current money, efpecially filver coin, which is the more effecemed here for its fcarcity.

Guamanga the fecond diocefe :

The city of Guamanga, the capital of this diocefe, was founded in the year 1539, by Don Francifco Pizarro, on the fite of an Indian village of the fame name. The Spaniards added the name of San Juan del la Victoria, in memory of the precipitate retreat of Manco the Ynca, from Pizarro, who offered him battle. This city was founded for the conveniency of the trade carried on between Lima and Cufco; for during this long distance, there was at that time no town, whence the travellers frequently fuffered by the incursions of Manco's army. This gave occasion to building the city on the spot where the Indian village ftood, though extremely inconvenient with regard to provisions, as lying contiguous to the great chain of the Andes; but the war being happily terminated by the entire defeat of Manco's party, the city was removed to its prefent fituation. Its jurifdiction, regulated at the time of its foundation, began at the frontiers of Jouxa, and reached to the bridge of Valcas; but at prefent it is bounded by the provinces which furround it, and contains the town of Anco, about three leagues from it: the city is fituated on the declivities of fome mountains not remarkable for their height, which, extending fouthward, inclose a fpacious plain to the eaftward of the town, watered by a fmall ftream defcending from the neighbouring mountains; but the ground on which the city is built being higher than the breach through which the river flows, the inhabitants were obliged to provide themfelves with fmall fountains. Among the number of inhabitants, Guamanga boafts at leaft of twenty noble families, who live in the center of the town, in fpacious houfes of a confiderable height, built partly of ftone, and covered with tiles. Befides the largeness of the apartments, they have extensive gardens and orchards, though it is no fmall difficulty to keep thefe in order, on account of the fcarcity of water. The large Indian fuburbs round the city add greatly to its extent, and the houfes though low are chiefly of ftone, and roofed, which confiderably augments the appearance of the city. This is indeed the general manner of building in the towns of this kingdom, remote from the coaft.

The cathedral is very fplendid, and its chapter, befides the bifhop, confifts of a dean, archdeacon, chanter, two canons by composition, a penitentiary, and two prebendaries. It has a feminary for the fervice of the church, under the title of St. Christopher. The church of this feminary is that belonging to the parish of the Spaniards, and another dedicated to St. Ann, the parish-church of the Indians. Befides these are the chapels of Carmenca, Belin, St. Sebastian, and St. John the Baptist, depending on it. The parish of Magdalena, inhabited by Indians, is under the care of the Dominicans, and the incumbent has the title of priest. The city has also an university, with professors of philofophy, divinity, and law, and equal privileges with that of Lima, they being both royal foundations. The corporation is composed of the principal nobility of the city, at the head of which is the corregidor, and out of this body the alcaldes are chosen, to superintend the civil and political government.

Within the walls of this city are the convents of St. Dominic, St. Francis, the fathers of Mercy, St. Augustine, St. Juan de Dios, a college of Jesuits, an hospital of St. Francis de Paula. The nunneries are of the order of St. Clare, and the Carmelites; and a religious futerhood.

612

The jurifdictions in the diocefe of Guamanga, are

I. Guamanga.	VI. Angaraes.
II. Guanta.	VII. Caftio Vineyna.
III. Vilcas Guaman.	VIII. Parina-Cocha.
IV. Andogualas.	IX. Lucanas.
V. Guanca Belica.	

I. The jurifdiction of Guamanga enjoys in every part fo good a temperature, that it abounds in variety of grain, fruit, and cattle, and is very populous. One part of its commerce confifts in bend-leather for foles of fhoes, which are cut out here. Conferves and fweetmeats are here made in great quantity.

II. The jurifdiction of Guanta, which lies north-north-weft of Guamanga, begins a little above four leagues from that city, and is in length about thirty leagues. It is very happy in the temperature of the cliniate, and fertility of the earth; but its filver mines, which were formerly very rich, are now greatly exhausted. In an island formed by the river Jouxa, called in that country Tayacaxa, grows in remarkable plenty the caca already mentioned. This herb, and the lead produced from the mines of that metal in this country, are the branches of its commerce. It supplies the city of Guamanga with great part of its corn and fruits.

III. South-eaft of Guamanga, and between fix and feven leagues from that city, is Vilcas Guaman, which extends above thirty leagues. The greateft part of this country lying in a temperate air, befides a fufficiency of corn and fruits, and efculent vegetables, has very fine paftures, in which are bred vaft quantities of cattle of all kinds. The Indians in the towns of this jurifdiction apply themfelves to weaving bays, corded ftuffs, and other branches of the woollen manufactory, which are carried to Cufco, and other provinces; but this trade is rendered very laborious by the great diftance of the feveral places. Here is ftill remaining a fort built by the old Indians, and refembles that already defcribed, near the town of Cannar; at the town of Vilcas Guaman was another, very famous, but taken down in order to erect a church with the ftones.

IV. Eaft, a little inclining to the fouth of Guamanga, is Andogualas, extending eaftward along an intermediate fpace between two branches of the Cordillera, above twenty miles, having the advantage of being watered by feveral fmall rivers. Its climate is partly hot, and partly temperate, fo that the foil, being watered by thefe ftreams, produces all kinds of fruits and grain in great plenty, efpecially maize, wheat, and fugarcanes. This province is one of the most populous in all those parts; in it the gentry of Guamanga have large fugar plantations.

V. The government of Guanca Belica begins thirty leagues north of Guamanga. The town which gives name to this government was founded on account of the famous rich quickfilver mine; and to the working it, the inhabitants owe their whole fubfiftence, the coldnefs of the air checking the growth of all kinds of grains and fruits, fo that they are obliged to purchafe them from their neighbours. The town is noted for a water where fuch large petrifactions are formed, that the inhabitants ufe them in building houfes, and other works. The quickfilver mines wrought here fupply with that neceffary mineral all the filver-mines of Peru; and notwithftanding the prodigious quantities already extracted no diminution is perceived. Some attribute the difcovery of thefe mines to a Portuguefe, called Henrique Garces, in the year 1566, who accidentally met an Indian with fome pieces of cinnaber, called by the Indians, Ilimpi, and ufed in painting their faces. But others, among whom are Acofta, Laett, and Efcalona, fay that the mines of Guanca Belica were difcovered by a Navincopa, or Indian, and fervant vant to Amador Cabrera; and that before the year 1564, Pedro Contreras and Henrique Garces had difcovered another mine of the fame kind at Patas. But however it be, the mines of Guanca Belica are the only ones now worked; and the ufe of quickfilver for aggregating the particles of filver began in the year 1571, under the direction of Petro Fernandes Velafco. The mines of Guanca Belica immediately on the difcovery were claimed in the King's name, and alternately governed by one of the members of the audienza of Lima, with the title of fuperintendant, whofe office expired at the end of five years, till in the year 1735, when Philip V. appointed a particular governor of thefe mines, with the fame title of fuperintendant, but thoroughly acquainted with the nature of extracting this mineral, having been employed in thofe of the fame nature in Spain; and by his economy the mines are worked with lefs charge, and will not be fo foon exhausted. Part of the quickfilver found here is fold on the fpot to the miners, and the remainder fent to all the royal offices in the kingdom of Peru, for the more commodious fupply of those whose mines are at a great distance.

VI. The jurifdiction of Angaraes depends on the government of Guanca Belica, and begins about twenty leagues weft-north-weft of the city of Guamanga. Its territories reach above twenty leagues; its air is temperate, and it abounds in wheat, maize, and other grains and fruits, and alfo breeds vaft droves of cattle of all kinds.

VII. Weft of the city of Guamanga is the jurifdiction of Caftio Vineyna. In fome parts this province extends above thirty leagues, and has fuch a variety of temperatures, that it produces every kind of grain and fruits. The heaths, which are the coldeft parts, are frequented by a kind of fheep called Vicunna, whofe wool is the moft confiderable article of its commerce. This animal was alfo common in the provinces of Jouxa, Guanuco, and Chuquiabo, till the conqueft of thofe countries, when every one hunted them at pleafure for the fake of their wool, without reftraint from the government, they became, as it were, exterminated in thofe parts; now they are only to be found on the fummits of mountains or the coldeft heaths, where they are not caught without great difficulty

VIII. About twenty leagues fouth of the city of Guamanga, is the jurifdiction of Parina-Cocha, which reaches about twenty-five leagues, and lies principally in fo temperate an air, that the foil, befides excellent paftures, abounds in grain and fruits. It has alfo feveral mines both of filver and gold, which now produce more confiderably than heretofore. These valuable metals make the chief branch of its active commerce, its passive being the fame as in the following jurifdiction.

IX. The jurifdiction of Lucanas begins about twenty-five or thirty leagues fouth-weft of Guamanga. Its temperature is cold and moderate. The parts of the former breed large droves of all forts of cattle; and those of the latter are fertile in grain, herbs, and fruits. It alfo abounds in valuable filver mines, in which chiefly the riches of Peru confist, and by that means made the center of a very large commerce; great numbers of merchants reforting hither with their goods, and others for pu_r chasing fuch provisions as their own councrises do not afford, for which they give in ex ange ingots and pinnas of filver.

III. Diocefe of the Audience of Lima. - Cufco.

Of all the cities in Peru, Cufco is the most ancient, being of the fame date with the vast empire of the Yncas. It was founded by the first Ynca Mango Capac, as the feat and capital of his empire. Having peopled it with the first Indians who voluntarily fubmitted to him, he divided it into two parts, which he called High and Low Cufco, the former having been peopled by Indians which the emperor himself had affembled, and the latter by those whom his confort Mama-Oello had prevailed upon to leave their wandering manner of life. The first forms the north, and the latter the fouth part of the city. The houses originally were low and small like cottages; but as the empire increased, they assume a new appearance; so that when the Spaniards landed in these parts, they were assume at the largeness and splendour of the city, especially the magnificence of the temple of the fun, the grandeur of the palaces of the Ynca, and the pomp and richness becoming the seat of so wast an empire. It was in the month of October 1534, when Don Francisco Pizarro entered and took posses followed by a single of the Ynca Mango, who laid great part of it in ass, but without dislodging the Spaniards.

This city stands in a very uneven fituation on the fides of the mountains, there being no other more convenient near it. On a mountain contiguous to the north part of the city are the ruins of that famous fort built by the Yncas for their defence; and it appears from thence, that the defign was to inclose the whole mountain with a prodigious wall, of fuch conftruction as to render the afcent of it abfolutely impracticable to an enemy, and, at the fame time, eafily to be defended by those within; in order to prevent all approach to the city. This wall was entirely of free-ftone, and ftrongly built, like all the other works of the Yncas, already defcribed, but ftill more remarkable for its dimensions and the largeness of the stones, which are of different magnitudes and figures. Those composing the principal part of the work are of fuch prodigious dimensions, that it is difficult to imagine how it was possible for the strength of man, unaffifted by machines, to have brought them hither from the quarries. The interffices formed by the irregularities of these enormous masses are filled with finaller, and fo clofely joined, as not to be perceived without a very narrow infpection. One of thefe iarge ftones is ftill lying on the ground, and feems not to have been applied to the use intended, and is such an enormous mass, that it is astonishing to human reason to think by what means it could be brought thither. It is called La Canfada, or the Troublefome, alluding probably to the labour of bringing it from the quarry. The internal works of this fortrefs confift of apartments, and two other walls are chiefly in ruins, but the outward wall is flanding.

The city of Cufco is nearly equal to that of Lima. The north and weft fides are furrounded by the mountain of the fortrefs, and others called Sanca: on the fouth, it borders on a plain, on which are feveral beautiful walks. Moft of the houfes are of ftone, well contrived and covered with tiles, whofe lively red gives them an elegant appearance. The apartments are very fpacious, and finely decorated, the inhabitants being noted for their elegant tafte. The mouldings of all the doors are gilt, and the other ornaments and furniture anfwerable.

The cathedral of Cufco, both with regard to materials, architecture, and difposition, greatly refembles that of Lima, but is a much fmaller ftructure. It is built entirely of ftone, and the architecture is even thought to exceed it. The facrifty is called Nueftra Senora del Triumpo, being the place where the Spaniards defended themfelves from the fury of the Indians, when furrounded by the army of the Ynca Mango; and, though the whole city was feveral times fet on fire, the flames had no effect on this part; which was attributed to the fpecial protection of the Holy Virgin. It is ferved by three priefts, one in particular for the Indians of the parish, and the other two for the Spaniards. Befides this, Cufco also contains eight other parishes; namely,

I. Belin.—II. The church of the general hofpital, which has alfo its prieft and its parifh.—III. Santa Anna.—IV. Santiago.—V. San Blas.—VI. San Chriftoval.—VII. San

San Sebastian.—VIII. San Geronymo. And though the first of the two last be a league, and the fecond two leagues from the city, they are reckoned among the number of its parishes.

Here is alfo a convent of Dominicans, the principal walls of which were formerly those of the temple of the fun, and at prefent the high altar stands in the very place where once was a golden image of that planet. There is likewise at Cusco a convent of Franciscans, which is the head of that order in this province. The convents of the Augustines and the fathers of Mercy in this city, are also the principal of their respective orders. The Jesuits have likewise a college here. The convent of St. Juan de Dios and that of the Bethlemites, which are both very large, are hospitals for the fick; the latter is particularly appropriated to the Indians, who are there used with the greatest care and tenderness. The nunneries are those of St. Clare, St. Catherine, the barefooted Carmelites, and a Nazarene fisterhood.

The government of this city confifts of a corregidor, placed at the head of the magiftrates, who are the chief nobility; and out of thefe are annually chofen two ordinary alcaldes, according to the cuftom of all the cities in South America. The members of the cathedral chapter befides the bifhop, are five dignitaries; namely, the dean, archdeacon, chanter, rector, and treafurer; two canons by competition, a magiftral, and penitentiary; three canons by prefentation, and two prebendaries. Here are three colleges; in the firft, called St. Anthony, a feminary for the fervice of the cathedral. are taught Latin, the fciences, and divinity. The fecond is under the direction of the Jefuits, where thefe fathers inftruct youths of fortune. The third, called St. Francis de Borja, belongs alfo to the Jefuits, and is appointed for the education of the fons of caciques, or Indian princes. The two former confer all degrees below that of doctor, and nave been erected into univerfities.

Among the courts of juftice, is one for the revenue, confifting of two judges. Here is alfo a court of inquifition, and of the croifade; together with the fame offices as in the other large cities already defcribed. Formerly this city was very full of Spaniards, and among them many noble families; but, at prefent, its inhabitants are very much declined.

Jurifdictions in the Diocefe of Cufco:

	Cufco.	VIII.	Canas, and Cances, or Tinta.
II.	Quifpicanchi.		Aymaraes.
III.	Avancay.		Chumbi-Vilcas.
IV.	Paucartambo.	XI.	Lampa.
v.	Colcaylares.		Carabaya.
VI.	Chilques, and Mafques.		Afangaro, and Afilo.
	Cotobamba.	XIV.	Apolo-Bamba.

I. The jurifdiction of Cufco extends two leagues; the temperature of air is various, but both the heat and cold very fupportable, except in fome parts where the cold is intenfe: thefe, however, afford good pafture for all kinds of cattle, whilft the valleys produce plenty of grain and fruits.

II. The jurifdiction of Quifpicanchi begins, as it were, at the fouth gates of Cufco, ftretching from eaft to welt about twenty leagues. The lands belong, in general, to the gentry of Cufco, and produce plenty of wheat, maize, and fruits. Here are alfo manufactories of bays, and coarfe woollen ftuffs. Part of this province borders on the forefts

forefts inhabited by wild Indians, and produces great quantities of coca, which forms one of the principal branches of its commerce.

III. Four leagues north-east from the city of Cufco, begins the jurifdiction of Avancay, and extends above thirty leagues; the air differing in temperature according to the fituation of its parts; but it is in general rather hot than temperate, and, accordingly, many parts of it are taken up with large plantations of canes, which yield a very rich fugar. The lands where the air is more temperate, abound in wheat, maize, and fruits, part of which are fent to the city of Cufco. In this province is the valley Xaquijaguana, corruptly called Xajaguana, where Gonzalo Pizarro was defeated and taken prifoner by Pedro de la Gafco.

IV. Paucartambo begins eight leagues east of Cusco, and is of a confiderable extent. This province produced, in the time of the Yncas, the greatest quantity of coca, with which it carried on a very profitable commerce; but is greatly declined fince this fhrub has been planted in other provinces. The foil is equally fertile in other products.

V. The jurifdiction of Calcaylares begins four leagues weft of the city of Cufco. The air every where excels that of all other provinces, and accordingly produces an exuberance of all kinds of grain and fruits. In the hotteft parts called Lares, were formerly very large plantations of fugar-canes, but for want of hands to cultivate them, they are at prefent fo diminifhed, that inftead of fixty or eighty thousand arobas, which they annually produced in the time of their profperity, they are now reduced to fomething lefs than thirty; but the fugar is of fuch an excellent kind, that without any other preparation than that of the country, it is equal both in colour and hardness to the refined fugar of Europe. This diminution of its fugar has greatly leffened the principal branch of its commerce.

VI. South-eaft of Cufco, and at the diftance of about feven or eight leagues, begins the jurifdiction of Chilques and Mafques, extending above thirty leagues in length. The temperature of the air is proportioned to the fituation of its feveral parts, fome of which are very fertile in grain, and others feed vaft numbers of cows and fheep. But befides thefe its commerce is greatly augmented by the woollen manufactures of the Indians.

VII. South-weft of Cufco, and about twenty leagues diftance, begins the jurifdiction of Cotabamba, which afterwards extends above thirty leagues between the rivers Avancay and Apurimac, in which extent are different temperatures of air. It abounds in all kinds of cattle, and the temperate parts produce plenty of wheat, maize, and fruits. Here are also mines of filver and gold, the richness of which formerly rendered this province very flourishing; but, at prefent, their produce is greatly declined.

VIII. The jurifdiction of Canas and Canches or Tinta, begins about fifteen or twenty leagues fouth of Cufco, and extends about twenty leagues in every direction. The Cordillera divides it into two parts; the higheft called Canas and the loweft Canches. The latter, by reafon of its temperate air, yields all kinds of grains and fruits; whilft the former affords pasture for very numerous flocks and herds; and in the meadows between the eminences are fed no lefs than twenty-five or thirty thousand mules, brought thither from Tucuma to pasture. Here is a very great fair for these creatures, to which dealers refort from all parts of the diocefe. In the part called Canas is the famous filver mine Condonoma.

IX. About forty leagues fouth-west from Cusco is the jurifdiction of Aymaraes, which extends thirty farther, and like the former has different temperatures of air. The lands abound in fugar, cattle, and grain; and alfo in mines of gold and filver, which formerly 4 K

VOL. XIV.

formerly produced large quantities of those valuable metals; but at present few of them are wrought, the country being too thinly inhabited.

X. Something more than forty leagues from Cufco, begins the jurifdiction of Chumbi Vilcas, which in fome parts extends above thirty leagues, has different temperatures of air, great quantities of corn and fruits, and large herds of cattle; together with fome mines of filver and gold.

XI. The jurifdiction of Lampa begins thirty leagues fouth of Cufco, and is the principal of all the provinces included under the name of Callao. Its plains are interrupted with fmall hills, but both abound in good pafture; and accordingly this province is particularly remarkable for its quantity of cattle, with which it carries on a very profitable trade; but the air being every where cold, the only fruits of the earth are papas and quincas. Another very confiderable advantage are its filver mines, being very rich, and conftantly worked.

XII. The jurifdiction of Carabaya begins fixty leagues fouth-eaft of Cufco, and extends above fifty leagues. The greatest part of it is cold, but the valleys fo warm as to produce coca, and abounds in all kinds of fruits, grain, and pulfe, together with fufficient pastures for cattle of all kinds. Here are feveral gold mines, and the two famous lavatories, called Lavaderos de San Juan del Oro, and Pablo Coya; alfo that of Monte de Ananea, two leagues from the town of Poto, where there is an office for collecting the quintos or fifth, belonging to the king. In this province alfo is a river, which feparates it from the mountains of the wild Indians, and is known to abound fo greatly in gold, that at certain times the caciques fend out a certain number of Indians in companies from the towns in their refpective diffricts to the banks of this river, where by washing the fands in fmall wells they dig for that purpose, they foon find a fufficient quantity of gold to pay the royal tribute. This kind of fervice they call chichina. This province has alfo mines of filver, which produces vaft quantities of that metal. In 1713 was difcovered in the mountain of Ucuntaya a vein or ftratum nearly of folid filver, which, though foon exhaufted, yielded fome millions, and hopes have been conceived from it of meeting with others, whole riches will be of longer continuance. This jurifdiction is also famous for the gold mine called Aporama, which is very rich, and the metal twenty-three carats fine.

XIII. The jurifdiction of Afangaro and Afilo, which lies about fifty leagues fouth of Cufco, is every where cold, and confequently proper only for breeding cattle, in which, however, it carries on a very profitable trade. In the north-eaft parts which border on those of Caravaya, are fome filver mines, but a few of them only are worked. Some of its lands produce plenty of those roots and grains which naturally flourish in a cold air, as papas, quinoas, and canaguas; of the two last the natives make chica in the fame manner as it is made with maize. This jurifdiction belongs to the audience of Charcas.

XIV. About fixty leagues from Cufco, on the borders of the Moxos, which are miffions of the Jefuits, are others called Apolo-bamba, belonging to the Francifcans. Thefe confift of feven towns of Indians newly converted, and who having received the doctrine of the gofpel, have abandoned the favage manner in which they formerly lived. In order to render the miffionaries more refpected by the Indians, and at the fame time to defend the latter from the infults of their idolatrous brethren, a major general is posted here, who is both a civil and military officer, administering justice, and commanding in chief the feveral bodies of militia formed by the inhabitants of thefe towns and villages.

IV. Diocefe of the Audience of Lima. - Arequipa.

The city of Arequipa was founded in 1539 by order of Don Francisco Pizarro, in a place known by the fame name : but this fituation being found very difadvantageous, the inhabitants obtained permiflion to remove it to the valley of Quilca, where it at prefent ftands, about twenty leagues diftant from the fea. The lands in its dependency having been united to the empire of the Yncas by Maita Capac, the goodnefs of the foil and the purity of the air, induced that monarch, for the farther improvement of the country, to draw three thousand families from fuch adjacent provinces as were lefs fertile, and with these to people four or five towns.

This city is one of the largeft in all Peru, delightfully fituated in a plain, and the houses well built of stone, and vaulted. They are not all of an equal height, though generally lofty, but commodious, finely decorated on the outfide, and neatly furnished The temperature of the air is remarkably good : and though fometimes a within. fmall frost is feen, the cold is never exceffive, nor the heat troublefome; fo that the fields are always cloathed with verdure and enamelled with flowers, as in a perpetual fpring. The inhabitants enjoy an exemption from many difeafes common to other countries, partly owing to their care in keeping the ftreets clean by means of canals which extend to a river running near the city; and by these all the filth of the city is fwept away.

But thefe pleafures and advantages are allayed by the dreadful flocks of earthquakes. to which, in common with all those parts of America, it is fo fubject, that it has been four times by these convulsions of nature laid in ruins; besides other small shocks not attended with fuch terrible confequences. The first of those was felt in 1582, the fecond on the 24th of February 1600, which was accompanied with an eruption of a volcano called Guayna-Patina, in the neighbourhood of the city : the third happened in 1604, and the last in 1725. And though the defolation attending the three last was not fo universal, yet the public buildings, and the most stately houses, were laid in ruins.

The city is very populous, and among its inhabitants many noble families, this being the place where most of the Spaniards fettled, on account of the goodness of the air, and the fertility of the foil; as alfo for the conveniency of commerce at the port of Aranta, which is only twenty leagues diftant. The civil, political, and military government of the city is executed by a corregidor, who is placed at the head of the regidores, from which are annually chofen two ordinary alcaldes.

The city of Arequipa did belong to the diocefe of Cufco, till the year 1609, when it was erected into a particular bishopric on the 20th of July. The chapter, besides the bifhop, confifts of the five ufual dignitaries, namely, the dean, archdeacon, chanter, rector, and treasurer: three canons and two prebends. Befides the facrifty, which is lerved by two priefts for the Spaniards, the parish of Santa Martha is appropriated to all the Indian inhabitants. Here are two Franciscan convents, one of observants, and the other of recollects, both belonging to the province of Cufco; alfo one of Dominicans, and another of Augustines, depending on Lima; and a monastery of the fathers of Mercy, fubordinate to that of Cufco. Under their refpective fraternities of Lima here is alfo a college of Jefuits, and a convent and hofpital of St. Juan de Dios. Here is a feminary for the fervice of the cathedral; and two nunneries; namely, one of the Carmelites, and the other of St. Catharine. A third is now building for the order of Santa Rofa. There is also at Arequipa an office of revenue, under the direction

direction of an accomptant and treasurer; together with commissions of the inquisition and croifades, with their fubalterns, as in all the other cities.

Jurifdictions in the Diocefe of Arequipa.

I. Arequipa.	IV. Caylloma.
II. Camana.	V. Monquegua.
III. Condefuyos de Arequipa.	VI. Arica.

I. Arequipa comprehends the fuburbs and towns in its neighbourhood, where the climate being the fame as in the city, the country is perpetually covered with flowers, corn, and truits; while the excellence of the pattures is fufficiently evident from the numbers of the cattle fed in them.

II. Along the coaft of the South Sea, but at fome diffance from the fhore, is the jurifdiction of Camana, which is very large, but contains many deferts, efpecially along the coaft. Eaftward it extends to the borders of the Cordillera; fo that the temperature of fome parts of its jurifdiction is nearly the fame with that of the former, while others are cold; both producing grain and fruits of a corresponding nature. Its principal trade confifts in affes. It has filver mines near the mountains, but of little advantage, as they are not worked.

III. North of Arequipa and thirty leagues diftant from that city, is the jurifdiction of Condefuyos de Arequipa, extending about thirty leagues, with different temperatures of the air, and confequently produces grains and fruits. Here is bred the wild cochineal, with which the Indians carry on a kind of trade with those provinces where the woollen manufactures flourish. They first pulverize the cochineal by grinding, and after mixing four ounces of it with twelve of violet maize, they form it into fquare cakes called mango, each weighing four ounces, and fell it for a dollar per pound. This country abounds in gold and filver mines; but they are not worked with the care and diligence of former times.

IV. At about thirty leagues eaft from the city of Arequipa, begins Caylloma, famous for a mountain of the fame name, and the filver mines it contains. Though thefe mines have been long difcovered and conftantly and induftrioufly worked, their produce is ftill fo inconfiderable, that in the principal village, called by the fame name, there is a governor and office appointed for receiving the king's fifths, and vending the quickfilver ufed in feparating the metal from the ore. The cold in the greateft part of the country is fo intenfe, that the inhabitants are obliged to have recourfe to the neighbouring provinces for the fruits of the earth. Even the declivities of mountains and valleys produce but little. In fome parts of this province are wild affes, like thofe already mentioned.

V. The jurifdiction of Monquegua lies about forty leagues fouth of the city of Arequipa, and fixteen from the coaft of the South Sea. The principal town, which bears the fame name, is inhabited by Spaniards, and among them feveral noble and opulent families. This jurifdiction extends at leaft forty leagues in length, and in a happy climate, adorned with large vineyards, from the produce of which great quantities of wine and brandy are made; thefe conftitute its whole commerce, fupplying all the provinces bordering on the Cordilleras as far as Potofi, by land carriage; while they are exported by fea to Callao, where they are greatly valued. Here are alfo papas and olives.

б20

VI. The laft jurifdiction of this diocefe is Arica, which extends along the coaft of the South Sea. Befides the heat, and inclemency of the air, the greatest part of the country is barren, producing only aji, or Guinea-pepper, from which alone it derives a very advantageous trade, as may eafily be imagined from the vaft confumption of it in all thefe parts of America. Accordingly the dealers in this commodity refort thither from the provinces on the other fide of the mountains, and by computation, the annual produce of these plantations amounts to no less than 600,000 dollars per annum. The pods of this pepper are about a quarter of a yard in length, and when gathered are dried in the fun, and packed up in bags or rufhes, each bag containing an aroba, or quarter of a hundred weight; and thus they are exported to all parts of the kingdom, and uled as an ingredient in most of their diffes. Other parts of this jurifdiction are famous for vaft quantities of large and excellent olives, far exceeding the fineft produced in Europe, being nearly as large as a hen's egg. They extract fome oil from their olives, and find a good market for it in the provinces of the Cordillera; others are pickled, and fome, together with a fmall quantity of oil, exported to Callao.

CHAP. XIII. - Of the Audience of Charcas.

THE province of Charcas, in the extent of its jurifdiction, is equal to that of Lima; but with this advantage, that many of its parts are not fo well inhabited, fome being full of vaft deferts and impenetrable forefts; while others are full of vaft plains, intercepted with the stupendous heights of the Cordilleras, fo that it is inhabited in those parts only which are free from these inconveniences. The name of Charcas formerly included many populous provinces of Indians, whom the Ynca Capac Yupanqui fubjected to his empire; but he carried his arms no farther than the provinces of Tutyras and Chaqui, where he terminated his conquefts towards Callafuyo. On the death of this monarch, his fon, Ynca Roca, the fixth in the fucceffion of those emperors, pushed his conquests farther in the fame part, till he became fovereign of all the intermediate nations to the province of Chaquifaca, where was afterwards founded the city of Plata, at prefent the capital of the whole province of Charcas. Its jurifdiction begins on the north fide, at Vilcanota, belonging to the province of Lampa in the diocefe of Cufco, and reaches fouthward to Buenos Ayres. Eaftward it extends to Brafil, being terminated by the meridian or demarcation; and westward part of it reaches to the South Sea, particularly at Atacama, the most northern part of it on this fide. The remainder of Charcas borders on the kingdom of Chili. These valt tracts of the land give one archbishop, and five bishops his fuffragans, namely,

The archbishop of Plata.

Bifhoprics:

I. La Pas.IV. Paraguay.II. Santa Cruz de la Sierra.V. Buenos Ayres.III. Tucuman.V. Buenos Ayres.

Archbishopric of the Audience of Charcas, or Chuquisaca. - La Plata.

The Spaniards having conquered all the provinces between Tumbez and Cufco, and quelled the tumults formed among the conquerors themfelves, turned their thoughts on

on reducing the more remote nations. Accordingly in the year 1538, Gonzalo Pizarro, and other commanders, marched from Cufco at the head of a large body of troops, and, advancing as far as Charcas, were opposed by the nations inhabiting this country, and the Carangues, with fuch vigour, that it was not till after feveral obstinate battles that they fubmitted. But their refistance did not equal that made by the Chuquifacans; for Pizarro having, after feveral actions, penetrated to their principal town, they befieged him in it, and the danger was fo great, that without the fpeedy fuccours fent him from Cufco by his brother the Marquis Don Francifco Pizarro, the few Spaniards who furvived the former actions would have been all cut off. But on the arrival of this reinforcement, among which were a great number of volunteers of diftinction, he routed the Indians, who, being no longer able to continue the war, fubmitted, and acknowledged the fovereignty of the King of Spain. In the following year 1539, Pizarro, convinced of the importance of making a ftrong fettlement there, commiffioned Captain Pedro Anzures to build a town, which was accordingly done on the fite of that of Chuquifaca, and great numbers of those who had fhared in the conquest, continued there in order to subdue the other contiguous nations. This town they called Plata, alluding to the filver mines of the mountain of Porco in its neighbourhood, and from which the Yncas received great quantities of filver, keeping in pay a proper number of Indians for working them; but the primitive name of Chuquifaca has prevailed, and is now commonly ufed. This city ftands in a fmall plain environed by eminences which defend it from the winds. The temperature of the air in fummer is very mild; nor is there any confiderable difference throughout the year; but in the winter, which here begins in September and continues till March, tempefts of thunder and lightning are very common, and the rains of long continuance; but all the other parts of the year the atmosphere is bright and ferene. The houfes both in the great fquare and those adjoining to it have one flory befides the ground floor. They are covered with tiles, are very roomy and convenient, with delightful gardens planted with the fruits of Europe. But water is fo fcarce that they have hardly enough to fupply the neceffary purposes of life: the little they have being fetched from feveral public fountains difperfed in different parts of the city. The inhabitants confift of Indians and Spaniards, and are faid to amount to about 14,000.

The cathedral is large, and divided into three aifles, of good architecture, and finely adorned with paintings and gildings. The parifh is ferved by two priefts, one for the Spaniards, and the other for the Indians. Here is alfo another parifh called St. Sebaftian, fituated at one end of the city, and is appropriated to the Indians living within its precinct, who are thought to be about three thoufand. The convents are those of the Franciscans, Dominicans, Augustines, the fathers of Mercy, and a college of Jesuits; all spacious buildings with fplendid churches. Here is also a conventual hospital of St. Juan de Dios, the expences of which are defrayed by the King; likewife two nunneries, of the order of St. Clare, and of St. Monica.

The city of La Plata has alfo an univerfity, dedicated to St. Francis Xavier, the chairs of which are filled indifferently either by fecular clergy or laymen; but the rector is always a Jefuit. Here are alfo two other colleges in which lectures of all kinds are read. That of St. John is under the direction of the Jefuits; while the archbifhop nominates to that of St. Chriftopher, which is a feminary.

Two leagues from Plata runs the river Cachimay along the plains, having on its banks feveral pleafant feats of the inhabitants; and about fix in the road leading to Potofi, is the river of Philco-mayo, which is paffed over by a large ftone bridge:

During

During fome months of the year, this river furnishes the city of Plata with great plenty of delicious fish; among which is one called the Dorado *, which generally weighs between twenty and twenty-five pounds. The other provisions, as bread, flesh, and fruits, are brought from the adjacent provinces.

The chief tribunal in Plata is that of the audience, erected in the year 1559, and whofe prefident has the titles of governor and captain-general of the province, exclusive of the government of Santa Cruz de la Sierra, Tucuman, Paraguay, and Buenos Ayres, which are independent, and in military cafes abfolute. It has alfo a fifcal, a protector-fifcal of the Indians, and two fupernumerary auditors.

The magiftracy or corporation, as in all other cities of this country, confifts of regidores, who are perfons of the first diffinction, with the corregidor at their head, and from them are annually chosen two ordinary alcaldes, for maintaining order and the police. Plata was erected into a bishopric in 1551, the place having then the title of city; and in the year 1608, was railed to a metropolis. Its chapter confists of a dean, archdeacon, chanter, treasurer, and rector; five canons, four prebendaries, and four minor prebendaries. The archbishop and his chancellor constitute the ecclessifical tribunal.

Here is alfo a tribunal of croifade, with a commiffary, fubdelegate, and other officers: likewife a court of inquifition fubordinate to that of Lima, and an office for taking care of the effects of perfons dying inteflate; all eftablished on the fame foundation with those in other cities already mentioned.

The jurifdictions belonging to the archbishopric of Plata, are the fourteen following:

	I.	The city of Plata, and imp	perial VIII.	Pilaya and Pafpaya.
		town of Potofi.		Cochabamba.
6	II.	Tomina.	Х.	Chayantas.
	III.	Porco.	XI.	Paria.
	IV.	Tarija.	XII.	Carangas.
		Lipes.	XIII.	Cuacica.
		Amparaes.	XIV.	Atacama.
		Oruro.		

I. The jurifdiction of the city of Plata is of fuch prodigious extent as to include the imperial town of Potofi, which is even the continual refidence of the corregidor. There also is established the office of revenue, which confists of an accountant and treasurer, with clerks; as most convenient on account of its vicinity to the mines, for taking account of the filver produced by them.

The famous mountain of Potofi, at the foot of which, on the fouth fide, ftands the town of the fame name, is known all over the commercial world, as having been greatly enriched by the filver it produces. The difcovery of thefe immenfe mines happened in the year 1545, by an accident feemingly fortuitous. An Indian, by fome called Gualca, and by others Hualpa, purfuing fome wild goats up this mountain, and coming to a part very fteep, he laid hold of a fmall fhrub in order to climb it with the greater celerity; but the fhrub being unable to fupport his weight came up by the roots, and difcovered a mafs of fine filver, and at the fame time he found fome lumps of the fame metal among the clods, which adhered to the roots. This Indian, who

lived

^{*} This is a large fpecies of the Dolphin, which, without plenty of good fauce, is very dry eating. A.

lived at Porco, hastened home with these first fruits of his discovery, washed the filver and made use of it, repairing, when his stock was near exhausted, to this perpetual fund. At length an intimate friend of his, called Guanca, observing such a happy change in his circumstances, was defirous of knowing the cause, and urged his questions with a warmth that Gualca was unable to deny. For some time they retired in concert to the mountain for fresh supplies of filver, till Gualca, refusing to discover his method of purifying the metal, Guanca revealed the whole fecret to his master Villarroel, a Spaniard, who lived at Porco. Immediately on this information he went, on the 21st of April 1545, to view this fortunate breach in the mountain, and the mine was without delay worked, with immense advantage.

This first mine was called the Discoverer, as having been the occasion of discovering other fources of riches enclosed in the bowels of this mountain; for in a few days another was found equally rich, and called the Tin-mine; fince that, another has been discovered, and distinguished by the name of Rica, as furpassing all the rest: and was fucceeded by the Mendieta. These are the principal mines of Potofi, but there are feveral son the north fide of the mountain, their direction being to the fourth, a little inclining to the west; and it is the opinion of the most intelligent miners in this country, that those which run in these directions are the richest.

On a report of thefe important difcoveries, people from all parts retired to Potofi, particularly from the city of Plata, which is fituated about twenty-five leagues from the mountains; fo that at prefent, befides its extraordinary riches, having among its inhabitants many noble families, particularly thofe concerned in the mines, the circuit of the town is near two leagues. The air of the mountain being extremely cold and dry*, renders the adjacent country remarkably barren, producing neither grain, fruits, herbs, or other efculents. The town, however, is fo plentifully provided as to enjoy an abundance of every kind; and the trade for provifions is greater here than in any other place, that of Lima alone excepted. Nor will this appear at all ftrange if the great number of people employed in the mines be confidered. Some provinces fend the beft of their grain and fruits; others their cattle; others their manufactures; and thofe who trade in European goods refort to Potofi, as to a market where there is a great demand, and no want of filver to give in exchange.

Befides this commerce, here are a fet of perfons called Aviadores, who find their account in advancing to the mafters of the mines coined filver to pay their neceffary expences, receiving in exchange filver in ingots and pinnas. Another article of great confequence, is the trade of quickfilver for the ufe of thefe mines; but this branch the crown has referved to itfelf. The vaft confumption of this mineral may in fome meafure be conceived by the great quantity of filver produced by thefe mines; for before the invention of extracting the filver with lefs mercury, a mark of that mineral was confumed in obtaining a mark of fine filver; and often by the ignorance of the workmen, a flill greater quantity; but the immenfe confumption of quickfilver in the following accounts of two authors, who were perfectly mafters of the fubject. The first is that of the Rev. Alonzo Barba, parifh-prieft in the imperial town of Potofi, who, in a piece on metals, publifhed in the year 1637, fays, that from the year 1574, when mercury was first ufed here in extracting the filver, the royal office of Potofi has received above 204,700 quintals of mercury, exclusive of what had been clandeftinely

bought

^{*} The extremeft cold in this part feldom freezes the waters thicker than a half crown.

bought by private perfons, and which amounted to no fmall quantity. And as this was confumed in the fpace of fixty-three years, the annual amount is about 3,249 quintals. The fecond account is given us by Don Gafper de Efcalona, who, in his Gazophilacio Perubico, declares, from very good authority, that before the year 1638, it appeared by the public accounts, that the produce of the filver amounted to 395,619,000 dollars, which, in ninety-three years, the time it had then been difcovered, amounted to 41,255,043 dollars per annum. Hence an idea may be formed of the vaft commerce which has for many years been carried on in this town, and which is ftill like to continue for a long time; fuch enormous fums being annually bartered for goods fent hither, its whole trade confifting in filver extracted from this mountain; and if fome diminution has been perceived in its produce, it is ftill very confiderable.

At a fmall diftance from **P**otofi, are the hot medicinal baths, called Don Diego, whither, as in other countries, fome refort for health, and others for diversion.

The jurifdiction of Tomina begins about eighteen leagues fouth-east from the city of Plata, and borders eaftward on a nation of wild Indians, called Chiriguanos. The climate is hot, and confequently its products are fuch as are common to hot countries. Some parts have vineyards, and in others are made confiderable quantities of fugar. It abounds also in cattle and sheep. The extent in some parts is near forty leagues. The vicinity of the Chiriguanos is a continual uneafinefs to the towns in this jurifdiction, and even to the city of Plata itfelf, they having more than once attempted to furprife it.

III. The jurifdiction of Porco begins at the weft fide of the town of Potofi, and about twenty-five leagues diffance from the city of Plata; extending about twenty far-The coldness of its fituation occasions a fcarcity of grain and fruits; but, ther. on the other hand, it abounds in fine cattle of all forts. In this jurifdiction is the mountain of Porco, whence it has its name, and from whole mines the Yncas, as I have already obferved, extracted all the filver for their expences and ornaments; and accordingly was the first mine worked by the Spaniards after the conquest.

IV. About thirty leagues fouth of Plata lies the jurifdiction of Tarija, or Chicas, the greatest extent of which is about thirty-five leagues. The temperature of the air is various, being in fome parts hot, and in others cold; whence it has the advantage of corn, fruits, and cattle. This country every where abounds in mines of gold and filver, and efpecially that part called Chocayas. Between this province and the country inhabited by wild Indians, runs the large river Tipuanys, the fands of which, being mixed with gold, are washed like those of the river Caravaga, already mentioned.

V. In the fame part as the former, but with a fmall inclination towards the fouthwelt, is the jurifdiction of Lipes, and extends also thirty-five leagues. The air is extremely cold, fo that grain and fruit thrive very little here, but it abounds in cattle, particularly those natural to the country, as the vicuna, alpaca, or taruga, and the llama. It must, however, be observed, that these creatures are common to all the other provinces of Punas, that is, to those where the heaths and mountains are of fuch a height, as to render the air continually cold. Here are also mines of gold, but at prefent forfaken, though the remains of the old works are still visible, particularly in one of the mountains near Colcha, known by the name of Abetanis, which, in the Indian language, fignifies a golden mine. That of St. Christopher de Acochala was formerly one of the most famous in all Peru for the richness of its filver mines, the metal being in fome parts cut out with a chiffel, but now very greatly declined; which may, in a great measure, be imputed to a want of people for working them: it

being

being highly probable that the fame work would ftill produce nearly an equal quantity of that valuable metal.

VI. The jurifdiction of Amparaes begins at a little diffance to the eaftward of the city of Plata, and is terminated on the eaft by the jurifdictions belonging to the diocefe of Santa Cruz de la Sierra, particularly on that of Mifquepocona; and the corregidor of the province of Amparaes has the cognizance of the Indian inhabitants of Plata. Its warm parts abound in grain, particularly barley, which, together with the numerous droves of cattle in the colder parts, conftitute the chief branches of its trade.

VII. North-weft of Plata is the province of Oruro, whole capital San Phelipe de Auftria de Oruro is thirty leagues diftant from it. The greateft part of this jurifdiction is fo cold as to deny it any efculent vegetables; but on the other hand it feeds numerous flocks and herds, befides great numbers of cattle peculiar to the country, as vicunas, guanacos, and llamas. Here are alfo many gold and filver mines; the former, though known even in the time of the Yncas, have been feldom worked; but thole of filver have yielded great riches to the inhabitants of the province. They are now however, according to all appearance, under an irremediable decay, being overflowed, and all the endeavours hitherto ufed, in order to drain them, have proved ineffectual; fo that thole of any confideration at prefent are in the mountains of Popo, about twelve leagues from the town, which is large and very populous from the trade carried on there with the mines. It has a revenue office for collecting the fifths belonging to the crown.

VIII. The province of Pilaya and Paſpaya, or Cinti, lies fouth of Plata, diftance about forty leagues. The greateft part of its jurifdiction being among the breaches of the mountains, is the better adapted for producing all kinds of grain, pulfe, and fruits; which, with the great quantity of wine made here, enable it to carry on a very lucrative commerce with the other provinces, which are not fo happily fituated.

IX. The province of Cochabamba lies fifty leagues fouth-eaft of Plata, and fifty-fix from Potofi. Its capital is one of the most confiderable cities in Peru, with regard to largeness, and the number and wealth of its inhabitants. The province in fome directions extends above forty leagues. Befides the fituation of the city in a most fertile plain, the whole country is fo fertilized by the many rivers and streams, which every where travers it, that this province is estended the granary of the whole archbishopric, and even of the dioces De la Paz. The air also is in most parts very mild and pure; and in fome fpots filver mines have been difcovered.

X. About fifty leagues north-weft from the city De la Plata, lies the province of Chayanta, extending in fome parts about forty leagues. This country is very famous for its gold and filver mines. The former are indeed at prefent difcontinued, though the ancient fubterraneous paffages are ftill open. This province is watered by the river Grande, in whofe fand confiderable quantities of gold duft, and grains of that metal, are found. The filver-mines are ftill worked to great advantage; but with regard to cattle, this province feeds no more than are barely fufficient for its inhabitants.

XI. The contiguous province to that of Chayanta, on the north-weft fide of Plata, and feventy leagues diftant from that city, is that of Paria, the extent of which is about forty leagues. The air here is cold, fo that it produces little grain, which is in fome meafure compenfated by the great plenty of cattle of all kinds; and the cheefes made here, both from the milk of fheep and cows, are fo highly efteemed, that they are fent into every part of Peru: it has alfo fome filver-mines. The name of this province is derived from a very large lake, being an arm of that prodigious collection of waters called Titi-caca, or Chucuito.

XII. The

XII. The province of Carangas begins feventy leagues welt from the city of Plata. and extends above fifty leagues. The climate of this jurifdiction is fo cold, that the only efculent vegetables here are the papa, quinoa, and canagua; but it abounds in cattle. Here are a great number of filver-mines conftantly worked; among which that named Turco is very remarkable for a fort of ore termed by miners machacado; the fibres of the filver forming an admirable intertexture with the flone in which they are contained. Mines of this kind are generally the richeft. Befides this there are others in this jurifdiction, which, if not richer, are equally remarkable; and thefe are found in the barren fandy deferts extending towards the coaft of the South Sea. And here, only by digging in the fands, are found detached lumps of filver, not mixed with any ore or ftone than what adheres in fome parts to the metal. These lumps are called papas, being taken out of the ground, in the fame manner as that root. It is doubtlefs very difficult to account for the formation of these maffes of filver in a barren and moveable fand, remote from any ore or mine. Two conjectures may, however, be offered. The first by admitting the continual reproduction of metals, of which there are indeed here fo many evident proofs; as the matrices of gold and filver, met with in many parts of this kingdom. Nay, the very mines themfelves, after being long forfaken, have again been worked with great advantage; but the skeletons of Indians found in old mines, and covered with fibres of filver, and the inward parts alfo full of the fame metal, feem to put the matter beyond difpute. If this be admitted, it is natural to conclude, that the primordial matter of filver is first fluid, and when it has acquired a certain degree of perfection, fome parts of it are filtrated through the pores of the fand, ftill ftopping in a place proper for completing the fixation; they there form a folid congeries of filver; and being joined with those earthy particles they collected in their courfe to the place where they were abforbed by the pores of the fand, confolidated with the filver.

Though this conjecture be not defitute of probability, yet I am more inclined to embrace the fecond, as it is, in my opinion, more fimple and natural. Subterraneous fires being very common in these parts of America, as I have already observed in speaking of the earthquakes, their activity is doubtlefs fo ftrong as to melt any metals depofited near the places where they begin; and to communicate to them a heat fufficient for keeping them a long time in a ftate of fufion; and hence a portion of filver thus melted neceffarily fpreads, and introduces itfelf through the larger pores of the earth, and continues to expand itfelf, till, being beyond the reach of heat, it fixes, and re-affumes its former confiftency, together with other heterogeneous fubftances collected in its paffage. To this hypothefis, two objections may be offered; one, that the metal in fusion, by changing its fituation, must be exposed to the cold air, and confequently foon condenfe. The fecond, that the pores of the earth being extremely minute, particularly in a fandy foil, the filver fhould rather be found in filaments, or fine ramifications, than in large lumps or pieces, as is really the cafe. To both thefe objections I shall endeavour to give a brief but fatisfactory answer.

Before the filver begins to run from the place where it was melted, the fubterraneous fire had pervaded the pores of the earth, which by the dilatation of the body of air enclosed in them, became diftended; the metal immediately follows, and finding a channel fufficiently capacious for introducing itfelf, farther compresses the particles of the earth contiguous to those it abrades, and, confequently, continues its course without obstruction. The subterraneous fire which preceded the fusion, communicates to the earth a degree of heat fufficient to expel the cold air, fo that the metal runs through it, till by degrees the heat is abated, and the metal becomes fixed. Another circumftance 4L 2

which

which contributes to prolong the heat is, there being often no fpiracle to these paffages, whence the earth through which the metal flows, does soon emit the first heat it contracted from the fubterraneous fire; confequently the metal will not be fixed till at a confiderable distance from the place of liquidation: but the first particles of the metal being checked by the cold they have gradually contracted, those which follow flow to the fame place, and there form a concreted mass, or mixed body of filver and fcoria, brought with it from the original mine. It now remains that we examine whether what is actually observed in these lumps of filver, agrees with what has been advanced, in order to determine whether this opinion have a probable foundation.

Thefe papas or lumps of filver are of a different composition from those found in the mines, having all the appearances of melted filver, as any perfon, a ftranger to the manner of finding them, would immediately conclude. In them the filver forms a mass, and the furface is covered over with terrene particles, few or none of which are mixed with the filver; conformable to what is feen in metals melted, and fuffered to cool without feparating the drofs. The terrene particles adhering to the filver are black, and exhibit all the marks of calcination, except that in fome it is ftronger than in others; and as this must happen if the lumps are formed by the fusion of the metal, it feems natural to conclude that they were really formed in this manner.

The fize and figure of these lumps are very different; fome weighing about two marks, and others much more; for among several which I faw at Lima, were two, one weighing fixty, and the other above one hundred and fifty marks, being a Paris foot in length; these indeed were the largest ever seen here. These lumps of filver are found in different parts of the same ground, though not often near one another. The metal in its course takes various directions, introducing itself into those places where it finds the least resistance; and as these parts are more or less capacious, the magnitude of the papa is greater or smaller,

XIII. About ninety leagues north of the city of Plata, but only forty from Paz, lies the province of Ciacica. Its capital, which has the fame name, and all the places fituated to the fouthward of it, belong to the archbifhopric of Plata; but many of those to the northwards of it are in the diocese of Paz. The countries in this jurifdiction extend in some parts above a hundred leagues, and consequently the temperature is various. Some spots are very hot, and produce an exuberance of coca, which shrub alone is the fource of a very confiderable commerce, supplying all the mine towns from Charcas to Potosi. The leaves of this plant are packed in frails, each of which must, according to the ordinance, contain eight pounds; and its current price at Ururo, Potosi, and the other mine towns, is from nine to ten pieces of eight, and fometimes more. The colder parts feed large herds of cattle: together with vicunas, guanacos, and other wild creatures. This province has also fome filver-mines, but not fo many, nor fo rich, as the preceding province.

XIV. Attacama is the weftern boundary of the audience of Charcas, extending to the South Sea; and the principal town, called alfo Attacama, is no lefs than one hundred and twenty leagues from Plata. Its jurifdiction is of a confiderable extent, and a great part of it very fruitful; but intermixed with fome deferts particularly towards the fouth, where it divides the kingdoms of Peru and Chili. On the coaft in this province, there is every year a large fifhery of tolo, a fort of fifh common in the South Sea, with which a very great trade is carried on with the inland provinces, it being there the chief food during Lent, and the other days of abftinence.

CHAP.

CHAP. XIV. - Account of the three Diocefes of La Paz, Santa Cruz de la Sierra, and Tucuman; and of their respective Provinces.

THE province in which the prefent city of La Paz is fituated, was formerly known by the name of Chuquiyapu, which, in the idiom of that country, is commonly thought to fignify Chacra, or an inheritance of gold, and is there corruptly called Chuquiabo. Accordingly, Garcelafo pretends that Chuquiyapu fignifies Lanz Capitana, or principal lance; but this is deriving it from the general language of the Yncas, and with a difference in the penultima, it not being uncommon for a word nearly alike in found to have a very different fignification in each idiom. This province was first conquered by Mayta-Capac, the fourth Ynca; and the Spaniards having afterwards taken poffeffion of it, and quelled all difturbances, this city was founded by Pedro de la Gafca, that in the vast distance of an hundred and feventy leagues between Arequipa and Plata, there might be a fettlement of Spaniards, for the improvement of commerce, and the fafety and conveniency of the traders. The prefident Gafca committed the care of building it to Alonzo de Mendoza, with orders that it fhould be erected on a fpot, midway between Cufco and Charcas, which are one hundred and fixty leagues from each other; and that it fhould be called Nueftra Senora de la Paz, in memory of the public tranquillity recently fettled by the defeat and execution of Gonzalo Pizarro, and his adherents. With regard to its fituation, a valley in the country called Las Pacafas, was pitched upon, on the 8th of October 1548, as a place abounding in grain and cattle, and full of Indians.

Along the valley De la Paz, flows a pretty large river, but fometimes greatly increafed by torrents from the Cordillera, about twelve leagues diftant from the city; but from its vicinity, great part of the country is exposed to fo cold an air, as hard frofts, fnow, and hail, are not uncommon ; but the city itfelf is fecured from them by its happy fituation. Other parts are also fo well sheltered, that they produce all the vegetables of a hot climate, as fugar-canes, coca, maize, and the like. In the mountainous parts are large woods of valuable timber, but infefted with bears, tigers, and leopards; they have alfo a few deer: while on the heaths are found guanacos, vicunas, and llamas, with great numbers of cattle of the European fpecies, as will be feen in the account of each refpective province.

The city is of a middling fize, and from its fituation among the breaches of the Cordillera, the ground on which it ftands is not only unequal, but alfo furrounded by mountains, without any other profpect than the channel of the river, and the adjacent mountains. When its river is increafed, either by rains or the melting of the fnow on the mountain, its current forces along huge maffes of rocks, with fome grains of gold, which are found after the flood has fubfided. Hence fome idea may be formed of the riches inclosed in the bowels of these mountains; but a more remarkable demonstration appeared in the year 1730, when an Indian, happening to wash his feet in the river, discovered a lump of gold, of so large a fize, that the Marquis de Castel-Fuerte gave twelve thousand pieces of eight for it, and sent it to Spain, as a present worthy the curiofity of his fovereign.

This city is governed by a corregidor, under whom are regidores, and ordinary alcaldes, as in all other towns. Befides the cathedral, and the parish church Del Sagrario, where two priefts officiate, here are alfo those of St. Barbara, St. Sebastian, and St. Peter : the religious fraternities of Franciscans, Dominicans, Augustines, the fathers of Mercy, a college of Jefuits, and a convent and hofpital of St. Juan de Dios; together together with a nunnery of the order of the Conception, and another of Santa Terefa. Here is alfo a college of St. Jerom, for the education of youth, whether defigned for ecclefiaftical or civil employments.

In 1608, the church De la Paz was feparated from the diocefe of Chuquifaca, to which it before belonged, and erected into a cathedral. Its chapter, befides the bifhop, confifts of a dean, archdeacon, chanter, four canons, and prebendaries; but with regard to other circumftances, being the fame with feveral cities already defcribed, I fhall proceed to the provinces in its diocefe.

I. Bifhopric of the audience of Charcas. - La Paz.

The provinces or jurifdictions in the diocefe of Paz, are the fix following :

I.	La Paz.	IV. Laricaxas.
II.	Omafuyos.	V. Chuciuto.
III.	Pacages.	VI. Paucar-Colla.

I. The jurifdiction of La Paz is of no great extent, and the city is almost the only place worth notice in it. In the adjacent Cordillera is a mountain of remarkable height, called Illimani, which doubtles contains immense riches. A crag of it being fome years fince ftruck from it by a flash of lightning, and falling on a neighbouring mountain, fuch a quantity of gold was found in the fragments, that for fome time that metal was fold at Paz, at eight pieces of eight per ounce. But its fummit being perpetually covered with ice and fnow, no mine has been opened in this mountain. The fame we have already observed of those high mountains in the province of Quito, all attempts having been rendered abortive.

II. North-weft, and almost at the gates of Paz, the jurifdiction of Omafuyos begins, and extends about twenty leagues, being bounded on the weft by the famous lake of Titi-caca, or Chucuito, of which a farther account will be given in the fequel. The air here is fomewhat cold, fo that it produces little grain; but that deficiency is abundantly compensated by the great numbers of cattle; befides an advantageous trade for fifh, carried on in other provinces by the Indians living on the borders of the lake, who are very industrious in improving that advantage.

III. Almost fouth-west of Paz, is the jurifdiction of Pacages, the greatest part of which being in a cold climate produces little grain or fruits: fo that the inhabitants apply themselves to the breeding of cattle. This province is however very rich in filver mines, though but a small part of them are worked; and it is known from undoubted figns, that these mines were worked in the time of the Yncas. Here are also mines of talc, called jaspas blancos de Verenguela. It is of a beautiful white, and, on account of its transparency, is transported to different parts of Peru, for making panes of windows, both in churches and houses; as the stone called Tecali ferves for the fame uses in New Spain. In these mountains are also a great number of mines and gems, particularly one of emeralds, well known in Europe, but for some latent reasons not worked; together with quarries of different species of marble. In this province is the famous filver mine called Verenguela : and likewise the mountains of Santa Juana, Tampaya, and others, well known for the immense treasfures extracted from them.

IV. Adjacent to the territories of the jurifdiction of La Paz, and to the north of that city, is the province of Laricaxas, which extends one hundred and eighteen leagues from eaft to weft, and about thirty from north to fouth. The temperature of the air is different in different parts, and fome of its products are the fame with those

630

of Carabaya, by which it is terminated to the northward. This whole privince abounds in gold mines, whofe metal is of fo fine a quality, that its ftandard is twenty-three carats, and three grains. In this province is the celebrated mountain of Sunchuli, in which about fifty years fince was difcovered a gold mine remarkably rich, and of the ftandard above-mentioned; but when in its higheft profperity, it was unfortunately overflowed; and notwithftanding prodigious fums were expended in endeavours to drain it, all the labour and expence, from the works being injudicioufly conducted, were thrown away.

V. The jurifdiction of Chucuito begins about twenty leagues weft of Paz, and fome part of it bordering on the lake of Titi-caca, that collection of waters is alfo called the lake of Chucuito. The extent of this province from north to fouth is betwixt twentyfix and twenty-eight leagues. Its temperature is in general cold and very difagreeable, the frofts continuing one half of the year, and the other either fnow or hail is continually falling. Accordingly the only efculent productions of the vegetable kingdom are the papas and quinoas. The inhabitants have however a very beneficial trade with their cattle, which abound in this jurifdiction, by falting and drying the flefh. The traders who carry it to the coaft exchange it for brandy and wine; and thofe who go to Cochabamba carry alfo papas and quinoas, which they barter for meal.

All the mountains in this province have their filver-mines, and formerly produced largely, but at prefent are totally abandoned.

The territories of the province of Chucuito are on one fide bounded by the lake of Titi-caca, the magnitude of which merits fome account to be given of it. This lake lies between thefe provinces, comprehended under the general name of Calloa, and is of all the known lakes of America, much the largeft. Its figure is fomewhat oval, inclining nearly from north-weft to fouth-eaft its circumference is about eighty leagues, and the water, in fome parts, feventy or eighty fathoms deep. Ten or twelve large rivers, befides a great number of fmaller ftreams, empty themfelves into it. The water of this lake, though neither bitter or brackifh, is turbid, and has in its tafte fomething fo naufeous that it cannot be drank. It abounds with fifh, of two oppofite kinds; one large and palatable, which the Indians call Suchis; the other fmall, infipid and bony, termed long fince by the Spaniards Boyas. It has alfo a great number of geefe and other wild fowl, and the fhores covered with flags and rufhes, the materials of which the bridges are made, and of which an account will be given in the fequel.

As the weftern borders of this lake are called Chucuito, fo thofe on the eaft fide are diftinguifhed by the name of Omafcuyo. It contains feveral iflands, among which is one very large, and was anciently one mountain, but fince levelled by order of the Yncas; it, however, gave to the lake its own name of Titi-caca, which, in the Indian language, fignifies a mountain of lead. In this ifland the firft Ynca Mancho-Capac, the illuftrious founder of the empire of Peru, invented his political fable, that the fun, his father, had placed him, together with his fifter and confort, Mama Oello Huaco, there, enjoining them to draw the neighbouring people from the ignorance, rudenefs, and barbarity in which they lived, and humanize them by cuftoms, laws and religious rites dictated by himfelf; and in return for the benefits refulting from this artful ftratagem, the ifland has, by all the Indians, been confidered as facred; and the Yncas determining to erect on it a temple to the fun, caufed it to be levelled, that the fituation might be more delightful and commodious.

This was one of the most *i*plendid temples in the whole empire. Befides the plates of gold and filver with which its walls were magnificently adorned, it contained an immense collection of riches, all the inhabitants of provinces which depended on the empire, being under an indifpenfable obligation of vifiting it once a year, and offering fome gift. Accordingly they always brought, in proportion to their zeal or ability, gold, filver, or jewels. This immenfe maßs of riches, the Indians, on feeing the rapacious violence of the Spaniards, are thought to have thrown into the lake; as it is certainly known, they did with regard to a great part of those at Cusco, among which was the famous golden chain made by order of the Ynca Huayna Capac, to celebrate the feftival of giving name to his eldeft fon. But these valuable effects were thrown into another lake, fix leagues fouth of Cusco, in the valley of Orcos; and though numbers of Spaniards, animated with the flattering hopes of fuch immenfe treasfures, made frequent attempts to recover them, the great depth of the water, and the bottom being covered with flime and mud, rendered all their endeavours abortive. For notwithstanding the circuit is not above half a league, yet the depth of water is in most places not lefs than twenty-three or twenty-four fathoms.

Towards the fouth part of the lake Titi-caca, the banks approach each other, fo as to form a kind of bay, which terminates in a river called El Defaguadero, or the drain, and afterwards forms the lake of Paria, which has no visible outlet; but the many whirlpools fufficiently indicate that the water iffues by a fubterraneous paffage. Over the river Defaguadero is ftill remaining the bridge of ruthes, invented by Capac Yupanqui, the fifth Ynca, for transporting his army to the other fide, in order to conquer the provinces of Collasuyo. The Defaguadero is here between eighty and a hundred yards in breadth, flowing with a very impetuous current under a fmooth, and, as it were, a fleeping furface. The Ynca, to overcome this difficulty, ordered four very large cables to be made of a kind of grafs which covers the lofty heaths and mountains of that country, and called by the Indians ichu; and thefe cables were the foundation of the whole ftructure. Two of thefe being laid acrofs the water. fascines of dry juncia and totora, species of rushes, were fastened together, and laid across them. On thefe the two other cables were laid, and again covered with the other fascines securely fastened, but smaller than the first, and arranged in such a manner as to form a level furface; and by this means he procured a fafe paffage to his army. This bridge, which is about five yards in breadth, and one and a half above the furface of the water, is carefully repaired, or rebuilt every fix months, by the neighbouring provinces, in purfuance of a law made by that Ynca, and fince often confirmed by the Kings of Spain, on account of its prodigious use; it being the channel of intercourfe between those provinces feparated by the Defaguadero.

VI. The laft jurifdiction of this bifhoprick is that of Paucar-Colla, whofe capital is the town of Puno. Its jurifdiction fouthward borders on that of Chucuito, and has the fame temperature : confequently is obliged to have recourfe to other provinces for the greateft part of its grain, and efculent vegetables; but abounds in all kinds of cattle, both of the European and American kinds. The Indians of the town weave bags with their wool, and fell them to great advantage. The mountains in this province contain feveral filver mines, and among the reft the famous Laycacota, which formerly belonged to Jofeph Salcedo, and where the metal was often cut out of the mine with a chiffel; but its prodigious richnefs accelerated the death of its owner, foon after which the waters broke into it; nor has any labour and expence been able to drain it, fo that it is at prefent abandoned. Few of the reft are worked, the general cafe with almoft all the filver-mines in this audience, efpecially of thofe in the archbifhopric of Charcas, and this diocefe of La Paz.

II. Bishopric

II. Bifhopric in the Audience of Charcas. — Santa Cruz de la Sierra.

The province of Santa Cruz de la Sierra is a government and captain-generalfhip: and though its jurifdiction is of a large extent, not many Spaniards are found in it, and the few towns are in general millions comprehended under the common name of Paraguay miffions. The capital of the fame name was erected into a bifhopric in the year 1605. Its chapter confifts only of a bifhop, dean, and archdeacon, having neither canons, prebendaries, or other dignitaries. The ufual refidence of the bifhop is the city of Mifque Pocona, eighty leagues from Santa Cruz de la Sierra.

The jurifdiction of Mafque Pocona reaches above thirty leagues; and although the city itfelf is very thinly inhabited, there are, in other parts of it, feveral populous towns. The temperature is hot, but not in a degree too great for vineyards. The valley in which the city ftands is about eighty leagues in circumference, and produces all kinds of grain and fruits; and the woods and uncultivated mountains afford great quantities of honey and wax, which conflitute a principal branch of its commerce.

The miffions belonging to the Jefuits in the parts dependent on this bifhopric, are those called Indios Chiquitos, or little Indians, a name given them by the Spaniards, on account of the great fmallness of the doors of their houses. Their country lies between Santa Cruz de la Sierra, and the lake Xarayes, from whence the river Paraguay had its rife, and being increased by the conflux of others, forms the famous river De la Plata. It was about the close of the last century, when the fathers first began their preaching in this nation, and fo great has been their fuccess, that in the year 1732, they had formed feven towns, each confisting of above fix hundred families; and were then building others for affembling under the fame laws, the great number of Indians, daily converted. These Indios Chiquitos are well made and active; and their courage has often been experienced by the Portuguese, who used to make incurfions, in order to carry off the inhabitants for flaves: but the valour of these people has taught them to defish from fuch inhuman attempts, and, for their own fast, to keep within their limits. The arms of these Indians are musquets, fabres, and poifoned arrows. Though their language is different from that of the other nations of Paraguay, the fame customs nearly obtain here, as among all the other Indians.

Bordering on this nation of Chiquitos is another of Pagan Indians, called Chiriguanos, or Chiriguanaes, who have always refufed to liften to the miffionaries; though the fathers ftill continue to vifit them at certain times, and preach to them, but prudently take care to be accompanied with fome Chiquitos for their fecurity; and thus they make now and then a few converts, who are fent to their towns, and there lead a focial life. This generally happens after fome misfortune in the wars continually carried on between them and the Chiquitos; when, in order the more eafily to obtain a peace, and that the Chiquitos may not abfolutely exterminate them, they fend for miffionaries; but foon difmifs them again, pretending that they cannot bear to fee punifhments inflicted on perfons merely for deviating from the rules of reafon. This plainly demonftrates, that all they defire or aim at, is an unbounded licentioufnefs of manners.

Santa Cruz de la Sierra, the capital of this government, lies eighty or ninety leagues east of Plata. It was originally built fomething farther toward the fouth-east, near the Cordillera of the Chiriguanos. It was founded in the year 1548, by Captain Nuflo de Chaves, who called it Santa Cruz, from a town of that name near Truxillo in Spain, where he was born. But the city having been destroyed, it was built in the VOL. XIV. 4 M place where it now ftands. It is neither large nor well built, nor has it any thing anfwerable to the promifing title of city.

III. Bifhoprick of the Audience of Charcas .--- El Tucuman.

Tucma, by the Spaniards called Tucuman, lies in the centre of this part of America, beginning fouth of the Plata, beyond the towns of Chicas, which furnish Indians for the mines in Potofi. On the east it borders on Paraguay and Buenos Ayres; reaches westward to the kingdom of Chilio, fouthward to the Pampas or plains belonging to the land of Magellan. This country, though united to the empire of the Yncas, was never conquered by them; having, when Vira Cocha the eighth Ynca had made himfelf fovereign in Charcas, fent a deputation of their chiefs, with a request of being admitted among the number of his subjects, and that he would be pleased to fend them governors, that their country might partake of the benefits of those wife laws, and useful improvements, he had introduced into all the parts of his empire.

The Spaniards having penetrated into Peru, and finished the conquest of far the greatest part of that empire, proceeded to that of Tucuman in 1549, under the conduct of Juan Nunez de Prado, whom the president Pedro de la Gasca intrusted with the conduct of this expedition. He had, indeed, no opportunity of displaying his military talents; for the inhabitants, being of a mild and easy disposition, readily submitted; on which, the following four cities were built in that country, namely, Santiago del Estero, so called from a river of the fame name on which it was built, and whose inundations greatly contribute to increase the fertility of the foil; it show one hundred and fixty leagues fouth of Plata: San Miguel del Tucuman, twenty-five or thirty leagues welt of the former : Nuestra Senora de Talavera, fomething more than forty leagues north-welt of Santiago. The fourth was called Cordova de la Nueva Andalucia, and is above eighty leagues fouth of Antiago.

The territories of this government being of fuch extent, that they reach from north to fouth above two hundred leagues, and little flort of a hundred in fome parts from eaft to weft, it was judged proper to increafe the number of Spanish fettlements; and, accordingly, orders were given for building two other cities, which are Rioja, about eighty leagues fouth-weft of Santiago, and Santa, between fixty and feventy leagues north-weft of the fame city; together with a village called San Salvador, or Xuxui, about twenty leagues north of Salta. But all these places are small, and built without either order or fymmetry. The governor, notwithstanding Santiago was the first, refides at Salta; and even the bission and his chapter at Cordova, which is the largest. The others have their respective corregidors, under whom, alfo, are the Indian villages, within the dependencies of their proper cities. But of these there is no great number, the principal part of the country not being inhabitable, either from a want of water, or from their being covered with impenetrable forests. This want of inhabitants is also greatly owing to the cruelties and ravages of the favage Indians, in their frequent incursions.

The epifcopal church of Tucuman, which, as we have already obferved, is in Cordova, was in the year 1570 erected into a cathedral, and its chapter now confifts of the bifhop, dean, archdeacon, chanter, rector, and treafurer, who is elected; but has neither canons nor prebendaries.

Those parts of the country which are watered by the rivers, are so remarkably fertile in grain and fruits, that they produce sufficient for the common confumption of the inhabitants. The woods abound in wild honey and wax, whils the hot parts produce

12

fugar

634

fugar and cotton; the laft is manufactured here, and, with the woollen ftuffs alfo wove by the inhabitants, form an advantageous branch of trade. But its great article confifts in the mules bred in the luxuriant paftures of its valleys. Inconceivable droves of these creatures are fent to all parts of Peru, the Tucuman mules being famous over these countries, far exceeding all others in ftrength and docility.

CHAP. XV. — Account of Paraguay and Buenos Ayres; the two last Governments of the Audience of Charcas.

IV. Bishopric of the Audience of Charcas.-Paraguay.

THE government of Paraguay lies fouth of Santa Cruz de la Sierra, and eaft of Tucuman. Southward it joins to that of Buenos Ayres; and is terminated eaftward by the captainfhip of St. Vicente in Brazil, whofe capital is the city of St. Pablo. Thefe countries were first discovered by Sebastian Gaboro, who, coming to the river of Plata in the year 1526, failed up the river Palana in fome fmall bark, and thence entered that of Paraguay. He was fucceeded in 1536 by Juan de Ayolos, to whom Don Pedro de Mendoza, the first governor of Buenos Ayres, had given a commission, together with a body of troops, military stores, and other necessaries; and afterwards, by his orders, Juan de Salinas founded the city of Nuestra Senora de la Affumption, the capital of the province; but the discovery of the whole, and, confequently, the conquest of people who inhabited it, being still imperfect, it was profecuted by Alvar Nunez, furnamed Cabeza de Baca, or Cowhead, whose eminent fervices, on the death of Don Pedro de Mendoza, procured him the government of Buenos Ayres.

The only fettlements in the whole extent of this government, are the city of Affumption, Villa Rica, and fome other towns, whole inhabitants are a mixture of Spaniards, Meftizos, and fome Indians, but the greateft part of the feveral cafts. As the city itfelf is but fmall and irregular, nothing better can be expected in Villa Rica, and other towns and villages. Its houfes are indeed intermixed with gardens and plantations, but without any fymmetry. It is the refidence of the governor of the province, who had formerly under his jurifdiction part of the towns composing the miffions of Paraguay; but a few years fince they were feparated from it, and are now annexed to the government of Buenos Ayres; but without any change in the ecclefiaftical government. In the city of Affumption is a cathedral, whole chapter confifts of the bifhop, dean, archdeacon, treafurer, and two canons. The parishes of the city of Villa Rica, and of the other towns depending on this government, are ferved by the Franciscans: but in the miffionary towns they are folely under the care of the Jefuits; and thefe composing the miffionary towns they are folely under the care of the Jefuits; and thefe composing the miffionary towns in this province, I shall fpeak particularly of them, shall keeping to that concisents I have observed in the other jurifdictions.

The miffions of Paraguay, befides those in the province of that name, include alfo a great many of Santa Cruz de la Sierra, Tucuman, and Buenos Ayres. Within a century and a half, the epocha of their first establishment, they have been the means of bringing into the bosom of the church many Indian nations, who lived in the blindness of idolatry, and the turpitude of the favage customs transmitted to them by their ancestors. The first instance of this apostolic zeal was the spiritual conquest of the Guaranies Indians, some of whom inhabited the banks of the rivers Uruguay and Parana; and others are near a hundred leagues up the countries north-west of the Guayra.

The

The Portuguefe, then only intent on the improvement of their colonies, in violation of the most facred laws, did not, even after the conversion of these people, cease from making incursions, in order to carry off the young inhabitants as flaves for their plantations; fo that it became absolutely neceffary, in order to preferve these converts, to remove into Paraguay, about twelve thousand of all ages, and both fexes; a like number of emigrants was also brought from Tappe and formed into communities, living here in peace and fafety; and, at the fame time, in a decency becoming their new profession.

But the number of fucceeding converts was fo great, that continual additions were neceffary to thefe towns, fo that I was at Quito informed by a perfon of undoubted veracity, and thoroughly acquainted with fuch matters, that the number of towns of the Guaranies Indians in the year 1734, amounted to thirty-two, and fuppofed to contain between thirty and forty thoufand families : that from the increasing prosperity of the Christian religion, they were then deliberating on the manner of building three other towns, thefe thirty-two being in the diocefes of Buenos Ayres and Paraguay. Befides the Indios Chiquitos belonging to the diocefe of Santa Cruz de la Sierra, there were at that time feven very populous towns ; and, by reason of the great refort of converted Indians, preparations were making for building others.

The Paraguay miffions are on all fides terminated by nations of idolatrous Indians; fome of which, however, live in perfect harmony with them, but others do all in their power to exterminate them by frequent incurfions; and it is with the latter that the fathers chiefly employ their zeal, in order to reclaim them from their inhumanity, by preaching to them the glad tidings of the Gofpel. Nor is this fortitude defitute of fruit, the moft rational receiving with joy the knowledge of the true God, and, quitting their country, are conducted to the Chriftian towns, where, after proper inftructions, they are admitted to baptifue.

About a hundred leagues from the miffion is a nation of idolaters, called Guanoas. It is with great difficulty any of thefe are brought to embrace the light of the Gofpel, as they are extremely addicted to a licentious life; and a great number of Meftizos, and even fome Spaniards, whom crimes have obliged to take fhelter among them, by their ill example harden the Indians in their contempt of inftruction. Befides they are fo indolent and flothful, that they will not take the pains to cultivate the lands, choofing to live by the more expeditious way of hunting; and, being convinced, that if they embrace the Chriftian religion, and fubmit to the miffionaries, they mult labour, they cannot bear to think of a change which will inevitably deprive them of their favourite indolence. Many, however, of thofe who come to the Chriftian towns to vifit their relations, cannot withftand the order and decency in which they fee them live, and accordingly embrace the Chriftian religion.

It is nearly the fame with the Charuas, a people inhabiting the country between the rivers Parana and Uruguay. Thofe dwelling on the banks of the river Parana, from the town of Corpus upwards, and called Guananas, are more tractable, and their industry in agriculture, and other rural arts, render them more fusceptible of listening to the preaching of the miffionaries; befides, no fuch thing as a fugitive is to be found among them. Near Cordova is another nation of idolaters, called Pampas, who, notwithstanding they frequently come to the city to fell different productions of the earth, are very obflinate in their opinions, and, confequently, are not reclaimed without the greateft difficulty. These four nations of idolatrous Indians live, however, in peace with the Christians. ~ In the neighbourhood of the city of Santa Fé, fituated in the province of Buenos Ayres, are others who reject all terms of peace; fo that even the villages and effates near Santiago and Salta, in the government of Tucuman, have felt the effects of their daring incurfions. The other nations between thefe and the Chiquitos, and the lake of Xarayes, are little known. Not many years fince fome Jefuit miffionaries ventured to vifit their country up the river Pilcomayo, which runs from Potofi to Affumption; but their territories being very large, and living a vagrant fort of lives, without fixed habitations, the zeal of the good fathers was fruftrated; as it has indeed on many other occafions, even after repeated trials.

The idolatrous Indians, who inhabit the country from the city of Affumption northward, are but very few. The millionaries have been fo fortunate as to meet with fome of thefe in their journeys after them, and prevailed on them to accompany them to the Chriftian towns, where, without much reluctancy, they have embraced Chriftianity. The Chiriguanos, already mentioned, alfo refide in thefe parts; but are fo infatuated with the pleafures of a favage life, that they will not hear of living under laws.

From what has been faid, it will eafily be conceived that the country occupied by the Paraguay miffions, muft be of a very great extent. The air in general is moift and temperate, though in fome parts it is rather cold *. The temperate parts abound with all kinds of provifions. Cotton contributes confiderably to their riches, growing here in fuch quantities, that every little village gathers of it annually above two thoufand arobas; and the induftrious are very ingenions in weaving it into fluffs for exportation. A great deal of tobacco is alfo planted here. But thefe articles are far lefs advantageous to the inhabitants than the herb called Paraguay, which alone would be fufficient to form a flourifhing commerce in this province, it being the only one which produces it : and from hence it is fent all over Peru and Chili, where its ufe is univerfal; efpecially that kind of it called camini, which is the pure leaf; the other, diftinguifhed by the name of palos, being lefs fine, and not fo proper for making mate, is not fo valuable.

These goods were carried for fale, to the cities of Santa Fé, and Buenos Ayres, where the fathers have factors; the Indians, particularly the Guaranies, wanting the fagacity and addrefs, fo abfolutely neceffary to procure fuccess in commercial affairs. These factors dispose of what is configned to them from Paraguay, and lay out the money in fuch European goods as the towns are then in want of, in ornaments for the churches, and the decent fupport of the priess officiating in them. But the greatest care is taken in deducting from what each town fends, the amount of the tribute of its Indian inhabitants, which is remitted immediately to the revenue offices, without the least deduction, except the store for the priess, and the pensions allowed the caciques.

The other products of their lands, together with their cattle, are made use of for the subfiftence of the inhabitants, among whom they are distributed with such regularity and œconomy, that the excellent police under which those people live so happily, cannot be passed over in filence, without great injustice to these wife legislators.

Every town of the miffions of Paraguay, like the cities and great towns of the Spaniards, are under a governor, regidores, and alcaldes. That the important office of a governor may be always filled by a perfon duly qualified, he is chosen by the Indians, with the approbation of the priefts. The alcaldes are annually appointed by the regi-

^{*} White frofts are very common here in July and August, fometimes they have ice about the thickness of half a crown. The former phænomenon has been sen feen as far to the northward as Rio de Janeiro.

dores, and jointly with them, the governor attends to the maintenance of good order and tranquillity among the inhabitants : and that these officers, who are feldom perfons of the most shining parts, may not abuse their authority, and either through interest, or paffion, carry their revenge too far against other Indians, they are not to proceed to punifhment without previoufly acquainting the prieft with the affair, that he may compare the offence with the fentence. The prieft, on finding the perfon really guilty, delivers him up to be punished, which generally confists in imprisonment for a certain number of days, and fometimes fasting is added to it; but if the fault be very great, the delinquent is whipt, which is the most fevere punishment used among them; these people being never known to commit any crime that merits a greater degree of chaftifement; for immediately on being registered as converts, the greatest care has been taken in these missions, to imprint on the minds of these new Christians, a detertation of murder, robbery, and fuch atrocious crimes. The execution of the fentence is preceded by a difcourfe made by the prieft before the delinquent, in which he reprefents to the offender, with the greateft foftnefs and fympathy, the nature of his crime, and its turpitude; fo that he is brought to acknowledge the just far of the fentence, and to receive it rather as a brotherly correction than a punifhment; fo that though nature must feel, yet he receives the correction with the greatest humility and refignation, being confcious that he has brought it upon himfelf. Thus the priefts are in no danger of any malice being harboured against them; indeed the love and veneration the Indians pay them, is fo great, that could they be guilty of enjoining an unjuft punifhment, the fuffering party would impute it to his own demerits, being firmly perfuaded that the priefts never do any thing without a fufficient reafon.

Every town has a particular armory, in which are kept all the fire-arms, fwords, and weapons ufed by the militia, when they take the field, whether to repel the infults of the Portuguefe, or any heathen Indians inhabiting on their frontiers. And that they may be dexterous in the management of them, they are exercised on the evening of every holiday, in the market-places of the towns. All perfons capable of bearing arms in every town, are divided into companies, and have their proper officers, who owe this diffinction to their military qualifications; their uniform is richly laced with gold and filver, according to their rank, and embroidered with the device of their towns. In these they always appear on holidays, and at the times of exercise. The governor, alcaldes, and regidores, have also very magnificent habits of ceremony, which they wear on folemn occasions.

No town is without a fchool for teaching reading, writing, dancing, and mufic; and in whatever they undertake, they generally excel, the inclination and genius of every one being carefully confulted before they are forwarded in any branch of fcience. Thus many attain a very good knowledge of the Latin tongue. In one of the courts of the houfe belonging to the prieft of every town, are fhops or work-houfes for painters, fculptors, gilders, filverfmiths, lockfmiths, carpenters, weavers, watchmakers, and all other mechanic arts and trades. Here every one works for the benefit of the whole town, under the infpection of the priefts coadjutors : and boys are there alfo inftructed in those trades and arts to which they have the greateft inclination.

The churches are large and well built, and with regard to decorations, not inferior to the richeft in Peru. Even the houfes of the Indians are built with that fymmetry and convenience, and fo completely and elegantly furnifhed, as to excel those of the Spaniards in many towns in this part of America. Most of them however are only of mud walls, fome of unburnt bricks, and others of ftone; but all in general covered with tiles. Every thing in these towns is on fuch good footing, that all private houses make make gunpowder, that a fufficient quantity of it may not be wanting, either on any exigency, or for fireworks on holidays, and other anniverfary rejoicings which are punctually kept. But the most fplendid ceremony is on the acceffion of the new monarch to the Spanish throne, when the governor, alcaldes, regidores, together with all the civil and military officers, appear in new uniforms, and other ornaments, to express the ardent affection they bear their new fovereign.

Every church has its band of mufic, confifting of a great number both of vocal and inftrumental performers. Divine fervice is celebrated in them with all the pomp and folemnity of cathedrals. The like is obferved in public proceffions, efpecially that on Corpus Chrifti day, at which the governor, alcaldes, and regidores, in their habits of ceremony, and the militia in their uniforms, affift; the reft of the people carry flambeaux; fo that the whole is conducted with an order and reverence fuitable to the occafion. Thefe proceffions are accompanied with fine dancing, but very different from that in the province of Quito, defcribed in the first part; and the performers wear particular dreffes, extremely rich, and well adapted to the characters reprefented. In fhort, a miffionary town omits no circumstance either of festivity or devotion, practifed in opulent cities.

Every town has a kind of beaterio, where women of ill fame are placed; it alfo ferves for the retreat of married women who have no families, during the abfence of their hufbands. For the fupport of this houfe, and alfo of orphans and others, who by age or any other circumftance are difabled from earning a livelihood, two days in the week are fet apart; when the inhabitants of every village are obliged to fow and cultivate a certain piece of ground, called Labor de la Comunidad, the labour of the community; and the furplus of the produce is applied to procure furniture and decorations for the church, and to clothe the orphans, the aged, and the difabled perfons. By this benevolent plan all diftrefs is precluded, and the inhabitants provided with every neceffary of life. The royal revenues are punctually paid; and by the union of the inhabitants, the uninterrupted peace they enjoy, and the wifdom of their policy, which is preferved inviolable; thefe places, if there are any fuch on earth, are the habitations of true religion and felicity.

The Jefuits, who are the priefts of thefe miffions, take upon them the fole care of difpofing of the manufactures and products of the Guaranies Indians, defigned for commerce; thefe people being naturally carelefs and indolent, and doubtlefs without the diligent infpection and pathetic exhortations of the fathers, would be buried in floth and indigence. The cafe is very different in the miffions of the Chiquitos, who are induftrious, careful, and frugal; and their genius fo happily adapted to commerce, as not to ftand in need of any factors. The priefts in the villages of this nation are of no expence to the crown, the Indians themfelves rejoicing in maintaining them; and join in cultivating a plantation filled with all kinds of grain and fruits for the prieft; the remainder, after this decent fupport, being applied to purchafe ornaments for the churches.

That the Indians may never be in any want of neceffaries, it is one part of the minifter's care to have always in readine's a flock of different kinds of tools, fluffs, and other goods; fo that all who are in want repair to him, bringing by way of exchange wax, of which there are here great quantities, and other products. And this barter is made with the flricteft integrity, that the Indians may have no reafon to complain of opprefilion; and that the high character of the priefts for juffice and fanctity may be fludioufly preferved. The goods received in exchange are by the priefts fent to the fuperior of the miffions, who is a different perfon from the fuperior of the Guaranies;

ranies; and with the produce, a fresh stock of goods is laid in. The principal intention of this is, that the Indians may have no occasion to leave their own country, in order to be furnished with neceffaries; and by this means are kept from the contagion of those vices, which they would naturally contract in their intercours with the inhabitants of other countries, where the depravity of human nature is not corrected by fuch good examples and laws.

If the civil government of thefe towns be fo admirably calculated for happinefs, the ecclefiaftical government is still more fo. Every town and village has its particular priest, who, in proportion to its largeness, has an affistant or two of the fame order. Thefe priefts, together with fix boys who wait on them, and alfo fing in the churches, form in every village a kind of fmall college, where the hours are under the fame regulation, and the exercifes fucceed each other with the fame formalities as in the great colleges of cities. The most laborious part of the duty belonging to the priest, is to vifit perfonally the chacaras or plantations of the Indians; and in this they are remarkably fedulous, in order to prevent the ill confequences of that flothful difpofition fo natural to the Guaranies; who, were they not frequently roufed and ftimulated by the prefence of the prieft, would abandon their work, or, at leaft, perform it in a very fuperficial manner. He alfo attends at the public flaughter-houfe, where every day are killed fome of the cattle; large herds of which are kept for the public use by the Indians. The flesh of these beafts is dealt out by the priest, in lots proportionable to the number of perfons each family confifts of; fo that every one has a fufficiency to fupply the calls of nature, but nothing for wafte. He alfo vifits the fick, to fee that they want for nothing, and are attended with that care and tendernefs their state requires. These charitable employments take up fo great a part of the day, as often to leave him no time for affifting the father coadjutor in the fervices of the church. One ufeful part of the duty of the latter is to catechize, and explain fome portion of fcripture in the church every day in the week, Thurfdays and Saturdays excepted, for the inftruction of the young of both fexes; and these in every town are not lefs than two thoufand. On Sundays all the inhabitants never fail to attend divine fervice. The prieft alfo vifits the fick to confess them; and if the cafe requires it, to give them the viaticum; and to all thefe must be added, the other indifpenfable duties of a prieft.

By the firicines of the law these priests should be nominated by the governor, as vice-patron, and be qualified for their function by the confectation of the bishop; but as among the three perfons recommended on fuch occasions to the governor, there will of confequence be one, whose virtues and talents render him most fit for the office; and as no better judges of this can be supposed than the provincials of the order, the governor and bishop have receded from their undoubted rights, and the provincials always collate and prefer those whose merits are most configuous.

The miffions of the Guaranies are alfo under one fuperior, who nominates the affiftant priefts of the other towns. His refidence is at Candelaria, which lies in the centre of all the miffions; but he frequently vifits the other towns, in order to fuperintend their governments; and at the fame time, concerts measures that fome of the fathers may be fent among the heathen Indians, to conciliate their affections, and by degrees work their conversion. In this important office he is affisted by two vicefuperiors, one of whom refides at Parana, and the other on the river Uruguay. All these miffions, though fo numerous and disperfed, are formed as it were into one college, of which the fuperior may be confidered as the mafter or head; and every town town is like a family governed by a wife and affectionate parent, in the perfon of the prieft.

In the miffions of the Guaranies, the King pays the ftipends of the priefts, which, including that of the affiftant, is three hundred dollars per annum. This fum is lodged in the hands of the fuperior, who every month fupplies them with neceffary food and apparel, and on any extraordinary demand, they apply to him, from whom they are fure of meeting with a gracious reception.

The miffions of the Chiquito Indians have a diftinct fuperior; but with the fame functions as he who prefides over the Guaranies; and the priefts alfo are on the fame footing, but have lefs anxiety and labour; the industry and activity of thefe Indians, faving them the trouble of coming among them to exhort them to follow their employments, or of being the ftorekeepers and agents in difpofing of the fruits of their labours; they themfelves vending them for their own advantage.

All thefe Indians are very fubject to feveral contagious diffempers; as the fmall-pox, malignant fevers, and others, to which, on account of the dreadful havock attending them, they give the name of peftilence. And to fuch difeafes it is owing, that thefe fettlements have not increased in a manner proportional to their numbers, the time fince their eftablifhment, and the quietnefs and plenty in which these people live.

The miffionary fathers will not allow any of the inhabitants of Peru, whether Spaniards or others, Mestizos or even Indians, to come within their missions in Paraguay. Not with a view of concealing their transactions from the world; or that they are afraid lest others should supplant them of part of the products and manufactures; nor for any of those causes, which even with less foundation, envy has dared to fuggest; but for this reason, and a very prudent one it is, that their Indians, who being as it were new-born from favageness and brutality, and initiated into morality and religion, Thefe Indians are may be kept fleady in this flate of innocence and fimplicity. ftrangers to fedition, pride, malice, envy, and other paffions, which are fo fatal to fociety. But were ftrangers admitted to come among them, their bad examples would teach them what at prefent they are happily ignorant of; but fhould modefty, and the attention they pay to the inftructions of their teachers, be once laid afide, the fhining advantages of these fettlements would foon come to nothing; and fuch a number of fouls, who now worship the true God in the beauty of holiness, and live in tranquillity and love (of which fuch flender traces are feen among civilized nations), would be again feduced into the paths of diforder and perdition.

These Indians live at prefent in an entire affurance, that whatever their priefts advife them to is good, and whatever they reprehend is bad. But their minds would foon take a different turn, by feeing other people, on whom the doctrine of the gofpel is fo far from having any effect, that their actions are abfolutely repugnant to its precepts. At prefent they are firmly perfuaded, that in all bargains, and other transactions, the greatest candour and probity must be used, without any prevarication or deceit. But it is too evident, that were others admitted among them, whole leading maxim is to fell as dear, and buy as cheap as they are able, thefe innocent people would foon imbibe the fame practice, together with a variety of others which feem naturally to flow from it. The contamination would foon fpread through every part of their behaviour, fo as never to be reclaimed. I do not here mean to leffen the characters of those Spaniards or inhabitants of other nations, whose countries are fituated conveniently for trading with Paraguay, by infinuating that they are univerfally fraudulent and diffolute; but, on the other hand, among fuch numbers, it would be very ftrange if there was not fome; and one fingle perfor of fuch a character would be fufficient to

VOL. XIV.

infect

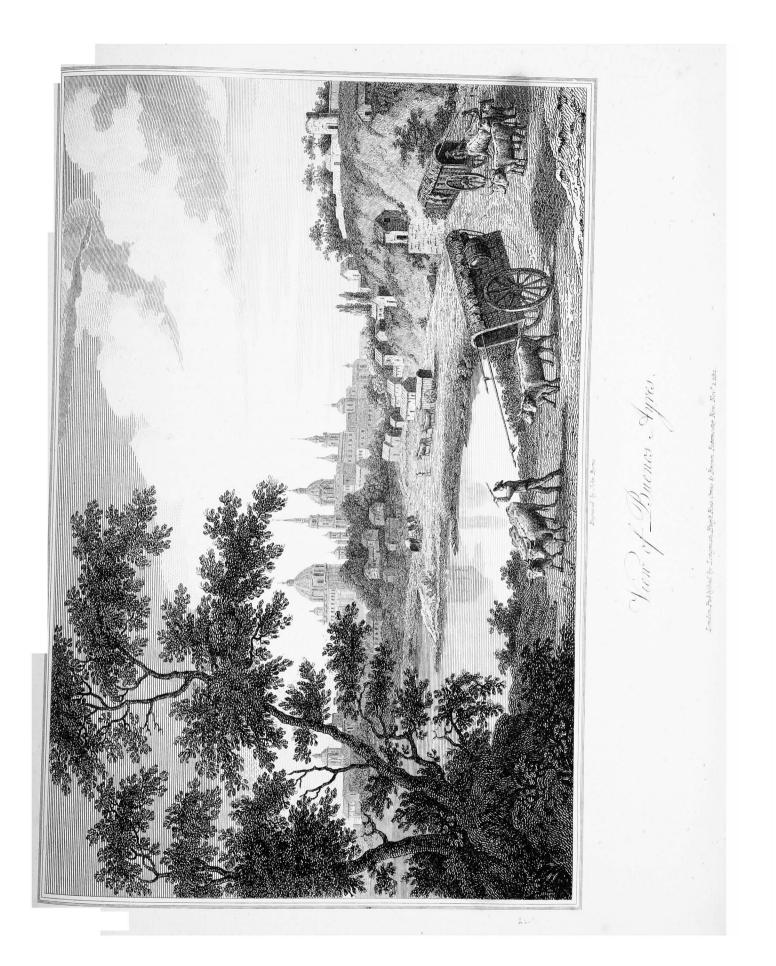

infect a whole country. And who could pretend to fay, that, if free admiffion were allowed to foreigners, there might not come in, among a multitude of virtuous, one of fuch peftilent dispositions? Who can fay that he might not be even the very first? Hence it is that the Jesuits have inflexibly adhered to the maxim of not admitting any foreigners among them; and in this they are certainly justified by the melancholy example of the other missions of Peru, whole decline from their former happines and piety is the effect of an open intercourse.

Though in the feveral parts of Paraguay, where the miffions have been always fettled, there are no mines of gold and filver; feveral are to be found in fome adjacent countries under the dominion of the King of Spain; but the Portuguese reap the whole benefit of them: for having encroached as far as the lake Xarayes, near which, about twenty years ago, a rich mine of gold was discovered, they, without any other right than poffeffion, turned it to their own use; the ministry in Spain, in confideration of the harmony substitution of the two nations, and their joint interest, forbearing to make use of any forcible methods.

V. Bifhoprick of the Audience of Charcas. — Buenos Ayres.

The ecclefiaftical jurifdiction of the bifhop of Buenos Ayres extends to all the countries under the temporal government of the fame name; and this begins on the oriental coaft of that part of America, and extends weltward as far as Tucuman; on the north it terminates on Paraguay, and is bounded towards the fouth by the land of Magellan. Its countries are watered by the great river De la Plata, the difcovery of which was owing to Juan Dias de Solis, who, in 1515, having failed from Spain with two veffels to make difcoveries, arrived at the mouth of this river, and took poffeffion of it in the name of the King of Spain. But being unhappily deluded by the figns of joy and friendship made by the Indians, he landed, and was immediately killed, together with his few attendants. The fame voyage was repeated in 1526, under Sebastian Cabot, who, entering the river, difcovered an ifland, which he called St. Gabriel; and advancing further, came to another river, which emptied itself into that of La Plata; to this he gave the name of St. Salvador, caufing his fleet to enter the river, and there difembark their troops. Here he built a fort, and leaving in it a part of his men, he failed above two hundred leagues up the river Parana, difcovering alfo that of Paraguay. Cabot, having purchafed fome ingots of filver from the Indians he met with, and particularly from the Guaranies, who brought the metal from the other parts of Peru, imagined that they had found it in the neighbourhood of the river, and thence called the river Rio de la Plata, or Silver River, which has fuperfeded that of Solis, as it was before called from its first difcoverer, whose memory is still preferved by the little river Solis, about feven or eight leagues weft of Maldonado bay.

The capital of this government is called Nueftra Senora de Buenos Ayres. It was founded in the year 1535 by Don Pedro de Mendoza, purfuant to his orders, which alfo appointed him governor. He chofe for it a place called Cape Blanco, on the fouth fide of Rio de la Plata, clofe by a fmall river. Its latitude, according to Father Feville, is 34° 34' 38"S. He gave it the name of Buenos Ayres, on account of the extreme falubrity of the air. The city is built on a large plain, gently rifing from the little river. It is far from being fmall, having at leaft three thoufand houfes, inhabited by Spaniards and different cafts. Like most towns fituated on rivers, its breadth is not proportional to its length. The ftreets are, however, ftraight, and of a proper breadth. The principal fquare is very large, and built near the little river; the front answering to it being a castle, where the governor constantly refides; and, with the other forts, has a garrifon of a

of a thouland regular troops. The houles, formerly of mud-walls, thatched with ftraw and very low, are now much improved, fome being of chalk, and others of brick, and having one ftory befides the ground-floor, and most of them tiled*. The cathedral is a fpacious and very elegant ftructure, and is the parish-church for the greatest part of the inhabitants; the other, at the farther end of the city, being only for the Indians. The chapter is composed of the bishop, dean, archdeacon, and two canons, one by composition, the other by prefentation. Here are also feveral convents, and a royal chapel in the castle where the governor refides. With regard to the civil and economical government, and the magistracy, it will be unnecessary to enter into particulars, they being on the fame footing as those of the places already mentioned.

The climate here is very little different from that of Spain, and the diffinctions between the feafons are the fame. In winter, indeed, violent tempefts of winds and rain are here very frequent, accompanied with fuch dreadful thunders and lightnings, as fill the inhabitants, though ufed to them, with terror and confternation. In fummer the exceffive heats are mitigated by gentle breezes, which conftantly begin at eight or nine in the morning.

The city is furrounded by a fpacious and pleafant country, free from any obftruction to the fight; and from these delightful fields the inhabitants are furnished with such a plenty of cattle, that there is no place in America or Europe where meat is better or cheaper. It is the usual custom to buy the hides of the beast, the carcase being in some measure a gratuitous addition; and the meat is always fat and very palatable. The country to the west, south, and north of Buenos Ayres lately abounded so greatly in cattle and horses, that the whole cost consisted in taking them; and even then a horse was fold for a dollar of that money, and the usual price of a beast, chosen out of a herd of two or three hundred, only four rials. At prefent there is no fcarcity, but they keep at a greater distance, and are more difficult to be catched, by reason of the prodigious havock made of them by the Spaniards and Portuguese, merely for the sake of their hides; the grand commerce of Buenos Ayres.

All kinds of game and fifh are alfo here in the fame plenty, feveral forts of the latter being caught in the river running by it; but the perexeyes are very remarkable, fome of them being half a yard or more in length. Both the American and European fruits come to full perfection, and are in great plenty. In a word, for the enjoyments of life, efpecially with regard to the falubrity of the air, a finer country cannot be imagined.

This city is fituated about feventy-feven leagues from Cape Santa Maria, which lies on the north coaft near the entrance of the river De la Plata; and its little river not having water fufficient for fhips of burden to come up to Buenos Ayres, they anchor in one of the two bays on the fame coaft. That fartheft to the eaftward is called Maldonado, and is nine léagues from the above cape: the other bay is, from a mountain near it, named Monte Video, and is about twenty leagues from it.

Within the government of Buenos Ayres are three other cities, namely, Santa Fé, Las Corientes, and Monte Video. The laft, which was lately built, ftands on the border of the bay, from whence it derives its name. Santa Fé lies about ninety leagues north-weft of Buenos Ayres, between the Rio de la Plata and the Rio Salado, which, after running through the country of Tucuman, joins the former. The city is but fmall, and meanly built, owing in a great measure to the infults it has frequently fuffered from the heathen Indians, who not long fince pillaged it, maffacring the inhabitants of the city, and those of the neighbouring villages; and they ftill keep the country under continual apprehensions of another visit. It is, however, the channel of the commerce be-

* Their houses are commonly thatched with cocoa-nut-leaves and flags. A.

4N 2

tween

The land of this whole coaft is low; but there are two figns which evidently indicate its being near. First the fea-wolves, which are feen near these islands, and at three or four leagues distant from them. The second is the great flocks of birds all along this coaft, flying two or three leagues from the flore, in quest of food. And though fogs are very frequent here, and so thick as to hide the land, yet its distance may be nearly known from these figns in the day-time; but at night more circumspection is necessary on account of the extreme lowness of the flore. And though the islands of Lobos are fomething higher than the coast, too much caution cannot be used in approaching them.

It is common in this voyage if the fhip is intended to touch at Paita, and has not had fight of the islands of Lobos in the day-time, when in their latitude, to lie-to all night. But if they do not propose to ftop at Paita, proper attention must be given to the course, and the voyage continued. If the fhip be bound to Paita, there is a neceffity for making these islands, or the continent near them to the north, in order to avoid being carried beyond the port by the currents; as in such a cafe a great deal of time would be lost in getting back, both the wind and currents being contrary.

From Paita, the coaft is always kept in fight; but a careful look-out is neceffary in order to difcover the Negrilos, rocky shoals, projecting four or five leagues distant from the fhore, and lying betwixt Paita and Cape Blanco, one of the points of Guayaquil bay. The winds during this whole paffage are ufually fouth, but in the fummer, that is, from November to May, fometimes veer as far as fouth-eaft. Near the coaft is a periodical morning breeze, or faint eafterly wind, which shifts round to the fouth-east or fouth-fouth-east, and in this feason, at any distance from the coast, the fouth winds are also faint; nor are the calms uncommon, though they are of fhort continuance; but the brifas never reach fo far: and this renders the voyage from Paita to Callao fo very long in all feafons. For if a fhip ftretches out to a great distance from the coast, the winds, even within ten or twelve leagues, shift from south to fouth-weft, but if fhe keeps along the fhore and endeavours to perform her voyage by tacking, fhe lofes on one what fhe gained on another. Befides, during the winter the currents fet ftrongly towards the north or north-weft, and confequently render the voyage flill more tedious. In fummer there is here generally no current, or if any do fet to the northward, it is fcarcely perceived ; the direction of the current in that feafon being generally weft. This proceeds from the brifas blowing from the north of the equator, though they are unable to change the fet of the current to the fouth as would be the natural confequence, were it not for the refiftance it meets with from the waters agitated by the fouth winds to the fouthward of the equinoctial; but by meeting each other they run towards the weft. There are, however, fome fhort intervals during the fummer, when the currents fuddenly change their direction, and run to the fouthward, but at no great diftance from the fhore; and in the fame inftantaneous manner fhift about to an opposite point; and this is the reason why most ships coming from Paita to Callao in this feafon keep near the fhore, and work up to windward, hoping, by the favourable change of the currents, to acquire that affiftance which the winds deny.

At all times this voyage is of a most difagreeable and fatiguing length; for though the diftance, according to the latitude of these ports, be only one hundred and forty leagues, a ship is very fortunate to perform it in forty or fifty days; and if even after fpending that time in continual labour, she be not obliged to return again to Paita: fuch accidents being very common; and it is nothing extraordinary to meet with two or three misfortunes of the same kind successively, especially if the same a great deal deal of lee-way, when it is often a twelvemonth's tafk. They relate here a flory to this purpofe, that the mafter of a merchant fhip, who had been lately married at Paita, took his wife on board with him, in order to carry her to Callao. In the veffel fhe was delivered of a fon, and before the fhip reached Callao, the boy could read diftinctly. For after turning to windward, two or three months, provisions growing fhort, the mafter put into fome port, where feveral months were fpent in procuring a fresh fupply; and after another course of tacking, the fame ill-fortune flill purfued him; and thus four or five years were fpent in tacking and victualling, to the ruin of the owner, before the fhip reached Callao. This misfortune was in a great measure owing to the ill-construction of the fhip; and every other circumstance tending to obftruct her passage, the transaction has nothing very wonderful in it.

According to obfervations made by Don George Juan at Paita, in the year 1737, its latitude is 5° 5' fouth. It is a fmall place, having only one ftreet, and about one hundred and feventy two houfes; and thefe only of quinchas and canes covered with leaves; the only houfe built of ftone being that of the governor. It has a parifh church and a chapel dedicated to Our Lady of Mercy, and ferved by a religious of that order. A little to the fouthward of the town is a mountain, called from its figure Silla de Paita, or the faddle of Paita. The foil round Paita is wholly of fand, and extremely barren; for befides the total want of rain, it has not a fingle river for the conveyance of water; fo that it is entirely defititute of that neceffary fluid, unlefs what is daily brought with great fatigue from Colan, a town on the fame bay, four leagues north of Paita, and near which runs the river Chera, the fame stream which waters Amotape. The Indians of the town of Colan are under an obligation of daily fending to Paita, one or two balzes loaded with water, which is diffributed among the inhabitants by flated proportions. From the fame town Paita has alfo the greatest part of its provisions. The nature of the foil, and the fituation of the place, render it extremely hot. Its inhabitants, who are about thirty-five or forty families, and confift of Spaniards, Mulattoes, and Mestizos, live chiefly by passengers going or returning from Panama to Lima. So that the town owes its whole fupport to the harbour, which, as I have before obferved, is the place where the cargoes of goods fent from Panama are landed, together with those coming from Callao to the jurifdictions of Piura and Loja.

In the bay of Paita, and that of Sechura, which lies a little farther to the fouthern, fuch large quantities of tollo are taken as to anfwer the demands of the provinces of the mountains, and part of those of Quito and Lima. The feason for this fishery begins in October, when great numbers of barks go from Callao, returning when the feason is over. Fishing is also the constant employment of the Indians of Colan, Sechura, and the small hamlets near the coast; these feas abounding in feveral kinds of fish, besides the tollo, all palatable, and some delicious.

CHAP. II.—Account of the Transactions at Quito : unhappy Occasion of our sudden Return to Guayaquil.

ON our arrival at Quito, we made it our first business to join the French company, who were pleased to express a great deal of joy at our return. Mr. Godin, during our absence, had finished the astronomical observations to the northward, and though Messer and De la Condamine had also gone through them, yet they still purposed to repeat them; for these able academicians, who had always shewn an indefatigable

indefatigable zeal for the perfection of the work, were particularly attentive in obferving the greatest obliquity of the ecliptic; at which observations we also affisted: but feveral accidents hindered them from being carried on without interruption. They therefore thought it most agreeable to their character, and the commission with which they had been honoured, to fpend fome time in afcertaining this important point, than to leave the country before their obfervations were completed. Notwithstanding their ftay was attended with fo much inconvenience and fatigue, they could not think of leaving, undetermined, a difficulty occafioned by a certain motion which they obferved in the ftars. In order to afcertain with the greateft accuracy the quantity of the arch, they divided themfelves into two companies, Bouguer being at the head of one, and M. de la Condamine, accompanied by M. Berguin, at that of the other; the latter, while the geometrical menfuration was carrying on, applied himfelf with indefatigable labour, and admirable skill, in drawing maps of the country, in order to erect the fignals in the most advantageous places. He also affisted both companies in their menfurations of the two bases, which ferved to prove the accuracy of the operations. And, laftly, he was prefent at making the aftronomical obfervations. But before the repetition was undertaken, M. de la Condamine employed himfelf in erecting two obelifks at the extremities of the bafe of Yaruqui, as monuments of this transaction : this fpot having been the foundation of the whole work. Various were the fentiments with regard to the infcription proper to be engraved on them; and indeed the difficulties attending this particular, feemingly of no great importance, were fuch, as could not be removed till the affair was entirely dropt, on account of other things of real concern, and which would admit of no delay. It was however unanimoufly concluded, that the whole affair should be referred to His Majesty's pleasure after our arrival in Spain. Accordingly in the year 1746, the Marquis de la Enfenada, equally diftinguished as a statesman, and a patron of real knowledge, being at that time fecretary of ftate for the Indies, fent over, in His Majesty's name, the following infcription :

PHILIPPO V. Hifpaniarum, & Indiarum Rege Catholico, LUDOVICI XV. Regis Chriftianiffimi Poftulatis, Regiæ Scientiarum Academiæ Parifienfis Votis Annuente, ac Favente, LUDOV. GODIN, PETRUS BOUGUER, CAR. Anno CHRISTI MDCCXXXXVI. Menfe Novembri.

Cujus Rei Memoriam duabus hinc inde Obelifcorum molibus extructis Alternum confecrari placuit.

" In the reign of His Catholic Majefty, Philip V. King of Spain and the Indies; agreeable to the request of His Most Christian Majesty Lewis XV. King of France, and in condefcention to the defire of the Royal Academy of Sciences at Paris, Lewis Godin, Peter Bouguer, Charles Marie de la Condamine, members of that academy, were, by the command and munificence of the Moft Christian King, fent into Peru, to measure the terrestrial degrees under the equinoctial, in order to obtain a more accurate knowledge of the true figure of the earth. At the fame time, by the command, and at the expence of His Catholic Majefty, were fent, George Juan, knight of the order of St. John of Jerufalem, and Antonio de Ulloa, both lieutenants in the royal navy, and well acquainted with all the branches of the mathematics: during the whole procefs of this menfuration they all equally fhared in the fatigues, hardfhips, and operations; and with an unanimous confent determined in this plain of Yaruqui a horizontal diftance of $6272 \frac{55}{726}$ Paris toifes in a line whofe direction was north 19° 25' 30" westerly, and intercepted between the axes of this and the other obelisk, as the base or fide of the first triangle, and a foundation for the whole work. In the month of November 1736. In the memory of which transaction an obelisk has been erected at each extremity of the faid bafe."

We had now been three months at Quito, waiting till Mr. Hugot, inftrumentmaker to the company, had finished fome indispensable works in which he was then employed, that he might accompany us to the place where M. Godin, after finishing the obfervations, had left the inftrument, which required fome repairs in order for our making use of it in finishing our part of the work. But on the 5th of December 1741, when we were animated with the hopes of concluding our talk in two or three days, the melancholy news arrived at Quito, that Paita had been pillaged and burnt by a fquadron of men of war, commanded by Commodore Anfon; and was too foon confirmed in all its circumstances, by letters from the corregidor and other officers of Piura, giving an account that on the 24th of November, at two in the morning, the Centurion man of war, being the Commodore's fhip, had entered that harbour, and fent her long-boat ashore with forty armed men, under the advantage of the night, whereby the inhabitants and ftrangers who happened to be in the place, were awaked from their fleep by the flocking furprife of an invation, the first notice of which were given by the cries of a negro; fo that filled with confusion and terror, like perfons unable to recollect themfelves, most of them had leaped from their beds, and fled naked from their houfes, without knowing whether their enemies were in poffeffion of the town; or whether, by a vigorous refiftance they might not be repelled; the VOL. XIV. 40

the mind, on fo great and fudden a perturbation, being but little capable of fuch re-flections.

Not fo Don Nicholas de Salaza, the accomptant of Piura, who happened to be then at Paita, on fome affairs of his office. This gentleman, attended only by a negro flave, with an equal prefence of mind and refolution, threw himfelf into the little fort, built for the defence of that fmall town, and fired two or three fhot towards the place where he heard the noife of the oars. Upon this the long-boat flopped; but the fort was obliged to give over firing for want of hands to affift an officer who had flewn fo generous an example of refolution. The Englifh, concluding very naturally, that the fort was alfo abandoned, landed about half a league north of the town, to which they immediately marched, and finding it forfaken, entered the fort, where, for fear of any furprife, they kept themfelves all night. But the inhabitants thought of nothing but faving their lives, and accordingly fled to a mountain, betwixt the Silla and the town, where they concealed themfelves, except a few flaves, who, finding that the enemy were all retired into the fort, took the advantage of the night, and boldly returned into the town, bringing off fuch arms and effects of their mafters as the night would permit, hiding in the fand what they found too heavy to carry up to the top of the mountain.

There was unfortunately then at Paita great quantities of meal, fruits, and brandy, configned to the provinces of the mountains, by the way of Piura; befides other goods depofited in the warehoufes to be fent to Panama. There was allo no fmall quantity of gold and filver. As foon as daylight returned, the Englifh left their retreat, and feeing every place forfaken, they began to enter the houfes, which are fo many magazines for goods. It was not long before they met with a quantity of brandy and wine, of which, like men whofe appetites are not to be governed at the fight of plenty after long diffrefs, they made a very licentious ufe, and became fo greatly inebriated, that the mulattoes and negro flaves, feeing their condition, abandoned their fears, and became fo familiar with the Englifh failors, as to drink with them, whilft others carried off hampers filled with the goods of their mafters, together with confiderable quantities of gold, which they buried in the fand. The long-boat, however, returned on board the fhip, but her chief fpoils confifted of provifions; and the men employed in that fervice regaled them-felves with a degree of intemperance equal to thofe who guarded the fort.

The inhabitants of Paita, who still timorously continued on the mountain, though in want of every thing, difpatched an express to Don Juan de Vinatea y Torres, the corregidor of Piura, and a native of the Canaries, who, agreeably to his known character of prudence and intrepidity, immediately affembled all the militia of that city and its dependencies, and haftened by forced marches through a troublefome fandy road of fourteen leagues to Paita. The English had been three days masters of Paita, when difcovering these fuccours, and being informed by the negroes and mulattoes- that the militia of Piura, headed by a famous general, were coming to diflodge them from the town; enraged at this, but wanting courage to defend what they had gained, or rather furprifed, carried off whatever they could, and took their leave of the place by ungeneroufly fetting fire to the houfes; an action which could reflect but little honour on the arms of their nation : but was rather a malicious transaction, to revenge on the poor inhabitants the coming of the militia, whom they did not dare to face. Nobody indeed imagined at that time that this proceeding was in confequence of any orders iffued by the commander, and it was afterwards known that he was under great concern for fuch unjuftifiable behaviour.

. The corregidor of Piura, as he had been very active in the defence of Paita, fo he loft no time in fending advice of the defcent to the corregidor of Guayaquil, that he might

put that city in a pofture of defence; it being natural to fuppofe, that the English would also make an attempt there, as it had always been attacked by every enemy who before infested those feas. Accordingly the inhabitants of Guayaquil were foon in arms, and the best measures taken with the utmost expedition. But the force of the enemy being uncertain, no other ship having been feen at Paita than that which entered the port, the corregidor and magistrates applied for affistance to the president and audience of Quito; who, among other measures for fecuring Guayaquil from the rage of the English, required us in His Majesty's name, to repair immediately to that city, and take upon us the command of the troops, all the jurisdictions having received orders to fend their contingencies; and to direct the works to be raifed, and the trenches necessary to be thrown up in the places most advantageous and most exposed.

As affairs of this nature admit of no delay, we immediately prepared for the journey, and leaving Quito the 16th of December, arrived at Guayaquil on the night of the 24th. But the paffage of the mountains was inconceivably fatiguing; the natural difficulty and badnefs of the roads, it being the beginning of winter, having been greatly increafed by the violent rains.

Having gone through all the neceffary operations, and taken the most proper meafures to defeat the attempts of an enemy, and such as we had the pleafure of feeing approved by the council of war held in that city, our longer flay only hindered the conclusion of our grand defign, and was of no further use here, especially as it was then certainly known that the enemy's fquadron had failed for Manta, the coafts of which, though in the jurifdiction of Guayaquil, are nearly twenty-eight leagues north of that city, and confequently to leeward of it. It was also known that the fleet intended to proceed from Manto to Acapulco. Impatient at the loss of time, we applied to the fame council of war, who were pleafed to grant leave for one of us to return to Quito, in order to complete the observations still remaining, that on any subsequent exigency we might be the more difengaged; but at the fame time thought it neceflary that one of us fhould continue on the fpot to act on any fudden emergency. The matter was foon agreed on between Don George Juan and myfelf, namely, that he fhould remain as commandant of Guayaquil, while I returned to continue the observations at Quito. But before I proceed, it will not be amifs to give an account of the transactions of the enemy's fquadron in those feas, according to the depositions of some prisoners whom they fet afhore at Manta.

This fquadron, at its entrance into the South Sea, befides being difperfed, was in a very fhattered condition; but arrived fucceflively at the island of Juan Fernandes, to the number of four fhips, from fifty to fixty guns, the Centurion and the Gloucester, a frigate between thirty-fix and forty guns, and a victualler. These ships came to an anchor close to the shore, their crews being very much diminished, and those which remained very fickly. Tents were pitched, a kind of village built with an hofpital for the recovery of their men. They arrived at this island in the month of June, and the commander was fo quick in his profecution of hostilities, that as foon as a number of failors fufficient to man the frigate were recovered, fhe was fent out on a cruize; and this being in the common track of thips bound from Callao to the coaft of Chili, they had the good fortune to take two or three, all of them richly laden, particularly the Aranzaza, one of the largest employed in those feas. Great numbers of men died on the island of Juan Fernandes, but on the recovery of the remainder, and the ships being careened, they funk the victualler, and fome time after the frigate, putting the guns and provisions on board the Aranzaza. After this the whole fquadron put to fea upon fresh enterprises, and about eight or nine vessels fell into their hands; and between Paita 40 %

Paita and the island of Lobos, they took a coast ship of great value. The facking of Paita was the last act of hostility they committed in these parts; for the English commodore having procured intelligence of the short time requisite to alarm Guayaquil, and finding that there had been abundantly more than sufficient, prudently abandoned a design, against which he judged insuperable precautions had been taken; and indeed had he made an attempt, in all probability those spirits would have been depressed, which were fo greatly elevated at their success in Paita.

After leaving Paita they steered for the coast of Manta, where they put the prisoners they had taken in the merchant fhips on board a long-boat, to make the best of their way to the land; the ship, keeping ten or twelve leagues from the shore; but many of the failors, negroes, and mulattoes, who had nothing to lofe, voluntarily entered with them. They now determined to fail for the Philippines, in order to intercept the galleon in her return to those islands, and which was to fail from Acapulco fome time in January. This was doubtlefs the most advantageous scheme that could be formed in their circumstances. But in this they were disappointed by the viceroy of Mexico; who, from the intelligence fent by the viceroy of Peru to all the ports on the coaft of the South Sea, as well as by expressed dispatched from Guayaquil and Atacames to Panama, deferred fending the ship that year; which the enemy being apprifed of, they burnt the Aranzaza, as they had before the other prizes, and continued their voyage towards the Philippines, where by a long perfeverance in a most tedious cruize they accomplifhed their defign. For the Acapulco fhip returning when all the danger was imagined to be over, fell in with the Centurion, and after a fhort, though fmart engagement, was taken.

But, to re-affume the thread of the narrative, to which I hope this has been no difagreeable interruption. On the fifth of January 1742, I fet out from Guayaquil for Quito, being the very worft time of the year for performing that journey; and, as fuch, I experienced it by feveral misfortunes. In one of the rivers we were obliged to ford, the two mules which first entered were fwept away by the current, and that which carried my portmanteau was loft; and the other, on which an Indian rode and led the former, fwam with great difficulty to the fhore, and the Indian faved himfelf by holding fast by the creature's tail; in which manner they were carried near a quarter of a league below the ford. If the travelling up the mountains was not attended with fuch imminent danger, it was extremely troublefome, a fpace of about half a league having taken me up from feven in the morning till feven in the afternoon, the mules, though light, falling at every ftep, nor was it an eafy matter to make them rife; and foon after the creatures became fo fatigued, they even funk under their own weight. At length I reached Quito on the nineteenth of the fame month; but had hardly alighted from the mules with the hopes of refting myfelf after thefe dangers and fatigues, when the prefident informed me, that three days before he had fent away an express, with letters from the viceroy, directing us to haften to Lima with all poffible expedition; and charging him in particular to provide immediately every thing neceffary that our journey might not be a moment delayed. It was therefore no time to think of reft; and, accordingly, after making fuch provisions as were abfolutely neceffary, I fet out on the 22d of the fame month, and a third time croffed that difficult mountain in my way to Guayaquil, where, having joined Don George Juan, who was included in the orders, we travelled night and day, with a difpatch answerable to the governor's impatience, all the towns on the road having received orders to keep beafts in readinefs, that we might not be detained a moment; and accordingly we reached Lima the 26th of February. In the meantime, the viceroy had ordered a fquadron of four men of war

to fail from Callao to Panama, for the defence of that place, which touched at Paita, in order to gain intelligence of the enemy's fhips, having orders to attack them if poffible; but, as we have already obferved, they were failed to the coaft of Acapulco. On our arrival, the viceroy was pleafed to express great fatisfaction at our dispatch, and to honour us with feveral commissions fuitable to the exigence of affairs; giving us the command of two frigates which he had ordered to be fitted out for the fecurity of the coaft of Chili, and the island of Juan Fernandes, against any reinforcement coming to the enemy. For though Commodore Anson had made no fecret of his intentions to the prisoners, and they had eagerly published them, no dependance could be had on informations given out by the enemy himself, and which were the more fuspicious as he told them openly. Besides, it was well known, that this fquadron originally consisted of more states, yet by perfeverance, and a fecond effort, they might fucceed.

Commodore Don Jofeph Pizarro had alfo been difappointed in getting into these feas this year, though he had attempted it in a fingle spipe scaled the Afia; but was obliged to put back to Buenos Ayres with the loss of one of his mass, and another was carried away just at the mouth of the Rio de la Plata. These disappointments rendered it the more necessary for the viceroy to provide for the defence of the coast of Chili, as all ships must pass near it in their course to Peru.

CHAP. III. — Voyage to the Island of Juan Fernandes; with an Account of the Seas and Winds in that Passage.

AMONG other precautions taken by the vigilant viceroy of Lima for the defence of the South Sea, he fitted out, as we have juft mentioned, two frigates for cruizing on the coaft of Chili; and gave the command of one, called Nueftra Senora de Belen, to Don George Juan, and appointed me for the other, called the Rofa: they had been both merchant fhips employed in thefe feas, all the King's fhips being fent in the Panama fquadron. They were between fix and feven hundred tons: each carried thirty guns on one deck, and three hundred and fifty men, all picked and expert failors. The fhips were alfo prime failors: fo that our force was, in all refpects, fufficient for the fervice on which it was employed; and, with the affiftance of Providence, would doubtlefs have anfwered the viceroy's expectations.

On the fourth of December 1742 we got under fail, intending to fleer first to the island of Juan Fernandes. Our courfe was from fouth-west one quarter westerly, to fouth one quarter westerly, according as the winds permitted, which were continually between the east-fouth-east and fouth-fouth-east, but not always of the fame flrength; fometimes short calms intervened, and, at others, fudden squalls, but did us no great damage. This course was continued till the 27th of the fame month, when, being in the latitude of 30°, and a little more than 15° west of Callao harbour, and the wind at north-west, we altered our course, fleering east-fouth-east, and east, till we made the island without that of Juan Fernandes. This happened on the 7th of January 1743, at three in the evening; the fouth point of the island bearing north-east, one quarter easterly, and the north-west point north-east. We now continued fleering east, one quarter northerly, and the next day, at eleven in the morning, we had fight of the other island, called De Tierra, bearing east-north-east. And in the following night, having weathered the north point, we the next day came to an anchor in the bay.

During our paffage from Callao to the tropic, we had light winds, often interrupted with fhort calms; but after we had croffed the tropic, they were more fettled, ftronger, and fqually, but not dangerous, being of fhort continuance. But, as I have already noticed in another part, they always blow from the fouth-east and never from the fouthweft, till you are fifteen or twenty degrees weft of the meridian of Callao. When we concluded ourfelves in the proper latitude for ftanding towards the iflands, and found the wind at north-welt, we steered east, in order to reach the meridian of Juan Fernandes. The wind then shifted round from west-north-west to west-fouth-west and fouth, and afterwards returned to its ufual rhumbs of fouth-east, fouth-fouth-east, and fouth-east, one quarter easterly. On the 27th of December, the wind again veered to the north-weft, and continued fo the whole day; the two fucceeding days at northnorth-weft and north-weft, but on the 30th veered to the weft-north-weft. On the 31ft it shifted to the fouth-fouth-west, and on the 1st of January veered round to the fouth, fouth-fouth-east, and fouth-east. Those, therefore, who endeavour to gain fuch winds, ftand off from the coaft till they fall in with them; and this fometimes happens at a greater diffance than at others; I mean during the fummer; for in winter a different courfe is neceffary, as we fhall explain in the fequel.

The atmosphere of these feas is generally filled with thick vapours to a confiderable height: fo that often for four or five days fucceffively, there is no poffibility of obferving the latitude. These fogs the failors call Sures Pardos, and are fond of them, as they are a fure fign that the wind will be fresh and constant, and that they shall not be troubled with calms. At this time it is very common to fee the horizon filled with a dark cloud, but of no dangerous confequence, except freshening the wind a little more than usual, and a short shower of rain; the weather, in four or five minutes, becoming as fair as before. The fame thing prefages the turbonada, or short hurricane; for the cloud is no fooner formed on the horizon, than it begins, according to the failor's phrase, "to open its eye," i. e. the cloud breaks, and the part of the horizon where it was formed becomes clear. These turbonadas are most common after you are passed the 17th or 18th of latitude.

Near the tropic, that is, between the parallels of fourteen or fixteen and twenty-eight degrees, calms greatly prevail during the months of January, February, and even March; and in fome years more than others; but near the coaft they are not fo common, on account of the land breezes, which are always between the fouth-east and east-fouth-east. Formerly, and even till within thefe few years, the voyage to and from Callao to Chili, was rarely performed in lefs than a twelvemonth; owing to a fear of flanding off to a great diftance from the coaft; for by tacking along the fhore they made but little way, and, confequently, laid the fhips under a neceffity of putting into the intermediate harbours for water and provisions; but an European pilot making his first voyage in the usual manner, observed that the course of the currents was from the west and south-west, whence he concluded that winds from those quarters might be found farther off at fea. Accordingly, in his voyage, he flood off to a great diftance, in order to fall in with those winds, and had the fatisfaction to find that he was not miltaken ; fo that he reached Chili in little more than thirty days. This being fo far fhort of the ufual term, he was fufpected of forcery, and ever after called Brujo, a forcerer. From this report, and the evidence of the dates of his papers, perfons of all ranks were perfuaded that he failed by magic, and the Inquifition caufed him to be apprehended; but, on examining his journals, they applauded his fagacity, and were convinced, that if others did not perform the fame voyage with equal dispatch, it was owing to their timidity in not stretching off to a proper. diftance

distance from the coast as he had done. And thus he had the honour of leading the way in that expeditious course, which has ever since been followed.

In all this paffage you have an eafy fea, the fwell coming fometimes from the foutheast, fouth or east being the points from whence the wind blows; at others, from the fouth-west and west, particularly after you are ten or twelve degrees from the coast. And it is only near the island of Juan Fernandes that you meet with a hollow fea. The course of the waves is there fufficiently manifest; for, on quitting the coast of Callao to about fixty degrees farther to the fouth, their courfe is to the northwards : but from between the parallels of fixteen and twenty degrees, their courfe is imperceptible; while in higher latitudes they run with fome force fouth and fouth-weft, and with a greater velocity in winter than in fummer; as I know from my own experience, having, in my fecond voyage to Chili, in the year 1744, at the end of October, and beginning of November, taken the greatest care, that the distances between the knots on the log line fhould be forty-feven Paris feet and a half, for meafuring the fhip's way; but every day found, that the observed latitude exceeded the latitude by account ten or fifteen minutes. The fame obfervation was made by Don George Juan, in both his voyages; as well as by the captain and officers of the French fhip, in which I returned: fo that the reality of the courfe of the fea is proved beyond exception; and, in this manner, it continues to the 38th or 40th degree of latitude.

In the latitude of 34° 30' and 4° 10' weft of Callao, you meet with a track of green water, extending north and fouth, and along which you fail above thirty leagues. Probably it runs to a great diffance in that fea, being found in every latitude to the coaft of Guatemala; but not always under the fame meridian, winding away north-weft. It is also met with in a higher latitude than that of Juan Fernandes; and it has also been observed by ships in their course to Chiloe, or Baldivia.

In this paffage, though part of it be at fuch a great diftance from the land, we meet with a kind of birds called Pardelas, which diftinguifh themfelves from all other fpecies, by venturing fo far from the land. They are fomething larger than a pigeon; their bodies long; their necks fhort; their tails of a proper proportion, and their wings long and flender. There are two forts of thefe birds, and of different colours, one parda or brown, from whence they derive their name; the other black, and called Pardela Gallinera, but in other circumftances they are entirely the fame. A fmaller bird is alfo feen in thefe feas, called Alma de Maestre; it is white fpotted with black, and has a long tail; but it is not fo common as the Pardelas: they are most frequent in ftormy weather. Within ten leagues of the islands of Juan Fernandes are feen fome balenatos, or fmall whales; and at near the fame diftance, fea-wolves; but the latter feldom go from the fhore.

Though this fea has not been improperly dignified with the appellation of Pacific, with regard to the interval between the tropics; yet that particular cannot with any juffice be applied to it, if confidered in its whole extent; tempefluous weather being equally common in the latitudes of twenty and twenty-three degrees in the South Sea, as in the oceans of Europe; and in higher latitudes florms are more frequent and violent. I am inclined to think that the first Spaniards gave it the name of the Pacific Sea, from their being greatly pleafed with its fmoothness, and the gentleness of the winds in their first voyages, concluding that it was fo in every part; but the fury of the winter florms, and the roughness of the fea, which are equal to those in any other parts, abundantly demonstrate that they formed a judgment too hastily.

Along these coafts and the adjacent fea, the winter begins at the fame time as at Lima; that is, in the month of June lasting till October and November; but its greatest violence violence is pail in August or September. During the whole winter feafon there is no dependance on being lafe from storms, which rife with a fudden rapidity; and in all latitudes beyond forty degrees, the winter fets in confiderably fooner, even at the beginning of April, and is also observed to last longer.

The winter in all latitudes beyond twenty degrees is ushered in by northerly winds. They are not indeed fixed like those of the fouth, though common to the feason. They always blow with great violence, but not always with the fame degree, being lefs ftrong in the beginning than in the depth of winter, when their rage ftrikes the most refolute with horror, and raifes fuch enormous waves, that the atmosphere is crouded with vapours, and thefe turn to a drizzling rain, which lafts as long as the ftorm continues. It often happens that these violent north winds, without the least fign of an approaching change, shift round instantly to the west, which change is called the travesia, but continue to blow with the fame force. Sometimes indeed this fudden change is indicated by the horizon clearing up a little in that quarter; but in feven or eight minutes after the appearance of this small gleam of light, a fecond storm comes on; so that when a ship is labouring against the violence of a storm from the north, the greatest care must be taken, on the least appearance, to prepare for the travefia; indeed its rapidity is often fuch as not to allow time fufficient for making the neceffary preparations, and the danger is fufficiently evident if the fhip has her fails fet, or is lying-to.

In the month of April 1743, in the latitude of forty degrees, I had the misfortune of experiencing the fury of a ftorm at north, which lasted in its full violence from the 29th of March till the 4th of April. Twice the wind fhifted to the travefia, and veering round to the fouthward, returned in a few hours to the north. The first time it chifted to the weft, the ship, by the vortices formed in the fea by this fudden opposition to the course of its waves, was to covered with water from head to ftern, that the officers who were on the watch concluded fhe had foundered; but fortunately we had our larboard tacks on board, and by a fmall motion of the helm, the fhip followed the change of the wind, and brought-to without receiving any damage; whereas we fhould otherwife in all probability have been loft. Another circumstance in our favour was, that the wind was fome points to the weftward of the north. For though thefe winds are here called nortes, they are generally between the north and north-weft, and during their feafon, veering in finall fqualls to the north, and in others to the north-weft. Sudden calms also often intervene; but if these happen before the wind has paffed the travefia, it returns in about half, or at least an hour with redoubled fury. These dangerous variations are however indicated by the thickness of the atmosphere, and the denfe clouds in the horizon. The duration of thefe ftorms is far from being fixed or regular, though I well know fome pilots here will have it, that the north wind blows twenty-four hours, and then paffes to the travefia; that it continues there with equal violence three or four hours, accompanied with flowers, which abate its first violence; and that it then veers round till it comes to the fouth-weft, when fair weather fugceeds. I own indeed that I have in feveral voyages found this to be true; but at other times I experienced, that the fucceflive changes of the wind are very different. The ftorm at north I before mentioned, began March the 29th, at one in the afternoon, and lafted till the 31ft at ten at night, which made fifty-feven hours; then the wind fhifted to the travefia, where it continued till the 1ft of April without any abatement, that is, during the fpace of twenty-two hours. From the weft, the wind veered round to the welt-fouth-west and fouth-west, still blowing with its former violence. Hence a short calm fucceeded; after which, it a fecond time fhifted to the north, where it continued blowing with its former fury fifteen or twenty hours; then came on a fecond travelia; and

and foon after its violence abated, and the next night fhifted from fouth-weft to foutheast. Thus the whole continuance of the storm was four natural days and nine hours; and I have fince met with others of the fame violence and duration, as I shall mention in their proper place. What I would infer from my own experience, confirmed by the information of feveral pilots, is, that the duration of thefe florms is proportional to the latitude ; being between twenty and thirty degrees, neither fo violent nor lafting as between thirty and thirty-fix; and ftill encreafing in proportion as the latitude is greater.

These winds have likewise no regular or settled period, the interval betwixt them being fometimes not above eight days; at others much longer; nor do they always blow with the fame violence; but are most uncertain in the winter, rifing fuddenly when leaft expected, though not blowing always with the fame force.

In this fea a change of the wind from north to north-east, is a fure fign of ftormy weather; for the wind is never fixed in the north-east, nor does it ever change from thence to the eaft, its conftant variation being to the weft or fouth-weft, contrary to what is feen in the northern hemifphere. Indeed in both the change of the wind ufually corresponds with the course of the fun; and hence it is, that as in one hemisphere it changes from the eaft to fouth, and thence to the weft, conformably to the course of the luminary, fo in the other it changes for the fame reafon, from the east to north, and afterwards to weft.

It is an old obfervation among the pilots of this fea, that a day or two before the north wind begins to blow, there is always feen along the fhores, and about the fhips, a fort of fea fowl called Quebrantahueffas, i. e. offifrage, or break-bones. These birds feldom appear at other times. I am little inclined to believe, much lefs to propagate any vulgar report : but here I must declare, that after repeated obfervations, in order to difcover the truth or falfity of this affertion, I always faw them before every florm I met with here; and fometimes even a day before, when there was not the leaft appearance of the wind's coming about to the north, and as the winds increased, great numbers of them gathered about the ship, fometimes flying round her, at others fettling on the waves, but always kept near the ship, till fair weather returned. It is still more fingular, that they are never feen either on the fea or land, except in ftormy weather; nor is it known where they hide themfelves when is it fair, that they flould fo immediately cover, as it were, the fea, when their natural inftinct informs them of the approach of a north wind.

This bird exceeds the fize of a large duck, has a fhort thick arched neck, with a large head and a thick but fhort bill, a fmall tail, a rifing back, large wings and fmall legs. They are by their plumage divided into two different kinds, one being white, fpotted with dark brown, and the upper part of its wings entirely of the latter colour : the breaft of the other, together with the infide of the wings, the whole head, and the lower part of the neck, is white; but the back, the upper parts of the wings and neck, of a very dark brown, and are hence called Lamo prieto (Black-backs). The last kind are by the pilots accounted the most certain fign, the others being often feen without any alteration of weather immediately fucceeding. I well knew a pilot here, who was a native of Callao, a man of indefatigable curiofity and exactnefs, never omitting to infert in his journals the most minute circumstances. His name was Bernardo de Mendofa, and with him thefe fowls were confidered as fo fure a fign, that when he was in any of these ports, and his ship ready to put to sea, it was his constant custom to take a walk on the fhore, to fee whether he could perceive any of them in the offing; and if he did, he continued 4 P

YOL. XIV.

continued in the harbour till the tempeft was over ; and he affured me that his conforming to this obfervation had been of the greateft advantage to him ; relating, in confirmation of his opinion, that being once at Baldivia, the governor, fo far from regarding his apprehenfions from fuch prefages, turned them into ridicule, and infifted on his putting to fea, but was foon convinced that thefe omens were not chimeras ; for the veffel was hardly out of the harbour, when a ftorm at north came on with fuch violence, that it was with the utmost difficulty fhe was faved from being wrecked in that bay ; and this would infallibly at laft have been the confequence, had the ftorm continued fome time longer ; for, even when the wind abated, they found it hardly possible to carry her into the harbour to repair the damages fhe had received.

Other obfervations relating to these northerly winds are, that they always blow when the Sures are in their strength, in the higher latitudes, and also between the parallel of 20° and that of Panama, it being then winter in those climates; and are also found in latitudes beyond 20°, but never nearer to the equinoctial. Another observation is, that during the time of the brifas, between Panama and the equinoctial, these winds are never felt in any part of the Pacific Sea, the fouth winds alone prevailing there. Lastly, it is observed, that within thirty or forty leagues of the coast of Chili, while one part is agitated with storms at north, the fouth winds freshen in another. This, however fingular it may appear, is no more than what was experienced by the three stores, the latter took her leave of them, and bore away with a fresh gale at fouth to Valparaiso, whils the others who steered for the islands of Juan Fernandes, were overtaken in their passage by a ftorm at north.

As in fummer the fouth winds generally fhift between the fouth-fouth eaft and eaftfouth-eaft, fo in winter they continue for fome time between the fouth-weft and fouth; confequently there is a neceffity, in the latter feafon, to ftand out to fuch a great diffance from the coaft in queft of them, as muft be done in fummer.

CHAP. IV. — Account of the Islands of Juan Fernandes. Voyage from those Islands to Santa Maria, and from thence to the Bay of Conception.

THE islands of Juan Fernandes, which, on account of their fituation, belong to the kingdom of Chili, are two in number; one, as lying farther to the weft, is diffinguished by the epithet De Afuera; and the other, as nearer the land, or to the eastward, is called La de Tierra. The former, which is fomething above a league in length, is nearly of an oval figure, and the land very high, fo that it has the appearance of a round mountain; and its steepness on all fides renders it every where almost inacceffible. Several large cascades tumble from its summit, and the water of one of them, after a succeffion of long falls among the rocks on the fouth-west fide of the island, precipitates itself into the fea with such amazing impetuosity, that its froth may be feen at three leagues distance. The longitude of this island, according to the reckoning of Don George Juan, admitting the currents to fet towards the fouth-west, is $3^{\circ} 20'$ W. from the meridian of Callao; but, according to my computation, $3^{\circ} 27'$. By the coast we fteered from the meridian De Afuera till we reached La de Tierra, we concluded the distance between those islands to be thirty-four leagues.

The island De Tierra, which is four hundred and forty leagues to the north of Cape Horn, is between three or four leagues from east to west, which is its greatest length.

Τŧ

It is for the most part high land, but not deftitute of fome plains, though these are part of the mountains themfelves. Its valleys are full of trees, and fome of them an excellent timber. Here is likewife the piemento tree, refembling the chiapa in New Spain. The plains and little hills produce a fort of ftraw, refembling that of oats, and growing higher than the usual stature of a man. The waters, of which several streams fall from the eminences into the fea, is very light, creates an appetite, and, among other medicinal qualities, is excellent against indigestion. Here are many dogs of different species, particularly of the greyhound kind; and alfo a great number of goats, which it is very difficult to come at, artfully keeping themfelves among those crags and precipices, where no other animal but themfelves can live. The dogs owe their origin to a colony fent thither, not many years ago, by the prefident of Chili, and the viceroy of Peru, in order totally to exterminate the goats, that any pirates or fhips of the enemy might not here be furnished with provisions. But this scheme has proved ineffectual, the dogs being incapable of purfuing them among the faftneffes where they live, these animals leaping from one rock to another with furprifing agility. Thus far, indeed, it has answered the purpofe; for fhips cannot now fo eafily furnish themselves with provisions here, it being very difficult to kill even a fingle goat.

Very few birds frequent this island; and, though we found feveral white feathers on the ground, and alfo parts of carcafes, which feemed to have been gnawed by the dogs, we faw but very few flying, and those wholly black. It is not indeed improbable but these islands may be the winter retreats of fome kinds of birds, which on the approach of fummer remove to another climate.

In this island are mountains of a great height; and the fides of those towards the north are covered with trees of good timber: but few or none are seen on those of the south part, except in the breaches and valleys, owing doubtless to the piercing violence of the fouth winds, which destroys them or checks their growth. On the other hand, every part is covered with tall grass or straw, already mentioned. Among the various forts of trees with which the island is decorated, there are none of the American fruittrees, owing to the coldness of the climate, which is increased by the violence of the winds, fo that even the heats of source are moderate.

In this island are three harbours or bays; but those on the west and east fides have only water fufficient for fmall veffels, fo that the only one proper for large fhips is that on the north, or rather north-east, fide of the island. The latter, which is properly called Juan Fernandes, confifts of a bay formed by the coaft, but exposed to the north and north-east winds, fo that in winter no ship can lie fafely in it; and even in summer it is not free from danger, on account of the great depth of water; for within the diftance of a cable's length or two from the fhore it has fifty fathoms, and growing deeper as the diftance increafes. To this must also be added the badness of the ground, which being of fand, and a tenacious mud, mixed with fhells and gravel, the cables are greatly rubbed by it, and confequently the anchorage unfafe. The fhips are also exposed to continual fqualls caufed by the Sures, which produce a very troublefome fea; violent currents likewife fet into the bay, and form dangerous eddies. Laftly, the fteepness of the coaft renders it very difficult to be approached on account of the dafhing of the waves against it; and accordingly the only ships that put into this port are such as belong to pirates, or the enemy, this island being the fole refuge for them in the South Seas: and they expose themfelves to these dangers, merely through the necessity of taking in water and wood, refreshing their crews, and furnishing themselves with fish, which is caught here in great abundance.

4P2

These foreign ships, which, in order to refresh their crews after the fatigues of so long a voyage, and the dangers of weathering Cape Horn, make for the harbour of Juan Fernandes, are very careful to fecure themfelves against the above-mentioned dangers, and therefore fail up to the farthest part of the bay, where they moor with an anchor in the water, and another on the south-west shore. But even this precaution is not fometimes fufficient to fecure them, as appears from the wrecks of three fhips; two of which have been long there, but the other of a more recent date.

The island De Afuera is every where prodigiously high land, and the shores fo steep and craggy as to afford no convenient landing-place; which, together with its having no harbour, prevents all fhips, whether those of the enemy, or the country, from touching at it.

The fea, all around the ifland De Tierra, may be faid to be filled with fea-wolves, of which there are observed to be three principal species; the first are small, not being above a yard in length, and their hair a dark brown: those of the fecond are about a toife and a half in length, and of a greyish brown colour: and those of the third are in general two toiles in length, and the hair of a pale ash-colour. The head of these creatures is too fmall in proportion to the rest of their body, and terminates in a fnout; which, bearing a great refemblance to that of a wolf, they have acquired the name. The mouth is proportioned to the head; but the tongue is very thick, and almost round. They have a row of large pointed teeth in each jaw, two thirds of which are in alveoli or fockets; but the others, being the most hard and folid, are without them. This threatening appearance is heightened by whifkers, like those of cats, or rather tygers. Their eyes are fmall; and their ears, from the root to the extremity, not above fix or eight lines in length, and of a proportional breadth. Their nostrils are also very small, and the only parts deftitute of hair, these having a glandulous membrane, like the fame part in dogs. This creature has two fins, which ferve them both for fwimming in the water, and for walking on the ground. The tail, which is every where equally cartilaginous, is of a length proportional to the body, but much thicker than those of the generality of fish. They carry it horizontally; fo that by inverting the laft vertebræ, where the articulations are more flexible than in other parts, they form of it a kind of hind feet; and at the fame time the fins helping them before, they walk without trailing the body along the ground. A remarkable particular in the formation of this amphibious creature is, that in both the fins and the extremity of the tail there are protuberances refembling fingers; they are fmall bones or cartilages inclosed within those callous membranes which cover the fins and tail. These fingers they can expand fo as to cover the whole breadth of the fin; and thus form, as it were, the fole to tread upon. At the end of each is a nail, of about two lines in length, and half a line in breadth.

Among the feveral articulations in the fins, are two very remarkable, one at the junction of the omoplata, where it forms a kind of shoulder, and the other at the extremity of the fin, where the fingers are connected. The fame economy is obferved in the tail, and thus they are adapted to an amphibious life : accordingly, though not with a celerity equal to that of quadrupeds, they climb up fteep rocks of a height one would think impracticable to fuch creatures, as they are abfolutely fo to men; and come down again with the fame eafe, notwithstanding their great bulk and fatnels, which is fuch in the larger species, that their diameter at the fins is little short of a yard and a half.

Their organs of generation are placed at the lower extremity of the belly, and at the time of coition the male and female place themfelves on their tails, with their faces II

inward,

inward, embracing each other with their fins, which, on this occafion, fupply the place of arms. The female brings forth and fuckles her young in the fame manner as terreftrial creatures, but has never above one or two at a time.

The largest species are by fome called fea-lions, but in these feas their general name is Lobos de Aceyte, or oil-wolves : becaufe when they move, they appear like a skin full of oil, from the motion of the vaft quantity of fat, or blubber, of which their enormous body confifts. And though oil is made from all the fpecies, none yield it in proportion to thefe; indeed they confift of little elfe. I was once entertained with a particular circumstance relating to this species. A failor having wounded one, it immediately plunged itself into the fea; but had hardly tinged the water with its blood, when it was furrounded in an inftant by fhoals of the other two fpecies, who attacked and devoured it in a few minutes, which was not the cafe with the other fpecies; which, when wounded, though they also plunged into the water, yet the fight of their blood had no effect on others; nor were they ever attacked. They are mifchievous, and their bite the more dangerous, as they never let go their hold; but they are heavy, torpid, and fluggifh; nor can they turn their heads without great difficulty. They were fo far from avoiding our men, that they were obliged to ftrike them with flicks to make them move out of their way. The cry of their young very nearly refembles the bleating of a fheep; but when they all join, as it were in concert, the noife is infupportable. They are the chief food of the dogs, who, after killing them, take off their skin with great dexterity. In their attack, they aim always at the throat; and when they have deftroyed the creature, they tear the fkin all round the neck; then feizing it by the head, and putting their fore-feet between the fkin and the flefh, they ftrip it entirely off, and then devour the carcafe.

The largeft kind, as we have already obferved, are, by the failors, called fea-lions, the heir of the neck diffinguifhing them from the others, and has fome refemblance to a mane, though not much longer than that on the other parts of the animal; but as their whole body has a greater fimilarity to that of the wolf, and being entirely like the other fpecies, the name of fea-wolf feens to be more proper than that given them by the feamen.

All these kinds of fea-wolves have fo tender a fensation at the extremity of their nostrils, that though they will bear many wounds in other parts of the body, the flightest ftroke on this dispatches them; and that they are fensible of it, is evident from their making it their chief care to defend that part from any violence.

A great fingularity is also observable in the dogs of this island, namely, that they never bark. We caught fome of them, and brought them on board; but they never made any noise till joined with fome tame dogs, and then indeed they began to imitate them, but in a ftrange manner, as if learning a thing not natural to them.

The iflands of Juan Fernandes abound greatly in fifh, among which are two fpecies, not obferved in any other part of this vaft fea. One is the cod, which, though not abfolutely like that of Newfoundland, the difference is very minute, either with regard to colour, form, tafte, and even the fmall fcales obfervable on that fifh. They are of different fizes, but the largeft three or four feet in length.

The other fpecies is a fifh refembling the tollo in fhape, but much more palatable. From the fore part of each of the two fins on his back, grows a kind of triangular fpur, a little bent, but round near the back, and terminating in a point. It has a fine glofs, and the hardnefs of a bone. At the root of it is a foft fpungy fubftance. This fpur, or bone, for it refembles both, is fuch a prefent remedy for the tooth-ache, that,

that, the point of it being applied to the part affected, it entirely removes the pain in half an hour. The first account I had of this fingular virtue was from a Frenchman, who was my pilot; but as reafon would not permit me to give credit, without experience, to a circumstance feemingly fo void of probability, the affeverations of the man increafed my defire of putting it to the proof, which I did feveral times, and always with fuccefs. I did not fail to communicate a difcovery of fuch great benefit; and accordingly feveral of my acquaintance, who laboured under that excruciating pain, made trial of it, and found from it the fame happy effects; with this particular circumstance, that foon after the application of the bone to the part affected, it became infenfible of pain, a drowfinefs fucceeded, and they awaked free from the torture. I obferved that the fpongy fubftance at the root, during the operation, became gradually inflated, and fofter than in its natural ftate, which could not be effected folely by the moifture of the mouth, the part put into it being compact, hard, and fmooth as ivory. I am therefore inclined to think, that it has an attractive virtue, which extracts the morbific humour, and collects it in the root. The common length of thefe anodyne fpurs, or bones, is two inches and a half, of which one moiety, together with the root, is within the body of the fifh. Each face of the triangle is about four lines in breadth. They are taken in the fame plenty as the others.

The abundance of fifh about thefe iflands is fuch, that two hours fifhing in the morning, and as many in the evening, with only fix or eight nets, procured not only a fufficiency for all the fhip's company, but a confiderable quantity remained for falting. The chief kinds are cod, berrugates, the fpur-fifh, fole, turbot, jureles, and lobfters; befides an infinite number of fmall fifh, which covered the water; a circum-ftance the more furprifing, as there are fuch multitudes of fea-wolves all along the coaft, which live on nothing elfe. For though there is very little fifhing near thefe iflands, yet doubtlefs the conftant ravages of fuch enormous creatures may be thought at leaft equal to the capture of a large fifhery.

Thefe feveral fpecies are all fo delicate and palatable, that the epicure would be at a lofs which to prefer. The lobsters are often half a yard in length, and are taken even with greater ease than the others. They are of an exquisite taste, though the meat is fomething hard. The berrugate is a large fcaly fish.

We continued at anchor near this ifland till the 22d of January; during which time, we reconnoitred every part of it, and particularly vifited the place where the English had erected their tents, in order to difcover any private fignal they might have left for the information of any other fhips that fhould afterwards touch at this ifland. The prefident of Chili had, with the fame view, fent a fhip hither fome months before our arrival; but all they met with was two bottles, in each of which was a writing in cypher; and all we difcovered were the piquets and poles of the tents; with their fmall wooden bridges for croffing the breaches, and other things of that kind. Both our frigates having taken in water and wood, we failed at three in the afternoon for the ifland of Santa Maria, which we made on the 5th of February, and after carefully furveying it on all fides, continued our courfe till half an hour after feven of the fame day, when we came to an anchor at Puerto Tome, on the eaft fide of the bay of Conception.

At our departure from the island of Fernandes, we steered first east one quarter foutherly, and the winds continuing between the fouth and fouth-east, we tacked on the 23d, and steered between the west-fouth-west and fouth-fouth-west, but on the 28th, being in the latitude of 35° 33' 30", 33' 30" fouth latitude, and a degree west of the meridian De

Afuera de Juan Fernandes, we observed the winds to shift from south to south-west. Accordingly we altered our courfe, steered east and east-fouth-east till the 31st day, when we found ourfelves in the latitude of 36° 23' and about fifteen or twenty leagues north-weft of the bay of Conception. But the weather, which had been the fame alfo the day preceding, was fo hazy, that we could not fee the other frigate. Sometimes indeed we difcerned the colours, but without having any fight either of the hull or mast*. This was however fufficient to affure us that they were within half a cannon shot of each other. This, and our being fomething to leeward of the bay, obliged us to ftand to fome diftance off to fea; and thus we kept along the coaft without venturing to approach it till the 5th, when at half an hour after nine in the morning, the weather cleared up, and gave us fight of Cape Carnero, bearing fouth-fouth-eaft ten or twelve leagues: and the middle part of Santa Maria, north-east one quarter northerly. We crouded all fail towards the latter, and at eleven the frigates lay-to, Cape Rumena bearing fouth one quarter eafterly diftance four leagues, and Cape Lavapies eaft one quarter north-east, distance two leagues. The fouth point of the island of Santa Maria bore north-eaft four leagues diftant, the north point of the fame ifland north-north-eaft and a large rock without, north one quarter eafterly. Here we fent our long boat with orders to go betwixt the iflands and the continent, and take a furvey of it, and then join us in Conception bay. Accordingly the frigates got under fail at twelve at noon, with a fresh gale at south-south-east and soon after came to an anchor in the faid bay.

Don George Juan, from his reckoning, concluded that the island of Santa Maria, which lies in 37° 3' fouth latitude, was 7° 10' east of the island De Afuera de Juan Fernandes. Whereas I differed 0° 14' from him, making it only 6° 56'.

To the north-weft of this ifland, at the diftance of a league and a half, is a lofty fteep rock with feveral fmaller at its foot; and one league and a half farther to feaward, alfo on the north-weft fide of the ifland, is a fhoal, which, though we at this time faw no breakers on it, we took care to keep at a proper diftance. And in my fecond voyage, in the year 1744, I had a clear view of it, for I not only faw the breakers, it being then low-water and the fea running high, but alfo a reef of rocks at the water's edge. The country pilots have affured me, that by fteering in the middle between this fhallow and the rock, there is a very fafe channel, having in moft parts fifty or fixty fathom water.

In my fecond voyage above-mentioned, on board a French frigate called La Delivrance, in the latitude of $36^{\circ} 54'$ and $2^{\circ} 24'$ weft of the ifland of Santa Maria, about half an hour after making our obfervations, we unexpectedly found ourfelves in a tract of thick water of a yellowifh colour; which, naturally occafioning a great furprife, we flarted from the table, being then at dinner, and haftened up to the quarterdeck. It was now too late to put the fhip about; fhe being in the very centre of it. This fhoal, as it appeared to us, ftretched near two leagues from north to fouth, and was about fix or eight hundred toifes over from eaft to weft. The colour of the water was of fo deep a yellow, that, after Providence had happily carried us through it, we could eafily diftinguifh it at a confiderable diftance. I muft own, our confternation was fuch, from our concluding we were on a fhoal, as there was all the appearance of it, that we had no thoughts of bringing the frigate-to, till we had got our founding line in order. In fome parts the water was of a deeper yellow, as being more

* This I fuppofe is a miftake, and ought to be read thus: fometimes we faw the looming of the fails, but could not perceive the hull. A. fhallow. In others we could perceive rays of fea or green water, intermixed with that of the fhoal. No chart has taken any notice of it; nor was it indeed before known to any of the pilots of thefe feas, as they themfelves acknowledged, notwithftanding their repeated voyages. We fhould therefore have been guilty of a great indifference with regard to the public fafety, had we neglected to have given this account of it.

The general winds, between the iflands of Juan Fernandes and this place, are the fame as those which reign in the gulph; and which have been already defcribed; but the currents are different, fetting north-west; and this becomes the more perceivable in proportion as you approach nearer to the coast. From the island De Tierra de Juan Fernandes eastward, the water is greenish, and westward blueish. This I have myself observed feveral times, even when not in fight of the island; and also that the colour of the water changes with the meridian. Between the islands and the continent I have frequently seen the water set on by the whales; an appearance which hasbeen often taken for breakers.

Within twenty or thirty leagues of the coaft, we met with large flights of curlews; but this diftance is the utmost limit of their excursions. These birds are of a middling bigness, mostly white except the breast and upper part of the wings, which are of a role colour. Their heads are proportionate to their bodies, but their bill very long, flender and crooked; and as small at the root as at the point. They fly in vast troops, and confequently are easily known.

The coafts in general of this fea, from Guayaquil to the fouthward, are very difficult to be feen, except in fummer time, being the whole winter covered with fuch thick fogs, that no object can be difcerned at half a league diftance. And this dangerous hazinefs extends often to the diftance of fifteen or twenty leagues off to fea. But during the night, and till about ten or eleven in the morning, the fog is only on the land. At that time it moves farther to feaward, with a prodigious denfity, refembling a wall, totally concealing every object on the other fide of it : and the cautious mariner forbears to make his way through it, being uncertain whether he fhall meet with clearer weather, as he approaches nearer to the coaft.

Thefe winter fogs on the coaft of Chili, feem to be occafioned by the north winds; they being obferved always to thicken when thofe winds blow, and though the atmofphere be clear when the wind fhifts to that quarter, it is inftantaneoufly filled with thofe vapours; which continue without any diminution, till the fouth winds fet in, and have blown frefh for two or three days fucceflively. But as in winter they are ufually interrupted by the winds at north-weft and fouth-weft, thefe vapours, fo inconvenient to commerce, are feldom totally difperfed; and it is a common phrafe among the mariners of thefe parts, that the north is a filthy wind on account of the difagreeable vapours, with which it is loaded, and the fouth is a cleanly wind, fweeping thefe nuifances from the coaft and country, and purifying the air. I call thefe winter fogs, as they are equally common all along the coaft from the parallel of twenty to the equinox, where no north winds are known. And as I have already related of Lima, all the inhabitants of the coaft live, during the winter, in a perpetual fog.

South Latitude.		Longitude from Callao.		Variations, and their Kinds.

I fhall conclude this chapter, with a table of the variations of the needle obferved in my fecond voyage, in the frigate La Delivrance, from Callao to Conception Bay.

Don George Juan, who failed from Callao, with the Delivrance, as commander of the Lys, another French frigate, made the following observations :---

South Latitude.		Longitude from Callao.		Variations, and their Kinds.				
Degrees.	Minutes.	Degrees.	Minutes.	Degrees.	Minutes.			
12	06	000	00	8	52 E			
12	50	359	00	7 6	48

33	45	002	00	10	45			
On the Coaft of Valparaifo.								
33	20	005	00	12	30			

The fenfible difference between these variations arole from the difference of the needles, by which they were observed; and the reasons for that difference have been confidered in another place.

The difference of the meridians between Callao and Conception, appears from the feries of obfervations made by us at Lima, and those by Father Feuillée, at the fame place, to be 3° 58', which is the eastern diffance of Conception from Callao, yet in the maps of this country, it is placed eight or nine degrees to the eastward, a mistake VOL. XIV. 4 Q proceeding

proceeding from a want of attention in the pilots in obferving the direction of the currents; and as thefe carry the fhip towards the fouth-weft, the pilots, when in the offing, begin to compute their diftance from the coaft. But this being in reality much greater than that given by the rhumb, they are afterwards under a neceffity of fteering towards the eaft, and thence their reckoning makes the port farther to the eaftward than it really is; and the currents running fometimes with a greater velocity than at others, pilots often differ in placing the meridian of Conception, fo that very few at first make the Cape, though affisted by that chart, which they confider as the beft. For all thefe draughts are laid down from the false conclusions of erroneous journals, no allowance having been made for the fetting of the currents. The difference of latitude proves, beyond contradiction, the reality of the currents, and the degree of their velocity, as I have already noticed.

On the 26th of January, the Efperanza, a Spanish frigate, commanded by Don Pedro de Mendinueta, came to an anchor in the harbour of Talcaguano, after her voyage from Monte-Video in the river of Buenos Ayres, round Cape Horn, which she had performed in fixty-fix days. On our arrival at Puerto Tome, an officer came on board the Belin, the very fame night we came to an anchor; and the day following, being the fixth of February, our two frigates joined the Esperanza at Talcaguano, and formed a little squadron under the command of Don Pedro de Mendinueta, according to orders from the Viceroy, who had received an account that the Esperanza lay ready at Monte-Video, to proceed on her voyage that fummer into the South Sea, and that Commodore Don Joseph Pizarro, with other officers, were travelling over-land to Santiago de Chili; which he had reached at the time of our arrival.

CHAP. V. — Defcription of the City of Conception, in the Kingdom of Chili; with an Account of its Commerce, and the Fertility of the Country.

CONCEPTION, otherwife called Penco, was first founded by Captain Pedro de Valdivia, in the year 1550. But the powerful revolts of the Indians of Arauco and Tucapel, obliged its inhabitants to remove to Santiago. They cannot, however, be charged, with having quitted their fettlement, till they had been defeated feveral times by the Indians, in one of which they loft the above-mentioned Pedro de Valdivia, who, as governor of that kingdom, was commander-in-chief of the forces employed in the conquest of it. The fame unhappy fate also attended Francisco de Villagra, who, as Valdivia's lieutenant-general, had fucceeded in the command. Thefe misfortunes, and the fuperiority of the allied Indians, obliged the Spaniards to abandon Conception. The inhabitants, however, being defirous of poffeffing again their plantations in the neighbourhood of that city, and of which they used to make such large profits, petitioned the audience of Lima for leave to return to their original city; but had foon fufficient caufe to repent of not having exerted their industry in improving the place whither they retired; the Indians, on the first notice that the Spaniards were returned to the city, forming a powerful alliance under a daring leader, called Lautaro, took by ftorm a fmall fort, which was the whole defence of the city, and put all to the fword, except a fmall number who had fortunately escaped to Santiago. Some time after, Don Gracia de Mendoza, fon to the Viceroy de Mendoza, Marquis of Canete, arriving as governor of Chili, with a body of forces fufficient for making head against the Indians, reftored the inhabitants of Conception to their former poffeffions, with the greatest apparent fecurity. But the year 1603 gave birth to a new and more general confederacy, confederacy, by which means Conception, La Imperia, and Baldivia, with fix fmaller places, were deftroyed; being the greatest part of the places in this kingdom. Conception, however, received fresh fuccours, the city was again repaired, and has continued ever fince.

Its latitude, according to an obfervation we made in the year 1744, at Talcaguana, which lies exactly east and west with the city, is 36° 43' 15" fouth, and its longitude from the meridian of Teneriff, according to Father Fevillée, 303° 18' 30". The city is built on the fouth-weft fhore of a beautiful bay, on an uneven fandy ground, and on a fmall declivity, having a little river running through it. The city, in its extent, is fcarce equal to one of the fourth class. The destruction it fuffered in the dreadful earthquake of 1730, occafioned all the houfes to be built low, though it had before been fubject to these fudden convulsions of nature. This was, however, the last of those remarkable for their melancholy confequences, which extended to Santiago, the capital of the kingdom, which was involved in the fame ruin. On the 8th of July, at one in the morning, the first emotions were felt, and the concussions increasing, the fea retreated to a confiderable diftance; but in a fmall time returned fo impetuoufly, and with fuch a fwell, that it overflowed the whole city, and the neighbouring countries. In this fudden calamity, the inhabitants had no other afylum than the neighbouring This inundation was foon fucceeded by three or four flocks; and, at eminences. about four in the morning, a little before day-break, the concuffions returned with the most tremendous violence, demolishing the few buildings which had withstood the first flocks, and the rapid motion of the fea.

The houfes are all either of topias, or mud walls, or adoves, unburnt bricks; but covered with tiles. The churches are fmall and mean; the fame may be faid of the Francifcan, Augustine, and Dominican convents, as well as those belonging to the fathers of Mercy: but the college of Jefuits is not wholly defitute of elegance, being well built, and of a tolerable architecture.

The political government of this city confifts of a corregidor, nominated by the King, and who is at the head of the ordinary alcaldes and the regideres. During the vacancy of this post, the duty is performed by the president of Chili, who is governor, and captain-general of the whole kingdom, and prefident of the audience of Santiago, on which, as its capital, Conception is dependent. The court of audience was originally established in the latter, and continued there from the year 1567 to 1574; but the danger and diffurbances, occafioned by the frequent revolts of the Indians, caufed it for a while to be fupprefied, and afterwards to be removed to the city of Santiago. The prefident is, however, obliged to refide fix months of the year at Conception, that he may attend carefully to the military concerns of the frontiers, fee that the forts be in a good condition, and well provided with every thing, in order to keep the Indians of Arauco in awe, and that the military forces are in good order, and well difciplined, and always in readinefs to repel any attempts of the Indians, provided they fhould ever abandon their dread of the Spanish troops. During the other fix months, when the governor refides at Santiago, he acts in a very different character; hearing complaints, redreffing grievances, and administering justice, that this tribunal may receive the greater dignity from his prefence. Here is also a chamber of finances, at the head of which is an accountant and treasurer. Befides which, Conception has likewife all the other courts and offices usual in the cities of South America.

As all the inhabitants of the towns, villages, and country, within the jurifdiction of Conception, form different bodies of militia, fome of which are in pay, and all must be ready on any fudden alarm, there is, befides the corregidor, a Maestra de Campo, who commands in all the militiary affairs without the city; but we fhall have occasion to give a farther account of his duty in the fequel.

This city at first belonged to the diocefe of Imperial; but that being ruined by the perpetual incursions of the Indians, the episcopal fee was removed to Conception, and the chapter changed. It is now a fuffragan of Lima, and has a chapter confisting of a bishop, dean, archdeacon, and two prebendaries.

The jurifdiction of Conception extends from the river Maule on the coaft north of the city to Cape Lavapies. It has few villages; but the whole country is full of feats, farms, and cottages.

The inhabitants confift of Spaniards and Meftizos, who in colour are hardly diftinguifhable from the former; both being very fair, and fome have even fresh complexions. The goodnefs of the climate, together with the fertility of the country, have drawn hither many Spanish families, both Creoles and Europeans, who live together in that harmony and friendship, which should be an example to the other parts of thefe provinces; where the comforts of fociety are greatly leffened by the feuds arifing from a mean pride and jealoufy. The men in general are well-shaped and robuft, and the women handfome. Their cuftoms and drefs are a kind of compound of those of Lima and Quito, but more nearly refemble the latter, except that the men use, instead of a cloak, a poncho, which is made in the form of a quilt, about two yards and a half or three in length, and two in breadth, having an opening in the middle just fufficient to put their head through, the rest hanging down on all fides. This is their drefs in all weathers, whether walking or riding. The peafants, whom they call Guafos, never pull it off but when they go to reft, tucking it up in fuch a manner, that both their arms and whole body are at full liberty either for labour or diversion. This is an universal garb among all ranks when they ride on horfeback, an exercife very common here; and the women are particularly famous. for their skill in horfemanship.

This drefs, though fo plain and uniform in itfelf, ferves to diffinguifh the rank and quality of the wearer; as its price is proportional to the work on it. Some wear it as a covering, fome for decency, and others for fhew. Accordingly if those of the common people cost only four or five dollars, others have stood the owners in an hundred and fifty, or two hundred. This difference arises from the fineness of the stuff, or from the laces and embroidery with which they are decorated. They are of a double woollen stuff, manufactured by the Indians, and generally of a blue colour, embroidered with red or white, fometimes indeed the ground is white, embroidered with blue, red, and other colours.

The peafants are furprifingly dexterous in managing the noofe and lance; and it is very feldom, that, though on full fpeed, they mifs their aim with the former. Accordingly thefe are their chief arms, and they will halter a wild bull with the fame agility as any other creature; nor could a man, however cautious, avoid being taken in their noofe. I fhall relate an inftance of their addrefs, with regard to an Englifhman whom we knew at Lima. He was in the long-boat of a privateer, then lying in Conception bay, intending to land at Talcaguano, with a view of plundering the neighbouring villages; but a body of the country militia made to the fhore in order to oppofe them. Upon this, the Englifh fired upon them with their mufquetry, imagining that would be fufficient to put them to flight, and thus the place be open for them to land. They had no fooner difcharged their pieces, than one of the peafants, though the boat was at a confiderable diftance, threw his noofe, and notwithftanding all in the boat threw themfelves on their faces, he noofed the above-mentioned perfon, pulling him out of

the

the boat with the greateft rapidity; whilft the others, inftead of endeavouring to fave him, in their fright thought of nothing but how to get out of danger as foon as poffible. It was the Englifhman's good fortune not to be ftrangled or killed by the bruifes he received, the flip-knot having paffed from one fhoulder under the oppofite arm, fo that he recovered in a few days.

As it is very feldom that they mifs, and are obliged, on haltering a creature, to draw the knot, at the fame time that they throw the noofe, they clap fpurs to their horfe, and put him on his full fpeed; that the creature is fo far from having time to difengage itfelf, that it is no fooner caught than difabled. This is also one of the weapons, if I may give it that name, ufed in their private quarrels, defending themfelves with a lance of a middling length. And their address on these occasions is fo very remarkable, that very often, after a long difpute, in which both parties are heartily tired, they part, with no other hurt than a few bruifes. This is also the method they take to fatisfy their revenge, endeavouring to halter the object of their hatred. either as he runs from them, or is not apprized of their intention. In this cafe the only refource in an open country, on feeing him with his noofe in his hand, is, to throw onefelf on the ground, keeping the legs and arms as close to the furface as poffible, that the rope may have no room to get under any part. The perfon may alfo fave himfelf by flanding clofe to a tree, and, if in the ftreet, by placing himfelf against the wall. A fmall diftance, that is, under ten or fifteen paces, partly renders their dexterity ineffectual; but there is very great danger of being entangled when the diftance is thirty or forty. The noofes, or halters, are thongs of a cow's hide, cut round the fkin, and of a proper breadth. Thefe thongs they twift, and work with fat, till they are of a proper degree of fupplenefs; but fo ftrong, that though when twifted they are not larger than the little finger, yet they hold the wildeft bull when its efforts to efcape would break a rope of hemp of much larger dimensions.

The climate of this city is not effentially different from that of the greatest part of Europe. Winter is indeed fomething colder than in the fouthern provinces of Spain, but milder than those of the northern; and the fummer heats proportionably. In winter the inhabitants feem to be little incommoded by the north winds, and in fummer the heats are moderated by the cooling breezes from the fouth. The heat is however greater in the city than in the adjacent country, occafioned chiefly by the different difpofition of the ground, being interfected by various rivers, fome of which are very large, as the Arauco and the Biobio. The latter of which, at a league above its mouth, is very near four leagues in breadth. It may, however, in fummer be forded, but not without danger; in the winter it is paffed in balzas. At the fouthern banks of the river, the territories of the wild Indians begin, and near the fame flore towards that part are the chain of frontier forts, of which a farther account will be given in the fequel. The country of this jurifdiction confifts principally of extensive plains, the Cordillera being at a confiderable diftance to the eastward, and the whole space between it and the fea-coaft, one entire and uniform plain, interrupted only by a few eminences, which are an ornament to the country, and render the perspective of it the more agreeable.

The great affinity between this climate and that of Spain is evident from its products, though there is a remarkable difference with regard to their goodnefs and plenty, in both which this country has greatly the advantage. The trees and plants of all kinds have their regular feafons, embellifhing the fields with their verdure, entertaining the fight with their various flowers and bloffoms, and gratifying the palate with their delicious fruits. It is needlefs to mention that the times of the feafon muft be oppofite, confequently

confequently the winter in Spain is their fummer, and the autumn of the former, the fpring of the latter. In faying that this country produces the fame corn and fruits as Spain, I do not mean those of the most fouthern parts; for neither fugar-canes, oranges, nor lemons thrive here. Nor is it well adapted to olive-yards, though fome olives are produced here. But the fruits cultivated in the centre of Spain are the fame with those produced here in a most astonishing plenty, wheat and other grain generally producing an hundred fold. I fhall here relate an inftance I myfelf faw and examined at Talcaguano, in a garden near the fea-fide, at a place called the Morro, very little more than a quarter of a league from the harbour. Among feveral stalks of wheat that had grown there without culture, I faw one whofe ftem was not more than a foot from the ground, but from its knots there afterwards fprung fo many stalks, as produced thirty-four ears *, the largest of which were near three inches in length, and the leaft not lefs than two. The mafter of the houfe obferving that I viewed this production of nature with aftonifhment, told me that it was nothing extraordinary, for though the grain in the ground commonly fown, did not often attain fuch a luxuriancy, it was common for each stalk to produce five or fix ears. This information raifed my curiofity; and I met with fo many inftances afterwards, that my furprife at feeing the stalk just mentioned was greatly abated; as from the moisture, advantageous exposure, and richness of the foil, a much greater produce might naturally be expected than in the ground conftantly fown.

The great plenty of wheat here is fufficiently indicated by its price; a meafure weighing fix arobas and fix pounds, being ufually fold for eight or ten rials. Yet for want of a market, though at fo low a price, no more is fown than is neceffary for home confumption; and thence a great part of the country lies fallow.

Here are vines of feveral kinds, and which vie with the wheat in exuberance. They are alfo, both with regard to the richnefs and flavour of their grapes, efteemed beyond any produced in Peru. Most of them are red. A fort of Muscadel is also made here, whose flavour far exceeds any of the kind made in Spain. The grapes grow mostly in espaliers, and not on detached vines. In this respect also, as in the wheat, large tracts of ground are totally neglected. For though its produce is so confiderable, the buyers are fo few, that the vineyards do not answer even the expence of cultivation.

The chief use made of these rich lands by the owners is, the fattening of oxen, goats and sheep. And this is the principal employment of greatest part of the inhabitants of the country of all ranks, and universally of the lower class. As soon as the horned cattle are fattened in these luxuriant pastures, and the proper feason arrived, four or five hundred, and even more, according to the largeness of the farm, are flaughtered. They take out the fat, melt it into a kind of lard, there called Grassa and buccaneer or dry the fless in fmoke; but the greatest profit arises from the hide, the tallow, and the grassa, a fufficient proof of their prodigious fatness when killed. But an idea of the fertility of this country may be best formed from the value of a live beast, which, when fit to be killed, may be purchased for four dollars; a price vastly beneath that in any other part of India; and may be fufficient to remove the unjust reproach of the poverty of this province. For were the industry of the people equal to the fertility of the foil, this kingdom would be the most opulent of any in America.

The manner of flaughtering the beafts renders it a favourable diversion to the perfons employed in performing it, and it must be owned that their dexterity is really furprising. The cattle intended to be killed are drove into an inclosure. At the gate are the Guasos

^{*} This fpecies of wheat is called Triticum fpica multiplici, and is cultivated in Italy and Sicily.

on horfeback with their fpears two or three toifes in length, and at one end a very fharp piece of fteel in the form of a half moon, the points of which are about a foot diftant from each other. Every thing being ready, the gate of the inclosure is opened, and a beaft turned out, which naturally betakes itfelf to flight, but is immediately purfued by a guafo, who, without checking his horfe, hamftrings it in one leg, and then immediately in the other. He then alights, and having difpatched his capture, fkins it, takes out the tallow, the fat for the graffa, and cuts up the flefh for falting and drying. This done he wraps up the tallow in the hide, and loading it on his horfe, carries it to the farm; returning again for the flefh. After this he fets out on another expedition. Sometimes they turn out at once as many beafts as there are guafos ready to kill them. And this is the daily exercife till all the cattle appointed for that year's flaughter are difpatched. An European is furprifed not only at their dexterity in hamftringing the beaft, when both are on full fpeed, but also to fee one man alone go through the whole work in fuch a regular method and great difpatch. If the beaft be fwifter than his horfe, the guafo has recourfe to his noofe, and halters him by throwing it either about his neck, or round one or two of his legs, according as opportunity offers, and by that means fecures him. Then if a tree be near at hand, he gives the end of the thong two or three turns round the trunk, and the whole difficulty of killing the beaft is over.

The tallow is wrapt up in the hides, and in this manner carried to the city for fale; the graffa is melted into bags of fheep-fkins; the flefh, after being cut into thin flices, is falted, and this is what they call 'Taffagear; afterwards it is buccaneered or dried in the fmoke*, and fold. The hides they tan, and make from them a most excellent leather, efpecially for the foles of fhoes[†]. Goats alfo, as we have already obferved, are fattened and turn to good account. Their tallow nearly refembles that of the ox, and the Cordovan leather made of their fkins furpaffes every thing of that kind made in any part of the whole kingdom of Peru.

All other provifions and grain are in the fame plenty, turkeys, geefe, and all kinds of poultry are fold at a remarkable low price, great numbers of them being bred all over the country, with little care and no expence. Wild fowls alfo are very common, among which are canelones, and others defcribed among the birds found in the deferts of Quito, though thefe are not fo large, and more like the bandarrias as they are there called. Here are alfo wood-pigeons, turtle-doves, partridges, fnipes, woodcocks, and royal cirapicos, &c. And with regard to thefe, the air may be faid to vie with the fertility of the earth.

Ámong the birds I must not omit one of a very fingular kind, and found all over the country. The natives call these birds dispertadores, awakeners, from their giving notice to others of the approach of any danger. On hearing the noise of the approach of any creature, whether man or beast, or seeing them within a small distance, they rise from the ground, and make a loud chattering not unlike that of a magpye; continuing the noise, and flying about in the air over the object which caused the alarm. This is understood by the birds thereabouts, who immediately rise, and by that means escape the danger.

This bird is about the fize of a middling fowl, its plumage black and white, has a thick neck, the head fomething large, erect, and beautifully adorned with a tuft of feathers; its eyes are large, fharp and lively; its bill well proportioned, ftrong, and a little curved. On the fore part of their wings are two fpurs, about an inch in length,

of

^{*} They dry it in the fun, by which it attains a rufty colour, and appears as though it had been dried in fmoke. A.

⁺ They tan thin leather with the bark of the mangrove tree. A.

of a reddifh tint towards the root, and their points refembling those of a cock, being very hard and fharp. These are the weapons they make use of against the other birds, particularly those of prey, as hawks, and others of that kind, which probably abound the more in this country, from the great variety of prey it affords them.

Among the finging birds is the goldfinch, in every particular refembling those of Spain, except a fmall variation in its plumage. There are besides others proper to this country, and met with in all the cold climates, particularly the piches, which are fomething larger than sparrows. They are of a brown colour, spotted with black, except their breast, which is of a most beautiful red, and some feathers of the same colour in their wings, intermixed with others of a bright yellow. Amidst all the fertility of this country, the only infects are the niguas or piques; and though some fnakes are found in the fields and woods, their bite is not dangerous. Neither are the country peafants under any apprehension from ravenous beasts; so that nature may be faid to pour her treasfures on this country, without blending them with the usual inconveniences.

The fruits which mostly abound in Chili, are of the fame kind as those known in Europe; its cherries in particular are large, and of a fine taste. The strawberries are of two kinds, one called frutillas, and are larger than those of Quito, wanting little of being equal to a hen's egg in magnitude. The other, which in fize, colour and taste, perfectly refemble those of Spain, grow wild, on the fide of the eminences with which the plains are intersperfed. And here also grow all kind of flowers, without any other culture than that of benign nature.

Among the remarkable herbs, of which many are medicinal, and others applied to divers ufes, is the panque, of great fervice in tanning leather. It abounds every where, and grows to about four or five feet from the ground. The principal ftem, which is of a foft fubftance, is betwixt four and five inches in diameter, and about two feet and a half in height, feparating there into feveral branches, bearing round, ferrated, rough, and thick leaves, and fo large that their diameter, when full grown, is feldom lefs than a foot and a half, and fometimes two feet. Before the plant is fit to be cut, when the leaves begin to turn red, the peafants make an incifion into the bark, and fuck the juice, which is very cooling and aftringent; but as foon as ever the leaf is obferved to turn white, an indication of decay, they cut the plant down at the root, take off the branches, and divide the ftalk into fhort pieces, which being dried in the fun make an excellent tan.

Befides this rich variety of productions on the furface of the earth, the country alfo abounds with valuable mines and quarries; particularly of Lapis lazuli and loadftone, copper equal to the beft of Europe; befides feveral of gold; but no advantage is derived from any; the inhabitants, contented with the plentiful enjoyment of all the neceffaries of life, extend their wifhes no farther, leaving to the curiofity and avarice of others, the laborious fearch after what the earth contains in its bowels.

This kingdom of Chili feems alfo to have been the first country of those famous horses and mules mentioned in the first part. Indeed all these creatures found in America owe their origin to fome imported from Spain. At present however, those of Chili surpass not only those of the other parts of America, but even those of Spain, from whence they are derived. The horses first brought over might possible have been of the running kind, Spain still abounding in that fort. But it must be owned, that greater care has been taken here of preventing the breed from being mixed with others of a less generous species; and by this means they greatly exceed those of Spain; for without any other incentive than their own inclination, before they will fuffer any other to get before them, they will exert their utmost strength; and at the same time their motion motion is fo eafy, that the rider is not the leaft fatigued. In beauty and gracefulnefs they are not inferior to the famous Andelufian horfes, and at the fame time full of fpirit. Accordingly they are every where fo highly valued, that a more acceptable prefent cannot be made to a perfon of the greateft diffinction, than one of thefe beafts. Many purchafe them for parade, and befides their being common all over the kingdom, they have been fent even to Quito. The great demand for them, and confequently their high price, has induced the inhabitants of feveral countries to attempt the breeding of them; but none are equal to those of Chili.

The commerce at Conception might be confiderably increafed, were the country, which is far from being the cafe, inhabited in any proportion to its fertility and extent; but for want of a fufficient number of hands, their commerce is at a very low ebb, confifting almost entirely in provisions, wine, &c. and this is fo fmall, that it is chiefly carried on by only a fingle fhip coming once a-year to Callao to load with them, together with a few others trading to Chiloe and Baldivia, and in their return touch here. Their exports are tallow, graffa, cordovan, bend leather, excellent butter, wines, and dried fruits. The goods brought hither in exchange are the feveral forts of woollen fluffs from Quito, and others from Europe, iron, and mercury. Very few European goods are however imported; for the people here not being remarkable for their riches, ufe only home-made fluffs and bays, which, though extremely good, are in no great quantity. The commerce carried on between the inhabitants of Chili, and the Arauco Indians, fhall be mentioned in its proper place.

CHAP. VI. — Defcription of Conception Bay, its Roads or Harbours, Fish, &c. and the fingular Mines of Shells in its Neighbourhood.

THE bay of Conception, befides its excellent bottom, is of fuch an extent, as not to be equalled by any on the whole coaft. For from Tierra-Firma, north and fouth, its length is nearly three leagues and a half, and its breadth from eaft to weft, almost three leagues, being the diftance betwixt the harbour of Talcaguano, and the Cirillo Verde, or little green mountain, fituated near the city; from whence its breadth is contracted by the ifland of Quiriquina, which, lying in the mouth of it, forms two entrances, of which that on the east fide is the fafeft, being two miles in breadth, and accordingly frequented by most fhips. The weft entrance is between the ifland and Talcaguano point, and is near half a league in breadth. In the principal entrance of this bay is thirty fathom water, which depth afterwards decreafes to eleven and ten, till within about a mile of the fhore, opposite to the entrance. The weftern, though the many rocks and breakers in it make it appear very dangerous, has a channel with water fufficient for the largeft fhip, the depth being at first thirty fathom, and never lefs than eleven ; it is fituated in the middle of the entrance, that is, at an equal diffance between the rocks which project about a quarter of a league from Talcaguano point and Quiriquina.

Within the bay are three roads or harbours, where fhips anchor; for though the bottom be every where clear, it is only in one of thefe three places fhips can ride in fafety, being no where elfe fheltered from the wind. The first, called Puerto Tome, lies east and west with the north point of Quiriquina, contiguous to the coast of Tierra Firma. The anchoring place is about half a league distant from the land, in about twelve fathom water. But this road is only used when ships come in during the night,

VOL. XIV.

it being difficult to reach either of the other two before day light, as feveral tacks must be made for that purpose.

In this bay the principal port is that of Talcaguano. It is properly an elbow, and bears fouth fouth-well from the fouth point of Quiriquina. This is by far the moft frequented, fhips in general anchoring here, having not only better ground than any other part of the bay, but are in fome meafure fheltered from the north winds. Whereas at Cirillo Verde, they lie exposed, not only to thefe, but alfo to the fouth winds, the land which fhould intercept them being low. Befides, the bottom is of a loofe mud, fo that the anchors in a hard gale of wind generally come home ; and confequently the fhips in great danger of being ftranded on the coaft. From these inconveniences it may be concluded, that the only fhips which anchor here, are fuch as happen to be in those parts in the midft of fummer, and are in hafte to take in their loading, for which this road is most convenient, as being neareft the city.

Two rivers empty themfelves into this bay, one of which, paffing through the city of Conception, has thence the fame name; the other is called St. Pedro. The first is the watering-place for ships anchoring at Cirillo Verde; whereas those at Talcaguano fupply themfelves with that necessfary fluid from fome streams which flow from the adjacent eminences; they easily take on board a sufficient quantity of wood, of which there is here plenty; as of all other necessfaries.

Ships, before they enter the bay of Conception, endeavour to make the ifland of Santa Maria, and then coaft along it, keeping at the fame time a good look-out for a reef of rocks which flretches out almost three leagues from the north-west point; thence they continue their courfe, keeping at a little diftance from the main, there being no rocks but what are above water. After weathering the real of rocks on the island of Santa Maria, they steer directly for Talcaguano point, at the distance of about half a league; from which feaward, is a rock called Quiebraollas, which must be the more carefully avoided as it is furrounded with fhoals. There is, however, no danger, if the fhip be not nearer than half a mile; indeed there is a fufficient depth of water within a cable's length. After their being a-breaft of this rock, they fleer for the north point of Quiriquina, off which lie two rocks, but the farthest from the shore is only a quarter of a league, and may be fafely approached within a ftone's caft. Both these rocks fwarm with fea-wolves, and as there is a fufficient depth of water all round them, there is no other danger in ftanding near them, than what may be feen. There is indeed a neceffity for flanding near them, to avoid falling to leeward of the bay. After paffing them, the course is continued as near as poffible to the ifland of Quiriquina, taking care to avoid fome other rocks lying along the fhore.

As fhips are generally obliged to make feveral tacks in order to get into Conception bay, care muft be taken not to approach too near to the ifland of Quiriquina, either on the eaft or fouth fides; for though the coaft is bold on the north and north-weft fides, there is a fhoal on the fouth extending to a confiderable diffance from the fhore. At a third part of the diffance between the road at Talcaguano, and the point of the fame name, is another fhoal, running about half a league to the eaftward, in the middle of it is a ledge of rocks, whofe tops are dry at low water. To avoid this fhoal, though the thick water fufficiently indicates it, the beft way is, at entering the mouth of the bay with a land wind, to fteer directly for the middle of a fpot of red earth on a mountain of a middling height, fituated at the bottom of the bay, continuing this courfe till the fhip is paft the fhoal; and then fteer directly for the houfes at Talcaguano, till within about half a mile from the fhore, which is the ufual anchoring place in five or

fix

fix fathom water; Cape Harradura being covered by the island of Quiriquina. The fame care is also neceffary to avoid another reef of rocks, lying between the Morro and the coaft of Talcaguano; nor must the Morro fide be approached too near, there being a fand ftretching all along from that reef of rocks to Cirillo Verde. The fhips riding at Talcaguano in the manner thus prefcribed, are fheltered from the north wind; but not entirely fo from the fea, which in those winds runs very high, and pours in through both entrances. The goodness of the bottom, however, fecures the thip. During the force of these winds there is no possibility of landing on account of the great fea; but in fair weather, every place is convenient for going on fhore.

The country round the bay, particularly that between Talcaguano and Conception. within four or five leagues from the fhore, is noted for a very fingular curiofity, namely, that at the depth of half or three quarters of a yard beneath the furface of the ground, is a stratum of shells of different kinds, two or three toises in thickness, and in some places even more, without any intermixture of earth, one large shell being joined together by fmaller, and which also fill the cavities of the larger. From these shells all the lime used in building is made; and large pits are dug in the earth for taking out those fhells, and calcining them. Were these strata of shells found only in low and level places, this phænomenon would be more eafily accounted for by a supposition no ways improbable, namely, that these parts were formerly covered by the fea, agreeably to an obfervation we made in our description of Lima. But what renders it furprifing is, that the like quarries of the fame kind of fhells are found on the tops of mountains in this country, fifty toiles above the level of the fea. I did not indeed perfonally examine the quarries on the higheft of those mountains, but was assured of their existence by perfons who had lime-kilns there; but I faw them myfelf on the fummits of others at the height of twenty toiles above the furface of the fea; and was the more pleafed with the fight, as it appeared to me a convincing proof of the univerfality of the deluge. I am not ignorant that fome have attributed this to other caufes; but an unanfwerable confutation of their fubterfuge is, that the various forts of fhells which compose these strata both in the plains and mountains, are the very fame with those found in the bay and neighbouring places. Among these shells are three species very remarkable; the first is called Choros, already mentioned in our description of Lima; the fecond is called Pies de Burros, affes feet; and the third Bulgados: and thefe to me feem to preclude all manner of doubt that they were originally produced in that fea, from whence they were carried by the waters, and deposited in the places where they are now found.

I have examined these parts with the closest attention, and found no manner of vestige No calcinations are to be met with on the furface of the of fubterraneous fires. earth, nor among the fhells; which, as I have already observed, are not intermixed with earth; nor are there ftones, or any other heterogeneous fubftances found among them. Some of these shells are entire, others broken; as must naturally happen in fuch a close compression of them, during so long an interval of time. This circumstance, however trifling it may appear to fome, may deferve the confideration of those who have advanced the notion, that fhells may be formed in the earth by fubterraneous fires, co-operating with the nature of the foil.

The Pie de Burro has its name from the fifh inclosed in it, refembling, when taken out, the foot of an afs. This fifh is of a dark brown colour, firm and filaceous; it is an univalve, its mouth almost circular, and its diameter about three inches. The bottom of the shell is concave within, and convex without. The colour within is perfectly white, the furface very fmooth, the outfide fcabrous and full of tubercles. Its thicknefs

thickness in every part is about four or five lines; and being large, compact, and heavy, is preferred to all others for making lime.

The bulgados, in the Canaries called bulgaos, are fnails, not at all differing in their form from the common; but larger than those of the fame name found in gardens, being from two inches to two inches and a half in diameter. The shell is also very thick, rough on the outside, and of a dark brown colour; and next to the preceding makes the best lime.

All these species of shell-fish are found at the bottom of the sea in four, fix, ten, and twelve fathom water. They are caught by drags; and what is very remarkable is, that no shells, either the fame, or that have any refemblance to them, are seen either on the fhores continually washed by the fea, or on those tracks which have been overflowed by They adhere to a fea-plant, called Cochayuyo lake-herb, the an extraordinary tide. Indians making no nominal diftinctions between the inland lakes and the fea, calling This plant refembles the bejuco; its diameter is about half an inch, and both cochas. from its root to its extremity of an equal thickness. In length is from twenty to thirty toifes, producing at every eighteen inches, or fomething more, a leaf about a yard and a half or two yards in length; but the breadth, which is in every part the fame, does not exceed two or three inches. It is remarkably fmooth, which, together with a vifcid liquor, with which it is covered, gives it a very fine glos. The fame may be faid of the ftem, which is extremely flexible, and ftrong. Its colour is of a pale green, but This plant divides itfelf into feveral branches, equal in that of the leaves more vivid. dimenfions to the main ftem. These branches fucceffively produce others of the fame proportion; fo that the produce of one fingle root covers a prodigious space. At the joints, where the branches fpring, are found this kind of fhell-fifh, where they both The extremities of these cochareceive their nourifhment, and propagate their fpecies. yuyos float on the furface, and in fome lakes, where the water has remained a long time undifturbed, form a kind of carpet. At the junction of the stalk of every leaf with the ftem, is a berry refembling a caper, but fomething larger, fmooth and gloffy on the furface, and exactly of the fame colour with the ftem.

The feas on thefe coafts abound in excellent fifh, though not in fo great a degree as thofe near Juan Fernandes. Here are feen in particular a great number of whales, which come even into the bay; alfo tunny-fifh and fea-wolves. Among the amphibious creatures, here is one known all along thefe coafts, and even at Callao. It is called Pajaro Nino, the bird-child. It in fome parts refembles a goofe, except that its neck and bill are not arched, and is fomething larger. It has a thick neck, a large head, and a ftrong fhort bill. Its legs very fmall, and in walking the body is in an erect pofition. Its wings are fmall, cartilaginous, and nearly refemble the fins of the feal. Its tail is fo fmall as hardly to be diftinguifhed; its wings and whole body are covered with a fhort brown hair, like that of the fea-wolves, and generally full of white fpots, though fome are of other colours; fo that, upon the whole, the bird makes no difagreeable appearance. It lives promifcuoufly either in the water or on land; on the latter it is eafily taken, being very flow in its motions; but when attacked, bites feverely, though it is obferved never to be the firft aggreffor.

CHAP. VII. - Description of the City of Santiago, the Capital of the Kingdom of Chili.

AFTER giving an account of all the cities and places of note through which we paffed, I muft not omit the capital of the kingdom of Chili. We had not indeed occa-

fion

fion to visit it perfonally; but by the informations we received from perfons best gualified to answer our enquiries, in the ports of its jurifdiction, to which our affairs called us more than once, we are enabled to gratify the curiofity of a rational reader.

The city of Santiago, originally called Santiago de la Nuestra Estremadura, was founded by Captain Pedro de Valdivia, who began the foundation on the 24th of February 1541, in the valley of Mapocho, near that of Chili, which gives its name to the whole kingdom. It has not been fubject to the revolutions of other places, but still stands on its original fpot, which is nearly in 33° 40' fouth latitude, and about twenty leagues from the harbour of Valparaifo, the nearest port to it in the South Seas. Its fituation is one of the most convenient and delightful that can be imagined, standing in a delightful plain of twenty-four leagues in extent, watered by a river flowing in meanders through the middle of it, and called by the fame name of Mapocho. This river runs fo near the city, that, by means of conduits, the water is conveyed from it through the ftreets, and alfo fupplies the gardens, which few houfes are here without, and hence the delightful fituation of the place, and the pleafure of the inhabitants are greatly heightened.

The city is a thouland toiles in length from east to welt, and fix hundred in breadth from north to fouth. On the fide oppofite the river, which washes the north part of it, is a large fuburb, called Chimba; and on the east fide, almost contiguous to the houses, is a mountain of a middling height, called Santa Lucia. The ftreets are all of a handfome breadth, paved and ftraight; fome run exactly in an eaft and weft direction, and are croffed by others, lying exactly north and fouth. Near the middle of the city is the grand piazza, which, like that of Lima, is fquare, with a very beautiful fountain in the center. On the north fide are the palace of the royal audience, where the prefidents have their apartments, the town-house, and the public prison. The west fide is taken up by the cathedral and the bifhop's palace. The fouth fide confifts of fhops, each decorated with an arch; and the eaft is a row of private houfes. The other parts of the city are divided into infulated fquares of houfes, regular, and of the fame dimensions with those of Lima.

The houfes here are built of adoves, or unburnt bricks, and very low; this neceffary caution against the terrible devastation of earthquakes being equally neceffary here as in all other towns of Peru, calamities with which this city has been often vifited; but the most remarkable are the following:

1. In the year 1750 an earthquake happened, which overflowed feveral mountains in this kingdom; many villages were entirely deftroyed, and great part of the inhabitants buried in their ruins.

2. In the year 1647, on the 13th of May, many of the houses and churches of this city were ruined by another fhock.

3. In 1657, on the 15th of March, the earth was observed to have a tremulous motion for the fpace of a quarter of an hour, and few of the buildings in the city were left ftanding.

4. In 1722, on the 24th of May, great part of the houses were damaged by another earthquake.

5. In the year 1730, on the 8th of July, happened that tremendous earthquake already mentioned in our account of Conception. This flock not only ruined the greatest part of the city, but concuffions were often felt for many months afterwards; and this catastrophe was fucceeded by an epidemical diftemper, which fwept away even greater numbers than had before perifhed by the earthquake.

Notwithstanding the houses are low, they make a handfome appearance, and are well contrived both for pleafure and convenience.

Befides

Befides the cathedral and the parifh-church of the Sagrario, here are two others, namely, that of St. Anne, and St. Ifadoro. There are alfo three convents of St. Francifco, San Diego, a college for ftudents, and, without the city, a convent of Recollects; two of Auguftines, one of Dominicans, one of the fathers of Mercy, one of St. Juan de Dios, and five colleges of Jefuits, namely, St. Michael, the Noviciate, St. Paul, St. Xavier; a college for ftudents, who wear a brown cloak, and a red fcarf; and the college, called La Olleria, for the exercises of St. Ignatius. Here are alfo four nunneries, two of St. Clare, two of Auguftines, and one of Carmelites; and a religious fifterhood, under the rules of St. Auguftine : all which have a large number of reclufes, as is common in all the cities of Peru. The churches of the convents, befides being very fpacious, are built either of brick or ftone, and those of the Jefuits are diftinguished by the beauty of their architecture. The parifh-churches are in every respect greatly inferior to them.

The inhabitants of Santiago are computed at about four thoufand families, and of these nearly one half are Spaniards of all degrees; and among them fome very eminent men, both of rank and opulence. The other moiety confasts of Casts and Indians, but chiefly of the latter.

The cuftoms here differ very little from those already mentioned in our account of large cities. They are not fo negligent in the care of their apparel as at Conception; and inftead of the oftentation of Lima, they follow the modelt decency of Quito. The men, except on fome particular ceremonies, generally wear ponchos, and all the families who can any way afford it, keep a calash for driving about the city. The men are robust, of a proper stature, well shaped, and of a good air. The women have all the charms of those of Peru, and are rather more remarkable for the delicacy of their features, and the finenels of their complexions; but they disfigure their natural beauty by a misplaced art, painting themselves in such a preposterous manner, as not only to spoil the natural delicacy of their skin, but even their teeth; fo that it is very rare to fee a woman here of any age with a good fet.

In this city is a royal audience, removed hither from Conception. It confifts of a prefident, four auditors, and a fifcal, together with another officer dignified with the endearing title of patron of the Indians. The determinations of this court are without appeal, except to the fupreme council of the Indies, and this is only in matters of notorious injuffice, or denial of redrefs.

The prefident, though in fome particulars fubordinate to the viceroy of Lima, is alfo governor and captain-general of the whole kingdom of Chili; and, as fuch, he is to refide one half of the year at Conception, and the other at Santiago. During his abfence from the laft city, the corregidor acts as his reprefentative; and his jurifdiction, on this occasion, extends to all the other towns, except the military governments.

The magistracy, at the head of which is the corregidor, confits of regidores, and two ordinary alcaldes. In these are lodged the police, and civil government of the city; and during the time the president resides here, the jurifdiction of the corregidor is limited to the liberties of Santiago.

The office for the royal revenue is directed by an accountant and treasurer; where are paid the tributes of the Indians, and other parts of the revenue; the falaries of officers within its department, and other affignments.

The chapter of the cathedral confifts of the bifhop, dean, archdeacon, chanter, four canons, and other fubordinate ecclefiaftics.

Here is alfo a tribunal of Croifade, the members of which are a fub-delegate commiffary, an accountant, and treasurer. Likewife a commiffion of inquisition, all the officers of which are appointed by the tribunal of inquisition at Lima.

The temperature of the air at Santiago is nearly the fame with that of Conception. The luxuriancy of foil, and exuberance of all kinds of provisions, the commerce, and other neceffary particulars, I shall mention in the following account of the kingdom of Chili.

CHAP. VIII. — Account of that Part of Chili within the jurifdiction of the Audience of Santiago.

THE kingdom of Chili extends from the frontiers of Peru to the ftreights of Magellan, the diftance being five hundred and thirty leagues. Thefe two kingdoms, as I have mentioned in another place, are feparated by the defart of Atacamo, which extends eighty leagues between the province of the fame name, being the laft of Peru, and the valley of Copoyapu, now corruptly called Copiapo, the first in Chili, and in every particular refembles the defart of Sectura. Eastward, fome parts of this kingdom terminates on the frontiers of Paraguay, though fome uninhabited defarts intervene; and others border on the government of Buenos Ayres; though between these are the Pampas, or extensive and level plains. Its weftern boundary is the fouth-fea, extending from twenty-feven degrees nearly, the latitude of Copiapo, to $53^{\circ} 3^{\circ}$. But to confine ourfelves to the true extent of this kingdom, as inhabited by the Spaniards, it begins at Copiapo, and terminates at the large island of Chiloe, the fouthern extremity of which is in 34° of fouth latitude; and its extent from weft to east is the diftance between the Cordillera, which is here of a stupendous height, and the coast of the fouth-fea; that is, about thirty leagues.

Part of the country which at prefent composes the kingdom of Chili, was subjected to the empire of the Yncas by Yupanqui, the tenth emperor; who, incited by the inchanting account given of these provinces, undertook the conquest of them; and prosecuted the enterprize with such success, that he subdued the several nations inhabiting the valleys of Copoyapu or Copiapo, Coquimpu or Coquimbo, and Chili. But in his intended career southward, the victorious Ynca met with an unfurmountable difficulty from the Purumauco Indians, and other nations, whom the rapidity of his conquests had induced to oppose him by a general confederacy. Thus he found himself under a necessfity of defissing, after having carried his arms as far as the river Mauli, which is in the latitude of 34° 30'.

After the Spaniards had undertaken a defcent in Peru, and made themfelves mafters of its feveral provinces, the Marfhal Don Diego de Almagro was commiffioned for the conqueft of Chili. Accordingly he marched from Cufco at the beginning of the year 1535, and after lefing the greateft part of his Indians, and a confiderable number of Spaniards, who perifhed with cold in paffing over the Cordillera Nevada, he arrived at Copiapo, where the Indians, without trying the chance of war, fubmitted. Animated with fuch unexpected pufillationity, he proceeded to the conqueft of other nations; even fuch as never had acknowledged the Yncas. And though he here met with a more warlike people, who were determined to fell their liberty dear, he carried on the war profeeroufly. But His Majefty, in confideration of his great fervices, performed with fo much hazard, having conferred on him the government of a territory a hundred leagues in length, fouth of that which belonged to the Marquis Don Don Francisco Pizarro, a difference arose between these two great men, with regard to the boundaries of their respective governments. Almagro, impatient to take posfession, and pretending that the city of Cusco ought to be included in his government, the conquest was suspended, and he himself hastened to that city, where, instead of being invested with the chief command, he fell a facrifice to the jealous of Hernando Pizarro, who endeavoured to conceal his irregular proceedings under the veil of justice.

In the year 1541, the conqueft of Chili was again fet on foot, and the Marquis Pizarro conferred the command on Pedro do Valdivia, together with the title of general. Accordingly he marched into the country, and founded moft of the principal towns and villages in it. So that in the year 1548, he was promoted to the government of it, by the prefident of Peru. In the profecution of the conqueft of thefe provinces, he had many fharp fkirmifhes with the natives, till at laft, in the year 1553, bravely oppofing a general revolt with a very inferior force, he fell, fighting with the greateft intrepidity, at the head of his troops, the greateft part of whom, enraged at lofing fo brave a man, chofe to perifh with him, rather than fave themfelves by flight. His name, befides the figure it makes in hiftory, is ftill preferved in this country, in the town of Valdivia, which he founded.

The martial genius of the Indians of this kingdom confiderably retarded the reduction of it; and has always been the chief caufe why the Spanish fettlements here are fo little proportional to the extent, fertility, and riches of the country. Accordingly the captain-generalship of this vast kingdom has only four particular governments, and eleven jurifdictions; which are the following:

Particular governments in the kingdom of Chili:

I. The major-generalship of the	III. Valdivia.
I. The major-generalship of the kingdom of Chili.	IV. Chiloe.

II. Valparaifo.

Jurifdictions in the kingdom of Chili:

I. San II. Rai III. Col IV. Chi V. Acc VI. Me	ncagua. chagua. illan. oncagua.	VIII. IX. X.	Quillota. Coquimbo. Copiapo and Guafco. Mendoza. La Conception.
--	--	--------------------	---

I. To the major-generalfhip of the kingdom of Chili, belongs the military government of the frontier towns and fortreffes. Thefe are Arauco, the ftated refidence of the general Santajuana, Puren, Los Angeles, Tucapel, and Yumbel. It will be here neceffary to obferve, that not above five leagues fouth of Conception bay, the fea receives a river called Biobio, both the fouth banks and head of which are inhabited by wild Indians: and to prevent their incurfions, ftrong forts have been erected along the banks, and are always well garrifoned and furnifhed with all kinds of military ftores. Among thefe on the fouth banks of the river is the fort of Arauco, and the others at a proper diftance eaftward to the mountain of Tucapel. Thus all attempts from thefe Indians is precluded, and the Spanifh fettlements protected from their depredations. The general is obliged to vifit thefe forts from time to time, carefully infpecting

ł

ing into their condition, and, in cafe of neceffity, to haften to their relief. During his absence, the commanding officer of each is the captain of the garrifon, which ufually confifting both of horfe and foot with their officers, the perfon on whom the command devolves is previoufly nominated. This important post is in the disposal of the prefident, as fuppofed to be beft acquainted with the merits of the feveral competitors when a vacancy happens; and that the fafety of his government will induce him to prefer the most deferving. Accordingly, whoever intends to offer himfelf a candidate for this post, should folicit to be employed in the frontier fervice, procure a competent knowledge of the stratagems of the Indians, and be very attentive to distinguish himfelf on any alarm or encounter. It is indeed expressed in the royal commission, that the corregidor of Conception shall be the military commander-in-chief; and, confequently, it is to him that the appointment of the general properly belongs; but this, from very powerful reafons, is difpenfed with, the proper difcharge of these two posts being utterly incompatible; and the civil and military requifite here very rarely meeting in the fame perfon. But when this obflacle does not exift, and the corregidor is one of these extraordinary perfons, the prefident, agreeably to the royal expression, confers the post of Maestre de campo on the corregidor of La Conception.

II. Valparaifo is the fecond military government. But the particular account of it, I shall defer for a more proper place.

III. Valdivia has a military governor nominated by the King. Here is alfo a good body of troops, both for garrifoning the place, and the forts built to defend the entrance of the river and harbours in it. Clofe to the river ftands the town, the inhabitants of which are chiefly whites or Meftizos; but a village forming a kind of fuburb is inhabited by friendly Indians. This government has undergone fome vicifitudes in point of fubordination, being fometimes independent of the prefidents of Chili, and immediately fubject to the viceroy of Lima; and at other times a part of the former. At laft, on weighing the difficulties for providing for any fudden exigence, or having a watchful eye over its neceffary concerns at fo great a diftance as Lima, it was annexed to the jurifdiction of the prefident of Chili, as being nearer at hand to fee that the forces are always on a good footing, and confequently in a proper pofture of defence.

IV. Chiloe has a military governor, who refides at Chacao, the principal harbour of the ifland, being well fortified and capable of making a good defence. Befides Chacas, which has the title of a city, is another place much larger, called Calbuco, where refides a corregidor, who is nominated by the prefident of Chili. It has alfo regidores and alcaldes chofen annually. Befides the parifh-church here, is a convent of Francifcans, another of the fathers of Mercy, and a college of Jefuits. The ifland is every-where well peopled with Spaniards, Meftizos, and Chriftian Indians.

The kingdom of Chili has continually a body of regular troops, confifting of five hundred men, for garrifoning Valparaifo, a fort at Conception, and thole on the frontiers. One half of this body is infantry and the other cavalry. Under the majorgeneral who commands in chief, is a ferjeant-major, whole duty it is to render them expert in all the various parts of military exercife; and that he may more conveniently render them ready at their feveral evolutions, he refides at the fort of Jumbal, which lies in the center of the others. To thefe alfo belong a commiffary-general of the horfe, whole poft is at Arauco, and in the abfence of the general has the command. Thefe troops have alfo a multer-mafter-general, who refides at Conception. The ftanding forces of Chili, till the beginning of this century, confifted of two thouland men: but the great charge of fupporting fuch a body of troops occalioned them to be reduced to the prefent number.

VOL. XIV.

The

The produce of the revenue-officers at Santiago and Conception, not being fufficient to defray the expences of even this fmall body, a remittance of 100,000 dollars is every year fent from Lima, half in fpecie, and half in clothes, and other goods. But fix or eight thousand is annually deducted out of this fum for repairing the forts of the frontiers, and making prefents to the deputies of the Indians who attend at conferences, or to fatisfy those who complain to the prefident of injuries received.

Valdivia alfo receives from the treasury of Lima, an annual fupply of 70,000 dollars, 30,000 in fpecie, the value of thirty thousand in clothes for the foldiers, and 10,000 in fpecie, which is paid to the King's officers at Santiago, in order to purchase flour, charqui, graffa, and other necessaries for the garrison at Valdivia. These remittances are conveyed in ships which fail from Valparaiso.

I. The jurifdiction of Santiago we have already observed to be limited to its boundaries.

II. Rancagua is a jurifdiction in the country, and owes its name from the inhabitants living in fingle houfes, without the appearance of a village, every family in their lonely cottage, four, fix, or more leagues from each other. It is not, however, without a kind of capital, confifting of about fifty houfes, and between fifty and fixty families, most of them Mestizos, though there cast is not at all perceivable by their complexion. The whole jurifdiction may contain about a thousand families, Spaniards, Mestizos, and Indians.

III. Colchagua refembles in every circumstance the former, except its being better peopled; its inhabitants, according to the best computations, amounting to fifteen hundred families.

IV. Chilan is a fmall place, but has the title of city, the number of families, by an accurate calculation, not exceeding two or three hundred, and having few Spaniards among them.

V. Aconcagua is a very fmall place at the foot of the mountains, but the country is interfperfed with a great number of fingle houfes. The valley of the fame name is fo delightful, that a town called Phelipe le Real, was built in it in 1741.

VI. Melipilla made no better figure than the foregoing jurifdictions, till the year 1742, when a town was erected in it by the name of St. Joseph de Longronno.

VII. Quillota. The town of this name does not contain above a hundred families; but those fcattered over the country exceed a thousand.

VIII. Coquimbo, or La Serena, according to Father Feuillée, ftands in $24^{\circ} 54' 10''$ fouth latitude. This was the fecond town built in the kingdom of Chili, in 1544, by Pedro de Valdivia, with a view of fecuring the intercourfe between Peru and Chili, for the more convenient fupply of what fuccours might be wanted; and at the fame time, for fecuring the fidelity of the Indians who lived in that valley. This place is fituated in the valley of Coquimbo, from whence it received its original name; but Valdivia gave it that of Le Serena, from an affection to the province of that name in Spain, and of which he was a native. It ftands about a quarter of a league from the coaft of the South Sea in a most delightful fituation, having an extensive prospect of the fea, the river, and the country, which prefents the fight with a charming variety of fields of different kinds of grain, and woods of a lively verdure.

This town is of itfelf large, but not proportionally peopled; the number of families not amounting to above four or five hundred, confifting of Spaniards, Meltizos, and a few Indians. The ftreets are ftraight and of a convenient breadth, fome of which lying north and fouth, and others interfecting from eaft to weft, the town confifts of fquares of buildings, like Santiago, and other places of note in this part of America. The houfes are all of mud walls, and covered with leaves; but none are without a large garden, well planted with fruit-trees and efculent vegetables, both those of America

and

and Spain; for the climate is happily adapted to a variety of both kinds, the heats not being exceffive, nor the colds fevere; fo that both in the fertility of the earth, and the cheerful appearance of the country, the whole year wears an alpect of one perpetual fpring. The ftreets, though regular and convenient as above-mentioned, are not entirely formed by the houles, parts of the intervals between the feveral fquares being filled up with gardens; and most of them have fo charming an appearance, as to atone for the mean afpect of the houfes.

Befides parifh-churches, here is a Franciscan, a Dominican, and an Augustine convent; one belonging to the fathers of Mercy, another to St. Juan de Dios; and a college of Jefuits. The churches of these religious fraternities are large and decent. The parish-church occupies part of one fide of the great fquare; and oppofite is the townhouse, where the alcaldes and regidores meet, who with the corregidor form the corporation.

On the north fide of Coquimbo runs the river, after flowing in various meanders through the whole valley of the fame name; and by canals cut from it, furnishes the town with water, one great use of which is to preferve the beauty of their gardens.

IX. Copiapo is about twelve leagues from the fea-coaft, very irregularly built, but contains between three and four hundred families. The fea-port nearest to it is that known by the fame name. There is indeed another port in this jurifdiction; but it lies thirty leagues farther to the fouth, and confifts only of a few huts.

X. Mendofa. The town of this name is fituated on the eaftern fide of the Cordillera, at the diftance of about fifty leagues from Santiago. It stands on a plain, and is decorated with gardens in the fame manner as Coquimbo, and the place being well fupplied with water by means of canals, no care is wanting to keep them in their greateft beauty. The town confifts of about an hundred families, half Spaniards or whites, and the other half cafts. It has befides a decent parifh-church, a Francifcan, Dominican, and Augustine convent, together with a college of Jefuits. This jurifdiction has also two other towns, that of St. Juan de la Frontera, likewife to the eastward of the Cordillera, and about thirty leagues north of Mendoza, and St.Luis de Loyala, about fifty leagues eaftward of Mendoza. The latter however is mean and fmall, not containing above twenty-five houfes, and fifty or fixty families, Spanish and cafts; though many more are fcattered up and down the neighbouring country. In fuch a fmall place it is fomething remarkable to fee a parifh-church, a Dominican convent, and a college of Jesuits. Here the prefidents of Chili are received as governors of it, in their way to Chili from Buenos Ayres, this being the first place in their government on that fide. The town of St. Juan de la Frontera is, in every refpect, equal to Mendoza itfelf.

XI. The jurifdiction of Conception is the laft; but having already given an account of it, I shall proceed to confider the commerce carried on by the kingdom of Chili with Peru, Buenos Ayres, Paraguay, and its own towns; and fubjoin an account of that carried on with the wild Indians bordering on it, with the manner of maintaining a harmony with these favage people. In the mean time I shall conclude this chapter with observing, that the corregidors of the whole jurifdiction are nominated by the King, except those of Rancagua, Melipilla, and Quillota, who are appointed by the prefident of Chili. This is indeed the cafe of all the others, when a corregidor happens to die, before a perfon is nominated to fucceed him; but the office of these corregidors being only for five years, the prolongation must be by His Majesty's express order. The inhabitants are formed into companies of militia, and every one knows the place of arms to which he is to repair on any alarm. Thus to Valparaifo belongs the companies

panies of militia of Santiago, Quillota, Melipilla, Aconcagua, and Rancagua; and thefe in all amount to between two or three thoufand men, and are formed into troops and companies. Rancagua, when Santiago and Colchagua are threatened, is alfo to fend fuccours thither; and the fame duty lies on Chillan with regard to Conception. In thefe cafes notice is conveyed with fuch difpatch, that they are fpeedily at their rendezvous, all they have to do, being to mount their horfes and repair to their flation with the ufual pace ufed in that country, which is always a gallop; and thus the militia of this country may be faid to ride poft to the parts where danger calls them.

CHAP. IX. — Commerce of Chili. — Methods used to keep up a good Harmony with the wild Indians.

IN my defcription of the city of Conception, I mentioned the inchanting beauties of the neighbouring countries; and the exuberant returns of nature for the hufbandman's toil. The like profusion of natural productions is feen all over this kingdom. Its plains, eminences, valleys, in fhort the whole country to the fmallest portion of ground, is an object of admiration. Every particle of earth in this amazing fertility feems transformed in feed. The country round Santiago, as it is not inferior in pleafantnefs and fertility to that of Conception, fo alfo from the great affinity to the climates, its products are nearly the fame. Accordingly fome farmers wholly apply themfelves to corn, others to fattening of cattle; fome confine themfelves to the breeding of horfes, and others to the culture of vines and fruit-trees. The first find their account in plentiful harvefts of wheat, barley, and particularly in hemp, which thrives here furprifingly, and furpaffes those of the former. The fecond, at their large flaughters, have great quantities of tallow, graffa, charqui, and fole leather tanned. Of the goat-fkins is made Cordovan leather; fome tallow is also procured from those creatures. Wines are made here of feveral forts, and though not fo excellent as those of Conception, they are very palatable and of a good body; brandy is also diftilled from them. Thefe are the principal articles of the active commerce of this kingdom with Peru, which it fupplies with wheat, tallow, and cordage; and by the most careful eftimate, the quantity of wheat fent annually from Santiago to Callao, amounts to 140,000 Tanegas, each weighing one hundred and fifty-fix pounds; about eight thousand quintals of cordage; and between fixteen and twenty thousand quintals of tallow : befides fole leather, nuts, filberts, figs, pears, and apples ; graffa, charqui, and neat tongues: the three laft being no inconfiderable articles.

The more northern parts of the kingdom, as Coquimbo, produce olives, the oil of which is preferable to that of many parts of Peru; but being a natural commodity of that kingdom, and confequently not an article of exportation, is confumed at home. The country about Santiago, likewife, produces good olives; but in no great quantity, the genius of the inhabitants having not hitherto led them to make large plantations of those trees.

Befides the commerce carried on with Peru in provisions, there is that of metals, this kingdom abounding in mines of all kinds, but principally of gold and copper, which we shall briefly confider.

The moft famous gold-mine known in Chili, is called Petorca, and lies in a country eaft of Santiago. This gold was formerly highly efteemed, and found in great plenty; but now, on account of a whitifh tinge, the value of it is confiderably diminifhed.

12

This

This mine, for the length of time it has been worked, is equal to the most celebrated in Peru.

In the country of Yapel, which is fituated in the fame quarter, but farther to the northward along the Cordillera, are alfo rich gold-mines, and the metal twenty-three carats fine. In 1710, in the mountains of Lumpanqui near the Cordillera, were difcovered mines of gold, filver, copper, lead, tin, and iron, the gold between twentyone and twenty-two carats fine; but the working, from the hardnefs of the ftone, where, according to the miner's phrafe, "the metal arms," was very difficult and laborious. This inconvenience does not however occur in the mountain Llaoin, where the ftone is foft, and not lefs rich in metal, equal in finenefs to the former. Befides thefe, there are other gold-mines, worked with good fuccefs at Tiltil, near Santiago.

Betwixt Quillota and Valparaifo, in a part called Ligua, is a very rich gold-mine, and the metal greatly effeemed. Coquimbo, Capiapo, and Guafco, have alfo goldmines, and the metal found in the two laft, is, by way of pre-eminence, called Oro Capote, being the moft valuable of any yet difcovered. Another kind of mines of the fame metal has alfo been found in this kingdom; but thefe were exhaufted almoft as foon as they were opened. Mines of this kind are very common, as well as another kind called Lavaderos *, moft of which are between Valparaifo and Las Pennuelas, and about a league from the former. Some of them are alfo found at Yapel, on the frontiers of the wild Indians, and near Conception. Thefe, together with the others known in this kingdom, yield gold-duft. Sometimes, indeed, lumps of gold of confiderable magnitude are found; and the hopes of difcovering thefe, animate many to work the mines.

All the gold thus collected in Chili is brought up in the country, and fent to Lima to be coined, there being no mint in Chili; and, by the accounts conftantly taken, it amounts, one year with another, to fix hundred thoufand dollars; but that clandeftinely fent by way of the Cordillera is faid to be nearly four hundred thoufand. Confequently, the whole muft be at leaft a million. In the countries of Coquimbo and Guafco, mines of all kinds of metals are fo very common, that the whole earth feems wholly composed of minerals; and it is here those of copper are worked, and from them all Peru and the kingdom of Chili are furnished with that metal. But though this copper exceeds every thing of the kind hitherto known, the mines are worked with great caution, and no more metal extracted than is fufficient to answer the usual demand; and other mines, though known to be equally rich, are left untouched.

In exchange for the grain, fruits, provisions, and metals, which Chili fends to Peru, it receives iron, cloth, and linen made at Quito, hats, bays, though not many of the latter, there being manufactures of the fame kind at Chili, fugar, cacao, fweetmeats, pickles, tobacco, oil, earthenware, and all kinds of European goods. A fmall commerce is alfo carried on between the kingdom of Chili, Paraguay, and Buenos Ayres, of which the latter is the ftaple. The products of Paraguay, which indeed confift only in its herb and wax, are carried thither, then forwarded to Chili, whence the herb is exported to Peru. Large quantities of tallow are alfo fent to Mendoza for making of foap. In exchange for these commodities, Chili fends to Buenos Ayres linen and woollen ftuffs, fome of which are imported from Peru, and others manufactured in the country : alfo ponchos, fugar, fnuff, wine, and brandy, the two laft the traders chiefly

* These Lavaderos are pits dug in the angles of ravines or trenches made by rain, and in which it is imagined there may be gold, and, in order to discover the metal, a stream of water is turned through it, and the earth briskly spread, that the gold may be carried down with the current, and deposited in the pits. buy at San Juan, as most convenient for transportation. During the affiento for negroes, they are usually brought to Chili from the factory at Buenos Ayres, the way of Peru being attended with great inconveniences; as in their journey from Panama, they take an opportunity of concealing themselves among the farm-houses; fo that, what with the great expence, and the numbers who die during their long rout, by the variety of climates, their purchase multi consequently be very high.

The home-commerce of Chili, or that carried on within itfelf, chiefly confifts in the provifions fent to Valdivia to the amount of ten thoufand_dollars, which, as the deducted part of its remittance, are fent from Lima to Santiago for that purpofe. Valdivia furnifhes the reft of the places with cedar. Chiloe purchafes from the other parts brandy, wine, honey, fugar, the Paraguay herb, falt, and Guinea-pepper; and returns to Valparaifo and Conception feveral kinds of fine wood, in which the ifland abounds; alfo woollen ftuffs of the country-manufacture, made into ponchos, cloaks, quilts, and the like; together with hams, which, from the particular delicacy of the flavour, are in great requeft even in Peru, and dried pilchards, the bay and coaft of that ifland being the only places in the South Sea where the fifth are caught.

Coquimbo fends copper to Valparaifo; for, though all parts of the Cordillera, towards Santiago and Conception, abound in mines of that metal, and particularly a place called Payen, where feveral were formerly worked, and where maffes of fifty or a hundred quintals of pure copper have been found, yet as thefe mines are now no longer worked, the whole country is under a neceffity of receiving their copper from the Coquimbo and Guafco mines; fending thither in exchange cordovan leather and foap, made at Mendoza, from whence it is carried to Santiago, and thence fold to different parts of the kingdom.

Having thus confidered the trade of Chili in both particulars, I fhall next proceed to mention that carried on with the wild Indians, and this confilts in felling them hardware, as bits, fpurs, and edge tools; alfo toys, and fome wine. All this is done by barter; for, though the countries they inhabit are not defitute of gold, the Indians cannot be prevailed upon to open the mines; fo that the returns confift in ponchos, horned cattle, horfes of their own breeding, and Indian children of both fexes, which are fold even by their own parents for fuch trifles; and this particular kind of traffic they call Refcatar, ranfoming. But no Spaniard of any character will be concerned in fuch barbarous exchanges, being carried on only by the guafos, and the meaneft clafs of Spaniards fettled in Chili. Thefe boldly venture into the parts inhabited by the Indians, and addrefs themfelves to the heads of the feveral families.

The Indians of Arauco, and those parts, are not governed by caciques, or Curacas, like those of Peru, the only subordination known among them being with regard to age, so that the oldest perform of the family is respected as its governor. The Spaniard begins his negociation with offering the chief of the family a cup of his wine. After this he displays his wares, that the Indian may make choice of what best pleafes him; mentioning, at the fame time, the return he expects. If they agree, the Spaniard makes him a prefent of a little wine; and the Indian chief informs the community that they are at liberty to trade with that Spaniard as his friend. Relying on this protection, the Spaniard goes from hut to hut, recommending himself at first by giving the head of every family a taste of his wine. After this they enter upon business, and the Indian having taken what he wanted, the trader goes away without receiving any equivalent at that time, and visits the other huts, as they lie disperfed all over the country, till he has disposed of his stock. He then returns to the cottage of the chief, calling on his customers in his way, and acquainting them that he is on his return home. Upon this fummons, not one fails of bringing him to the chief's hut what had been agreed on. Here they take their leave of him, with all the appearance of a fincere friendship, and the chief even orders fome Indians to effort him to the frontiers, and affift him in driving the cattle he has received in exchange for his goods.

Formerly, and even till the year 1724, thefe traders carried large quantities of wine, of which, as well as of all other inebriating liquors, the Indians are immoderately fond; but on account of the tumults and wars that arofe from the intemperate use of spirituous liquors, this branch of trade has been suppressed, and no more wine allowed to be carried into the Indian territories than what shall be judged necessary to give the masses of families a cup by way of compliment, and a very small quantity for trading. The happy effects of this prohibition are felt on both fides; the Spaniards live in fastey, and the Indians in peace and tranquillity. They are very fair dealers, never receding from what has been agreed on, and punctual in their payments. It is indeed furpriss, that a whole people, who are almost strangers to government, and favage in their manners, should, amids the uncontrouled gratification of the most enormous vices, have so delicate a fense of justice, as to observe it in the most irreproachable manner in their dealings.

All the Indians of Arauco, Tucapel, and others inhabiting the more fouthern parts of the banks of the river Biobio, and alfo those who live near the Cordillera, have hitherto fruftrated all attempts made for reducing them under the Spanish government. For in this boundlefs country, as it may be called, when ftrongly pufhed, they abandon their huts, and retire into the more diftant parts of the kingdom, where, being joined by other nations, they return in fuch numbers, that all refiftance would be temerity, and again take pofferfion of their former habitations. Thus Chili has always been exposed to their infults; and, if a very few only call for war against the Spaniards, the flame immediately fpreads, and their measures are taken with fuch fecrecy, that the first declaration of it is, the murder of those who happen to be among them, and the ravages of the neighbouring villages. Their first step, when a war is agreed on, is, to give notice to the nations for affembling; and this they call Correa la Fletcha, to fhoot the dart, the fummons being fent from village to village with the utmost filence and rapidity. In these notices they specify the night when the irruption is to be made, and, though advice of it is fent to the Indians who refide in the Spanish territories, nothing transpires : nor is there a fingle inftance, among all the Indians that have been taken up on fufpicion, that one ever made any difcovery. And as no great armaments are neceffary in this kind of war, their defigns continue impenetrable till the terrible executions withdraw the veil.

The Indians of the feveral nations being affembled, a general is chofen, with the title of Toqui; and when the night fixed on for executing their defigns arrives, the Indians who live among the Spaniards rife and maffacre them. After which, they divide themfelves into fmall parties, and deftroy the feats, farm-houfes, and villages, murdering all without the leaft regard to youth or age. Thefe parties after wards unite, and, in a body, attack the larger fettlements of the Spaniards, befiege the forts, and commit every kind of hoftility; and their vaft numbers, rather than any difcipline, have enabled them, on feveral occafions, to carry on their enterprizes with fuccefs, notwithftanding all the meafures taken by the Spaniards gain the fuperiority, the Indians retire to the diftance of feveral leagues, where, after concealing themfelves a few days, they fuddenly fall on a different part from that where they were encamped, endeavouring

ing to carry the place by a fudden affault, unlefs the commandant's vigilance has provided againft any fudden furprife; when, by the advantage of the Spanish difcipline, they are generally repulsed with great flaughter.

These Indian wars against the Spaniards usually continue fome years, being of little detriment to the Indians; for most of their occupations, which consist in the culture of a small spot of ground, and weaving ponchos and cloaks for apparel, are carried on by the women. Their huts are built in a day or two, and their food consists of roots, maize, and other grain. War, therefore, is no impediment or loss to them; indeed, they rather consider it as a defirable occupation, their hours, at other times, being spent in idleness or caroufals, in which they drink chica, a liquor common among them, and made from apples.

The first advances towards a treaty of peace with these Indians are generally made by the Spaniards; and as foon as the proposals are agreed to, a congress is held, at which the governor, major-general of Chili, and the principal officers, the bishop of Conception, and other perfons of eminence affist. On the part of the Indians the toqui, or generaliss, and the captains of his army, as representatives of the communities, repair to the congress. The last inroad made by these favage enemies was in the year 1720, during the government of Don Gabriel Cano, lieutenant-general of His Majesty's forces, who managed the war against them with such vigour and address, that they were obliged to folicit a peace; and their preliminaries were fo submissive, that at a congress held in 1724, the peace was concluded, whereby they were left in possible of all the country fouth of the river Biobio; and the Capitaines de Paz were suppressive. These were Spaniards refiding in the villages of the converted Indians, and by their exactions had been the principal cause of the revolt.

Befides the congresses held with these Indians, for concluding a treaty of peace, others are held on the arrival of a new president, and the same ceremonies observed in both; fo that an account of the one will be sufficient to give a just idea of the other.

On the holding a congress, the prefident fends notice to the frontier Indians of the day and place, whither he repairs with the above-mentioned perfons; and on the part of the Indians, the heads of their feveral communities; and both, for the greater fplendor of the interview, are accompanied by an efcort confisting of a certain number previously agreed on. The prefident and his company lodge in tents, and the Indians encamp at a small distance. The elders or chiefs of the neighbouring nations pay the first visit to the prefident, who receives them very courteously, drinks their healths in wine, and himfelf gives them the glass to do the like. This politeness, with which they are highly pleased, is succeeded by a prefent of knives, fciffars, and different forts of toys, on which they place the greatest value. The treaty of peace is then brought on the carpet, and the manner of observing the feveral articles is settled: after which they return to their camp, and the prefident returns the visit, carrying with him a quantity of wine fufficient for a moderate regale.

Now all the chiefs of the other communities, who were not prefent at the first visit, go in a body to pay their respects to the prefident. At the rising of the congress, the prefident makes each a small present of wine, which the Indians liberally return in calves, oxen, horse, and fowls. After these reciprocal tokens of friendship, both parties return to their respective habitations.

In order to gain more effectually the hearts of these Indians, who, though in our efteem wretchedly poor, conceal the most stubborn pride, which can only be fostened by compliments and favours, it is a maxim with the presidents to admit to their table those who are apparently of the best dispositions, and during the three or four days of

the

the congress, neglects no means of ingratiating himfelf with the whole body. On these occasions a kind of fair is held at both camps, great numbers of Spaniards repairing thither with fuch goods as they know will please the Indians, who also come with their ponchos and cattle. Both parties deal by exchange, and never fail of felling their whole stocks; and of observing in their dealings the most exact candour and regularity, as a specimen in which all future commerce is to be conducted.

Though these Indians have shewn such a determined aversion to submitting to the Spanish monarchs, their behaviour has been very different to the missionaries, whom they voluntarily permitted to come among them; and many have even fhewed the greatest joy at being baptized. But it is extremely difficult to prevail on them to quit their free manner of living; which being productive of vice and favageness, prepoffeifes the mind against the precepts of the Christian religion. Before the war of the year 1723, the miffionaries, by their indefatigable zeal, had formed feveral villages, hoping by that means to induce their converts to practife the doctrines of the Christian faith. These villages were called St. Chriftopher, Santa Fé, Santa Juana, St. Pedro, and La Mocha. all of them being under the infpection of the Jefuits. The chaplains alfo of the forts on the frontiers had an additional falary for inftructing a certain number of Indians. But on that general infurrection, their innate favageness returned, all these converts abandoned the miffionaries, and joined their countrymen. On the re-eftablishment of the peace, they again folicited the miffionaries to come among them; and fome communities have been fince formed; but they are far fhort of their former promifing ftate, it being very difficult to bring even this fmall number to embrace a focial life.

Amidft all the fanguinary rage of thefe Indians in their hoftilities againft the Spaniards, they generally fpare the white women, carrying them to their huts, and ufing them as their own. And hence it is, that many Indians of thofe nations have the complexions of the Spaniards born in that country. In time of peace many of them come into the Spanifh territories, hiring themfelves for a certain time to work at the farm houfes, and at the expiration of the term return home, after laying out their wages in the purchafe of fuch goods as are valued in their country. All of them, both men and women, wear the poncho and manta, which they weave from wool, and though it cannot be properly called a drefs, it is abundantly fufficient for decency; whereas the Indians at a greater diftance from the Spanifh frontiers, as thofe who inhabit the countries fouth of Valdivia, and the Chonos who live on the continent near Chiloe, ufe no fort of apparel*. The Indians of Arauco, Tucapel, and other tribes near the river Biobio, take great delight in riding, and their armies have fome bodies of horfe. Their weapons are large fpears, javelins, &c. in the ufe of which they are very dextrous.

CHAP. X. — Voyage from Conception to the Island of Juan Fernandes; and from thence to Valparaiso.

THE fhips being come to an anchor in the port of Talcaguana, we waited on Don Pedro de Mendinueta, at the city of Conception, who informed us that the commodore Don Jofeph Pizarro, together with the land and fea officers, were arrived at Santiago, and that he intended to fet out for Valparaifo, in order to hoift his flag on board the Efperanza, and take upon him the command of that fquadron: on receiving this intel-

* Thefe Indians now drefs like the former. A.

VOL. XIV.

ligence.

ligence, and having no orders to continue at Conception, we put to fea on the fixth of February, and fteering for the place of our deftination, made, on the 20th, the ifland De Tierra de Juan Fernandes, and at half an hour after ten, as we were plying to windward along the coaft, and ftanding towards the ifland which then bore two leagues weft from us, we faw on the top of one of the mountains a bright light, which furprifed us the more, as on the following day we faw no traces of any fhip's being in the port fince we left it. I had a clear view of it from the inftant it began, and obferved that at first it was very fmall, and increafed, fo as to form a flame like that of a flambeau. The full vigour of its light lafted about three or four minutes, when it diminifhed in the fame gradual manner it had increafed. It did not appear again all the next night, nor had we during the whole time we were at anchor in the port, any view of fuch a phænomenon. We fent fome of our people on fhore to examine all the mountains, and other parts of the ifland, and they fpent feveral nights on that and the adjacent mountains, but could not difcover the leaft veftige of any fire. As I knew the illand to be abfolutely deftitute, the fanguine colour of the flame inclined me to think there might be fome volcano; but having never feen any thing of the kind before, nor heard from others that there was ever any eruption, I was far from being tenacious of my opinion. We had indeed all our conjectures; but the difficulty was not cleared up till my fifth and laft voyage to this ifland, when Don Jofeph Pizarro fent fome people on fhore to take an accurate furvey of this place, and the ground was found to be burnt, full of fiffures and hot, which verified my first opinion of a volcano.

On the 21ft, after coafting along this ifland, we continued our course for Valparaifo, where our little fquadron came to an anchor on the 24th, and were the more pleafed, as we found there the prefident of Santiago, Don Joieph Manfo, and our commodore; and in the harbour, befides the Callao fleet, three French fhips, called the Louis Erafme, Notre Dame de la Delivrance, and the Lys, which had been freighted by four merchants as register ships; and Valparaiso was the first port they had touched at, for vending their cargoes.

From feveral obfervations made in this harbour by Don George Juan, in the laft vovage of 1744, its latitude appears to be 33° 02' 36" 30", and Father Feuillée fettled its its longitude at 304° 11' 45" from the meridian of Teneriff. This town was at first very mean, confisting only of a few warehouses built by the inhabitants of Santiago for laying up their goods till shipped off for Callao, the harbour of Valparaiso being the nearest port to that city, from which it is only twenty leagues distant, though the natives will have it to be more. The only inhabitants at that time were the few fervants left by their refpective mafters for taking care of the warehoufes, and managing their mercantile affairs. But in process of time, the merchants themselves, together with feveral other families, removed from Santiago, in order to be more conveniently fituated for trade; fince which it has gradually increafed, fo that at prefent it is both large and populous; and would be still larger were it not for its inconvenient situation, standing fo near the foot of a mountain, that a great part of the houfes are built on its acclivity, or in its breaches. The broadeft and most convenient part is that along the coast, but this is very unpleafant in winter, being fo exposed to the north winds, that the waves beat against the walls of the houses, some of which are built of unburnt bricks, fome of chalk and pebbles, and others of bajareques.

Valparaifo, befides its parifh-church, has a convent of Franciscans, and another of Augustines; but very few religious, and the churches belonging to them fmall and mean. It is inhabited by families of Spaniards, and Cafts, both Mulattoes and Meftizos. In its neighbourhood are feveral villages, and the great number of farm-houfes

10

give

give the country a cheerful appearance. Here is a military governor nominated by the King, who having the command of the garrifons in the feveral ports, and of the militia of the place and its dependencies, is to take care that they are properly difciplined.

The proximity of this port to Santiago has drawn hither all the commerce formerly carried on at that city. To this it owes its foundation, increase, and present prosperity. At prefent all the Callao ships which carry on the commerce between the two kingdoms come hither. The cargoes they bring are indeed but fmall, confifting only of the goods already mentioned, as not produced in Chili. But in this port they take in wheat, tallow, cordovan leather, cordage, and dried fruits, and with these return to Callao; and a ship has been known to make three voyages in one fummer, namely, between November and June, during which interval the droves of mules and carriages from all the farm-houfes in the jurifdiction of Santiago bring fresh supplies to the warehouses, that trade is carried The matters of thips, who generally refide at Lima or Callao, on both by land and fea. enter into partnership with the landed gentlemen of Chili, that the cargo of every ship generally belongs in part to the mafter; though fome fhips are freighted, and, if the loading be wheat, greatly augments its value; for the fanega costs here only ten or twelve rials, or two dollars, and the freight is from twelve rials to two piasters. Another circumstance which raifes the price of wheat at Callao, where it is fold for twentyfour or thirty rials, is, that the fanega is there only five arobas and five pounds, whereas at Chili the fanega is fix arobas and fix pounds.

This commerce being carried on only in fummer, that feafon may be termed the fair of Valparaifo; but on the approach of winter the place becomes as remarkably defolate, the crowd of traders repairing to Santiago, those only continuing at Valparaifo who cannot afford to remove.

Valparaifo is abundantly fupplied with provisions from Santiago, and other places in its neighbourhood; but fhips do not victual here fo cheap as at Conception. The fruits cannot be viewed without admiration, both with regard to their beauty and fize, particularly a fort of apples called Quillota, being brought from that place; they prodigiously exceed the largeft in Spain, and, befides their exquisite flavour, are fo luscious that they melt in the mouth.

Among the feveral kinds of game, there is here fuch a plenty of partridges in their feafon, which begins at March and lafts feveral fucceeding months, that the Santiago muleteers knock them down with flicks without going out of the road, and bring great numbers of them to Valparaifo. But few of thefe or any other birds are feen near the town. It is the fame thing with regard to fifh*, very little being to be caught either in the harbour or along the coaft, in comparison of what may be taken in the other parts.

The coaft of Valparaifo forms a bay, lying north-eaft and fouth-weft, three leagues in length, and having two capes, called Concon, and Valparaifo. In the fouth-weft part of this bay is the harbour, of a convenient fize, and running above a league farther up the country. The bottom is a firm tenacious mud. At the diftance of a cable's length and a half from the fhore, is from fourteen to fixteen fathom water, which increafes in depth proportional to the diftance, that at the diftance of half a league there is thirty-fix or forty fathom. The harbour is every-where free from rocks and fhoals, except to the north-eaft of the breach De los Angeles, where, about a cable's length or two from the land is a rock, which muft be the more carefully avoided, as it never appears above water, but fometimes has not a depth fufficient for a fhip of any burden to pafs over it. The

courfe

^{*} They take their fifh by fhooting a barbed arrow into them, which has a long light fhaft, that fuffers the fifh not to fink after it is wounded. A.

courfe into this harbour is to keep near the point of Valparaifo, within a quarter of a league from the fhore, where there is twenty, eighteen, and fixteen fathoms water. After getting round the point, you must stand nearer to the shore, in order to avoid a bank which lies thereabouts; not that it can be attended with any danger; for the fide of it is fo bold, that if the fhip fhould touch it little damage could enfue. This bank is always above water, and there is a neceffity for paffing fo near it, in order to keep to windward, as otherwife it would be difficult to fetch the harbour. Regard muft alfo be had to the time proper for entering the port of Valparaifo; for it is by no means proper to attempt it in the morning, as the wind, though blowing fresh without, does not then extend fo far into the bay, and thus the ship, by having very little way, and confequently not answering her helm, might drive upon the bank; and to let go your anchor in fifty fathom water, which is the depth clofe to the fand, will be very inconvenient. The common method, therefore, is to keep in the offing till about noon, or fomething after, when the wind ufually continues to the bottom of the harbour, and then, by observing the above-mentioned rules, the ship will fall into her station without any difficulty; or you may run into the bay, and there come to an anchor till the day following, and then weigh early and go in with the land-breeze, here called Concon, as blowing from that point; and this breeze may be depended on every day at a certain hour, except during the time of the north winds, which caufe fome alteration in it.

The fafeft method of mooring fhips is lying one anchor on the fhore towards the fouthfouth-weft, and another in the channel towards the north-north-weft. The former muft be well fecured, as the refource against the fouth and fouth-weft winds; for though they come over the land, they are often fo violent, and the fhore of the harbour fo floping, that the fhips would otherwife drive.

As foon as the north winds fet in, which happens in the months of April and May, the veffels in the harbour are exposed to their whole violence, which also causes a very high fea. In this exigence, the whole fecurity of the fhips depends on the anchor and cable towards the north-north-east, it will therefore be very proper to lay another in the fame direction; for if it should give way, it would be impossible to hinder the ship from striking on the rocks near the shore. The only favourable circumstance here is, that the bottom being very firm, and rising towards the shore, the anchor has good hold, and confequently the whole depends on the strength of the cable.

CHAP. XI. — Voyage from Valparaifo to Callao : — fecond Return to Quito to finish the Observations : — third Journey to Lima, in order to return to Spain by the way of Cape Horn.

THE fervice our fquadron was employed on being that of cruizing in those feas, in quest of the enemy as long as it should be thought requisite, the commodore, without staying any longer than was absolutely necessary, came on board, and we immediately put to fea, and feveral times visited the islands of Juan Fernandes, till the 24th of June 1743, when we shaped our course for Callao, which port we entered on the 6th of July. The day following the commodore and principal officers went on shore, and were received by Don Joseph de Llamas, general of the forces in Peru, and government of Callao; who, on account of the first employment, resides at Lima, but was come to Callao to compliment the commodore. He attended him to Lima, and introduced him to the viceroy, who expressed his great fatisfaction at his fafe arrival after such long expectations. He was also met on the road by the principal persons of the city.

692

After

After taking our departure from the island De Tierra de Juan Fernandes, we steered the three first days north-north-east, and north-east, one quarter northernly, having fresh gales at west, and a heavy fea from the south-west. When we came into the latitude of 28° 30' we steered north, fix or seven degrees easterly, till the third day at nine in the morning, when being in the latitude of 16° 28' we made the land on the coast of Chala; and the day following, being the 4th, the island of Sangallan, which at noon bore east-north-east distance fix leagues. We then coasted along the shore, and on the 5th at noon, we faw the isle of Asia, bearing east-north-east fix leagues distant; and on the 6th as before-mentioned, the squadron came to an anchor at half an hour after one in the asternoon, in Callao harbour.

Hence it appears, that till we were in the latitude of 28° 30', the wind was at fouthweft, which agrees with my obfervations, mentioned Chap. III. relating to this fea; and if no other circumftance concurred to verify them, it muft be imputed to the feafon of the year, it being the beginning of winter when we returned to Callao. But as during the firft three days, the ftrength of the wind had driven us near the coaft, fo from the latitude we found it farther to the fouth; between twenty-five and twenty-one, began to incline towards the fouth-eaft, and from the latitude of twenty degrees, when we found ourfelves near the land, till our arrival at Callao, we had the wiud fouthfouth-eaft, and eaft-fouth-eaft. It was the fame with regard to the fea coming from the fouth-weft, for it gradually diminified as we approached the coaft; fo that from twenty-five degrees it was not at all troublefome, and after we were paft twenty-one degrees, became imperceptible. But it was very different with regard to the current, which, from the parallel of twenty or twenty-one degrees, we perceived to fet towards the north-weft, parallel to the direction of the coaft, and became much more fenfible after we had fight of the land, its velocity increafing as latitude decreafed.

I would recommend two precautions to be ufed in the voyage from Chili to Callao. The firft is not to make the land in the bay of Arica, the many eddies of the current there rendering it very difficult to get again clear of the coaft; which muft be done by keeping along fhore; as by ftanding out to fea, you will be in danger of not reaching the harbour; for the current fetting north-weft, on ftanding in for the land, you will probably find yourfelf to leeward of the harbour; in which cafe it will be far from eafy to work up againft the wind and ftrong current. The fecond flows from the former, and is to make the land fomewhere between Nafca and Sangallan, as the coaft may be then kept at a proper diftance, and the danger of falling to leeward of the port avoided; a misfortune which has happened to many, who have been carried farther out than they expected; fo that after a long look-out for land, they find themfelves on its firft appearance to leeward of their port.

In winter, efpecially, too much care cannot be taken, as from the continual thicknefs of the atmosphere, obfervations cannot be made fo often as requisite; fometimes not for five or fix days fucceffively; at the fame time the fight of land is entirely intercepted by the density of the fog. This we experienced; for after we were anchored in Callao at only a quarter of a league diftant from the land, the people on the fhore had no fight of the fhips; and it was owing to our being very near the coast that we made the harbour; for had we been at a diftance, we fhould have been far to leeward, when the weather cleared up.

On the 25th of June, being the fecond day after our departure from the ifland De Tierra de Juan Fernandes, we faw a meteor like that we had before feen at Quito, namely, a globe of fire, or large globe of inflammable exhalations. It first appeared in the west, at half an hour after three in the morning, and moved with great velocity for for a confiderable fpace towards the eaft, as if carried by the wind. The light of this meteor was fuch, that the watch on the quarter-deck could plainly diffinguifh every perfon on the fore-caftle; and both were not a little terrified. The phænomenon lafted between three and four minutes, and half an hour after we felt two violent flocks, at an interval of about a minute and a half betwixt them, fo that all apprehended the fhip had ftruck on fome floal; but on reflection, we concluded it to be the effect of an earthquake.

The fquadron being fafely arrived at Callao, with the commander-in-chief of the South Sea, a title given to Don Jofeph Pizarro, and a fufficient number of officers of fuch diftinguifhed zeal and experience, that they might well fupply our place without detriment to the fervice; and at the fame time, we being willing to put the finishing hand to our principal work, we asked the viceroy's leave to return to Quito; but his excellency was defirous that we should first complete fome particulars he had committed to our care. Accordingly we applied ourfelves assisted our work; and Don George Juan, having finished his part first, left Callao on the 14th of November, proposing to make all the neceffary preparatives against my arrival, that the proper observations might be made without delay. On the 27th of January 1744, I reached Quito, where I found that Don George Juan had, by his extraordinary care, nearly finished every thing neceffary for the continuation of our work; and whils the remainder was performing, we had an opportunity, in conjunction with M. Godin, the only French academician now remaining in this province, of observing the comet which appeared this year.

Though the comet might have been feen on the 2d and 3d of February, the atmofphere of Quito being fo unfavourable to aftronomical obfervations on account of the clouds, it was the 6th before we could obferve it. The comet was then near the weftern part of the horizon, and being behind the mountain of Pichincha, its altitude concealed it from our fight, fo that we could not obferve it after feven or eight at night. On the 6th, at feven in the evening, we found its altitude above the horizon to be fifteen degrees, and its azimuth from the north, feventy-two degrees; M. Godin and Don George Juan judged its nucleus to be oblong, to me_it appeared perfectly circular; but we all agreed that it was larger than Jupiter. The tail, which was difcerned through fome light clouds, feemed to extend two degrees, and to form with the vertical circle, an angle of near thirty degrees.

On the 7th, at eight minutes after feven in the evening, on repeating our obfervations, we found its altitude to be 11° 11', and its azimuth from the north 72° 45'. From this fecond obfervation, which we confidered as more accurate than the former, having made proper allowances for refraction, we concluded that the right afcenfion of the comet was 332° 50', and that its northern declination was 20° 5'. Whence we inferred, that its trajectory was the fame with that obferved in 1681 by Caffini, and by Tycho Brahe in 1572, and that in all probability, it was the fame; for though the periods do not agree, it might have appeared twice in the first interval. After this we were hindered from profecuting our obfervations by the cloudinefs of the nights; and fome days afterwards we were affured by feveral, that they had feen it in the morning.

As all the triangles on the north fide from Pambamarca to the place where M. Godin had made his fecond aftronomical obfervations were not completed, and the inftrument conftructed for that purpofe kept in readinefs, we made that our first task; M. Godin not having then gone through them all. After finishing every thing here, we repaired on the 22d of March to the observatory De Pueblo Viejo de Mira, where, meeting with the the fame difficulties from the thicknefs of the atmosphere as we had before experienced during the whole courfe of our operations, we were obliged to continue there till the 22d of May, when, being fatisfied with the accuracy of the obfervations made during this long interval, we returned to Quito, with the pleafing expectation, that our perfeverance against the constant difficulties we met with from the clouds was at last come to a period; and that we should now rest from the toils and hardships of living on frozen defarts; a repose the more pleafing, as it was accompanied with a confcious field that no inconveniences had occasioned us to omit the least part of our duty.

During our ftay at Mira, Don George Juan applied himfelf to obferve the variation of the magnetic needle, and by four obfervations nearly coincident, he concluded to be nearly 8° 47' eafterly.

We now began to deliberate on our return upon the favourable oppertunity of the above-mentioned French fhips, which were preparing to fail for Spain; as we fhould then pafs round Cape Horn, and not only complete from our own experience, an account of the South Sea, but be enabled to make obfervations on the whole courfe. Another, and indeed our principal motive was, the fafety of our papers, concluding there could be no danger in a neutral fhip, as we then imagined those to be. The concurrence of fo many advantages immediately determined us; and leaving Quito we fet out for Lima, where I arrived first, Don George Juan having fome days been detained at Guayaquil by a fresh commission by the viceroy. These fhips, not failing to foon as expected, I employed the interval in drawing up an extract of all interesting observations and remarks, and prefenting it to the viceroy, who was pleafed to order the papers to be preferved in the fecretary's office, that if any misfortune spectrum found happen to us in the voyage, our fovereign might not be totally disappointed in his generous views of promoting the useful fciences of geography and navigation.

While we were employed in finishing our observations at Mira, the university of Lima gave a remarkable testimony of their fense of M. Godin's eminent talents, by choofing him professor of mathematics, in the room of Don Pedro de Peralta, deceased; which he accepted of with the greater fatisfaction, as fome indifpenfable affairs of his company would not permit him to gratify his defires of returning to Europe. Accordingly he proposed to spend this interval in making fresh observations and experiments, concluding that the atmosphere of Lima, during the fummer-feason, would be more favourable to his defigns than that of Quito or the mountains. On his arrival at that city, the viceroy, who was no ftranger to his great abilities, and pleafed with the prudent choice of the univerfity, conferred on him, at the fame time of his being invelted with the profefforship, the post of cosmographer to His Majesty; with other advantages annexed to it. But this gentleman was far from proposing to make any longer stay there than what these affairs required; no advantages or honours being fufficient to make him forget the obligations he was under of giving an account of his voyage and observations to his fovereign and the academy, especially as being the eldeft of the three academicians; fo that all the testimonies of esteem could not suppress his uneafinefs at the delay.

M. de Juffieu, though with the fame regret as the former, determined to continue fome time at Quito, with M. Hugot, till he faw what turn the war would take, that he might efcape, in his return to Europe, those dangers then so common at fea. M. Verguin chose to go by the way of Panama: and the others, except the two who died in the country, one at Cayambe and Cuenca, were dispersed; one fettling in Quito. Quito. Thus, the whole French company feparated: and it must be confidered as a fingular happines that, after such a fcene of labours, hardships, and dangers, in such a variety of climates, and amidst such inhospitable defarts and precipices, our operations were accurately performed: and we capable of entering on a new scene of dangers and difficulties, which it was our fortune to experience before we were in a condition of prefenting this work to the public.

VOYAGES AND TRAVELS

INTO

BRAZIL.

WITH

A PARTICULAR ACCOUNT OF ALL THE REMARKABLE PASSAGES THAT HAPPENED DURING THE AUTHOR'S STAY OF NINE YEARS IN BRAZIL;

Especially in relation to the Revolt of the Portuguese, and the intestine War carried on there from 1640 to 1649.

By Mr. John Nieuhoff.*

ADVERTISEMENT TO THE READER.

IT is about nineteen years fince my brother, John Nieuhoff, just before his fecond voyage into the Indies, prefented me with his description of China, and certain draughts he had made during his embaffy in that empire, which, being afterwards publifhed, were foon after translated into fix feveral languages.

My brother had, before that time, not only been in Brazil, and feveral other places in those parts, but also fince that time, has had the opportunity of travelling through a great part of Afia, till 1671, when, returning into Holland, he brought along with him all his papers, obfervations, and draughts, he had collected during his voyages; which, though much coveted by all curious perfons, yet for fome reafons best known to himfelf, he did not think fit to commit to public view.

But, after his deceafe, confidering with myfelf that fuch ufeful collections ought not to be buried in oblivion, I thought fit to publish them for the public good.

As those things which he relates of the revolt of the Portuguese in Brazil, are extracted verbatim out of the records kept during my brother's abode of nine years in Brazil, under the government of the lords, Henry Hamel, Peter Bas, and Adrian Bullestrate, and authentic letters; fo the truth thereof admits not of the least doubt from unbiaffed perfons.

The vaft countries through which my brother travelled in his life-time, as Brazil, part of Pérfia, Malabar, Madura, Coromandel, Amboyna, Ceylon, Malacca, Sumatra, Java, Tagowan, and part of China, befides many iflands, could not in the least infect him with that difeafe, fo incident to travellers, to relate fables instead of histories, it having been his conftant practice to adhere most religiously in all his treatifes to the naked truth, without the leaft difguife.

His last voyage to the isle of Madagascar, where he was lost, I have taken partly out of his own letters, partly out of the journal of Captain Reinard Claefon, which he brought along with him from thence.

VOL. XIV.

4 U

As

As to his perfon, I will only add thus much: he was born at Uffen, in the earldom of Benthem, (where his father, brother, and brother-in-law, were all three Burgomafters) of a good family, the 22d of July 1618. He was a comely perfon, of a good underftanding, good humoured, and agreeable in converfation; a great admirer of poefy, drawing, and mufic: as he delighted in travelling, fo he was thereby become mafter of divers languages: in what flation he lived during his abode in Brazil, and the Eaft Indies, will beft appear by the two following treatifes.*

HENRY NIEUHOFF.

VOYAGES AND TRAVELS INTO BRAZIL.

IN the year 1640, I entered into the fervice of the Weft India company, and on the 24th of October went in the quality of mcrchant-fupercargo, aboard the fhip called the Roebuck, of twenty-eight guns and one hundred and thirty men, commanded by Nicholas Selles of Durkendam. We fet fail out of the Texel the fame day, in company of feveral other veffels bound for France, Spain, and the Streights; and purfued our voyage the 28th, with a favourable gale, through the channel betwixt France and England.

On the 29th we were overtaken with a most violent tempest, which obliged us to take in all our great fails: it continued from morning to night, when the fury of the winds being somewhat allayed, we found that we had escaped without any confiderable damage; but the sea continued very turbulent all that night. The next day following, our seamen catched a wood-snipe, a wild pigeon, and several other small birds, which were forced into the sea by the violence of the storm.

On the 31ft we found ourfelves under the forty-fifth degree of northern latitude. The next morning, being the firft of November, fome of our feamen catched a fea-hog, by means of a harpoon: it was fo big, that four men could fcarce lift it into the fhip. Its tafte was not very agreeable, but rankifh, which was the reafon our men did not catch any more of them, though they fwam in vaft numbers round about our veffel. By fun-fet, the wind beginning to increafe, we parted from the other fhips bound for Spain and the Streights, which were not feparated from us in the laft ftorm, fteering our courfe fouth-weft. The 2d and 3d it blew very hard, with thunder and lightning, fo that we were forced to take in all our great fails, and the fhip being very leaky ever fince the laft tempeft, to ply the pump with all our might.

The 4th we found ourfelves under 40° 30', when, about midnight, the wind increafed with fo much violence, that the air which furrounded us appeared no otherwife than one continual fire, occafioned by the lightning, which fcarce ever ceafed all that night. During this calamity we perceived certain fmall fires or lights, fixed to the maft : they are called Peaceable's Fires by the feamen. These fires are supposed to be certain fulphureous vapours, forced by the violence of the winds from the shore into the fea, where, being lightened by the violent agitation of the air, they burn till their oily

* The Voyage to the East Indies is omitted.

I

fubstance

fubstance be confumed. The feamen look upon them as a good omen, that the form is going to abate; which proved true in effect, the fury of the winds beginning to allay from that time; and we had the good fortune to difcover two leaks near our forecastle, which elfe might have proved of dangerous confequence.

The 5th, we paffed the Barrels, under the thirty-ninth degree; where, according to an ancient cuftom, every one, of what quality or degree foever, that has not paffed there before, is obliged to be baptifed, or redeem himfelf from it. He that is to be baptifed, has a rope tied round his middle, wherewith he is drawn up to the very top of the bowfprit, and from thence three times fucceffively tumbled into the water. There were fome who looked very blank upon the matter, but others went cheerfully about it, and for a meafure of Spanifh wine fuffered themfelves to be rebaptifed for the mafter and the merchant. But this cuftom is abolifhed of late years, by fpecial orders from the governors of the company, to avoid broils and quarrels, which ufed often to arife upon this occafion.

The 6th, as we were fteering our courfe fouth-fouth-weft, with a frefh gale, we defcried two veffels, making all the fail they could towards us, whom we fuppofed to be Turkifh pirates (as indeed they proved afterwards); it was refolved to defend us till the utmoft extremity. Accordingly orders were given to clear every thing upon the deck, and to furnifh the feamen with mufquets, hangers, pikes, and other fuch like weapons. Every one having taken his flation, we put up the bloody flag, and expected their coming under the found of our trumpets. The mafter of the fhip, being all that time very ill of fome wounds he had received formerly, which were now broken up afrefh; and the commiffary, Francis Zweers, not being in a condition, by reafon of his great age, to remain upon deck, I was fain to undertake the whole management of the fhip, and encouraged them to fight bravely for their lives and liberty, ordering them not to fire at all, till they were in their full reach, they being much better manned than we.

About noon we faw the Turks make up towards us, with orange-coloured flags, which however they foon after changed for the bloody flags, and the biggeft of them faluted us with two cannon-fhot out of his forecaftle, without doing us the leaft harm, but the fecond time almost fhot our foremast in pieces. In the mean-while we were come fo near to one another, that we fent them a good broadfide into their fhip, which the Turks repaid us immediately; but it was not long before we observed the biggeft of the two had received a fhot betwixt wind and water, which made her keep at fome farther diftance, till fhe had repaired her damage, which gave me opportunity to encourage our people with words, and a good proportion of wine, which they mixed with fome gunpowder; and I, to pleafe them, followed their example.

By this time they returned both to the charge, and faluted us fo fiercely with their cannon and fmall fhot, that they took away the roof of our great cabin, and did us fome damage in our rigging. I then changed my fcymetar for a mufquet, and difcharged continually upon the enemy, and I found myfelf fore feveral weeks after, by the hurt I received from a mufquet of one that ftood hard by me, which being by a cannon-ball forced out of his hands againft my body, I fell down, ftretched all along upon the deck, without fenfe or motion; but having after fome time recovered myfelf, I returned to my poft. I then perceived the captain of the biggeft Turkifh fhip with a turbant on his head, in the ftern, encouraging his men, which made me order thofe about me to aim at him with their fmall fhot, which, as I fuppofe, fucceeded according to our hopes, it being not long before we loft fight of him. Notwithftanding this, the heat of the fight increafed on both fides, many broadfides paffing betwixt us, 4 U 2

accompanied with most dreadful outcries and lamentations of the wounded on both fides. However, the Turks durft not attempt to board us; whether it were that they thought us better manned than really we were, or that they feared we would fet fire to the fhip, which we threatened we would, fhewing them a match ready for that purpofe. They answered us in Dutch, that they would not part with us upon those terms; yet was it not long before we faw them make away from us, having received many shots through their sings; and we, with a brisk gale, made all the fail we could to be rid of these unwelcome guests, steering a quite different course, which, with the advantage of the darkness of the night, brought us quite out of fight of them by next morning.

We gave thanks to God for his having delivered us from the danger of flavery, and crowning our endeavours with fuccefs against an enemy much stronger than us, the biggest of them carrying twenty-four guns, and the other two; whereas we had no more than eighteen, befides that they were much better manned than we. After having taken a view of our fhip, and found it found under water, we betook ourfelves to repair the damage we had received during the fight; but whilft we were bufy in this work, we were on the 7th furprifed by fo violent a ftorm, that we were forced to take in all our fails. This put us to a great nonplus, but by good fortune the ftorm blew foon over, when orders were given to give an allowance of three pounds and a half of bifcuit per week to the feamen, all our other bread being become multy by that time. The 10th we found ourfelves under the thirty-ninth degree and thirty minutes, about twenty leagues off of the Canary Islands; here we difcovered the pike of Teneriff, being two leagues and a half high, and accounted the highest mountain in the world. It may be difcovered at fixty leagues diftance from the fhore. Thus we continued our voyage till the 14th, without any memorable accident, when we paffed the tropic of Cancer. About noon we were overtaken by another ftorm, which made us take in most of our great fails, for fear of the worst, but it lasted not long.

This tract of the fea is called by the Dutch, the Kroos Sea; by the Portuguefe, Mar del Aragaco (or Largaco, or Suargaco), i. e. the Sea of Ducks-meat, becaufe hereabouts, viz. from the eighteenth to the thirtieth degree, or as fome will have it, from the twentieth to the twenty-fecond and twenty-third degree of northern latitude, it is found in great quantity, and carried along with the ftream; its leaves are of a pale green colour, like that of parrots, fmall, thin, and carved at the end. It bears berries of the fame colour, about the bignefs of a pepper-corn, but are quite hollow, without any feed within or tafte. It is fometimes fo clofely twifted together, that it ftops a fhip in its full courfe; though we had the good fortune to pafs through it without much difficulty, being then about four hundred leagues from the coaft of Afric, where are no iflands nor anchorage. It may be pickled with falt and pepper, and ufed like as we do capers, being accounted a good remedy againft the gravel. It is generally found without roots, having only a few thin fprouts, which, as it is fuppoled, take root in the fandy grounds of the fea; though others are of opinion, that it is carried by the violence of the ftream from the iflands into the fea.

The 18th, one of our fhip's crew died, who was the next day thrown overboard, at which time I observed, what indeed I had heard often before, that the dead carcaffes always float with their heads to the east at fea.

The 22d we were overtaken by another tempeft, called Travado, which with horrible thunder and lightning furprifes the fhips fo fuddenly, that they have fcarce leifure to take in their fails, and fometimes returns three times in an hour. We catched here abundance of fifh, fuch as Bonytes of ten feet long, and Korets, and a great lamprey, which we had enough to do to bring aboard; we only took out the brains, being looked

looked upon as a fovereign remedy against the stone in the bladder, the sleing of an oily taste.

The 24th we faw great quantities of fmall birds about our veffel, and catched one not unlike a crane, but fomewhat fmaller, it being a very fair day.

The 26th, being under the fifth degree forty-feven minutes, we were fo becalmed that we could not perceive the fhip to move, and fpent our time in catching of fifh, of which we had fuch plenty, that we chofe only the beft for our eating; among the reft we met with a fifh called the king's-fifh: for by reafon of the impenetrable depth of the fea in this place, the waters are fo clear and transparent in ftill weather, that you may fee the fifh in vaft numbers fwimming near two feet deep; fo that you need but faften a crooked nail or any thing elfe like a hook to a ftring, and hanging it in the fea, you may catch as many fifh as you pleafe. This calm was followed by a moft violent ftorm of rain.

The 30th we found ourfelves under the fourth degree forty-one minutes, where we faw abundance of flying-fifh.

The 3d of December we came under the first degree thirty minutes, where we met with millions of fish, and did catch as many as we thought fit: fome we put in falt, others we rubbed in the belly with pepper and falt, and hung them up by the tail in the fun.

The 4th, by break of day, being very clear weather, we faw the ifland of St.Paulo, as it is called by the Portuguefe, which at a diffance reprefents a fail, which as you approach nearer to it, proves five high rocks. About noon we found ourfelves at fiftythree minutes of northern latitude, taking our courfe five leagues to the weft. Here at feveral times we catched fome fea-gulls; those birds make a flew as if they would bite you, but remain immoveable in the place, till they are caught or killed.

The 5th, about eleven o'clock we paffed the equinoctial line, fo that in the afternoon we found ourfelves at five minutes fouthern latitude, where we had but little reafon to complain of cold; it being often fo calm here, that fhips are forced to fpend a confiderable time in paffing this tract. It is extremely hot here, and great fcarcity of good and fweet water, the rain-water being not wholefome, but caufing the fcurvy, by reafon of its being corrupted by the violent heat of the fun.

About three years after my arrival in Brazil, a certain Portuguese fhip was found adrift under the equinoctial line, without any living creature in it, which, according to the journal, had been fix whole weeks under the line. We had a very good pasfage, and catched abundance of fish, and among the rest a certain fish called the blower, which solve a confiderable quantity of water in their guts, and then at once spout it forth again. They will follow the solve for a long time.

The 8th we paffed by the ifle called Ilha Ferdinando of Neronha; it being very ferene weather, we faw vaft numbers of birds, and whole fhoals of flying fifh, which were followed by the Bonytes and Korets.

The island of Ferdinando of Neronha, fituated under the fourth degree of fouthern latitude, about fifty leagues from the coast of Brazil, was about the year 1630 inhabited by the Dutch, but by reason of the vast number of rats, which confumed all the fruits of the earth, deferted by them a few years after; it being otherwise a very fruitful island, and abounding with fish, the inhabitants of Receif being used to fend their fisher-boats thither, which return commonly well freighted with fish. The council of Brazil did afterwards fend a certain number of negroes thither, under the conduct of one Gellis Vepant, to cultivate the ground for their subfishence, who likewise shared there for fome time. About a-year and a half after, the council of justice banished feveral

feveral malefactors into that ifland, who, being furnished with necessary instruments for cultivating the ground, were forced to feek for their fustenance there.

The 1 ith at night we found ourfelves under the feventh degree, over against the province of Goyana, about twenty leagues on this fide of Olinda; with break of day we faw the fhore of Brazil, but kept out at fea till it was broad day.

The 12th it was very foggy, and we kept our courfe with fair wind and water all along the coaft, and arrived before noon fafely near the Receif, where we caft our anchor at feveral fathoms depth, after we had spent feven weeks and one day in the voyage.

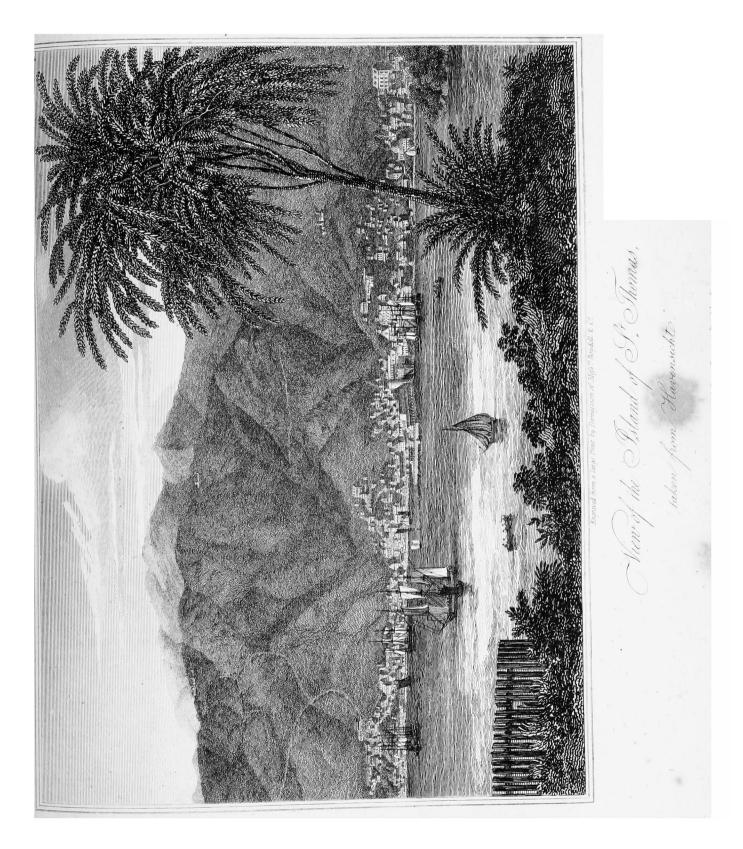

After we had returned our thanks to God for his deliverance from the dangers of the fea, and flavery of the Turks, I went afhore the fame night with the mafter and commiffary in a boat, to notify our happy arrival, and to deliver a letter to Count Maurice, and the governor of the council. I continued afhore that night, but returned aboard the next day. And,

The 15th the pilots conducted our veffel into the harbour of the Receif, where we found twenty-eight veffels and two yachts lying behind the Water Caftel.

Towards the latter end of August 1643, I received orders from the council to fail with the yacht called the Sea Hog, loaden with fullers-earth, to the ifle of St. Thomas, to exchange it for black fugar, this being the chief commodity transported from thence. My voyage proved fortunate enough, not meeting with any finisfer accident, except with a violent tempest of thunder, lightning, and rains, and came the 9th of September at an anchor there; the cargo did bear no good price, yet after a stay of fourteen days, I returned with a cargo of black fugar to Brazil, where I arrived the 3d of October before the Receif, after a voyage of near three months.

The isle of St. Thomas is of a circular figure, about thirty-fix leagues in compass; the high mountains in the midft of that island are always covered with fnow, notwithftanding that in the low grounds, by reason of its fituation under the line, it is exceffive hot. It is very fertile in black fugar and ginger; the fugar-fields being continually moistened by the melted fnow that falls down from the mountains. There were at that time above fixty fugar-mills there; but the air is the most unwholesome in the world, no foreigner daring to ftay for much as one night as fore, without running the hazard of his life; because by the heat of the fun-beams fuch venomous vapours are drawn from the earth, as are unsupportable to ftrangers. This fog continues till about ten o'clock in the morning, when the fame is disperfed, and the air cleared, which made us always ftay abroad till after that time. This mist is not observed at fea.

The air here is very hot and moift throughout the year, except in the fummer about June, when the fouth-eaft and fouth-weft winds abate much of the heat of the climate. The vapours drawn up by the fun, occafion certain epidemical intermittent fevers, which carry off the patient in a few days, with exceffive pains in the head, and violent torments in the bowels; though fome attribute it to the immoderate ufe of women, and of the juice of cocoas. Certain it is, that among a hundred foreigners, fcarce ten efcape with life, and those feldom live till fifty years of age; though fome of the inhabitants, as likewife the negroes (who are all loufy here), live to a great age. Its first inhabitants were Jews, banished out of Portugal; they are of a very odd complexion. Among the mountains dwell abundance of negroes, who are run away from the Portuguese, and make fometimes excursions to the very gates of the city of Pavaofa. It is almost next to a miracle, that any people should inhabit fo unwholefome a climate; but that the hopes of lucre makes all danger eafy.

The city of Pavaofa, belonging to this island, is fituate upon a rivulet; it contains about eight hundred houses, and three churches. This city, as well as the whole island, was, October 16, 1641, conquered by the Admiral Cornelius Tol, after a fiege of forty days, without any confiderable loss; but both he and his lieutenant, as well as feveral other commanders and many feamen, were fwept away by this pestilential air; and of three hundred Brazilians, not above fixty escaped with life.

But before I proceed to give you an account of all the remarkable paffages that happened in Brazil fince the revolt of the Portuguefe, and during my ftay of eight years there; it will not be amifs to give a fhort defcription of this country.

A Description of Brazil.

AMERICA, (or the Weft Indies,) is divided into the Northern and Southern America. Brazil is part of the laft.

The Northern America borders to the north upon the Terra Incognita, or rather upon Hudfon's Streights; to the fouth and weft upon the South Sea, and to the eaft upon the ftreights of Panama, the bay of Mexico or Nieu Spain, and the North Sea.

It comprehends the following provinces :

Eftotiland and Labrador, New France, Canada, Bakaloos, New England, Virginia, Florida, New Spain, the provinces of Mexico, New Mexico, Tlafkalla, Guaxaka, Mechoakana, Zakatula, Kolim, Yukatan, Tabafko, New Gallicia, New Bifcay, Chiametla, Kuliaka, Cimalon, New Granada, California, Anian, Quivira or New Albion, Conibas, Guatemala, Sokonufko, Chiapa, Vera-pas, Honduras, Nikaragua, Coftarika, and Veragua.

The Southern America is a demi-ifland in form of a pyramid, the bafis of which lies to the north; the point extends to the Streights of Magellan, under the fifty-third degree of fouthern latitude, bordering to the eaft upon the Atlantic ocean, or North Sea, and to the weft upon the South Sea; its whole circuit being of about four thoufand Italian, or one thoufand German, miles. It contains the provinces of Caftilla d'Or, Tierra Ferma (called by the Portuguefe, Paria), Cumana, Caribana, Brazil, Chika to the eaft, to the weft Popayan, Peru, Chili, befides feveral inland provinces.

Brazil was first discovered by Pedro Alvaro Capralis, a Portuguese, fome time before Americus Vesputius, viz. the year 1500. He gave it in the name of Santa Cruz, which was afterwards by the Portuguese changed into that of Brazil, from the wood of the same name, which is found there in great quantity, and from thence transported into all parts of Europe, for the use of the dyers.

It is fituate in the midft of the torrid zone, extending to the tropic of Cancer and the temperate zone.

Concerning its extent from north to fouth, there is no fmall difference among the geographers; but, according to the beft computations, its beginning may be fixed under the fecond degree and a half of northern latitude, near the river Pata, and its end under the twenty-fourth degree and a half of fouthern latitude, to the river Capibari, two leagues above the city of St. Vincent; fo that its whole extent from north to fouth comprehends twenty-five degrees, or three hundred and feventy-five leagues; fome place Brazil betwixt the river of Maranhaon and Rio de la Plata. The extent of Brazil from the eaft, where it borders upon the North Sea, to the weft, is not determined hitherto, there being very few who have penetrated fo deep into the country, though its bignefs from eaft to weft may be computed to be feven hundred and forty-two leagues; there are

are fome, however, who extends its limits farther to the eaft, and to the weft as far as Peru or Guiana, which makes an addition of one hundred and eighty-eight leagues. Some make the boundaries of Brazil to the north the river of the Amazons, to the fouth Rio de la Plata, to the east the North Sea, and to the west the mountains of Peru or Guiana.

Brazil, thus limited, is divided by the Portuguefe into fourteen diffricts, called by them kapitania, or captainships; viz. Paria, the first of all towards the north; Maranhaon, Siara, Potigi or Rio Grande, Paraiba, Parnambuko, Tamarika or Itamarika, Seregippe del Rey, Quirimune or Bahia dos todos los Santos, Nhoe-Kombe or Os Ilhos, Pakata or Porto Securo, Rio de Janeiro or Nheteroya, St. Vincent, and Efpiritu Santo.

Whilft part of Brazil was in our poffeffion, it might conveniently be divided into the Dutch and Portuguese Brazil. Each of these captainships is watered by some confiderable river or other, befides feveral others of lefs note; most of these have very rapid currents in the rainy months, and overflow the adjacent country.

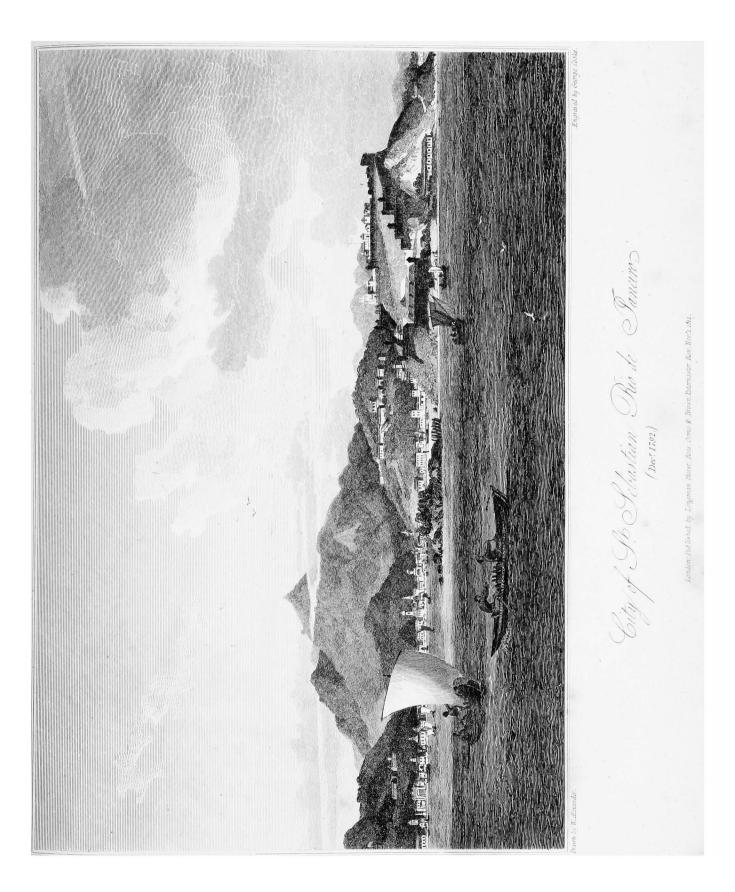

The river of St. Francis, the largeft and most confiderable in those parts, is the common boundary of the captainship of Parnambuko and Bahia dos todos los Santos, or the Bay of All Saints. In fome places it is fo broad that a fix-pounder can fcarce reach over it, and its depth is eight, twelve, and fometimes fifteen yards; but it admits of no fhips of burthen, becaufe its entrance is choked up with fands.

Its first fpring is faid to arife out of a certain lake, which being augmented by many rivulets out of the mountains of Peru, but especially by the rivers of Rio de la Plata and Maranhaon, exonerates itfelf into the fea. Some of our people went in a shallop near forty leagues up the river, and found it of a good depth and pretty broad. If we may believe the Portuguese, there are about fifty leagues from the sea, certain impassable cataracts or water-falls, called by them Kakocras; beyond those the river winds to the north, till you come to its fource in the lake, in which are many pleafant iflands, inhabited by the barbarians; as is likewife the fhore round about it. They find good ftore of gold-dust in this lake, but it is none of the best, being carried thither by the many rivulets which wash the gold-bearing rocks of Peru: here is also most excellent faltpetre.

It is obfervable, that in the fummer, and those winter months when it rains but feldom, this river has more water than in the rainy feafon : the reafon alleged for it is, the valt diftance from its first fource, whither the rains that fall from the mountains must first be conveyed by many rivulets. All the other rivers near the Receif are fo empty of water during the fummer feafon, that they are rendered quite unnavigable. But the ridges of mountains, which lie not far from the fea-fhore, exonerate their waters, as well here as in Peru, backward to the weft, and dividing themfelves into two branches; the first runs to the north, and joins with the most large and rapid rivers of Maranhaon and of the Amazons; the other with the rivers of St. Francis de la Plata and Janeiro. The waters of these rivers being confiderably increased by many rivulets, they exonerate themfelves with fo much violence into the fea, that the feamen meet often with fresh water at a confiderable diftance at fea.

The increase of the waters in this river, during the dry feason, may likewife be attributed to the vaft quantity of fnow among the mountains, which being melted by the heat of the fun, occasions the river to transgress its ordinary bounds; which in this point is quite different from other rivers, which commonly in the winter-time overflow their banks.

Six of those captainships were under the jurifdiction of the West India company, before the Portuguese revolted from the Dutch, which they had conquered with their fwords,

fwords, viz. the captainfhip (it being on the fouth fide) Seregippe del Rey of Parnambuko, Itamarika, unto which belongs Gauiana, Paraiba, Potigi or Rio Grande, and Siara or Ciara. The captainfhip of Maranhaon was 1644, by fpecial command of the company, left by the Dutch. This part of Brazil used to be called by the Portuguese the Northern Brazil, as the other remaining in their possession went by the name of South Brazil.

The fix Dutch captainfhips did extend all along the fea-coaft from north to fouth, in length about a hundred and fixty or a hundred and eighty leagues; for from Rio Grande to the northern border of Seregippe del Rey, is a hundred leagues: the two others, viz. that of Siara to the north, and Seregippe del Rey to the fouth, make up the reft. Each of thefe captainfhips contain feveral other leffer diftricts, called by the Portuguefe Fregefias, and by us Fregefien: as for inftance, in Seregippe del Rey, are Pojuka, Kameragibi, Porto Calvo, Serinhaim, and feveral others. Fregafie comprehends a certain tract of ground, compofed of divers villages, rivers, hills, and valleys, betwixt each of which is commonly a tract of barren hills, of about three or four leagues in length. Moft of the Dutch captainfhips are but indifferently cultivated, becaufe the Portuguefe ufed not to manure the ground in thofe parts beyond three or four, or, at fartheft, five leagues diftance from the fea,

The captainfhip of Seregippe del Rey is likewife called Carigi, from a certain fmall lake of that name; it is fituate in the fouthern part of Brazil, extending about thirtytwo leagues along the fea-coaft, bordering on the north fide, upon the river of St. Francis, by which it is divided from Parnambuko, as on the fouth fide it is feparated by Rio Real from Bahia dos todos los Santos. Seregippe del Rey has, among others, a certain Fregafie called Porto Calvo, fituated betwixt the ninth and tenth degree of fouthern latitude; being encompafied on the north-weft fide by the Fregafie of Serinhaim, and the fmall river of Pirafenunga, extending to the fouth as far as the river Parepuera, by which it is divided from the Fregafie of Alagoafi, containing in all about twelve leagues in length near the fea-fhore, its bounds on the land fide reaching to the unpafiable woods.

In this Fregafie is a village, called by the Portuguefe Villa de bon fucceffo de Porto Calvo, but was formerly called Portocano Dos quatros Rios, it being fituate at the confluence of the four rivers, Maleita, Tapamunde, Commentabunda and Monguaba. It is built upon a rifing ground, about four leagues from the fea-fhore, and by the Dutch ftrengthened with two forts; the biggeft of which was called Bon Succeffo, being built all of ftone, furrounded with a good counterfcarp, with a large bafon of frefh water within. The other fort was called by us the New Church, being created out of the ruins of an old church, called by the Portuguefe Noffa Senhora de Prefentacao. Betwixt both thefe forts, a third was ordered to be erected by Count Maurice, upon the banks of the river, but it lying within the reach of mufket-fhot from the mountains, was not brought to perfection.

The village has two ftreets, the chief of which runs parallel with the river, from one fort to the other, and is called St. Jofeph's ftreet; it contained no more than three houfes of one ftory high, and about thirty-fix others covered with pantiles, being only built upon the ground. The Portuguefe have, in lieu of their churches, which were demolifhed when the fortifications were erected, built themfelves another on the other fide of the river, where they fometimes hear mafs. The village is fituate in a moft pleafant and wholefome air, being cooled by the continual breezes from the fea, which are not ftopped by any hills betwixt them and the fhore. In the night-time they enjoy the benefit of the land-wind, which drives the cool vapours arifing from the neighbour-

VOL. XIV.

ing

withal. They have twice a year a harvest of barley, which being over, they make merry for a whole week together. Before fowing time, they light great fires for fourteen days, which may be feen at a great distance. The shortest way from the Receif to this Palmairas is along the lake of the Northern Alagoa.

The greater Palmairas is betwixt twenty and thirty leagues diftant behind the village of St. Amar, near the mountain of Behe, being furrounded with a double inclofure. About eight thousand negroes are faid to inhabit the valleys near the mountains, befides many others, who dwell in leffer numbers of fifty or a hundred, in other places. Their houses lie straggling, they fow and reap among the woods, and have certain caves whither they retreat in cafe of necessity. They drefs their victuals in the day-time, and at night tell over their whole number, to fee whether any be wanting; if not, they conclude the evening with dancing and beating the drum, which may be heard at a great diftance. Then they go to fleep till nine or ten o'clock the next day. During the dry feafon, they detach a certain number among them, to fteal flaves from the Portuguefe. The fhortest cut to their habitations is from the Alagoas through St. Amar, and fo crofs the plains of Nhumahu and Kororipe, towards the backfide of the mountain of Warrakaka, till you come to the lake Paraiba; along which you must pass, till you reach the mountain Behe, from whence you go directly into the valleys. Under the government of Count Maurice, the negroes of this Palmairas did confiderable mifchief, efpecially to the country-people about the Alagoas; to reprefs which, he fent three hundred firelocks, one hundred Mamelukes, and feven hundred Brazilians.

The Receif, Maurice's Town, and Anthony Vaez.

The Receif is, by reafon of its commodious and advantageous fituation, the ftrongeft place of all Brazil; befides that, it is ftrengthened and defended by feveral adjacent forts: but to give you the most commodious view both of the Receif, and the fituation of Maurice's town, it is to be observed, that the whole coast of Brazil is, from one end to the other, furrounded with a long, thick, and flat ridge of rocks, which in fome places is twenty, and in others thirty paces broad : however, there are certain paffages in this ridge, through which the fhips approach the fhore, and fome few places, where this ridge is not to be found at all. Thus a league on this fide Rio Dolee, two leagues on the north fide of the city of Olinda, there is nothing of this ridge to be found; but begins again near Poumarelle or Soxamardo, and extends to the ifle of Itamarika. Betwixt the ridge and the continent you may pafs in boats at high water; for at low tide most of those rocks appear above water; though the tide never fails to cover the fame. The rock over-against the Receif of Parnambuko is between twenty and thirty paces broad, being not only at fpring tides, but at all other tides overflown by the fea; it is thereabouts very flat, without any prominences, and extends for a league from fouth to north. On the north point is an open paffage for fhips to approach the fhore, lying five hundred paces farther to the north than the Receif itself. It is but narrow, and at fpring-tide not above twenty-two feet deep.

Betwixt this rocky ridge and the continent there is a fandy ridge, or finall ifland, extending to the fouth from Olinda, a league in length, and about two hundred paces broad. This is by our people commonly called The Sandy Receif, to diffinguish it from The Stony Receif.

On the fouthern point of this little ifland, a league off Olinda, the Portuguefe had built a village called Povoacano, which fignifies peopling, or elfe Reciffo; it was very populous

populous for a confiderable time, till the building of Maurice's Town, in the island of Anthony Vaez. For after Olinda was forfaken by its inhabitants, and deftroyed by us, many of them, but efpecially the merchants, fettled in this Reciffo, or the village of Povoacano, where they erected magnificent ftructures. At our first arrival we found no more than two hundred houses there, which were afterwards increased to above two thousand, fome of which are very goodly edifices. We furrounded it with pallifadoes on the fide of the river Biberibi, which at low water is fordable; and for its better fecurity fortified it with three bulwarks, one towards Olinda, the other to the harbour, and the third towards the Salt-River; upon each of which was raifed a good battery with three great cannon. This Receif is fituate under 8° 20' fouthern latitude.

Some derive the word Reciffo from the Latin, *recipere* and *receptus* to receive, which after was turned into Reciffo, becaufe the fhips ufed to be received betwixt the Stony and Sandy Receifs, to load and unload their goods. Before the building of Maurice's Town, we kept here our factories, and all bufinefs both of peace and war was tranfacted in this place. In the time of the Portuguefe, all the fhips coming out of the fea did unload on the village of Povoacano, or the Receif, and the goods were from thence in boats and lighters conveyed up the river Biberibi, to the fuburbs of Olinda.

Before the building of Maurice's Town, most of the traffic was in the Receif, where , all the great merchants had their habitations, and from hence the fugar was transported into Holland. To prevent the frauds in the customs, it was furrounded with pallifadoes, and a goodly hospital was erected for the conveniency of the fick and wounded, and the education of orphans, under the tuition of four governors, and as many governeffes.

Upon the uttermost point of the Stony Receif, on the left fide, as you enter the harbour out of the fea, is a ftrong and large caftle, built of free-ftone, furrounded with a very high wall, upon which are mounted many heavy cannon, with fuitable artillery and other provisions. When we took the place, we found nine brafs, and twenty-two iron pieces of cannon within it; fo that it feems both by art and nature impregnable; there being no coming near it on foot, at high water.

About five leagues higher, upon a branch of the great river, lies a fmall town of little confequence, called by our people The New City; and upon another branch of the fame river, oppofite to the former, a village called Atapuepe.

The Island of Anthony Vaez, and Maurice's Town.

TO the fouth of the Receif, opposite to it, lies the ifle of Anthony Vaez, fo called by our people, from its ancient poffessor. It is about half a league in circuit, being divided from the Receif by the Salt-River, or Biberibi.

On the eaft fide of this ifland, Count Maurice laid the foundation of a city, which, after his own name, he called Maurice's Town or city; the ruins of the churches or monafteries of the city of Olinda furnished the materials for the building of it, which were from thence carried to the Receif, and fo transported to this place.

On the weft fide it is environed with a morafs; and on the eaft fide washed by the fea, which passes the story ridge. Besides which, it is on the land side strengthened with an earthern wall, four bulwarks and a large moat.

On that fide where the fort of Erneftus was, the town lay open, and the houfes took up a larger compass than those in the Receif; but after the revolt of the Portuguese, most of those houses were pulled down, and the place drawn into a more narrow compas,

pafs, to render it more defenfible : yet was the place well flocked with inhabitants, as well merchants as handicrafts-men.

Maurice's Town was on each fide guarded by a fort. On the fouth fide by the fort called Frederick-Henry, or the quinquangular fort, from its five bulwarks. This fort was, befides this, furrounded by a large ditch and pallifadoes, and ftrengthened by two horn-works, fo that it commanded the whole plain, which at fpring-tides ufed to be overflown by the fea.

The fecond fort Erneftus, thus called after John Erneft, the brother of Count Maurice, was four-fquare, with four bulwarks, with a very large ditch; it commanded the river, the plains, and Maurice's Town. Near this laft fort was the garden of Count Maurice, flored with all forts of trees, brought thither from Europe and both the Indies.

Upon the north point of the Stony Receif just over against the Sandy Receif, lies the before-named fort, built all of stone, being about a hundred paces in circumference, provided with a good garrifon and twenty pieces of great cannon, though in stormy weather the water flies over it on all fides. It commands the harbour, the land-fort, the Bruin Fort, and the Receif.

As the ifle of Anthony Vaez was joined to the continent by a bridge, fo it was thought neceffary to join the Receif with another bridge to the faid ifland, for the conveniency of carriage; the fugar chefts being before that time never to be transported to the Receif, except at low water, unlefs the owners would run the hazard of expofing them to the danger of the fea in fmall boats. Accordingly the great council, with confent of the governor Count Maurice, agreed with a certain architect for the building of a bridge with ftone arches, for the fum of two hundred and fifty thousand florins. But after the architect had confumed a prodigious quantity of ftone, and raifed the ftructure near to the height of the banks of the river, finding that at low-water there was still eleven foot water, and defpairing to be able to accomplifh it, left it unfinished. But the council being unwilling to defift, renewed the work, which had already coft a hundred thousand florins; and by means of many trees of forty and fifty foot long, ftopped the current till the bridge was brought to perfection, which was done in two months time, and a certain toll imposed upon all passengers, viz. for an inhabitant two-pence, for a foldier and negro one penny, for a horfe four-pence, and a waggon drawn by oxen feven-pence.

The fpace betwixt the Sandy and Stony Receif is properly the harbour, which at high water has about thirteen or fourteen foot depth, where the fhips ride very fafe, being defended from the fea by the Stony Receif. The paffage betwixt the Sandy Receif and the continent is called the Salt-River, to diffinguish it from the river Kapivaribi, which carries fweet water.

The river Kapivaribi has derived its name from a certain kind of river or fea hogs, which ufed to be found there, and were by the Brazilians called Kapivaribi. This river arifes fome leagues to the weft, paffing by 'the Matta, or the Wood of Brazil, Mafyafti, St. Lorenzo, and Real, where, joining with the river Affogados, near another river of the fame name, difembogues in the fea, near the Receif. The river Kapivaribi divides itfelf into two branches; one turns to the fouth, and paffes by the fort William, and is called Affogados; the other running to the north, retains its former name, continuing its courfe betwixt the continent and Maurice's Town, or the ifle of Anthony Vaez (into which you may pafs over it by a bridge), and fo to Waerdenburgh, where it joins with the river Biberibi, or Salt-River, both which are afterwards mixed with the fea. The two branches of this river furround the river Biberibi on the weft fide, and to the

eaft the ifle of Anthony Vaez. Upon that branch of the river called Affogados, are abundance of fugar-mills, from whence the Portuguese used to convey their fugar chefts, either in boats by the way of the river, or in carts to Baretta, and from thence in flatbottomed boats to the Receif and to Olinda.

A league to the fouth of Maurice's Town, upon the branch called Affogados, is a four-fquare fort of the fame name, otherwife called Fort William; and from whence you may pafs along a dike to the fort Frederick-Henry, or Maurice's Town. It was a noble ftructure, furrounded with high and strong walls, a large ditch and pallifadoes, with fix brafs cannon; it defended the avenues to the plains.

About half a league from thence, and at the fame diffance from the continent, lies another fort on the fea-fhore, called Baretta; this commands the avenues both by fea and land to the cape of St. Auftin and the Receif.

Upon that part of the ifland which lies betwixt the rivers Kapivaribi and Biberibi, and betwixt the forts of Erneftus and the triangular fort of Waerdenburg, were the before-mentioned gardens of Count Maurice, flored with all kinds of trees, fruits, flowers and greens, which either Europe, Africk, or both the Indies could afford. There were near feven hundred cocoa-trees of all fizes, fome of which were thirty, forty, and fifty feet high; which being transplanted thither, out of the circumjacent countries, bore abundance of fruit the very first year; above fifty lemon-trees, and eighteen citron-trees, eighty pomegranate-trees, and fixty-fix fig-trees, were alfo to be feen in thefe gardens.

In the midit of it flood the feat itfelf, called Vryburg, a noble ftructure indeed, which, as is reported, coft fix hundred thoufand florins; it had a moft admirable profpect, both to the fea and land fide, and its two towers were of fuch a height, that they might be feen fix or feven leagues off at fea, and ferved the feamen for a beacon. In the front of the houfe was a battery of marble, rifing by degrees from the river fide, upon which were mounted, ten pieces of cannon for the defence of the river. About two or three rods from the river, were feveral large bafons in the garden, containing very fweet water, notwithflanding the river all round about afforded nothing but faltwater; befides this, there were divers fifh-ponds, flocked with all forts of fifh.

At the very foot of the bridge which is built over the river Kapivaribi, from Maurice's Town to the continent, Count Maurice had built a very pleafant fummer feat, called by the Portuguefe, Baavifta, i. e. a fair profpect. It was not only furrounded with very pleafant gardens and fifh-ponds, but ferved likewife as a fort for the defence of the ifle of Anthony Vaez and Maurice's Town.

Upon the Sandy Receif, opposite to the fea, or Water Fort, was a strong fort built of stone, called by the Portuguese, St. Toris, our people used to call it the Land Fort, to distinguish it from the before-mentioned Water Fort; it defends the entrance of the harbour with thirteen iron pieces of cannon.

About a mufket-fhot thence to the north, lies upon the fame Sandy Receif, a fmall fort with four baftions, called the fort of Bruin; and about a mufket-fhot farther to the north, a redoubt, called Madame de Bruin; both thefe forts were built by the Dutch.

Near the continent, nor far from the falt-pits, betwixt the Sandy Receif and the ifle of Anthony Vaez, was a triangular fort called Waerdenburg. It was at first a fourfquare, but afterwards turned by the Dutch into a triangular fort, the fourth bulwark being not defensible, by reason of the ground. These three bulwarks were afterwards changed into as many redoubts, and provided with some brass guns; at high tide it is furrounded on all fides with water.

The City of Olinda.

AT a finall diftance from the Receif, or Maurice's Town, to the north, is the ruinated city of Olinda, once a famous place among the Portuguefe; the whole product of Brazil being from thence transported by fea into Europe. The best part of the city was built upon divers hills; towards the fea on the fouth fide, these hills were pretty plain, extending to the fea-fhore, which has a very white fand all along that coaft; towards the land fide, or the north, those hills are more steep and craggy, full of thorn-buss, intermixed with a few orange-trees. These hills are an additional strength to the place, which besides this, was guarded by several bastions to the land fide, though by reason of the great variety of hills contained in its circuit, it was a difficult task to bring the fortifications into a regular form. There is a very fair prospect from the higher part of the town, both to the fouth and north, or to the fea and land fide, by reason of the great quantity of circumjacent trees, which continue green all the year round. You may also from thence fee the isle of Anthony Vaez, and Maurice's Town. The point of land near Olinda, is called Tipo by the inhabitants.

Upon the higheft hill within the place, flood formerly a convent belonging to the Jefuits, being a magnificent flructure, founded by Sebaftian King of Portugal, who endowed it with confiderable revenues. It had a very fair profpect, and might be feen at a good diftance at fea. Not far from thence was another monaftery belonging to the Capuchins; and near the fea-flore, another of the Dominican friars. Befides which, it had two churches, the one called St. Salvador, and the other St. Peter.

It contained above two thouland inhabitants, befides the clergymen and flaves, among whom were two hundred that were accounted very rich. On the foot of the mountain upon which the city of Olinda was built, a ftrong redoubt was erected, which in the year 1645 was by a ferjeant betrayed to the Portuguele for a fum of money. About a league from the city, near the water-fide, were the fuburbs, well flored with inhabitants and packhoules, but deflitute of fresh water, which they were fain to fetch from beyond the river.

The whole diftrict of Parnambuco abounds in divers kinds of fruits and cattle. The valleys afford good pafturage, and the lower grounds near the rivers, great flore of fugar reeds, which are much cultivated hereabouts. The mountains produce richer minerals here, than in the other captainfhips. During the rainy feafon the heat is more tolerable here in the day-time than the cold nights.

The Cameleon, or Indian Salamander, otherwife called Gekko.

THIS creature, which is not only found in Brazil, but alfo in the ifle of Java, belonging to the Eaft Indies, and which by our people is called Gekko, from its conftant cry (like among us that of Cuckoe), is properly an Indian Salamander. It is about a foot long, its fkin of a pale or fea-green colour, with red fpots. The head is not unlike that of a tortoife, with a ftraight mouth. The eyes are very large, ftarting out of the head, with long and fmall eye-apples. The tail is diftinguifhed by feveral white rings. Its teeth are fo fharp as to make an impreffion even upon fteel. Each of its four legs had five crooked claws armed on the end with nails. Its gait is very flow, but wherever it faftens it is not eafily removed. It dwells commonly upon rotten trees, or among the ruins of old houses and churches; it oftentimes fett is near the bedsfeads, which makes fometimes the moors pull down their huts.

Its conftant cry is Gekko, but before it begins it makes a kind of hiffing noife. The fting of this creature is fo venomous, that the wound proves mortal, unlefs it be immediately burnt with a red-hot iron, or cut off. The blood is of a palifh colour, refembling poifon itfelf.

The Javanefe ufe to dip their arrows in the blood of this creature; and thofe who deal in poifons among them (an art much effeemed in the ifland of Java, by both fexes) hang it up with a ftring tied to the tail on the ceiling, by which means it being exafperated to the higheft pitch, fends forth a yellow liquor out of its mouth, which they gather in fmall pots fet underneath, and afterwards coagulate into a body in the fun. This they continue for feveral months together, by giving daily food to the creature. It is unqueftionably the ftrongeft poifon in the world, its urine being of fo corrofive a quality, that it not only raifes blifters wherever it touches the fkin, but turns the flefh black, and caufes a gangrene. The inhabitants of the Eaft Indies fay, that the beft remedy against this poifon is the Curcumie root. Such a Gekko was got within the body of the wall of the church in the Receif, which obliged us to have a great hole made in the faid wall to diflodge it from thence.

There are alfo feveral forts of ferpents in Brazil, fuch as rattle-ferpents, doubleheaded ferpents, and fuch like; of which the Brazilians enumerate twenty-three, viz. Boigvacu, or Liboya, Arabo, Bioby, Boicininga, Boitrapo, Boykupekanga, Bapoba, Kukuruku, Kaninana, Kurukakutinga, Grinipaijaguara, Ibiara, Jakapekoaja, Ibiboboca, Jararaka, Manima, Vona, Tarciboya, Kakaboya, Amorepinima.

We will give you an account of those only that dwell in the houses and woods of Pernambuko, passing by the rest, as not so well known among us; and it is observable that though some of the American or Brazilian servers exceed those of Europe in bigness, they are nevertheless not so poisonous.

The ferpent of Boicininga, or Boicinininga, likewife called Boiquira by the Brazilians. is by the Portuguese called Kaskaveda and Tangedor, i. e. a rattle, and by our people a ruttle-ferpent, becaufe it makes a noife with its tail, not unlike a rattle. This ferpent is found both upon the highway and in defolate places; it moves with fuch fwiftnefs as if it had wings, and is extremely venomous. In the midft it is about the thicknefs of a man's arin near the elbow, but grows thinner by degrees towards the head and tail. The belly and head is flattifh, the last being of the length and breadth of a finger and a half, with very fmall eyes. It has four peculiar teeth longer than all the reft. white and fharp like a thorn, which it hides fometimes within the gums. The fkin is covered with thick fcales, those upon the back being fomewhat higher than the reft, and of a pale yellowish colour, with black edges. The fides of the body are likewife yellowifh, with black fcales on each fide; but those upon the belly are larger, four-fquare, and of a yellow colour. It is three, four, and fometimes five foot long; has a round tongue, fplit in the middle, with long and fharp teeth. The tail is composed of feveral loofe and bony joints, which make fuch a noise that it may be heard at a diftance; or rather at the end of the tail, is a long piece, confifting of feveral joints, joined within one another in a most peculiar manner, not unlike a chain. Every year there is an addition of one of these joints, fo that you may know the exact age of the ferpent by their number; nature feeming in this point to have favoured mankind, as a warning to avoid this poifonous creature by this noife. One of thefe joints put in the fundament caufes immediate death; but the fting of this creature proceeds much flower in its operation, for in the beginning a bloody matter iffues from

the

the wound, afterwards the flefh turns blue, and the ulcer corrodes the adjacent parts by degrees.

The most fovereign remedy used by the Brazilians against the poison of this and other ferpents, is the head of the fame ferpent that has given the wound, which they bruile in a mortar, and in form of a plaister apply it to the affected part. They mix it commonly with fasting spittle, wherewith they also frequently moisten the wound. If they find the poison begins to feize the nobler parts, they use the Tiproka as a cordial, and afterwards give strong sudorifies. They also lay open the wound, and apply cupping-glass, to draw the venom from thence; or else they burn it with a red-hot iron.

The ferpent Kukuruku is of an afh colour, with yellow fpots within and black fpeckles without, and has just fuch fcales as the rattle-ferpent.

The ferpent Guaku, or Liboya, is queffionlefs the biggeft of all ferpents; fome being eighteen, twenty-four, nay thirty foot long, and of the thickness of a man in the middle. The Portuguefe call it Kobre Dehado, or the roebuck ferpent, becaufe it will fwallow a whole roebuck, or any other deer it meets with; and this is performed by fucking it through the throat, which is pretty narrow, but the belly vaftly big. After they have fwallowed fuch a deer, they fall afleep, and fo are catched. Such a one I faw near Paraiba, which was thirty foot long, and as big as a barrel. Some negroes faw it accidentally fwallow a roebuck, whereupon thirteen mulqueteers were fent out, who fhot it, and cut the roebuck out of its belly. It was of a greyifh colour, though others are inclining more to the brown. It is not fo venomous as the other ferpents. The negroes and Portuguefe, nay even fome of the Dutch, eat the flefh; neither are its ftings looked upon as very infectious, the wound healing often up without any application of remedies; fo that it ought not to be reckoned among the number of poifonous ferpents, no more than the Kaninana, Mavina, and Vocia. This ferpent being a very devouring creature, greedy of prey, leaps from amongst the hedges and woods, and flanding upright upon its tail, wreftles both with men and wild beafts; fometimes it leaps from the trees upon the traveller, whom it faftens upon, and beats the breath out of his body with its tail.

The ferpent Jararaka is flort, feldom exceeding the length of an arm to the elbow. It has certain protuberant veins on the head like the adder, and makes much fuch a noife. The fkin is covered with red and black fpots, the reft being of an earth colour. The ftings of this creature are as dangerous, and attended with the fame fymptoms, as those of other ferpents. Its body, the head, tail, and fkin, being before taken away together with the entrails, boiled in the water of the root of Jurepeba, with falt, dill, and fuch like, is looked upon as a very good remedy.

The ferpent Boitrapo, called by the Portuguefe, Cobre de Cipo, is about feven foot in length, of the thickness of a man's arm, feeds upon frogs, and is of an olive colour. It is very venomous, and when it flings, occasions the fame fymptoms as the ferpent Kukuruku; nay, the wound is accounted past curing, unless you apply the hot iron.

The adder Ibiara, by the Portuguese called Cobra Vega, or Cobra de das Cabecas, i. e. the double-headed ferpent, because it appears to have two heads, which, however, is not fo. They are found in great numbers, lurking in holes under ground. They feed upon pissions, are of the thickness of the length of a finger, and a foot and a half long, of a filver colour; nothing is more possionous than the stings of these creatures, though not beyond all hopes of cure, provided the before-mentioned remedies be applied in time.

The

The ferpent by the Brazilians called Ibiboboka, the Portuguese call Cobra de Corais. It is very beautiful, and of a fnow-white colour, speckled with black and red spots, and about two foot long : its sting is mortal, but kills by degrees.

The ferpent Biobi, called by the Portuguefe Cabro Verde, or the green ferpent, about three quarters of a yard long, and the thicknefs of a thumb; of a finiting green colour. It lives among houfes, and hurts nobody, unlefs when provoked. Its fting is, however, full of poifon, and fcarce curable. A certain foldier being wounded by one of these creatures, which lay hidden in a hedge, in his thigh, did, for want of proper remedies, die in a few hours after : his body fwelled, and turned pale blue.

The ferpent Kaninana is yellow on the belly, and green on the back; its length is about eight hands, and is looked upon as the leaft venomous of all. It feeds upon eggs and birds, and the negroes and Brazilians eat the body, after they have cut off the head and tail.

The ferpent called by the Brazilians Ibirakoa, is of feveral colours, with white, black, and red fpots. The fling of this creature is very poifonous, attended with the fame fymptoms as that of Kukuruku; for it kills infallibly, unlefs proper remedies be applied immediately. If the poifon has not feized the heart, they boil the flefh of the fame ferpent with certain roots, and give it the patient in wine.

The ferpent Tarciboya and Kakaboya are amphibious creatures. The first is of a blackish colour, very large, and stings when provoked, but is not very difficult to be cured. The Kakaboya is of a yellowish colour, fix hands long, and feeds upon tame fowl.

Of the Senembi or the Leguan.

NOT only in the captainfhip of Parnambuko, but alfo all over Brazil and America, as likewife in the ifle of Java in the East Indies, are a certain kind of land crocodile. called by the Brazilians Senembi, by our people Leguan : fome are larger than others, fome being three, others four foot long, but feldom exceed five : they are all over covered with fcales, which are fomewhat bigger on the back, legs, and beginning of the tail, than on the other parts: the neck is about a finger and a half long, the eyes are black and bright, and the noftrils in the hindermost part of the head. Each jawbone is full of fmall, black, and fhort teeth; the tongue is very thick : all along the back, from the neck to the tail, are fmall fharp teeth, of a greenifh colour; they are biggeft on the neck, and grow fmaller and fmaller towards the tail: under the throat are likewife many of the fame kind. The whole this is of a delicate green, with black and white fpots. It has four legs and feet, with five claws armed with very fharp nails : it can live two or three months without food. Its flefh is as white as that of a rabbit, and of as good a tafte as that of fowls or rabbits, if it be boiled or well fried with butter. In the head of this creature are certain ftones, which are an infallible remedy to break and drive the gravel out of the kidneys, given to the quantity of two drams at a time, or carried on fome part of the body.

There are in Brazil lizards both great and fmall; fome are green, others greyifh, and fome four foot long, with fparkling eyes. The negroes feed upon fome of them, whom they kill with blunt arrows; they broil them, after they have fkinned them, and eat them without the leaft harm. Among all those that are found among the thorns and briars, or the ruins of houses, there is but one kind venomous, which is called Bibora. They are like the others, but leffer, not exceeding the bigness of of a thumb; they are of an afh colour, inclining to white; the body and limbs thick, and fwelled with the poifon, but the tail fhort and broad. The wounds given by them are full of a thin flinking matter, with blue fwellings, with a pain near the heart, and in the bowels.

There are alfo certain creatures, called Thoufand Legs, as likewife Hundred Legs, by the natives called Ambua, who bend as they crawl along, and are accounted very poifonous. The first are commonly found in the houses, and the last among the woods, where they not only spoil the fruits of the earth, but also plague men and beafts.

Scorpions, by the Brazilians called Jaaciaiira, are found here in great numbers, being in fhape like the European fcorpions, but not fo peftiferous, and confequently the wounds given by them are eafily cured. They lurk in houfes, behind old ftools, benches, and chefts. They are exceeding big, no bigger being to be found in any other parts, fome being five or fix foot long, and of a confiderable thicknefs.

There are fuch prodigious quantities of pifmires in Brazil, that for this reafon they are called by the Portuguefe Rey de Brazil, i. e. King of Brazil. They eat all that lights in their way, as fruit, flefh, fifh, and infects, without any harm. There is alfo a certain flying pifmire, of a finger's length, with a triangular head, the body being feparated into two parts, and faftened together by a fmall ftring. On the head are two fmall and long horns, their eyes being very fmall. On the foremost part of the body are fix legs, three joints each, and four thin and transparent wings; to wit, two without, and two within; the hindermost part is of a bright brown colour, and round, which is eaten by the negroes. They dig into the ground like the moles, and confume the feed.

There is another kind of great pifmires, refembling a great fly; the whole body of which is about the length of half a finger, and feparated into three feveral parts. The laft part refembling in fhape and bignefs a barley-corn; the middlemoft of an oblong figure, with fix legs, half a finger long, each of which has four joints: the foremoft part, or the head, is pretty thick, in the fhape of a heart, with two horns, and as many black crooked teeth: the white of the eyes is inclining to black, the whole composition of the head being the two eyes, placed opposite to one another, refembling the figure of a heart. The fore and hindermost parts are of a bright red colour.

There is another kind of pifmire, of a bright black colour, with black and rough legs. It is about the length of a finger, with a large four-fquare head, ftarting black eyes and teeth, and two horns, half a finger longer. The body is alfo feparated into three parts. The foremost of an oblong figure, not very thick, with fix legs, each of the length of half a finger; the middlemost very fmall and fquare, not exceeding the bigness of a louse; the hindermost is the biggest of the three, of an oval figure, and fharp on the end. These three parts are fastened together with a fingle string, the Brazilians call it Tapijai.

There is befides this another pifmire, called by the Brazilians Kupia, of a chefnut brown colour; its head being as big as another pifmire, with black eyes, two horns, and two tufks inftead of teeth. The whole body is covered with hair; it is divided into two parts; the foremost with fix legs, being fomewhat lefs than the hindermost; at certain feafons it gets four wings, the foremost being a little bigger than the hindermost, which it lofes again at a certain time.

The Iron Pig of Brazil, called by the Brazilians Kuandu, and by the Portuguefe Ourico Kachiero, is of the bignefs of a large ape, its whole body being covered with fharp fpikes of three or four fingers long, without any hair. Towards the body thofe fpikes

fpikes are halfways yellowish, the remaining part is black, except the points, which are whitish and as sharp as an awl. When they are vexed, they are able, by a certain contraction of the skin, to throw or dart them with such violence, that they wound, nay, fometimes kill men or beasts. Their whole body, to measure from the hindermost part of the head to the beginning of the tail, is a foot long, and the tail a foot and five inches in length, which likewise has halfways sharp spike, the rest being covered with briftles like other hogs. The eyes are round, starting and glistering like a carbuncle; about the mouth and nose is hair of four singers length, refembling those of our cats or hares : the feet are like those of apes, but with four singers only without a thumb, instead of which you see a place vacant, as if it had been cut away. The fore-legs are less than the hindermost, they are likewise armed with spikes, but not the feet.

This creature commonly fleeps in the day-time, and roves about by night; it breathes through the noftrils, is a great lover of fowl, and climbs up the trees, though very flowly. The flefth is of no ungrateful tafte, but roafted and eaten by the inhabitants. It makes a noife jii, like the Luyaert.

That four-legged creature, by the Brazilians called Ai, by the Portuguefe Priguiza, and by the Dutch Luyaert (lazy-back) from its lazy and flow pace, becaufe in fifteen days time it fcarce walks above a ftone's throw. It is about the bignefs of a middlefized fox, its length being a little above a foot, to meafure from the neck (which is fcarce three fingers long) to the tail. The fore-legs are feven fingers long to the feet, but the hindermoft about fix; the head round, of three fingers in length; its mouth, which never is without a foam, is round and fmall, its teeth neither large nor fharp. The nofe is black, high, and glib, and the eyes fmall, black and heavy. The body is covered all over with afh-coloured hair, about two fingers long; which are more inclining to the white towards the back. Round about the neck the hair is fomewhat longer than the reft. It is a very lazy creature, unable to undergo any fatigues, by reafon its legs are as it were disjointed in the middle; yet it keeps upon the trees, but moves, or rather creeps along very flowly. Its food is the leaves of the trees; it never drinks, and when it rains, hides itfelf. Wherever it faftens with its paws, it is not eafily removed; it makes, though feldom, a noife like our cats.

The Pifmire Eater, is thus called, becaufe he feeds upon nothing but pifmires; there are two forts, the great and the fmall : the Brazilians call the first Tamanduai, and the last Tamanduai Guacu. It is a four-legged creature, of the bigness of a dog, with a round head, long fnout, fmall mouth, and no teeth. The tongue is roundifh, but fometimes twenty-five inches, nay, two foot and a half long. When it feeds, it ftretches out its tongue upon the dunghills, till the pifmires have fettled upon it, and then fwallows them. It has round ears, and a rough tail; is not nimble, but may be taken with the hand in the field. The fmall one, called Tamanduai Guacu, is of the bignefs of a Brazilian fox, about a foot in length. On the fore-feet it has four crooked claws, two big ones in the midft, and the two leffer on the fides. The head is round, yet pointed at one end, a little bent below; with a little black mouth without teeth. The eyes are very fmall; the ears fland upright about a finger's length. Two broad black lifts run along on both fides of the back; the hairs on the tail are longer than those on the back, the extremity of the tail is without hair, wherewith it fastens to the branches of the trees. The hairs all over the body are of a pale yellow, hard and bright. Its tongue is round, and about eight fingers long. It is a very favage creature, grafps every thing with its paws, and if you hit it with a flick, fits upright like a bear, and takes hold of it with its mouth. It fleeps all day long, with its

its head and fore-feet under the neck, and roves about in the night time. As often as it drinks, the water fpouts forth immediately through the noftrils.

They have also a kind of ferpents of about two fathoms long, without legs, with a fkin of various colours, and four teeth. The tongue is fplit in the middle, refembling two arrows, and the poifon is hid in a bladder in its tail.

The four-legged creature, called by the Brazilians Totu and Tatupera, by the Spaniards, Armadillo, by the Portuguefe, Encuberto, and by the Dutch, Schilt Verken (fhield-hog), becaufe it is defended with feales like as with an armour, refembles in bignels and shape our hogs; there are several forts of them. The uppermost part of the body, as well as the head and tail, is covered with bony fhields, composed of very' fine fcales. It has on the back feven partitions, betwixt each of which appears a dark brown fkin. The head is altogether like that of a hog, with a fharp nofe, wherewith they grub under ground; fmall eyes, which lie deep in the head; a little, but fharp tongue; dark brown and fhort ears, without hair or fcales : the colour of the whole body inclining to red; the tail in its beginning is about four fingers thick, but grows by degrees fharp and round to the end, like those of our pigs: but the belly, the breast, and legs are without any fcales; but covered with a fkin not unlike that of a goofe, and whitifh hair of a finger's length. It is generally very bulky and fat, living upon melons and roots, and does confiderable mifchief in the plantations. It loves to rout under ground, eats rabbtis, and the dead carcafes of birds, or any other carrion: it drinks much, lives for the most part upon the land, yet loves the water and marshy places. Its flefh is fit to be eaten. It is catched like the doe in Holland with the rabbits, by fending a fmall dog abroad, who by his barking, gives notice where it lurks under ground, and fo by digging up the ground it is found and catched.

The bats in Brazil, called by the inhabitants Andirika, are of the bignefs of our crows; they are very fierce, and bite most violently with their fharp teeth. They build their nefts in hollow trees and holes.

The bird called by the Brazilians Ipekati Apoa, by the Portuguefe Pata, is no more than a goofe; and for that reafon by the Dutch called a wild-goofe. It is of the bignefs of one of our gede of about nine months old, and in all other refpects refembles them. The belly and under part of the tail, as likewife the neck, is covered with white feathers; but on the back to the neck, on the wings and head, the feathers are black intermixed with fome green. There are alfo fome black feathers intermixed with the white ones on the neck and belly. They differ from our geefe in this, that they are fomewhat bigger; their bills refemble rather those of our ducks, but are black, and turned at the end, and on the top of it grows a broad, round, and black piece of flefh, with white fpeckles. They are commonly found near the river fide, are very flefby and well-tafted.

The bird by the Brazilians called Toukan, or large bill, is about the bignefs of a wood-pigeon. It has a crop about the breaft of three or four fingers in compass, of a faffron colour, with high red-coloured feathers round the edges, which are yellow on the break, but black on the back and all the other parts of the body. Its bill is very large, of the length of a palm of a hand, yellow without and red within. It is almost incredible how fo fmall a bird is able to manage fo large a bill, but that it is very thin and light.

The bird called by the Brazilians Kokoi, is a kind of a crane, very pleafing to the fight, as big as our ftorks. Their bills are ftraight and fharp, about fix fingers in length, of a yellowish colour inclining to green. The neck is fifteen fingers long, the body ten, the tail five: their legs are half-ways covered with feathers, about eight 12

fingers in length, the remaining part being fix and an half. The neck and throat is white, both fides of the head black, mixt with afh-colour. On the far and undermost part of the neck are most delicious, white, long, and thin feathers, fit for plumes: the wings and tail are of an afh-colour, yet mixt with fome white feathers. All along the back you fee long and light feathers, like those on the necks, but are of an afficolour : their flefh is very good, and of a grateful tafte. There is another kind of thefe birds, which is fomewhat bigger than a tame duck. Its bill is ftraight, and fharp at the end, of the length of four fingers and a half, with a double fet of teeth both above and below : the head and neck (which is two foot long) refembles the crane, with black eyes inclosed in a gold-coloured circle. The body is two foot and a half in length; the tail, which flands even with the extremity of the wings, four fingers. The bill is of an afh-colour towards the head, the reft yellow, inclining to green. The head and upper part of the neck are covered with long pale yellowish feathers, intermixt with black. On the back and wings it has afh-coloured feathers inclining to yellow: but the legs and feet are dark grey: the flefh of this bird is eatable, and taftes like that of a crane.

The bird, called by the Brazilians Jabiru-Guaku, and by the Dutch, Schuur Vogel (or barn-bird), has no tongue, but a very large bill, near feven foot and a half long; round and crooked towards the end, of a grey colour. On the top of the head is a crown of white and green feathers. The eyes are black, behind each of which are two great concavities inflead of ears. The neck is ten fingers in length, one half part of which, as well as the head, is not covered with feathers, but with an afh-coloured, whitifh, rugged tkin. This bird is of the bignefs of a ftork, with a fhort black tail, which ftands even with the extremities of the wings. The other part of the neck, and the whole body, is covered with white feathers, and thofe on the neck very long ones: the wings are likewife white, but mixed with fome red. The flefh, if boiled, after the fkin is taken off, is good food, being very white, but fomewhat dry.

Brazil produces incredible quantities of other wild fowl of all forts, both great and fmall, fome of which live among the woods, others in the water, but are very good food.

Of the best kind are the thrushes, called by them Bamodi; pheasants of divers kinds, called by the barbarians Magnagu, Jaku, and Arakua.

Mouton is a bird of the bignefs of a peacock, but has black feathers; the flefh is very good and tender. Becaufe this country is full of fruit-trees and woody places, it produces abundance of fparrow-hawks, and other hawks, called by the Portuguefe Guavilon, and by the Brazilians Teguata and Inage, which are always at enmity with the chickens and pigeons.

Among those that live both in the water and upon the land, the wild ducks claim the precedency; fome of those are finaller than the European ducks, others much exceed them, being as big as a goose. They have also a fort of fnipes, called Jakana-miri and Jakana-guaku. Besides these there are cranes, quails, and oftriges, and many others of that kind; the flesh of which is eatable, but not very toothfome.

The reft of thefe birds are very greedy after the amber-gris, which is thrown affore by the boifterous fea, which they devour before the inhabitants can come thither to gather it. They have alfo abundance of Parakets, or fmall parrots; thefe never fpeak; but their parrots are extraordinary fine and large, fome of which learn to fpeak as diftinctly as a man. I have feen fome of thefe parrots express every thing what they heard cried in the ftreets very plainly; and among the reft I faw one, which if put in a bafket upon the floor, would make a dog that belonged to the fame houfe fit up before the bafkit bafket, crying out to him, Sit up, fit up, you nafty toad. Neither did this parroe leave off calling and crying, till the dog came to fit up before the bafket. It was afterwards prefented to the Queen of Sweden.

There is among the reft a certain finall bird, no bigger than a joint of a finger, which, notwithstanding this, makes a great noife, and is catched with the hands whilst it is fitting among the flowers, from whence it draws its nourifhment. As often as you turn this bird, the feathers reprefent a different colour, which makes the Brazilian women fasten them with golden wires to their ears, as we do our ear-rings. The birds here are never deflitute of food, which they always meet with either among the flowers or fruits of the trees, which are never fpoiled here during the winter feafon.

The rivers and lakes of Brazil, as well as the neighbouring fea, furnishes them with great ftore of all forts of fifh, which are accounted fo wholefome here, that they are even allowed for those that are troubled with agues. The standing waters near the fea-fide, which fometimes are quite dried up, produce abundance of craw-fifh, tortoifes, fhrimps, crabs, oyfters, and divers others of this kind, which are all very good food.

There are abundance of fifh in Brazil common to the fea and rivers, efpecially during the rainy feafon; when a great quantity of the river-water being conveyed into the fea, the fweetness of the water allures the fish into the rivers, where, meeting with abundance of green weeds (the product of the bottom of the rivers), they never return to the fea.

Among the river fifh, the chiefeft are, the Duja, Prajuba, and Akara-Puku; the laft of which refembles the beft and largeft of our perches.

Brazil produces alfo various kinds of infects, fome of which are of four fingers' length, and an inch thick. They have likewife filk worms, called by the Brazilians Ifokukus, and their filk, Ifokurenimbo. There are alfo divers forts of fire-flies, which are likewife found in the Eaft Indies, where we shall give you a farther account of them. Befides thefe, there are many forts of other flies, hornets, wafps, and bees; fome of which produce honey, fome none at all.

Among other kinds of fpiders there is one of a prodigious bignefs, which is always found either in dunghills, or in the concavities of hollow trees: they call it Nhanduguaka. Thefe creatures weave cobwebs like other fpiders; the fkin is rough and black, provided with fharp and long teeth. This creature, if provoked, wounds with its poifonous sting, which is so finall as scarce to be visible, and raises a blueish tumour, which is very painful, and, if care be not taken in time, occasions an inflammation, attended with fuch dangerous fymptoms, as prove afterwards incurable.

Near Rio St. Francifco are vast numbers of a certain finall infect not unlike our crickets; I have been very curious to get fight of this creature, to fatisfy myfelf as to its fhape and refemblance to others of this kind; but though it makes a very fhrill noife, which refembles that of our crickets, I was never able to fee any of them; for as foon as you approach they defift, fo that you are at a lofs which way to look. They fing fometimes for a quarter of an hour without intermission. In the island of Java, in the East Indies, it is commonly heard in the months of February and June. At last I had the good fortune to get one of these creatures into my hands, by means of a certain Chinese woman, after I had often been in search of it, both within and without the city of Batavia. The Javanese fet two of these little creatures a fighting together, and lay money on both fides, as we do at a cock-match.

There are also abundance of ravenous wild beafts in Brazil, fuch as tigers, leopards, &c. The tigers are extremely favage here; they fall upon beafts, and fometimes upon .13

men.

men, of whom feveral were killed by them in my time. A certain Portuguefe had a fugar-mill very pleafantly fituated near a wood, whither we ufed to go to divert ourfelves fometimes. The Portuguefe fitting one time with four more of his friends in the houfe, with the windows drawn up for the conveniency of the land air, a dog belonging to the houfe, who had ventured too far into the adjacent wood, was purfued by a tiger, fo that to fave his life he leapt into the window to feek for fhelter near his mafter; but the tiger clofely purfuing him, leapt alfo through the window into the room, where the door being flut, he tore two of those there prefent in pieces before the reft could make their efcape, and afterwards went his way.

There is another fort of favage beaft in those parts, called by fome of our people, Jan-over-Zee (or jack beyond fea), which furpaffes all others in nimbleness, and tears all to pieces it meets with.

Brazil has also great plenty of cattle, but the flesh will not keep above twenty-four hours after it is dreffed. The Dutch cut off the fat, and cut the lean in thin flices, and dry it in the fun like fish. No butter is to be made here, because the milk turns to curds immediately; the Dutch butter is drawn out of a veffel like oil.

Their hogs are fmall and black, but very well tafted, and wholefome; there is another kind of amphibious hogs, by the Portuguefe called Kapiverres; they are very near as black as the others, and good food.

There is another four-legged creature in Brazil, called by the inhabitants Taperete, and by the Portuguefe, Antes; its flefh has the tafte of beef, but fomewhat finer. It is about the bignefs of a calf, but fhaped like a hog; it fleeps all day among the woods, and feeks for belly-timber in the night: its food is grafs, fugar-reeds, cabbages, and fuch like. They have likewife good flore of goats, called by them Pakas and Kotias, and hares and rabbits, which do not give way in goodnefs to those of Europe. There is alfo an excellent kind of lizards, called by the inhabitants Vuana and Teju, which are accounted a dainty bit.

The fifth in Brazil are no lefs confiderable for the fupply of our plantations, than the cattle, which are on the coafts of Brazil, but efpecially in Pernambuko, where they are found in fuch plenty, that at one draught they catch fometimes two or three thousand fine fish in the four or five fummer months, for during the rainy feason they catch but few. There are certain diffricts along the fea-coaft whither the fifh moft refort; fome of those belong to the inhabitants, the rest to the company, and are farmed at a certain rate per annum. The lakes, as well as the bays, are flored with an incredible multitude of fish; the first are, by the Portuguese, called Alagoas; and the best they produce are the Sindia, Queba, and Noja, all without scales. And though the fifh which are catched in the lakes are not fo much efteemed as the river-fifh, neverthelefs are they not much behind them in goodnefs, becaufe thefe lakes are not always ftanding-waters, but intermixed with feveral rivers. Some of these fish they dry in the fun. The chiefeft of this kind are those called by the Brazilians Kurima Parati, and by the Dutch inhabitants, Herders. They abound no lefs in fea-fifh of all forts. The fish, called by the Brazilians Karapantangele, which is not unlike our perch, has the preference among them. And as the rivers furnish infinite numbers of fish, fo they are generally fatter and better tafted than the fea-fifh. Those which are catched in those fisheries near the fea-shore, are, for the most part, falted, and carried from thence into the country, for the ufe of the fugar-mills, which caufe great plenty among them.

The craw-fifh, which are in great quantities near the rivers, and in the marfhy grounds, ferve likewife for food to the Brazilians and negroes, and fome of our people like them tolerably well.

VOL. XIV.

It

It is further to be obferved, that whereas a confiderable number of cattle, during the war, was run aftray out of the parks into the forefts and woods beyond the river of St. Francis, it was thought convenient by the great council of the company here, to agree with certain perfons to catch this cattle, and bring it to the Receif, in order to be killed for the use of the inhabitants. The time of the faid contract being expired, it was confulted, whether the fame fhould be renewed; but it being apparent that there were not enough left to quit coft, the fame was laid afide, and this refolution fent to the council of Nineteen. For in the mean-while the inhabitants near Rio St. Francisco and Rio Grande, having applied themfelves with great industry to the breeding of cattle, their parks were fo well flocked by this time, that they not only furnished the inhabitants of the Receif, but alfo the fugar-mills, with plenty of meat, which was bought at the rate of three and four-pence per pound in the country; befides that, they provided the garrifons with the fame for a twelve-month, after the store-houses of the Receif were emptied; and notwithstanding this, the inhabitants of those parts were not out of debt, when those of Pernambuko and Parayba were involved over head and ears, which shews what advantage they reaped from the breeding of cattle; and that if the Dutch Brazil had continued in peace, those parks might have furnished all the garrifons with meat, without impairing their flock for breeding; which, together with the great plenty of fish, are the two main pillars of the state of Brazil.

Notwithstanding all which, it is certain that the inhabitants of the Dutch Brazil cannot be provided with fufficient maintenance, without a yearly fupply from Europe, as well of eatables as other commodities, as has been found by experience, to the great detriment of the company; after our store-houses were exhausted by the several expeditions against Angola, Meranhaon, and other places.

In the rivers and lakes here are also found crocodiles, by the Brazilians called Jakare, and in the East Indies, Kaymans. They are like the African crocodiles, but not quite fo big, feldom exceeding five foot in length. They lay twenty or thirty eggs bigger than geele eggs, which are eaten by the Brazilians, Portuguese and Dutch, as well as the flesh.

In the feas near the coaft of Brazil, they meet alfo fometimes with great lampreys. Before the bridge from the Receif to Maurice-Town was built, one of this kind of a confiderable bignefs did lurk near that paffage, where the boats ufed to pafs over from one fide to the other, and fnatched all that fell in this way, (both men and dogs that fwam fometimes after the boat,) into the water : but at a certain time, by the fudden falling of the tide, being got aground with the foremost part of the body, he was with much ado brought afhore.

The diftrict of Pernambuko does also abound in various forts of fruits, as well as all the other parts of Brazil, of which we shall fay more hereafter.

Upon the captainship of Pernambuko, borders to the north the captainship of Tamarika, which owes its name to an island of the same name, being the chiefest part of this district, which however extends near thirty-five leagues along the sea-coast on the continent.

The island of Tamarika lies two leagues to the north of Pomerello, in the fea; being parted from the continent by the river Tamarika, its most fouthern point lying under 7° 58' fouth latitude. It is from fouth to north about two leagues long, and its circuit near feven. To the jurifdiction of this isle did alfo belong Goyana, Capavaribi, Terukupa, and Abray on the continent. Formerly it had but few inhabitants, and fcarce any houfes, though it is a very pleafant isle, and tolerably fertile, producing brazil-wood, cocoa-nuts, cotton, fugar-reeds, melons, and fuch like; besides wood for firing, and fresh

fresh water for the conveniency of the Receif: it abounds likewife in wood both for building of houfes and fhipping. This island was much infested with wild beasts, which did great mifchief to the fugar-reeds : this moved Peter Pas, director of the captainfhip of Itamarika, to make his application to Count Maurice and the great council in 1647, to know their pleafure, whether they should dispose of those beasts by contract, to such as would be at the charge of catching of them, or whether they fhould be taken and killed for the use of the garrifons; but this was rejected by the council, who enjoined the inhabitants not to kill those beasts in the open fields, unless they should break into their plantations, it being for the interest of the company to preferve them in case of a neceffity: the damage which from thence might accrue to the fugar reeds, being to be prevented by furrounding their plantations with pales and ftakes.

The ifland is looked upon as of the greatest confequence to us, it having been propofed by fome to transfer the feat of the Dutch-Brazil from the Receif thither; but the directors of the company did not agree to it, confidering that at that time this island was quite defolate; whereas upon the Receif, were store-houses, magazines, ware-houses, and fuch like buildings ready to their hands, befides that the place was much more pleafant, fertile and ftronger; and the harbour much more convenient for fhips: the river Tamarika on the other hand being not navigable, but for fmall veffels, by reafon of the shallowness of the harbour, which was noted for shipwrecks. The defect of fresh water in the Receif, in which this ifle abounds, may be fupplied from the river Biberibi; befides that, they had feveral bafons with fresh water within the Receif, for their prefent ufe. During the war with the Portuguese we were sensible of the conveniences we received from this island, by reason of its strength both by art and nature, which might ferve as a fave retreat upon all emergencies; befides, that its prefervation was abfolutely neceffary for the Receif, which was fupplied from thence with fifh, and feveral other forts of provisions.

Upon the banks of the river at the fouth entrance of the harbour, we had built a quadrangular fort called Orange. It was provided with a goodly wall, but the ditch was not very deep, and for the most part without water, for which reason it was ftrengthened with pallifadoes. On the north-fide we had a hornwork, but much decayed; within the body of the fort was a powder-vault, and other conveniences for the bedding of foldiers. Several batteries were raifed upon the walls, mounted upon fix brass and as many iron great guns. In the island near the entrance of the river, close by a morafs full of thorn-bufnes, was a finall town, most inhabited by foldiers, called by the Portuguese Nostra Senhora de la Conceptiano. Upon a hanging-rock, just by, was an old redoubt erected by the Portuguefe, called by the fame name, which, together with the whole island, was taken by the Dutch, under the command of Colonel Schoppe from the Portuguese, and the place, after his name, called Schoppe's Town. This fort was afterwards by the Dutch closed up on the backfide towards the church, fo that it afterwards ferved both for the defence of the town and the harbour, as the Blockhouse on the north-fide covered the gates. There were then eleven pieces of cannon mounted upon it. At the north entrance of the harbour, was another redoubt, which defended that paffage on that fide, with three iron cannon. One Mr. Dortmont, governor of Itamarika, found under the before-mentioned rock in 1645, as he was digging a well, a fpring of fresh water, which proved very useful for the garrison, because it could not be cut off by the enemy.

Somewhat higher up the river Tamarika, lies an island called Magioppe, where are found abundance of Mandihoka roots. You may go quite round this ifland in barks; it having a kind of a harbour on both ends, viz. to the fouth and north, but the first is

the

the beft; becaufe there rifes from the northern fhore of the continent, a fhelf, which reaches very clofe to the ifland, the channel betwixt both not having above ten or twelve foot water. The only harbour fit for ufe thereabouts is the fouth entrance of the river, which makes Tamarika an ifland, where fhips that drew fourteen or fifteen foot water, may pass through; there is no convenient anchorage. That end, where the river returns into the fea, is by the Dutch called the northern entrance, and by the Portuguefe, Katuamma.

Betwixt Pomerello and the river Tamarika, a river comes from the continent, fit for barges, called Marafarinha; and half a league within the mouth of the river Tamarika, another falls likewife from the continent, called Garaffou, but is of little moment. From thence to the north, are feveral other rivers near the fea-fhore, which are navivable with barges, for the conveniency of the fugar-mills, of which there are feveral thereabouts.

A league and a half further to the north of the north entrance of Tamarika, is a noted point of land called by the Portuguese Punto Pedra, furrounded with a Receif, betwixt which you may pass with barges and yachts.

A league further to the north from this point, and three leagues to the north-weft of Tamarika, is the fmall river Goyana, under $7^{\circ} 46'$, which difembogues in two branches in the bay; at the entrance lies a great rock, where is great flore of fea-fowl. Before it lies a great Receif, but within it are fo many fhelves that renders the paffage very dangerous.

About two leagues and a half beyond the river Goyana, to the north, is a great river, called Auyay, but the entrance is fo choaked up with fands, that there is fcarce any paffage for barges. This river fends forth feveral branches into the country, upon one of which to the north, lies the village of Maurice, and upon the fouthern branch the village Auyay.

Among others, Porto Francisco lies in a creek three long leagues to the north of the river Auyay; and five leagues to the north-west of the same river, an unnavigable river called Grammana, besides several other rivulets.

About a league and a half to the north-weft of the river Grammana, is the Cabo Blanco, or White Cape; and three leagues from thence to the north-weft, the cape of Parayba, being a long point of land, with a large adjacent bay. The whole coaft from Pomerello to the cape of Parayba, is covered with receifs or rocks, which, lying for the moft part about half a league from the flore, and the water between them being generally very fmooth, affords an eafy paffage to barges, even in tempeftuous weather; when it is almost impossible for flips to pass without the rocks, by reason of the violence of the current from the northern and the fouthern winds, which blow there continually.

Three leagues within the mouth of the river Goyana is a town of the fame name, where is kept the court of judicature of this captainship. There are five or fix sugarmills thereabouts, fituated upon the banks of the river, for the more commodious transportation of sugar in barges to Pernambuko. This country produces likewife brazil-wood, ginger, cotton, and Indian nuts; the people called Petiguaves inhabit here, though this whole tract of land, as far as Cabo Blanco, is not very populous, having only a few villages, inhabited by the Brazilians.

The isle of Tamarika has feveral landing-places on the river fide, the chiefest are; Os Markos and Pedreiros, where the river is narrowest; Tapasima and Kamboa of Domingos Rebeyro; the great Makqueira and Kamboa of Conrad Pauli; in which places the enemy landed in that island; the pass near the north entrance of Topowa, and the island Taposoka, where with one fingle ship you may defend the passage from

724

the

the rivers Tujukapape and Mafferandaku, as likewife from the fea. For the reft, the fhore all along the river being very marfhy and full of Manga trees, is of a very difficult accefs. The fhore towards the fea-fide is very flat, but woody, which, together with the fands that are at fome diffance in the fea, makes the approach of fhips very dangerous on that fide. Formerly the court of judicature of the captainfhip was kept in this ifland but was afterwards transferred from thence, as we told you before, to the town of Goyana and Kapivaribi on the continent, becaufe thefe places were both more populous, and more fugar-mills were built thereabouts, the ground being much better here than in the ifland. In my time there were five judges belonging to this court, three of which lived at Goyana, and the other two in the ifle of Itamarika. However, this court was afterwards likewife removed from Goyana. In the year 1641, Mr. Peter Pas was director of the captainfhip of Itamarika for the Weft India company, and Captain Sluiter commander-in-chief over the foldiers.

This captainship has derived its name from the capital city, which has borrowed hers of the river Parayba, upon which it is fituate. It is one of the most northerly captainships, about five leagues distant from the fea. It was formerly in the possification of the French, who were in 1585 chased from thence and feveral other harbours, by the Portugues general Martin Leytan.

Five leagues upwards the river Parayba, is a city founded by the Portuguefe, and after Philip King of Spain, called Filippen, and Noffa Senhora de Nives, otherwife Parayba, from the river Parayba; which name was by the Dutch, after they had in November 1633 conquered the whole captainfhip, changed into that of Frederick's Town, after Frederick Henry Prince of Orange. This city has been but lately built by the Portuguefe, and had feveral flately houfes with marble pillars, the reft being only of flone. Here is kept the court of judicature of this captainfhip. Before the time of the rebellion of the Portuguefe, this place was inhabited as well by the Portuguefe as Dutch, being much frequented by the inhabitants of the circumjacent country, who ufed to exchange their fugar for what other commodities they flood in need of, which was afterwards from thence transported to other places.

Within the mouth of the river Parayba, were three very confiderable forts. One on the fouth point, by the Portuguese called Catharine, but by Count Maurice afterwards named Margaret after his fifter. It was defended with five goodly bastions, and a hornwork without.

The fort called St. Antonio by the Portuguefe, was built upon a fmall ifland, which by a narrow branch was feparated from the north point. This is only the remainder of a large four-fquare fort, formerly erected by the Portuguefe, which was afterwards rafed by the Dutch, part of it having been wafhed away by the river. It is furrounded with pallifadoes and a good ditch, fupplied with water from the before-named branch of the river; the walls are very ftrong, and upon a battery are mounted fix iron pieces of cannon. It may be defended by the cannon both from the city of Parayba, and from the fort Margaret, lying juft oppofite to it on the fouth-fide, which is the reafon it was always but carelefsly guarded by the Portuguefe.

The third fort lies upon a triangular island, called Reftinga, not far from thence, more upwards the river. It was strengthened with pallifadoes, and upon the batteries were mounted five brass, and as many iron pieces of cannon.

The captainfhip of Parayba is watered and divided by two confiderable rivers, viz. the Parayba and Mongoapa, otherwife called St. Domingo. The great river of Parayba lies under the fixth degree twenty-four minutes, four leagues to north of Cabo Blanco, and difcharges itfelf in two branches into the fea, being feparated by a large fand-bank. One One is called the northern, and the other the fouthern entrance. From the laft extends a rocky ridge as far as Cabo Blanco, and within the river lies a fand-bank quite crofs to the fort Margaret. This river is very fhallow during the fummer time, but in the winter feafon the waters rife to that height that they overflow all the adjacent country, fometimes to the great lofs of men and cattle.

Two leagues beyond this river to the north, is a bay which affords a very fafe flation to the largeft fhips. It is by the Portuguese called Porto Lucena, and by the Dutch the Red Land, the grounds being red hereabout. There is very good anchorage here at five and fix fathom water, and the country near it affords very good fresh water, which is the reason why the Dutch sound for Holland from the Receif, used to stay for one another's coming in this bay, and to provide themselves with fresh water.

Half a league farther to the north, under 6° 34', the river Mongoapa, or Mongoanawapy, exonerates itfelf into the fea. This river is much larger towards its fource than at the mouth, the banks on both fides being full of briars, bufhes, and Mangatrees. Before its entrance lies a receif, and at the very mouth two dangerous fandbanks; it has three fathom water at low tide.

About two fmall leagues to the north of the river Mongoapa, is a bay called by the Portuguefe Bahia de Treycano, or Treafon, where at about a league diftant from the fhore, is eleven or twelve fathom water. Five leagues to the north of this bay, you meet with the river Barra Conguon or Konayo, which is fcarce paffable for yatchts. About a league and a half from thence is a large bay of about two leagues in length, called Pernambuko; and five leagues beyond it to the north, the river Jan de Sta, or Eftau.

The natives of Parayba inhabit about feven villages, the chiefeit of which is called Pinda Una, which in 1634 contained about fifteen hundred inhabitants, whereas each of the others had fcarce three hundred; each of these comprehending not above five or fix very long buildings, with a great many doors, but very small ones.

The chief commodities of this captainfhip are fugar, brazil-wood, tobacco, hides, cotton, and fuch like. The fugar-reeds did bear extremely well, becaufe they were transplanted into fresh grounds. Whilst the district of Parayba was under our jurifdiction, there were above one and twenty fugar-mills on both fides of the banks of the river, eighteen of which fent away every year four thousand chefts of fugar. Near the river-fide, the country is low and plain, but not far from thence rifes by degrees, and affords a very agreeable variety of hills and valleys. The flat country, which is alfo the moft fertile, is diffinguished into feveral divisions, fome of which have borrowed their names from fmall rivers which run through them; as for inftance, Gramamma, Tapoa, Tibery, Ingeby, Monguappe, Increry, Kamaratuba, and feveral more. All those countries are extremely fertile, occasioned by the overflowing of the river Paravba. Their products are fugar, barley, turkey-wheat, potatoes, ananas, coconuts, melons, oranges, citrons, bananas, pakovas, markomas, cucumbers, and all other necessaries for the fustenance of men and beasts. They have here a kind of wild pears, called kajous, which are very juicy and well tafted; within is a certain bean or fmall nut, the rind of which is bitter, but the kernel fweet if roafted in the afhes. The pear is very cooling, but the nut has a contrary quality.

Towards the end of November 1634, the Dutch undertook the expedition against Parayba, their forces being embarked in thirty-two ships under the command of Colonels Schoppe, Artisjoski, Hinderson, Stachouwer, and Carpentier. The whole sheet was divided into two squadrons, the first consisted of one and twenty ships, in which

I

ï

were nineteen hundred and forty-five men, the other of eleven yatchts, with four hundred and nine men. Schoppe was the first that landed fix hundred men, and advanced towards the enemy, who betook themselves to their heels, leaving their arms and clothes behind them; Anthony Albuquerque their general himself fcarce escaping their hands. In the mean-while, the reft being likewise got ashore, three companies, under the conduct of Gasper Ley, marched directly to the fort of Margaret, and intrenched himself near the fort, whilst Schoppe kept all along the shore, and Artisjoski posted himself on the right-fide, in fight of the garrison. At the fame time Mr. Lichthart attacked the fort in the solution of the garrison. At the fame time Mr. Lichthart attacked the fort in the solution of the best schoppe had raised a battery against the fort, from whence he fo forely galled the best best of St. Antonio was fummoned to furrender is the place. Hereupon the fort of St. Antonio was fummoned to furrender is Maglianes the governor desired three days delay, which being denied, he marched away fecretly by night, leaving the place to Lichthart, who found there five great brass pieces, and nineteen iron pieces of cannon.

The fame night our forces marched towards the city of Parayba, being fixteen hundred ftrong, and having paffed a fmall branch of the river called Tambra Grande, made themfelves mafters of it without any oppofition: the Spanifh general Banjola, who commanded there with two hundred and fifty men only, having left the place before, and being retired to Goyana, after he had either funk or nailed up the cannon, and fet fire to three fhips and two warehoufes, in which were confumed three thoufand chefts with fugar. The fort of St. Catharine being much decayed, was ordered by Count Maurice to be repaired, and the ditch to be enlarged and deepened; giving it the name of Margaret, after his fafter. The fort of St. Antonio was rafed for the greateft part, there being only one bulwark left for the defence of the north point of the river. The fort Reftinga was ordered to be furrounded with new pallifadoes, and the convent of Parayba fortified with a wall and outwork; and the command thereof given to Elias Harkman, together with the government of the whole captainfhip.

The captainfhip of Potigi, or Potingi or Poteingi, is otherwife, by the Portuguefe, called Rio Grande, from a river of the fame name : the Dutch call it North Brazil, in refpect of the more fouthern captainfhips of Brazil. It borders to the fouth upon Parayba, and to the north upon the captainfhip of Siara; though the Portuguefe geographers extended its bounds as far as the island Maranhaon.

The French were once mafters of this captainfhip; till 1597, they were chafed from thence by the Spanish commander, Feliciano Creça de Karvalasho. It has four divifions, named after so many rivers, that run through them; viz. Kunhao, Goyana, Mompobu and Potegy. And though this district has been much neglected by the Portuguese, yet does it produce plenty of wild-fowl and fish, which are so luss that they commonly eat them only with lemon-juice or vinegar, without oil. There is an incredible number of fish in the lake Goraires; besides which, abundance of farinha is planted here. This part of the country stood us in good stead during the late rebellion of the Portuguese, our garrisons in Parayba, and other places, being supplied from thence with good store of fless and fish.

Above the river Rio Grande is a town, of no great moment, called Amfterdam; the inhabitants live by planting farinha and tobacco, and fifhing. Higher up in the country live fome Moradores or hufbandmen, who cultivate the grounds; but on the north fide of Rio Grande are but few inhabitants.

The river Rio Grande, i. e. the Great River, is fo called by the Portuguese from its bigness, but by the Brazilians, Potigi or Poteingi. The mouth of this river lies under under 50° 42' fouthern latitude, three leagues from Punto Negro, coming from the weft fide of the continent. It difembogues four leagues about the fort Keulen, called by the Portuguefe Tres Reyos: it bears fhips of great burthen; but the river Kunhao in the fame captainfhip is only navigable with barges and yachts. The bays of this captainfhip are, Bahia Formofa, Punto Negro, Ponto de Pipas, and the bay of Martin Tiiffen. The bay of Ginapabo lies beyond Rio Grande to the north; and beyond that a river called Guafiavi, upon which, near the mouth, lies the village Atape Wappa. Near to the north you meet with the river Siria Mixui; and near the village of Natal, and the fort of Tres Reyos, paffes a river called the Crofs River, which arifes out of a fmall lake in Rio Grande. Over-againft the fame fort, a frefh river falls into the great river, betwixt two land-banks, and not far from thence another falt-water river.

The fort Keulen was four-fquare, built upon a rock or point of a receif, at fome diftance from the fhore, at the mouth of the river Receif; being furrounded with water, as often as it is flowing water, fo that at high tide there is no coming at it but with boats. In the midft of this fort is a fmall chapel, where in 1645 and 1646 our people found a wall about a foot and a half wide on the top, but at the bottom three foot, cut within a rock, which brings frefh fupplies of good and fweet water every tide; with an ordinary tide two hundred and twenty-five, and at fpring-tide about three hundred and fifty quarts; which is more than fufficient for the ufe of the garrifon, in cafe of a fiege. The fort is built of fquare ftone; being towards the fhore defended with two half baftions, in form of hornworks. In the year 1646, there was an artillery of twenty-nine, as well brafs as iron pieces of cannon in the place, and provided with a good undervault, and convenient lodgments for the foldiers.

This fort was in 1633 taken by the Dutch, under the command of Matthias van Keulen, one of the governors of the company, who being affifted by feveral noted captains, viz. Byma, Kloppenburg, Lichthart, Garstman, and Mansfelt van Keulen, fet fail thither with eight hundred and eight men, embarked in four ships and feven yachts, and made himself master of it, and the whole captainship at the same time; fince which it changed its name Tres Reyos into that of Keulen, from the commanderin-chief of this expedition.

The Tapoyers (or mountaineers) use commonly twice a-year, especially when the dry feafon puts them in want of fresh water, to make an inroad into this captainship; there being a conftant enmity betwixt them and the Portuguese. It happened in July 1645, that these Tapoyers being advertised that the Portuguese intended to revolt from us, and had actually begun the fame in Pernambuko, did, under the conduct of one of their leaders, called Jacob Rabbi, after feveral provocations given them by the Portuguese, make an incursion into Kunhao, where they killed thirty-fix persons in a fugar-mill belonging to one Gonfalvo d'Olivera. From thence they marched to a certain place, where the Portuguese had cast up a line for their defence, which they made themfelves mafters of, and put the Portuguefe to the fword. The Brazilians told us, that this had been done in requital of what had been done to fome of those mountaineers by one Andrew Vidal, in Serinhaim, after quarter given them before, of which we shall fay more hereafter. Since which time, the Portuguese have laid this tract defolate, which the Dutch once had a mind to re-people, and to put it in the fame condition as the Portuguese had possessed it, but for want of people that defign was fain to be laid afide.

The captainfhip of Siara is one of the most northerly districts of Brazil, bordering upon Maranhoon to the north upon the river Siara. It is of no great extent, its whole compass being not above ten or twelve leagues.

The river Siara, which rifes deep in the continent, difembogues about feven leagues and a half to the north of the bay Mangorypa, under three degrees forty minutes fouthern latitude.

The native inhabitants of this captainfhip, according to the report of those that have frequently visited it, are very large of stature, with ugly features, long hair, and black skin; except the space betwixt the eyes and mouth. They have holes in their ears, which hang downwards upon the shoulders; fome make holes in their lips, some in their noses, in which they wear stones as an ornament. Their food is farinha, wild fowls, fish, and fruit. They drink most water, but make likewise a certain liquor out of farinha; and of late began to be used to drink good store of brandy, though it was expressly forbidden to bring it into the villages, to keep them from the excessive use of strong liquors. The country produces sugar-reeds, chrystal, cotton, pearls, falt, and several other commodities. Amber-gris is also found on the fea-shore.

The inland part of the country was in 1630 governed by one of their own Kings, called Algodoi; in fome refpect tributary to the Portuguefe, who had built a fort upon the river Siara, and made themfelves mafters of the whole fea-coaft thereabouts; notwithftanding which they were in continual broils with one another, till 1638 this fort and the whole country was taken by the Dutch from the Portuguefe, in the following manner.

Count Maurice and the council being folicited by the natives of that country to make themfelves mafters of the Portuguefe fort on that fide, and to deliver them from the oppreffion they lay under at that time, they offering their affiftance, and giving two young lads of their best families, as pledges of their fidelity, this condition was refolved upon. The chief command over the troops defigned for this exploit was conferred on Colonel John Garstman, a man of more than ordinary conduct in martial affairs, though, as the cafe then ftood, this enterprife was not likely to meet with any confiderable difficulties; being affured of the affistance of the Brazilians, who bore an old hatred to the Portuguese, and were acquainted with the strength and condition both of their forces and places. Garftman being provided with fhips, men, ammunition, and all other neceffaries requifite for fuch an expedition, fet fail towards the river Siara; where being met by the Algodoi, or King, with white enfigns in token of peace, and having landed his men, two hundred of the natives joined with them. With those he marched directly to the fort, which after a brave refistance from the Portuguefe, who killed fome of his men, he took by ftorm, and made most of the garrifon prifoners, among whom were fome commanders of note. They found good ftore of cannon and artillery in the place.

Since that time, the Dutch built a fmall fort upon the Siara, unto which they gave likewife the name of Siara, which was provided with a garrifon of betwixt thirty and forty foldiers only; not fo much for the defence of the country, as to maintain a good correspondency with the Brazilians, who, being very numerous in those parts, might do us confiderable fervice in time of war. It was upon this confideration, that the great council always commanded their officers, fent thither, to cultivate a good understanding with them; and at feveral times fent them fome fmall prefents, which however proved ineffectual in the end, for in 1644 they attacked and killed feveral VOL. XIV. 5 A

of our men at Komefy, (a place about thirty leagues from Siara,) as we shall hear anon.

For the Brazilians being, in 1641, increafed to fuch a number in Siara, that the villages thereabouts were not able to contain them without great inconveniency, whereas the diftrict of Rio Grande was almost destitute of inhabitants, and confequently not in a condition to oppose an enemy; one Andrew Uliifs proposed to the great council to build a village in Rio Grande, for the use of fuch as intended to settle there out of Siara, defiring to be conflituted chief of the faid village. Count Maurice and the great council, being informed of the inclinations of those of Siara, who were willing to fettle in Rio Grande, their ancient place of abode, and confidering the benefit that was likely to accrue to the company, from the fettlement of those Brazilians fo near at hand, granted Uliifs's requeft, withing him to bring thither as many of the Brazilians of Siara as he thought convenient, for the compais of a village of which he was made chief or captain. Things being thus fettled, they chofe, with the approbation of our directors, certain chiefs or heads out of the most ancient families of each division, called Refidoor by the Portuguese, and certain judges; as for instance, in Goyana. Domingoi, Fernandes, and Karapeva; in Parayba, Peter Potty; and in Rio Grande. Antonio Perapeva. Notwithstanding all this, the Brazilians of Siara revolted against the Dutch, in 1644 furprifed the garrifon in the fort, which they raifed, and killed the commander-in-chief, Gideon Morritz, with the whole garrifon, befides all the workmen belonging to the falt-pits near the river Upanemma, who were all cut in pieces by thefe barbarians.

A certain mafter of a ship, with a captain, lieutenant, and some soldiers, who happened to come ashore in a boat to fetch some fresh provisions, being ignorant of their treachery, were also put to the flaughter, three feamen having the good fortune to efcape with their lives into the wood.

Some laid the caufe of this rebellion at the door of the Portuguefe and Brazilians of Maranhaon, bordering upon them; but if we fearch into the true fource of this evil, it must be attributed to the miscarriage of our own officers, who, by their hard usage, had forced the inhabitants to revenge themfelves for the injuries received at their hands.

Thus much concerning the captainships of the Dutch Brazil; we will, in the next place, give you an account of all the memorable transactions that happened betwixt the Dutch and Portuguele in Brazil, during our ftay there : after I have reprefented to you the excellency and convenient fituation of this country, together with the ecclefiaftical state of the Dutch Brazil.

Brazil is a country excellently well qualified by nature for the producing of all things which are generally found in the Weft Indies, under or near the fame climate; except that hitherto no gold or filver mines have been difcovered here worth taking notice of. But next to gold and filver, the fugar claims the precedency here before all other commodities. Among all the harbours and places of the Weft Indies, there is not one that can compare with Brazil, either for the product or conveniency of transportation of fugar; the whole coast of Brazil being full of fmall rivers, which, flowing through the adjacent valleys, difembogues in the fea; from whence the fugarmills, built in the valleys, reap the benefit of faving vaft charges, which elfe must be beftowed upon labourers and carriages; whereas these rivers drive the mills, ferve for the transportation of fugar to other places, and furnish them at an easy rate with what commodities they stand in need of; all which conveniencies, as they are not to be met with in any other place of the West Indies, so no fugar-mills could be erected there

there with any profpect of profit. The exportation of fugar from Brazil into Europe and Africa is likewife performed with much more eafe than from any other places in the Weft Indies; for the fituation of Brazil (being the moft eaftern part of all America) is fuch, as could not be more conveniently contrived by human art or nature for the transportation of fo general and agreeable a commodity as fugar, into all the other parts of the world; confidering those two excellencies of Brazil, together with its vast extent, it is most certain, that, provided it were well peopled, it might command both the North and Ethiopian Seas, and spread its commerce over all parts of the world; nay, it might extend its conquests both to the east and west, or at least establish factories there, for the conveniency of traffic. To prove which, it is to be observed:

That all Eaft India fhips, both going and coming, muft pafs by the coaft of Brazil; and as those fhips, in their voyages thither, are often forced to touch upon this coaft, fo in their return nothing could be more commodious for them, than to be fupplied with frefh provisions here. From Brazil you may fail, in fourteen days, to the Caribbee Iflands, and in the fame time, or a little longer, to Sierra Leona, on the coaft of Guinea. It is impoffible to enter deep into the great South Sea, (whereabouts a great part of the terreftrial globe remains as yet undifcovered,) unlefs you take in frefh provisions and firing in Brazil, or expose yourfelf to the greateft hazards imaginable in fo long a voyage, as is fufficiently evident from the journals of Oliver Van North, Spilbergen, Le Maire, and John l'Heremite. And experience has taught us, fince Mr. Brower's voyage to Chili, how eafy the paffage is betwixt Brazil and the South Sea; for he loft not fo much as one fhip out of four, and very few died in the whole voyage.

Brazil enjoys likewife the advantage of a very wholefome climate; for though it lies betwixt the equinoctial line and the tropic of Capricorn, and confequently is fubject to burning heats, yet are the fame much allayed by the winds, that blow out of the eaft from the fea, their free paffage being not interrupted by any mountains or illands; which is the reafon, that in Brazil the fame diftempers are rarely to be met with, which reign fo frequently in Angola, Guinea, St. Thomas, and feveral other places, where the eaft winds cannot afford them the fame advantage. A plague is a thing unknown in Brazil, in which it excels all other countries; though they are not free from continual putrid fevers, caufed by the hot and moift air, and the exceffive ufe of raw fruits.

Those that are bound for the coaft of Brazil, ought to have a special regard to the feason of the year, which regulates the winds and stream thereabouts; and to be very careful to fail above the harbour whither they are bound; for if they miss, and come below it, they lose their aim, and must stay till the next turn of the wind and stream. For it is observable, that on the coast of Brazil, the stream runs from February till pass July, constantly northerly, during which time there is no passing from the north to the fouth; but after those months are pass, the stream turns, and from the beginning of September to the latter end of November runs as violently to the fouth as it did to the north before, and consequently there is no failing from the north to the fouth, no more than before from the south to the north. The winds here turn with the stream; and at the beginning of March, blow fouth-fouth-east, and fouth-cast. And like as the stream changes its current till September, so the winds continue in the east, and blow till that time out of the east-fouth-east. For there are but two winds that reign along this coast, viz. the fouth-east and north-east winds; according to which, ships must regulate their course here.

5 A 2

The

The ecclefiaftical state of the Dutch Brazil was, in my time, thus ordered :

Before the infurrection of the Portuguese, there were, to the south of the Receif, five Protestant churches; viz. in Rio St. Francisco, Porto Calvo, Serinhaim, the cape St. Auftin, and St. Anthony; though these were feldom altogether provided with ministers, because that some or other of them returned into Holland after their limited time was expired. In the isle of Tamarika and fort Orange, was at that time a minister, one John Offringo, who lived formerly in the town of Schoppe, and at the fame time preached in the church of Igaraffu, which was afterwards left by the Dutch and poffeffed by the Portuguefe. In Rio Grande preached one John Theodore Polheim. In Parayba were formerly two ministers, whilst the town of Frederica was as yet under the Dutch jurifdiction, but after the revolt of the Portuguese, the place was left by the inhabitants, and Henry Harman was the only minister in those parts. In the Receif, Maurice's Town, and the circumjacent forts, which contained about four hundred Protestants, Dutch, French, and English, were three ministers, who preached in the Dutch tongue; Nicholas Vogel, Peter Ongena, and Peter Grib. Befides thefe there was a fourth, called Jodocus Aftett, who formerly had been minister of the cape of St. Auftin, but now was employed either aboard our fleet, or upon any land expedition. The French church here remained without a minister, after the departure of Joachim Solaer, fo that they were forced to be contented with reading of certain chapters of the bible, and prayers every Sunday morning. The English minister was one Samuel Batchelour, who, in 1646, returned likewife to England; about which time there were feven Dutch ministers in the Dutch Brazil. Our religious worship was, both in its doctrine and practice, regulated exactly according to the prefcription of the fynod of Dort, and peculiar care was taken for the education of the youth, for which purpofe the catechifm was every Sunday in the afternoon explained, both in the Receif and Maurice's Town. Four times in the year the holy facrament was administered, those who defired to be partakers of it, being obliged to make their confessions before the church-council, or the ministers, who entered their names in a book; and if they came from abroad, published their names to the congregation; and in all other respects the church-difcipline was carefully obferved. The church-council was composed of fix church-wardens, befides the minifter; these met duly once a week, and if any bufines of moment happened, fuch as chufing a minifter, &c. they called the deacons, who were likewife fix in number, to their affiftance. Out of the deacons were every month chofen two, who (befides their ordinary bufinefs) were to vifit the fick and wounded, and to provide for them if neceffity required. They also took care of the orphans, to have them inftructed in reading and writing. In the fame manner the other churches were regulated, with this difference only, that the number of church-wardens and deacons was lefs, in proportion to the number of their refpective congregations. Thus much of the ecclefiantical state.

Befides those living creatures we have given you a description of before, there are divers forts of bees in Brazil, called Eirukus, which fettle upon the trees in a most furprifing manner. They are not unlike our bees, but somewhat smaller, and swarm chiefly among the woods. The Brazilians distinguish them into twelve different kinds, viz. Amanakay Miri, Amanakay Veu, Aibu, Mumbuka, Pixuna, Urutuetra, Tubuna, Tujuba, Eiruku, Eixu, Kubiara, and Kurupireira; the last of which are in no esteem among them.

The bees Eiruku are the largeft of all, and produce a very good honey, though it is not commonly ufed. They make their combs within the hollownefs of trees, which the Brazilians draw from thence by means of a hollow pipe. The bees called Eiku and

12

Kopy are fmaller and of a blackifh colour; they make holes from without, in the bark of the trees, in the nature of bee-hives, and the comb within is all of white wax; this is now counted the beft thing, but is not gathered in the fame quantity as the former; befides that, thefe bees fting very furioufly. The bees Thanbuka are likewife fmall, of a yellowifh colour; they fix their combs on the top of the higheft trees, and afford the beft honey, which is in great quantities transported from hence to Europe, where it is fold very cheap. It is little inferior in goodness to the European honey, and of a good fubftance, transparent, and of an agreeable fcent. It is accounted very balfamic, corrects the fharp humours in the intestines, and efpecially in the kidneys, and provokes urine. They make of this honey metheglin, which is very ftrong, and will keep a great while: you may alfo make meath of this honey without boiling, only mixed with fome fpring water, and exposed to the weather.

Brazil produces likewife feveral forts of balfams, the beft of which is called by the Brazilians Kopaiba, from the trees from whence it comes. Kopaiba is a very high wild tree, with an afh-coloured bark, which fpreads at the top into many branches. The leaves are about half a foot long, fometimes larger, fometimes leffer, which in the midft of the branches ftand oppofite to one another, but on the end like other leaves. At the end of the great branches are abundance of leffer fprouts full of leaves, out of which comes forth the bloffom, and afterwards berries, not unlike our laurel-berries. They are green at first, but as they ripen turn black and fweet. Within is a round hard ftone, the kernel of which is white, but mealy, and not fit to be eaten. The berries ripen in June, when the Brazilians fuck the juice out of them, and throw away the ftone and fkin. The apes take great delight in this fruit.

The oily and odoriferous balfam, in which this tree abounds, drops every full moon, provided you cut a flit through the bark as deep as to the pith, in fuch quantity, that in three hours time you may gather above twelve mengeln. But if that does not drop immediately, the flit is made up with wax, and within fourteen days they are fure the balfam will come in great quantity. This tree does not grow fo plentifully in the captainfhip of Pernambuko as in the ifle Maranhaon, from whence this balfam is transported into Europe. The balfam is hot in the fecond degree, of a thick, oleaginous, and refinous fubftance. It is very ftomachic, and a good remedy againft the cholic occafioned by cold, externally applied to the affected parts; fome few drops taken inwardly ftrengthen the bowels, and ftop the overflowing in women, the loofenefs, and involuntary emiffion of feed in men; againft which diftempers it likewife is ufed in clyfters, or by fyringing. Thus far concerning the Dutch Brazil; we will now proceed to give you an account of what paffed during our atode there.

In the year 1640, Mr. Henry Hamel, one of the directors of the Weft India company for the chamber of Amfterdam, and Mr. Dirck Kodde Vander Burgh (both perfons excellently well qualified for the management of the Dutch Brazil, and of great experience in affairs of commerce), were, at the requeft of the council of Nineteen, fent to Brazil, and arriving there on the 8th of August, the two preceding directors or counfellors, Matthias Van Keulen and John Giifeling, refigned their places to them, and with them the chief management of the Dutch Brazil, under the government of John Maurice Count Naffau.

At the time of their arrival in Brazil there were under the jurifdiction of the ftates the following captainfhips: Pernambuko, Itamarika (unto which belongs Goyana), Parayba, Rio Grande, and Siara, being the northern part of Brazil: the fouthern part, which contained the captainfhips, Bahia, Ileos, Porto Securo, Spirito Santo, Rio Janeiro, and St. Vincent, remained under the Portuguefe, who inhabited the country as far far as Rio de la Plate. Not many months after, the island of Maranhaon was joined with the Dutch Brazil, but the charges we were fain to be at to defend it against the Portuguese, those of Para and the natives, which over-balancing the profit the company was likely to reap from thence, it was thought most expedient to quit the fame, which was done accordingly in the year 1644; or rather, to confess the truth, by the combination of the Portuguese, those of Grand Para and the natives, we were forced to abandon it.

Before the arrival of thofe new directors, a fleet had been fent to the Bahia to land fome men there, and to deftroy all with fire and fword; which, after they had put in execution, and returned to the Receif, the fame fleet, under the command of Admiral Jol and Cornelius Lichthart, was, by fpecial command from the council of Nineteen in Holland, ordered to the Weft Indies to lie in wait for the Spanifh plate fleet of Terra Fiuma and New Spain; but they returned without doing any thing, in December 1640, having loft four or five fhips in this voyage. Colonel Koin was much about the fame time fent with a body of foldiers into the captainfhip of Rio Real, to bridle the Portuguefe, by making a diversion in their own territories, but those troops being but indifferently fupplied with neceffaries in an enemy's country, and forced to undergo great fatigues, they were fo much weakened, that it was thought adviseable to recal them out of Rio Real, and to affign them quarters of refreshment in the garrifons. Major Van Brande had worfe fuccefs than all the reft; for, being fent abroad with a party to fetch in fome cattle, was put to the rout, and he himfelf taken prifoner.

In the mean-while that our whole fleet was waiting for the Spanish plate fleet on the coast of America, and we consequently were not in a condition to undertake any thing at fea, our directors had all the reason in the world to fear, that the Portuguese would take this opportunity to revenge their loss by destroying our fugar-mills, which made them leave no stone unturned to fecure the Dutch Brazil and its inhabitants against the attempts of the enemy: and considering that a great part of our fecurity depended on the good inclinations of the Portuguese living among us, it was thought convenient to call an affembly of the chiefest Portuguese inhabitants of the three captains of Pernambuko, Itamarika, and Parayba, towards the latter end of August, to concert measures how to defend their fugar-mills and fields against the incursions of the enemy.

The most effectual means that could be pitched upon in this affembly were, to provide their forts with good garrifons on the borders, and to fecure the fugar-mills, by putting a certain number of foldiers in or near them, for the fecurity of the adjacent fields. This was put in execution accordingly; and the officers had strict charge to keep a watchful eye upon the least motion of the Portuguese; notwithstanding which, it had not the defired effect, becaufe those Portuguese who lived at a confiderable diftance from us, and near the enemy's frontiers, durft not give timely notice of their approach; befides that, many among them having a constant hatred to our nation, did favour the enterprifes of those parties that burnt the fugar-fields and plundered the mills, ferved them fometimes for guides, and had their fhare in the booty, which obliged our people to be at a conftant charge of a ftrong guard to conduct their goods, and defend them against any fudden attempts. Such an incursion was not long after made by the Portuguese into our territories; for in November the viceroy, the Marquis of Montelvano, fent two barges full of foldiers to burn our fugar-reeds in the plains, which they effected, but durft not go too far, or attempt any thing against our mills, for fear of the foldiers quartered thereabouts, who could not prevent their burning in the fields, as being done in the The Dutch were the greatest losers by it, because they had generally the night-time. greatest share in those fields and mills, besides that the Portuguese spared those of their own

own countrymen; all which brought a great damp upon trade, every one being afraid to venture in any bufinefs, where he might lofe all his fubftance in one night, and that perhaps by the hand of a fingle perfon, whereby the revenues of the company were greatly impaired, and their charges increafed, being forced to maintain twenty or thirty foldiers for the defence of any confiderable plantation or fugar-mills; which prevented them from bringing a fufficient body of men into the field, to make head against the enemy. This was the ftate of the Dutch Brazil towards the latter end of 1640.

The 22d of December, in the fame year, Mr. Adrian van Bulleftraete arrived at the Receif from Middleburgh, in the quality of director of Brazil, fo that, now the great council being complete, the beft expedient to obviate all these difficulties, was judged to confist in our fleet; pursuant to this resolution, all our fhips were ordered to the Bahia, to make the enemy fensible that we were in a condition to be even with them, and thereby to facilitate the negociation that was in hand, for the furceasing of burning on both fides. The council of Nineteen having also fent express orders to cruife with fome ships before Rio Janeiro, from whence the Spanish sufed generally to return into Spain, about the month of May or June, fome of the biggest ships were ordered that way, to intercept, if possible, the flota, the rest being left near the Bahia.

But whilft our commiffioners were treating with the viceroy about the furceafing of burning and plundering, a certain Portuguefe, Paulo de Kunha by name, committed unheard-of cruelties, with murdering, plundering, and burning, in the open country, which made Count Maurice write the following letter to the viceroy :---

Count Maurice's Letter to the Viceroy.

"The barbarities lately committed by Paule de Kunha, with burning, murdering, and plundering, in the open country, give me great reafon to fear, that your laft obliging letter was defigned for a compliment, without any reality. The confidence I had in your excellency's fincerity made me recal our fhips and forces from your territories, to take away all means of offence: but the long flay of our deputies affords great occafion of fufpicion, that your intention is only to amufe us; which has obliged me to difpatch a veffel to let them know, that in cafe the treaty is not brought to a conclufion, to return without delay; it being our intention that the faid negotiation fhould not be continued longer. Your Excellency will therefore difmifs them, together with our two hoftages, as we are refolved to fend back to you Martin Feirara, left with us as a hoftage from your excellency, his companion being dead of late."

Hereupon, by the mediation of the clergy living under our jurifdiction, but effecially by the indefatigable care of Dirck Kodde Vander Burgh, who was fent thither for that purpofe, the treaty was brought to a happy conclusion in February 1641, by virtue of which, all deftructions by burning and plundering were to furceafe on both fides; which being published by proclamation, the Portuguese were ordered to quit our dominions, whereby we reaped this advantage, that now we might turn all our forces where we found it most expedient.

In June 1641, Count Maurice and the great council received advice of the ten years' truce concluded betwixt the States of Holland and the King of Portugal, with all the articles thereunto belonging, which were published by proclamation in all our captainships, and all acts of hostilities ceased on both fides; the Dutch living in good understanding with the inhabitants of the Bahia, giving them all the demonstrations of friendfhip fhip, fufficient to convince the Portuguese that they had not the least reason to fear any infraction on their fide.

The great council being willing to improve this interval of peace for the advancement of traffic, and the benefit of the company, gave all imaginable encouragement, in proportion to the circumftances of time and place, to all the inhabitants of what nation foever, for the eultivating the lands, which had this good effect, that the mafters of the fugar-mills rebuilt their mills, and the hufbandmen betook themfelves with fo much eagernefs to the cultivating of their fugar-fields, that they borrowed confiderable fums, upon a profpect of fure gain, which would over-pay their debts; as, without queftion, it would have done in a fhort time, if, by the treachery of the Portuguefe, they had not been difappointed in their hopes. The next thing to be taken in hand, was, to make fuch wholefome laws as were thought moft expedient for the eftablifhment and increafe of commerce, both in the Receif and other places, and to improve the domains and other revenues belonging to the company, during this time of truce.

Trade then began to flourish apace, fo that fome time after the truce, the merchants and factors fold more commodities than had ever been known either before or fince. Many millions were dealt for in a little time, the merchants and factors being contented to fell to those who would pay fome money in part, though there were buyers enough who would and could buy for ready cash.

The finances of the company in Brazil were in fo good a ftate, by the extraordinary care of the great council, that, in 1040 and 1641, they bought confiderable quantities of fugar upon the public account, which they fent to Holland. In the Receif and Maurice's Town, we faw feveral goodly ftructures erected by the inhabitants, who lived in great plenty and magnificence, every one looking upon his debts as fecure, and having a fair prospect to increase his riches, by the flourishing state of commerce and improvement of the lands.

But this was of no long continuance, for, in the beginning of 1643, things began to appear with a quite different face; for the magazines of the company being exhausted by feveral expeditions against Angola, &c. and having received no supplies in their stead out of Holland, as they used to do before, the great council was obliged to make use of what was due to the company, for the payment of the garrifons and other officers, and, confequently, to force their debtors to prompt payments.

For at the beginning of the government of the new directors, the company had a confiderable naval force upon the coaft of Brazil, their magazines were well provided with provision and ammunition, and they maintained a good number of foldiers. The great council of the Dutch Brazil relying upon their ftrength, did, with confent of Count Maurice, fend, in 1641, feveral fleets with foldiers to Spirito Santa, Rio de Janeiro, the isle of Maranhaon, Angola, St. Thomas, and other places thereabouts, to attack the fame, which fucceeded according to expectation; but their magazines were greatly exhaufted by those expeditions. Befides this, the merchants in Holland began to call upon their fervants and factors for confiderable fums of money, in return of what they had received from them; who being obliged to fend all the money they could bring together from their creditors to their mafters in Holland; this occafioned great fcarcity of ready-money, and, confequently, no fmall detriment in traffic, which continuing thus from time to time, there arofe fuch a general fcarcity of money as is fcarce to be imagined; many of the mafters of the fugar-mills, that had no ready money to fatisfy their debts at the appointed time, being forced to take up money upon credit, and to pay three or four per cent. per month, which reduced many of them to fuch fuch an extremity in a little time, that they were neither able to pay the principal nor interest.

Upon the arrival of the three new directors, or members of the great council, in 1640, viz. Henry Hamel, Kodde, and Bullestraet, they found that the inhabitants, but especially the Portuguese of the Dutch Brazil, by buying of sugar-mills and plantations, as well as negroes and other commodities, had run themfelves much in debt; having bought their negroes not only at three hundred pieces of eight per head, but also given molt extravagant prices for all other forts of commodities, and purchased whole warehouses, without making a just account how to be able to pay for them. This was done by the Portuguele, in hopes of the good fuccels of those great fleets they understood were equipping in Spain, to reduce Brazil under the King's obedience, which they fuppofed would free them from their debts; which the factors not being aware of, and, blinded with the profpect of vaft profit, fold their goods to the Portuguefe without reluctancy. But the defign of the Portuguese vanishing into smoke for that time, they were forced to pay; but new supplies of all forts of commodities being fent out of Holland, they bought on a-fresh, heaping debts upon debts, till, failing in their payments, their credit began alfo to fail with the merchants, who now began to urge for fatisfaction of their debts. For the country-trader being urged by the factors and merchants, who received those commodities from their correspondents in Holland, was obliged to call to an account the Portuguese unto whom he had fold the goods. And because the Portuguese had not bought those commodities from the Dutch, but with an intention never to pay them, the country-trader, who was obliged to pay the merchants in the Receif, faw himfelf reduced to ruin, the Portuguese having not wherewithal to fatisfy their debts.

Thus, through the unwariness and mismanagement of those factors, whom the merchants in Holland had intrusted with their goods, fuch a confusion was introduced, as tended to the great detriment of their correspondents in Holland. All the business at that time lay among the lawyers, and in the courts of judicature, which, confidering the chargeablenefs of law-fuits in Brazil, tended to their farther ruin; for when they had obtained fentence and execution against the debtors, the greatest difficulty was, how, and which way, to lay the execution; most of the Portuguese fueing for protection from the Regency, which, if they could not obtain, they lived incognito; efpecially those who had no lands or effects, or if they had, it was no eafy matter to find out where they were. Befides that, if the creditors executed their executions upon the lands, they were forced to be the buyers themfelves, and to live in the country to manage the lands, a thing altogether inconvenient to the merchants, who had other bufinefs upon their hands in the Receif. Such as were cast into prifon must be maintained there at the charge of the creditor, which, in process of time, amounted to fuch a fum, that they themfelves were fain to folicit the releasement of their debtors, and to make the beft composition with them they could.

Befides thefe inconveniences, there have happened of late feveral others, viz. a great mortality of the negroes and Brazilians, by a certain infectious diftemper, incident to the natives, called Bexigos, refembling our fmall-pox in Europe. Moft of thefe negroes were bought at the rate of three hundred pieces of eight, and, confequently, their loss drew after it the ruin of the planters, who alfo complained much of vermin, and feveral inundations that had done confiderable damage to the fugar-fields. This confusion in traffic introduced no fmall broils among the inhabitants themfelves, who, in cafe of non-payment, threw one another into prifon without mercy, and endeavoured to prevent one another, by clandeftine means, to get in their debts before the reft;

VOL. XIV.

offering

offering confiderable abatements and rewards to fuch as would underhand furrender or transport their effects; and those divisions were not a little fomented by fome ill-minded perfons, to the prejudice of the government; many of those, who, either by unwariness or other mifmanagement, lost their debts, laying the fault thereof at the door of the Regency and of the courts of justice, vainly imagining, that what they had lost by their own neglect or want of care, should be made good by the public purfe; effecially if it happened fo, that the fame perfons were indebted to the company as well as private perfons, there arife great contests about the preference.

The debts of the company did alfo increase every day, which at last amounted to fome millions: for the directors, which before the year 1640 had the management of affairs in Brazil, did fell most of the confiscated estates, sugar-mills, and merchandizes, as well as the negroes bought on account of the company in Africk, upon credit, fo that their books were filled with debts, but their cash empty of money. The fucceeding members of the great council, Meffrs. Hamel, Bullestraet, and Kodde, did leave no, ftone unturned to correct this cuftom, and to fell their commodities for ready money, or otherwife to exchange them for fugars, thereby to eafe the company in the great charge they were forced to be at in their feveral expeditions; and it is certain, that in 1640, 1641, and 1642, they fent fuch vast cargoes of fugar to Holland, that the like had never been known before in Brazil. Notwithstanding which, by the vast numbers of negroes that were imported, after our conquest of Angola, the company fell more and more in debt, by reafon their debtors were very dilatory in their payments. The council of Nineteen fent express orders to remedy this evil, by felling the negroes lor ready money, or exchanging them for fugar; but this could not be put in practice, becaufe there was nobody who would buy upon those conditions, fo that the price of the negroes falling daily lower and lower, and thefe being a great burden to the company, and fubject to diftempers and mortality, this order was fain to be revoked, unlefs they would fee the negro-trade dwindle away into nothing; for the inhabitants being for the most part fuch as had bestowed most part of their fubstance in the fugar-mills, plantations, and negroes, they could not pay ready money, but were forced to deal upon credit, till they could reap the benefit of their labour.

The members of the great council did therefore take all imaginable care to call upon their debtors exactly at the time of their fugar-harvest, and ordered their officers in the country to feize upon some of them on account of the company.

From hence arole nothing but law-fuits, fentences, executions, and imprisonments: the members of the great council thinking it not below their flation; to go fometimes in perfon into the country to promote the payment of the debts owing to the company. But this had a contrary effect, for the merchants and factors began to be extremely diffatisfied, that the company should feize upon the fugar in the mills, without letting them, who were creditors as well as they, have their fhare in them. This occafioned not only murmurings, but alfo threats and complaints to the council of Nineteen, where they mifreprefented these transactions under the worst colours they could, hoping thereby to deter the officers of the company from doing their duty. The great council having taken the matter into mature deliberation, and fearing, not without reafon, that in time it might occasion a general difcontent, they left no stone unturned to fatisfy the minds of the people, by finding out means to have their debts fatisfied. It was propofed by feveral understanding perfons, that the company should undertake to fatisfy the debts of private perfons, either by way of payment or exchange; in lieu of which the mafters of the fugar-mills fhould furrender to the company every year, the whole product of these mills, till they had fatisfied all their debts. And to make the fame the more effectual,

for the general benefit as well of the company and fugar-mills, as the merchants and factors, it was agreed, that certain articles fhould be agreed upon for that purpofe; the greateft advantage the company pretended to reap by it being, that they fhould have a fair opportunity of recovering fome of their debts, which were given over for loft. These agreements were wonderfully pleasing to the council of Nineteen, who in the year 1645, on the 16th of June, fent their approbation of a fecond agreement made with one George Homo Pinto (which indeed was of as great confequence as all the other contracts together) to the great council as follows:

Approbation of the Agreement.

"Concerning the agreement by you (meaning the council) on the 14th of December laft, made with George Homo Pinto, we have had feveral debates, which we find to have been brought to a conclusion, with the previous advice and approbation of the counfellors of juffice and of the finances; fo that both in respect of the fame, and of the great benefit that is likely to accrue thereby to the company, we have thought fit to approve of the faid agreement; recommending to you the execution of it, with the fame zeal as you have shewn your conduct and circumspection in the whole management of these contracts."

That these agreements were by all people, that had any knowledge of those affairs, looked upon as greatly for the interest of the company, is most evident from hence, that several other merchants that were fensible of this advantage, made agreements with their debtors much upon the fame terms as the company had done; which, that it may be put beyond all doubt, we will give you a copy of one of those agreements, from whence it will plainly appear with how much circumspection the council proceeded in this matter, betwixt the company, the masters of the fugar-mills, and their debtors.

The Copy of an Agreement.

" Mr. Peter John Bas, and John van Ratsfield, counfellors of justice of Brazil, by fpecial commission from the West-India company, and John van Walbeeck, assessor of the great council, did appear before us on one fide; and Manuel Fernando Cruz, Sieur de Ingenho Tapicura, in behalf of himfelf and his heirs; as alfo Benjamin de Pina for ten thoufand fix hundred gilders; Ifaac de Costa for thirteen thousand one hundred and eight; Joseph Abenacar for four hundred and ninety; Simon de Vale for three hundred and twenty-five; Gasper Francisco and David Brandoa for eleven hundred and thirty-three; Abraham de Tovaer for one thousand; John Parente for three hundred and fifty; John Mendonça de Moeribeca for four thousand three hundred and fifty; James Gabay for one thousand and fifty; More de Leon for fix hundred; Balthazar de Fonseca for fix hundred; Simon Gomes de Lisboa for five thousand nine hundred and ten; Bartholomew Rodrigues for nine hundred; and Daniel Cardofa for nine hundred and ten gilders; the whole amounting to forty thousand five hundred and twenty-fix gilders, being all creditors of the faid Manuel Fernando Cruz, and for the most part debtors to the company on the other fide, who profess and declare to have agreed among themfelves, that the before-mentioned Manuel Fernando Cruz, shall pay to the company the full fum of fixty thousand feven hundred and ninety-five gilders, viz, nineteen thousand two hundred and fixty nine gilders upon his own account, being by him owing to the faid company, and the remaining fum on the account of his creditors, which, proportionably to their respective debts, ought to be discounted for with him by the faid company, upon the following conditions :

" I. That the whole debt is to be fatisfied in the three next following years, the first payment to begin in January 1645, and if it happen, that in one year a less fhare be paid than in the other, the whole is to be made good in the last year.

" 2. That no difcounts shall be entered in the books of the company, until after the payment of the due proportion appointed for each respective term of time.

" 3. That the creditors of those with whom they have entered into articles of agreement, as well as the debtors of the company, shall not be discharged of their debts in the books of the company, but in case of failure or delay of payment, either of the whole sum or part thereof, all the respective appointed times, shall stand engaged and answerable, each for his respective debt, unless they give other fecurity to the company; but those creditors who have no debts in the books of the company, shall have liberty to transfer other debts, or elfe to receive their share in two years time, either by affignments or in negroes; but not in any commodities imported from abroad, or sugar to be exported; provided nevertheless that the articles of agreement be fulfilled, or otherwise the fum be put to their own account immediately, in which case they are to allow eighteen pound per cent. and nevertheless be liable to fee the agreement put in execution.

"4. Those who are entered into articles of agreement shall be obliged to engage both their body and goods for the performance thereof, but especially to deliver an inventory of their perfonal estates, confirmed by oath; besides which, they are to give such securities as shall be approved of by the great council; with renouncing the *beneficium ordinis, divisionis, et excusationis*, as well for each respective payment at the appointed times, as the whole sum in general.

" 5. Thefe before-mentioned fecurities are to be perfons well-qualified, of good fubftance, not involved in debts, but especially in the company's; and shall be warranted by the magistrates of their respective places of abode.

" 6. Public notice is to be given to all perfons who have any bonds, bills or accounts, or other engagements relating to the perfonal effates (which fhall be named or fpecified), of fuch as are entered into those articles, that within the fpace of three weeks they are to produce the fame, or elfe be excluded from the benefit thereof, till after the expiration of the time mentioned and appointed in the faid agreement.

" 7. That he who has engaged himfelf in fuch an agreement or contract, fhall not be permitted to contract new debts, unlefs with the confent of the great council; otherwife the fame to be void and null, of which public notice fhall be given. Neither fhall he abalienate any fugars by land as remains, under the penalty of reftitution to be made with full intereft and charges.

"The creditors fhall be obliged to furrender and renounce all their pretenfions, engagements, and actions, to the company; neither fhall they lay any claim upon that fcore of precedence, or otherwife.

"Whenever it fhall be judged requifite, by the great council, to fend a certain perfon to the Ingenho of any perfon entered into fuch an agreement, for the better fecurity of their debt, and the receiving and fending away the fugar allotted to the company, he fhall be obliged to find him with victuals and lodgings in his Ingenho; but the company fhall pay him for his pains.

"Purfuant to which, the before-named Manuel Fernando Cruz, with the advice and confent of his before-mentioned creditors, has obliged himfelf in general, and by thefe prefents, obliges and engages his perfon and eftate, both real and perfonal, without any refervation or exception; but efpecially the before-named Ingenho Tapicura,

740

with

with all its appurtenances, according to the inventory there affixed and confirmed by oath; which Ingenho Tapicura he declares to be free from any pre-engagements, with all the grounds, fugar-fields, pafturages, woods, and other things thereunto belonging, viz. eight brafs calderns, ten tachoos, and ten parvos, befides feveral other copper veffels belonging to the faid Ingenho; twenty flaves belonging to the faid Ingenho, and Manuel Fernando Cruz, his houfe and fixty oxen. And for the better performance of this agreement, Senhor John de Mendole, dwelling at Moeribeca, and Manuel Gomes de Lifboa, living in Moquiaxe, have, after certificates obtained from the magiftrates of their refpective dwelling-places, engaged themfelves, and do by thefe prefents engage themfelves as fecurities for the whole debt, and as debtors for each and every part thereof, promifing to indemnify the company of all actions, fuits, or other pretenfions which may be made against them on account of any other creditors of the faid Manuel Fernando Cruz, not mentioned or engaged in this agreement ; as likewife, that no fugar fhall be furreptitioufly conveyed away or abalienated : that in cafe of non-payment, the company shall be hereby fully empowered to recover their damages with intereft and charges, upon their perfons and eftates; they renouncing by thefe prefents all exceptions, ordinis, divisionis, et excusationis, as likewise all other pretensions of privileges tending to the invalidity of this contract. The before-named creditors alfo, in general, and every one of them in particular, declare that they have given in a true account of all their respective pretensions upon the faid Manuel Fernando Cruz, neither that they do demand any other fum or fums of him, but what have been fpecified there under their respective names; promifing to be well fatisfied with what has been flipulated, and, if put in execution accordingly, to renounce all actions or private engagements, difcontents or preference in favour of the company; and that in cafe of nonpayment, they will be obliged to make good and reftore to the faid company, not only each particular fum paid at certain limited times, but alfo the whole, in the fame manner, as if the faid agreement had never been made betwixt them; leaving it to the difcretion of the company, whether they will lay their actions against Manuel Fernando Cruz and his fecurities, or against themselves and their estates; under the condition they were in before the conclusion of this agreement; the benefit of actionem ceffam being allowed them against the faid Cruz and his fecurities, for the recovery of their just debts. In witnefs and confirmation of which we have granted thefe our letters, as ulual in fuch cafes, fealed with the ordinary feal of the court of justice, and figned by the fecretary of the council. Translated in the Receif, 23d September 1644."

In the fame manner all the other contracts were made and penned; the contents of which amounted, in the whole, to two million one hundred and twenty-five thousand eight hundred and feven gilders, which were due from the farmers to the masters of the fugar-mills, and from those again to the company.

The chief, if not the only reafon, why these agreements were refolved upon, was, (as we faid before) the intolerable vexations and exactions put upon the mafters of the fugar-mills by their creditors, who, unless these mafters paid them at the rate of two or three per cent. interest per month, made immediate feizure of their negroes, oxen, coppers, and other necessaries belonging to the fugar-mills; fo that the masters of these fugar-mills being reduced to a necessity of paying fuch exorbitant exactions, or elfe to fee themselves entirely ruined, began to defend their plantations and mills by force, fo that things feemed to tend at that time to a general infurrection, if the fame had not been prevented, by entering into those contracts; by which means, the masters of the fugar-mills being freed from the oppressions of their creditors, and in lieu thereof now become debtors to the company, and time given them to employ their mills for the payment

ment of their debts, at certain limited times, and that at the rate of one per cent. interest per month only, all pretensions and occasions of a revolt were thereby removed, at least for that time; the first term of payment being set out for a confiderable time.

To make this the more evident, thefe following heads deferve our particular obfervation: that the company and the merchants, being creditors of the mafters of the fugar-mills, endeavouring at the fame time to force them to the payment of their debts, by executions: this occafioned, from the year 1647, to the time of the making of those contracts, fuch a confusion, as must needs have tended to the total defruction of the fugar-mills, and, confequently, of the merchants and company; which induced them to apply themselves to the great council, to find out fome means, by way of difcount, or otherwise, to put these debts into the company's hands.

The counfellors of justice did not, at first, agree in all points to these proposals, but at their meeting on the 12th of August 1644, being better convinced of the matter, and that the company was fufficiently secured and benefited thereby, the next following day did not only approve of the same, but also were of opinion, that some things might be rather mitigated for the advantage of the masters of mills and their creditors, than not to relieve them at this juncture; so that the conditions were, the 10th of November 1644, agreed unto with the confent of the counfellors of the court of justice and the finances.

Purfuant to these, the great council took care that public notice should be given of these agreements made betwixt the company and certain private perfons, by which every one was forewarned not to fell any thing upon credit to them, without the confent of the great council; and their creditors fummoned to make good their debts within three weeks time, or elfe to be excluded from the benefit of the contract, till after the time therein limited was expired. From all which, it is fufficiently demonstrable, with how little appearance of truth fome have attempted to infinuate, that these contracts were prejudicial to the company, and had given no fmall occafion to the enfuing revolt of the Portuguese; when it is beyond all question, from what has been faid before, that thefe were the only means to prevent those calamities, wherewith the masters of the fugar-mills, and the farmers or country-planters, were overwhelmed all at that time, who were forced to let their mills ftand ftill, and leave the ground uncultivated; all which, as it tended to the utter destruction of the fugar-mills, fo the company fustained an irreparable lofs, viz. thirty-eight pounds per cent. yearly in Brazil, and thirty-feven pounds per cent. in Holland, which being feventy-five pounds per cent., did altogether arife from the ufe of the fugar-mills.

Befides this, there were not a few of those merchants that were creditors of the fugar-mills, that were confiderably indebted to the company, who pleaded infolvency, by reason of the non-payment of their debtors; the company would have been confiderable losers by them, unless by this way of discounting, they had found means to recover those desperate debts. All which moved the great council to make a virtue of neceffity, and, with the advice of the masters of the fugar-mills and their creditors, and the approbation of the council of Nineteen, to enter upon those articles; which could not be in anywise detrimental to the company; though fome malicious perfons have objected against them, that (fupposing there had been no revolt) these masters would not, in twenty years, nay, perhaps never, have been in a condition to wrong the company, what they had laid out upon their account; when it is fufficiently known that the great council never paid one farthing of ready-money for them on the account of the company; besides, that for the fatisfaction of the company, twenty-five fugarmills were engaged, which, one with another, affording from two hundred and thirty

to two hundred and fifty chefts of fugar yearly; if the company had drawn but a hundred and forty or a hundred and fifty chefts from each, the fame would have amounted to four hundred and twenty thousand gilders; from whence it is evident, that, not to include the fugar-mills, their coppers, oxen, and other inftruments thereunto belonging, the fum of two millions one hundred and twenty-five thousand eight hundred and fixteen gilders, being the total fum of the debt owing to the company by virtue of these contracts, might have been fatisfied without much hazard; the Portuguese mafters of the fugar-mills, being by this expedient left in the quiet possible of their mills, and eased from the oppressions of their creditors, and our hopes were not a little increased by the industry of the inhabitants of the country, who, finding themfelves now at ease, applied themselves with fo much affiduity to the improvement of their plantations, for the better fatisfying of their debts, that, in 1645, there was fuch a fair prospect of a plentiful harvest of fugar, as had not been known in many years before.

But it feems as if the Portuguefe, out of an in-born hatred to our nation, who had conquered them, were refolved not to reft fatisfied, till by underhand practices and plots they had undermined our government. Add to this, that many of them having involved themfelves over head and ears in debt, and feeing no way to fatisfy their creditors, were become defperate, and more forward to run the hazard of an open revolt (in hopes of affiftance from Portugal), than to undergo the unavoidable neceffities of poverty; which made fome of them frankly tell our people afterwards, that in cafe they were difappointed in their hopes of fuccours from the Bahia, they would feek for aid in Spain or Turkey.

Towards the latter end of the year 1642, there were rumours fpread abroad of a plot contrived by the Portuguese against the state, when they were difarmed, and their arms brought into the magazines, which however they got again under some pretence or other afterwards, they living very quietly among us, for fear, as I suppose, of our garrisons, and that they were not then sufficiently assured of succours from the Bahia. But it will not be amiss to trace the true origin of this revolt.

The 13th December 1642, one John Fernandes Vieira, alderman of Maurice's Town, appeared in the great council, Count Maurice being prefent, where he told them, that he had been informed by certain Jews, how he and his father-in-law Beringel were fufpected in Holland, of having fent letters by a fon of the faid Beringel to the King of Portugal, tending to the detriment of the ftate. He did not deny to have fent a letter by the faid perfon to the King of Portugal, but containing no more than a recommendation of the faid Beringel's perfon, to help him to fome employment under the King: this he offered to prove by his copy, which being produced, there was found nothing material in it, but a congratulation to the King upon his acceffion to the crown, and a recommendation of the faid Beringel; Vieira further propofed, that he thought it abfolutely neceffary, for the fafety of the eftate, to have the Portuguefe difarmed, as likewife the captains De Campo, with thofe under their jurifdiction, the negroes, Brazilians, mulatts, and Mamalukes.

There was alfo a letter fent by the council of Nineteen, dated 1ft June 1642, to Count Maurice, containing in fubftance, that one John van North, who had ferved for fourteen months in the quality of a cadet in Brazil, had declared to them at Amfterdam, that he had been a fervant in a fugar-mill belonging to John Fernandes Vieira, where, after a ftay of two months, he was entreated by Francisco Beringel Labrador, to go with his fon Antonio Dandrado Beringel, as an interpreter, to Holland, and from thence to Portugal; which upon great promises he accepted of, and they fet fail on on board the fhip called the Love from Brazil for Zeeland, and afterwards from Uliffimen went to Lifbon. He faid, that this Antonio Dandrado Beringel, after a familiar converfation of three weeks, had told him that he was fent with a letter figned by John Fernandes Vieira, Francifco Beringel, Bernardin Karvailho, John Biferro and Lewis Bras Biferro, in which they gave to underftand to the King of Portugal, that they were well provided with men, money, and arms, for the reducing Brazil under his obedience. The council added, that the King of Portugal had made the faid Beringel a captain for this piece of fervice, and that therefore they defired Count Maurice and the great council to keep a watchful eye over them, being fenfible what an averfion the Portuguefe did bear to the Dutch.

At the meeting of the great council of Brazil, 16th February 1643, Count Maurice affured them, that he had received intelligence, that fome of the chiefeft of the Portuguefe had refolved to furprife our garrifons in the country, at Moribeca, St. Anthony, and fome other places, and to put them to the fword, which was to be put in execution upon one of their faint's days, when they ufed to meet in confiderable numbers. Thofe who had the chief management of this affair, had their dwelling-places in the Vargea, who had propofed to furprife likewife the Receif, not queftioning that if they could make themfelves mafters of it, the other garrifons in the country would be eafily reduced, and confequently the company not able to fubfift long in Brazil, without foldiers and traffic.

Hereupon it was taken into deliberation, whether it were best to fecure the heads of this rebellion immediately, or to delay it till a more convenient time, for fear of alarming the whole country by their imprifonment : the laft was refolved upon, becaufe they did not think themfelves as yet fufficiently affured of their defigns, and did not question, but that by the fecret intelligence Count Maurice was to receive of their tranfactions, to prevent them. It was however judged adviseable to draw the garrifons out of the country into the Receif, which was ftrengthened with new pallifadoes, and the old wooden battery repaired; a fhip was also ordered with feveral great chaloops, the first on the sea-fide, the others in the river, to defend the avenues of the Receif with their cannon. There were likewife divers letters fent by private perfons, fome without names, to Count Maurice and the great council, confirming the traiterous defigns of the Portuguese; among others, one Mr. Van Els sent a letter to Count Maurice, dated at Serinhaim the 20th of March 1643, importing, that he had it from fure hands, that a certain mulat, of the company of Augustin Hardoso, being asked by certain inhabitants of that Fregefie, what bufinefs they had thereabouts, had told them, that they had been to carry letters to fome perfons living near the Receif; adding, that in a fhort time they would fee that place taken without any effution of blood, either of the Dutch or Portuguefe.

In December 1643, Don Michael de Krafto, Don Baftian Manduba de Sonho, and Don Antonio Ferdinandes, three ambaffadors from the Count Sonho in Angola, arrived in the Receif, in the fhip called the Arms of Dort; they had but one fervant each, but brought along with them feveral negroes with golden collars, as a prefent to Count Maurice, befides a great number of other negroes for the company.

Being admitted to audience by Count Maurice and the great council, they defired, in the name of their mafters, not to fend any affiftance to the King of Congo, whom they feared would attack them before long, notwithstanding they were at that time both engaged in a war against the Portuguese. They received for answer, that the council would write to Mr. Niewland, their director there, to interpose his authority and mediation, in order to maintain a correspondency, and remove all occasion of con-

744

teft betwixt the King of Congo and their mafter, they being both confederates of the ftates: the faid earl fent likewile a letter to Count Maurice, in which he defired leave to buy a chair, a cloak, fome enfigns of war, fome apparel, and fuch like things. The great council wrote alfo a letter, as well to the King of Congo, as to the Count of Sonho, exhorting them to peace, and fent them the following prefents in the name of the company: — To the King, a long black velvet cloak, with filver galloons, a fcarf edged with filver lace, a velvet coat, and a caftor-hat with a filver hatband. — To the Count, a red velvet elbow-chair, with gold fringes, a large velvet cloak, with gold and filver galloons, a fcarf with a gold and filver lace, a velvet coat, and a caftor-hat with a gold and filver hatband.

They were entertained with all imaginable civility during their ftay here : they were very fkilful in playing with the backfword; in the management of which, they made most terrible postures and faces. They understood Latin very well, and made feveral learned harangues in the fame.

The 13th of October 1644, a certain Jew called Gafpar Francisco de Kunha, with two others of the chief of the fame fraternity, gave notice to the great council, that they had been credibly informed by fome Jews, who conversed and kept frequent correspondence in the country, that the Portuguese were plotting against the Dutch Brazil, telling the council the reasons upon which they founded this sufficient. The council, after having returned thanks to these elders for their care, resolved to leave no store unturned, to discover the designs of the Portuguese; and having received certain intelligence, that they expected some arms and ammunition to be brought them by sea, they ordered, the 12th of October 1644, the yacht called Niewhouse, with a galiot and a chaloop, to cruize along the coast of Dutch Brazil, to observe what vessels did approach the specifies.

The 11th of May 1644, Count Maurice left the Receif, in order to his return to Holland, after he had been eight years governor of the Dutch Brazil. All the citizens and chief inhabitants, both of the Receif and Maurice's Town, appeared in arms, making a lane from the old town to the water-gate, from whom, as he paffed by, he took his leave with all imaginable demonstrations of kindnefs. At the gate he mounted on horfe-back, and being accompanied by the great council, the counfellors of juffice, and all the military officers, as far as Olinda, he there once more took his leave of them in particular, the Sieur Bullestraet remaining only with him, being deputed by the regency to conduct him on board the fhips defigned for his transportation. They did not fet fail from the Red Land till the 22d of May, with a fleet of thirteen fhips, on board of which were a good number of foldiers, leaving only eighteen companies for the defence of the Dutch Brazil. Mr. Bullestraet returned the 26th to the Receif.

On the 22d of April, not long before the departure of Count Maurice, the commiffion from the governors of the Weft India company, according to a refolution taken at their meeting the first of July 1642, concerning the government of Dutch Brazil, and dated the 22d of May 1643, was read in the great council, by which the members thereof were to have the administration of the government till further orders. Accordingly, Count Maurice having appointed a day to invest them with the administration of the government, he ordered (with the confent of the faid council) an affembly to be called on the 6th of May, of the counfellors of justice, of the magiftrates, the ecclefiastical council and ministers of Maurice's Town; of the commandersin-chief, both by fea and land, the chief officers of the company, the officers of the militia, and the chief men among the Jews.

VOL. XIV.

All

All these being at the appointed time met in the great hall of the Stadthuis, he told them, that fince Their High and Mightineffes the States, His Highness the Prince of Orange, and the council of Nineteen, had been pleased to grant him leave, after a stay of eight years among them, in the quality of governor of the Dutch Brazil, to return into Holland, he had called them together, to return them thanks for the many fervices, each in his ftation, had done to the company; as likewife for the obedience, fidelity, and refpect they had always fhewn to his perfon; telling them, that from this minute he refigned the government into the hands of the great council, requiring and defiring them, in the name of the States, the Prince of Orange, and the council of Nineteen, to fhew them the fame obedience, fidelity, and refpect, they had done before; whereupon Count Maurice having congratulated the council, and the reft there prefent done the fame, he took his leave of them in the hall, and immediately after in the council-chamber, of the members of the great council, giving them most hearty thanks for their faithful council and affistance upon all occasions, and for the refpect and deference they had always fhewn to his perfon; telling them, that fince this would be the last time of his appearing in their affembly, he had drawn up a memorial, which might ferve them as a guide, for the better administration of the government; and that, if they thought it convenient, he fhould be ready to difcourfe with them, and enlarge further upon that fubject. The members of the great council returned him their unfeigned thanks, withing him a happy voyage, and good fuccefs in all his undertakings, and recommended themfelves and the whole Dutch Brazil to his care hereafter. Before the breaking up of the affembly, it was debated in the prefence of Count Maurice, which of the members fhould have the precedency there as prefident, or whether the fame fhould be taken by turns, the fame being not determined in their commission. After feveral arguments pro and con, it was agreed, that things fhould remain, in refpect of this point, in the fame condition as had been ufual before, in the abfence of Count Maurice, viz. for every one to keep his rank without any priority, till further orders from the council of Nineteen; to wit, first Mr. Dirk Hamel, then Mr. Bullestraet, Mr. Kodde Vander Burgh, &c.

The next thing the great council took in hand, was to inquire more narrowly into the defigns of the Portuguefe against the government; to effect which, it was refolved, in January 1644, to fend Gilbert de Wit, counfellor of the court of justice, and Captain Dirk Hoogstraten, then commander-in-chief in the Cape of St. Austin, to Antonio Telles de Sylva, then governor of the Bahia, with the following instructions, dated the 15th of the fame month; to compliment the governor (after the delivery of their credentials), in the name of the great council, with a fincere promife and affurance of friendship, and good neighbourly correspondency. After this, they were to represent to him, that many of the fubjects of the Dutch Brazil, after having contracted considerable dehts there, both with the company and other inhabitants, did retire into the Bahia; wherefore they defired, that for the promoting of justice, they would either detain those bankrupts in prison, or at least give timely notice of their coming thither, to the Dutch government, whereby their ship the enabled to profecute them at law: but their real errand was to be instructed underhand in the following points:

1. What forces the Portuguese had at that time in the Bahia, and the other fouthern provinces.

2. What number of fhips.

3. What number of fhips were expected there out of Portugal.

4. How

4. How the negroes trade flood affected, and from what places they were brought thither.

5. Whether there was any commerce betwixt them and the inhabitants of Buenos Ayres.

6. In what condition their places were thereabouts; of all which they were to give the beft account they were able to get, after their return to the great council; they were alfo charged by word of mouth, to make diligent enquiry who were the perfons that underhand encouraged the fo-much-feared revolt of the Portuguefe in the Dutch Brazil, and what aid or affiftance they were to have from them; and to defire the governor not to permit for the future, that fuch of the Dutch foldiers as deferted out of the Receif, and went by land to the Bahia, might from thence be transported into Portugal, but be ftopped and fent back to the Receif.

These convoys arrived fafely the 8th of February 1644, in the Bahia, and dropped their anchor, towards the evening, near the city of St. Salvador, and the caftle of St. Antonio, where two officers came on board them, to enquire from whence they came, and by whom, and to whom they were fent, in order to give an account thereof to the governor, Antonio Telles de Sylva. The next following day they were complimented in the name of the governor, by Major Domingo Delgados, and Captain David Ventura, who told them that he intended to fend his chaloop with the first opportunity to fetch them ashore. About three o'clock in the asternoon, the same officers, with three or four more, came with the chaloop to fetch them; and they were no fooner landed, but found feveral horfes ready for them to mount upon, which they did, and were conducted up a high hill, all over covered with fpectators, to the governor's palace. In the outward hall was a ftrong guard of foldiers; in the fecond, feveral enfigns and other inferior officers; in the third apartment they met with nothing but captains and lieutenants; and in the fourth, with colonels, general officers, fome clergymen, and the governor himfelf; who, after having received them at the door, defired them to fit down next to him, upon chairs fet for that purpofe. The envoys then begun their harangue, in which they told him, that they were extremely glad to find him in good health at this time, when they were fent by the great council of the Dutch Brazil, to affure him of their good inclinations to maintain a good correspondency and friendship with him, and of their hearty wishes for His Majesty's, his own, and the government's prosperity; to preferve which, they were ready to contribute all that lay in their power. Then they told him, that they had feveral things to propofe to him, when he should think convenient to receive them; the reft of the difcourfe run upon mutual compliments and news. After which, the envoys were again accompanied by the governor to the door of the apartment, where he ordered the before-mentioned Domingo Delgados and David Ventura, to conduct them to a certain large house, finely furnished, in Bishop's-street, and to entertain them at his charge; which, though the envoys refused, alledging it to be contrary to the intentions of their masters, yet were forced to accept of the same, and were very magnificently entertained at fupper.

The next morning about eleven o'clock, they went again to the palace, and after having defired a fecond audience, were received in the fame manner as before. Every one being ordered to withdraw, befides the fecretary of the governor; the envoys made their propositions to the last, which they delivered to him in writing, in Portuguese, recommending the fame to his confideration, as tending towards the maintaining a good and firm correspondency betwixt them. To which the governor gave this general answer: anfwer: "That he fhould always endeavour to cultivate a good underftanding and correspondency with us, pursuant to the strict and reiterated orders he had received for that purpose from the King his master. And that concerning the propositions made by them to him, he would assemble his council of war and justice, and asterwards impart to them his answer." Then they were, by Domingo Delgados, reconducted to his own house, where they were very well entertained the same day at dinner, and the next by the governor himself.

The 17th they had another audience from the governor, who told them, in very obliging terms, " that he had confulted the matter with his council, and could give them no other anfwer but what was contained in this letter," which he delivered to them, and told them the contents thereof; whereupon our envoys told him, that fince thereby a door was left open for rogues and vagabonds, they hoped he would at leaft order that the names of fuch as fled to the Bahia might be taken notice of, that the great council of the Dutch Brazil might not remain quite unfatisfied, whither they were fled; which he promifed to do. After fome further compliments, and mutual affurance of friendfhip, they parted for this time.

The 22d they took their leave of the bifhop, and feveral other perfons of note, unto whom they owed any obligations, and laft of all of the governor himfelf, being conducted thither by many perfons of quality and officers; they returned him thanks for the civilities and refpect he had been pleafed to fhew them, wifhing both him and His Portuguese Majesty a long and happy reign, and victory against the Castilians. The governor returned their compliments, and conducted them out of the room, ordering feveral negroes to attend them down the precipice of the hill, upon which the city is built, with chairs; but the envoys choosing rather to go on foot, they were, in the fame chaloop they came in associate the source of the found of music on board their yacht. The Portuguese officers, after having taken their leave, returned to the city, and ours made the best of their way to the Receif, where they arrived fafely not long after.

The letter delivered to them by the governor was as follows :

The Governor's Letter.

"Gilbert de Wit counfellor of your court of juftice, and Dirk Hoogftraten commander-in-chief on the Cape of St. Auftin, Your Lordfhips deputies, whom I received according to their quality and merits, have delivered your letter to me, and propofed fuch other matters as they were empowered to treat with me about. Though I endeavour nothing fo much as to cultivate and maintain in the ftricteft manner, our neighbourly good correfpondency, yet am I conftrained at this time frankly to acknowledge, that it is not in my power to give your lordfhips any more fatisfactory anfwer than this, in hopes that the many proofs you have had of my fincere inclinations, will ferve as a plea with Your Lordfhips, to affure you, that I fhall always be ready in all points depending on my government, to give the fame proofs both of obedience and fidelity to the King my mafter, whofe pleafure is, that the truce fhould be obferved inviolably; and of my fincere intentions, and the efteem I have for Your Lordfhips friendfhip, defiring, nothing more than that you furnifh me with an opportunity of giving real demonstrations of my readinefs to ferve you; whom I recommend to the protection of God Almighty.

"Bahia, Feb. 14th, 1645.

(Signed)

ANTONIO TELLES DE SYLVA." Concerning

Concerning the fix points mentioned in their fecret inftructions, they made the following report to the great council :

" 1. That the Portuguese forces in those parts were generally esteemed to be less or more betwixt three and four thousand men, without the Brazilians and negroes. But that upon the most exact enquiry they could make, they had found them to be not above three thousand, including the Brazilians and negroes, and their garrifons both to the north and fouth, as far as Rio Janeiro. These confisted of five regiments, viz. three of Portuguese, under the Colonels John Darauge, Martin Soares, and N. N. the fourth of Brazilians, under a Brazilian colonel, Antonio Philippo Camarao, and the fifth of negroes, under the command of negro Henricio Dyas. Thefe two laft regiments, amounting both not to above three hundred men, were divided in the garrifons to the north, about Rio Real on our frontiers; they being the fcum and off-cafts of all their territories, and confequently not to be quartered near the capital city, there having of late been fome broils among them in the garrifons, whither officers were difpatched to compose them. The three Portuguese regiments, confisting of about two thousand seven hundred men, kept garrison in St. Salvador, and the circumjacent forts, except two companies, one of which was quartered about Rio Real, the other in the ifland Morro St. Paulo: and about one hundred and fifty more, which were difpofed in the captainfhips of Os Ilheos, Porto Seguro, and Spirito Sancto; fo that the garrifons of St. Salvador and the circumjacent forts confifted of at least two thousand three hundred, each company confifting of one hundred men lefs or more, all chofen men and well cloathed; four companies mounted the guard every night, one at the palace, at each of the two gates one, and the fourth in the water-works without the city.

2. " Of their naval ftrength they gave a very flender account, being more confiderable in number than force, as confifting only in fifty fmall veffels and yachts, not in the leaft fitted for war; neither could they observe the leaft show of preparations tending that way, their aim being only to protect their ships bound to the Portuguese coafts against the infults of the Castilian and Denmark privateers, and the Turkish rovers. It was, as they faid, upon this account, that during our flay there, two flout Portuguese ships fit for war, manned with fix hundred men, and provided with good store of ammunition, arrived in the Bahia, under the command of Salvador Correada-fa, with orders to go directly from thence to Rio de Janeiro, and to fetch all fhips ready laden from thence to Bahia, from whence they were to convoy thefe as well as fuch other veffels as they found ready there, to the coaft of Portugal; for which reafon alfo all the veffels which otherwife ufed to go according to their own conveniency, were ordered to ftay for the faid convoy. That news was brought by the faid two fhips, that the King of Portugal had forbid the building of caravels and other fuch like fmall veffels, inftead of which they were to build thips of better defence against the infults of an enemy at fea. From whence the envoys faid they fuppofed would arife this inconveniency to the Portuguese, that the freights and convoy-money paid for the commodities transported from Portugal to the Portuguese Brazil, and for the fugar transported from thence to Portugal, must increase, and confequently would not be able to fell the last at the fame price the Dutch did, confidering especially that they must be confiderable lofers both in their interest and time, where they were forced to tarry for their convoys, whereas they used formerly to make the best of their way home.

"3. They had observed, that though the inhabitants of the Bahia expected the coming of those ships at their first arrival, yet several vessels arrived there, both from the Portuguese coast and the islands, before the rest.

4. " They

" 4. They concluded the negro-trade to be very inconfiderable there, they having fcarce ever heard it as much as mentioned, but becaufe the price of a good negro-did not at that time amount to above three hundred gilders, they fuppofed them pretty well flocked with them; those which were of late bought there being brought thither from Cape Verde and Arder. They farther reported, that when on Wednefday, being the 8th of February, they entered the Bahia, they met two fhips of good bulk, carrying about twenty guns each, and well manned, going out, which upon enquiry were told them to be bound for Portugal, but could not learn to what harbour there, which, together with fome other reafons, made them fufpect they were intended another way, in which we found ourfelves not deceived, when on the 22d of February, just as they were ready for their departure, they underftood from the Mulat Juliana, and of two monks, that thefe two fhips were fent with men to Angola, for the fecurity of the inhabitants of Mafagao, who, being but fmall in number, were forely afraid to be fet upon by the negroes of the country, and having defired the governor's affiftance, who ordered those ships and the men to go in the night-time, and to endeavour to reach Mafagao unperceived by any, and without committing any hoftilities against the Dutch. Whether and how far this might be true, time would fhew, but they had all the reafon in the world to believe, that it was upon their fcore of concealing this expedition, as well as fome other matters from them, that immediately after their arrival (though they were not informed of it till near the time of their departure) that no Dutch or Germans should appear as much as in the fight of the envoys, much lefs difcourfe with them; which was observed with that ftrictness, that they really imagined there had been no Dutch there; but found afterwards that they had been all (how many they knew not) carried on board the Portuguese vessels, to prevent their keeping any correlpondency with us and our fhip's crew; to which end alfo, fix centinels were placed in two boats lying near our yacht, during the time of our flay here, under pretence of protecting our veffel, but in effect to prevent any body from coming on board us, purfuant to the orders of the governor.

" 5. That the inhabitants of the Bahia and the other Portuguese captainships, had not the least commerce at this time with those of Buenos Ayres. That immediately after the revolution in Portugal, those of Bahia had attempted to go thither, but were treated as enemies by them; fo that it was their opinion, the place would either son, or was already totally ruined for want of commerce; all their livelihood confisting in the traffic from the coast of Brazil thither; which falling away, no filver could be transported thither from Peru; it being not probable that the Spaniards would run the hazard of passing along an enemy's coast, when they had a fafer way to transport their treasures from the West Indies.

" 6. That they could not get the leaft certain information concerning the defigns carried on betwixt fome of the inhabitants of the Bahia and those of the Dutch Brazil against the last; besides which they gave them a general relation of what they had been able to learn, concerning the condition of the city of St. Salvador, its inhabitants, governor, and fome other matters relating to the country thereabouts."

The rumours which in 1640 were noifed about concerning the treacherous defigns of the Portuguese inhabitants against us, being for that time vanished into smoke, the fame was revived, and their defigns began to be discovered in February 1645, viz. That confiding in the promised fuccours from Bahia, they intended to rise in arms against us, looking upon this juncture as the most favourable for their purpose, since Count Maurice with the greatest part of our fleet, and a good number of foldiers, were returned to Holland, from whence no fresh supplies were come of late into Brazil. The great council

75°

council not being ignorant of this, were indefatigable in their care, to leave no ftone unturned to find out the ring-leaders of this rebellion, fo as to charge them effectually with this crime, and find out fufficient caufe for their commitment. They fent out feveral of their officers into the country as fpies, to found the inclinations of the people, and whether they could meet with any one who incited the reft to an infurrection. The like he did on the other fide of the river of St. Francis, and in Kamaron's camp, whither they had fent certain perfons to inveftigate their defigns, and to learn what preparations they made for war, and whether they were intended againft Pernambuko, but were not able to find out any thing, upon which they could make any fure account. Being neverthelefs fenfible that thofe forewarnings were not altogether groundlefs, and knowing the Portuguefe to be of fo haughty a temper (befides the difference in religion) that they would fcarce let any opportunity flip of withdrawing themfelves from the obedience of their conquerors; they writ the 13th of February 1645 the following letter, concerning the defigns of the Portuguefe to the council of Nineteen:

A Letter from the Great Council to the West India Company.

" Moft Noble and Right Honourable,

" During the government of His Excellency Count Maurice, there were already feveral of the inhabitants of this state entered into fecret cabals to rife in mutiny against us, in hopes of affiftance from the Bahia; their bufines was to infinuate into those that were well affected to them, after their good fuccefs in Maranhaon, that our forces being confiderably weakened by the ftrong detachments fent to the garrifons of Angola, St. Thomas, and others, a fair opportunity was offered them, to withdraw themfelves from our obedience, and to enjoy their former liberty under their own King. They were not a little encouraged in their defign, imagining the fame might be carried on without any great difficulty, when they found that of late we had received no supplies either of meat or other provisions, or of foldiers, from Holland, whereby the ftorehouses of the company here being exhausted, the garrisons of the forts were forced to be fupplied from time to time with farinha and fresh meats out of the country; they judged, if they could once be mafters in the field, they must of necessity fall into their hands, as it happened in 1640 to the Spanish garrifons in Portugal, who for the fame reafon were not in a condition to hold out against the Portuguese; being, besides that, fensible that, unless we would too much weaken our garrifons, we had no fufficient number of troops left to appear formidable in the field. These and other fuch like infinuations have been frequently fpread among the Portuguefe, by those who, finding themfelves most uneafy under our government, hoped for a change of their affairs by changing their masters; which, however, wrought no confiderable effect, as long as His Excellency continued in the government, partly becaufe we, being forewarned of their defigns, kept a watchful eye over all their actions, and partly because our sea and land forces being much more confiderable at that time than they are now, they had but little profpect of fucceeding in their enterprife, which therefore they judged most convenient to defer till after His Excellency's departure, which as it was fufficiently known beforehand, fo they were fenfible that thereby our forces both by fea and land must be confiderably weakened, and confequently would furnish them with a fairer opportunity of putting their fo long rejected defign in execution; the more, because that many of the Portuguese who, relying hitherto upon the authority of Count Maurice, as the only means to keep the foldiers in awe, being now put in fear of the executions and exorbitancies

tancies likely to be committed by the covetous officers and rapacious foldiers, would be forced to join with them against us. After the departure of His Excellency for Holland, those cabals have instead of divine things increased every day; they have been very diligent in getting information concerning the ftrength of all our garrifons, with an intent to carry on their defigns before we could be reinforced with fupplies of men and provisions from Holland; to effect which they have, by meffengers fent to Bahia, folicited for fuccours of men and arms, of which, as it feems, they have no fmall hopes. There is great reafon to believe that the journey of Andrew Vidal from the Bahia hither, in August last, undertaken under pretence of taking his leave before his return to Portugal, in order to ferve the King there, was founded upon no other motive than to inform himfelf most narrowly concerning the true state of affairs here, in order to give a verbal account thereof in the Bahia, and afterwards in Portugal; as likewife to found the inclinations of the inhabitants, and to animate fuch as he found well difpofed for his intereft, with hopes of fpeedy fuccours from the Bahia: we having fince received fecret intelligence that he has been prefent at feveral of thefe cabals. But though they were greatly encouraged with these hopes of good fuccess, by reason of the diminution of our forces, and fcarcity of provisions, they were not very forward in venturing upon this enterprize, being fenfible that their defign having taken vent, we made all neceffary preparations against them; befides that many of the Portuguese inhabitants being beyond their expectation well fatisfied with the government of the great council, did rather chufe to live quietly and fecurely, than to engage in fo dangerous an enterprize. So that things remained without any confiderable alteration at prefent; and, as matters ftand now, we are not able to find out fufficient caufe to fatisfy ourfelves whether they proceed in the fame defign. Their chief defign, as we are credibly informed, was laid againft the Receif, which they intended to furprife, upon a certain day appointed for the fale of negroes, when the inhabitants of the country flocking thither in great numbers, they did not doubt but, with the affiftance of our own negroes, who are for the most part papifts, to make themfelves mafters of the place, not questioning but if this fucceeded, the reft would foon be forced to yield. But in this they were prevented by the ftrong guards we took care to post in the Receif on those fair-days. The chief ring-leaders, as they are fpecified to us, are John Fernandes Vieira, and his father-in-law Francifco Beringel, with feveral others, whom we would have committed to prifon, if we could have had more certain information against them; but though we left no stone unturned to find out the truth, yet we could not meet with fufficient motives to induce us either to imprifon them, or to proceed again to the general difarming of the inhabitants, we having received certain intelligence, that fo foon as we fhould attempt it, we must expect no lefs than a general infurrection, which, confidering our own magazines and ftorehoufes were fo ill provided, and no fufficient force could be drawn out of the garri-, fon to fecure the open country, would have drawn after it very ill confequences for our nation, especially those living at some distance from our forts, who thereby, as we had reason to fear, might have been exposed to the danger of being massacred by the Portu-It is evident, from the information given to your lordships in Holland, and guefe. transmitted to us, that the fubjects of the King of Portugal themselves are encouraged and animated against us; wherefore it will be absolutely necessary to be very cautious, and to haften the fupplies we fo often have requested at your hands. Upon the first information we received, that toward the fouth of the Receif the Portuguese intended to land fome men or arms, we fent the 13th of October a yacht, the Enckhuyfen, with another galliot and chaloop, to cruife thereabouts, but they returned after fome time without being able to difcover any fuch thing. The next intelligence we had was, that a fleet

a fleet was equipping in the Bahia, to transport fome forces for the affistance of our rebellious fubjects; to find out the bottom of this defign, we thought we could pitch upon no better expedient than to fend thither Mr. Gilbert de Witt and Dirk Hoogstraten with certain instructions, of which we have inclosed the copy, who fet fail the 25th of the last month. Being further informed that a certain Portuguese captain, with an enfign and three foldiers, have been lately dispatched from the Bahia to our captains to endeavour to ftir up our subjects to rebellion, with affurance of succours from thence: we have employed all necessary means to find them out and get them into our hands. We shall not be wanting in any thing which, according as occasion prefents, may contribute to the prefervation of this state.

" Receif, 13th February 1645."

The 4th, the great council were informed, by letter from Ifaac Rafiere and Captain Blewbeck, written at Parayba, that a rumour was fpread thereabouts that Kamaron, chief commander of the Brazilians in the Bahia, was on his march from Sertao to Siara to join with the Brazilians inhabiting thereabouts, to attack with their united forces the inhabitants of the captainfhip of Rio Grande. Whereupon the council fent orders to Hans Vogel, governor of Seregippo del Rey, to get intelligence and fend them fpeedy word whether Kamaron with his camp were ftill in Rio Real; and if not, whither he had taken his march, or whither he intended to take it. They alfo fent word to the inhabitants of Parayba that they fhould be very diligent in enquiring after the caufe of this rumour, and fend them intelligence accordingly.

The 15th of May they received an anfwer from Hans Vogel, dated the 25th of April at Seregippo del Rey, wherein he told them, that purfuant to their orders he had fent a ferjeant with fome foldiers to Kamaron's head-quarters, about ten leagues from Seregippo del Rey, under pretence of looking for fome deferters; who, after their return, reported that his forces, confifting of two hundred Portuguefe and one thoufand two hundred Brazilians, were ftill in the fame place, bufied for the moft part in cultivating fome plantations, Kamaron himfelf being then in the Bahia, to affift at the folemnity of their Eafter, from whence they conjectured that the rumour concerning his march was only a fiction. But two days after the fame rumour was renewed by two paffengers coming from Rio St. Francifco, and being landed by one John Hoen, a mafter of a veffel near Kindelaria; but upon a more ftrict inquiry made by the council, the faid mafter of the veffel declared, that on the eighth of the fame month, when he left Rio St. Francifco, there was no news of Kamaron's march.

The 30th of May 1645, a letter without a name was delivered to the great council by one Abraham Markado, a Jew, fubfcribed only "Plus ultra." This letter being tranflated out of the Portuguefe the fame night, the contents whereof were, that three unknown perfons gave them notice that a good body of troops were come from Rio Real into Parayba, with an intention to join with a difcontented party there, and to furprife the Dutch forts; with advice to feize upon the perfon of John Fernandes Vieira their chief ring-leader.

The letter is as follows:

A Letter of Intelligence to the Council.

"We ftand amazed you are fo fecure, when it is reported that the Matta of Parayba is full of foldiers, come thither lately from Rio Real, who confifting of a good number vol. xiv. 5 D of

of negroes, mulats, and Portuguefe, with Kamaron at the head of them, began their march in the month of March, expecting now to be joined by other troops, which hitherto were ftopped by the overflowing of the rivers. Their aim is to encourage the inhabitants to take up arms, which done, they expect confiderable fuccours from the Bahia, both by fea and land, wherewith they pretend to block you up in the Receif, intending to fix their camp either at Olinda, or in the Vergea, and quarter the foldiers in the Fregefies thereabouts. They boaft that their forces are already confiderably increafed by those who are indebted to the company, and other vagabonds, and threaten to maffacre all fuch of your fubjects as refufe to join with them. A certain perfon of note and reputation belonging to the fame camp, has given us this information, in order to communicate it to Your Lordships, to be upon your guard, which we do accordingly by thefe prefents. The fame perfon told us, that John Fernandes Vieira was the chief ring-leader of this infurrection, who maintains the rebellious crew in the Matta, as they meet together, till a certain time appointed for their rendezvous, when they are with their joint forces to attack all the Dutch forts and out-guards at once. We were alfo told, that the faid Vieira does not fleep in his houfe, and is always upon his guard; to try which, you have no more to do than to fend fome to take him, with his fervants and factors; which if you could do they would be all amazed, and make an open confeffion, which may be done without the least hazard; for if you mifcarry in the attempt, it will neverthelefs not redound to your difadvantage. We conjure Your Lordships to take care of this poor nation, for fear they fhould be forced to join with the rebels against you. We judge it therefore abfolutely neceffary to undertake the business without delay, with all imaginable fecrecy; for if they find themfelves difcovered, they will begin the game immediately; fo that ftrong guards ought to be put in the outworks, and in the harbours of Kandelaria and the Receif. We advife Your Lordships to oblige the inhabitants forthwith to furrender their arms, to order all the mafters of the fugar-mills, with their planters, to appear in the Receif, especially those of the Fregefies of Vergea, Garaffu, St. Lorenzo, St. Amaro, Moribeca, De Cabo, Pojuka, and Serinham, with affurance that they shall not be molested for any debts there; and when they are come, to detain them till they fee what is further to be done, under pretence of fecuring them against the attempts of the rebels in the country, by which means you will both fecure the government, and oblige many private perfons. The fame method ought to be used with those of Parayba, where they may be detained in the fort, as well as those of Porto Calvo in that place. Thus if you can get the chiefest into your hands, the defign will dwindle away to nothing. We befeech you not to fend away any more foldiers before you have made a full difcovery of the rebellion, and provide your forts with good garrifons; whither we would also have all the Dutch inhabitants to retire for fear of being maffacred. We three being faithful fubjects of Your Lordships, have now fatisfied our confciences in proposing your remedy, which confifts in the taking of Vieira, which must be undertaken with great fecrecy and forefight, he being, as it is faid, continually upon his guard. Your Lordships will be fensible without our advice how much it concerns them, not to divulge to any, from whom they have received this information; and we affure you, that we will not fail to give further intelligence of what we are able to learn by way of letters; and one time or other, we shall make no difficulty to let you know, who these three faithful subjects are. If we had been present, we could have declared no more than we have done in this letter. Your Lordships must take effectual care against their attempts without delay, the approaching feast being the time appointing for the putting it in execution. We have fent you immediate notice after it came to our knowledge: we advise you likewife to feize upon Francisco Beringel, Vieira's 12

father-

father-in-law, and Antonio Kavalkanti; and in fhort, all the chiefeft of the Vergeas, and other places.

(Signed) " A. Verdade. " Plus Ultra."

Hereupon the great council called Paul de Linge, prefident of the council of juftice, Vice-admiral Cornelius Lichthart, and Lieutenant-colonel Garftman, into their affembly, to confult unanimoufly what were beft to be done at this juncture, for the prefervation of the Dutch Brazil; when by this, as well as feveral other letters and intelligences, they were forewarned of the approaching danger; and notwithftanding they were much in doubt, whether they ought to make any certain account upon a letter written without a name; yet confidering all the circumftances of this, as well as feveral other informations, it was judged abfolutely neceffary to provide for the fafety of the Dutch Brazil, againft any attempts of an enemy.

1. By providing all the forts with meal for two months.

2. By giving immediate notice to all commanders of forts to be conftantly upon their guard.

3. To write to John Liftry, chief commander of the Brazilians, to keep his people in readinefs with their arms in the villages, to be ready to march upon the first orders from the council, we being not in a condition to take the field without them.

4. To fend abroad their fpies in all corners, even into the woods, to get intelligence whereabouts the enemy's troops are, and to give timely notice of what they are able to learn to the council.

5. It was agreed, to fummon John Fernandes Vieira, the chief ring-leader of the intended rebellion, and his fecurities, Francifco Beringel, Vieira's father-in-law, and Bernardin Karvalho, unto the Receif, under pretence of making a fecond agreement with him, which he earneftly defired; by which means they fhould fecure his perfon, know the whole bottom of the Portuguefe defign, and confequently be the better able to prevent it. A certain broker, called Koin, who folicited this agreement for Vieira, was prevailed upon to undertake this tafk, which he might do without the leaft fufpicion; but the Whitfuntide holidays put fome ftop to it for the prefent. With the fame care the great council employed all poffible means to get the other perfons of the Vergea, fufpected to have a hand in this rebellious defign, into their hands, under fome pretence or other, they being not likely to be taken by force, becaufe they did not lodge in their mills and houfes in the night-time, and by day were fo ftrictly upon their guard, that they could not poffibly be furprized.

The 31ft of May, Vice-admiral Lichthart, and Henry Haus, a lieutenant, offered to undertake the delivering of John Fernandes Vieira to the council, which they intended to effect, under pretence of giving him a vifit, and going a fifting with him in the lake Lewis Bras Biferra.

The 9th of July the great council received advice by a letter from Mr. Koin, governor of Rio St. Francisco, dated the 1st of June, that Kamaron, with a small body, was passed the river St. Francis; therefore he defired some affistance of men, with suitable ammunition.

The fame was confirmed by another letter, dated the 27th of June, with advice, that as yet no enemy had appeared within fight of the fort.

Frequent intelligence being likewife fent to the council, that in the Matta of St. Lawrence, and fome other diftant places, confiderable numbers of foldiers from the Bahia, of mulats and negroes, were gathering in a body, they fent feveral fmall bodies thither,

under

under command of fuch as were well acquainted with that country, who all unanimoufly reported, that they could meet with no foldiers, mulats, or any other vagabonds thereabouts.

The 12th of June, the director Moucheron fent further advice, that he had been credibly informed, by letters dated the 8th of the fame month, from Rio St. Francifco, that Kamaron and Henrico Dias, with fix companies of Brazilians, mulats, and negroes, were paffed the faid river; and that juft as he was concluding his letter, two inhabitants of the Algoas had given him to underftand, that fome of them had been at their houfes for fome meal; the copies of which letters he fent to the council, who did now not in the leaft queftion, but that their defign was upon the Dutch Brazil, efpecially fince they were forewarned by feveral letters from St. Antonio, that the inhabitants thereabouts feemed to prepare for a revolt.

The council finding their project of taking Vieira by craft, not to fucceed, because he and the fecurities of his father-in-law, Francisco Beringel, and Bernardin Karvalho, could not be cajoled into the Receif, under pretence of renewing their former contract. and looking upon him as the chief ring-leader of this revolt, they ordered Joachim Denniger, a lieutenant, with a good number of foldiers, to the mill and houfe of the faid John Fernandes Vieira, to bring his perfon from thence to the Receif. Accordingly Denniger advanced with his foldiers towards the evening near the mills, which he furrounded, and about midnight unexpectedly entered both the houfe and mills, making a most strict fearch throughout all the rooms and corners, but to no purpope. In the morning he withdrew at fome diffance, but returned the next night, when, after having made another fearch, but in vain, he was informed by one of his Turkish flaves, and fome negroes, that neither Vieira, nor his father-in-law Beringel, had flept in their houfes thefe last three weeks; that fometimes they came thither on horfeback, but after a very fhort ftay went their ways again. Denniger likewife fearched the houfes of Antonio Kavalkanti and Antonio Biferra, but to as little purpofe as those of the former, being informed by their negroes, that they had abfconded for fome weeks before.

In the mean-while, the council fent divers parties abroad, under the command of Hans Catner, Slodinifki, and Cunraed Hilt, all which, after their return, agreed in this, that there were no enemies there as yet, effectially not in the Matta, where they met with nobody but those that were employed in manuring the grounds.

The great council finding themfelves altogether difappointed in their hopes of taking Vieira, refolved to fecure, immediately, the perfons of Francisco Beringel, Vieira's fatherin-law, Bernardin Karvalho, and his brother Sebastian Karvalho, Lewis Bas, Amaro Lopez, and John Peffoa, being perfons fuspected to have a hand in the confpiracy, inhabiting the Vergea. In the more distant provinces were ordered to be feized,

In St. Amaro, Antonio de Bulhous.

In St. Antonio, Amador d'Arouja; Pedro Marinho; Antonio del Rafto.

In Pojuka, Korneo de Morais; Father Frey Lewis; and Francisco Dias del Gado.

In Serinham, John Albuquerq, fon-in-law of Pero Lopez de Vera.

In Porto Calvo, Rodrigues de Barras Pimentel.

In Iguaraka, John Pimenta.

In Itamarika, Father Lawrence d'Alkunha.

And in Rio Grande, John Leftan Navarro.

But it being most of all to be feared that the inhabitants of Parayba, who were much indebted, would revolt before all the rest, Mr. Paul de Linge was sent thither immediately in the quality of director, with full power to act both in that and the captainship of Rio Grande, as he should find it most expedient for the company, with ex-

prefs

prefs orders to prefs one hundred men out of the fhips, with proportionable provisions, immediately after his arrival there, which were to be difposed in the fort of St. Margaret, both for its defence, and to keep the inhabitants in due obedience.

And, confidering that the fcarcity of provisions was one of the main obstacles to be furmounted on our fide, which, as the cafe then stood, would more and more increase, unless we could remain masters of the field, from whence we drew most of our provifions, and to over-awe the discontented inhabitants, it was judged requisite to form a small camp near St. Lawrence; and, accordingly, the two lieutenants Huykquessot and Hamel, were ordered thither with thirty-five men each, the first from Iguaraka, the last from Moribeca, as likewise Captain Wiltschut, with fifty men more from the Receif; John Listry, commander-in-chief of the Brazilians, was likewise ordered to join with them with all possible speed, three hundred Brazilians under their own commanders.

The fame day, being the 12th, after a view was taken of the fortifications of Moribeca town, the fame were ordered to be repaired; and news being brought, that John Fernandes Vieira had been feen in his mill the fame night, the council endeavoured, with all poflible care, to have fecured his perfon, but in vain; it being certain, that (according to the depofitions made by his fleward of the mill, called St. John, before the public notary Indiik, in the Receif, 21ft January 1647), near fix months before the breaking out of this infurrection, he had never flept one night in his houfe : and whenever he happened to be there in the day-time, he remained for the moft part in a turret on the top of the houfe, from whence he could have a profpect at a great diffance; if his bufinefs called him below, he put fomebody elfe there to keep the watch; who, if they faw but two or three perfons come that way, gave immediate notice thereof to him; and if any Dutch in a body were difcovered, he retired inftantly into the adjacent woods. He had likewife placed fome negroes at a certain diffance from the houfe, who were to give notice of the approach of any unknown perfons that way.

The 13th, Sebaftian Karvalho, and Antonio de Bulhous, were brought in prifoners to the Receif, the reft, who were fenfible of their guilt, having efcaped their hands; the first being examined the fame night by the affestion of the court of justice, Mr. Walbeek, concerning the intended confpiracy, gave him the following account by word of mouth:—

1

His Confession.

"That he was one of thofe three who, a few days ago, had, by way of letter, given an account of an intended confpiracy in the Vergea, to the great council, the ring-leader thereof being John Fernandes Vieira, who, with the reft of his Portuguefe accomplices, relied upon the fuccours promifed them from the Bahia; with what he had judged moft proper for obviating the fame. That the whole defign of this confpiracy was laid open to him by means of a certain writing, in form of an affociation, which was delivered to him by a Portuguefe fervant of the faid Vieira, together with a letter, in which he defired him to fubfcribe the fame, there being no more than two who had figned it at that time, viz. John Fernandes Vieira, and Lewis da Cofta Sepulpeda. The contents of this affociation were, that they promifed to rife in arms againft this ftate, and to facrifice their lives and eftates for the recovery of the Dutch Brazil under the obedience of the King of Portugal. That indeed he had figned the faid affociation, but had given immediate notice thereof to Fernando Vale and a third perfon; and that he, together with Mr. Vale, had caufed the before-mentioned letter, directed to the great council,

to be delivered to Merkado the phyfician. That the infurrection was intended to extend all over Dutch Brazil, but that the inhabitants of the captainfhip of Parayba were moft to be feared, as being moft indebted, and, confequently, bearing an ill-will to our government. That their main defign was to furprife one of our forts, on or near the fea-fide, whereby they might fecure themfelves a place to receive fuccours from the Bahia; from whence they expected to be affifted with two men of war, and three or four frigates. That he had figned this affociation barely out of fear of Vieira, who had threatened those that fhould refuse with no lefs than death, and had caufed feveral to be murdered upon that account."

His confession agreeing in all points with what Fernando Vale had deposed before, and being all that time forely afflicted with the gravel, he was dispensed with from any further examination.

The council being by this deposition of Karvalho fully convinced of the treachery of Vieira and his adherents, it was refolved to attempt once more the taking of the faid Vieira, if perhaps he might as yet lurk fomewhere or other near the Receif, and of his factor Mor Manuel de Soufa, engaged in the fame defign ; as likewife of Antonio Bezerra and Amaro Lopez, both inhabitants of the Vergea, but in vain. Those who were fent upon that errand bringing back no other fatisfaction, than that they were not to be met with thereabouts; and that befides that, Antonio and Manuel Kavalkanti. Antonio Bezerra, John Peffo, and Cofmo de Krafto, were the fame day retired out of the Vergea to the Matta. The fame day Captain Wiltfchut was ordered to feize the public notary, Cafpar Pereira, dwelling in St. Lawrence, who was fuppofed to have drawn the before-mentioned affociation; and it was refolved to fend a pardon to Antonio Kavalkanti and John Pais Kaeral, who having a great family at home, might thereby be prevailed upon to quit the party of the rebels, whereby we fhould both weaken that of the enemy, and get a further infight into their defigns. Antonio de Bulhous being examined at the fame time, ingenuoufly confeffed that he had not the leaft knowledge of the confpiracy; Sebaftian Karvalho being, notwithstanding his former confession, detained prifoner upon fufpicion till the 4th of August, was, at his request, difmiffed by the great council, after having given fufficient proof that he was one of the three who wrote the letter concerning the intended confpiracy to the council.

The 14th of June, orders were given to all the inhabitants of the Receif, and those living upon the back of the river, to furround their dwelling-places with pallifadoes, under forfeiture of two hundred gilders. And to render the companies the more complete, and to expose our men to as little danger as might be of being furprifed by the enemy, all the fafeguards were commanded to be withdrawn by Mr. Haus, near the Receif, and in Serinham by Captain Fallo, who was likewife ordered to remove the garrifon of Huna to another place of more ftrength. The better to fupply the fcarcity of provisions in the forts, which, for want thereof, might be in danger of falling into the enemy's hands, orders were difpatched to the chief commanders, to feize upon what quantity of farinha (or meal) they flood in need of for the use of their respective garrifons among the inhabitants of the country, which they were to be paid for by the commiffaries of the company. It was also thought neceffary, that for the greater fecurity of Maurice's Town, the ditches of the fort Ernestus should be made larger, as likewife the Quinqueregular fort, which was put in execution by Haus, as Vice-admiral Lichthart took care to have two fpy-fhips posted, one betwixt the Quinqueangular fort and the fort Bruin, the other beyond Baretta, to prevent any furprife on that fide at low-tide; it was also refolved not to let any ships or boats go out of the Receif without a pafs

a pais from the great council. The major of the city militia was ordered to keep the reft of his officers with the foldiery in readiness against the 17th, to pais the review, the fame day being also appointed to the garrison for that purpose; feveral new commanders were also chosen for the militia, inftead of those that were ready to return into Holland. The fame day Paul Linge fet out on his journey into Parayba, being furnished with fifteen hundred foldiers for necessary occasions: and Bernardino Karvalho, who had absconded for fome time, had, at his request, leave granted him to come to the Receif to answer for himself.

The 15th, John Peffoa, mafter of the fugar-mill Pantelio, one of those that were ordered to be fecured, defired leave also, in a letter to the council, to appear before them, his flight being occasioned not by his guilt, but only fear, which was granted him, as well as the request of Father Lawrence Alkunha, upon the fame account.

On the 16th, early in the morning, we received fecret intelligence, that Andrew Vidal, at the head of one thoufand Portuguefe, and Kamaron with d'Indeos Rondelas, and Henry Dias, with a body of armed negroes, had pofted themfelves above St. Anthony, near the fugar-mill Topekura. The fame day John Karnero de Maris, and Francifco Dias del Gado, both mafters of fugar-mills in the diftrict of Pojuka, ordered to be apprehended, were brought prifoners to the Receif, and Amador da Rouje, and Pero Marinha Falkao, inhabitants of St. Anthony, who had hitherto abfconded, did afk permiffion to come to the Receif to anfwer for themfelves, which was eafily granted.

It was then taken into deliberation by the great council, whether, according to the laft intelligences received of the enemy's defigns, it were not most expedient to remove our fmall camp from St. Lawrence to Moribeca, which, after fome debates, was agreed upon accordingly, thereby to fecure the passage of the river Sangea, and confequently to remain masters of the country as far as the Cape of St. Austin, from whence both the camp and the Receif might conveniently be supplied, both with farinha and cattle; whereas on the contrary, if the enemy should be posses of it, he might (as had been done in the former war) cut off all supplies coming from the fourth to the Receif.

Purfuant to this refolution, orders were fent to Captain Wiltfchut to march immediately to Moribeca, to expect there the coming of the Brazilians, and fome further fuccours: in the meanwhile, to poft himfelf in the church, and to fortify the fame againft any fudden attack: and the aldermen of Maurice's Town were ordered to buy up the neceffary provifions, both of farinha and cattle, about Moribeca, for their ufe. A proclamation was alfo iffued, commanding all the inhabitants of Serinham, Pojuka, St. Antonio, and Moribeca, without any exception, to repair well armed, both horfe and foot, with all poffible fpeed to St. Antonio, there to lift themfelves for the defence of the open country, under the command of Colonel Gafpar Vander Ley, and Lieutenant-colonel John Heck: thofe that were not able to maintain themfelves at their own charge, being to receive their provifion from the company, like other foldiers: the faid colonel and lieutenant-colonel offering at the fame time, to furnifh fifteen hundred Alqueras or meafures of farinha, for the ufe of our garrifons, for ready money.

The fame day the great council received a letter from Antonio Kavalkanti (unto whom they had lately fent his pardon), in which he protefted, that neither he nor the reft of the inhabitants of the Vergea were concerned in any cabals againft the flate, their flight being occafioned only by fear of being imprifoned upon fufpicion, raifed againft against them by their enemies. The answer of the council was to this effect, "That if he knew himself innocent, he should return to his mill, this being the only means to recover his former reputation."

The great council having great reafon to fulpect, that Kamaron would endeavour to bring the Brazilians under their jurifdiction over to his party, refolved, in order to fecure them in their intereft, to treat with Liftry, their commander-in-chief, to perfuade them, to fend their wives and children into the Isle of Tamarika, under pretence of fecuring them against any attempts of the enemy, to which they might in all probability be exposed in the open villages; but in effect, to keep them as pledges of their fidelity.

The fame day the council received fecret intelligence from Antonio d'Olivera, that the fuccours fent to the rebels from the Bahia, confifted in a confiderable number of Portuguefe, under the command of the brother of Kavalkanti; of four hundred Brazilians, under the command of Kamaron; three hundred Indeos Rondelas from Sertoa; and fifty negroes, under command of Henry Dias.

On the fame 16th of June, Mr. Sloteniski, ensign of the guards, was sent abroad to be at the campaign, with eleven fire-locks, and twelve Brazilians, who, returning the 24th of June, gave the following account to the great council: That he took his way from the Receif directly to St. Lawrence, and from thence directly to the village of St. Michael; where being joined by his Brazilians, he marched through St. Francifco to Kafura, from thence to Geyta, and fo further through the Matta to St. Sebaftian, where all the inhabitants had left their houfes. At St.Sebastian he passed the river Topikura, and coming to John Fernandes Vieira's park, met there with good able horfes. The negroes told him, they had orders from their mafter to fly from before the Dutch, but to furnish the Portuguese with what they defired. From thence he marched to Antonio, and in his way thither did light upon a houfe belonging likewife to John Fernandes Vieira, where he found about fifty or fixty fheep, with good ftore of poultry, intended for the ufe of the fick belonging to those rebels, or those come to their affistance from the Bahia. They fore-warned him not to advance too far, he being likely to meet with fome troops in the park belonging to the fathers of St. Bento; but coming thither, found both the Portuguefe and negroes fled. From thence he marched to a houfe belonging to Michael Fernandes, who above three months before had been ordered by John Fernandes Vieira, to provide a fufficient quantity of farinha for the use of the fuccours expected from the Bahia; which he lately had transported from thence to Pedro de Alkunha, where was the rendezvous of two companies of the rebellious inhabitants, where the faid Michael expected a good flore of cattle, bought by Vieira for their ufe, according to the information of a negro, brought by Sloteniski to the Receif. Near the park of Don Pedro d'Alkunha, he met with the fame mulat who had shot Captain Waldeck, and with two Hollanders who had committed murder, and were never pardoned. John Fernandes Vieira had promiled to be with them against Midfummer-day. From thence Sloteniski marched directly to Una, and fo further to St. Luce, but met with nobody there except one monk, and fo returned to the Receif.

On the 17th of June it was refolved by the great council, with the confent of the council of juffice, to iffue a proclamation for a general pardon, except fome few of the ring-leaders of the rebellion. The proclamation was as follows:

A Pro-

A Proclamation for a general Pardon.

" The great council of Brazil makes known to every body whom it may concern, that they being fenfible, to their grief, how many of their fubjects, having been milled by fome of the ring-leaders of the rebellion, have left their mills, wives and children for fear, as has been infinuated to them, of being difturbed, plundered, and killed by our ftraggling parties: we being willing to provide against it, and to contribute as much as in us lies, to the profperity of our fubjects, and their eftates, have thought fit to publish their intention, to be, to defend and protect the inhabitants of the open country, against all evil-intentioned perfons to the utmost of their power. And to reduce those who have left their habitations, to obedience, and prevent their utter destruction, we promife our pardon to all fuch as shall within five days after fight of this our proclamation, make their perfonal appearance in the Receif, not excepting those who have been actually engaged in the faid rebellion (unless they are among the number of the chief ring-leaders), provided they leave the rebellious party, and return to their former obedience; and that they shall enjoy the quiet possession of their mills and lands as before, under our protection; under condition however, that they fhall be obliged to take a new oath of allegiance to the flate. Those on the contrary, who shall perfift in their rebellion, or shall affift the rebels under what pretence foever, are hereby declared enemies of the ftate, who have forfeited their lives and eftates, whofe perfons and eftates fhall be liable to be profecuted with fire and fword," &c.

This proclamation being immediately translated into the Portuguese tongue, was fent the next morning to St. Antonio and the Vergea to be published there; feveral copies were also distributed among the friars, in order to publish them from the pulpits, and caufe them to be affixed to the church-doors.

The 18th, good flore of provision and ammunition was fent to the fort Keulen and Rio Grande, and the garrifons of both thefe places forewarned to keep upon their guard. At the fame time the proclamation of pardon was fent thither to be published; and Antonio Parayba, chief of the Brazilians in those parts, was fummoned to keep his Brazilians in readiness with their arms, whenever they should be commanded to give proofs of their fidelity to the company.

The 19th of June, two inhabitants of Porto Calvo, that were landed but the fame morning in a fmall boat on the Receif, brought news to the great council, that Kamaron, at the head of the Brazilians, and Henry Dias, with his armed negroes, confifting in feven companies, had posted themselves in the Alegoas, near the fugar-mill Velho; that their number was increased fince to four or five thousand men, by the conjunction of those who were passed the river St. Francisco through the Matta, and that they had begun to commit open holtilities; fo that now the council had not the least reafon to doubt any further of the defign of the Portuguese. The commander of Porto Calvo fent word much to the fame purpofe, and that he prepared for a vigorous defence. The first effects of this insurrection broke out in the district of Pojuka, and confidering that our whole force there confifted only in thirty men, under Jacob Flemming, a lieutenant, orders were fent him to retreat to St. Antonio, there to defend themfelves with their joint forces. The first beginning of hostilities was made by those of the Pojuka, by feizing upon two boats, all the paffengers of which they took prifoners, and flew them afterwards, except one feaman, who had the good fortune to efcape. This done, the inhabitants both of the village and the open country chofe for their head Tabatinga Amador d'Arravio, whereby they cut off our communication with the Cape Auftin by land, ςE

land, and all about to the fouth, befides that, the fort on the faid cape could not, but with great difficulty, be fupplied with water from the river.

The 20th of June, a Brazilian arrived very early in the morning in the Receif; his errand to the council was, that he being fent by John Blaar, from Porto Calvo, with letters to the great council, was fet upon by those of Pojuka, near Kamboa, who took from him the faid letters, and killed his companion. For the reft he told them, that Kamaron was posted in the district of Porto Calvo, and that Captain John Blaar was in the fort. A council being called, to confider of the beft means to fecure the Dutch Brazil against any attempts of the enemy, the first thing that fell under debate was, whether, according to the general advice of those of the inhabitants, who wished well to our government, it were not most expedient for our defence, to form a camp to make head against the enemy in the field; who, if once master of the open country, would force the inhabitants to join with him, and cut off our provisions, without which we could not fubfift long. The next thing to be taken into confideration was, where to find forces for this camp, the garrifons being fo weakly manned, as not to be able to fpare any, and the body under Captain Wiltfchut confifting only of one hundred and twenty men, befides the three hundred Brazilians, to be joined with him. Confidering, therefore, that the whole force in the Alegoas confifted only of two companies, under the command of Mucheron, a number not any ways proportionable to the extent of fo large a tract of ground; it was judged most convenient to make a virtue of neceffity, and to draw them from thence to the Receif, as indeed they had been ordered before. But their way by land being cut off by the rebels of Pojuka, a veffel, which lay ready to go out a cruifing, was ordered to Porto Francisco, with others to Mucheron, to embark for hwith those forces aboard her, without having any regard to the baggage; but the reft, which could not be put aboard the veffel, flould be fent by land to Rio Francisco, to reinforce Captain Koin, for the better defence of that place. Captain Fallo was likewife ordered to march with the garrifon of Serinham to St. Antonio, it being not likely that the troops in Serinham fhould be able to make head there, after the coming of Kamaron into Porto Calvo, it being an inland country.

The fame day, forty new-lifted foldiers were fent to Tamarika, under command of Captain Peter Seuliin, mafter of the fugar-mill Harlem; becaufe this ifland was of the greateft confequence to us; and the garrifons of the fort Orange, and the town of Schoppe, confifting each of one company, were very weak, and the armed inhabitants did not amount to above one company more.

The fame day Mr. Bas and Mr. Van de Voerde, counfellors of the court of juffice, were ordered to examine Gafper Pereira, the public notary, concerning his drawing of the inftrument of affociation; as likewife John Kariero de Maris, Francisco Dias Delgado, masters of fugar-mills, in the district of Pojuka, and Sebastian Karvalho, concerning what they knew of the intended confpiracy.

Karvalho declared a fecond time, at the houfe of Lieutenant-colonel Haus, that fome days ago (he could not remember exactly which), a certain Portuguefe fervant, whom he knew not, did come to him in the name of John Fernandes Vieira, with a letter, in which the faid Vieira defired him to fign the inclofed writing, drawn in form of an affociation, to take up arms againft the government, as foon as they fhould receive any fuccours from the Bahia; which at that time was fubfcribed only by John Fernandes Vieira and Lewis da Colta Sepulpeda; but, as he fuppofed, was to be carried to moft of the inhabitants. He further declared, that he refufed to fign the faid writing upon the bare letter of John Fernandes Vieira, and the hand-writing being unknown

known to him, he fent both the letter and inftrument of affociation back by the fame lad that brought it, with his anfwer by way of mouth, that he could not fubfcribe it. Having more maturely weighed the matter, he fent the fame evening to his friend, Fernando Vale, to defire him to give him a meeting the next morning upon the hills of Garapes; which being done accordingly, it was agreed among them to give notice of this confpiracy to the great council, in a letter without a name. This letter, with the fubfcription of *Plus ultra*, was writ by Vale, and about ten days after given him to read in a baker's houfe in the Pont-ftreet, and afterwards given to Abraham Merkado, the phyfician, who delivered it to the great council.

The fame day, the 20th of June, the great council received a letter from Mr. Ley and Hoek, dated at St. Antonio, importing, that the whole Fregefie had taken up arms, and made fixteen or eighteen Dutch inhabitants prifoners; that they had fortified the church against those of Pojuka, whom they did not question to force from thence, provided they received any fuccours from the Receif. The council having taken the whole matter into ferious deliberation, and confidering with themfelves, that, as the cafe then stood, they had no great reason to fear any rebellion in the north, in Parayba, and Rio Grande, as long as our fleet remained near the Red Land, and judging it highly neceffary to bring the rebels in Pojuka to reason, and by their punishment to deter the reit from attempting the like, they ordered Lieutenant-colonel Haus, with a detachment of a hundred men, to march the next morning to Moribeca, there to join with Captain Wiltfchut and the Brazilians, and fo continue their march to St. Antonio; from whence they were, with their joint forces, to go directly against the rebels of Pojuka, to reduce them to obedience; it being otherwife to be feared that they would cut off all communication betwixt the Receif and the garrifons to the fouth. This expedition proved to fuccefsful, that the rebels were put to flight, and Lieutenantcolonel Haus made himfelf mafter both of the town and convent, forcing them to quit all the paffes thereabouts; and forty prifoners were releafed, whom they had loaded with irons in the faid monastery. But having received intelligence of the approach of Kamaron with his whole body against him, he defired further fuccours from the great council to keep the field; but the garrifon of the Receif being too much weakened already, they could fend him no other reinforcement till the expected fuccours fhould arrive from Holland.

The 21ft, it was refolved by the great council, to proclaim a general faft all over Dutch Brazil, to be kept the 28th of June, to return thanks to God Almighty for the great mercy flewn to them on feveral occasions, but especially of late, in the timely difcovery of the treacherous defigns of their enemies, who intended to have furprifed them when they were least aware of them.

The defign of this confpiracy was laid thus by the Portuguefe : they intended, in the Whitfuntide holidays, to make folemn rejoicings, with feafting, tournaments, and fuch like, on occafion of feveral weddings appointed for that purpofe, unto which were to be invited all the chief men of Dutch Brazil, both civil and military; whom, after they were flufhed with wine, they intended to murder, in imitation of the Sicilian vefpers, or the noted Parifian wedding; not queftioning but that, when the heads of the Dutch Brazil were cut off, the reft, when attacked at once in divers places, would fall an eafy prey into their hands. But being prevented in this bloody defign for that time, Midfummer-day was pitched upon, as moft proper for the execution of it, when the fhips were departed out of the harbour of the Receif. For the Portuguefe were not ignorant, that we, having received no frefh fupplies, effecially of gunpowder, for a confiderable time, out of Holland, our magazines were but very indifferently fupplied,

plied, both with ammunition and provifions; and that confequently we muft foon be reduced to great extremity, if they were mafters of the field: they knew alfo, that all our fhips, except two, were ready to fail with the first fair wind, being already fallen down to the Red Land; thus being fensible of our weakness, the Portuguese proposed to themfelves no lefs than the conquest of the whole Dutch Brazil at one stroke. But the whole defign being discovered before Midfummer-day, it vanished into stroke, both fides betaking themselves to decide the matter by arms.

The Portuguese pretended not fo much the allegiance due to their King, as liberty of confcience; notwithstanding which, we have all the reason in the world to imagine, that this infurrection was undertaken not only with the knowledge, but alfo at the inftigation of the court of Portugal, and of those of the Bahia; it being very improbable that Kamaron, Henry Dias, and the reft of the ring-leaders, should, without the approbation of the King of Portugal, have attempted to attack us by open force. Befides this, Mucheron declares to have read, in a Portuguese commission, these words : "This revolt and war, undertaken for the honour of God, the propagating of the Roman Catholic faith, for the fervice of the King, and common liberty." He further adds, that he has heard feveral Portuguese fay, that if they miscarried in their defign of chafing us out of Brazil, to deftroy all with fire and fword, thereby to bereave us of all future profpect of receiving any benefit from thole lands; which done, they would retire with their wives and children to the Bahia, or fettle in fome more remote place, where they might be fecure against any attempts of the Dutch. There have indeed been fome who, confidering the unfettled eftate of the King of Portugal, and the odd fancy of his reign, have thought it very improbable he fhould involve himfelf in a war with us, or have given his confent to this infinuation; but the event has fufficiently contradicted that opinion.

The 22d of June a letter was delivered to the great council, figned by John Fernandes Vieira, Antonio Kavalkanti, John Pefcoa, Manuel Kavalkanti, Antonio Bezerra, and Cofmo de Crafto Pafos, in which they complained, that they being a confiderable time ago accufed by the Jews of a treacherous defign againft the government, had been great fufferers upon that fcore; that now they being informed by the fame Jews that they were in danger of lofing all their mills and lands, to be given to certain Hollanders, who were fent for for that purpofe, they defired that the time of five days appointed in the laft pardon might be prolonged, as being too flort for a bufinefs of fuch moment, and that the faid pardon might be granted without exception; which they refufing to grant, they did hereby proteft before God and all the Roman Catholic Princes, that they thought themfelves innocent, and not in the leaft guilty of all those miferies which might enfue from this refufal hereafter.

The 23d, in the morning, the council was affembled to confider of the faid letter; where, after feveral harangues upon the prefent flate of our affairs, and the enemy's defign againft us, they were divided in their opinions, fome being for granting a general pardon, without the leaft exception, as the cafe flood with us at prefent, when we were deflitute of fufficient provifion, ammunition, and men; others maintained, that a letter which contained fo many notorious untruths deferved not the leaft anfwer; others were of another opinion. Whilft they were thus debating the matter, letters were brought to the council, written by Lieutenant-colonel Haus, from St. Antonio, that he was ready to attack the rebels of Pojuka the next day, not without hopes of good fuccefs, fo that the council, confidering of what moment the event of this action was to their affairs, refolved to adjourn the faid debate till the next day, when they hoped to know the iffue of the whole enterprize. The 28th of June Mucheron arrived with his two companies in the Receif, from the Alegoas, where it was refolved to difpofe his own company in Quinqueregular fort, of which, as a place of great confequence, he was made commander-in-chief; the other of Captain William Lambert was put in the fort Erneftus.

By letters from Paul Linge, governor of Parayba, dated the 25th of June, we received advice that the inhabitants thereabouts offered to give him fresh affurance of their fidelity, by taking a new oath of allegiance, and that he did not observe the least motion towards an infurrection.

Jacob Daffine, mafter of the fugar-mill Supapema, who had been abroad with a good party, made his report to the council, that he had been at feveral fugar-mills, where he had met with about two hundred of the enemy's troops divided into divers fmall bodies, composed of Portuguese, mulats, and negroes, under the command of Amador de Araouje, Antonio de Crasto, one Taborda, and Henry Dias.

The 29th of June, by fpecial commission from the council, Balthafar Vander Voerden examined Antonio d'Oliveira, concerning the defign of the Portuguese formed against our government. He declared, that about the beginning of this prefent June, being then at the house of Sebastian de Karvalho, together with Francisco d'Oliveira, Bernardin Karvalho, and the before-mentioned Sebaftian de Karvello, a certain Portuguese very well known to them all, delivered to him a letter, directed to all the perfons there prefent, with another piece of writing unfealed, which he began to read; but finding the contents to be, that the under-written perfons promifed to be, and declare themfelves faithful fubjects of the King of Portugal, and that John Fernandes Vieira, Francisco Beringel, Antonio de Sylva, and several more, whofe names he would not look upon, had figned the fame, he returned the faid writing, and refufed to fubfcribe the fame, telling his fon at the fame time, "You ought rather to fuffer your hand to be cut off, than fign this paper ;" and fo went his way immediately, not any one of all there prefent having fubfcribed their names at that time : he protested he knew not the hand-writing. After a more ferious confideration, he thought it requisite to make a discovery of it, which he did accordingly within two days after to Matthew Reex, defiring him to give an account of it to the great council; he declared further, that the faid writing was figned by above one hundred of the inhabitants.

The 30th of June, one Digos Lopes Leyte, who was not long ago taken prifoner by the Brazilians, was examined by Mr. Bulleftraet, Dortmont, and fome other military officers. His confeffion was, that at the first beginning of the defign of the Portuguefe against this state, they had fent a letter to the governor of the Bahia, Antonio Telles de Sylva, to crave affistance from him, which if he refused, they would feek for aid in Spain; and if they did not succeed there, they would rather surrender themselves to the Turks, than endure any longer the ill-treatment they met with from the Hollanders. That nevertheles he had heard many dire imprecations made against John Fernandes Vieira; that he deferved no less than the gallows, he having raifed this rebellion for no other end, than thereby to free himself from the vast debts he owed to the company.

The fame day it was agreed to fend abroad a party of twelve foldiers and eight Brazilians, to fetch a good quantity of farinha from St. Lawrence, who were put to the rout near that place, fo that very few escaped. At the fame time the council received the unwelcome news, that fome of the inhabitants of Iguarafu had taken up arms against them.

In the beginning of July it was refolved to draw the fortifications of Maurice's Town into a narrower compass, and to add a new line with a breaft-work. This tafk

was performed by the negroes belonging to the inhabitants of Maurice's Town and the Receif, under the conduct of Vice-Admiral Lichthart, who took care to have the fame perfected, according to the model drawn by the engineer.

The fame day advice was brought that John Lawrence Frances and John Dias Leyte, inhabitants of Iguarafu, made it their bufinefs to incite the inhabitants to an infurrection. Captain Sluyter fent alfo word from Tamarika, that about eighty men, and one hundred and ten women and children, all Brazilians of the villages of St. Michael and Naffau, were come into that ifland for fhelter, and that the Brazilians of Otta intended to do the like. The magiftrates and chief Portuguefe of Goyana, gave the council frefh affurances of their fidelity, provided they might, in cafe of neceffity, be allowed to retire into the faid ifland, which was granted, and thanks given them for their loyalty. The magiftrates of Iguarafu advifed, that Vieira had caufed a declaration to be affixed in the fugar-mills of Gonfalvo Novo de Lira, which they had ordered to be torn down, and fent a copy of it to the council, affuring them, that they would take all poffible care to keep the inhabitants thereabouts under obedience, though they found fome of them much inclined to revolt.

At the fame time Fernandes Vale was examined by Mr. Vander Voerde and Mr. Bas; he declared, that having received a letter from Sebaftian de Karvalho, to meet him the next morning upon the hills Garapes, becaufe he had fomething to communicate to him, concerning no lefs than their eftates, lives, and honour; he, without mentioning any thing of it to his wife or brother, went thither on horfeback, accompanied only by a boy; notwithstanding he happened at that time to be afflicted with the gravel; there he met Sebaftian Karvalho, with one boy only, who told him, that he having received a letter, with another writing, containing a project of an infurrection to be undertaken against the government, he thought it absolutely neceffary to give notice thereof to the great council; and that he defired him to write a letter accordingly to the council; he being pretty well verfed in the Dutch tongue. That Vale afked him, whether any body befides himfelf knew of the matter; unto which he answered, that his brother Bernardin did; whofe opinion was likewife to difclofe it to the council; hereupon they returning each to their respective homes, Vale writ a letter in Portuguese, purfuant to the inftructions he had received from Karvalho, for whom the faid letter was left to perufe in a baker's houfe, on a public fair-day for the fale of negroes; after which he had fent the faid letter inclosed in another, to Dr. Merkado, defiring him to fee the fame carefully difpatched to the great council, without mentioning the contents thereof.

The great council receiving frequent intelligence that the Portuguese from the Bahia intended to fend a fleet to the affistance of the rebels, it was resolved to fend orders to the four ships, the Amsterdam, the Blackmore, the North Holland, and Groningen, then at anchor near the Red Land, in order to their return to Holland, to return forthwith to the Receif, the government standing in great need of their affistance, to prevent the conjunction of the forces from the Bahia with the rebels. They received also letters from Lieutenant-colonel Haus, dated at Pojuka the 26th of June, affuring them that he had granted passes to above two hundred perfons that were returned to their duty; that two or three of the ring-leaders, excepted in the lass pardon, fued for the fame favour, and that he had caused one Francko Godinho, one of the chief of the rebels, taken by his people, to be hanged on the gallows he had erected himfelf; that Amador d'Araouje being gone from thence with a hundred and fifty men to the Vergea, to join with Vieira, he expected their orders whether he should follow him, he looking upon it as a feint to draw him from thence. He further told them, that with the

766

Brazilians

Brazilians and their wives and children, he was above five hundred ftrong; and that unlefs they were foon fupplied with provisions from the Receif, they should confume all the cattle thereabouts.

The great council fent an anfwer the fame night to Lieutenant-colonel Haus, requiring him to grant free pardon to all who fhould defire it, not excepting the ring-leaders themfelves, thereby to weaken Amador d'Araouje and his party. That with what forces he could fpare in Pojuka (after fufficient provision made for the defence of the garrifons, according to their own difcretion), he fhould march to the Receif, in order to attack Viera, where they need not fear but to be able to fubfift upon what the faid Vieira had laid up for the ufe of the expected fuccours of the Bahia, and the cattle belonging to the rebels.

But whilft Lieutenant-colonel Haus was employed in fecuring Pojuka againft their attempts, those of the Vergea ftrengthened themfelves with all poffible diligence; to further which, John Fernandes Viera and Antonio Kavalkanti, who ftyled themfelves the heads of this war, did not only affix their declarations round about Maurice's Town, and in Iguarafu, inciting the inhabitants to rebellion, by promifing them confiderable fuccours from the Bahia, but their parties alfo, which they fent frequently abroad, forced those of the open country to take up arms, killing fuch as refused. The fame was practifed by Amador d'Araouje in Pojuca; fo that, what with provisions, what with threats and force, they got together a confiderable body in the Vergea, we being not in a capacity to prevent it, becaufe what forces we had were in Pojuka.

But judging it abfolutely for our interest to stop as much as possible these proceedings, it was refolved to arm fome of the lufty young fellows with firelocks, which they were furnished withal by the citizens (there being none in magazines), and to join with them a detatchment of the garrifon, befides a hundred Brazilians, that were lately arrived under Peter Potti.

Purfuant to this refolution, Captain John Blaar received orders to put himfelf at the head of three hundred men, with whom he was to march with all imaginable fecrecy from the Receif, and by lying in ambush near the passes, to endeavour to intercept fome of the enemy's troops, not questioning but that out of the prisoners they should be able to learn where Vieira was posted with his main body, and of what strength both he and the fuccours from Bahia was reputed to be among them. He had ftrict orders not to moleft any of the inhabitants who were not in arms, but to protect them and their estates, and to receive those who sought for mercy, and bring them into the Receif. Orders were also fent to Lieutenant-colonel Haus to march with what forces could poffibly be fpared out of the garrifons to the fouth, to the Vergea, in order to join with Captain Blaar, and endeavour to attack the heads of the rebels, which, if they could once put to the rout, might be a means to quench the whole fire of rebellion, and to reftore peace to the Dutch Brazil.

The first of July it was debated in council, whether all fuch perfons as were fufpected to have a hand in the confpiracy, ought not to be excepted in the pardon, or whether it should be granted to all that defired it without exception. The last was refolved upon as conducing most to the quieting the fubjects minds.

The 2d in the evening, the council received advice from Captain Blaar, that he was posted at Mongioppe, with an intention to attack the enemy, wherever he met them.

The 3d he marched to Iguarafu.

The 4th, they received letters from Lieutenant-colonel Haus, from St. Antonio, importing that after having left a garrifon in Pojuka under Lieutenant Flemming, and one one hundred Brazilians in St. Antonio, he was ready to march to the fugar-mill Velho, and from thence to Moribeca, where he would expect their further orders.

At the fame time the inhabitants of Goyana having fortified themfelves in a certain houfe, belonging to Liftry their chief magiftrate, they defired the council to furnifh them with forty mufquets, for the ufe of fuch among them as were unprovided with arms. Their requeft was granted, and pofitive orders fent at the fame time to Servaes Karpentier, to take this opportunity to difarm all the Portuguefe, either by fair or foul means; to effect which, he fhould keep the Dutch together in a body as much as poffibly he could; his anfwer was, "he would endeavour to difarm the Portuguefe by fair means, he wanting power to do it by force." Befides which, he gave notice in his letter dated the 11th of July, that every thing remained quiet hitherto in Goyana, but that the Brazilians, (contrary to his express orders) claiming a prerogative to be commanded by none but their own officers, purfuant to a decree of the council of Nineteen, had, in their paffage to Tamarika, plundered feveral of the Portuguefe inhabitants.

Moft of the rebellious Portuguese had left their wives and children in their houses and mills, which, as it tended to their no small conveniency, so some of the faithful Portuguese inhabitants did propose on the 3d of July to the great council, whether it would not be for our interest to oblige those wives and children to quit their houses and mills, and to fend them after their husbands.

Several reafons were alledged for it :

1. Becaufe the rebels being encumbered with their families, must of neceffity make greater confumption of farinha, and other provisions, which would oblige them the fooner to alter their measures, and to change their places.

2. That thereby they would be much difheartened, for fear of a vigorous attack.

3. That they would not be able to march or to change their camp fo conveniently as before, or to lurk in uninhabitable places.

4. That by the removal of these women, who served them as spies by the help of their negroes, we should take away all opportunity from them, to be informed of our designs.

All which reafons being well weighed, the following proclamation was published :

A Proclamation for the Removal of the Rebels' Wives and Children.

"The great council of Brazil, by the authority of the States-General of the United Provinces, His Highnefs the Prince of Orange, and the Weft India company, make known unto every body, that whereas many of thofe who have fided with the three head rebels, John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, againft this ftate, have left behind them their wives, children, and families, which hitherto continue in their former dwelling-places; we do by thefe prefents ftrictly command all the wives and children, whether male or female, whole hufbands and fathers are engaged with the rebels, to leave their refpective houfes within fix days after the publication of this proclamation; and to repair to their refpective hufbands and fathers, or elfe to incur the penalties due to rebels; it being our refolution not to take the fame into our protection; nay, to take away our fafe-guards from all fuch of our fubjects as fhall be found to harbour or conceal thefe before-faid wives, children, and their effects, unlefs the hufbands and fathers of thefe wives and children fhall, within the limited time of fix days, return to their dwelling-places, and fue for pardon to the council.

" Thus decreed in the affembly of the great council of Brazil."

II

About

About this time near one thousand Brazilians, among whom were three hundred and fixty-nine men, the reft women and children, being retired to the ifle Tamarika, to shelter themselves against the rebellious Portuguese, Mr. Dormont, counsellor of the finances, was fent thither in the beginning of July, as fupreme director of the territory of Iguarafu, to fecure that ifland which was of fo great confequence to the ftate, in our intereft.

The 5th of July, a proclamation was iffued against the three chief rebels, John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, declaring their lives and eftates to be forfeited, offering a reward for the apprehending of them, as follows :

A Proclamation for apprehending the three head Rebels.

" The great council of Brazil, by authority of the States-General of the United Provinces, His Highnefs the Prince of Orange, and the Weft-India company, fend greeting. Be it known by all, that whereas we are fully fatisfied that John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, fetting afide their allegiance, have a confiderable time ago entered into a confpiracy against the state, fending their letters throughout feveral Fregefies of our jurifdiction, to excite our fubjects to a revolt; that they have gathered and ftill are gathering forces to maintain their treacherous defigns against this state, forcing our faithful subjects to join with them, threatening with death fuch as refufed to enter into this rebellion; nay, having caufed feveral, as well Hollanders as Brazilians, to be murdered upon that fcore. That they have affixed and published declarations in feveral places, tending to the difquieting and difturbing the minds of the fubjects of this ftate, with the name and title of governors of this war, (whereas they ought to have flyled themfelves faithlefs traitors) covering their villainous defigns under the name of the Divine Majefty, befides many other mifdemeanors, whereby they have rendered themfelves guilty of high treafon. It is for these reafons that we thought it our duty to declare the above-named John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, and by thefe prefents do declare them enemies of this ftate, difturbers of the public peace and our good fubjects, rebels and traitors against their lawful magistrates; and to have forfeited all their privileges, rights, lives, and eftates; and as fuch, we grant not only free leave to every one to apprehend or to kill the faid John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, but also promife a reward of one thousand Charles's gilders, to such or such perfons as shall do fo fignal a piece of fervice to the company, as to apprehend either of those perfons, fo as they may be brought to justice; and the like reward to any perfon who shall kill either of the faid traitors, befides his pardon for any offence he may have committed before; and if he be a flave, his liberty, together with the reward. We also strictly command by these presents, all the inhabitants of this state, of what quality, degree or nation foever, that they shall not prefume to affift the faid rebels with arms, provisions, money, men and ammunition, or harbour, conceal, or advife them in any respect, or keep the least correspondence with them, under pain of being declared traitors, and to be punifhed as fuch with the utmost rigour," &c.

Whilst the great council were thus endeavouring to quench the flame of rebellion, they received frequent intelligence, that befides the fuccours already come to the rebels from the Bahia by land, by way of Rio St. Francisco, they expected a confiderable fleet from thence; it was refolved to fend once more fome deputies to the governor Antonio Telles da Sylva, to reprefent to him that Kamaron and Henry Dias being under his jurifdiction, their entering in an hoftile manner into the Dutch Brazil, could

VOL. XIV.

5 F

not be interpreted otherwife than a breach of the truce concluded betwixt the king of Portugal and Their High and Mightineffes the States-General.

The perfons pitched upon for this purpofe were Balthafar Vander Voerde, counfellor of the court of juffice, and Dirk Van Hoogstraten, then commander-in-chief to the Cape of St. Austin, who being looked upon at that time as a very loyal perfon, was fent for the 4th of July, leaving Barent Van Tichlenborgh, to command in his absence. Francis Kyrnen Springapple was appointed their fecretary, and Gerrard Dirk Laet, Alexander Sylve, and Jacob Swearts to attend them as gentlemen.

Their inftructions were, to lay open to the governor the true reafon and occafion of this infurrection, and the ring-leaders thereof, who would never have dared to attempt it without the hopes of fuccours, which were fent them by land through Rio St. Francifco: they were to fearch into his intentions as near as poffibly they could, and to defire him to recal Kamaron and Henry Dias with their troops out of the Dutch Brazil, and to punifh them according to their deferts. If they found the governor not inclined to give them due fatisfaction, by recalling those troops either by public proclamation, or fending fome perfon of authority to bring them back, or by giving them fome other real demonstrations of his fincere intention before their departure, they were to proteft to, and to declare themfelves innocent of all the damages, murders, and rapines as well against the Hollanders, as Portuguese and Brazilians, already committed or to be committed by those forces. They were to declare to the governor, that they would look upon it as an open breach of peace and act of hoftility, of which they must give an account to their mafters, who, without queftion, would know how to make themfelves amends for the damages fuftained; and to proteft once more, that the Dutch declared themfelves innocent of all the miferies which muft enfue from their taking up arms for their own defence, after their fo reafonable request had been rejected.

Accordingly they fet fail the 9th of July 1645, from the Receif, in the fhip called the Roebuck, and coming to an anchor the 17th in the Bahia, were, in the name of the governor Antonio Telles da Sylva, complimented aboard their fhips by feveral Portuguefe gentlemen, from whom they afked leave to come afhore, having feveral matters of moment to propofe to him in the name of the great council of Brazil.

The next day being the 18th of July, about noon, Lieutenant-colonel Andrew Vidal, and Captain Pedro Kavalkanti, with fome other officers, came in a brigantine to fetch them to the palace; where, after the first compliments, they delivered their credentials, telling the governor, that out of those he would understand that they were fent to treat with him of certain points, which they were ready to propose, either now or whenever he should be disposed to receive them. The governor, after the usual return of compliments and perusal of the credentials, told them, that he was ready to hear them whenever they pleased; whereupon they proposed,

That fome Portuguese solutions for their High and Mightiness the States-General of the United Provinces, have entered into a cabal, in order to take up arms and attack Pernambuko; to effect which, they have by certain letters folicited their fellow-fubjects to enter into a rebellion, and provided themselves with arms, in hopes of fuccours from abroad. That in the beginning of May, Kamaron and Henry Dias with their Brazilians and negroes, and fome Portuguese, being on their march in an hostile manner to Pernambuko; John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, with other Portuguese their accomplices, had no fooner notice of their coming, but they absconded from their house, gathered what forces they could, fome by force, fome otherwise, published their declarations, ftyling themselves governors of this war for the public liberty; all which they undertook upon hopes of being backed by foreign troops.

That

That through God's mercy their mafters did not want power to protect their faithful fubjects, and to punish the rebels according to their deferts : but as they could not comprehend what it was that could induce these foreign troops to enter their territories in time of peace, in order to aid their rebellious fubjects against them, fo they were at a stand how to deal with them. That the great council as well as all the rest of the inhabitants, being too well acquainted with His Excellency's extraction, exquisite knowledge in state-affairs, and the good neighbourly correspondency he had always cultivated with our government, than to harbour the least thought that he should give the least encouragement to any of his fubjects, to aid rebellious fubjects against their fovereigns: that they were fenfible he would use all possible means to prevent it. It was for this reafon that they were fent by the great council to give His Excellency notice of the hostilities committed by Kamaron and Henry Dias, defiring that he would be pleafed not only to command them not to affift the rebels with their troops, but also to retire out of Pernambuko and the other captainships under the Dutch jurifdiction; that fo the rebels being difappointed of their affiftance, might be fooner reduced to their former obedience, and our fubjects enjoy the benefit of the truces flipulated betwixt His prefent Majefty of Portugal, Don John IV. and Their High and Mightineffes the States-General. All which, the great council of Brazil highly recommended to His Excellency's confideration, in a letter which was then delivered by the deputies to the governor, which is as follows:

A Letter from the Great Council to the Governor of the Bahia.

" It is fufficiently known to Your Excellency with what ftrictnefs the truce betwixt His Majefty of Portugal and the High and Mighty the States-General of the United Provinces, has been observed in all its circumftances by the inhabitants of the Dutch Brazil, even according to the conftitution of those of the Bahia and other places, who have of late paffed through our captainfhips; neither have we ever received the leaft complaints upon that account, either from the King your mafter, or from Your Excellency; all which gave us fufficient reafon to believe that you would not in the leaft confent that your fubjects flould attempt any thing contrary to the faid truce. And though fome of the Portuguese inhabitants, subjects of the states, laying aside their allegiance, have taken up arms and are rifen in rebellion against this state, as foon as Kamaron and Henry Dias at the head of their Brazilians and negroes, befides fome Portuguefe, did without licence or the least encouragement from us, enter our territories, contrary to the law of nations, and joining with the rebels exercifed open hoftilities against our fubjects, not like foldiers, but robbers and thieves; yet can we not be perfuaded that those troops should have made this attempt by order or confent of His Majefty of Portugal or Your Excellency, against us your confederates.

Thanks be to God, we do not want means to bring our revolted fubjects to reason, and to deftroy those foreign troops; but to shew to all the world how ready we are to fulfil the reiterated command of our masters, to maintain inviolably the truce betwixt His Majefty and them; and to remove all finister interpretations which might be made in foreign courts upon this head, as also to give fufficient opportunity to His Majesty of Portugal and Your Excellency, to convince the world that you have neither confented to nor abetted this confpiracy; we in the name of Their High and Mightineffes the States-General, His Highnefs the Prince of Orange, and the governors of the Weft-India company, have fent Mr. Balthafar Van Voerden, counfellor of the court of juffice, and Dirk Hoogstraet, commander-in-chief on the Cape of St. Austin, as our deputies to you, with

with full power to propole these points to you, and to defire you forthwith to recall the faid Kamaron, Henry Dias, and other leaders, with their troops, within a limited time out of our territories, either by public proclamation, or fuch other means as Your Excellency shall think most forcible or expedient, and to punish them according to their deferts; and if they refuse to obey, to declare them open enemies of His Majesty; it being impossible for us to conceive, how due fatisfaction can be given without it to Their High and Mightiness, to the Prince of Orange, and the West-India company, which nevertheless we ought and do expect from Your Excellency.

" (Subfcribed) Your Excellency's well-meaning friends, " (On the fide ftood) HENRY HAMEL, A. VAN BULLESTRATER

" From the Receif, July 7, 1640. A. VAN BULLESTRATEN, P. J. BAS, J. VAN WALBECK, and HENRY DE MUCHERON."

The governor gave immediate anfwer to the deputies propositions, that he was fo far from fending any fuccours to the rebels, that he had not had the least knowledge of it. That the Brazilians and negroes were difbanded by His Majefty's order, and that thefe as well as the Portuguefe among them, that were come to the affiftance of the rebels, could be in no great numbers, confifting (as he fuppofed) in fome vagabonds, or others, who having committed mifdemeanors in the Bahia, had taken this opportunity to fhelter themfelves, and flee from punifhment, as it frequently happened that fuch-like perfons did come to the Bahia from Pernambuko, which neverthelefs had given him not the leaft fufpicion of the council's fincerity. He told them that he was extremely glad to underftand the good confidence their mafters repofed in him, of maintaining the truce concluded betwixt His Majefty of Portugal and Their High and Mightineffes the States-General, affuring them that he never fhould be prevailed upon to act contrary to it, for fear of hazarding his life. And that if he had any fuch intention, he did not want means to attempt it by the affiftance of the Brazilians. But that he had never had any thoughts that way, notwithftanding he had been provoked to it by the Dutch, who fince the truce had taken a Portuguefe fhip and carried it to the Receif, which by the bravery of the Portuguese was delivered from the Hollanders, and they and the ship brought to the Bahia; the Dutch mariners being difmiffed without any punifhment. He told them further, that he was not infenfible what an opinion their mafters entertained of his fincerity; and that he had reafon to believe, that they had at this time as they had done before, fent their deputies chiefly to feel his pulfe, to inquire into his ftrength, and to dive into his defigns. That however, he would communicate the letter to his council, and give them a fpeedy answer, in order to their return home, pursuant to the request of their masters. Then the governor arising from his feat, the deputies took their leave and returned aboard.

The 19th, in the morning, they were fent for afhore by a lieutenant, and brought to the houfe of Lieutenant-colonel Pedro Korea de Gama, where they dined in company of Andrew Vidal and Paulo de Kunha. Towards the evening they were again conducted to the palace, where the fecretary defired them to tarry a minute, becaufe His Excellency was bufy with clofing his letters; after fome ftay, they were introduced to the governor, who told them, that he had underftood the contents of the letter, which he found altogether agreeable to the propositions made to him the day before by way of mouth by them, which confifted chiefly in two points.

First, the good opinion their masters had of his fincere intention, in maintaining a good correspondency with them, in order to maintain the truce betwixt His Majesty and the States-General, and the confidence they had of his not being concerned in the rebellion, either by encouraging or affifting the fame. Wherefore he defired they would continue in the fame fentiments, becaufe he never had made the leaft infraction of the faid truce, neither ever thought of any thing like it, nor fuffered any of his fubjects to act contrary to it; notwithstanding, faid he, the Hollanders have broke the fame in feveral refpects, viz. in their expeditions against Angola, St. Thomas, and Marinho; by the plundering of Pedro Cæfar Mines, who had been bafely ufed during his imprifonment, not like a man of quality, being forced to fhelter himfelf among the woods after his escape. They had also taken a Portuguese ship in his own harbour. Neither did the inhabitants of Pernambuko want reasons of complaint, as well as the other captainfhips; he had underftood out of feveral letters from thence, how the Jews were always bufy in forging acculations against them, which were taken for truth; and when the Portuguese had thereupon absconded themselves out of fear, the Tapoyers, or mountaineers, were armed against them; among the reft, they had caufed a poor hermit to be hanged. The great council had always given him fufficient proofs of their fufpicion, in the last embaffy, being intended to no other purpose (as Captain Hoogstraten could teftify) than to dive into his defigns and ftrength. Thus it was reported and believed, that Andrew Vidal and Paulo Kunha, with feveral other officers, were fent by him into Pernambuko, though they faw them here before their eyes.

Upon the fecond point, concerning the troops faid to be fent to Pernambuko, he gave for anfwer, that they must be fome Brazilians and negroes lately difbanded, who were of little account, as we were fenfible ourfelves: that if a few Portuguefe were among them, they must be supposed to be criminals who were fled from justice; that he was not unwilling to call them back by proclamation, but feared that he should be but flenderly obeyed, by a fort of people who could not be kept in obedience within his own jurifdiction. That to fatisfy our requeft, and to remove all reafons of complaint, he intended to fend his deputies fhortly to Pernambuko ; all which he had more clearly expressed in his letter to the great council, wherewith he would, according to the request of our masters, dispatch us with all imaginable speed.

The deputies replied, that their mafters had never entertained any fufpicion of His Excellency, neither had they given any orders to dive into his defigns; but always had a favourable opinion of his firm adherence to the truce, as might be evidenced by Mr. Andrew Vidal, who, during his ftay with them, had liberty to go where he pleafed, without any attendance but his own. That what he objected concerning the accufations of the Jews was of no moment, the fame being never hearkened to, the intended infurrection being difcovered by perfons of unquestionable credit. That John Fernandes Vieira, Antonio Kavalkanti, and others their adherents, had always been protected against any false accusations, and had free access to all the counfellors of the court of justice, and those of other colonies, as well as the chiefest among the Dutch, fo that they had no reafon to abfcond out of fear for the Tapoyers, who never were intended to be employed against them. That they did not know of any hermit that was hanged by them, but remembered, that in an engagement with Amador d'Araouje, fuch a one was fhot by the Brazilians as he was ringing the bell to give the alarm.

They further told him, that though they had no orders to treat with His Excellency upon any other points than those that concern the rebellion, they could easily make it out before all the world, that Angola, and the other places, were conquered according to the rules of war, without the least infraction of the truce, it having been exprefsly

prefsly ftipulated, that the war fhould continue in those parts till the fame was published there. The Brazilians, negroes, and Portuguese, were come in confiderable numbers into our territories, not like disbanded foldiers, but well.armed, and their coming was not unexpected, but well-known to the rebels; but the council was not fo much concerned for their number, as to be fatisfied under whose authority they had taken up arms against them, that they might deal with them accordingly. But however it was, they defired His Excellency to believe, that their masters would be extremely glad to understand his good inclinations, that thereby the effusion of human blood might be faved; intreating him to fend his deputies forthwith with the neceffary instructions.

The governor promifed to fend his deputies foon after their return to Pernambuko, telling them, that as he thought himfelf fecure of the good neighbourly correspondency of their mafters, fo he was refolved to continue in the fame on his fide. What he had proposed for the reft, had been only by way of difcourfe, not with an intention to enter into a dispute concerning the legality or illegality of it; though it appeared very odd to him, that they should affist his mafter at home, and at the same time wage war with him in other parts, under pretence that the peace was not published there; and what had passed with Pedro Cæsar de Mines was a thing not justifiable in his understanding.

After the ufual compliments, he arofe from his feat, telling them, that he would fend the letter directed to the council to them aboard the next day, and fo our deputies returned aboard their fhip. The 20th, in the morning, the fecretary of the governor came aboard our veffel, with the governor's letter to the council, which he delivered to the deputies, requefting in his mafter's name, to fend him a translation of the letter from the council to the governor out of the Dutch into the Portuguefe, fubfcribed with their own hands; which they did, and having delivered the fame to the fecretary, he took his leave and returned afhore.

Our people fet fail the fame day about noon from the Bahia to Pernambuko, where they arrived the 28th in the afternoon before the Receif, and gave an account the fame day of their negociation to the great council, unto whom they also delivered the letter written by Antonio Telles de Sylva, and directed to them. The contents of which are as follows :--

The Governor's Letter to the Council.

"Mr. Balthafar Vander Voerden, counfellor of juffice, and Captain Dirk Van Hoogftraten, commander-in-chief on the Cape of St. Auftin, Your Lordfhips' deputies, have delivered your letter to me, in which you are pleafed to give me notice of the revolt of fome of your fubjects againft you. I received this news as I ought to do, and fhould not have been able to receive it without the greateft furprife and difcompofure of mind, if I had not been affured in my confcience, that Your Lordfhips did not in the leaft imagine that this infurrection could derive its fource from our government; and, though I could upon this occafion enter upon a long recital of the proceedings of my government, tending, from its beginning till now, to a fufficient juftification in the eyes of all the world, and of the greateft kings and princes of Chriftendom, that the faid good correfpondency has been maintained as ftrictly on our fide, as the fame is promifed in Your Lordfhips' letter : but rather than give the leaft occafion of difguft or difference, by enlarging myfelf upon those heads, in which your fubjects have exprefsly and manifeftly violated the truce concluded and ratified betwixt the King my mafter, and the

the States-General of the United Provinces, I will facrifice the fame to the intereft of our common neighbourhood, rather than to enter upon a particular account of those miscarriages in the expedition of Angola, at a time when the States-General did affift the crown of Portugal with their naval force, when our ambaffadors refiding in the Receif were told, that these troops were not intended to be employed against any of His Majesty's harbours, but in the West Indies, though at the fame time they were embarked for the conquest of Angola. The same may be faid of the taking of the isle of St. Thomas, and the city of Luy de Mapanha, and the feizing of a Portuguese ship upon our coast, loaden with sugar from Spiritu Sancto. The commiffary Greening was difpatched hither, under a pretext of buying of farinha, but in effect to found my inclinations, as he himfelf confesses, when he fays in a certain letter of his, " I was fent thither with this commission, but rather to feel his pulse and try his friendship, than that we were in want." The unfaithful dealings of the directors of Angola in the capitulation with the governor Pedro Cæfar de Mines; the rafing of our fort Araval in Bengo; the bafe treatment put upon the faid governor, being a perfon of quality, and a general of His Majesty's, are matters altogether inconfistent with the rules of war, nay, with humanity itself, and contrary to the practice not only of the more civilized nations of Europe, but alfo the barbarians themfelves. Of the fame ftamp was the answer given by your council to our ambaffador, who urging a ceffation of arms in the kingdom of Angola, was answered, that the fame had no dependency on our jurifdiction, quite contrary to the fincere intentions always obferved by me in all our transactions with you; for no fooner did Your Lordships make complaints to me against one Captain Augustino Condago and one Domingo de Rocha, who having carried away a barge with fugar, had brought her into the harbour of our city, I fent back the faid veffel immediately, and put the captain in prifon till he was fent over to His Majefty. And that time being informed, that two foldiers living under my jurifdiction, whole names were John de Campos and Domingo Velho Sigifmundo, had committed fome infolencies in your captainfhip of Pernambuko, I caufed them to be hanged immediately, looking upon it as a duty not to be difpenfed with by me, for the maintaining of our mutual good correfpondency; all these before-mentioned infractions having never been able to make me forgetful of the reiterated orders of His Majefty, viz. to improve the effects of the peace and alliances made betwixt him and the States-General, to our both fides fatisfaction: I must at the fame time confess, that looking upon myself as a foldier, (abstracted from the confideration of the interest of the state, and the duty of a subject) I thought I ought not to take tamely fo many affronts, and to let flip fo many fair opportunities of doing myfelf justice; much beyond what can be supposed to arise from the conjunction of a few unarmed Portuguele, a few difcontented negroes, and fome rebels, whole protection cannot, as I faid before, come in any competition with the feveral opportunities and provocations paffed by on our fide before, for the common intereft; and that confequently our government cannot as much as be conceived to be the hidden caufe of this rebellion, as Your Lordships themselves are pleased to confess; neither would I have entered upon a recital of those particularities, if I had not thought myself obliged both in duty and affection, to give this fatisfaction to you. To give you the true account of the absence of Henry Dias, you must know, that one night he left his guard in Rio Real, and paffed over to your fide; Don Antonio Philippo Kamaron, captain of the Brazilians, being fent after him, and not returning, I judged that they were gone towards Mocambo, to attack the Palmairas of Rio St. Francisco, which made me (to avoid all fufpicion of being concerned in any thing that might tend to the breach

breach of peace) fent two Jesuits to perfuade them to return, but in vain, they refufing to obey, either for fear of punishment, or that they were already engaged with the rebels (as I now am apt to believe they were), fo that I have heard nothing from them fince, except what I have understood out of Your Lordship's letter. The Portuguese under your jurifdiction have fent to me the reasons which moved them to this infurrection, imploring my affiftance, as fubjects of the King my mafter; they told me, that they stood in fear of being facrificed to the fury of four thousand Tapoyers, fent for that purpofe from Rio Grande; to avoid which, and dreading Your Lordships' anger, awakened against them by the false accusations of the Jews (the most perfidious and irreconcileable enemies of Christendom), had rather chosen to expose themselves to a miferable flight, leaving behind them their wives and children, than to indure the hardfhips of a tedious imprifonment. I could fcarce have imagined, that you could be fo far milled by the fictions of a people fo much defpifed by all other nations, as to be perfuaded by them, that certain perfons were fent from hence into your territories, who have been feen here by your deputies. And though I am apt to perfuade myfelf, that fome of the Portuguele would, as the cafe now ftands, be glad to embrace our protection, it being much more natural to be oppreffed by one's own King or Prince, than by foreigners: yet when I ferioufly reflect upon Your Lordfhips' propofals made by your deputies, viz. to oblige Captain Kamaron and Henry Dias to return to the Bahia, and to use all other proper means to bring the revolted Portuguese to reafon; when, I fay, I ferioufly reflect upon the public calamities on one fide, and how defititute I am of fuitable means at prefent to fatisfy your defires, I cannot but be infinitely concerned thereat; being fenfible that thefe captains will not be brought over by perfuafions; and wanting means to reduce them to obedience, who have now fettled themfelves at fo great a diftance among the woods and forefts. But as I am ready to conform myfelf in all refpects to Your Lordships' defires, to convince you of the fincerity of the Portuguese nation, which is such, that no opportunity, though never fo great, of promoting their own interest, does ever stand in competition with what they think they owe to their confederates: I am willing to take upon me the office of a mediator, in order to endeavour to appeale these troubles by my authority; for which end I intend to fend to you with all possible speed, certain perfons of known ability, with fufficient inftructions and power, to the rebellious to return to their duty; which, if they decline, fuch measures may be taken as will force them to it; which, as I hope, may ferve as the most effectual means to restore tranquillity to your dominions, and to cultivate the good opinion and correspondency betwixt us; which I wifh God Almighty will be pleafed to continue betwixt thefe two nations, by a perpetual tie of amity.

" Bahia, July 19, 1645. (Signed) ANTONIO TELLES DE SYLVA."

Mr. Hoogftraten at the fame time gave a fecret verbal account to the great council, that foon after their arrival there, Andrew Vidal, Captain Paulo Kunha, and John de Soufa came to them, the laft of whom fat himfelf down near him (Mr. Hoogftraten), inquiring fecretly after his uncle Philip Pays Baretto, whether he was among the mutineers; to whom he gave for anfwer, that he was ftill in his mill. After which, the table-cloth being laid, Soufa was invited to ftay at dinner with them, which he refufed; becaufe, as he faid, he was upon the guard: before dinner was ended Soufa came back, and after the table-cloth was taken away, invited Mr. Hoogftraten and Kunha to fmoke a pipe with him in a back room, whither they went, but were followed by the fecretary, Mr. Springapple. As they paffed through a gallery, Paulo de Kunha took

took Springapple a little on one fide; and in the meanwhile, Soufa to'd Hoogftraten with a loud voice, that he was furprifed to hear that his uncle Philip Pays had not. fided with the reft: unto which Hoogftraten anfwered, "That he thought he did very wifely to keep himfelf quict, becaufe it was likely to turn to no good account." "That is your opinion," replied Soufa, "but have a little patience; and becaufe I know you to have always been a friend to the Portuguefe, I can affure you it will turn to a confiderable account. And it is upon this fcore, I advife you, like a friend, to provide for your own fafety and your family. You may reft affured, that if you will engage to do a piece of good fervice to the King my master, and to the governor, you shall want neither money, sugar-mills, places, nor preferments." Mr. Hoogstraten, appearing fomewhat difcomposed at this discourse, told him, " That though he was not unwilling to do the King and governor what fervice he could, he did not know what fort of fervice he meant." Unto which Soufa replied, "I am fure you are able to do good fervice to the King." "But then," fays Hoogftraten, "you muft tell me how. "That I will," anfwered Soufa; "are you not governor on the cape of St. Auftin?" Unto which Mr. Hoogftraten faid, "Yes, I am." "Then," replied Soufa, "all that is required of you, is, to furrender the faid fort, with all its works, into the King's hands, that we may land our men thereabouts: if you will promife to do it, you shall have a very ample reward, and be made commander-in-chief of our forces." Mr. Hoogftraten gave for anfwer, " that these were things of such a nature, as were not con-fistent with his oath and honour." Their discourse being interrupted at that time by the coming of another perfon into the gallery, John Soufa and Paulo Kunha went out another way. Mr. Hoogstraten told his fecretary, Mr. Springapple, with a difcompofed look, "What is the meaning of these dogs, do they take me for a traitor?" He was going on to fay more, when Soufa and Kunha returning into the gallery, took him afide, and told him, " That he might be fure every thing should be performed that had been promifed him; that if he wanted any money, he fhould have it immediately; and for the reft, they would introduce him alone to the governor, to receive the confirmation of it from his own mouth." Mr. Hoogstraten replied, "What you defire is not in my power to perform, if I would never so fain; because I am promised to have a commission of major immediately after my return, and then I shall certainly be employed in another place." During this parley, Mr. Vander Voerde entered the gallery in company with Mr. Andrew Vidal, who entertained him all the while the others were talking together, till Hoogstraten, taking his opportunity as they were walking together, whilpered Mr. Vander Voerde in the ear, " I wish I was well rid of them, to talk a little with you in private, for I know not what their defign is; I am afraid they will either kill or detain me here." Mr. Vander Voerde would willingly have made a reply, but could not, by reafon Soufa and Kunha, and Pedro Korea de Gama (the last of which understood Dutch), were so near them ; so that he thought it the fafeit way to diffemble, and to pretend as if they had been talking about some indifferent matter. Mr. Hoogstraten then told Soula, that he had a great mind to pay a visit to Donna Catherine de Melo, mother-in-law of Philip Pays Sousa; he answered him, that he would ask the governor, who having given his confent, Hoogstraten went thitherward with Soufa, and at his going out of the gallery, whifpered Vander Voerde again in the ear, " They have catched a mackerel, for I intend to act the hypocrite to the life." As they were walking along the street to Madam de Melo's house, Soufa and Kunha repeated their former difcourfe, endeavouring to encourage Mr. Hoogftraten, by hopes and promifes of great reward, both from the King and governor, with whom .5 G VOL. XIV.

.

whom they faid he fhould confer in private concerning the point in hand, and that in the following manner.

After their return from Madam de Melo's, to the house of Pedro Korea de Gama, where Vander Voerde expected their coming, Kunha was to go privately to the governor, to agree with him, that when Mr. Vander Voerde, Hoogstraten, Soufa, and Kunha, should come to speak with him, he should by his secretary defire them to stay a little while. In the meanwhile, Soufa was to ask Mr. Hoogstraten to take a glass of wine with him, and under that pretence bring him to the chamber of the confessor of the governor, where they were to have this private interview. Accordingly, Paulo de Kunha went to the governor, whilft Hoogftraten and Soufa were returning to Piedro Corre de Gama's houfe; when Soufa entertained him with nothing elfe, but the probability of fucceeding in their enterprife against the Dutch Brazil, telling him, that the governor flayed only for the coming of Salvador, Korrea de Saa and Benevides, who were expected with galions from Rio Janeiro, befides fome other fhips; and that twenty-five hundred men were defigned for this expedition, befides those already in arms in Pernambuko, who were to be fent from the Bahia, and to be landed on the Cape of St. Auftin; " this is," faid Soufa, " the governor's requeft to you."

Scarce were they returned to the houfe of Piedro Korrea de Gama, when Andrew Vidal came and told them, that the governor was ready to receive them ; fo they went to the palace, where they were no fooner come within the anti-chamber, but the governor's fecretary came to defire them to tarry a little, the governor being bufy with clofing fome letters. So, whilft fome Portuguefe were entertaining Mr. Vander Voerde near the window, fays Soufa to Mr. Hoogftraten, " Come, fhall you and I take a glafs of wine in the meanwhile?" Which Mr. Springapple, the fecretary of the embaffy, understanding, told him, that he would go along with them ; but Paulo de Kunha, and fome other Portuguefe, taking him afide, kept him in difcourfe, whilft Mr. Hoogftraten was conducted by Soufa into the confeffor's chamber.

Within a few minutes after, the governor, Antonio Telles de Sylva, entering the room, faluted Mr. Hoogftraten very courteoufly, and fetting himfelf in a chair near him, ordered the chamber to be locked, nobody being prefent befides themfelves, but Soufa. The governor then told Mr. Hoogstraten, that he had always taken a particular notice of his character, of his being a friend to the Portuguese, that he hoped he would continue in the fame opinion, and would not refufe the offer made him by Don John de Soufa, in the King's and his name; their intention being not to enter into a war with the Dutch, but only to repoffers themfelves of what of right belonged to the prefent King of Portugal, Don John IV. and that if Count Maurice of Naffau had ftayed any longer in this country, he himfelf would have been inftrumental in bringing this matter about. Mr. Hoogstraten answered the governor, that he should be glad to understand what it was he could ferve him in. "You have," fays he, " understood that from Mr. Soufa, and I defire you to turn abfolute Portuguefe." Mr. Hoogstraten told him it was beyond his power, becaufe immediately after his return, he fhould be provided with a major's commission, and confequently not be employed in the fame place: unto which the governor replied, "You need not queftion any place of honour or profit among us, but it will perhaps not be convenient to difcourfe together upon this point at prefent, for fear Mr. Vander Voerde fhould fufpect us : but I intend to fend two ambaffadors (of which Mr. Paulo de Kunha is to be one) to your government, who shall be empowered to treat with you further upon this account. And," fays he, giving his hand to Mr. Hoogstraten, " rest affured, in the name of the King 117. my

my master, that whatever Mr. Paulo de Kunha shall promise you, will be punctually observed and performed."

Then the governor took his leave, telling him that he would not detain him any longer, for fear of creating a fufpicion in his colleague, and fo retired into his own apartment. But Mr. Hoogftraten and John de Soufa were no fooner returned from thence, but the governor fent for the faid Mr. Hoogftraten and his colleague Mr. Vander Voerde, to confer with them, concerning their propofals, made in the name of the council of the Dutch Brazil : as they were walking thither, Mr. John de Soufa told again to Mr. Hoogftraten, with a low voice, "And why are you obliged to accept of the major's commifien? It is an eafy matter for you to tell them, that you would rather continue governor of the place where you now are; and be fatisfied, that when you come among us, that you will not want any employment fit for a good foldier as you are." Mr. Hoogftraten being not a little moved with this difcourfe, was more defirous to get aboard their veffel, as foon as poffible he might, to get an opportunity of communicating the whole matter to Mr. Vander Voerde; which he did accordingly, as foon as they were entered the cabin, the door of which he ordered to be locked immediately.

In the meanwhile, viz. the 5th of July, it was debated in the council of the Dutch Brazil, whether, for the fecurity of the country, they fhould not want the affiftance of the Tapoyers, under their King, John Duwy, dwelling in Rio Grande; who for that purpofe had gathered a good body near Kunhau, efpecially fince the Portuguefe committed all manner of barbarities against the Dutch, and had fummoned the barbarians called Rondelas, from the Bahia.

But confidering the devaltations which must needs ensue upon the march of those barbarous people in the flat country, it was thought convenient not to come to any certain refolution upon this point, until they had advifed with Lieutenant-colonel Haus, to whom a letter was dispatched immediately upon that account.

On the 7th of July, the faid Mr. Haus fent word to the council, that he intended to march the fame day from Moribeca, and after being joined with Captain John Blaar, to attack the enemy at St. Lawrence; but by another letter of the 16th, written by Captain Blaar, they were informed that the rebels continued very ftrong at St. Lawrence, expecting a certain reinforcement from the Matta, where they had forced the people to take up arms for them; defiring a fuccour of fifty men, to drive them from thence. Hereupon the council difpatched meffengers both to Blaar and Haus, ordering them to join their troops, and to rout the rebels near St. Lawrence, on which in a great meafure depended the prefervation of the Dutch Brazil.

The 7th of the fame month the council received allo a letter from Lieutenant Flemming, dated at Pojuka, in which he advertifed them, that he had received certain intelligence, that Kamaron was marching againft him, and that two companies were already come to the fugar-mill of Pikdora. Hereupon orders were fent him, that if he found himfelf not in a condition to keep the monaftery for want of provisions, he flould, at the approach of Karamon's troops, retire to St. Antonio, the better to make head againft the enemy. The fame day Enfign Hartstein marched with a detachment of ninety foldiers and thirty Brazilians, of the garrifon of the Receif and Itamarika, to Ajama and Jegoaribi, in queft of the rebels, but meeting with none, returned about noon, and the fame evening directed his march towards Haus.

The 8th of July, the council having received advice from Haus that they intended the fame day to march from the fugar-mill of St. John Fernando Vieira to attack the rebels of St. Lawrence, if they would abide his coming, it was refolved to fend as

5 G 2

many

many forces as poffibly they could fpare to his relief, confidering that the prefervation of the whole Dutch Brazil depended on the fuccefs of this expedition; and accordingly two companies of foot, of Mucheron and Blaar, were ordered to march thither, not queftioning but that before their arrival Haus would be joined by Captain John Blaar; and in effect the next following day they received advice from Mr. Haus, that he was ready to join with the faid Blaar.

The 10th of July the council gave an account, by letters to Haus, what intelligence they had received concerning the pofture of affairs in St. Antonio and Pojuka, with orders to fend as many firelocks and Brazilians as he could poffibly fpare to their relief, to keep the paffage from St. Antonio to Pojuka and Serinham open; without which, all communication betwixt them and the Receif would be cut off by the enemy. Two letters of John Fernandes Vieira and Antonio Kavalkanti were the fame day read in council, in which they complained of the feverity of the two laft proclamations, but were not thought fit to be anfwered; efpecially fince Amador d'Araouje had about the fame time retired from the pafs of Pinderama.

Two days before, viz. that the council had received letters from Mr. Hoek, dated the 25th of June, at Rio Grande, intimating that hitherto there had not happened any commotions in those parts; that, however, he had difarmed the Portuguese, and that the Tapoyers appeared to be well inclined to the government. Orders were fent him to cultivate a good understanding with the Tapoyers, for which purpose they fent fome prefents to John Duwy, their King, and that the council approved his difarming the Portuguese. On the fame day Father Imanuel, Lewis Bras, Imanuel Ferdinand de Sa, Kafpar de Mendoza, Furtado, and Jeronymo de Rocha, all Portuguese inhabitants of the Dutch Brazil, delivered their petition to the council, requesting that the time of fix days, appointed by the last proclamation for the wives and children of the revolted Portuguese to leave the country, being expired, they might be allowed to ftay in their habitations at least till the ways, which at that time were rendered unpassable by the overflowing of the rivers, were fomewhat mended. But confidering that the Portuguese rebels forced the inhabitants by threats and other unufual methods to take up arms against the government, their request was not granted.

The 13th of July, the council were advertifed by letters from Haus, dated the 12th, that he had paffed the river Kapivaribi, and marching through the Matta to the fugarmills of Arnao d'Ollanda, had met with four hundred rebels, who at the approach of his troops were fled to Moribeca, with the loss of fome of their men, from whence they might, without any opposition, march to the Matta of Brazil, and that he was ready to march directly to St. Lawrence, where he would expect the further orders of the council. They immediately difpatched their orders to him to purfue and rout the flying rebels with all poffible fpeed before they could make head again, which done, he fhould fix his head-quarters in fuch a place where he was fure he might be fupplied with provisions out of the adjacent country ; their magazines being fo exhausted, as not to be in a condition to fupply his troops. Haus had already in fome meafure taken effectual care of this point, having in the meanwhile fent a reinforcement of one hundred foot, and a company of Brazilians, under the command of Captain Tallo, to Mr. Ley, governor of Moribeca and St. Antonio. The council alfo ordered the governor of the Cape of St. Augustin to ftrengthen the fort with pallifadoes; and at the fame time received advice from Mr. Ley from St. Antonio, that the rebels under Amador d'Araouje and Pedro Marinha Falkao, had posted themselves within fight of them, in the new sugarmill, but as foon as he received the expected fuccours, he did not queftion to chafe them

from thence, Amador d'Araouje having in vain attempted to force those of Pojuka, to take up arms against the government.

He received alfo intelligence from Mr. Carpentier out of Goyana, that things remained in quiet there as yet: but whilft Haus was bufy in making head againft the rebels in the Vergea, Petro Marinho Falkao having declared himfelf head of the rebels of Pojuka, had gathered a body fufficient to block up the garrifon of St. Antonio, who had no other fupplies of provision, but what they received from the circumjacent country; fo that the council being fensible of the danger, fent immediate orders to Haus, to haften to the relief of that place; who, accordingly directed his march the fame night to the fugar-mill of Lewis Bras, leaving Captain Wiltfchut with a company of foldiers, and all the fick, behind at St. Lawrence.

The council received alfo advice by letters from Paul de Linge, dated the 12th of July at Parayba, that things were as yet quiet thereabouts, but that with much ado he had hitherto kept the Brazilians, inhabiting the villages, from plundering the Portuguefe inhabitants, who were extremely diffatisfied, becaufe fome of the Brazilians and Tapoyers, that had done them confiderable mifchief, were difcharged out of cuftody. They ordered him to take all poffible care to keep both the Brazilians and Dutch inhabitants, who were both for plundering the Portuguefe, from doing any mifchief to them; for which reafon the council fent the following proclamation to be published there:

A Proclamation.

"We the members of the great council, having received frequent complaints, that many of the faithful inhabitants of the country, who lately have taken a new oath of allegiance to the government, are plundered and robbed by the foldiers and volunteers; and being refolved to maintain them in the poffeffion of their eftates and goods, have for that reafon granted them fafeguards, and taken them into our peculiar protection; do hereby forbid all our officers and foldiers, as well as the other inhabitants under our jurifdiction, to attempt to plunder any of the inhabitants, provided with fuch fafeguards, or to indamage them any otherwife, either in their goods or perfons, upon pain of corporal punifhment."

The 15th of July in the evening, the council was advertifed by Mr. Ley, that the rebels had killed fome foldiers of the garrifon of St. Antonio, that were fent abroad to fetch fome cattle from the fugar-mill Gurapou, and had fo clofely blocked up the place, that no provision could be brought thither; and as they were not provided with neceffaries for above a few days longer, they were in the utmost danger of being lost. Lieutenant-colonel Haus being expected the fame evening with his troops at St. Lawrence, orders were difpatched thither for him go to either in perfon, or at least to fend as many able foldiers as he could bring together, under the command of Captain John Blaar, to the relief of St. Antonio, the council being of opinion, that the fafety of the Cape of St. Auftin, and of all the fouthern provinces, depended on the prefervation of this place; for which reafon, they also ordered Captain Falho, who was expected about the fame time with a company of foldiers, and as many Brazilians at Moribeca, to march directly to St. Antonio, and to ftay there till further orders; of all which they fent advice to Mr. Ley, and Mr. Heck. Haus having, purfuant to these orders, directed his march to St. Antonio (notwithstanding the weariness of his foldiers, tired by a tedious march), Pedro Marinho Falkao had no fooner notice of his approach, but he raifed the blockade of St. Antonio, and with his body of rebels gathered. gathered out of the three diffricts of St. Antonio, Pojuca, and Moribeca, to the number of fix hundred, joined with the rebels in the Vergea of Moribeca.

The 17th of July, the council were advertifed by Haus in a letter dated at Moribeca, that having received a meffage from Mr. Ley and Mr. Heck out of St. Antonio, with advice, that in Puerto de Gallinas two boats with ammunition were landed by Pedro de Kunha, he had fent thither Captain John Blaar, and Enfign Hartftein, with a good body of his ableft foldiers and Brazilians, he himfelf not being in a condition to follow with the reft, difabled by their late marches; for which reafon he had put them into quarters of refreshment in Moribeca, where he would expect their further orders, as not judging his prefence neceffary at the Receif, now the enemies were fled before him.

Orders were thereupon difpatched to him by the council the 19th of July, to keep his head-quarters in Moribeca, the better to keep a watchful eye over the rebels that were retired into the woods; and to be the nearer at hand to fuccour either St. Antonio or Pojuka, for which Moribeca lay very convenient; but if the enemy fhould become too ftrong for him, he fhould retreat towards the Receif. Advice alfo was fent him that Amador d'Araouje, Pedro Marinho Falkao, John Pais, and Kabral, were, with the rebels they had gathered in St. Antontio and Pojuka, marched the day before in the morning from D'Ingenio Moreno Gardo, to join their troops with those of John Fernandes Vieira.

The council likewife received feveral letters from John Hoek, Rudolph Baro, and James Rabbi, dated the 5th, 6th, and 7th of July, concerning the prefent flate of affairs in Rio Grande, and that they being threatened with an invalion by Kamaron on the fouth-fide, and by the Brazilians of Siara and Maranhaon from the north, they had difarmed all the Portuguefe and laid up their arms in the forts of Keulen. They had alfo, by the advice of King John Duwy, taken into cuftody a certain Portuguefe called Antonio Vetallo, with his fon, being accufed by the faid King Duwy of having had a hand in the murther committed upon the Dutch in Siara, and in the confpiracy of the rebels. They further complained of the ill practices of the Portuguefe, who fought by all means poffible to opprefs the Dutch thereabouts; adding withal, that King Duwy was ready with his Tapoyers to fall upon the Portuguefe, as foon as he received orders for that purpofe, which had made many of the Portuguefe fly out of Parayba.

About the fame time, near one thoufand Brazilians, viz. three hundred and fixty nine men, the reft women and children, being fled for fhelter into the ifle of Itamarika, where they were maintained out of the magazines, it was refolved the 21ft of July by the council, to fend thither Mr. Liftry, to take effectual care to eafe the company of that burthen, that they might be engaged to provide themfelves out of their refpective Aldeas. Things were as yet quiet about that time in Itamarika, Goyana and Parayba, by the good conduct of Mr. Paul Vander Linge, governor of the laft. For as foon as the fire of rebellion began to break out in the Vergea, Pojuka, and in Olinda, the council being advertifed that they ought to keep a watchful eye over those of Parayba, where feveral were sufpected of being confcious of the design, they fent the 13th of July Paul de Linge, one of the affeffors in the court of justice thither, with an ample commission, to endeavour to keep the inhabitants in obedience, and to act for that purpole, as he fhould find it most conducive to the public fecurity. He was no fooner arrived there, but he made it his chief care to provide the forts with fufficient garrifons, ammunition, and provisions, which he took from the ships then lying in the road, behind the Red Land: he further took care to fecure all the fufpected perfons, and

and fummoned the reft to take a new oath of allegiance to the government, which they did accordingly.

The council used the fame precaution in the diffrict of Pojuka, in the Vergea, Garaffu, and Goyana, where they obliged fuch of the inhabitants as had not left their dwelling-places to take a new oath of obedience. But the late fuccours fent thither from the Bahia frustrated all these endeavours.

On the 24th of July, Mr. Ley came with credentials from St. Antonio to the council, unto whom he made the following propositions.

I. That whereas feveral young and able men, living near St. Antonio, had not lifted themfelves purfuant to the proclamation iffued for that purpofe, they defired orders might be fent for all those living in the jurifdiction of Maurice's Town and St. Antonio in the open country, to be obliged to take up arms for the defence of the country.

II. To oblige all fuch young men as were not able to ferve as volunteers, at their own charge, to lift themfelves for foldiers, and to inftruct them in martial difcipline.

III. That perhaps it might not be unadvifeable to draw the garrifon out of Porto Calvo, to appear the more formidable in the field.

IV. To divide our land-forces into two bodies, the better to maintain themfelves in the open country; whereas now, upon the leaft motion of the enemy, our whole force was obliged to follow them; and that the garrifon of St. Antonio fhould be reinforced with fuch a number, as to be able to fend abroad a good party, for the conveniency of fetching the neceffary provisions out of the country.

After mature deliberation, the council was of opinion as to the

1st. That the young inhabitants of St. Antonio, Pojuka, and Moribeca, ought not to be forced to ferve in the fort St. Antonio.

2d. That they would empower Mr. Ley and Heck to take as many of the young men as voluntarily offered themfelves into the fervice for four months, at nine gilders per month, and one month's advance-money.

3d. They were abfolutely against the leaving of the fort Porto Calvo, but that it ought to be defended to the utmost.

4th. What concerned the dividing of their land-forces in two bodies, they would advife with Colonel Haus, but they approved of the proposed reinforcement of the garrison of St. Antonio, for reasons by them alledged.

Lieutenant Hans Vogel, by his letters dated the 18th and 27th of July, at Seregippo del Rey, advifed the council, that he had fent a detachment towards Kamaron, who could not get fight either of any Portuguefe or Brazilians, but that they had taken a fingle Portuguefe, who was charged with letters to be carried to Rio St. Francifco. He told them that Kamaron with fome troops was marched through Rio St. Francifco into the captainfhip of Seregippo del Rey; and that three or four fmall veffels or caravans, with fome troops under the command of Andrew Vidal, were failed from the Bahia to Maranhaon and Siara. He likewife fent the letters found upon the faid Portuguefe to the council, by which it appeared that the first foundation of this revolt had been laid among thofe of the Bahia, or, at least, that they had been made privy to it, and that they had provided thefe fuccours; for, among others, there was a letter from the bifhop of that place, to a certain friar of the Receif, in which he told him, that he hoped to be with him before long; whereupon the fifcal was ordered to examine the matter, in order to find out the bottom of this correfpondency betwixt thefe two clergymen. In the meanwhile the Tapoyers of Rio Grande, (according to Mr. Linge's letter of the 19th of July,) had murdered thirty-five Portuguese in the sugar-mills of Kunha, who being of the number of those that had surrendered their arms, pursuant to the proclamation, this caused no small terror among the rest of the Portuguese thereabouts, and especially in Parayba, where they left their habitations; so that, it being to be feared they would affociate with the rebels, under pretence of felf-defence, Mr. Linge defired a reinforcement of foldiers to keep the Tapoyers in awe. The council therefore commanded Mr. Aftellen and Captain William Lambert, with his company of foot, besides twenty fuzileers, and a detachment of fifty men out of the garrisons of Parayba and Rio Grande, to take care of the Tapoyers, and to conduct them to the Receif; Jacob Rabbi their commander was ordered to march along with them, and Rudolph Baro appointed to provide them quarters upon the road.

Haus having by this time fufficiently refreshed his troops, writ a letter, dated the first of August, to the council, in which he defired their orders to go in quest of the rebels, and to attack them before they could be reinforced with their expected fuccours; which being granted him, he attacked them in D'Ingenio of Balthazar Moreno, with such fuccess, that he beat them from place to place, till on the 3d of August they retired to their intrenchment upon a high steep hill, accessible only in one place. Notwithstanding which, he, relying upon the bravery of his foldiers, and hoping thereby to put an end to the war, attacked them vigorously in this advantageous post; but the rebels being superior to him both in number and in the strength of their camp, his forces were repulsed with the loss of one hundred men (fome fay five hundred), among whom was Captain Lor. After this defeat, Haus, being fensible that the enemy expected daily a fresh reinforcement from the Bahia, retired to the Receif, where he knew his troops were absolutely necessary for the defence of the place.

On the first of August, Gonfalvo Kabral de Kaldos was by the court of justice condemned to death, having, at the infligation of John Fernandes Vieira, undertaken to head the rebels in the captainfhip of Goyana. The fame fate attended one Thomas Pais, an inhabitant of Tienpio, who had endeavoured to raife fome troops for the faid John Fernandes Vieira. The fame day the great council received advice out of Serinham, (the letters being fent privately in the night-time in a finall boat down the river to the fea-fide,) that the rebels began to be very numerous thereabouts, that they were mafters of the river, had ftaved all the boats, and plundered D'Ingenio Formofa, where they carried away the negroes, and killed the beafts belonging to the Dutch, but fpared The council being fenfible that nothing but force would be those of the Portuguese. able to reduce thefe rebels to their duty, and that they were from time to time reinforced from the Bahia, whereas the Dutch troops diminifhed daily, they refolved the first of August to fend Mr. Balthafar Vander Voerde, counfellor of justice, to Holland, to represent to the council of Nineteen there the true state of the affairs of the Dutch Brazil, and to folicit prompt fuccours. Accordingly the faid Mr. Vander Voerde having taken his leave of the council, fet fail the next day with the reft of the fhips that lay ready to fail for Holland, being initructed with fufficient power and credentials from the council, as follows:

Mr. Vander Voerden sent with a Credential into Holland.

"Moft noble, honourable, and moft prudent Lords,

"Notwithstanding the rebels make not the least use of the royal authority, but cover their revolt with the cloak of godly liberty, we were always of opinion that this rebellion

lion of our Portuguese inhabitants has not only been undertaken with the confent of the King of Portugal, or at least of his governor of the Bahia, but also encouraged and fomented by his authority and conduct : for how can it be fuppofed that Kamaron, Henry Dias, and the other ring-leaders, should have dared to attempt to attack us by force of arms without his approbation ? It was likewife our conftant opinion, confidering the prefent unfettled ftate of Portugal, and the alliance betwixt that King and the ftates of Holland againft Spain, that he would be fure never to acknowledge the transactions of the heads of the rebellion, and the fuccours fent them, to have been done by his authority, left the breach of faith and all its ill confequences might be one time or other laid at his door, till he thought himfelf fure in the entire conquest of the Dutch Brazil. Our guess has fince proved more than too true; for Antonio Telles de la Sylva, governor of the Bahia, (as is evident from his answer to our letters here inclosed) denies to have had the leaft knowledge, much lefs any hand, in the contrivance or conduct of this confpiracy; laying the blame of this infurrection upon their ring-leaders, who refufed to obey his orders, and offering to fend certain commissioners to appeale the fury of the rebels; and in cafe they fhould refuse to comply, to force them by the King's authority to lay down their arms. But how little agreeable this offer of putting an end to this rebellion, is to his real intention, is apparent out of the report made by Mr. Vander Voerde and Captain Dieterick Hoogstraten, under-written by their own hands; in which you will find these express words of the governor: ' That the Brazilians and negroes were difbanded by His Majefty of Portugal's particular order.' The abstracts of the feveral inclosed letters fent from the Bahia, and taken from the meffenger by our forces in Seregippo, will put it beyond all doubt, that feveral inhabitants of the Bahia, and among them the bishop himself, had already in May last fome knowledge of the intentions of John Fernandes Vieira, and his accomplices; add to this, the depolitions of Captain Dieterick Hoogstraten, subscribed by himself, concerning the propositions made to him in private, whilft he was managing the company's bufinefs there, in the quality of one of our deputies ; which as it directly contradicts the governor's answer to us, fo it unravels the whole fecret of his real intentions. And forafmuch as all thefe things are fufficient forewarnings to us, that the rebels will be conftantly fupplied from the Bahia, whereas we on the contrary must expect to be weakened more and more in every respect, we judged it abfolutely neceffary and requifite for the fervice of our flate, to fend to you the members of the council of Nineteen, Mr. Balthafar Vander Voerde, counfellor in our court of justice, to give you a verbal account of the deplorable state of our affairs here in a more ample manner than the fame may be expressed in writing, not questioning, but Your Lordships will thereby be encouraged to fend us a speedy and fufficient fuccour, to re-establish our affairs here, and to deliver your faithful subjects from the imminent danger that threatens no lefs than the ruin and lofs of their lives and eftates, and defiring you to give a favourable reception to the faid Mr. Balthafar Vander Voerde.

" Receif, the 2d of Aug. 1645."

Immediately after the departure of the two before-mentioned envoys, Mr. Vander Voerde, and Captain Hoogstraten out of the Bahia, being the 20th of July, the governor, Antonio Telles de Sylva, ordered all the fea and land men that could be got together in hafte, to be embarked in twelve ships ready fitted out for that purpose, with neceffary ammunition, arms, and provision, for the intended invasion. Hieronymo Serrao de Payva had the supreme command over the fleet, as the Colonels Martin Soares Moreno and Andrew Vidal de Nigreiros had over the land-forces, both officers in the fervice 5 н

VOL. XIV.

fervice of the King of Portugal. The orders given to the admiral by the governor, dated the 20th of July, contained in fubftance, that the great council of the Dutch Brazil having notified to him the infurrection of the Portuguefe inhabitants of Pernambuko, he had judged it expedient to equip his fleet, in order to put a fpeedy ftop to those diforders, because he was willing to comply with the faid council's request, in respect of the fincere friendship and correspondency betwixt the crown of Portugal and them, which he had strict orders from His Majefty to observe; whereas it is evident, that the great council of the Dutch Brazil. in their letter to Salvador Korrea de Saa Benavides, of the 13th of August, expressly declare, never to have defired any affistance from the governor of the Bahia, against the rebellious Portuguese inhabitants.

The farther inftructions given to the faid Admiral Payva were, that he fhould directly fleer his courfe from the Bahia to Pernambuko, keeping about twenty or thirty leagues diftance at fea, from the flore; that coming to the tenth degree he fhould approach to the flore, and if he found the wind to blow hard from the fouth, before he came to the before-mentioned height, he flould be very careful not to pass beyond the land's point in the night-time. After having taken a view of the country, he flould, with the advice of his beft pilots, endeavour to land his men in the moft fecure place he could meet with thereabouts, either at Una, Legamar, or Tamandare; being three leagues to the fouth of the ifle of Alexo. But if they could not make any of thefe harbours, they flould enter at Porto Doffer, Nambous, or Lagamar of Marakaipe, lying two leagues to the north of Alexo. But if, notwithftanding all their endeavours, they alfo flould mifs their aim in those places, to make themfelves mafters of Porto de Gallinhas, and to land their men betwixt that place and Barra Grande. After they had landed their men, with the neceffary ammunition and provisions, he flould fet fail to the bay of Pernambuko, in order to deliver with his own hands the governor's letter to the lords of the great council.

Accordingly the faid fleet fet fail towards the latter end of July from the Bahia, and in a few days after arrived in the bay of Tamandare, betwixt the rivers Olna and Formofa, about four or five leagues beyond Alevo and Serinham. They were no fooner come to an anchor there, but the Colonels Martin Soares Moreno and Andrew Vigal de Nigreiros landed the 28th of July one thoufand eight hundred or two ' thoufand landmen, among whom were many reformed officers well appointed, and great flore of arms, ammunition, and other neceffaries.

The 1ft of August, towards evening, three ships with five small vessels appeared in fight of the Receif, steering their course to the north, whereupon the council dispatched their immediate orders to the two ships, the Zoutlandia and the Zealandia, to make all the fail they could after them, to observe what course they steered, and to prevent their landing of men. About the same time an advice-boat arrived from Admiral Lichthart, with letters to the council, intimating, that he had seen the faid ships, and that he supposed their intent to be, to land some men on the south of the cape of St. Austin, for which reason he desired them to fend him some ships, and grant him leave to take as many of the garrison of St. Antonio as he should judge necessary to attack the enemy; of all which immediate notice was given to the northern parts, to be upon their guard against any fudden supposed.

But the next following day those fhips being got out of fight, feveral masters of fmall veffels, that had been near them at fea, reported, that they were heavily freighted fhips, which by the strong north winds were forced near the shore, so that it was concluded that they had steered their course towards Portugal.

Immediately

Immediately after, Admiral Payva fet fail from the bay of Tamandare, and meeting with the fleet under the command of Admiral Salvador Korrea de Saa Benavides, which was latterly failed out of the port of Rio Janeiro, he returned with him into the faid harbour, and on St. Lawrence's day with their joint forces failed from thence towards the bay of Pernambuko.

The first news the council received of it was on the 11th of August, by a master of a fmall veffel, called John Hoen, bound for Seregippo del Rey, and by commiffary John Barentz, with advice that they had feen a fleet of twenty-eight or thirty fhips off Una, or Rio Formofa, and that three of them had purfued them, and difcharged fome of their guns upon them. Much about the fame time they received letters from Major Hoogftraten, from the cape of St. Auftin, and the fort Vander Duffen, intimating that Andrew Vidal, Henry Dias, and Paul de Kunha were landed at Una, and marching to Serinham, had made themfelves mafters of the place, where they had given quarter to the Dutch, but cut to pieces all the Brazilians. The council hereupon took immediate care to fend fome ammunition and provisions to the faid cape, having already, for the better fecurity of that place, ordered Mr. Ley and Mr. Hoek, two days before, to leave the fort of St. Antonio, and to retire with the garrifon to the cape of St. Auftin, before they were enclosed by the enemy. That two fhips, the Deventer and the Elias, which were in the harbour unlading their goods and provifions brought along with them for the fervice of the company, were ordered to be equipped immediately, in order to join with the other five flips that lay at anchor in the road, viz. the Utrecht, the Zealandia, Ter Veer, the Zoutlandia, and the Golden-Doe. The fame night advice of all that was paft was fent to Colonel Haus, with orders to be upon his guard, and to retire with his troops to the fugar-mill belonging to Mr. Hoek, or any other convenient place, from whence he might be able to maintain a communication with the Receif. Letters were also dispatched to Mr. Dormont in Itamarika, to Mr. Carpentier in Goyana, and Mr. de Linge in Parayba, to advertife them of the enemy's arrival.

To fupply the want of feamen, many labourers were prefied on board the fhips, as were likewife thirty-five land-foldiers of Moucheron's company, who had fpoiled their feet by their laft long march; and out of the fhip Elias were a thoufand pounds of gunpowder, and out of the Douchter fix hundred, fent afhore for the use of the garrifon.

Not long after dinner-time the enemy's fleet, confifting of twenty-eight or thirty fhips, appeared in fight of the Receif, where they caft anchor to the north of four of our fhips and a yacht, which lay in that road; fo that the next following night was fpent in ballafting the two fhips, the Elias and Deventer, and in fitting them for the fea. The next morning with break of day, the Portuguefe admiral who carried the white flag, fent Martinho de Rebeira and Balthafar de Caftilho, as his deputies, aboard the Dutch admiral Cornelius Lichthart, who brought four letters, viz. two from the governor of the Bahia, Antonio Telles de Sylva, the first dated the 21st, and the fecond the 22d of July; the third from the Portuguefe admiral, Salvador Korrea de Saa Benavides, and the fourth from Jeronymo Sarrao de Pavia, dated the 12th of August; befides another letter from the before-mentioned governor, directed to John Fernandes Vieira, Anthony Kavalkanti, and the other heads of the Portuguefe rebels.

Admiral Lichthart carried the faid deputies afhore, in order to deliver the letters to the council; which being translated, were read at the meeting of the council the 14th of August, as well those of the governor from the 21st, 22d, and 24th of July,

5 H 2

as from Salvador Korrea de Saa Benavides, commodore of the Portuguese fleets, and Jeronymo Sarrao de Pavia, who had landed Andrew Vidal with his men near Rio Formosa.

The first letter was as follows :

The first Letter.

"Purfuant to Your Lordfhips' letter, and the propositions made in your behalf by your deputies, Mr. Balthafar Vander Voerde, counfellor of Justice, and Dieterick Hoogstraten, governor of the cape of St. Austin, in which you requested the recalling of the troops under Henry Dias; I being defirous to fulfil my promife, fent to you in my answer by the most effectual means that I could possibly think of, have fent the two colonels, Martin Soares Moreno and Andrew Vidal de Negreiros (both perfons of unquestionable conduct and prudence), to the captainship of Pernambuko, with full power and instructions to reduce the revolted Portuguese to their due obedience, for which reason also I have fent a letter to the faid rebels, to exhort them to the remembrance of their duty, and to lay down their arms. Which, that it might prove the more effectual, I have fent thither fufficient force, which may be ferviceable to Your Lordships, to reduce those that remain obstinate to reason, and to chase the rebellious troops out of your dominions. I hope that with God's affistance this may prove an effectual means to quench the fire of rebellion, to reftore the peace of Brazil, and to encrease the good understanding and friendship which has been established betwixt both these nations. We recommend you to God's protection, remaining

" Bahia, July 21, 1645.

" Your Lordships' affectionate fervant,

ANTONIO TELLES DE SYLVA."

The fecond letter of the faid governor to the council runs thus :

The fecond Letter.

" I have difpatched my orders to Colonel Jeronymo Sarrao de Pavia, captain-major of our fleet (which I have fent to your affiftance), to deliver thefe prefents to you, immediately after the landing of the forces aboard the faid fleet, and to offer in my name all the affiftance he is able to give you, purfuant to my command and Your Lordfhips' requeft. I am very ready to embrace this opportunity to give you thefe marks of my zeal for your welfare, efpecially in contributing what in me lies to the reducing of your revolted fubjects to their obedience. Neither do I in the leaft queftion, but that by this expedient the flames of an inteffine war will be quenched, beyond all hopes of being ever rekindled hereafter; and that I fhall have the fatisfaction of having been inftrumental to anfwer the expectation of Your Lordfhips, purfuant to the propofals made to me upon that account in your behalf. So recommending you to God's protection, I reft

" Your Lordships' affectionate fervant,

" Bahia, July 22, 1645.

ANTONIO TELLES DE SYLVA."

Befides thefe he fent another letter by Don Salvador Korrea de Saa Benavides, admiral of the Portuguele fleet, directed to the council of Dutch Brazil, as follows: The

The third Letter.

"Whilft I was endeavouring to fatisfy the requeft made to me by your ambaffadors, and bufied in embarking the forces defigned for your fervice, under the command of the two colonels Martin Soares Moreno and Andrew Vidal de Nigreiros, together with Colonel Jeronymo de Payva, captain-major of the faid forces, Salvador Korrea de Saa Benavides, admiral of this flate, and a member of the council of transmarine affairs, eftablished by authority of the King my master, happened to arrive, by God's peculiar direction, with his fleet from Rio de Janeiro, in the Bahia, in order to conduct them to Portugal. But being defirous to redouble my efforts, as well in the conduct of his perfon as in the ftrength of his fleet, to render the whole more ferviceable to Your Lordships, I thought convenient to fend the faid admiral, with the fleet under his command, in conjunction with the reft, to the revolted captainship; not questioning, but that, by his prudent conduct and authority, he will be very inftrumental in reftoring the peace in your dominions, according to our utmost wishes; and I live in hopes, that this may ferve as real demonstrations of the good understanding and friendship I am willing to cultivate betwixt thefe two ftates, both as a just friend and good neighbour. I recommend you to God's protection.

" Bahia, July 25, 1645.

"Your affectionate fervant,

ANTONIO TELLES DE SYLVA."

The chief contents of thefe letters tended to perfuade the great council of the Dutch Brazil, that the governor of the Bahia had, purfuant to the requeft made by the deputies of the faid council to him, fent certain land-forces under the command of the two colonels Martin Soares Moreno and Andrew Vidal de Nigreiros, aboard the fleet commanded by Jeronymo Sarrao de Payva, in conjunction with the whole fleet of Rio de Janeiro, under the conduct of Admiral Korrea, to affift them both by fea and land, as is evident from the words of the preceding letters : he alfo requefted by his deputies, viz. Captain Martinho de Rebeira, and Auditor-general Balthafar de Caftilho, that the great council would be pleafed to acquaint the King his mafter with it, in a particular letter from them to His Majefty.

What deferves our particular obfervation in his letter to John Fernandes Vieira, and the reft of the rebels, is, that he calls them the King's fubjects, unto whom he has fent this fuccour for their defence; yet with this reftriction, in order to reduce them by all gentle means to their former obedience to the Dutch government. It being evident, that the propositions made by our deputies to the Governor Telles, tended to no other purpofe than to engage him to recal Kamaron and Dias, and fuch others as were come to join with the rebellious Portuguese, out of the Dutch Brazil, and, in case of refusal, to declare them rebels and enemies of the King of Portugal; but he, directly contrary to the intention and request of the faid council, had, instead of recalling them, fent these forces to their fuccours; and, instead of leaving them to the disposal of the council, had caufed them to be landed in a remote place, where the faid Kamaron and Dias were with their forces at that time. Neither was the council ignorant of their intention, in fending a fleet into the road of the Receif at this juncture ; tending to no other end than to back the revolted rebels in their defign, and to encourage the reft to take up arms against them.

The council was fully fatisfied as to this point, when they received advice from the cape of St. Auftin, that the garrifon of Serinham had been forced to furrender to Andrew Vidal after his landing thereabouts.

Their

Their chief debate then turned upon this point, by what means this fleet might be removed from the road of the Receif and our coafts; confidering, that the whole naval force of the Dutch then ready to fail, confifted only in five fhips, viz. the Utrecht, Zealandia, Ter Veere, Zoutlandia, and the Golden-Doe, not very well manned, and but indifferently provided with ammunition, efpecially with gun-powder, and few foldiers could be drawn out of the neighbouring garrifons; whereas the Portuguese fleet confifted at leaft in eight or ten flout fhips, the admiral being a two-decked fhip, refembling at a diftance one of their large galleons; fo that the attacking of them appeared to be a hazardous enterprize. After mature deliberation, it was unanimoufly refolved in the faid council, to return thanks to the Admiral Salvador Korrea de Saa Benavides, for the offered fuccours against the rebels, and to tell him the reafons that obliged us to defire him to retire with his fleet out of our road, as will more at large appear out of the following letter: it was thought convenient to difpatch the faid letter immediately, and whill we flaid for his answer, to use all possible diligence in equipping the two before-mentioned fhips, the Deventer and Elias; that if the Portuguese refused to comply with the council's requeft, we might be in a condition to attack them, and to drive their fleet from our coaft, without which we faw but little probability to make our party good against the rebels, as long as they were backed by constant supplies from the Bahia. It was alfo taken into confideration, whether it were not expedient to detain one of the Portuguese deputies till fuch time that Jeronymo Sarrao de Payva should, according to the request of the council, come ashore in the Receif; but this proposition was rejected, for fear of furnishing the Portuguese with a new pretence of staying in our road : Mr. Gilbert de Wit and Henry Moucheron, both members of the council of justice, being ordered to carry the faid letter, they went aboard the Portuguese admiral the fame evening, unto whom they delivered the following letter to Salvador Korrea de Saa Benavides.

A Letter from the Council to the Portuguese Admiral.

"We understand, both out of Your Lordship's letter, and those of the Governor Antonio Telles de Sylva, delivered to us by Captain Martin de Rebeira, and the Auditorgeneral Balthafar de Caftilho, as also by the verbal affurances given to us by them in your behalf, that your coming with the fleet into our road is with no other defign than to affift us with your authority and council in bringing the rebels to reafon, for all which we return our hearty thanks to Your Lordship. But at the fame time we cannot forbear to reprefent to you, that the coming with fo confiderable a fleet at this juncture, gives us no fmall caufe of jealoufy, not only becaufe we never requefted any fuch affiftance, but alfo by reason that inflead of recalling Kamaron and Henry Dias with their troops, the two colonels Andrew Vidal and Martin Soares Moreno, have, under pretence of reducing the rebels to obedience, landed their men and ammunition without our knowledge, in a far diftant place, and, confequently, for the defence of the revolted Portuguefe; whereas (purfuant to His Excellency the Governor's promife to us) this reduction might have been much better obtained by a fevere proclamation, to oblige them to return to the Bahia; or at least the before-mentioned colonels ought to have made their first addreffes to us. These proceedings have, contrary to Your Lordship's intention, drawn this ill confequence after them, that many of the inhabitants, imagining no otherwife than this fleet was intended for the affiftance of the revolted Portuguese, have also begun to take up arms, in order to join with them; which obliges us to return our thanks to Your Lordship for the offered fuccours, defiring you would be pleased, with all possible speed, to retire

79°

retire with the fleet out of the road; which, as it will undeceive the inhabitants concerning the finister interpretations of Your Lordship's intentions, fo it will ferve as an effectual means to keep them in quiet, which at this juncture will work upon us a fingular obligation. What relates to Your Lordship's request to take in fresh water and fuel here, being ill-provided with both by reafon of your fudden departure from the Bahia, we fhould be very ready to comply with it, were it not for the before-alleged reafons, and the badness of the feafon, which would make it very tedious, which obliges us to beg your excufe for this time upon that account. His Excellency Antonio Telles de Sylva having told us in his letter that he had ordered Jeronymo Sarrao de Payva, immediately after the landing of the infantry under Martin Soares Moreno and Andrew Vidal, to give us in perfon a full account with what power he was inftructed by His Excellency, we defire Your Lordfhip to fend the faid Jeronymo Sarrao de Payva without delay to us, to confer with him concerning the inftruction he has received from His Excellency, in relation to the fending and landing of thefe officers and land-forces. For the reft, we refer ourfelves to our deputies, counfellors in our court of juffice here, unto whom we defire Your Lordship to give full credit, proportionable to their own merits and the truft we have repofed in them. God protect Your Lordship.

" Signed by

HENRY HAMEL, A. VAN BULLESTRAET, P. J. BAS, / J. VAN WALBECK, G. DE WIT, J. ALBRECHT, HENRY DE MOUCHERON, J. VAN RAESVELT, and J. C. LICHTHART."

" Receif, Aug. 13, 1645.

This letter was pitched upon by the before-mentioned great council, as the best expedient at this juncture, till, by the conjunction of the Deventer and Elias, we might be put in a probability of diflodging them by force, if they refufed to retire at the council's requeft.

The 14th by break of day, we faw the whole Portuguese fleet under fail, and for the most part out of fight; and confidering that the two boats, which carried both ours and the two Portuguese deputies, would scarce be able to overtake them, and that our deputies in their return were to give an account to our admiral on board his thip, whether, purfuant to the council's letter, the Portuguese admiral had confented to send Jeronymo Sarrao de Payva to the Receif, in order to open his instructions to the great council, which they had now all the reafon to believe he would not, they difpatched immediate orders to our admiral Lichthart, to make all the fail he could with the ships under his command, after the Portuguese, to observe their motions, and to endeavour to come up with the flag ship, on board of which was the faid Jeronymo Sarrao, to defire him to return with his fhips to the road of the Receif, in order to confer with the council in perfon, concerning his inftructions. But after mature deliberation, the whole proceedings of the Portuguese, and the letters of the governor of the Bahia concerning the pretended reduction of the rebels, being looked upon as mere amufements, orders were fent to our admiral Lichthart, to oblige all the Portuguele ships he could meet with, to strike, and to treat them for the future like enemies.

The 28th of August, the council was advertised by letters dated the 20th, at the fort of St. Margaret in Rio Grande, from the governor de Linge, that twelve of the enemies ships, after having landed fome forces near Tamandare, were come into the bay of Traikona; and that according to the deposition of a certain Portuguese prisoner from on board the faid fleet, they intended to land likewise fome men thereabouts, provided they might be joined by the rebels from the Matta; but if they failed to come, they would return to the Bahia. Whereupon orders were fent to Mr. de Linge, to bring what forces he was able together, either of foldiers, Tapoyers, or Brazilians, to prevent their landing, and their conjunction with the rebels in that captainship.

The next thing under debate was, whether it were not convenient to fend fome fhips under the command of Admiral Lichthart that way, to attack the Portuguefe; after various confultations, it was agreed, to ftay until all the fhips might be got ready for that fervice, to fupply the want of feamen by good able labourers from the Receif, and fo to render ourfelves as formidable at fea as poffibly could be.

In the meanwhile, the faid Admiral Lichthart fet fail the 1ft of September with four fhips and a yacht only, he himfelf being in the Utrecht, but was forced by ftrefs of weather (in which the Zealandia loft a maft), and for fear of the rocks, to come to an anchor not far from the Portuguefe, who endeavoured to gain the wind of him. Mr. de Wit and Moucheron returned alfo with their boat, having not been able, by reafon of the violent winds to overtake the Portuguefe, but had put their deputies on board a fmall veffel to fail after their fleet.

The fame day the council received letters from Mr. Hoogftraten, Ley and Heck, from the cape of St. Auftin, that the enemies had pofted themfelves in the fugar-mills Salgado, Surhague, and other places thereabouts; and becaufe the Portuguefe fleet, which had been feen off the bay of Traikona, appeared again in fight of the Receif the fame evening, it was thought expedient to order Admiral Lichthart immediately to go on board the Utrecht, and with that and the fhip Ter Veere and two fmaller veffels, to keep a watchful eye over the Portuguefe: care was alfo taken to get the fhip the Overyffel ready againft next day, not queftioning that when joined by this and the Zoutlandia and Golden-Doe, which were fent abroad for intelligence, they fhould be able to cope with the Portuguefe, or at leaft to force them out of the road. The next morning early, the Portuguefe fleet might be plainly difcovered from the Receif, but our admiral was not able to ftir by reafon of the contrary winds; neverthelefs the Zoutlandia and the Ter Veere, which came from the fouth a cruifing, made all the fail they could to efcape the Portuguefe, which they did, being much the nimbler failors, and joined our fleet.

The 4th of September, Major Bayert and Mr. Volbergen complained to the council, that Mr. Vierbergen, Count Maurice's fteward, had made it his bufinefs to give it out, that they being impowered to cut down certain trees, and fome part of the ftabling and gardens, for the better fortifying of the fort Erneftus, had tranfgreffed their commiffion, in cutting down many of the great trees, with an intention, as he faid, to ruin the whole plantation; whereas they declared, that they had been very careful in preferving as much as poffibly could be, all the largeft cocoa-trees that ftood not in their way; that by thefe rumours, the rage of the populace had been raifed to that pitch that they had much ado to appeafe them, they being for the cutting down not only of all the trees, but alfo for the pulling down of the whole palace of Count Maurice; all which they defired to be registered in the public records, to ferve them for a legal defence in due time and place.

In the mean-time our Admiral Lichthart being gone out in purfuit of the Portuguese fleet, met with them in the bay of Tamandare, confifting of feven ships, three smaller veffels, and four barks, the reft being fent loaden with fugar to Portugal. He was not as yet joined by all the fhips from the Receif; but being refolved not to let flip this opportunity of attacking the enemy, fent the 7th of September advice to the great council, that being come in fight of the enemy's fleet near the bay of Tamandare, confifting in all of eleven veffels, he was refolved to attack them there, defiring them to fend as many fhips as poffibly they could immediately. Hereupon it was refolved to join the two fhips the Deventer and Elias, with the Unicorn and Leyden, then lying ready in the road and bound for Holland, and fuch tenders as were at hand, and to fend them forthwith to the Admiral Lichthart. Purfuant to thefe refolutions, the whole next following night was spent in manning the faid ships, but were the next morning detained for fome time by the contrary winds.

The fame day orders were given to all the foldiers and inhabitants of the ifle called Antonio Vaez, to provide themfelves with bafkets filled with earth; and palifadoes were planted from the point of the Receif next to the river, to the utmost point near the fea-fide, and five great guns were planted upon a certain wreck, from whence they could command the fea-fhore as far as to the fort of five baftions.

The 8th of September, the Dutch admiral having ordered the red flag to be put up, boarded the Portuguese admiral carrying fixty guns and three hundred men: he behaved himfelf very valiantly, having posted himfelf at the entrance of his cabin with a flaming fword in his hand, wherewith he killed three or four, but having received feveral wounds, was at laft forced to yield. The reft of the fhips following the example of their admiral, had likewife boarded the Portuguese ships; but these seeing the flag taken down from the admiral (a difinal fignal of her misfortune), they loft all hopes, and threw themfelves headlong into the fea, to escape the fury of the fire and fword; whither being purfued by the Dutch in their boats, many perifhed before they could reach the shore. Above seven hundred Portuguese were killed in this action, besides a great number of prifoners, among whom was the admiral himfelf: three ships were taken and fent to the Receif; the reft were fet on fire, being not in a condition to be carried off, becaufe they had cut their cables and were run afhore, where the Portuguese had planted fome cannon upon batteries, which fo annoyed our people, that fearing they might run aground within the reach of the enemy's cannon, they fet fire to them, and with much ado got their fhips clear from among the fhelves. After this engagement I returned to the Receif to take care of my affairs there, and the admiral fent an express in a fisher-boat, with the following letter to the council of the Dutch Brazil:

A Letter from the Dutch Admiral to the Council.

" No fooner were the fhips Leyden, the yacht, and the Doe, arrived laft night, near the point of Tamandare, but purfuant to the refult of the council of war, it was refolved to enter the next morning within the bar, which was performed in the following order : first the ship the Utrecht admiral, second the Ter Veere, third the Zealandia, fourth the Overyfiel, fifth the Zoutlandia, followed by the Doe and Leyden, and the yacht, the Unicorn; the tenders being ordered to be at hand as occasion should require. Being come within the bar, we found the enemy feven fail ftrong, befides three fmall veffels and four barks; and that they had planted feveral pieces of cannon upon two batteries on the fea-fhore. We received a very warm falute both from their fhips and batteries, and feveral vollies of fmall fhot; notwithstanding which, the ship the Utrecht courageoufly

VOL. XIV.

oufly laid the Portuguefe admiral on board, after a fhort but fharp difpute took the fhip and the admiral's flag: to be fhort, the reft of our fhips behaved themfelves fo well, that foon after they forced the Portuguefe to quit their fhips; God be praifed for this victory. Jeronymo Sarrao de Paiva the Portuguefe admiral is our prifoner, and at prefent in my fhip, being forely wounded, whom I intend to deliver up to Your Lordfhips fo foon as I fhall come to the Receif; in the mean-while, I intend to fend back the Leyden and the Unicorn to-morrow morning, according to Your Lordfhips directions. And forafmuch as there is likely to be no more action hereabouts, the enemy having ftrengthened themfelves near the fea-fhore, I will the firft opportunity return to the Receif, where I hope to give in perfon a more ample account of the whole action; I recommend Your Lordfhips to God's protection. In hafte,

"Your Lordfhips' fervant,

"From the ship the Utrecht, within the bay of Tamandare, September 9,

" 1645."

The Portuguese admiral Sarrao de Payva, in his letter dated the 18th of September, gave the following account of his engagement to the two colonels Martin Soares Moreno and Andrew Vidal Negreiros :

The Portuguese Admiral's Letter to Andrew Vidal.

" It being the general difcourfe here in the Receif, which is likewife come to my ears, that it is reported by you there how the Dutch admiral, John Cornelius Lichthart, did before the beginning of the laft engagement enter the bay with a white flag, thus furprifing our people, killed many of them in cold blood. I thought myfelf obliged to acquaint you, that indeed two days before the faid engagement a yacht and a bark with white flags appeared at the entrance of the bay; at which one of our fmall veffels and a bark fhot three cannon-fhot. But that day, when the admiral entered the faid bay, he had put up both the Dutch and red flags. Neither is it true what had been faid of their killing our men in cool blood, there being not one man flain aboard my fhip, but during the heat of the engagement, five or fix that had hid themfelves below deck having received quarter, and a foldier forely wounded, ordered immediately to be looked after with all care imaginable. Neither was there a ftroke given after the yielding of the thip, but every body treated and provided for according to his quality and prefent necef-The reafon why fo few had quarter given them was, becaufe most leapt overfity. board, the feamen first, and then the foldiers; I being not able with fword in hand to keep them from chufing rather to perifh in the fea than to fland it out aboard the fhip. Two or three perfons of note feeing me forely wounded, freely gave me quarter, without knowing either my perfon, or being afked it by me; a convincing argument that they would not have refused the fame to all the reft that would have begged quarter. I must confess myself fo much obliged to the humanity and generofity of the admiral, that it is not to be expressed in writing. Befides that, it is unquestionable that we first shot at them, both from our fhips and batteries near the fea-fhore. I have given you a true account of the whole matter, of which, as I have been an eye-witnefs myfelf, fo I do not queftion you will give an entire credit to what I have written to you on this account. God protect you for many years.

"Receif, Sep. 18, 1645.

JERONYMO SARRAO DA PAYVA."

CORNELIUS LICHTHART."

Andrew

Andrew Vidal fent a letter in anfwer to this by one of our drummers (fent to the enemy upon fome errand), dated the 20th of September, as follows:

His Answer to the Admiral's Letter.

"We are fufficiently fatisfied by Your Lordship's letter, that, instead of being entertained according to your merits, you receive the fame ill treatment with the reft of our countrymen; though, confidering that your cafe is different from the reft, you ought to have been treated in another manner, Your Lordship being come without the least intention of waging war against them, (which they ought to have made due reflection upon,) but only as you were going to convoy fome fhips homeward, did at their own requeft land our forces in that captainship; confidering the ill usage and tyrannies our Iubjects have received at their hands, we are afraid we cannot promife Your Lordship a much better entertainment; of all which murders, committed in cold blood, we have taken fo circumftantial an account, that we are fure we shall be able to justify our cause and ourfelves, both to the ftates of the United Netherlands and the reft of our allies; for we have fifhed up many of our Portuguese with bullets and stones tied to their legs and necks; fome had the good fortune to be faved as they were fwimming afhore, but many were burnt alive in the wrecks of the fhips; the intention of thefe gentlemen being without queftion, by making fo general a flaughter among their fellow-chriftians, to cut us from all hopes of returning home: of all which they will be obliged to give one day a fevere account, both to God Almighty and those who shall require fatisfaction for it at their hands, it being our conftant opinion that they never will be able to justify their cruelties, and the mischief done to our people, either before God or the King We hope Your Lordship will rest fatisfied in this present condition, and our master. put your truft in God and our King, who are still alive to demand a fevere fatisfaction from them. God protect Your Lordship.

" From our quarters at St. John in the Vergea, Sept. 29, 1645.

" (Signed) ANDREW VIDAL DE NEGREIROS."

A certain lieutenant belonging to the enemy, called Francisco Guomes, came along with the fame drummer, with a letter from the faid Andrew Vidal directed to the great council, the contents of which were as follow:

Andrew Vidal de Negreiros's Letter to the Great Council.

" I received Your Lordship's letter at Iguarafu, wherein you feem to be extremely difgusted at the killing of some Brazilians, with their wives, by our foldiers, under pretence that the absolute command over them belongs only to you; which I cannot but be much furprifed at, when I confider that Your Lordships in your proclamation, wherein you command not to give quarter to any Portuguese inhabitants, though natural subjects of the King my master; you alledge, among other reasons, because they had received their birth and education in this captainship (which, however, was first conquered by the Portuguese kings at the expence of many of their subjects), whereas now you would impose this hardship upon the same inhabitants, to give quarter to these Brazilians, who not long ago have been maintained and instructed in the Catholic faith, as being their vaffals, and confequently not your's, but the King my master's subjects. Your Lordships ought to remember, that you are not in possession of this country by right right of fucceffion, or any other legal pretenfion, but bafely by force of arms. We defire Your Lordfhips to take effectual measures concerning the methods to be observed in the carrying on of this war, which we hope will be managed to by your prudence as that quarter may be allowed to the inhabitants of our nation; if not, I shall be obliged to act as I find it most confistent with my honour, to take fatisfaction for these injuries. We defire also to put a stop to the murdering of the women, children, and ancient people, in cool blood, as has been done lately at Tihicupapo, Rio Grande, and Parayba. God protect Your Lordships.

" (Signed)

ANDREW VIDAL DE NEGREIROS."

The great council returned, with the confent of the members of the court of juffice and Colonel Garfman, an immediate anfwer to the faid letter, wherewith they fent the faid lieutenant, in company of the drummer, back the fame evening.

But we must look back to their proceedings: after Andrew Vidal de Negreiros and Martin Soares Moreno had landed their men, to the number of eighteen hundred or two thousand, the 28th of July 1645, with good store of arms and ammunition, near Tamandare, betwixt Olna and Formola, they were foon after joined, not only by four companies which had taken their way by land from the Bahia, but alfo by the troops under the command of Kamaron and Henry Dias, who had hitherto kept Porto Calvo blocked up by their forces. From thence they directed their march to the city of Serinhaim, and laid fiege to the fort in which there was only a garrifon of eighty Dutch foldiers and fixty Brazilians, commanded by Samuel Lambert and Cofmo de Moucheron. Two days after their arrival near Serinham, the enemy posted themselves in the D'Ingenio of Daniel Hohn; about which time Henry Dias was feen in Serinham, notwithstanding the Portuguese commanders Andrew Vidal and Moreno difowned to have any correspondence with them at that time. The faid commanders had also fent the Captain-major Paulo de Kunha before to fummon the faid fort, which he did accordingly by his letter dated the 2d of August, at the fugar-mill of James Peres, and directed to Samuel Lambert.

The Summons fent to the Fort of Serinham.

" I am come to this fugar-mill by fpecial orders from Martin Soares Moreno and Andrew Vidal Negreiros, our governors, they being very bufy at prefent in landing their men; they have fent me before to prevent all mifchief that otherwife might happen betwixt you and us; and if in the meanwhile you will join your forces with ours, or retire with them to fome other place, you may fafely do it, I being ready to furnifh you with pafles for that purpofe, the before-mentioned governors being come with an intention to put a ftop to the prefent infurrection. God protect you.

" From the fugar-mill in St. Antonio, August 2, 1645.

PAULO DE KUNHA."

Two days after, the before-mentioned commanders-in-chief fent another letter to Samuel Lambert, very little different from this.

A second

A fecond Summons from the Portuguese Commanders.

"We fuppole you not to be acquainted with the intention of our coming, which makes us to be the lefs furprifed at your ftanding upon your defence. The great council of the Dutch Brazil have fent an embaffy to our governor-general by fea and land, Antonio Telles de Sylva, to defire His Excellency to make use of his authority and forces to appeale the infurrection in this captainship, which request being readily granted, in order to be ferviceable to the council, and to free the Portuguese from the outrages they fuffered in their houfes and families, we were fent to land our forces near thefe fugar-mills of Rio Formofa; which having been done accordingly, and ready to march further into the country, we thought fit to acquaint you with our intentions, which in all probability may have reached your ears, the fame having been published in feveral places by our proclamations, of which we fend you one, defiring it may be affixed on the church of Serinham. We defire you therefore to lay by your arms to remove all fufpicion; not queftioning but that we fhall meet with a favourable reception on your fide, as we on the other hand fhall make it our main endeavours to reftore tranquillity among the revolted Portuguese by all gentle means that poffibly may be used; affuring you at the fame time, that in case you refuse to concur with us in this defign, you will caufe no fmall difpleafure to the great council of the Dutch Brazil. God protect you.

" From the fugar-mill of Formola, August 4, 1645.

MARTIN SOARES MORENO, ANDREW VIDAL DE NEGREIROS."

The next following day Paulo de Kunha came in perfon before the place with a body of foldiers and boors, provided with arms from on board the fleet, and after having invefted the place, cut off the water of the fountains and rivers from the befieged. In the meanwhile Rowland Carpentier and Daniel Hohn had been fent away with passes by the commanders of the Portuguese forces, who embarked their heavy cannon on board Carpentier's veffel, in order to carry it up the river Formofa. Within five days of the arrival of Paulo de Kunha, the whole force of the enemy appeared in fight of Serinham in battle array, and clofely blocked up the fort. The Dutch garrifon was inconfiderable in proportion of the enemy's ftrength, who had fo well guarded all the avenues leading to the place, that they were foon reduced to want all manner of neceffaries, especially water. Besides this, many of the circumjacent inhabitants and volunteers went daily over to the enemy, who gave them an account of the condition of the fort; and notwithstanding they had fent feveral meffengers to the Receif, they had heard nothing from the council for two months last past; fo that being without all hopes of maintaining their post, they judged it more for the interest of the company to preferve the garrifon, which might be ferviceable in other places, where there was fufficient want of good foldiers, than rashly to expose themselves to the fury of the enemy's fword: accordingly Samuel Lambert, Cofmo de Moucheron, and La Montagny, who commanded in the fort, upon the fecond fummons made by the enemy, entered the 6th of August into a capitulation with the Portuguese, of which Moucheron gave an account in perfon the 15th of August to the council, and delivered it the 20th of August to them in writing.

"We the Portuguese commanders make known to every body that we were fent into this country at the request of the great council of the Dutch Brazil, to appeal the

the revolt and troubles arifen among the Portuguese inhabitants. But at our landing here, being informed that notwithstanding this request and our good intention, the Dutch had murdered many Portuguese in cool blood (it being evident that they had cut to pieces several Portuguese, who were inticed into a church for that purpose), and that they had formed a camp to oppose us, which ought to be a caution to us, not to leave any strong holds behind us, whilst we are marching towards the Receif, we have thought it necessary to enter into this capitulation, till such time that we may have the opportunity of concerting new measures with the great council, of which the articles are as follow :

" I. The commanders Samuel Lambert and Cofmo de Moucheron fhall have leave to march out of the fort and caftle, with the garrifon, with enfigns difplayed, all their arms, matches burning, &c.

" II. They fhall be permitted to march along the road with their enfigns, and fwords drawn, and fhall be fafely conducted by one or more captains, who also fhall be obliged to provide them carriages and boats, for the transportation of their perfons and goods to the Receif.

" III. The Portuguese oblige themselves to restore to Moucheron all what has been taken from him, and belonged to him before the siege.

" IV. They also oblige themselves to engage the inhabitants of the city as well as those of Kamara, to pass by all pass injuries either by word or deed; and that such of the Dutch as are willing to continue there, shall be maintained in their possessions in the fame manner as the Portuguese are; and shall enjoy the same privileges and their own religion, provided they do not preach in public, and pay due reverence to confecrated places. They shall be at liberty to traffic with the Portuguese, and call in their debts as before, neither shall they be obliged to take up arms against the states of the United Provinces.

" V. The Dutch officers shall reftore to the Portuguese all their Brazilians, with their wives and children, as being subjects of King John IV. whom God preferve; and what relates to their reception and entertainment, is to be left to the difference of the chief commanders of the Portuguese.

"Upon these conditions they shall be obliged to furrender the fort, with every thing thereunto belonging, this afternoon, but are permitted to provide themselves with necessaries for their journey, which they shall have liberty to perform at their own leifure.

" (Signed)

ANDREW VIDAL DE NEGREIROS, Alvaro Fregoso d'Albuquerque, Diogno de Silveira, Lopes Laurenzo, Fereiro Betenkor, Suppolito Abuko de Verkosa, and Sebastian de Guimares."

Immediately after the furrender of the fort, Moucheron entered into a long difcourfe with the Portuguefe commanders, about their proceedings, which he told them were far different from what the governor pretended in his letters, to wit, the appealing of the revolt of the Portuguefe inhabitants, according to the requeft of the great council. They answered him with tergiversations, telling him that they would be very careful not to act contrary to the peace established betwixt the King his master and the States-General.

79⁸

General. But it was not long before they began to lord it over the country, by taking fuch as were in the leaft fufpected to them into cuftody, and taking an account of those of the Dutch that had married Portuguese women; nay, they erected a court of juftice of their own, and forced Moucheron to fell his flaves for the fourth part of what they were worth. They had fo little regard to the late articles, that they caufed thirty Brazilians, part of that garrison, to be tied to the palifadoes, where they were ftrangled; the Portuguese alledged in their behalf, that they had fuffered death for certain crimes they had confessed themselves, though it is more probable they were made facrifices to the discontented Portuguese inhabitants, that had made heavy complaints at the Brazilians. However, about thirty of them were spared, and bestowed upon the officers to carry their baggage, and their wives given to the inhabitants. The Portuguese made Alvaro Fregolo d'Albuquerque governor of the city and fort, and made one Francis de la Tour, a French deserter, captain over forty deserters, who had taken fervice among them.

They also raifed three companies out of the Portuguese boors or inhabitants, commanded by Pedro Fregolo, Ignatius Ferrere, and Immanuel de Mello, which were put into Serinham for the defence of that place, where they also caused two Jews to be baptized, called Jacquo Franco and Isaac Navare. Most of the Dutch who had any possession of sugar-mills thereabouts had safe-guards allowed them, so that none, except two, who came to the Receif, left that captainship, of which they had sufficient reason to repent afterwards, being very ill-treated by the Portuguese, as shall be shewn more at large hereafter.

The 15th of August in the afternoon, the garrifon of Serinham, confisting only of thirty-two men (the rest having staid behind), arrived in a bark at the Receif; and their commander-in-chief appeared the fame day before the council, where he gave an account of the reasons that moved him to furrender the place, notwithstanding which he was ordered to be examined by a court-martial, to answer the fame. The ensign who had conducted the garrifon to the Receif, delivered the fame day a letter to the faid council, from Martin Soares Moreno and Andrew Vidal, dated the 8th of August, intimating that they were come into the Dutch Brazil, by special command from the governor of the Bahia, and exasperating the outrages, they faid were committed by the Hollanders against the Portuguese. This letter had another enclosed from the faid governor, dated the 30th of July, with a proclamation, to be published in the captainsthip of Pernambuko, whereby all the inhabitants were fummoned to appear peremptorily before them, within the space of eight days, to receive their directions for restoring tranquillity among them. The letter from Martin Soares Moreno, and Andrew Vidal was as follows :

A Letter from the Portuguese Commanders to the Council.

"When Your Lordfhips found yourfelves entangled by a dangerous confpiracy among the Portuguefe inhabitants of this captainfhip, you made your applications to Antonio Telles de Sylva, governor-general of Brazil, defiring him to make ufe of themoft effectual means he could to appeafe this rebellion. About the fame time the inhabitants of this country by one unanimous voice implored his aid and protection against those many affronts, plunderings, murders, and ravifhments of women they groaned under; being refolved with joint confent to arm themfelves with flicks (the ufe of arms being taken away from them by their tyrannical governors) against those oppressions, and to defend their honour to the last gasp; not questioning but that God Almighty would take vengeance for

for the blood of fo many innocent people. They reprefented to His Excellency, that he was obliged by his flation to affift them in this extremity, as they were his countrymen; but if that fhould not be prevailing enough, reasons of state would induce him not to force them to defpair by denying them his aid; which if he did, it should be at the peril of his head, and that he must give a fevere account of it before God Almighty, and others, if they should be constrained to beg that from a foreign power which they could not obtain from their countrymen. The governor having taken all these preffing reasons into mature confideration, and in respect both of Your Lordships' request, and the heavy complaints of the Portuguese, made it his chief care to find out the most effectual means (which Your Lordfhips feemed to leave to his difcretion) to appeale this revolt. Being fenfible that the revolt of the Portuguese inhabitants had taken deep root among them, and was likely to prove more univerfal against your government, he judged it most expedient to fend hither certain perfons with fuch forces as he thought might either by their prudence, and if that failed, by force of arms, reftore the fo much-defired tranquility. It is upon this account, my Lords, we are come to this place, in order to employ all our force and affiftance, according to your requeft, purfuant to the peace established betwixt these two nations, in regard of which we value not the expences we have been put to upon this occafion. But we fcarce had fet foot afhore, when our ears and hearts were ftruck with the doleful outcries of forty innocent Catholic Portuguese, murdered in the church of Rio Formola, whither they were enticed for that purpole, by those that were in your fervice, without the leaft respect of age or fex, the very babes being by the natives barbaroufly murdered as they were lying on their mother's breafts. Neither have the fighs and groans of many noble maids efcaped our ears, that were ravified in the Vergea and St. Lawrence, by the Brazilians, not to mention here what barbarities have been committed in Pojuka, where is the fight of many a hermit and innocent babe who were flaughtered in a cave. Neither have they abltained from holy and confecrated places; they have cut to pieces the images of the faints, and ftripped the queen of heaven, the virgin Mary, our bleffed lady, of all her apparel; things fo enormous, and never heard of before, enough to create horror and aftonifhment in a generous heart. And notwithstanding Your Lordships had defired the governor-general to interpofe his authority, you did form a camp, which continues in the field to this day; and we being obliged by our orders to come to you upon the Receif, we judged it not convenient to leave any armed power behind us, which in time might prove the occasion of great inconveniences to us; we shall endervour to fhew all due respect and kindness to your subjects, and carry the garrison of Serinham along with us, until matters may be concerted betwixt Your Lordfhips and us, for the fervice of God and the ftate. In the meanwhile, we most earneftly defire a ftop may be put to the outrages committed by your foldiers hitherto, to avoid all occasion of a rupture on your fide; we protest on the other hand, in the name of God and John IV. the King our master, whom God preferve, as also in the name of the States-General, whole power God encreafe, that we defire nothing fo much as the continuation of the late established peace, which shall be the guide of all our actions; of which we have brought along with us an authentic copy, to ferve us as a fufficient justification by all the princes of Europe. And that Your Lordships may be fatisfied in the reality of it, we have fent you enclosed a copy of the proclamation published by us, at our landing in this captainfhip. God preferve Your Lordfhips.

" Serinham, Aug. 8, 1645.

MARTIN SOARES MORENO. ANDREW VIDAL DE NEGREIROS."

The before-mentioned proclamation runs thus :

Their Proclamation.

" We the commanders in-chief of the Portuguese forces, Martin Soares Moreno and Andrew Vidal de Negreiros, make known to all perfons and inhabitants of the captainfhip of Pernambuko: that the great council of the Dutch Brazil, having by a letter fent to the governor and captain-general of Brazil, given advice of the revolt arifen among the Portuguele of this place, defire to endeavour the appealing of this rebellion by his affiftance; for which purpofe the faid governor now having fent us with a fufficient force into this captainship, we command all the Portuguese, of what condition and quality foever, to appear peremptorily within eight days after the publication of thefe prefents before us, in order to reftore tranquillity among them, purfuant to the requeft of the lords of the council of the Dutch Brazil. We also hereby entreat the faid lords, in the most friendly manner that can be, purfuant to the tenour of the strict alliance there is betwixt both these nations, to stop the further perfecution of the Portuguese, or any other warlike executions, and that if any of their foldiers prefume to act contrary to it, they may, upon complaint made thereof to them, be feverely punished.

" I Alexes Autunes have penned this proclamation, and I Franco Bravo Defembarquador have approved it.

> MARTIN SOARES MORENO. ANDREW VIDAL DE NEGREIROS."

The great council refolved to give a fhort anfwer to the faid letter, and to refute the proclamation by another; and confidering, that the origin and caufe of all those troubles and misdemeanours were laid at the door of the council, they ordered the two counfellors of the court of juffice, De Wit and Moucheron, in conjunction with Mr. Walbeck. affeffor in the fame court, to anfwer the fame, and thereby to reprefent to the council of Nineteen in Holland, that they were occafioned by the rebels and their adherents.

In the month of August, the troops lately come from the Bahia marched from Serinham to Pojuka, and fo to the cape of St. Auftin, where, being joined by the forces under the command of Kamaron and Dias, and the inhabitants, they refolved (after our men had quitted Pojuka and the city St. Antonio de Cabo) to attack the fort Vander Duffen on the cape of St. Auftin from the land-fide; pursuant to which resolution they posted their troops all along both fides the river.

The council in the meanwhile being forewarned of the enemy's defign, had ordered, the 2d of August, Mr. Adrian Bullestraet, one of their own members, and Admiral Lichthart, to go thither with all fpeed, and to take effectual care that nothing might be wanting for the defence of the place. They were for that end to take a full view of the fort Vander Duffen and all its out-works, and to confider whether the redoubt upon the hill called Nazareth, and the battery at the entrance of the harbour, might be repaired for the better defence of the fort. Accordingly Mr. Bullestraet and Admiral Lichthart left the Receif the 5th of August, and arrived the same evening in the fort Vander Duffen, where, having executed their commission, Mr. Bullestraet returned the 9th of August to the Receif, where he gave the following account to the council.

That he left the Receif the 5th of August, in the morning about nine o'clock, and came the fame evening to the fort Vander Duffen on the cape of St. Auflin.

That the 6th of August, after forenoon fermon was ended, he rid with the admiral, and fome other officers, to the hill of the cape of St. Auftin; where, having taken a

VOL. XIV.

view

view of the harbour, he found the ftone redoubt in a condition to be repaired, without any great charge, the cannon upon the batteries nailed up, but the works towards the fea-fide in pretty good order.

That he had ordered a draught to be made, to furround the redoubt with palifadoes, to raife a battery within it, to build a guard-houfe, and to widen the ditches. He had alfo ordered a ftone breaft-work (for want of wood) to be made on the back-fide of the battery, with a row of palifadoes, and a guard-houfe; and that with the first fair weather, they fhould fet on fire all the bufhes and brambles on the faid hill, and clear the ground round about the church Nazareth.

Upon view of the fort Vander Duffen, he had commanded the major Hoogftraten with all poffible fpeed to put it in a good pofture of defence, the admiral having already taken care to have it furrounded with palifadoes. That on the 7th of Auguft, having paid off the garrifon, and those belonging to the artillery, he paffed through very difficult ways to St. Antonio, where he likewife paid off the foldiery, visited the retrenchment, and put every thing in the best order he could.

That he had bargained with certain perfons to repair the faid redoubt on the hill called Nazareth, and the ftone breaft-work, the building of two guard-houfes, and furrounding both the works with palifadoes, according to his draught, for nine hundred gilders, the whole to be completed within three weeks time. Here it was he had the first notice of the landing of fome forces from the Bahia, near Rio Formofa, by the fame fleet which the week before was feen off the Receif. But not being able to get any fure intelligence, he had fent a meffenger to Lieutenant Montangie, then commander in Serinham, to give him a true account of the matter, and in what condition he and his garrifon were at that time; encouraging him by fair promifes, all communication by land being already cut off betwixt them. Here he alfo lifted thirty-eight volunteers that offered their fervice.

That the 8th of August he left the faid place, and notwithstanding the badness of the weather, rid across the hills of Hegendos to the fea-shore, where, meeting with the admiral, they went together up the river Sangado with the tide, as far as Calandaria, where they stayed for some time, and received the news, that in the last encounter betwixt Colonel Haus and the rebels near that hill, above two hundred of the last, among whom were some officers, were flain, and about forty or fifty on our fide. One Melchior Alvares came on purpose to tell them, that about three hundred of the revolted inhabitants were inclined to accept of a pardon, which he referred to the council.

That being ready to take horfe in order to his return to the Receif, a certain foldier of our troops, that had been left behind, complained that he had been ftripped ftark naked by the fervants of the ferryman of the river Sangado, who had wounded and beat him miferably. Melchior Alvares was ordered to take care of his wounds, and Captain Piftor to go with twenty of his men in queft of thefe villains; who, coming to the ferry, befet the houfe, took the ferryman and his three fons prifoners, but the mulat, who had committed the fact, efcaped their hands.

That he purfued his journey on horfeback towards the Receif, notwithftanding the violent rains, and not without great danger paffed the river the fame night near the fort Emilia.

That on the 9th of August he was advertifed by some negroes belonging to Moses Navarre, whom he had sent with letters to D'Ingenio Surfacque, that an ambust had been laid for them near Candalaria, but the enemy durst not attack them, their negroes being all such as were taken prisoners, and afterwards made their escape to us.

Major

Major Hoogstraten fent advice by his letters on the 13th of August, to the council, that the garrifon and volunteers of St. Antonio being fafely arrived on the cape of St. Auftin, they were now about two hundred and eighty ftrong, viz. two hundred and feventeen foldiers and gunners, and fixty-three volunteers. That immediately after our garrifon had left St. Antonio, Kamaron and Henry Dias had posted themselves with their troops in the fugar-mill Algodais, near that place, where they expected to be joined by Martin Soare's and Andrew Vidal's forces, fafely arrived from the Bahia. That he expected every day to be befieged, and feared nothing fo much as want of fresh water, the spring being cut off by the enemy. Hereupon immediate orders were given by the council to fend thither thirty barrels of water, fome ammunition and provision, and what elfe should be requisite for a vigorous defence of the place, which was fufficiently provided before with foldiers. The next following day they received intelligence from Major Hoogftraten, Mr. Ley, and Mr. Heck, that the enemy's troops had taken post in the fugar-mill Salgado Zuvisiaque and other circumjacent places. The council relied much upon the bravery and fidelity of the officers within the fort, from whom they promifed themfelves a very vigorous defence, they being all perfons who had advanced themfelves in their fervices, and were in expectation of better preferments, viz. Major Hoogstraten, Caspar Vender Ley, formerly a captain of horse, John Hick, and Albert Gerritfon Wedda, an old captain belonging to the company: but their unfaithfulnefs and covetous temper over-balanced all these confiderations; for the faid Major Hoogstraten, commander-in-chief, with the confent of Caspar Vander Ley, and Albert Gerritfon Wedda, treacheroufly and villainoufly fold and furrendered the faid fort to the Portuguese, the 23d of August, for the sum of eighteen thousand gilders, befides fome other rewards promifed them upon that account. They went over with the whole garrifon to the enemy, who made Hoogftraten colonel of a Dutch regiment, raifed out of thefe and other foldiers of feveral nations, that had deferted our fervice. Thus this ftrong hold was betrayed to the Portuguefe, by a perfon who owed his whole fortune to our company.

Martin Soares Moreno gave the following account of the furrender of this fort to the governor, Antonio Telles de Sylva, in his letter, dated from the hill of Nazareth, August 26, 1645:

A Letter to the Governor of the Bahia, concerning the taking of the Cape of Puntael.

"Sunday the 23d of this month, God Almighty, through his mercy, has put us into the pofferfion of the fort of the cape of Puntael, which was befieged by Andrew Vidal de Negreiros: the next day we were rejoiced with the money fent us by Your Lordship, and the wine prefented to me in particular, part of which I have beftowed upon entertaining fome of our friends, who are merry with me at this time.

"We have made an excellent bargain: for, befides the importance of the place and its artillery, we have got the very flower of their foldiers; befides that, this will be like a fignal to the reft to follow their footfleps.

"John Fernandes Vieira has raifed, on Saturday laft, the fum of four thousand ducats for our use, though not without force, but it was very welcome to us at this time, when we were upon striking up the bargain for the better fortifying of this place, the harbour of which is not inferior to that of the Receif: but I will not trouble Your Lordship any longer with this point.

Not long after the furrender of the fort, a bark appeared in fight, fent to its relief from the Receif. We fent Captain Barreiros, with a well-armed bark, out 5×2 against

against her, who took her, with thirty-five men, and good store of gun-powder and bullets, all which will prove very ferviceable to us.

" I kindly defire Your Lordship, that in cafe you fend a meffenger with this news to His Majesty, Captain Damian de Lankois may be employed upon that errand, it being very probable that the King, besides a good present, will reward him with some honourable employment.

" Last night we received advice, that the fleet under Jeronymo de Payva was entered the bay of Tamandare; I am forely afraid they will be attacked by the ships fent thither from the Receif, notwithstanding we have defired him several times to come into our road.

"Kapivara is gone from that place by land to the Bahia, perhaps he has given him notice that we are mafters of the cape; if he thinks fit to bring his fleet to this place, he is fafe, if not, it lies at his door. It is difcourfed here, that the fhip the Bifhop is milling, perhaps he has a fancy to convoy Salvador Korrea fome part of the way.

" I cannot forbear to let Your Lordship know how much you stand indebted to Major Dieterick Hoogstraten, and the rest of the commanders of the fort. We have promifed to the first a commandery of Christ. I beg of Your Lordship to make my promife good to him in His Majefty's name, as foon as possible may be, he being a perfon who will be ready to do us all the further fervice he can. We have, for the prefent, engaged him with fome prefents of lefs moment, of which we shall give an account to you hereafter. Captain Vander Ley has likewife deferved well of us, and fo have all the reft that had married Portuguefe women: it is reported here that he is a perfon of note in his country: we have likewife promifed to him a commandery of Chrift, and a yearly penfion for one of his fons: we hope Your Lordship will not refuse to make good our promise, because his fons are born of a Portuguese woman: the name of the eldeft being John, and the youngeft Cafpar Vander Ley. The reft are at prefent at their habitations, as foon as they return we must engage them with fome promifes, of which we will give an account to Your Lordship. They are all of confequence to us, having married Portuguese women. I hope Your Lordship will be well fatisfied with this piece of fervice, for John Fernandes Vieira fometimes brings us more money in an hour than the conquest of the cape costs us. He is at prefent in the Vergea among the barbarians, and we in the fort in the cape, till we have got every thing in readinefs. Kapivara is about three days ago gone by land, poffibly he may be with you before the bark which carries this letter ; I wilh it may arrive in fafety, and to Your Lordship a long life for the defence of this state.

" (Signed) MAR

MARTIN SOARES MORENO."

Martin Soares Moreno and Andrew Vidal de Negreiros had in the meanwhile fent feven or eight letters from the cape of St. Auftin, dated the 23d, 30th, and 31ft of August, and the 2d and 6th of September, in which they advertised the Admiral Payva, that they were in possession of that cape, defiring him by all means to come with his fleet into that harbour. The first of the two last letters was thus written:

"We are got now into the poffeffion of the harbour of Nazareth, and that, as the faying is, without cafting an anchor; which is the reafon we intreat you likewife to 5 come

Letter from the Portuguese Commanders to Admiral Payvas (1991), online " My Lord,

come with your fleet hither, where you may careen your fhips, and provide yourfelves with frefh provifions, men, ammunition, and all other neceffaries, till fuch time we fhall mutually agree in what is further to be undertaken for the fervice of God and His Majefty. The enemy has hitherto but one fhip of ftrength at fea, the reft being of no confequence; neither are they for engaging with you at this time, but endeavour to cut off your communication with the fea-coaft. My Lord, you have given fo many proofs of your courage before this time, that this retreat will not abate any thing from the fame of your victories: on the other hand, you have to confider, that you are anfwerable for fo many thousand lives of those that are in your fleet; wherefore we defire you once more to come hither with the fleet, and fuch officers as are under your command, where you will meet with a very kind and comfortable reception. But being fensible that it would be a gross error in us, to urge a matter fo evident it itself any further, to fo great a commander as you, we live in hopes of your coming, where we intend, in the house of Nazareth, to receive the bleffed facrament, which name we have given to the fort, having, among other things, found a mafs-book here, which is of no fmall fervice to us. God preferve Your Lordship.

> MARTIN SOARES MORENO, and ANDREW VIDAL DE NEGREIROS."

" Puntael, Sept. 2, 1645.

The contents of the fecond letter to the fame admiral are as follows:

"Your Lordship being already acquainted with our being masters of the Puntael (cape), we hope you will take the first opportunity of coming to us; the enemies having two squadrons of ships at fea, with one fire-ship, to force you from this coast, which has been discovered to us by a letter writ at the Receif, and directed to the governor, and taken by us in a bark defigned for the relief of that place, of which we thought fit to give you immediate notice, that you might take your measures according to your wonted prudence. These Dutch gentlemen have, by their treacherous dealings, obliged us to have recours to open force, and we defire Your Lordship to repay them in their own coin, with fire and fword, as they do us. If you defign to come hither, it must be done speedily, all delay being dangerous at this time. We have a true copy of this letter in our journal to ferve for our justification hereafter. God preferve Your Lordship.

" Dated in the Puntael of the Bleffed	MARTIN SOARES MORENO, and
" Sacrament, Sept. 6, 1645.	Andrew Vidal de Negreiros."

An account of the furrender of the cape of St. Auftin, and of the further tranfactions betwixt us and the Portuguefe, was fent in a letter by Cafpar da Coîta d'Abreu, from the faid cape to his friend Domingos da Koîta, an inhabitant of the Bahia, which runs thus:

" I wifh this letter may find you in good health, as I who am your faithful comrade defire; I am in a tolerable good condition in the Puntael of Nazareth, which after a fiege of twenty days was furrendered to us at an eafy rate, becaufe thofe who commanded within the fort, had Portuguefe wives, and their eftates thereabouts. The captain of horfe was the moft forward of all in furrendering the place; they have obtained what conditions they demanded, and a gratuity of four thoufand ducats befides. We found in the fort three hundred Dutch, of their beft troops, and twelve brafs pieces of cannon, four of which were four and twenty-pounders, and provisions for three

three months; fo that if they had not come with us to `a composition, it would have coft us abundance of men, whereas now we have gained the place with the lofs of one fingle man, who was killed by a random cannon-fhot. We made ourfelves mafters of a bark, firing from the Puntael, before its furrender, in which was a gentleman with feveral hundred men that were going to the Receif. This gentleman and another of Serenham (being both magistates in their respective places) we delivered up to the inhabitants, who foon killed them, notwithstanding one was married with a Portuguese woman; for they having been heard to fay, that they hoped to walh their hands in the blood of the Portuguefe, the women were fo much exafperated against them, that they foon difpatched them according to their defires. The prifoners are for the most part detained at St. Anthony, in order to be fent to the Bahia; but many among them have taken fervice with us. We suppose the number of the dead and Dutch prifoners amount to near thirteen hundred: we have not feen the fquadron under Salvador Korrea de Saa; we are afraid fome misfortune has befallen him; fome of our fhips were cruifing hereabouts, but within thefe three or four days none of them have appeared on this coaft. The Dutch have a fleet of twelve fhips at fea, it is well if they do not venture a brush with us. The Receif with all its forts are invested; Lawrence Karneiro is at Porto Calvo; the Jews report, that orders are come to take all the Dutch forces out of Rio Grande, Parayba, and St. Francis, in order to transport them to the Receif. There is no great harmony betwixt the Jews and Dutch, the first pretending that the others intend to fell the country. Four of their head officers, which are our prifoners, are ordered to be fent to the Bahia, and among them their master of the artillery. The fame day that we were become masters of the Puntael, a bark arrived there from the Receif with orders to keep it to the last extremity; we took the bark with good ftore of ammunition and provision, worth in all about fifteen hundred ducats.

" Sept. 5, 1645.

CASPAR DA COSTA D'ABREU."

From this and the following letters it is apparent that Major Hoogftraten had laid the foundation of his treacherous defign of betraying the cape of St. Auftin to the Portuguefe, long before; to wit, ever fince he with Mr. Balthafar Vander Voerde was fent to the governor of the Bahia, Antonio Telles de Sylva. Thus a certain ferjeant fold a redoubt near the city of Olinda to the enemy for three hundred gilders.

At the beginning of the fiege of the cape of St. Auftin, Andrew Vidal de Negreiros fent two letters to Major Hoogftraten, Ley, and Heck, by one John Guomes de Mello, dated the 13th of August; in the first of which the faid Vidal complains of the illtreatment and murthers committed upon the Portuguese by the Dutch; in the fecond he requests them to declare, pursuant to the promises made by Hoogstraten in the Bahia, for the King of Portugal, and to deliver the fort into their hands

Two letters from Vidal to Hoog straten.

The first was as follows:

" I am come this morning to the village of St. Antonio de Cabo, in hopes of receiving news from you and Captain Ley, I give by thefe prefents, notice to you, that we are fent hither by order from the governor Antonio Telles de Sylva, with no other intention than to appeale the troubles lately arifen in this country, purfuant to the request of the council, of which you are a fufficient witness. No fooner were

1

806

we

we arrived at Tamandare, but we received many informations directly contrary to what we expected to meet with here; viz. that in Rio Grande thirty feven inhabitants had been murthered, many virgins deflowered, and the image of the virgin Mary grofly mifuled by the Dutch; things fo abominable in themfelves, that it is fcarce to be imagined fo brave a nation fhould be guilty of fuch enormities. Whilft I am writing this letter, news is brought me, that the Dutch have caufed many of the inhabitants of Goyana to be murthered, though I can fcarce give credit to it : for fuppofing this to be true, we could not avoid giving affiftance to thefe miferable people, though they were the most defpifeable of all nations, confidering they crave our help, and are not only Christians, but also subjects of the King our master, whom God preferve. Whilft the council was in expectation of the iffues of the intended accommodation, they have furprized and killed many of the inhabitants, which obliges us to require you in the name of God, of His Majesty, His Highness, and the States-General, not to give any occafion for a rupture, but to maintain the late concluded peace to the utmost of your power, as we are ready on our fide to concert all poffible measures with the commander-in-chief of this place, which may tend to the tranquillity of both parties. The bearers hereof are Captain John Guomes de Mello, and Lieutenant Francis Guomes, who we defire may be difpatched back with all poffible fpeed. God preferve you for many years.

" August 13, 1645.

The fecond letter was written thus:

The fecond letter.

"Your promife made to us in the Bahia, and what has fince been told by Captain Ley to John Fernandes Vieira and Captain John Guomes de Mello, encourages us to proceed in our former defign, not questioning but that both you and Captain Ley will not in the least recede from the engagement you have been pleased to oblige us with, and to tie us to your fervice. We are come into this country at the head of three thousand chosen men, backed by two squadrons of men of war well equipped, one of which has not as yet appeared on this coaft, the other you have feen yourfelf pass by the other day. I hope this may ferve as a means to fet the poor miferable inhabitants at liberty; and as both they and we wish for nothing more than to see you embrace our fide, that we not want an opportunity to give you more evident proofs of our refpect and affection towards you, fo we defire you not to entertain the leaft finifter fuspicion of us; we being ready (for the performance of which we by these prefents give you our words) to accomplish in every point, what has been promifed to you, by John Fernandes Vieira and John Guomes de Mello. And I for my part affure you, that I will not fail to perform and agree to whatever you shall further demand upon this occafion.

The inhabitants of this place fhall be provided with paffports, and protected by us, in the fame manner as the commander of Serinham, Carpentier, and fome others were; and we expect the fame at your hand. And that you may be fure whom to treat with upon this account, we have fent to you John Guomes de Mello, who is intrufted with the whole matter; which if you refufe to do, we must take fuch measures as we fhall judge most expedient for us. In the meanwhile God preferve you for many years.

" St. Ant. de Cabo, Aug. 13, 1645.

Your affectionate friend and fervant, ANDREW VIDAL DE NEGREIROS." Major

Major Hoogffraten, Mr. Heck, and Ley, fent an anfwer to this letter immediately, containing in fubftance, that they were not in the leaft concerned in the outrages committed by the Tapoyers against the Portuguese, and seemingly refused to treat with De Mello. It runs thus:

His answer to them.

"We have received your letter fent by John Guomes de Mello, out of which we underftand, that you are come to St. Antonio. We are extremely well fatisfied, that the governor Antonio Telles de Sylva has undertaken to appeafe the tumults arifen in thefe parts, and do not queftion but that your prefence will contribute much towards the accomplifhment of it. The affronts and outrages you fpeak of by the Tapoyers and Dutch foldiers put upon the inhabitants, as they were committed forely againft our will, fo I can affure you, that nobody, not fo much as the leaft child, has been fuffered to be mifufed upon our accounts, fo that thefe complaints muft not be made to us, but ought to be referred to the council. The treaty you propofe with Captain John Guomes de Mello, and Lieutenant Francis Guomes, is beyond our province and power, fo that we earneftly defire you not to ufe any further folicitations to us upon that account. So we kifs your hands, recommending you to God's protection. We reft "Your fervants and good friends,

Casper Vander Ley. D. Van Hoogstraten.

John Heck.

Major Hoogftraten took care to fend there two letters, together with their anfwer, to the council, with repeated affurances of their conftant fidelity; whereupon the great council confirmed Hoogftraten in his government, and exhorted Ley and Heck to perfevere in their brave refolution, which they would in due time take care to reward with better preferments. This difcovery of the enemy's letters being looked upon as an undeniable proof of Mr. Hoogftraten's fincere intentions, had fuch an influence upon the generality of the people, that there was fcarce any body but what thought himfelf fecure of his fidelity and duty. Neverthelefs, as thefe temptations could not but raife fome jealoufy in the minds of the council, they thought fit to fend Colonel Haus to the Receif, to order him to the Cape of St. Auftin.

The council in the meanwhile being, by Vidal's letters to Hoogftraten, fufficiently convinced, that the intended recalling of the rebellious troops were nothing but amufements, fent immediate orders to their admiral Lichthart, that, for the future, he fhould treat all the Portuguefe fhips he could meet with as enemies.

The 15th of Auguft, Colonel Haus being come to the Receif, propofed to the council, that he judged it abfolutely neceffary for the fervice of the ftate, that fince by the fuccours come from the Bahia to the affiftance of the rebels under Martin Soares Moreno and Andrew Vidal, they were grown very ftrong and numerous, the troops encamped in the field fhould be drawn into the Receif, becaufe they being, befides the Brazilians, not above three hundred ftrong, they might eafily be cut off in a place where they could not be feconded in the Receif, where they were wanting for the defence of that place, which being the capital of the whole Dutch Brazil, would, in all likelihood, be attacked with the utmost vigour by the enemy.

Against this opinion many reasons were alleged too.

I. By

I. By fo doing, they must quit all the open country from whence they were now fupplied with cattle and meal, which they flood highly in need of, till fuch time that they could receive new fupplies from Holland, and that, in fuch a cafe, they muft expect the enemy immediately at their gates.

II. That thereby the number of the enemy would be increased; the inhabitants of the country, being freed from the dread of our troops, would join with them against us.

III. That by fo doing, we must leave the Tapoyers, that had taken up arms at our requeft, and were to be joined by our troops near Machiape or St. Antonio, to the enemy's mercy. To this, it was answered,

ift, That as to the fupplies of cattle and meal from the country, they should be in a much better condition to be furnished withal when their forces could be fent aboard into all circumjacent parts of the country, whereas now they were forced to remain in one certain place. Befides that, we being mafters at fea, might embark at any time a certain number of men, and land them where we found it most convenient, which would oblige the enemy, inftead of befieging the Receif, to divide his forces, for the defence of the country. What related to the increase of the enemy's forces, by the acceffion of the Portuguese inhabitants of the country, was to be looked upon as of no great confequence against us; it being more for our interest to see them appear as declared enemies than diffembling friends; it being generally known, that their inclinations were bent for their countrymen, and that, notwithstanding all their specious pretences, they miffed no opportunity of giving intelligence to the enemy of what paffed among us; whereas, if they were once declared enemies of the flates, we floud have a fair opportunity of feizing upon their cattle, provisions, and other moveables, for the ufe of the Receif; which being thus provided, would difcourage the enemy from attempting to reduce it by famine.

What was alledged concerning the danger of the Tapoyers, was acknowledged to be of no fmall moment; but, confidering they had received no news as yet of their motion, it was not judged of fuch vaft confequence, as to be put in balance with the welfare of the whole Dutch Brazil, which depended in a great measure on the fafety of these troops.

After mature deliberation of the whole matter, it was refolved, on the 15th of Auguft, by the council, with the approbation of the members of the court of justice, that, confidering the danger the troops were exposed to, and that on their fafety depended the prefervation of the Receif, they fhould with all poffible fpeed march thither, and that only fifty men should be left in the house of De Wit, under Captain Wiltschut, in order to command fome part of the circumjacent country, and to ferve as a retreat for our parties that fhould be fent abroad to fetch in cattle, and farinha or meal.

Purfuant to this refolution, Colonel Haus went thither on horfeback the fame day, to put it in execution the fame evening, if possible he could, or, at farthest, the next morning. But it feems Colonel Haus was fo neglectful, as to delay the march of these troops not only that afternoon, but also the whole next following day; and, instead of retreating towards the Receif, tarried in the fame fugar-mill, without having the leaft intelligence of the enemy's approach; fo that on the 17th of August, being surprised by the troops of Andrew Vidal, much more numerous than his, before they could betake themfelves to their arms they were put to the rout. The council being advertifed, that Colonel Haus with his troops were attacked by the enemy in the fugar-mill of M. de Wit, they called the city militia to their arms; Mr. Bullestraet and De Bas went to the house of Bavista; from whence, as being nearer at hand, they might give the neceffary orders, according as they fhould receive advice from Haus : and twelve fire-locks were

YOL. XIV.

5 I.

were posted in this house for the better fecurity of the bridge across the river. Dieterick Hamel, and the counfellors of justice, took care to look after the Receif. Immediately after, word being brought to the council that Colonel Haus had been overthrown, and was retired to the house of De Wit belonging to the fugar-mill, it was confulted, whether by any means they might be able to relieve him; and, though by reason of the weakness of the garrison, it was no easy matter to do it, nevertheless, it was refolved, with one hundred volunteers of the inhabitants, and one hundred and fifty foldiers, to attempt his relief. But before this could be put in execution, a certain Brazilian that had been prefent at the whole action, and having, by changing his clothes with a Portuguese, found means to escape the Receif, brought the unwelcome news, that Colonel Haus, with the forces under his command, had furrendered the house belonging to the fugar-mill, and themselves, upon promise of quarters, at difcretion.

It was generally believed, that this misfortune was chiefly occafioned by Colonel Haus's own neglect, who did not, till it was too late, put the foldiers into a pofture of defence, which was afterwards confirmed by the deposition of William Jacobson, late captain-lieutenant of Colonel Haus's own company, made before the great council the 6th of July, 1646.

It was not till the night before our defeat, that Colonel Haus received the first intelligences from a prifoner, a negro, that the enemy, with a ftrong body, were broken up from Moribeca. The next morning, one of our fafe-guards brought word to the colonel, that the enemy was paffing the river; and foon after, the colonel's groom. who had been to water his mafter's horfe in the faid river, came in a full gallop, telling: him likewife, that the rebels were paffing the river, fo that we foon after heard them fire upon our advanced guard, who retired immediately to the main body. Colonel Haus did not call the foldiers to their arms, or caufed the alarm to be given, until the enemy came within fight of us, and charging our out-guard, when we first began to fkirmifh with them: but they charging us with their more numerous forces in the front, whilft Kamaron with his troops endeavoured to cut off our retreat to the Receif, which we were not able to prevent, by reafon of the fmallnefs of our number, Haus afked Captain Wiltschut, Blaar and Listry, "What was best to be done?" Wiltschut answered, "You never asked our advice before, do what you think best." Whereupon Haus ordered to retreat to the houfe of Mr. de Wit: Captain Blaar, who expected no guarter, being on the other hand for fighting our way through to the Receif. The houfe was bravely defended for four hours, but at last powder and ball beginning to fail, becaufe half a barrel of gunpowder (which was all they had left) blew up by accident, they furrendered at difcretion to Andrew Vidal, under condition to have their lives faved, as well for themfelves as the Brazilians among them; which agreement being figned by Vidal, and two or three more of the chief commanders of the Portuguefe, was delivered to Colonel Haus. Notwithstanding which, the Brazilians were cut to pieces by the inhabitants, with the confent of the Portuguese commanders, as soon as we had quitted our post in the house. The Brazilian women seeing their husbands murdered before their faces, dashed most of their children's brains against the walls, for fear they should fall alive into the hands of the Portuguese. All the Dutch, about two hundred and fifty ftrong, among whom were Colonel Haus, Captain Blaar and Liftry, were made prifoners of war, and were for the first four or five days kept in the fugar-mill of Hacq, when John Fernandes Vieira, and many of the inhabitants folicited Andrew Vidal, to deliver the faid prifoners up into their hands, with an intention to kill them, but Vidal refused to grant their request, and caused them forthwith to be fent by

land

land to the Bahia: they were indifferently well treated in their journey thither; but fuch as either by reason of fickness, or any other accident, were left behind, fell into the inhabitants' hands, who cut them to pieces, and would have done the fame with all the reft, had it not been for their convoy. After their arrival in the Bahia, an account being taken of their names, they had certain quarters affigned them, and thirty-one pence halfpenny per week for their pay, and a measure of meal for every ten days.

They had liberty to walk up and down-within the city where they pleafed, except Colonel Haus, Captain Wiltschut, and Listry, who were confined to their lodgings, and durft not, without special leave, talk with anybody. Colonel Haus was at last fent to Portugal, and Wiltschut and Listry, in June 1647, put on board a ship with two hundred and thirty Dutch prifoners; about fixty of our men took fervice among them there, but they refused the natives of Holland.

The enemies being greatly encouraged by thefe fucceffes, and their ftrength increafing daily by the great concourfe of the Portuguefe inhabitants, who in the captainships of Parayba and Goyana, which hitherto had remained in quiet, and engaged themfelves to the government by a new oath of allegiance, now alfo took up arms against us; fo that it was thought convenient to recall our garrifons out of those parts.

But to return to the cape of St. Auftin, after the furrender of which the garrifon was carried to St. Antonio, where they were forced to deliver up their arms. Among the reft of our prisoners there was Ifaac Zweers, afterwards vice-admiral of Holland and Weftfrifeland, Abraham Van Millingen, and John Broekhufen, both ftill living in Holland. Major Hoogstraten addressed himself to them, endeavouring to bring them over to the Portuguele fide, by the allurements of captain, lieutenant, and enfign's places, telling them, that it would now be in his power to promote them to much higher employments; but when he faw them refuse his offer, he fwore they should repent it. At the fame time he preferred three Dutch men, to wit, Winfel Smith, formerly his lieutenant; Alexander Boucholt, and Claes Claefen, a native of Amfterdam, to captains places; the last of these three being an intimate friend of Zweers and Broekhufen, told them, and confirmed it by many oaths, that he had taken fervice among them for no other end, than to get an opportunity of returning to us. They had alfo liberty given them to walk abroad, but not without a guard to keep a watchful eye over all their actions.

Not long after, the Portuguese provider, Mor, sent for John Broekhusen, and after the first compliments were passed, told him, that if he would ferve the King of Portugal in the quality of commiffary-general, he should go along with him to the camp, where he should receive one hundred gilders per month, and be welcome to his table befides; and that if he refufed his offer, and ftayed behind, he would be in danger of being murdered by the inhabitants. He replied, that being engaged by his oath to the company he could not break it, though with the hazard of his life. "And," faid the provider, " will you choofe rather to ferve a company of mob than a King? We are just now upon the point of executing a defign which is infallible, and then you will begin to fee that the King's caufe is the justeft, and will be crowned with fuccefs for ever." Then he gave him a cup with brandy, of which after Mr. Broekhusen had taken a good draught, he took his leave and returned to his comrades, unto whom he gave an account of what had paffed betwixt them.

These had in the meanwhile been informed by fome Portuguese, that this defign was upon the ifle Itamarika, and being certain that the council did not forefee this danger, they were contriving all poffible means to give them notice of it, but could not pitch

pitch upon any perfon fitly qualified for this undertaking. At laft, Ifaac Zweers, by vaft promifes of reward, prevailed fo far upon a Dutch trumpeter, called Martin Stomp, that he undertook to carry this piece of news in perfon to the council, and at the fame time to requeft the releafing of the Dutch prifoners ftill remaining at St. Antonio. Every thing being agreed upon betwixt them, the trumpeter took his leave of Mr. Zweers, and fet out on his journey to the Receif about midnight, leaving his wife and children behind him. Mr. Zweers and Mr. Broekhufen appeared very well fatisfied, but neverthelefs were in their hearts not a little concerned for the iffue of this enterprife.

They would often call upon the trumpeter's wife to enjoin her filence, and ordered her, that if any enquired after him, to tell them he was run away from her, in order to take fervice in the camp in the Vergea.

Some days after they met with one Peter Ritfau, formerly baker to the garrifon of the cape of St. Auftin; Broekhufen having a mind to feel his pulfe, and finding him not averfe to fuch a tafk, he at laft with fair words prevailed upon him to undertake the fame journey the trumpeter had done before; that in cafe he fhould mifcarry, which they much feared he might, the council might neverthelefs be advertifed of the enemy's intended expedition againft Itamarika. The baker having defired a certificate from them, teftifying, that he never had taken fervice among the Portuguefe, prepared himfelf for his journey, which he intended to begin with the firft dark night.

The fame night they were forewarned of a defign against their lives, by a certain Italian called Jacomo da Perugalho, fo that Zweers and Broekhusen guessing, not without reason, that some of the Portuguese had got scent of their fending away the trumpeter and baker, thought it not adviseable to stay longer in this place, but to ask leave from Colonel Pedro Marinho Falkaho, to go to the Algodais, where they could not want conveniency to go along with the rest of the prisoners, that were intended to be fent to the Bahia, which was readily granted.

In the meanwhile the baker having taken the first opportunity to fet out on his journey, was met by two Portuguese in the fugar-mill Trapicha, who having found the before-mentioned certificate about him, carried him prisoner to St. Antonio de Cabo, where being put to the torture, it made fuch a noise among the inhabitants, that they all rose up in arms, protessing, they would not be fatisfied till they had fetched Zweers and Broekhusen from the Algodais, and cut them to pieces; for which purpose they also obtained feven foldiers from Pedro Marinho, and had certainly put it in execution if Captain Ley had not opposed it; for, as good luck would have it, they happened at that time to be in his fugar-mill, and the baker had stood it out bravely, without discovering the matter. The next morning Captain Ley gave them a visit, telling them what had happened; and fays he to Broekhusen, "What is your meaning by this?" But he having no great confidence in Ley, denied every thing to the utmost.

But the 2d of October, the whole defign was likely to have been difcovered by the imprudence of the before-mentioned trumpeter's wife, who being got drunk, told fome of her acquaintance, that her hufband was gone to the Receif. She was carried a prifoner to the cape of St. Auftin, where fhe was miferably tortured, but being a refolute woman, would not confefs any thing: it was however Major Hoogftraten's advice, that the Portuguese ought not to keep the Dutch any longer in Pernambuko, but that all fuch as refused to take fervice among them, ought to be fent to the Bahia. Accordingly, all the Dutch prifoners then about the cape and St. Anthony, were fent to the Algodais, where every one was afked by Colonel Peter Marinho, whether they

812

would

would take fervice under the King of Portugal, and that fuch as would not, fhould be fent forthwith by land to the Bahia, a tedious journey; befides, that they ran the hazard of being murdered by the way. Many took fervice for fear, but Zweers and Broekhufen being afked again, whether they were not willing to ferve the King, they anfwered, they would rather die than bear arms againft their own nation.

The 5th of October, all the prifoners under a convoy, both of foldiers and boors, were carried from the Algodais to Pojuka. But fcarce were they come thither, when Zweers was ordered to be fent back to the cape of St. Auftin, where he was put to the rack, to extort from him a confeilion concerning the trumpeter's journey to the Receif, who, as they fuppofed, had difcovered their defign upon Itamarika; but not being able to bring him to make the leaft difcovery, they fent him, after an imprifonment of five weeks, to the Bahia.

In the meanwhile Mr. Broekhufen, with the reft of the Dutch prifoners, had been forced to travel day and night till the 28th of November 1645, when they came to a caftle called Tapuao, on the fea-fhore of the Bahia, about half a league from the city of St. Salvador, after a dangerous journey: they were carried in ten boats to the city, on that fide where it is beft fortified, the Portuguefe being not willing to let them have a fight of the fortifications on the land fide. Mr. Broekhufen was by order from the governor Antonio Telles de Sylva, made a prifoner in a citizen's houfe, and the foldiers difpofed into quarters. The next day they heard the drums beat up for volunteers, every one being invited to ferve the King of Portugal, of what nation foever, except the Dutch.

The next following year, on the 18th of January 1646, Zweers and Broekhufen intercepted a letter written by Hoogftraten to Hondius, concerning feveral transactions to be communicated to the governors, of which Captain Ley having got fcent, gave immediate notice thereof to the governor, the 1ft of February, who threatening them with no lefs than the gallows, fent them to a loathfome prifon; with ftrict orders that nobody fhould be permitted to fpeak with them, nor that pen, ink, or paper, fhould be allowed them; nay, whilft the clerk was fetting down their names, a captain came and told them from the governor, that they were the traitors who kept correspondence with the Dutch in the Receif; and ordered that a centinel should be fet at the prifon door, to keep the inhabitants from laying violent hands upon them; for as they were carrying to prifon, they made a horrible noife, crying, "To the gallows with these impostors and traitors." They remained five whole days in this prifon without any victuals or drink, till being almost fpent with hunger and thirst, they got leave to write to the governor, reprefenting to him their deplorable condition; who gave immediate orders that victuals should be given them for the future : the Portuguese keeper being afraid, that if they fhould give them plenty of victuals at first, it might turn to the danger of their lives, was fo cautious, as to fend them no more than each a piece of bread well dipt in wine at first, and after fome hours, fuch another, but fomething bigger, till by degrees their ftomachs were reftored to their former digeftive faculty.

The laft day of February the governor gave public audience (which is done three times every year) for the releafing of those that are prisoners on the King's account. Upon this occasion, a free access was likewise granted to our people to the governor. They passed through the anti-chamber, lined on both fides with his guards, into the room of audience, adorned with damask hangings of divers colours: here they found the governor fitting in an elbow-chair, on the right fide of which stood the royal throne, raifed four steps higher from the ground than the governor's feat, which was furrounded "And," replied the governor, "fuppofing you had done fuch a thing in Holland ?" Upon which, Broekhufen anfwered, "That His Lordfhip would be pleafed to remember, that it was no more than a private letter, and not directed to His Lordfhip." The governor, after having paufed for a little while, gave immediate order for their difcharge; from that time they had liberty given them of walking abroad, but were fain to carry themfelves very fwimmingly, for fear of the inhabitants, who kept a watchful eye over them.

The 7th of May, Ifaac Zweers and John Broekhufen were carried on board a yacht called the St. Francis, in order to be conveyed to the Ifle of Terceira; and as they were the first Dutch prifoners that were fent to that island, every one looked upon it no otherwife than a pretence to throw them over-board after they were come to fea. Here they met with worfe treatment than before, being forced to ftand to the pump during the whole voyage, and yet were ready to be flarved, notwithflanding the feamen catched more fish than they could confume. At last, the 28th, being arrived in the road near Terceira, they faw within an hour after, a Dutch ship coming to anchor near them; they called to the fhip till the mafter fent fome of his people aboard them, unto whom they made their complaints; and, understanding that the master was a native of Niewendam, called Martin Peter Honing, they began to be a little cheerful, though the Portuguese would not allow them to go aboard the Dutch ship. But the 29th, being left alone with the fteer-man, and only one boy in the veffel, they found means to go in fpite of their keepers aboard Martin Peter Honing, who promifed to fee them delivered. The fame afternoon, Moor, the governor of this and the adjacent iflands, refiding in Terceira, fent for Zweers and Broekhufen, and told them that he had received a letter from the governor Antonio Telles de Sylva, in which he had defired him to detain them prifoners in the caftle for a twelve-month; but that he did not think himfelf obliged to follow his directions, he having no other dependance but on the King, who being not concerned in this war, his orders were, to fend all the prifoners brought thither to Portugal; that they might rely upon it; and, for their prefent fustenance, till a ship should be ready to go, ordered them nine rix-dollars.

The 13th of June, they met with a maîter of a French veffel, who offered to carry them, without any reward, to Portugal, which they willingly accepted of: here they met with many of their fellow-prifoners, who had imagined no otherwife, but that the Portuguefe had thrown them over-board. They continued here till the 1cth of September, when Zweers and Broekhufen embarked themfelves at Lifbon aboard a man of war, called the Prince Henry, and at laft, the 4th of December, after a thoufand dangers and miferies, which they had fuftained fince their departure from the Dutch Brazil, arrived fafely in the Maefe.

But we must return towards the Receif. The unexpected defeat of Colonel Haus put all the inhabitants of the Receif under great consternation; but the council left no stone unturned to put the place, with all the adjacent forts, in a condition to make a vigorous a vigorous defence, in cafe it fhould be attacked by the enemy; and, that every thing might be performed with the beft order that could be, Peter Bas was conftituted commander-in-chief in the Receif. Admiral Lichthart was to take care of the batteries and artillery thereunto belonging; Henry Moucheron was made commander in Maurice's Town; all their thoughts being now bent upon the defence of thefe places, which before they judged out of danger.

The ftables and out-houfes for the ufe of the negroes, as likewife the walks and gardens belonging to Count Maurice's houfe, being no fmall impediment to the fort Erneftus, it being to be feared that, under favour of thefe houfes and trees, the enemy might unexpectedly furprife the fort and Maurice's Town; and the inhabitants earneftly requefted the pulling down of thofe ftables, out-houfes, and trees, and what elfe might prove dangerous to the place; orders were given to Mr. Valbergen and Major Bayert, commanding in the fort Erneftus, to fee the fame put in execution, with as little damage to the houfe as poffibly could be. The houfes near the fort Bruin were likewife ordered to be pulled down, and the horn-work belonging to it, to be levelled at the requeft of the citizens. Many negroes were alfo employed under the conduct of Major Beck and the captain of the city-militia, to break down all the houfes in Maurice's Town, which lay too near the retrenchments. All Portuguefe prifoners were ordered to be diffributed in the fhips; and feveral volunteers, who had committed many outrages in the country, and were detained in cuftody, were taken into fervice for three months. A rumour being fpread abroad that eighteen of the enemy were come into the Affagados, a company of citizens were got in readinefs to affift them, but it proved not true.

The fame day, the fhip called the Orange-tree, arrived near the Receif, being come out of the Maefe the 21ft of May with thirty-five foldiers for recruits. The watches were fo difpofed, that in Maurice's Town Mr. de Wit and Raetfield (befides the ordinary officers), and in the Receif, Mr. Aldrich and Valbergen, fhould go the rounds.

Balthafar Dortmund, governor of Itamarika, fent advice to the council the 17th of August, that Kavalkanti was with fome troops come to Iguaraku, and had summoned the Brazilians to join with him in four days, under forfeiture of their lives.

The 19th, the citizens prefented a petition, fhewing the neceffity of having the houfe of Count Maurice pulled down, as hindering the profpect from the fort Erneftus, and, if once poffeffed by the enemy, they might from thence annoy both the fort and the Receif itfelf with their cannon. But the council having advifed with Mr. Walbeck, Admiral Tichthart, Aldrich, De Wit, Raetfield, Moucheron, and Valbergen, thought fit not to agree to it for that time, being in hopes that it might be made ufeful for their defence. Mr. de Wit and Hamel were commanded to go from hence to each houfe in Maurice's Town, and to take an exact account of what negroes were able to bear arms, and to furnifh them with mufkets and pikes; the fame charge was given to Admiral Lichthart and Captain Bartholomew Van Collen, for the Receif. All the fick that were in a flate of reconvalefcency in the caftle were likewife ordered to be armed for its defence.

At the fame time, an anfwer was fent to Mr. Dortmund, with orders to draw as many Brazilians as poffibly he could into the ifle of Itamarika, and to provide himfelf with as much cattle and meal (farinha) as he was able to get out of the adjacent places; but that if he found himfelf not in a condition to maintain the whole ifland, or the city of Schoppe, he fhould retire into the fort Orange, where he might be fupplied by fea, and, confequently, make a vigorous defence. Mr. Carpentier was likewife forwarned to

to be upon his guard, and to retire in time into the ifle of Itamarika, with his foldiers and Brazilians, if he found the inhabitants ready to take up arms against him.

The 19th, at night, a party went abroad to get intelligence, but met with no enemy. Some negroes were also fent towards the enemy's quarters to know their strength. The fame evening the council received a letter by Lieutenant Francis Meades from Andrew Vidal, in which he professed his readiness still to maintain the peace, complaining, at the fame time, of outrages committed by our foldiers, as may be feen out of the following letter:—

A Letter from Vidal to the Council.

" We have fent you advice before by Lieutenant Manuel Antonio, of our arrival in this captainship, by ordere from the governor Antonio Telles de Sylva, and at your own requeft, in order to reftore tranquillity here by the most effectual means we could devife. We also did represent to Your Lordships the many innovations and unaccountable proceedings which had reached our ears, by the lamentable cries of feveral noble ravifhed virgins, and the doleful complaints of the inhabitants of Rio Grande, where forty perfons of note, together with a prieft, and the other day two more in the Salinas, were murdered in cool blood. I can fcarce mention without horror (and the refpect every one ought to have to facred places forbids me to particularize) the outrages committed against the images of faints, and especially that of the mother of God, and facrileges committed by your foldiers: all which confiderations, together with that we found you in a warlike condition, with your troops in the field, natural right of felf-defence established by the constant custom of war did teach us, not to leave an armed power behind our backs, which upon occafion might have proved fatal to us before we could come to a refolution in conjunction with Your Lordships, what measures were best to be taken for the re-eftablifhment of that tranquillity, which was the only aim of our coming into thefe parts; according to which we have regulated ourfelves in our march towards the Receif, till we come to the town of St. Antonio de Cabo; where, having caufed John Fernandes Vieira to be taken into cuftody, under a guard of twelve foldiers, we were furprifed at the vaft numbers of inhabitants, children, women, and religious men, who, to fhelter themfelves from the outrages and robberies committed againft them by Captain Blaar in the Vergea, came to feek for fhelter among us. They gave us an account how that the faid captain, not fatisfied with having plundered their houfes, had carried away three of the nobleft ladies of the country, after they had been grievoufly difgraced before; the inhabitants, being exafperated by these violences, did, against our will, leave our camp fo fuddenly, that whatever haste we made to march after them, we could not overtake them before they were engaged with fome of your troops, in the fugar-mill of Ifabel Gonfalves, which they intended to have fet on fire, had it not been for our men, who were forced to interpofe betwixt them and your foldiers, to their no fmall danger and our lofs, as being exposed to the volleys of your fmall fhot, which confifted for the most part of bullets cut in pieces and made four fquare. As the hoftilities committed daily against our troops afford fresh occasion of revolt among the inhabitants, fo we cannot but lay before Your Lordships the late proclamation and ratification of peace betwixt us, protefting now and for ever, in the name of God, John IV. our King, as also in the name of the States-General, and all our allies, that Your Lordships will not let things come to a rupture, and not give us new caufe of acting offenfively, or to declare war against you. We cannot longer diffemble our opinion, that the reiterated complaints of the inhabitants may, at least in fome meafure,

fure, ferve for an excufe, if not a justification, of the proceedings of John Fernandes Vieira, concerning whom we are fufficiently fatisfied that his first intentions were only to afford protection to fome innocent perfons threatened with destruction; which though it was in his power to do, yet did he retire from place to place with his forces, in hopes of avoiding any engagement, till forced thereunto by neceffity, he was conftrained to repel force by force. We beg of Your Lordships to take this letter into ferious confideration, being of fo much confequence to our both fides fafeties; for it feems as if Heaven itfelf were offended at our proceedings. God preferve Your Lordships.

" From De Ingenio of St. John Baptift

" de Venies, Aug. 19, 1645.

ANDREW VIDAL DE NEGREIROS."

An answer from the council was fent the next following day by the fame lieutenant :

The Council's Anfaver.

" Out of our anfwer to your letter, dated at Serinham, the 8th of August, you may fufficiently fee that the protestations made, both by the governor, Antonio Telles de Sylva, and by yourfelf, concerning the maintaining of the peace betwixt His Majefty of Portugal and the states general of the United Provinces, were never looked upon by us as fincere, or to be relied upon, fince your actions did in no wife agree with your words. The treacherous propofals made to one of our deputies, to betray one of our beft ftrong holds into your hands; the landing of fo formidable a force in our territories without any knowledge, under pretence of a mifinterpreted fenfe of our letter to His Excellency; the coming with a ftrong fleet into our road; the taking of the fort of Serinham; the flaughter of fo many Brazilians, our fubjects, in cool blood; the fummons fent to the Cape of St. Auftin for a furrender; nay, the attacking and furprifing of our troops, who were forced to keep in the field, for the bridling of our rebellious inhabitants; all thefe, we fay, cannot by any unbiaffed perfons be looked upon otherwife than manifelt infractions of the faid treaty, and open hoftilities. We on our fide can, without the least contradiction to truth, positively declare, that our armament was not in the leaft intended against His Majesty of Portugal, but against the rebels and their adherents; which we were compelled to, when we faw many armed troops to penetrate into our territories crofs the river St. Francifco. The furprifing of fome of our barks in the Salgados; the taking of the houfe Marecape, and making our fafeguards prifoners there, as well as at Cambao, and feveral other places; the gallows that were erected on purpole to terrify our inhabitants into a compliance with the revolted party; the killing of three of the faid inhabitants of Pojuka in cool blood, and the furprifing of feveral of our foldiers and Brazilians fent to St. Lawrence to fetch farinha; the plundering of the houfes and shops of feveral tradefmen in the country, with many fuch-like violences committed by the revolted party; and what is the worft, before ever we appeared in arms, but endeavoured, by proclamations of pardon and maintaining them in their poffeffions, to divert the danger; all these actions, we fay, will not admit of any other interpretation but of open hoffilities.

"How can it be fuppofed that in the station we are, we could, after all those provocations and flights of our kind offers, defift any longer from drawing the fword? Whatever, in the mean-time, has been transacted contrary to the custom of war, has been done without our knowledge and intention; being occafioned by the treacherous dealings of the rebels, and confequently to be looked upon as deferved punifhments, rather than the confequences of a just war; befides, that neither His Excellency Antonio Telles de Sylva, neither you nor any body elfe, has any legal power to call us to an account concerning 5 M

VOL. XIV.

cerning the government or punishment of the fubjects of the States-General, no more than the King of Portugal is answerable to us for what is transacted upon that account in his kingdom or other dominions.

" Notwithstanding which, we would have you not in the least lay the before-mentioned crimes and violences at our door; we are fo far from having encouraged or commanded the Tapoyers to kill the Portuguese inhabitants in Kunhao, that for these several years laft paft we have endeavoured to prevent it; for having, by the ill treatment they had received from the Portuguefe, been exafperated against them, they were for killing most of the inhabitants of that captainship, and had actually put it in execution, had we not interpofed our authority, and ordered our garrifons to take them into their particular protection. What you fay of ravifhing of women, is not only beyond our knowledge, but even beyond whatever we heard of before, having taken all imaginable care to prevent fuch violences by our proclamation, published for that purpose. It is known to all the world that we afforded our peculiar protection to the women of De Ingenio, of St. Arnout d'Orlanda, and what concerns the taking of the ladies by Captain John Blaar, was, as we are informed, done with no other intention, than to exchange them for his wife, or at leaft to keep them as hoftages for her, he having received intelligence that fhe was very ill treated by you at Serinham. The rebels themfelves made the first step towards thole robberies and rapines that have been committed by our foldiers fince, which, however, cannot come into balance with those cheats, frauds, and rapines, wherewith those rebels have defrauded and robbed their creditors of their debts and goods; notwithftanding which, we have, by granting fafeguards and otherwife, done all what in us lay to prevent the fame.

" The late murder upon the perfon of the Salinhas was committed the 17th of August, without our knowledge, to our great diffatisfaction, by the flying Brazilians, who, being enraged at the killing of their men, women, and children at Serinham, without any diffinction of age or fex, took this opportunity of revenging themfelves. You may eafily guess that the papers dispersed by Antonio Kavalcanti at Iguaracu have also contributed not a little to this enterprife.

" Of the bullets mentioned by you to have been used in the last encounter, we have more reason to complain than you, it being our constant order not to recede from what is the cuftom of war in these cases.

" The courtefy fhewed in faving and receiving our foldiers we are ready to acknowledge, and to return upon the like occasion, defiring you would fend us back your refolution upon this point by the fame drummer.

" It being evident from what has been alledged, that all the past misfortunes ought to be imputed to the rebels, unto whom we endeavoured by all requifite means to reftore tranquillity and peace; but they, perfifting in their rebellious defigns, deferve rather condign punifhment than the least excuse at your hands. For which reason it is that we protest before God and the whole world, against the proceedings of His Ex-For which reafon it is cellency Antonio Telles de Sylva, and what elfe has been committed by yourfelf contrary to the treaty concluded betwixt His Majefty of Portugal and the states-general of the United Provinces; not questioning but that upon the receipt of these prefents, you will retire with your forces to the Bahia, and thereby put an end to the further violation of the faid treaty. Thus, expecting your answer, we reft,

" Receif, Aug. 20, 1645.

Sir, yours, &c."

The fame night word being brought that fome of the enemy's troops were advanced to Olinda, notice was given to all the circumjacent forts to prepare for a vigorous de-11

fence,

fence, and two batteries ordered to be raifed on the back-fide of the dwelling-place of the negroes, from whence they might command the avenues to the Receif along the river fide. Several volunteers lately come from the flat country, were incorporated into one company, under the command of Secretary Hamel, as captain, and Jeronymo Holman their lieutenant: two advanced guards were placed, one betwixt the fort Bruin and the triangular fort; the fecond betwixt the laft and Count Maurice's plantation : part of the bridge of Boavifta was broken down to hinder the enemy's paffage that way; and confidering the importance of the triangular fort, a detachment of twentyfix foldiers, out of feveral companies, was ordered to reinforce the garrifon there. The fame care was taken for the fecurity of Maurice's Town, Antonio Vaez, the fort Erneftus, the quiquangular fort, and all the reft.

Major Bayert was ordered to have the remaining walls of Count Maurice's ftables pulled down, because they hindered the prospect from the fort Ernestus; and Henry Vermeulen was commanded to employ thirty negroes in clearing the plantation of Count Maurice and the ditches from all rubbish; and the before-mentioned Bayert ordered to remove the palifadoes from the faid gardens, and to put them round his fort. The engineer Pifteor had orders given him to fet a row of palifadoes on that fide of the fort of Ernestus, where it fronts the before-mentioned gardens, and to extend them five rods into the river. And this fort being not fufficiently flored with heavy cannon, commiffary Sticht was to carry thither two great pieces, then planted at the bridge-foot, and inftead of them to place there two culverins; likewife, the entrance of the channel of Maurice's Town was ftopped by a double row of palifadoes. The members of the council, in conjunction with those of the court of justice, took another view of the fuburbs of Maurice's Town, to confult whether it were best to maintain or to defert that post, but the refolution thereof was deferred till the next day. Two great cannon were planted in the quinquangular fort, to command the river fide; and in confideration that the horn-works belonging to that fort required a confiderable number of men for their defence, the governor of the fort was ordered to have the fame levelled by his Brazilians and foldiers, and one hundred negroes; and the woods betwixt the faid fort and the Affagados, were ordered to be cut down by the Brazilians belonging to the fort, when it was also refolved to draw the fortifications of Maurice's Town into a narrower compass, and to repair the walls round the Receif; fo that by the indefatigable care of the council, all the fortifications, both of the Receif and the other adjacent places, were put into fuch a good pofture of defence, that the enemy, though very ftrong, durst not attempt any thing thereabouts for that time. Mr. Dortmund had drawn near fourteen hundred perfons into Itamarica, feven hundred of which being women and children, he defired fome fupplies of provisions, but for the reft, had put the ifland in a good pofture.

Mr. Linge, by his letter, dated in Parayba, the 22d of August, fent advice to the council, that after notice given him of the defeat of Colonel Haus, he had judged it most convenient to remove the garrison and inhabitants of Fredericia into the forts; that however the Portuguese were pretty quiet as yet, notwithstanding his whole force confisted not in above four hundred foldiers, one hundred inhabitants, and fifty Brazilians, among whom were a good number of fick and maimed men; and that the Tapoyers had flain about twelve or fourteen labouring countrymen. Major Hoogstraten, Ley, and Heck, had not long before given notice to the council, that they had burnt all the houses, but especially the magazine and church without the fort, for its better defence, and that the enemy hast posted themselves on the hill of the cape, and on the fouthern island. On the 25th of August, upon another review of the fortifications of Maurice's Town, the fame were ordered to be brought forthwith to perfection.

The fame day the council received letters from Mr. Linge, by the way of Itamarica, dated the 18th and 19th of August, in Parayba, that William Barents had sent him advice from Kunhao the 14th of August, that he and Rudolph Bawn had a troop of Tapoyers ready for our fervice, every thing being very quiet thereabouts; but that the faid Tapoyers had carried away all the cattle belonging to Peter Farcharson, which had occasioned no small fcarcity of fresh flesh thereabouts.

It was also judged abfolutely neceffary by the council, to take into their ferious confideration the prefent condition of the forts in Rio St. Francisco and Seregippo del Rey, which being provided but with flender garrifons, and all communication cut off betwixt them and the Receif, and in great danger of being loft; it was judged abfolutely neceffary, after the defeat of Colonel Haus, to endeavour the prefervation of them, and confequently of the whole Dutch Brazil, by removing them from thence to the Receif.

To accomplifh this with all imaginable fecurity, Mr. Walbeck was deputed by the great council to the council of war, to know their opinion, by what means thefe garrifons, as well as that of Porto Calvo, might be with fafety brought to the Receif, or whether, confidering that they would be forced to leave their cannon behind them, they fhould be ordered to defend themfelves to the laft extremity, in hopes of receiving fpeedy fuccours from Holland for their relief.

The council of war having well weighed the whole matter, unanimoufly agreed upon the following refolution:

The Refolution of the Council of War.

"That it was their opinion, confidering the capital city was in danger, for want of a fufficient garrifon, the garrifons of the before-mentioned forts, which in all probability could not make any long refiftance, ought to be taken from thence, with as much ammunition and cannon as could be done, and carried to the Receif. But in regard that the fort of Porto Calvo lay pretty deep into the country, where the river was very narrow and fhallow, the garrifons of Rio St. Francifco and Seregippo del Rey were to pafs that way, in order to join them, and that they fhould bury or break their cannon.

" By order from the council of war, August 24, 1645.

" (Signed)

KORNELIS BAYER, ALBERTUS OOSTERMAN, L. VAN HARKEMAN, JOHN DENNING, SAMUEL LAMBARTZ, HENRY ADVOCAET, FREDERICK PISTOOR, CAPTAIN HAELMEISTER, RENE DE MOUCHY."

Accordingly two barks, with the fhip Zealandia, were ordered for the execution of this enterprife, to Rio St. Francisco.

The laft day of August, one of the captains of these two barks returned, and gave an account that he, being advanced into the river of Rio St. Francisco, within a league of of the faid fort, he received fo warm a falute of fmall fhot from a Portuguefe veffel full of fire-locks, that he was forced to return, without being able to penetrate any further up the river; that the other bark being difcouraged thereat, durft not venture to go to Seregippo, but that they thought fit to retreat back with the fhip Zealandia; he further added, that it would be very difficult to put this defign in execution, unlefs they were provided with fome galiots and yachts well armed.

Purfuant to this advice, the council ordered the yacht called the Sprew, with three other barks, thither, to join with the fhip Zealandia, for the more effectual execution of this defign.

They fet fail from the Receif the 2d of September, Captain William Lambartz commodore. He returned with the faid yacht and the Zealandia, the 1ft of October, to the Receif, where he gave the following account of his expedition to the council:

We came, the 22d of September, within a half league of the fort of St. Maurice, where we met with a bark, which, at the difcharge of one of our cannon, failed away before us up the river. As we were in purfuit of her, we efpied another fmall veffel, in company of the bark belonging to John Hoek, both full of foldiers: we faw the first of these two run ashore, and the foldiers landing, who skirmished with an opposite party for the defence of the veffel: our yacht, under favour of our cannon, boarded the faid veffel, with an intention to fet it on fire; but finding it loaden with the baggage of our foldiers, fell to plundering first; and foon after espied a boat, with a white flag, making all the fail they could towards them : Major Pappenheim, late commander of the fort of Rio St. Francisco, and Mr. Hoek, were in this boat, being sent by the enemy to let us know, that if we fet fire to the veffel, he would cut all the prifoners, with their wives and children, to pieces, fo that we defifted from it. They gave us an account, that the faid fort had been forced to furrender three days before, for want of wood and provisions, after a fiege of twenty-fix days: that the Portuguefe, having taken a ferjeant, with four foldiers of the garrifon of Seregippo, had killed the foldiers, and fent the ferjeant back with a convoy of two hundred men, to fetch the garrifon of Seregippo, which had not above four days provision left, from thence. That about eight days before the furrender of the fort, Colonel Haus, Captain Liftry, and Captain Wiltschut, paffed by that way, in their journey to the Bahia, whither they, pursuant to their capitulation, were to be carried, with the reft of the prifoners, and from thence to Portugal, and fo further to Holland, without any other lofs except their baggage, being for the rest indifferently well treated. They further added, that the Portuguese, not long ago, detached two hundred men to the island of Melchior Alvares, in hopes to cut off the retreat of our men, and to prevent their excursions, but came too late, our people being retired before. That the enemy had likewife made themfelves masters of the fort Dos Affagados, where Mr. Bullestraet being made a prisoner, was now on his way to the Bahia. Captain Lambartz hearing this account, thought it his best way to retreat towards the mouth of the river, where, having spent two days in refitting his fhips, he returned the 1st of October to the Receif.

The fame ill fuccefs attended us at Seregippo and Porto Calvo; for the council having fent a bark with provifions to their relief, the fame, contrary to her orders, came to anchor before Rio St. Francifco, where being feized by the enemy, the garrifon of Seregippo being thereby difappointed in their hopes, were forced to furrender, after they had fpent all their provifions. After this misfortune, there was not the leaft probability left of faving the garrifon of Porto Calvo, which lying deep into the country, the river was not navigable thereabouts, by reafon of its narrownefs, and that the enemy was mafter of the field on both fides, fo that they were likewife obliged to furrender for want: want of neceffaries. The garrifons of these three forts were, contrary to their capitulation (by virtue of which they were to be conducted to the Receif), carried prisoners to the Bahia; but those that could not follow the rest, by reason of fickness, or otherwise, were cut to pieces by the Portuguese.

Many of the foldiers belonging to thefe as well as other garrifons, and of the troops under Colonel Haus, dreading the danger of the land journey to the Bahia, did take fervice among the Portuguefe: but Captain Nicholas Nicholfon being fent with fixtyfour of thefe Dutch to prepare an ambufh for fome of our forces, took this opportunity to join with us, which exafperated the enemy to that degree, that they difarmed all the Dutch that had taken fervice there, and murdered them in cool blood, the like they did with the Dutch inhabitants that had ftaid behind in the country.

In the meanwhile the captainship of Parayba, through the good conduct of their governor Paul de Linge, remained in obedience, at leaft in outward appearance, till the 25th of August 1645, when the inhabitants, having received intelligence of the defeat of Colonel Haus, and the furrender of the cape of St. Auftin, and being at the fame time encouraged by the fuccours of five companies, and good flore of arms, fent to them by Vidal from Pernambuko, they began alfo to take up arms, with an intention to cut off the communication betwixt the garrifon in the monastery of St. Francisco, as the inhabitants of Fredericia (a place of no ftrength), and the forts near the fea-fhore; but Mr. Linge fhrewdly fufpecting their defign, did, with confent of the reft of the officers there, order all the citizens with their effects, and the before-mentioned garrifon, to withdraw within thefe forts, to prevent their being furprifed by the Portuguefe, and to ferve as an additional ftrength for the defence of the forts; for which reafon also the Brazilians inhabiting with their families in those parts, were commanded to intrench themfelves under the cannon, which ferved for outworks to them. The enemy finding themfelves by the conjunction of these forces, disappointed in their design of making themselves masters of Parayba by force, had recourse to their wonted artifice, not queltioning but they might have the fame fuccefs in purchafing the forts of Parayba, as they had had at the cape of St. Auftin. To encompass which, they fent in September 1645, one Ferdinand Rodrigo de Bulhaus, clerk of the court of justice of Parayba, with a letter directed to the commander-in-chief, Paul Vander Linge, offering him the fum of nineteen thousand gilders, if he would furrender the faid fort into their hands. But this meffage had not the defired effect, the meffenger being, by order from Mr. de Linge taken into cuftody, and hanged the next day; of which he fent notice to the council the 16th of September. In the meanwhile, (according to Mr. de Linge's letter from the 6th of September) five companies more of the enemy's troops, making in all about three hundred men, were arrived in Parayba, which being joined by the ableft of the inhabitants, had posted themselves near Tibery, where they had published by proclamation, for every one to repair to his fugar-mill, under pain of forfeiting the fame.

The paffage betwixt the Affagados and the quinquangular fort, where the cattle belonging to the Receif were kept at pafture, being much infefted by the enemy's parties, one of which had taken good part of it, a fmall wooden fort was ordered to be erected in the most convenient post, for the fecurity of the meadows thereabouts.

Some time before, viz. the 26th of July, orders were fent from the council to Servaes Carpentier, to difarm the inhabitants of Goyana, who thereupon petitioned the faid council to be excufed from furrendering their arms, confidering that thirty-feven Portuguefe of Kunhao, who had been difarmed, were murdered by the Tapoyers, and that they were daily in fear of the fame treatment, till they were further removed from their borders.

The council answered, that the murder committed upon these Portuguese had borders. been done without their knowledge, and contrary to their orders; that in cafe they perfifted in their allegiance, they had nothing to fear from the Tapoyers, whilft they were under their protection; neither ought they to imagine that the difarming of them, was done with an intention to leave them a prey to the Tapoyers, but for our own fecurity, and to furnish them with a plaufible excuse not to join with the rebels, whenever they fhould be prompted thereunto by them. At the fame time they repeated their orders to Mr. Carpentier, not to defift from difarming those of Goyana, notwithstanding their petition to the contrary, but that he should be very careful, that neither the soldiers nor Brazilians of Marni might be burthenfome to them. The council alfo deputed Mr. Aftelle and Captain William Lambartz, with letters to John Duwy and Karakara, the first king, and the second commander-in-chief of a troop of the Tapoyers, with prefents to all the reft of their commanders, in order to engage them to join with us, they having complained of their not having been prefented, like as John Duwy was before ; accordingly the faid Mr. Aftelle and Captain William Lambartz having taken their leave the 28th of August of the council, took shipping for Parayba, in order to go from thence to Kunhao to treat with the Tapoyers.

The members of the court of juftice and the council of war, in conjunction with the magiftrates, having reprefented to the great council the abfolute neceffity of having the houfes in Maurice's Town pulled down and laid level with the ground; an order of the faid council was published the 29th of August by beat of drum, enjoining the inhabitants to pull down fuch houses, within the space of two days, and in case of failure, every body to be at liberty to break down the fame for his use; the house of Mr. Rechteren only excepted, which was to be converted into a redoubt, for the defence of the adjacent plain. The fame day John Denninger, lately lieutenant to Colonel Haus, succeeded Captain Baar, now a prisoner with the enemy, in his command; and many negroes offered to ferve the company under a captain of their own choosing.

The 30th of August, Captain William Lambartz, with part of his forces returned to the Receif from Parayba, where he gave the council an account of his negotiation : that not without a great deal of trouble they at last obtained two hundred Tapoyers from their king John Duwy, who pretended that he dreaded an incursion from one of his neighbours, who in the abfence of his troops might perhaps kill him with all his family, and demanded at the fame time, that all the Portuguese might be killed in Parayba. That he marching with these Tapoyers into the faid captainship of Parayba, they actually flew all the Portuguese they met with in their way, to the number of one hundred perfons, and plundered their houses; and as soon as they found him prepared to appeale them, one half of them, with what negroes and other booty they had got, returned home; but continuing his march with the reft through Goyana towards the Receif, the Tapoyers did no fooner understand that they were likely to meet with fome opposition by the way, but they followed the footsteps of the rest homewards, fo that he was forced to retire with all speed to the fort of St. Margaret in Parayba, from whence he returned by fea to the Receif. Hereupon the council difpatched fome letters the 16th of September for Rio Grande, directed to king John Duwy, Jacob Rabbi and Rudolf Baro, exhorting them to join their arms with ours, for our mutual defence, and to chafe the Portuguese that were on their march thither, from thence.

The 13th of September 1645, Jeronymo Serrao da Payva, late admiral of the Portuguele fleet (made prifoners in the late fea-engagement in the bay of Tamandare) appeared before the council, where being examined concerning the defigns of the governor of the Bahia in fending a fleet, and landing his forces in the bay of Tamandare, as likewife

wife concerning the fleet under the command of Salvador Korrea de Saa, he refufed to give any other anfwer, or to make the leaft confession, but that he was sent with the faid fleet and forces to offer his affistance to appeale the revolt arisen among us. He defired also leave to fend a letter by a drummer to the colonels Martin Soares Moreno and Andrew Vidal, about the exchanging of his person, and some other Portugues prifoners, which was granted.

Some of the citizens having conceived a jealoufy, as if their prefing circumftances and the need they flood in of prefent relief, had not been fufficiently reprefented to the council of Nineteen in Holland, it was thought fit by the council to communicate the contents of the two laft letters to their fatisfaction.

The 19th of September, about noon, our whole fleet retired from the bay of Tamandare into the road of the Receif, with two men of war and two fmall veffels, taken from the enemy; where I was arrived long before, having left them immediately after the engagement. The fame night Servaes Carpentier, who died the day before, was interred. The fame day the yacht called the Doe, and one of the fmall veffels taken from the enemy, and called by us the Receif, were fent a cruifing to the cape of St. Auftin, to prevent the enemy receiving any fupplies by fea thereabouts.

The conncil being fenfible that the enemy made it his chiefeft endeavour to drive away their cattle, and to prevent them by ftrong parties from fetching of wood and fifhing, a company of fuzileers were ordered to be erected out of other companies, who were to be commanded by Captain Renbagh, and to ferve as a conftant guard againft the enemy's flying parties. The 21ft of September, the following proclamation of pardon for fuch as had taken fervice with the enemy, was published.

A Pardon published.

"The great council of the Dutch Brazil being made fenfible, that many of their fubjects being fallen into the enemy's hands, have either for fear of being killed or transported, and out of other confiderations, taken fervice among the enemy's troops, and confidering that most of them have been inveigled by their commanders, and perhaps are in a fair way of repenting of their error, have thought fit, by these prefents, to grant our pardon to all fuch as shall return to our fervice, for all past offences; with our promise, that they shall receive the advantage of the fame station they were posses of among us before; and such as are willing to return to their native country, shall have passion granted them for that purpose: from the benefit of which pardon, are however excepted Dirck Hoogstraten, and the other traitors, who being commanders of forts, have treacherously delivered up the fame to the enemy."

By this time the enemy had blocked up all the avenues by land, leading to the Receif, in hopes to reduce us by famine, having posted both all the Portuguese forces sent to their aid from the Bahia, and the rebellious troops from the city of Olinda to the Baretta, in the form of a half-moon; and made about half a league from the fort of Affagodas an entrenchment provided with fix pieces of heavy cannon, brought hither from Porto Calvo; but durft not attack us by force, knowing we were prepared for their reception.

Mr. Dortmund having by his letters reprefented to the council, the neceflity there was of fending one of their members to provide for the fecurity of Itamarika, and to keep the Brazilians (confifting of fifteen hundred men, women, and children), by his authority in their duty against the folicitations of Kamaron, who left no flone unturned

824

'turned to bring them over to his fide; they defired Mr. Bullestraet to take upon him this province; who accordingly, the 23d of September, fet fail thither in the ship the Deventer, and returning the 29th of September to the Receif, gave the following account to the council.

He arrived about noon at the entrance of the river Maria Farinha, where being informed by John Vos, mafter of a bark, that the enemy had twice attacked the city of Schoppe, and continued before it ftill, he went in a fhallop with five or fix feamen to the fort Orange, but was no fooner efpied by the garrifon, but they defired him not to come nearer, they being ftill fmartly engaged with the enemy upon the hill, and doubtful of fuccefs: whereupon he fent two feamen, with a letter to Mr. Dortmund, who being encouraged by the reward of two reals, brought an anfwer from him the fame night, intimating that the enemy had been forced to retire.

The 25th of August, by break of day, he went in a shallop to the city of Schoppe, and finding that the enemy, what with the brave resistance made by the garrison, what with fear of this ship, had abandoned not only the city, but also the whole island, he ordered the fortifications to be forthwith repaired, and to be put into a good posture of defence.

For the enemy perceiving that it was in vain to attack us upon the Receif, fent great part of their forces, embarked in eight boats and a bark, against Itamarika, the 20th of September; where having furprifed and vigoroufly attacked our forces, posted on the hill near the city (our deferters making the first attack), that they the third time made themselves masters of it, forcing our troops to retreat into their entrenchments of the church.

About three days after, viz. the 23d, Mr. Bulleftraet, as we are told, arrived in the fhip Deventer, to give the neceffary orders for the defence of the place; and to keep the Brazilians in awe, he brought along with him fome volunteers chosen from among the citizens, the garrifon of the Receif being fo weak as not to be rendered ufelefs by any further detachments; befides that there were four hundred Brazilians capable of bearing arms at Itamarika. He was charged by the great council, and the members of the council of war, to watch above all things for the defence of the fort Orange, which was to be maintained to the laft, if they were not able to keep the whole ifland on the hill.

Mr. Bulleftraet, after his arrival there, found it abfolutely neceffary to preferve likewife the city of Schoppe, from whence the faid fort muft be fupplied with wood, its fituation being fuch, as that fo long as we were mafters at fea, we could maintain a correfpondence betwixt the faid fort and city; for which purpofe alfo, the yacht called the Golden-Doe, had her flation appointed betwixt the fort Orange and the hill, to maintain the paffage of the river between both. But to return to the fiege of the city: the enemy made three vigorous attacks upon the entrenchment on the hill, but was repulfed with the lofs of one hundred and fifty killed; though a barber, who after the fight deferted them, made their lofs amount to four hundred and fifty. Kamaron and Hoogftraten were wounded, and we had only fifteen killed and fixteen wounded. The Brazilians lately transported thither, from the villages of Goyana, Iguaracu, and other places, behaved themfelves to a miracle upon this occasion, though it muft be allowed that the arrival of Mr. Bulleftraet did not a little cool their courage, which made them abandon the island in the night, betwixt Sunday and Monday.

The 2d of October the great council entered upon a fecond debate concerning the prefervation of Itamarika, they having received certain intelligence, that the eneny had undertaken the laft expedition against that island, upon hopes of being feconded vol. xiv. 5 N

therein by certain perfons of our party, with whom they kept a fecret correspondency; and though they were in the dark upon whom in particular to fix the intended treachery, yet did they think it conducing to the fafety of that fo important place, to remove Captain Sluyter with his company from thence, and in their ftead to fend thither the company commanded by Captain William Lambartz, and to intrust him with the fupreme command of all their forces there, which was put in execution accordingly the next day. The entrenchments round the church and the fort Orange were alfo ordered to be ftrengthened with palifadoes; and the first (pursuant to the advice of Garstman and Dortmund), I ordered to be furrounded with a counterfcarp, within the compass of which a company of Brazilians were lodged, with their wives and children, and the reft to be employed in the defence of the fort Orange; fo the redoubt which commanded the place, from which the fort was fupplied with water, was ordered to be repaired against a fudden attack, without which the fort could not long fubfis, or hold out against an enemy.

Letters were about the fame time delivered to the council, dated the 5th of October, by Major Auftin de Magethaes, fent by Andrew Vidal, to treat about the exchange of prifoners; he told them, that fince Admiral Serrao de Payva had by two feveral letters folicited his releafement, he defired that the fame might be exchanged for other foldiers, or be ranfomed by Antonio Telles de Sylva, governor of the Bahia. He defired alfo that a cartel might be agreed upon for the exchange of the foldiers; and that in the meanwhile fuch of the Portuguefe inhabitants, as were prifoners with us, might be releafed for reafonable ranfom, which was not accepted of by the council.

In the meanwhile (purfuant to the letters from the commander-in-chief of Rio Grande, and John Hoek of the 6th of October), Jacob Rabbi, with a fmall troop of Tapoyers and Brazilians, in conjunction with thirty Dutch inhabitants, made themfelves mafters of the feat of John Leftan, with the flaughter of fifteen Portuguefe. But they had not the fame fuccefs at Fernandez Menda's houfe in the Potigi, which being defended by fifty Portuguefe, they were repulfed with fome lofs.

The enemies finding themfelves difappointed in their defign of gaining Parayba by treachery, did again apply all their care to block up the avenues leading to the Receif, in hopes of reducing it by famine. This occafioned many fkirmifhes, in which the Brazilians, who got the greatest part of their provision out of the country, did a confiderable mifchief to the Portuguele; who for their greater fecurity built a fort in Pernambuko (as they likewife did in the Vergea of Parayba) near the fugar-mill of George Huomo Pinto, but flightly fortified, and not able to hold out against any vigorous attack. In Rio Grande the Tapoyers played the mafters over the Portuguefe: for as we told you before, that according to their cuftom they entered the faid captainship in July 1645, when being informed of the rebellion of the Portuguese in Pernambuko, they out of an in-born hatred to that nation, attacked the 16th of July fome of them in the fugar-mill of Kunhao, and killed every foul of them, the Dutch inhabitants thereabouts not being strong enough to prevent it. From thence the Tapoyers marched to Monpobu, Goyana, and Potofi, places belonging likewife to Rio Grande, where finding a body of Portuguese entrenched with palifadoes in the nature of a Palanka, they forced them, in conjunction with fome Brazilians, to furrender, under condition that their lives fhould be faved, provided they did not give any further occafion of disturbance. But some of the Portuguese flying afterwards into Parayba, the Tapoyers looking upon this as a breach of the late treaty, did with the before-mentioned. Brazilians agree to put the reft to the fword wherever they met with them, which they did

did accordingly, the Brazilians exclaiming against the tyranny committed upon thirty or forty of their comrades, who, by Andrew Vidal's order, were tied to palifadoes in Serinham and strangled, which had this good effect, that Rio Grande for that time was entirely purged of the rebellious crew, except fome few who escaped their hands. Their estates and cattle were afterwards disposed for the benefit of the company, and others their creditors, which furnished the public magazines with good store of flesh, at a very seafonable time. The Portuguese being fensible that we drew confiderable sof provisions from that country, endeavoured to prevent it by fending several bodies of their troops thither, but were always forced to retire to Parayba, whither they carried as much cattle along with them as they could.

According to the deposition of Captain Nicholas Nicholfon (who came over to us the 12th of November, as we shall see anon) the four companies of Dutch quartered in the Vergea were as follows:

The company of Nicholas Nicholfon, fixty-three men, and among them twentythree mulquets.

The company of Alexander Buchhalt, of forty-three men, among whom thirty-fix mulquets.

The company of Captain Anthony, who was mortally wounded in a late engagement, confifted of thirty-fix men, and among them thirty-two mulquets.

The company of John de Wit, of forty men, but miferable wretches, and among them only twelve mulquets.

Befides thefe they had two other Dutch companies in Goyana, one commanded by George Peterfon of feventeen men, all pikes, the other by La Cour of nineteen men, likewife most pikes. They had also two more in Parayba, one under the command of Captain Peter Gendre of nineteen men, most pikes; the fecond by Edward Versman of twenty men, among whom was but one mulqueteer. So that the whole number of these eight companies amounted to no more than two hundred and fifty-feven men; their colonel was Hoogstraten, and Francis la Tour, late alderman of Serinham, major, a profeffed enemy to the Hollanders. Most of the Dutch prisoners were put under a neceffity of taking fervice with the enemy, being otherwife in danger of being murdered in their way to the Bahia, as it happened to forty-two prifoners taken at the cape of St. Auftin, who were all flain in the fugar-mill Konjau, near Serinham. He further declared, that the enemy's forces in the Vergea confifted of about feven hundred men, fent from the Bahia, divided into nine companies, well armed with mulquets and firelocks. That befides thefe, they had about one hundred men, gathered from among the Portuguese inhabitants, they having forced all the young men from the south of Huma, as far as St. Lawrence, to take up arms : fome being armed with fire-locks, others with musquets they had taken from us; they were for the most part mulats, and an undifciplined rabble, commanded by John Fernandes Vieira as colonel, and Anthony Dias, (who came from the Bahia) their major. Their captains most in effeem among them were, Simon Mendes, Domingos Fagundos, and John d'Albuquerque. Kamaron commanded one hundred Brazilians armed with blunderbuffes, and Dias two hundred negroes (among whom fifty were ours), provided with very good guns; befides fome Tapoyers. Each foldier had for his daily allowance, a pound of meat, and about a pint of farinha or meal, and twelve gilders per month; a captain one hundred and twenty gilders, an enfign forty-two, a serjeant twenty-one, and a corporal fifteen gilders per month. But they only paid the Dutch troops with ready money, the account with the Portuguese from the Bahia being made up but once a year. They were at that time bufy in raifing of a fort with four finall baffions and a powder-houfe, betwixt

betwixt Bierbrom's fugar-mill and Cafa de Sabrodo, upon each of which were to be mounted three pieces of cannon, eight pieces having been brought for that purpofe from Porto Calvo, among which were five of metal. Round about this fort the foldiers from the Bahia had their quarters affigned them, except the company commanded by John de Magehais, which was quartered in the Baretta, with four Dutch companies, viz. the Dutch that were in the fugar-mill of Bierbrom, and those commanded by Captain Peter Kavalkanti, and Anthony Jaconio, and two or three companies of the Portuguefe come from the Bahia, in the fugar-mill Brito; the reft being Portuguefe, mulats, and other idle fellows they had forced to follow them from the fouth. Thefe were armed for the most part with fire-locks and mulquets, the rest with pikes. Andrew Vidal, John Fernandes Vieira, and Major Hoogstraten, were at that time in the Cafa de Sabrodo; all these confisted not in above fix hundred men. About the fugar-mill of John de Mendonce were quartered three companies, two at the houfe of Sebastian Karvalho, and two more in the fugar-mill of Mengao. The reft were posted in the Salines, Baretta, and the city of Olinda. Some of Kamaron's troops were in the fugar-mill of Van School, and in the houfe of John Kordero de Mendoje, upon the bank of the river, being their advanced guard; Henry Dias with his troops had his post in the house of Mr. Luffelen. The redoubts belonging to the city of Olinda were manned only with feventeen foldiers.

In November the great council received intelligence, both by letters from Paulo de Linge out of Parayba, as alfo by feveral deferters, that the enemy had fent four hundred men, two hundred of which were foldiers, the reft inhabitants, from Rio Grande into Parayba, to make themfelves mafters of the open country, or at leaft to drive away the cattle; whereupon it was refolved, with confent of Colonel Garfman, to endeavour to hinder the execution of the enemy's defign.

The 12th of November, Captain Nicholas Nicholfon, a native of Amfterdam, came, as we told you before, over to us to the Receif. He was among other prifoners of the cape of St. Auftin, carried from thence to St. Antonio, where he took fervice among the Portuguese, but with no other intention than to desert them upon the first opportunity; he being entrusted with a captain's commission, to command a company of Dutch foldiers forced to lift themfelves from among the prifoners they had taken, was ordered, at the recommendation of Hoogstraten, and Albert Geuitz Weddo, with the approbation of Vidal and John Vieira, to lie in ambush for some of our people in the Salines, with a detachment of fixty men, out of the four Dutch companies in their fervice; and four more companies were ordered for a referve, to affift him upon all occafions. The fupreme command of the whole body being committed to him, he approached as near as he could with his Dutch to the fort Bruin, where he took the opportunity to pais the river by break of day, and to go with them (they being all willing to follow) over to us to the faid fort. Captain Nicholas Nicholfon had the command over the faid company confirmed to him by the council, they being all willing to enter into their fervice. But the enemy had no fooner notice of it, but they difarmed all the Dutch, and under pretence of fending them to the Bahia, caufed them to be murdered by the way, with their wives and children.

The 2d of November, the council had received advice from Mr. Linge from Parayba, that Andrew Vidal had entered that captainfhip with two hundred men, and that Kamaron had by letters ftrongly folicited Peter Potty, to defert our fervice with his Brazilians, but had received a fmart refufal; the council fent him two pieces of fine linen cloth as a reward of his fidelity. For it ought to be obferved, that the Portuguefe, when they first began to take up arms against the government, did with letters and

828

7

great

great promifes tempt the regidores or commanders of the Brazilians to join with them, but they were fo far from hearkening to them, that they fent all the letters written upon that account, both by Kamaron and the reft of the rebellious ring-leaders, without opening, to the council, thereby to avoid all fufpicion of keeping any correspondence with the enemy, Peter Potty being a near kinsman of Kamaron; and ever fince that time they have behaved themselves fo well upon all occasions, and have done such considerable mischiefs to the Portugues, by plundering and killing them, wherever they could meet with them, that we had not the least reason to mistrust the fincerity of their intentions.

The faid Mr. Linge did alfo fend word November the 4th, that the enemy had attempted nothing as yet; and from November 14, that a party of three hundred of our people being joined by fome Brazilians of Parayba, had engaged eight hundred of the enemy's troops, whom after a fmart engagement they put to the rout, with the flaughter of a good number of their men. The Brazilians being encouraged by this fuccefs, did over-run all the flat country, and meeting with a good number of Portuguefe, who were merry-making upon St. Martin's eve in the fugar-mill of Andrew Dias de Tigeireda, they attacked them fo furioufly, that after a flender refiftance they put them all to the fword, even the fon of the faid Tigeireda himfelf, and a prieft, without giving quarter to any body, except to a very beautiful maiden ; who, though almost diftracted at the death of her father, and fome of her other relations, that lay wallowing in their own blood, had fuch a powerful influence upon the hearts of thefe barbarians, that they brought her a prifoner fafely to the fort of Parayba.

The 21ft of November towards the evening, three hundred and fixty foldiers (twenty of whom were taken from the Receif.) fet fail in fmall boats to the bay of Traican, and continued their march the fame night, under the command of Lieutenant Berge, Juftice Hoek, and the receiver-general of Pernambuko, towards Kunhao, in order to attack the enemy that were lately come into Rio Grande from Parayba; but thefe enemies having got fome intelligence of our defigns, were retired from Kunhao to a retrenchment among the bogs, which being acceffible but in one place, they fo warmly faluted our forces that would have forced them from thence with their fhot, that they were obliged to retreat, with the lofs of fome dead and wounded, to the caftle of Keulen, partly to refresh their men, partly to prevent their penetrating deeper into the council.

The 4th of December it was refolved to fend the fhip the Overyfiel, and the yacht called the Sprew, towards the Bahia a cruizing, to get intelligence of their naval ftrength thereabouts, and to endeavour to take fome prizes. The 5th of December the great council fent for all the commanders of the Brazilians, to inform them, that they had received confiderable fupplies of powder, ball, and all other forts of ammunition, by the fhip called the Swan, with letters from Holland; that they were equipping a confiderable fleet for their relief, at which the Brazilians were extremely rejoiced; the Portuguefe commanders having made it their bufinefs to perfuade them, that no fuch thing was expected from Holland.

The fame evening a Brazilian deferter declared, that all the Dutch were killed by the rebellious inhabitants, and their wives and children made flaves. The fame thing was confirmed by a negroe deferter, concerning Captain Bochholt; who having taken fervice with the enemy, and being afterwards fufpected by them, had caufed him to be murdered, as they had done with all the reft of the Dutch in their fervice, who were flain in their way to the Bahia.

The 7th of December, it was refolved in council, to erect four companies of fuzileers, the fame being found by experience to be more ferviceable at this juncture, for which purpofe,

purpose, the companies of Colonel Garfman, Captain Jurian Remberger, Captain Nicholas Nicholson, and Captain John Taylor, were pitched upon before all the rest.

In the fame month of December, a certain Portuguefe, Gafper Gonfalves, was taken by the Brazilians in the island of Itamarika, fent on purpose to perfuade the Brazilians, that the Dutch intended to deliver them up to the Portuguese for a certain sum of money, and they to retire with their effects into Holland, which caused no small commotion among the Brazilians, who began to give credit to the relation. And because Gonfalves had spread this rumour abroad fome time before the arrival of Caspar Honyhouse, (who the 28th of August was appointed commander-in-chief of the Brazilians of Itamarika, instead of Listry, taken prisoner by the enemy), he was hardly put to it how to remove this jealous from among them. Jacob Rabbi, pursuant to his letters of the 11th of December, was about the fame time preparing to enter eighty leagues further into the country towards the Tapoyers, to folicit their affistance : he at last came to Oyepe, fon-in-law to King Duwy, who promised, in case those of Siara would fend their troops to us, he would endeavour to raife as many of his vass as he could; but King Duwy excused himself, under pretence that many of his troops died by fickness in the Sartan.

The night before the 27th of December, the enemy had, by means of a boat, faftened two puppets with fire-works to the fhip called the Swan; but being difcovered as foon as it took fire, was foon quenched without doing any damage to the veffel; which made the fhips to be conftantly upon their guard for the future.

The 30th of December, two fuch puppets, found by two foldiers in a fmall boat near the fort Bruin, were prefented to the council. This boat, which queftionlefs was fent on purpofe to faften these puppets to fome ship or other, being discovered by the centinels, the men quitted the boat, leaving the faid puppets behind them.

Mr. de Linge, by his letters date! the 30th of December, from the fort St. Margaret in Parayba, advifed, that a certain negroe, who had deferted the enemy's quarter of St. Andrew, had declared, that the enemy had built two large barks in order to tranfport three hundred men in each, in order to attack Peter Potty, commander of the Brazilians, in his intrenchments. That Kamaron had been near three weeks in Parayba, the enemy's troops confifting thereabouts in fixteen companies; but that they had many fick among them for want of provisions, and that they had drawn all their forces out of Rio Grande.

The 6th of January 1646, Peter Bas, one of the members of the great council, did, by order from the faid council, fet fail with the two fhips the Lichthart and the Receif, and a bark, called the Blue-Boar, towards the captainfhips of Parayba and Rio Grande. His inftructions were, to confult with Mr. Linge commander-in-chief in Parayba, and the reft of the officers there, how to put the intrenchments and other works of the Brazilians, into a pofture of defence. From thence he was to go to Rio Grande, there to take an exact account both of the real eftates and chattels of fuch Portuguefe, as by reafon of their being engaged with the rebels, were forfeited to the company; he was alfo to ufe his endeavours to have thofe goods which were upon that account concealed or embezzled, reftored for the benefit of the faid company. He was alfo ordered to act in all other refpects, but efpecially in providing for the fecurity of the captainfhip and the fort, as he found it most confistent with our prefent interest, and to exhort the inhabitants to remain stedfast in their duty, and not to neglect the cultivating of the grounds and breeding of cattle.

The 12th of January, Peter Dunkerke arrived from Parayba, where he had been a cruifing before the Receif in the ship Hamel; he brought a letter from Mr. Linge, dated

830

dated in the fort St. Margaret, the 11th of January, who fent also one Mr. Steenhuifen to the council, he having deferted the enemy when they began to kill the Dutch in their fervice. This Steenhuifen brought advice to the council, that Kamaron, with five hundred well-appointed foldiers, was marched out of Parayba into Rio Grande to be masters of the field there; and, confequently, to keep our garrifons from being fupplied with cattle and farinha from thence. He further added, that the enemy were in want of meat, oil, and other neceffaries; but that the inhabitants flattered themfelves, that, for want of provisions, we fhould fhortly be obliged to furrender our forts into the hands of the Portuguese. This being likewise confirmed by Mr. Linge's letter, dated the 10th of January, a council was called against the 13th of January, Dirk Hamel and Mr. Bulleftraet being prefent, both members of the great council, befides the affeffor Walbeck, as likewife Lieutenant-Colonel Garfman, Mr. Raetsfield, Mr. de Witt, Aldrich, Volbergen, and Sans, in order to deliberate concerning the prefent exigency, confidering, that in cafe we should, by the enemy's being masters of the field, be bereaved of the supplies of cattle and farinha of Rio Grande, at a juncture when Itamarika and Parayba are clofely befet by their troops, it would be next to an impoffibility to maintain ourfelves in the poffeffion of the Dutch Brazil, till the arrival of the expected fuccours from Holland. It was therefore taken into confideration, whether this captainship might be best secured by a powerful diversion, or by endeavouring to drive him from thence. But being fenfible that the enemy were fo powerful near the Receif, Parayba, and Itamarika, as not to be attacked in any of these places, without exposing the whole Dutch Brazil to an imminent danger, it was refolved, that in order to attempt the relief of the captainship of Rio Grande, Mr. Dortmund should be ordered to fend fixty foldiers under the command of Captain Welling, and one hundred Brazilians, in the barks fent him for that purpole, from Itamarika to Rio Grande: at the fame time, orders were difpatched to Mr. Linge, commander in the fort St. Margaret in Parayba, to fend the fame number of foldiers under Lieutenant Brefman, and of Brazilians, to Rio Grande, to join with the reft that were to rendezvous there. These forces, confisting of one hundred and twenty foldiers and two hundred Brazilians, fet fail the 19th of January for Rio Grande, and were thought fufficient to oppose the enemy's defigns on that fide.

Mr. Dortmund and William Lambartz, by a letter dated the 15th of January, gave notice to the council, that they had fent a body of fixty foldiers and one hundred Brazilians abroad, as far in the Aldea by Oubus, and from thence to the fugar-mill Arraripe, but did not meet with any enemies in that part of the country, though they had feveral guns difcharged at them from among the woods; fo that they returned to Itamarika by the way of Tapafima.

Mr. Linge, not long after, fent advice by his letter dated the 22d of January, at the fort of St. Margaret in Parayba, to the council, that Peter Potty with one hundred and fifty Brazilians, had attacked the enemy four hundred ftrong in the Aldea of Magrebbe, and put them to flight with the lofs of twenty killed, and many wounded, whereas they loft but one brazilian.

-

The 29th of January, it was refolved in council, to bring the fhips the Elias, Orangetree, Deventer, Omlandia, and the Swan, into the road of the Receif, to be ready upon all occasions, in case the enemy should again appear at sea.

Mr. Bas, purfuant to his letter from the caffle of Keulen, in Rio Grande, dated the 23d of January, could not, by reafon of a tempest, land his forces at Kunhao, in order to join them with those under Captain Rhineburgh; but was forced to land his forces the 14th and 15th near Peringi. In the meanwhile, Kamaron having found means to

break

break in through the Matta, had furprifed many of the inhabitants in their Fazendas, and killed them without diffinction of age or fex : he had fince pofted himfelf with his forces, confifting of four hundred foldiers, as many Brazilians, and eighty Tapoyers, under the command of Antonio Jacomo Beferro, at a houfe of Henry Hamme in Mompabou, to cut off the provifions from us. Our forces confifting of about one thoufand foldiers, Brazilians and Tapoyers, marched the 23d of January to a houfe of John Leftan Navarre, to attack the enemy, and to force them to quit the captainfhip of Rio Grande. Befides thefe, Jacob Rabbi, and the fons of King Duwy, were the 19th, paft by the fort Keulen, at the head of fixty Tapoyers, and were daily followed by others, that came to our affiftance. Mr. Bas folicited alfo fome fupplies of provifions, of which they ftood in great want, there being above one thoufand five hundred Brazilians, men, women, and children, lodged under the caftle. He defired alfo fome money, ammunition, linen, and filks, to prefent to the Brazilians and Tapoyers ; all which, together with fome pieces of red cloth, was fent him by the council.

According to this advice, it being much to be feared the enemy would fcarce ftand the brunt in Rio Grande, but retire into Parayba, it was taken into ferious confideration the 29th of January, whether it would be advifeable, in cafe the enemy fhould be forced by our troops, or voluntarily retreat into Parayba, to purfue them thither, and thereby endeavour the recovery likewife of that captainfhip: but confidering that, by reafon of the weaknefs of our garrifons, we were not in a condition to fend any further fuccours from the Receif, Itamarika or Parayba, without running a manifeft hazard to our troops there; whereas, on the contrary, the enemy did not want opportunity to relieve theirs from the adjacent places of Parayba, and that we lived in daily hopes of fuccours from Holland, it was judged the beft way, that the welfare of the whole Dutch Brazil ought not to be put to the hazard by fuch an enterprize as this.

Accordingly orders were fent to Mr. Bas and the reft of the commanders of our troops there, to act with all imaginable caution, and rather than expose our men, in following the enemy into Parayba, to be contented with the recovery of the captainship of Rio Grande.

The 30th of March, Colonel Garfman was, by fpecial order from the council, fent a fecond time with fome troops to the captainship of Rio Grande, to inform himself, whether any troops of the enemy were posted in that captainship, and in what number; his inftructions were, that fo foon as he had received intelligence of the enemy, he fhould, with what forces he was able to bring together, endeavour to ftop their progress. But if he found himself not strong enough to oppose him, he should fer.d fpeedy advice thereof to the council, that they might fend him fpeedy fuccours, and that he was to take all imaginable care not to engage the enemy, before the arrival of the faid fuccours. But if he found the enemy already fo ftrongly entrenched as to be master of the country, without any hopes of forcing them from thence, the defence of the fort Keulen should be his chiefest care, as likewife of the Brazilians, with their wives and children; and fince, in cafe the faid fort of Keulen should be in danger of being attacked by the enemy, it would be of ill confequence, to have these women and children enclosed within these fortifications, for fear of want of provisions, he was ftrictly ordered to transport them in time, to some place of fecurity, fuch as Siara, or the like, where they might be able to fubfift, and be fecure against any attempt from the enemy. He was ordered also in his return to the Receif, to take en paffant (if it could be done without inconveniency) a view of the fortifications of Itamarika and Parayba, in order to give an account of their condition to the council.

832

But to return to Mr. Bas: according to his letters dated the 30th of January from the fort Keulen, Captain Rhinebergh had with his body made fix feveral attacks upon the enemy, who was retired from Mompabou and Kunhao into a bog, without being able to force their entrenchments; we loft about one hundred killed and wounded in this action, and retreated to the houfe of John Leytan with order to get fome cattle, which was very fcarce thereabouts, our forces feeding most upon fishes, which they caught by the help of two large nets; twenty-eight of our wounded men were brought to the Receif, with advice that notwithstanding this unfuccessful attack on our fide, the enemy were retreated into Parayba. Mr. Bas alfo folicited fome fresh supplies of men and ammunition, in order to purfue them into Parayba, but the refolution upon this head was deferred until they fhould hear further from Mr. Bas. The 7th of February, it was refolved by the council, with the approbation of Admiral Lichthart, to equip the Hollandia and the Swan, together with the yachts, the Flight, the Hamel, Bullestraet, and Lichthart, for cruizing. By letters from Mr. Linge, dated the 11th of February, at the fort Margaret in Parayba, the council was advifed; how that, according to the deposition of a negro deferter, Kamaron was come with all his troops into the city of Parayba, with an intention to attack our forts on that fide; an answer, with what was thought neceffary for this prefent purpofe, was immediately fent back in a bark by the council. By another bark fent by Mr. Bas from Rio Grande, they were advertifed, that he lay still encamped with his troops near the house of John Leftan, where with much ado he could get provisions for them, the enemy being ftill pofted at Momguappe, and guarding all the avenues into the country; that he had fent feveral fpies abroad, to get intelligence concerning the prefent pofture of the enemy. The 17th of February, the ship the Swan and the yacht called Bullestraet were ordered to go out a-cruizing; the 18th, the yacht the Flight, and the 20th, the ship Hollandia, set fail for the fame purpose. The ship the Overyssel was also ordered to go out, to ferve for a fpy-fhip on the coaft of Parayba.

The 21ft of February, the council received a letter from Mr. de Linge, dated the 18th, in the fort of St. Margaret, intimating that he had heard nothing fince of the enemy. Yet that he wifhed the forces he had fent to Rio Grande might be returned with all convenient fpeed, to make use of them for the defence of his forts, in case of an attack. The 24th of February, a party under command of Captain Killion Taylor and Captain Nicholas Nicholfon, were fent abroad towards the island of the Barette to get fome prisoners, but they returned the 20th to the Receif, having met with nobody except a man, at a confiderable distance. Another party which had taken their way towards Olinda and Bracco de St. Jago, but with the fame fucces, the enemy having only shewn himfelf at a distance, as they were returning to the fort Bruin. The 27th of February, the enemy appeared with a strong body in the Salinas, but being faluted by some cannon-shot from the fort Bruin, retired without attempting any thing.

In the meanwhile, according to Mr. Linge's letter, from the 2d of March, three barks with foldiers were arrived in Parayba from Rio Grande, fo that the rcft, under the command of Mr. Bas, being five hundred in number, might be hourly expected at the Receif. He further advifed, that he had feen no enemy of late, but being informed that a confiderable body lay encamped in a valley near the village of Magarebbe, he had ordered thither one hundred and twenty foldiers, and one hundred Brazilians, to beat up their quarters, and to get fome prifoners. In effect the 4th of March, he, with his troops confifting in five hundred men, arrived from Rio Grande at the Receif, and the 5th of March gave the council an account of his expedition.

VOL. XIV.

50

The

March, taken into cuftody, and fent on board the Hollandia, Major Bayert being ordered in the mean-time to fupply his place. This Jacob Rabbi, a native of Germany, had been employed by authority of the ftates-general, His Highnefs the Prince of Orange, and the company, to engage and keep the Topayers in the intereft of our government; in which commiffion he had acquitted himfelf fo well, that he brought thefe Tapoyers feveral times, out of the mountains (their habitations) to our affiftance. His dwelling-place was in the fort Keulen, in Rio Grande, where he had married a Brazilian woman. Gafper Honyhoufe, commander of the Brazilians in Itamarika, being flain in the laft engagement in that ifland, Mr. Vincent Van Drillenberg was, at their requeft, conftituted their commander by the council.

The 17th of April, fome papers were delivered to the council, which had been difperfed by the enemy, to debauch our foldiery; in return of which, they fent abroad their fummons, upbraiding each of their fubjects as were in the enemy's fervice, with treachery, and exhorting them to return to their duty. It was alfo agreed to publifh a copy of a letter delivered by the Portuguefe ambaffador at the Hague, to the ftatesgeneral, from the King his mafter; with the anfwer of the ftates to the faid letter : for fince the King of Portugal in this letter did difown the war, and the proceedings of Antonio Telles de Sylva, and his fending of his troops into the Dutch Brazil, they did not queftion but by this means to open the eyes of the Portuguefe inhabitants, not to flatter themfelves with vain hopes of affiftance from Portugal; befides, that we were in hopes thereby to fow the feeds of miftruft betwixt them and the Portuguefe commanders from the Bahia.

The 24th of April, two Portuguese companies, commanded by Captain Lawrence Karnero and Peter Kavalkanti, confisting of about forty men each, marched from the Vergea and the city of Olinda to Iguaracu.

They were headed by Vidal and Hoogftraten in perfon, who having got intelligence that Admiral Lichthart and John Nicholfon were gone to Itamarika, to get fome farinha-roots. The 25th of April, as they were marching from Iguaracu, a certain German furgeon, named Chriftopher Mars, who was formerly taken prifoner by them, happening to ftay fomewhat behind, whilft he was ftopping, was furprifed by one of our parties near Tapafino. Upon examination by Mr. Walbeck, he declared, that not long ago there were nine companies of the enemy's forces quartered in the Baretta, the city of Olinda, and in the mills of Bierboom and Brito; each company confifted of betwixt forty or fifty men. That there were five companies more, much of the fame ftrength, posted in the Salinas; and Henry Dias, with two hundred mulats and negroes in Gaspar Cox's house, but they had then no forces in the Vergea.

That after Nicholas Nicholfon was come over to us with his troops, Martin Soares Moreno had caufed two hundred and fixty Dutch, both foldiers and inhabitants, (among whom were fix women and two children,) to be killed by a company of the country-militia, in the woods of Tabatinga, betwixt Sibero and Deriba, in their way to the Bahia, befides those killed by his order in other places, amounting in all to three hundred.

By this time there began to be great fcarcity of meat in the Receif, notwithstanding which, the garrifons in the outworks, as well as the Brazilians in Itamarika, with their wives and children, were to be fupplied from thence; and the farinha roots being either all taken up before by our own people, or elfe destroyed by the enemy, in the island of Itamarika: to supply this preffing necessfity, it was refolved by the great council, to fend a detachment of four hundred men in barks to St. Lawrence de Praja

or

or Tujukapa, to fetch mandinka or farinha-roots from thence. This detachment was composed out of these following troops:

Out of Captain Nicholas Nicholfon's company, nine men.

From the Quinquangular fort, twenty-five.

From the Affagados, twenty-five.

Out of the company of Captain William Lambartz, fifty.

Volunteers from Itamarika, thirty.

Brazilians, one hundred and fifty.

The 29th of April the council was, by letters from Itamarika, advertifed, that our forces being fent abroad to fetch fome farinha, had chafed the enemy out of two or three entrenchments; but retiring into another, furrounded with a deep ditch, they were there alfo, with more courage than conduct, attacked by our troops, being forced to retire, with the lofs of fixteen killed and twenty-fix wounded, among whom was Captain William Lambartz: the enemy had likewife not a few killed on their fide. Mr. Dortmund, commander-in-chief of Itamarika, therefore defiring to be fupplied with meal, his magazines being quite exhaufted, the council fent thither, the 1ft of May, twenty barrels with meal, two with oatmeal, two with dry peafe, befides a pipe of wine and brandy, and one thoufand gilders in money, for the ufe of the Brazilians.

The 3d of May the council received advice, by a letter dated the 2d of May, from Mr. Dortmund, that the enemy had carried away ten negroes, four belonging to the company, the reft to one Mr. Seulin, and four other men from Itamarika; and that the Brazilians there had been fo far debauched by their intrigues, that they retired into a wood, and being twice fummoned to rejoin our troops, had refufed fo to do. That at laft Mr. Apprifius (minifter of the Brazilians) having been fent to reduce them to their duty, either by perfuafions or threats, his arguments were for prevailing, that they returned quietly, alledging for their excufe, that they were forced to fly thither for want of fubfiftance. Hereupon Dortmund defired fresh fupplies for his magazines, that a perfon of authority might be fent thither, and that another company might be put in place of that of Captain Vosterman, his men being ready to revolt.

To remove all these obstacles, it was refolved immediately to dispatch thither Mr. Bullestraet, a member of the great council, who was to agree with certain private perfons to provide our garrifons with fish, and to act in every thing there as he should find it most expedient for the fervice of the company.

. Accordingly, Mr. Bullestraet fet fail the 4th of May, in the yacht the Greyhound, and arrived the fame day in the afternoon in Itamarika; where, having executed his commiffion, he returned the 10th of May to the Receif, and gave the following account to the council: that he had taken a view of the city of Schoppe, and the fort Orange, both which he had ordered to be ftrengthened; as alfo, to fortify the old brick-houfe, formerly the stadthoufe, with palifadoes against any fudden attempt; that he having called before him all the commanders of the Brazilians, had reprefented to them that we were in daily expectation of a powerful fuccour from Holland, exhorting them to remain stedfast in their duty, and to keep their soldiers under the best discipline they could; he had also prefented their commander with cloth for a fuit of clothes, and the reft with fome wine and money, which they very thankfully accepted : he had en paffant taken a view of the plantations of Conradt Pauli, where he had found about one hundred and fixty cocoa-trees cut down by the Brazilians, being forced by famine to feed upon the fruit; the like they had done in feveral other places; that he had endeavoured to treat with feveral private perfons for a certain quantity of fiſh

fifh to be delivered at the Receif, but could meet with none that would accept his offers; they alledging, that most of their negroes being either run away or taken by the enemy, they did catch no more fish but what they could readily fell in the island, without the charge of falt and transportation; that he had likewise proposed to the commander-in-chief of the Brazilians, to give them for the future money instead of meal; and that they were to be furnished with three nets to catch fish for their own use; that the commander promised to propose it to the rest, and gave him fome hopes that they would accept of the faid offer.

To fupply the prefent want of provisions, which began to be fcarcer and fcarcer every day in Itamarika, Parayba, Rio Grande, and the Receif, by reafon that the expected fupplies from Holland were not as yet arrived, and we were clofely blocked up by land; it was thought fit to give all imaginable encouragement to the fifting trade; for which purpofe the two members of the great council, Mr. Hamel and Mr. Bas, ordered, the 7th of May, to buy up as much yarn as poffible could be got, to make fifting nets of, which afterwards ftood us in good ftead.

A certain Portuguese, who had committed man-flaughter in Angola, and was fled from thence to the Receif, having accused John Vieira d'Allegoas, he was by order from the council taken into custody.

This Portuguese declared, that the faid Vieira had delivered to him a certain piece of parchment, written in characters, and a box, wherein were several other papers, in order to carry them to the enemy, which parchment and box he produced in the presence of the members of the council. John Vieira denying the matter, was put to the rack, but continued resolute in his denial; till at last the key of these characters being found among his papers, and a certain Jew having uncyphered these letters, it appeared that he had given an account of the whole posture of our affairs to the enemy, with directions how to make themselves masters of the Receif; fo that finding himself discovered, he confessed that he had written and delivered these cyphered papers to the Portuguese; and was executed the 29th of May.

The magazines being by this time almost exhausted, there being fcarce provisions left for a few weeks, it was proposed by the council to the majors Bayert and Pistoor, that confidering it was not adviseable to exasperate the foldiery at this juncture, by retrenching their allowance of bread and other eatables, whether inftead of a pound of meat, they might not be prevailed upon to take fixpence, by this means to preferve that fmall ftore of flesh they had left; which these two majors undertook to propose to the foldiers, not without hopes of fucceeding in their project. And that nobody might be exempted from bearing his fhare in the public calamity, it was ordered that the loaves which used before to weigh a pound and a half, fhould be reduced to one pound weight, and that each citizen and others depending on the company, nay the members of the great council themselves, should have an allowance only of two loaves per week; the fame was to be given to all feaman, captains, lieutenants, and ensigns; but the reft, from the ferjeant to the common foldier, should have three pounds of bread allowed them per week.

Mr. Linge advifed from the 1ft of May, out of Parayba, that the enemy had not attempted any thing against the forts, and that a party of Brazilians was gone abroad towards Tapoa, in hopes to take fome prifoners. Much about the fame time the council received advice, that Colonel Garfman, without orders from the council, had endeavoured by fome prefents, to draw the Tapoyers into Rio Grande, under pretence of keeping them at hand, to enter into a confederacy with the new members of the great council that were expected from Holland. The council being not a little furprifed at

838

this

this undertaking, fince by the coming of the Tapoyers into that captainship, they fhould be difappointed of a confiderable part of those fupplies they received from thence; they fent word to Rudolph Barro to leave no ftone unturned to draw the Tapoyers by fair means back to their habitations; but that if they would fend fome of their commanders to the Receif, all imaginable fatisfaction should be given them concerning the murder of Jacob Rabbi; and the more to engage Barro to do his utmost, a prefent of wine, brandy, and fome toys, was ordered to be fent him. For as the cafe then stood, it was absolutely necessary for us to remain masters of Rio Grande, till the arrival of the fuccours from Holland; the vaft numbers of Brazilians that were fled to Itamarika, having confumed all forts of provisions there to that degree, that that island could not only not fend any supplies to the Receif, but most of the women and children of the Brazilians must be supplied out of the magazines there; fo that Rio Grande was the only place left from whence they received a confiderable quantity of farinha and cattle; which in fome measure abated the fcarcity of provisions in the Receif, and by the prudent conduct of the council, was the chief means that the place continued in tolerable good health till the arrival of the fuccours, which without it, it would in all human probability have been impossible to be done; and no question but this captainfhip might for a confiderable time after, having furnished the garrifons to the fouth with neceffaries, had it not been for the following accident.

The expected fuccours from Holland being detained by the winter-feafon and contrary winds, the Brazilians of Goyana, who with their wives and children had fheltered themfelves in Itamarika, were reduced to the greateft extremity for want of food; for after they had confumed all what the ifland could afford for their fubfiftence, and all the avenues by land being blocked up by the enemy, they had no other fupplies but what they received from our magazines: thefe being now exhausted to fuch a degree, that each citizen had but one pound of bread allowed him per week (which however at that rate would not hold out above fourteen days longer), the council was under an abfolute neceffity to have it propofed to the Brazilians, to retire with their wives and children (in all about twelve hundred) to Rio Grande, where they might fubfift fome time upon what the country afforded. Accordingly they writ to Mr. Dortmund the 1st of May, and fent Mr. Walbeck thither in perfon, to perfuade the Brazilians to fend at leaft five hundred women and children, with a certain number of their men, to Siara and Rio Grande, there being at that time in all near fifteen hundred Brazilians, men, women, and children in that island, among whom were only five hundred fit to bear arms, under the command of Caspar Honyhouse, who had each fcarce a pound of bread allowed them per week.

Provisions, as I told you before, growing daily fcarcer and fcarcer, by reafon the fuccours from Holland were detained beyond all expectation, by contrary winds; a general council was called, where the three members of the great council, Mr. Hamel, Mr. Bullestraet, and Mr. Bas, being prefent, as likewife Admiral Lichthart, and the two Majors Bayert and Pistoor, the following points were taken into debate.

First of all, the fending of the Brazilians from Itamarika to Rio Grande being looked upon as unavoidable, immediate orders were given to get the neceffary transport veffels ready for that purpofe. It was also taken into confideration, whether it were not feasible to gather a fufficient force out of the forts, who in conjunction with the Brazilians might attack fome place or other, from whence to provide ourfelves with farinha; but to this it was objected by the Majors Bayert and Piltoor, that the garrifons of the forts could not be weakened by any detachment, without running a great hazard; befides that it was a hard matter to pitch upon any place where there was any ftore

ftore of farinha, the enemy having either confumed, fpoiled, or carried it away before ; fo that we muft expofe our men to an apparent danger, without a fure profpect of intereft; for, fuppofing we fhould be fuccefsful, the quantity that might be got, would not be fufficient to maintain our garrifons for any confiderable time. It was however agreed to take an exact account of all the garrifons, to fee whether upon an occafion fomething might be undertaken for the fervice of the ftate. Accordingly thefe two majors, Bayert and Piftoor, having prefented a lift of thefe forces the next day to the council, it was concluded that no troops could be fpared out of the forts, except it were out of the Affagados, but they were but few in number. At the fame time it was refolved to fend Captain Niger with his company of Brazilians to Rio Grande, and the Omlandia and Greyhound yacht were ordered forthwith to fail to Itamarika, to transport the Brazilians to Rio Grande.

The 30th of May the council, the admiral, and two majors, entered into a fecond debate, whether it were poffible to attack the enemy, and in what place : against which it was alledged, that their chiefest force was at prefent in the Vergea; but fuppofing it was not, no farinha was to be got there, becaufe they were fupplied with it themfelves from far diftant places. That the farinha-fields nearest to the Receif were about St. Lawrence, at least five leagues from thence; that the nearest farinhafields to the fouth were about St. Antonio and Moribeca, where, by reafon of the ftrength of the enemy and the great diftance from us, there was no probability of incompaffing our defign; and that the farinha-fields to the north were likewife at fuch a diftance from the fea-fide, as could not in any likelihood answer our expectation. It was farther taken into confideration, whether fome forces might not be fpared in Itamarika, but it was carried in the negative; becaufe fince the Brazilians were ready to depart for Rio Grande, it was not adviseable to expose the rest of our troops there to a hazard. After ferious deliberation, what forces poffibly could be raifed out of the forts (their places being in the meanwhile to be fupplied by the inhabitants), it was found that the Affagados could furnish about feventy or eighty men, the Quinquangular fort and Maurice's Town, the fame number, and that of St. Antonio Vaez about fifty. But, confidering that the city-militia of the Receif confifted only of fix companies of feventy or at the most eighty men each, and that they were obliged to be upon the guard every night there (the place being without a garrifon), if a confiderable number of them should be employed in the forts, this must needs expose the capital place, which the enemy chiefly aimed at, to an imminent danger. The feamen being not above two hundred and fifty in all, could likewife not be employed in that fervice, unlefs we could leave our fhips quite unmanned and ufelefs. So that after many arguments on both fides, it was agreed to chuse the fecurest way, and according to the orders of the council of Nineteen in Holland, to expect the fuccours from thence with patience, and in the meanwhile to provide for the fecurity of our forts.

The fame day the council received letters from Mr. Walbeck, that fome of the Brazilians of Itamarika had deferted, a rumour being fpread among them, that we intended to leave them to the mercy of the Portuguefe, which had put all the reft into a great confternation, but that Mr. Dortmund had convinced them to the contrary. Mr. Walbeck and Dortmund had in the meanwhile reprefented to the Brazilians, that they being many in number, and confequently very ill provided for at this juncture, whether it were not beft for them to go for fome time to Rio Grande. They were at first averse to his propofals, for fear of being deferted by us, neverthelefs the urgent neceffity of providing for their fustenance, and to shew their compliance with the government's orders,

840

orders, were fo reconciled with them, as to refolve to go to Rio Grande, provided they might be furnished with convenient transport-ships, provisions, and some ammunition for their defence, and fifty men of regular troops. Mr. Dortmund having again folicited for provisions, fome were fent (fufficient for fourteen days) immediately, with fome gun-powder, bullets, and other ammunition.

Accordingly above one thousand two hundred Brazilians, most women and children, whofe hulbands and fathers had been flain in our fervice, embarked aboard the Omlandia and fome yachts, a pound of falt cod-fifh being allowed to each for the whole voyage without bread. At their arrival in Rio Grande they were fo emaciated by famine, that they appeared more like dead carcafes than living bodies, and laid hold of every thing they could meet with to fatisfy their greedy ftomach, fo that in a little time they confumed all the farinha that was left there.

Mr. Linge, by his letters from the 25th of June, fent advice to the council, that there appeared no enemy at that time in Parayba, but that ten Tapoyers, vaffals of king John Duwy, being come into Rio Grande, had fhewn themfelves extremely diffatisfied at the murder of Jacob Rabbi, whereupon it was refolved to reconcile that king to our intereft by the following prefents:

Two hundred gilders in ready money.

One thousand ells of Ofnaburg linen-cloth.

One hundred gallons of Spanish wine.

Two cafks of brandy.

Forty gallons of oil, and a barrel with powdered beef.

The Brazilians in garrifon in the fort the Bruin, the Quinquangular, and fome other forts, being diffatisfied at their being detained there for eight months last past, petitioned the council the 12th of June, to be fent back into Rio Grande.

The opinion of the two majors being afked thereupon, they advifed, that confidering they did no extraordinary fervice there, they might well be fpared; fo that it was refolved the 14th of June in council, to pay them their arrears, and to fend them back to Parayba and Rio Grande, to inhabit their villages as before.

In the Quinquangular fort, the company of Immanuel Barros was ordered to keep guard inftead of the Brazilians, who were commanded to depart the 20th of June. The 11th, 12th, 13th, and 14th of June, the enemy flot in the night-time very fiercely against the fort de Affagados, a redoubt called Kirk, and the house Boavista.

The 15th of June it was propofed to the council by Admiral Lichthart, and the two majors, Bayert and Pistoor, to beat up the enemy's quarters in the house of Immanuel Kavalkanti, and in the Baretta, with the following troops:

The company of Captain Killian Taylor, forty men.

The company of Captain Nicholas Nicholfon, of feventy men, which were to be joined by Captain de Niger with thirty men out of the fort Frederick, with Lieutenant Mos from the fort Ernestus with ten men, and Lieutenant Katnar from the fort Prince William with twenty men.

In all two hundred men.

About one hundred volunteers were fuppofed to be raifed from among the citizens, under the Colonel Walbeck; and Immanuel Baros with his negroes, confifting in fifty men, these joined with the other two hundred, would make up a body of three hundred and fifty men, to be commanded in chief by Major Piftoor, and to be conducted by fea by Admiral Lichthart to their landing-place, viz. the regular troops to the fouth of the Baretta, and the negroes upon the ifland on the north-fide, from whence they might break through the marshes to the Affagados, and fo further to the house cross the river

VOL. XIV.

river, where they were to make a falfe attack, whilft the troops landed at the Baretta affaulted them from before; the admiral, with his transport veffels, to lay ready all this while to receive them, and to fecure their retreat upon all occasions. This proposition being approved of by the council, partly to animate our foldiers, partly to get at least fome provisions for the fick, it was refolved to be put in execution the next day, but the wind proving contrary, and afterwards the tides being unfeasonable for the convenient landing of our men, this project was laid as a fide, especially when instead of one hundred volunteers fearce twenty-five offered themselves for this fervice, notwithstanding the council gave them all imaginable encouragement, by promising them to receive the fame treatment as the other fervants of the company had, in case they should be wounded or come to fome other misfortune.

In the meanwhile, the enemy having been informed by fome of our deferters, that by the departure of the Brazilians from Itamarika the garrifons there were much weakened, they thought fit to lay hold of this opportunity, to land fuch a force there, as fhould be beyond our power to drive from thence. The 15th of June, with the break of day, they furprized our fpy-fhip there, called the Sprew, with feveral barks and boats at the entrance called Pafloos (Markers); they got three prifoners, the reft efcaping with the lofs of two of their comrades killed.

The fhip before Tapafima was fet on fire by our own people, leaving the galiot that lay hard by, to the enemy, after they had taken out all her men, who went aboard the yacht called the Golden-Doe, lying before the north entrance. They landed with about two thoufand men in fhalops and other transport veffels, and Andrew Vidal and John Ferdinand Vieira wrote the fame night the following letter to Mr. Dortmund, commander-in-chief of Itamarika, which they fent by a boy they had taken prifoner in the Sprew:

Their Letter to Mr. Dortmund.

" Moft honourable and moft brave,

"You are doubtlefs not unacquainted with the refolution of the inhabitants of this country to retrieve their former liberty; to effect which they neither want power nor any other means; but their chief aim being to encompafs their defign without effufion of blood, we thought fit to let you know that we are ready to attack you in this ifland with all our forces, unlefs you will prevent it by a treaty. For being fenfible that you are paffed all hopes of relief, we were willing to advife you to treat with us, according to the cuftom of war ufed in fuch cafes; that in cafe hereafter things fhould fall out contrary to our expectation, by the fury of the conquering fword, you may not lay the fault thereof at our doors; for which reafon it is, that we offer to you and the reft of the commanders there, all their arrears due to them from the company. Whereupon we expect your anfwer to-morrow.

"From our head quarter, June 15, 1646.

Andrew Vidal de Negreiros. John Fernandes Vieira."

The 17th of June the council received advice from Mr. Dortmund of their landing, defiring prompt fuccours, without which he would not be in a condition to maintain the ifland againft them. It was therefore taken into debate, whether it were possible for us o bring together fuch a force, as without much hazard might be able to force the enetmy from thence; but it was carried in the negative.

842

For it was alledged, that without manifest danger not above two hundred foldiers could be taken out of the forts of the Receif, which number was not fufficient to attack the enemy, who had already intrenched himfelf there, with hopes of fuccefs: and, confidering that these forces must be transported thither by sea, we wanted ships (there being at that time not above two barks at the Receif) both to convey them thither, and to cut off the communication with the continent to the enemy. Befides, that at leaft fourteen days provisions were required for this expedition, in cafe the enemy should ftand his ground, which at this juncture was not to be done, unlefs we would leave the magazines of the Receif quite empty; there being then no poffibility of attempting its relief. The next thing under confideration was, whether the intrenchments on the hill might be defended or not? Against the maintaining of it was objected, that without fresh fupplies of provisions this fort could not hold out a week, especially since the enemy, by cutting off the pipes of the fpring that furnished them with fresh water, would foon put them under a neceffity of coming to furrender; when it was evident, that they might post themselves betwixt the fort of Orange and this hill, and consequently prevent their receiving any fupplies from thence.

Befides, that the hill, being of a confiderable compais, was the more difficult to be maintained by our forces, the fort itfelf being irregular, and but flightly fortified on that fide, efpecially where the old church-wall, making up part of the curtain, would not be proof against the enemy's cannon, and confequently expose the whole fort, with the garrifon, to the mercy of the enemy: fo that it being beyond all difpute in the enemy's power to cut off all communication with the fort Orange, it was unanimoufly refolved and ordered to leave the faid intrenchments, and to retire with the garrifon, and what provisions and ammunition they had, into the fort Orange, before their retreat was ftopped by the enemy's troops; it being past all doubt, that in case they could maintain themfelves in that fort, they could at all times, if they were mafters of the field, recover the hill and the whole ifland.

The council were the more forward in coming to this refolution, becaufe they had received certain information, that the enemy, who knew the importance of the fort Orange, had gained fome of the gunners and volunteers of the fort by prefents, who had engaged to affign them a place where it was eafieft to be attacked, whereabouts they were to charge the cannon with gun-powder only, to facilitate their attack. Two of the gunners were hanged the 23d of June for this treachery; the reft made their escape to the enemy. For the better prefervation therefore of this fort, our people left the entrenchments upon the hill the 21st of June, where the enemy posted a strong body of their troops immediately after. The council likewife ordered the yacht the Heemstede to cruize in conjunction with the Golden-Doe, before the north entrance of the ifland, to keep open free communication for us with our garrifon, and to prevent the enemy from receiving any fuccours that way; and at the fame time fome provisions were fent thither for the use of the garrifon.

But whilft things were thus transacting with various fortune, though for the most part to our difadvantage, and the fo long expected fuccours from Holland not arriving, the want of neceffaries encreafed more and more every day in the Receif to fuch a degree, that whatever was found fit for fustenance, either in the public magazines, or with private perfons, was applied to the common ufe, which however amounting to no more than one pound of bread a week for each fingle perfon, many died for hunger; their legs beginning to fwell first, which was the fore-runner of certain death; cats and dogs, of which we had great quantities, were looked upon as dainties at that time; and you might fee the negroes digging the half-rotten bones of dead horfes out of

of the ground, and to gnaw them with incredible eagerness; neither was the want of tresh water less insupportable, by reason of the heat of the climate, and the constant use of falt meats, all springs that were dug being brackish. The poor flaves, who had the leaft fhare of what was left, looked fo ghaftly and wild, with their eyes and jaws funk, as appeared terrible to the most undaunted of men. At last (notwithstanding all the care taken by the council) things came to that pafs, that the allowance of one pound of bread per week was fain to be taken away from the inhabitants, and allotted the foldiers; who, by the enticements of the Portuguese beginning to defert apace, had two pounds of bread allowed them, as long as there was any left; but when all was fpent, and no remedy was to be found against this lingering evil, it was proposed by the council, and unanimoufly refolved, rather to die bravely than ftarve, and to fight their way through the enemy. The foldiers were to lead the van, the women, children, fick, and other unable people to keep in the middle, and the members of the great council, with the inhabitants, to defend the rear. The Jews were above all the reft in a defperate condition, and therefore refolved rather to die with fword in hand than be burnt alive, which is their doom in Portugal.

But when we were juft reduced to the laft gafp, all horfes, cats, dogs, and rats being confumed, and a few quarterns of farinha fold at the rate of betwixt eighty or ninety gilders per quartern, which however could not fuffice for above two days longer, on the 22d of June (a day never to be forgotten) we faw two veffels with Dutch colours making all the fail they could towards the Receif; they had no fooner caft their anchors, and given us the fignal by the difcharge of three guns each, that they came from Holland, but you might have read in all our faces the fudden joy we conceived at this relief in our laft extremity; there was nobody that could fland upon his legs for want of bread, but did crawl to the harbour, where you might hear the cries of the people weeping for joy at a great diftance. Thefe two fhips, called the Falcon and Elizabeth, were freighted for the chamber of Amfterdam, and had left the Texel the 26th of April; they brought us the welcome news, that we might hourly expect the whole convoy. The captain of the Elizabeth told me himfelf, that having a very fair wind one day, he faid to his crew, "I am fure they are in great extremity at the Receif, God fend us fair wind and weather to relieve them in time," which happened thus accordingly. The captains were each prefented with a gold medal, with the following infcription; "The Falcon and Elizabeth did relieve the Receif."

The 23d of June, Mr. Bas, a member of the council, was fent to Itamarika, to affift in the defence of the fort; by his letters of the 28th he advifed that the enemy continued ftill in his poft on the hill, and that he had fent abroad fome fpies to get intelligence. The 7th of July, the faid Mr. Bas returned to the Receif with the companies commanded by Captain Bluecock and Conrad Held, leaving the two companies of Reinard Sikkema and Dignus Byfterman there in garrifon. The enemy had fome days before, after having blown up the fort on the hill, and fet fire to their camp, left the ifland, carrying along with them all the cannon, and among them two brafs ones. For when they faw that we were reinforced with feveral fhips from Holland, they did not think fit to abide there till we fhould ftop their paffage back by our veffels; neither were they infenfible, that without being mafters of the fort Orange, they could not promife themfelves the poffeffion of the ifland, the fouth entrance being commanded by the faid fort, and the north paffage by our yachts.

The 29th of June, the council received advice from our head quarter at the houfe of John Leftan, in Rio Grande, that two fons of king John Duwy, with twenty-three Tapoyers, were fent thither by their father, to affure our people of his good inclination

844

and

and fervice; but they refufed to come into the fort Keulen before they had fpoken with Rudolph Baro, who had been fent for upon that account. About this time feveral merchants fet out fome privateers, but as this could not be done without great charge, and there were but few fhips at fea of the Portuguefe, this turned to no great account, and confequently continued not long. A very odd accident happened to me much at the fame time; for fome of the labourers who were employed to unload a veffel belonging to the company, were got fo drunk, that they had killed a man, and hurt feveral others, by letting a pipe of wine fall upon them; I went thither to prevent any further diforder, but was no fooner entered the fhip, when on a fudden I found the filver galoons upon my coat turn black, and myfelf bereaved of my fight, which however I recovered by degrees in a few days after, the caufe of which I attributed to the ftrong exhalations of the wine, that had been clofed up for a confiderable time before. Much about the fame time a difference arofe betwixt the officers of the army and the city-militia, about the chief command of the head guard in the Receif, which the city-officers laid claim to.

But to return to our fo long expected fuccours.

The reiterated letters from the council of the Dutch Brazil to the States-General, and the directors of our company, wherein they prefented their dangerous condition to them, had had fuch an influence upon the firft, that they advifed the directors of the company to fend us a reinforcement of five or fix thoufand men, and a good fleet; for which purpole they fent them twenty-five companies of their regular troops, and gave leave for the raifing as many more, as in all amounted to four thoufand land foldiers, befides feamen and volunteers.

This fleet, confifting of a good number of brave fhips, was ready to fail in November 1645, but by reafon of a fudden and hard froft, were detained in the road of Ulieffingen, till February 1646. One Mr. Bankert, admiral of Zealand, had the chief command of this fleet, and at the fame time the following five gentlemen, who were appointed members of the great council of the Dutch Brazil, and were to relieve the old ones, were fent to their flations there; to wit, Walter Schonenburgh prefident, Michael van Goch penfionary of Ulieffingen, Simon van Beaumont fifcal of the city of Dort, Henry Hacks, and Mr. Trowens, two great merchants of Amfterdam, and Mr. Heremite a lawyer of Dort, their fecretary. One Sigifmund Schoppe, formerly under Count Maurice, and who had commanded the land forces of Dutch Brazil, was now fent in the quality of commander-in-chief of thefe forces; he was a most experienced captain, and who always kept a ftrict difcipline among the foldiers.

Never did any fleet fent from Holland to Brazil meet with fo many unfortunate accidents as this, during the fix months they were at fea. For within two days after they had left the Dutch coaft, they were forced to caft anchor in the Downs oppofite to Newport, where they loft two of their fhips by ftrefs of weather. After a ftay of three days, the winds being fomewhat allayed, the fquadron under Mr. Van Goch fet fail again, but was in two days after again forced into St. Helen's in the ille of Wight ; three days before their arrival, a rich Dutch fhip, valued at two millions of livres, then lately come from Brazil, was loft among the rocks, fo that of three hundred perfons no more than thirty were faved. Here they were detained by foul weather and contrary winds feven weeks, when another Dutch fhip coming from Brazil chanced to caft anchor near them, and told them, that their countrymen in the Receif were drove to the laft extremity; nay, that perhaps the place was furrendered by this time, they having no more than two months provifions left at the time of his departure. Hereupon it was refolved to continue their voyage with the whole fleet, notwithftaading the winds were

were against them, but on the coast near Portland were again overtaken by a violent ftorm, in which they faw a Scotch fhip with two hundred perfons in her perifh. The fleet under Mr. Van Goch came with much ado to an anchor behind a rock, where they ftayed till the fiercenefs of the tempeft being allayed, they profecuted their voyage. But fcarce were they got through the channel, just as they were entering the Spanish fea, but a difference arofe betwixt Mr. Van Goch and Mr. Beaumont about the flag, the Zealanders (in a council of war held for that purpose) allotting the precedency to Mr. Van Goch; whereas the Hollanders pretended the fame to belong to Mr. Beaumont; but Mr. Van Goch perfifting notwithstanding to claim the precedency, Mr. Beaumont gave a fignal to the Holland fhips to follow him, and fo bid adieu to Mr. Van Goch, who after a troublefome and tedious voyage, in which he loft many of his men by fickness, and especially the fcurvy, he arrived the 14th of July with his ship in the road of the Receif, being the first of the five new lords of the council that arrived in the Dutch Brazil. The 31st of July 1646, the ship the Bluecock, and the Ulieffingen of Zealand, came likewife to an anchor there; in the first came Mr. Trowens, and in the laft Golonel Sigifmund Schoppe.

The 6th of August the faid colonel gave an account to the members of the council how, purfuant to their orders, he was advanced with four hundred and fifty men as far as the fort of Olinda, to difcover the countenance of the enemy, and to take fome prifoners; that they had made a flew of attacking us, but after fome flight fkirmiss retired, and with a body of their troops marched through Bracer de St. Jago, to cut off our retreat; but our people forced them to retreat again with the loss of feveral of their men killed and wounded; whereas we had but one wounded during the whole action, befides Colonel Schoppe himfelf, who received a flight hurt on his leg.

The 8th of August the Arms of Dort, and in it Mr. Beaumont, arrived before the Receif; he was conducted the next day with all imaginable respect to the Receif.

The 12th, late in the evening, Mr. Walter Schonenbergh, prefident of the new council, and Henry Hacks, arrived in a bark from the north in the Receif, where they were received by all the citizens and foldiers in arms; they had been forced to leave their fhip, called the Middleburgh, before the north entrance of Itamarika, as likewife the Dolphin, laden with provifions on account of the chamber of Zealand, both which were feen the 30th of July, off Olinda; but being forced back by contrary winds, the laft of thefe two did not come to an anchor near the Receif till the 13th of August.

The fame day a certain negro deferter coming to the Receif brought information that the enemy intended to erect a fort on the pais of the Baretta, to prevent our excursions into the open country; whereupon it was refolved, with unanimous confent of Mr. Schonenbergh and the whole council, as likewife with the approbation of Colonel Schoppe and Admiral Lichthart, to prevent the enemy's defign by fortifying and maintaining the faid pais, as being the only inlet we had left for the recovery of the whole Dutch Brazil, all the other paffes being fo ftrongly fortified by the enemy, as not to be attempted without great hazard.

Accordingly the faid Colonel Schoppe marched the fame night with all the forces he could bring together, ordering the boats laden with materials for the intended fortifications, to follow him the next tide. The colonel at his arrival having foon chafed the enemy from thence, and poffeffed himfelf of the houfe of the Baretta, fent for immediate orders to the council, to know whether he fhould continue in that poft all night; who, with the approbation of the new prefident Schonenbergh, difpatched Mr. Bulleftraet thither immediately to take a view of it, and to make his report accordingly; he

returned

returned the 14th against night, and reported to the council that he had found the work there very far advanced already, and the fortifications in fuch a state, that they would foon be in a posture of defence against any attempts from the enemy.

The 13th of August Rudolph Baro, who, as we told you, was fent with fome prefents to John Duwy, king of the Tapoyers, brought a letter from the faid king, dated the 1st of July, to the council, wherein he thanked them for the prefents, and defired they would be pleafed to fend him fome iron weapons, he being then in war with the Pojukas, and that, after he had humbled them, he would march with all his forces against the Portuguese.

By this time the prefident, Walter Schonenbergh, and the other members of the new great council, being arrived at the Receif, and having delivered their commissions from Their High and Mightineffes, the States-General, His Highnefs the Prince of Orange, and the council of Nineteen, conftituting them joint-governos of the Dutch Brazil, the late members of the faid council; to wit, Henry Hamel, Bullestraet, and Peter Bas, ordered all the colleges and other perfons of note to be called together, to be prefent at the inftalment of the future lords of the council.

Accordingly all the members of the court of justice, and of the finances, next the magistrates and commissions of Maurice's Town, then the ministers and church council, together with the fea and land officers, the heads of the Jews, and laft of all the factors and book-keepers of the company, being affembled, Mr. Walbeck told them, in the name of the council, that Mr. Henry Hamel, Mr. Bulleftraet, and Peter Bas, had called them together, to lay down in their prefence the reins of the government, and to furrender the fame to Mr. Schonenbergh, and the reft of the lords appointed by Their High and Mightineffes, by His Highnefs the Prince of Orange, and the council of Nineteen, for the supreme management of the government of the Dutch Brazil; returning them their hearty thanks for the fervices each in his refpective ftation had done to the government, and for their conftant fidelity during these intestine commotions, exhorting them to perfevere in the fame obedience to the new council; whereupon the new prefident and other members having received the congratulations, first of the old council, and then of the other colleges, they from thenceforward transacted every thing by their own authority, though they, in all affairs of moment, took the advice of the faid members of the old council, during their stay in Brazil; for which purpose they defired them, the 20th of August, to appear every day at eight o'clock at their affembly, and to affift them with their counfel for the better management of the affairs of the company. The 19th of August Mr. Trowens died late at night.

The 3d of September was appointed for a general mufter of all the forces in garrifon in the forts near the Receif. Mr. Heck and Commiffary Zweers were ordered to take a review of those in the fort Ernestus, Wardenburgh, and Boavista; Mr. Beaumont and Moucheron in the fort of Anthony Vaez and Maurice's Town; Mr. Van Goch, Hamel, and Aldrich, at the Receif, and of those belonging to the artillery; Mr. Raetsfield and Crowranger, at the Baretta and adjacent quarters; Mr. Volbergin and Commission Stricht, in the forts William and Frederick-Henry; Mr. Bullestraet and De Witt, in the fort Bruin, and the land and fea fort.

The 4th of September, a pardon being agreed upon by joint confent of the old and new council, the fame was, the 6th, fent by a drummer to the enemy, with a letter to the Portuguese commanders from the Bahia, defiring them to withdraw their forces.

The 10th of September being appointed for a review of the militia of the Receif and Maurice's Town, the fame was found to confift of 700 men; they received the thanks of of the old council for their faithful fervices during the prefent inteffine war, and then returned their thanks to them for the prudent management of the government.

The 13th of September, the letters written by the Portuguese colonel the 11th of September, in answer to ours of the 6th, were read in the great council, filled with untruths and fictions of their own invention. They pretended that they were prevented by the inhabitants from retiring to the Bahia; besides, that they wanted transport vessels, their ships being detained in the bay of Tamandare, and that they must expect the King's orders for that purpose.

They took alfo a great deal of pains to magnify their ftrength. The 12th and 13th of September feveral letters were difperfed abroad by the Portuguefe, directed to Juffice Daems, to Matthew Bek, Balthafar de Fonfeca, Duarte Sarayva, Cafpar Francis de Cofta, being all merchants, and written by John Fernandes Vieira, in which they again exaggerated their own number, and fpoke very defpicably of ours, threatening that, in cafe they fhould be forced to quit the country, they would deftroy all with fire and fword, as they had already done in fome parts of Parayba. The contents of thefe letters were as follows :

A Letter from Vieira to fome Merchants in the Dutch Brazil.

" Experience has, without queftion, convinced you fufficiently of the reafons that moved us to undertake this war, and the fuccefs we have met with is an ample teftimony that God was pleafed to inflict this punifhment upon our enemies for the many outrages committed against the inhabitants of this country. This is, however, in a great meafure to be attributed to the general confent of the faid inhabitants, who having now forced themfelves from the tyrannical yoke of their oppreffors, ought to expect from me, who, though unworthy, am appointed the chief manager of this war, to be backed in fo brave a refolution. I would not have you be ignorant of our ftrength, which, in comparison of yours, exceeds all that can be faid upon that head ; I will only tell you that, as by our quitting the captainfhips of Parayba and Goyana, we are confiderably increased in number; fo it is most evident from thence that the inhabitants chose rather to lofe their pofferfions than to endure any longer the indignities that were put upon them, which was the true caufe of their infurrection, and not, as it is given out among you, becaufe they were unable to fatisfy their creditors; becaufe they left more than what would have paid their debts. But if it should happen so, that the faid inhabitants fhould not be able to maintain themfelves by force of arms, they are refolved to lay all the other captainships desolate in the same manner.

"Having, therefore, well weighed the reafons which feem to promife us a good iffue of this war, I thought myfelf obliged, as a friend, to advife you, that that party is backed by reafon, and the unanimous refolution of many thoufands; for, I can affure you, we are at leaft fourteen thoufand ftrong, befides the negroes and Tapoyers, difperfed in feveral places, from Rio Grande as far as Rio St. Francifco. Kamaron commands fix hundred mufqueteers, Henry Dias eight hundred negroes, two hundred Minos, and feven hundred Tapoyers; and thofe of the Sertan are at our devotion, whenever we are pleafed to call for them; but, above all the reft, we have God on our fide. We are not ignorant, that before the arrival of Mr. Sigifmund Schoppe, your whole force confifted not in above fix hundred men, and that the fuccours come along with him do not amount to above one thoufand two hundred more; moft of which are boys, and the reft either dead or fick. You fee I am well acquainted with your ftrength, having killed and taken prifoners about two thoufand fix hundred of your

beft

beft foldiers, and five hundred Brazilians, befides the wounded that were carried to the Receif; when our troops had no other arms than pointed flicks and clubs. Thefe are bleffings from heaven, for if we are able to perform thefe things without powder and ball, what may not be expected from our forces, now they are ftrengthened with good troops, and provided with fufficient arms and ammunition? All which I confirm to you upon my word, to be nothing but the real truth; and, had it not been in refpect of those colonels fent from the Bahia, and of His Majesty of Portugal, I had by this time been master of the Receif, or some of the forts, or at least I might have done much greater mischief: but if matters are not brought to a happy conclusion, I am refolved to act like a desperate man, and not leave any fugar-mills, cattle or negroes in the country, but will rather turn all to ruin and destruction, before we will be compelled to fubmit again to your obedience.

"As thefe prefents may ferve as a warning to you, fo I hope you, and the reft of the merchants, will not delay to enter with us into fuch articles of agreement, as may be most conducing to the prefervation of your possession of I would have you call to mind, that there are many *ingenious* (mills) reduced at prefent to fuch a flate, as not to be likely to be in a condition to be used these ten years next to come. The Vergea is in no better condition than Parayba and Goyana, and the cattle (without which the mills cannot fubfift) destroyed in most places.

" Colonel Sigifmund Schoppe, I fuppofe, pretends to keep the field against us, as he did in the last war, but he will find himfelf egregiously mistaken, because the inhabitants will not be of his fide; for if I fhould hear of one that was, I would caufe him to be hanged immediately. You allege that we are vaffals of the company, but when was ever any conquered nation treated thus as we were, worfe than the vileft flaves, of which you are fenfible as well as we; fo that, being forced to break our chains, we do not owe you any further obedience. If we had not been in hopes of this opportunity, we would long before have implored the affiftance of the King of Spain or France; and if those had failed us, to have had recourse to the Turks and Moors. I defire you not to throw away this letter, becaufe experience will convince you of the truth of it; and that we shall purfue the same methods here as we have done in other places; wherefore, I would have you not give credit to any body, except to those that come in perfon from those places; I having told them nothing but the bare truth, which you will find in effect thus: in the profecution of this war, I hope you will confider what is most for your interest, in which I am ready to ferve you; for though your governors do not direct their letters to me, it is I that have the chief management of this war, and under my command; the power of the colonels come from the Bahia extending no farther than over those troops they have brought along with them. A Reyal de bon Jefus, September 11, 1646.

"On the 10th of this month, the before-mentioned colonels having fent an anfwer to a letter directed to them from your council, by one of our captains, feveral infnaring queftions were afked him concerning the prefent war, which he, perhaps, not anfwering according to their expectation, they replied more like drunken cowards than foldiers; if they will be pleafed to come out and tell me thefe things, I will try whether their fwords are as nimble as their tongues are, and teach them what refpect is due to the meffengers of those perfons who have the fupreme command here. This I write to you at prefent, but shall not fail in due time to make my words good by the fword, of which your people feel the daily effects as often as they dare to come out of their forts. Pray be not deceived, for Brazil is not allotted to you; not quession but that God will bless our arms, and if we happen to die, we shall lose our lives in the you. XIV. 5Q defence of our holy religion and liberty; and all those that have refused to accept of our offers will pay for it with the loss of their lives, possession, and debts.

" A Reyal, Sept. 12, 1646. (Signed) JOHN FERNANDES VIEIRA."

The 14th of September, a man of war, called the Ter Veer, equipped by the chamber of Zealand, (aboard of which was Colonel Hinderfon) arrived before the Receif, after a voyage of fourteen weeks. The 24th of September, the enemy caufed fome pamphlets to be difperfed, promifing, in very haughty terms, a general pardon, and a composition of their debts, in cafe we would leave the island. The 27th of September, Colonel Schoppe returned with fome troops from Goyana, by the way of Itamarika; I had not met with any enemy, but had found all the fugar-mills burnt in the first place, but the fugar-reed and farinha fields in a pretty good condition; we received afterwards further information, that the fugar-mills of Goyana were not quite burnt down. The 27th of October, a conference was held betwixt the old council and Mr. Van Goch, unto whom they imparted their advice concerning feveral matters relating to the ftate of the Dutch Brazil, and especially to the planting of the mandioka or farinharoots, and the killing of cattle, which they advifed to be done with great circumfpection, Brazil being not able to fubfift without a confiderable number of oxen, which were continually employed in carrying of fugar-reeds, wood, and other neceffaries, to the mills.

For the planting of farinha-roots they propoled Itamarika, Rio Grande, and Parayba, which countries were thought fufficient to fupply their prefent occasions; provided it were done before the feason was elapfed.

In the meanwhile, Colonel Schoppe having made feveral, but, for the most part, unfuccefsful attempts, upon the enemy, our forces were thereby fo diminished, that we were not in condition to make head against the Portuguese near the Receif; which made our council take a resolution to endeavour the recovery of Rio St. Francisco, the execution of which being committed to the management of Colonel Hinderson, proved more fortunate for us, he meeting with little resistance thereabout.

Accordingly, the 24th of October, the following fhips, Count Eano admiral, Loanda vice-admiral, the Arms of Dort rear-admiral, the Bluecock, the Watchful Dog, the Greyhound, Eagle, the Star, Heemstede, and the Flight, with eight barks, fet fail under the command of Admiral Lichthart and Colonel Hinderson to the fouth. The 17th of November the council received advice, that our troops under Colonel Hinderson were fafely landed at Korasippa, and, marching from thence to Rio St. Francisco and the fort St. Maurice, had met with no opposition from the enemy, who had begun to rafe the faid fort. That they had been seconded by the small vesses, which had followed them up the river, which our forces had passed, and were marched to Seregippe del Rey, having left fome behind to repair the fort; and that four Portuguess had requested their pardon, which was promised them. Whilst our forces were employed thereabouts, I was ordered thither to take care of the necessary provisions (of which there was great plenty) for our troops; having accordingly caused my cargo to be embarked aboard a ship called the Brownsish, Francis Frantz master.

I fet fail the 24th of November. We were carried with a brifk gale as far as the mountains, called by our people the Saddle-hills, from their fhape, the coaft all thereabouts being white fand downs. About half an hour after fun-fet, we faw ourfelves off the bay of Tamandare, and from thence continued our courfe with a fair wind, which in two days after brought us happily to the entrance of that great river, which

1

850

is

is fo broad at the beginning, that a fix-pounder can fcarce reach acrofs it; it falls with a very foft current into the fea, its waters being low in the winter, but increase in the fummer, perhaps by reafon of the fnows that are melted by the heat of the fun. About fifty leagues from its mouth is a great cataract or waterfall, furrounded by a great many iflands; the fea at its entrance meeting in tempestuous weather with the current, are fo boisterous, thatthey firike terror into the flouteft mariners, and carry away great pieces of the continent along with them. We entered the faid river, but were forced to caft anchor immediately after fun-fet, for want of an east wind to carry us higher up, which commonly begins to blow thereabout at three in the morning. The country appeared very pleafant on both fides, and we faw abundance of wild beafts near the river-fide, and feveral huts made of straw. We were detained near twenty-four hours upon a fand-bank, which, after we had paffed, we came at last to the village called Penedos, fituate upon a high hill; here we landed with our boats, and found a few houses which were rebuilt by our people, the reft being burnt by the enemy before their flight. In the fort was formerly, in the time of the Portuguele, a church, which we turned into a magazine; it was furrounded with a goodly wall, the river paffing by it on the north fide, where the hill is very fteep.

The 30th of November Admiral Lichthart was feized with a fudden and violent illnefs, occafioned by his drinking too much cold water after he had over-heated himfelf before; he was carried into a boat, with three foldiers under the command of an officer, lower down the river, but foon after loft his fenfes, and in my prefence expired. The next day his corpfe being put in a coffin was carried aboard the Golden Star, being conducted by the chief officers there prefent, and four companies of foldiers, to the riverfide, who gave three falvoes with their mufkets, as did the cannon from the fort and fhips, in order to his interment at the Receif.

Towards evening, as I was going aboard our ship, the boat overturned by the swiftnefs of the current, and, had I not been a good fwimmer, I had infallibly been drowned; the mafter threw out a great cable over-board, by the help of which, and God's mercy, I got fafely into the fhip. The foldiers in the meanwhile foured the country, and brought feven hundred oxen, (of which there was plenty,) and three hundred calves, into our quarters, having been at pasture in one of the adjacent islands of the river, under the guard of fome foldiers; they were not extraordinary fat, but tolerable good meat. The foldiers' huts were for the most part planted on the north fide of the hill, which being composed of branches and leaves of trees, took fire accidentally the 3d of December, with fuch fury, that in a quarter of an hour the whole quarter was in a flame, notwithstanding that the alarm was given immediately, by the beating of drums and the founding of trumpets; fome foldiers that were then fwimming in the river, loft all their cloaths by this accident. It was well it happened by day; for if it had been in the night it would have put us under a great confternation, it being generally reported that it had been done by treachery.

There was at that time a plentiful crop of tobacco upon the circumjacent fields, but was not quite fit for reaping, which muft be done at a certain feafon, before the low grounds overflowed. The colonel defired me to provide thofe who had loft all, with new cloaths, and to deduct it out of their pay; but I told him that I being only a factor, could not do it without fpecial order from the council, fome having but little pay due to them. The 25th of December we received intelligence that the enemy began to appear in a confiderable body, whereupon the companies of Captains Coufin, Schut, Gyfeling, La Montayne, and of a Brazilian captain, called Tomee, were fent in

5Q 2

in queft of them, with orders to fet their stables on fire, and bring the cattle to our quarters. The next following Monday, word was brought us, that our troops were to narrowly enclosed by the enemy, that it was feared fcarce one of them would efcape with life. Whilft we were in a great confternation, not knowing what refolution to take, a Brazilian brought us the unwelcome news, that our whole body was routed and difperfed, and Captains Schut, Coufin, and La Montayne, killed upon the fpot. He had fcarce finished his doleful relation before a German foldier, who had efcaped the fight, by his bleeding wounds and his words gave us a confirmation of what had been told us before, with this addition, that Captain Gyfeling's lieutenant, La Montayne's enfign, and one Kilmet, belonging to Captain Schut, had fought their way through the enemy, with about thirty foldiers, and would foon be here. This mishap was chiefly attributed to the fool-hardiness of our troops, who contrary to Colonel Hinderfon's command, having at once difcharged all their mulquets againft the enemy, fell in pell-mell, without any regular order, with fword in hand upon the enemy, which the enemy perceiving, retreated back and drew them into an ambufh. Towards night we faw feveral foldiers miferably wounded with darts come to our quarters, fome who had thrown away their arms, were forced to caft lots for their lives, the misfortune of which fell upon a Dutchman and a Brazilian, who being tied to a flake to be flot to death, were however pardoned by the colonel. Captain Gyfeling's lieutenant, who came without his arms to the fort, was fent immediately to the Receif, where his fword was broke over his head, and he declared incapable of ferving the company for the future, notwithstanding he had done them faithful fervice for feven years laft paft.

By this time I was fent for to the Receif, fo that after having taken my leave of the colonel and Mr. Dames, I embarked on board the Bat the 16th of December, and we were the fame evening with a fair wind and ftream carried to the mouth of the river. It being a fine moon-light night we catched abundance of Zaggers, as we call them, a fish of a very good taste, and continued our course with a brisk gale: not far from the river's mouth we met with four of our ships, who told us they were to fetch provisions, but in cafe they could not, were to return forthwith to the Receif. The 18th, we advanced but little, the fhips being not out of fight of us, near the river's mouth, but did catch more fish than we were able to eat. The 20th we were likewife becalmed, and we perceived the moon to be half eclipfed for the fpace of two hours. The next following day we failed fo near to St. Antonio, that we could fee them walking along the fea-shore. Towards night we discovered Porto Calvo, about thirty leagues from Rio St. Francisco. We were often becalmed, but catched abundance of king's-fish and cods, and faw fires in many places along the coaft. The 24th of December we came fo near to the cape of St. Auftin that we discovered five ships and feven rowbarges in the harbour; we might have reached fome of those that went ashore with our fhot, had it not been for the fand-bank which hindered our nearer approach. About noon we came before the Receif, but it was fo foggy that we could fcarce difcover the water-fort; nevertheless we ventured in, and I got ashore immediately, with an intention to give an account of the state of affairs in Rio St. Francisco to Mr. Schonenbergh, being conducted thither by Colonel Schoppe, who happened to meet me immediately after my landing.

The 27th of October the enemy had laid two ambushes in the way to the fort Prince William, beyond the redoubt Kiik. They did not ftir till towards noon, when perceiving a company of our foldiers marching along the dike, they fired fo briskly upon

852

them,

them, that they killed eleven, wounded twelve, and took three prifoners; yet not without the lofs of fome on their fide.

In the meanwhile the Tapoyers being much exafperated at the murder of the beforementioned Jacob Rabbi their commander, had left our party; the council did what they could to appeale them, imprifoned and banifhed Garfman the author of it, and confifcated his eftate, notwithstanding which, the Tapoyers could not be prevailed upon to join with us as before.

The 18th of November Mr. Van Goch entered into a conference with the members of the old council, whether it might not be feafible to embark what forces we were able to fpare on board our great fhips, and to attempt to make a powerful diversion to the enemy by attacking him in fome place or other. But those of the old council having represented to him the danger of this enterprise if it should miscarry, whilst they were blocked up in the Receif, the further debate thereof was deferred till the next day. It was then proposed, upon fecond thoughts, that in cafe we could bring all our forces together, fomething of moment might be undertaken without manifest hazard, whereby to oblige the enemy to withdraw his forces from the Receif; but Mr. Van Goch apprehending no fmall danger in cafe we miscarried, they came to no resolution for that time.

It being found by experience that all our promifes of pardon had proved ineffectual, it was propofed by Mr. Van Goch the first of December, whether it was not most expedient to give no quarter for the future; unto which it was answered, that very feldom quarter had been given by us, and few prisoners were taken, and that the enemy had likewife killed most of our people that were fallen into their hands, but they judged it not convenient to refuse quarter to all without distinction, which would induce such of the inhabitants as had remained quiet hitherto, to betake themselves likewife to their arms.

The 23d of November we laid an ambufh for the enemy near the fort of Affagados, who being by fome few fent out for that purpofe engaged in a fkirmifh, and purfuing our men with great eagerness under the cannon of the fort, were let upon by those lying in ambufh, who killed and wounded many of them.

The 12th of December the corps of the late Admiral Lichthart was interred, one company of the city-militia, and two of foldiers appearing in arms upon that occasion, gave him three falvoes with their mulquets.

The 30th of December the Eagle yacht brought letters to the council, dated in Rio St. Francifco the 4th of December, intimating that in an ifland a little above the fort, one Colonel Rebellia was arrived with two hundred men from the Bahia; and that they expected another reinforcement, as well from thence as from the Vergea; that our people being fent higher up the river, had attacked fome of the enemy's troops, but they made their efcape to the other fide, leaving their arms and clothes behind them.

The 2d of January 1647, Colonel Schoppe, who had been with three hundred fuzileers in Goyana, returned to the Receif, giving an account that he had taken a view of all the rivers thereabouts, but met with no enemy.

The 5th of January the council received an account of the before-mentioned action in Rio St. Francifco, viz. five companies of our forces being fent to Orambou, to beat up the enemy's quarters, they met with a body of one hundred men, whom they attacked and put to flight; but foon after our forces were attacked by a much ftronger body, who put them to the rout, with the lofs of one hundred and fifty men; of our officers one captain was killed, and five taken prifoners, viz. Captains Samuel Lambart, Lambart, La Montagne, Gerrit Schut, Kilian Taylor, Daniel Koin, and three lieutenants, Jooft Koyman, Anthony Baliart, Jeronymus Hellemen, and one enfign.

The 8th of January Mr. Van Goch, in the name of the new council, advifed with those of the old council, that it being refolved among them to fend for a confiderable number of their forces out of Parayba, in order to gather a body of troops for fome important defign, they defired to be informed concerning the present condition of the faid captainship; and whether the city of Parayba and St. Andrew might be defended by a fmall garrifon; whereupon those of the old council replied, that the town of Frederica had no fresh water but what they must fetch at a mile's distance, and confequently might be cut off by the enemy; the fame thing might be done at the paffage leading to the river fide; befides, that there was no fortifications belonging to the place but the monastery, which was of no great confequence, and the Guarte Domaiges church, which had been fortified by the enemy in this war. As to St. Andrew it was no more than a fugar-mill, about four hours diftant from the city of Parayba, fituate upon the bank of the river; that the communication of this place with the fort of St. Margaret might eafily be cut off by the enemy, as being likewife about four leagues from thence, but it might be relieved from the water-fide, and yet not without great difficulty. Mr. Van Goch told them he would make his report thereof to the council.

The 12th of January the council received advice, that the enemy were, with a ftrong body of troops, entered Parayba, and advancing very near to the fugar-mill of St. Andrew's, had in the night-time furprifed fome Dutch and Brazilians, to the number of fifty men, women and children, of which they had killed fome, and ripped up the women's bellies.

The 13th of January fome pamphlets were again difperfed by the enemy, containing in fubftance, that fince the inhabitants of the Receif were now beyond all hopes of further relief, it would be their fureft way to come to an accommodation; for they were relolved to venture all before they would lay afide their defign; but if all failed, they would deftroy the whole country, and fo leave it : they exhorted them not to be deceived by the infinuations of those who belonged to the company, and called them rebels; they being no more to be ftyled fo than the Dutch themfelves, who had afferted their liberty againft Spain.

The 17th of January four negroes belonging to one Ifaac de Raffier, who had been taken prifoners fome days before in Parayba, came over to us into the Receif, and brought advice, that the enemy, after having tarried but a little time in that captainfhip, where they had killed five Dutchmen and fome Brazilians, were retired from thence.

The 22d of January, early in the morning, the enemy began to batter the wooden fort near the Baretta, from a battery on the bank of the fouth fide of the river, which he continued the whole day, but defifted at night; the garrifon having been reinforced about noon with five companies of foldiers, and fome provifions; becaufe Mr. Hamel, one of the members of the old council, did reprefent to Mr. Van Goch, that though the fort itfelf was fo inconfiderable, as fcarce to be worth the trouble of defending it by a good garrifon, yet at this juncture, when the enemy had made his first attempt upon it, it would not be advifeable to defert it, for fear of giving encouragement to the enemy to attack the other forts; but that on the contrary, as long as they did meet with a brave refiltance here, they would not be fo forward to attempt others; efpecially fince we had the conveniency of relieving them with boats at high water, with low tide by land by the way of the fand-ridge; and that we might annoy the enemy enemy with the cannon from our yachts in his trenches, as we had done that day. About the fame time, a map was ordered to be made, fhewing the true fituation of the Receif, with the turnings and windings of the adjacent rivers and marshes, as far as the Baretta, for the better instruction of the council.

The 24th of January in the morning, news was brought that the enemy had raifed the fiege of the fort of the Baretta the night before, and carried off all their cannon, being fenfible that as long as they could be annoyed from the fea-fide, and we be able to reinforce them daily with fresh troops, they could promife themfelves but slender fuccefs: but befides that, our people were to struggle against the enemy and famine, they were frequently troubled with defertions; many of our foldiers, nay, even to the ferjeants and other officers, who begun to despair of our cafe, running over to the enemy, even at that time when the before-mentioned struggle the faulton and Elizabeth, were in fight of the Receif.

Now the members of the old council began to prepare in good earnest for their return to Holland, they had already, in December 1646, folicited Mr. Schonenbergh, prefident of the new council, to order fome fhips to be got ready to transport them thither, and the Ulyeffingen had been appointed for that purpose; but the fame being not as yet returned from cruizing, they applied themfelves, the 25th of January 1647, to Mr. Van Goch, and told him, that whereas, according to their commission, one of them fhould return after the expiration of three years, they had continued in Brazil thefe fix years, Mr. Kodde having indeed been ordered to return about that time, but his place not being fupplied by another, he died before his departure : that they had, for thefe three years last past, folicited their return, and had two years ago received promifes of being relieved by others; which had not been performed till within thefe few months, to the great prejudice of themfelves and their families: Mr. Van Goch promifed them to take effectual care to have the fhips got ready, and to fend for the fhip the Ulyeffingen, in order to their return home. At the time of the acceffion of the new council to the government, and the departure of Henry Hamel, Adrian Bullestraet, and Peter Bas, late members of the great council, the following forts remained ftill in the poffeffion of our West-India company:

The fort of Keulen, at the mouth of Rio Grande, provided with twenty-eight brafs and one iron cannon.

The redoubt of St. Antonio, on the north fide of the river Parayba, with fix iron pieces of cannon.

The fort Reftanguets, in an ifland of the fame name within the river Parayba, with four brafs and five iron pieces of cannon.

The fort Margaret, on the fouth fide of the river Parayba, with fourteen brass and twenty-four iron pieces of cannon.

The fort Orange, in the isle of Itamarika, with fix brass and seven iron pieces of cannon.

Noffa Senhora de Conceptiano, an old battery upon the hill of Itamarika, with two brafs and eight iron pieces of cannon.

The redoubt called Madame de Bruin, three iron pieces of cannon.

The fort Wardenbrugh, alias the Triangular Fort, betwixt the Bruin and the Receif; the first provided with four brass and five iron pieces of cannon; the last with fourteen brass guns.

The Land Fort, alias St. John's, with eleven iron guns.

The Water Fort, at the mouth of the river of the Receif, with feven brafs guns.

The

The fort Erneftus, with five brafs and three iron pieces of cannon, and the battery with five brafs and two iron pieces of cannon.

The Receif.

Maurice's Town, upon the island of Anthony Vaez.

The fort Frederick Henry, alias the Quinquangular Fort.

The redoubt of ftone near this fort.

The redoubt Kiik, betwixt the fort Frederick Henry and the fort Prince William.

The fort Prince William, upon the river Affagados.

The forts then in possession of the Portuguese, and taken by them from the Dutch, are these:

Seregippo del Rey, Rio St. Francisco, and Porto Calvo, being reduced by famine, were rafed by the Portuguese, being sensible that our people could not maintain themfelves there without erecting of new ones, which was not to be done without a vast charge. Near the point of Tamandare, the place where the Portuguese from the Bahia first of all landed their men; and where afterwards their fleet was beaten by ours, the enemy laid the foundation of a fort for the security of that harbour, where set the point of great burthen might fafely ride at anchor.

The 23d of January, Mr. Beaumont was fent by the new council to confer with the late members, concerning the prefent condition of Rio St. Francisco, and what was best to be done there: they answered him as before, that the fort as it was now could do but little fervice, and that therefore it would be worth our confideration, whether the propofals made by them in writing might not now be put in practice. The faid Mr. Beaumont further proposed, whether it would not be requisite to erect an earthen redoubt for the defence of the Baretta; unto which those of the old council replied, that confidering the vaft charge, and the finall benefit which could be expected from it, the fame might be more conveniently built in fome place or other, to facilitate our paffage into the open country. Beaumont was of opinion, that thereby the enemy would be prevented from advancing to the fort Frederick Henry; but the old members told him, that notwithstanding we had now a fort on the Baretta, we could not hinder the enemy's coming upon that ifland near the fort, unlefs we would keep a confiderable force there for that purpole; that we need not fear their transporting any cannon thither, because their retreat might be cut off at high tide; neither could they, from thence, do any mifchief to the Receif, it being evident, that the fhot of our biggeft cannon in the fort Frederick William could not reach the faid ifland. The fame evening, Mr. Van Goch and Hack came to tell the members of the old council, that the Hollandia and Ulyeffingen would be ready in a little time, in order to conduct them to Holland, the Ulyeffingen being ordered forthwith to return from the Bahia, whither fhe was fent a-cruizing.

By this time the enemy had blocked us up fo clofely in the Receif, that on the land fide we durft fcarce look without the gates; and a certain Portuguese had prepared us a worse entertainment, having invited all our chief commanders abroad to his daughter's wedding, during which time the enemy were to have surprised the city; but this design being timely discovered by some Portuguese and Jews, miscarried.

About the 15th of October, the Portuguese began to rebuild the fort Bon Jesus, as it is called by them, but by us Altena, on the other fide of the river. We had fome notice of it by deferters, but could not difcover the truth of it, because they kept us from advancing that way by their cannon, and the place was furrounded on all fides with woods; but as foon as they had caused them to be cut down, we discovered it both by fight and the roaring of their cannon, which thundered incessfantly against the

the city, caufed fuch a confternation, as is not easy to be expressed, most people sheltering themselves in vaults, to avoid the fury of the enemy's cannon. Of this I faw a most miferable spectacle in a certain young lady, a niece of the late Admiral Lichthart, who being come to vifit one of her acquaintance lately married, had both her legs fhot off by a cannon bullet, which at the fame time killed the new-married woman upon the fpot. At the outcry of these miserable wretches I ran thither instantly, my houfe being just by, where I was an eye-witness of their milery, the poor young lady grafping my legs with fuch an agony, that fhe could fcarce be pulled off with all the firength I had; it being a most doleful spectacle for me to see the floor covered with the legs and arms of these miferable wretches; the poor young lady died likewife within three days after. It was not long after that I narrowly escaped the fame misfortune; for whilft I was talking with fome of the inhabitants of the city, as I was going the rounds, two of them were killed by a cannot bullet, and another had both his hands fhot off as he was lighting his pipe. Nay, we were forced to remove all the fhips out of the harbour for fear of being funk. Colonel Schoppe, in the meanwhile, had made himfelf mafter of and deftroyed Taperika, 2,000 Portuguese only having faved themfelves by flight; but by the many unfuccefsful encounters we had with the Portuguefe, our forces decreasing daily, whereas theirs increased, Colonel Schoppe was ordered to command Colonel Hinderfon to leave Rio St. Francisco, and to join him in Taperika; but this flood us but in little flead, being not long after obliged to leave likewife Taperika for the relief of the Receif. All our force confifting of about 1,800 men, being now come to the Receif, (where they had not provisions for above feven months left) it was feveral times taken into confideration, what was beft to be done at this juncture. Colonel Schoppe, with fome other officers, were of opinion not to hazard an engagement, our forces being fo much inferior to the enemy, but to ftay for a more favourable opportunity; but it was carried by the majority to venture a general fally for the relief of the Receif, the chief command thereof being given to Colonel Brink, becaufe Colonel Schoppe was not as yet cured of his wounds he had received in a late en-Our forces marched towards evening as far as Guerapes, a place fatal to us counter. the year before by the defeat of our people, the fields thereabouts being as yet covered with their bones. The Portuguese no fooner perceived us to be upon the march, but they left the fort Altena, of which we having got notice, poffeffed ourfelves of it immediately,, and thus drew the thorn out of our foot. But the 16th of May proved the most fatal of all we had feen for many years before in Brazil. For though our forces attacked the enemy with bravery, and maintained the fight with great obstinacy for some time, yet the enemy, flushed with their number and late fuccess, with 2,500 of their beft men, at last forced our men to give way, and afterwards to fly, being purfued by 150 Portuguele horfe; fo that both in the fight and flight, we lost above 1,100 men, among whom were Colonel Brink, and almost all the rest of our commanders : we lost alfo nineteen colours, and all our cannon and ammunition we had carried along with us. It was not till five days after before leave could be obtained to bury our dead, which began to corrupt and stink most nauseously, by reason of the burning heat of the sun. This was the last effort we were likely to make in the field; all our future care being for the prefervation and defence of the Receif, unlefs we fhould be fupplied with frefh fuccours from Holland: but the fame arriving but flowly, most people began to fear, that, in cafe God Almighty did not fend us fome unexpected relief, we fhould be at laft forced to leave that place likewife to the mercy of the enemy; the great council laying the fault of our late misfortunes upon the council of war, and thefe again upon them, alledging that the foldiers were ill-provided for, and wanted their pay. As for myfelf, ςR

VOL. XIV.

being

beit 3 fenfible that things would be worfe and worfe every day, I thought it the fafeft way for me alfo to defire a paffport for my return to Holland, which at laft with much ado I obtained, and fo prepared every thing for my voyage. But before I leave Brazil, I ought to give you a flort account of the products of the faid country.

The captainship of Pernambuko, and Brazil in general, being not only well stored with cattle, but also with feveral forts of herbs, trees, and fruits, we will give you a fhort view of them, and begin with the Mandiiba, and its root, called Mandioka, unto which the Brazilians stand chiefly indebted for their fustenance. The most parts of America are ignorant hitherto of wheat or any other grain, inftead of which, nature has furnished them with a certain shrub, the root of which dried and powdered, and afterwards boiled and baked as we do our bread, is the common food of the inhabitants of This fhrub grows in vaft plenty every where, being by the Brazilians called America. Maniiba and Mandiiba, and its root Mandioka. There are divers kinds of it, diftinguifhed by the Brazilians by different names, but the root is in general called mandioka. Their leaves are fmall, green, and long, pointed at the end, which grow upon large stalks or branches, each of which has five, fix, or feven leaves, growing in a clufter, refembling a ftar, called by the Brazilians, Manikoba. The flock or ftem is diftinguifhed by certain knots, not above an inch thick, but generally fix, fometimes feven feet high, from whence fprout forth feveral branches, which producing again leffer ftalks, bear the before-mentioned leaves. It bears a fmall flower of a pale yellow colour, and of five leaves only, with fmall ftalks within, which at laft turn to feed. The root mandioka refembles our parfnip in fhape, being two or three foot long, and about a man's arm thick, but grows thinner towards the bottom. Its outward rind refembles that of a hazel-tree, but its fubstance is white, affording a milky sharp juice, which is pernicious to beafts. This fhrub grows in dry, barren, and fandy ground, its nature being fo averfe to moifture, that they are obliged to plant it only in the fummer months, where it is most exposed to the fun. For this purpose it is, that the inhabitants cut down the woods on the hills and in the plains, which they burn, and fo prepare the ground for the production of this root; these fields are by the Brazilians called Ko, by the Portuguese, Roza or Chokas, and by our people, Rossen. These fields are turned up into fmall round hills like mole-hills; the Portuguefe call them Montes de Terra Cavada, or Hollowed Hills, the Brazilians, Kujo. Thefe hills they make about two foot and a half asunder, each being about three foot in circumference, and half a foot high, that the rain may be carried off with the more eafe. In each of these hills they commonly plant three small taks of this shrub, of about nine or ten inches or a foot long, without leaves; notwithstanding which, they grow and foon bear fresh leaves, and in time produce new roots, which cannot be transplanted, because no sooner are they taken out of the ground, but they begin to putrefy and flink. After thefe taks have been about ten days in the ground, they begin to bud and produce as many fresh taks as they have knots; each of these taks is about a finger long, from whence sprout forth many leffer ones of a purple colour. The fields must be three or four times a year cleared of the weeds, which grow in great plenty amongst it, and choak it up before it comes to its full growth. The fmall taks and leaves of these shrubs are mightily infefted by the pifmires, and likewife coveted by the wild-goats, oxen, horfes, and fheep, for which reafon they are very careful to fence these plantations with stalks and branches of trees. The bees, conies, and fome other Brazilian creatures, are mighty fond of the root, which takes no harm, though the fhrub be ftripped of all the leaves, provided the root

root itself be not touched. This root does not come to its full perfection till a year after planting of the taks, though, in cafe of neceffity, they may be drawn in fix months, but afford but little farinha. Each fhrub produces two, three, four, nay fometimes twenty, roots, according to the goodness of the ground, and after they are come to full maturity, will keep two or three years under-ground; but it is much more fafe to take them up at the year's end, for elfe many of them will rot; nay if the feafon happens to prove very wet, they must of necessity be drawn, though they are but half ripe. The root. after it is taken out of the ground, will not keep above three days, but flinks, take what care you can; for which reafon they feldom draw more at a time than they can make immediately into farinha or meal. That kind of mandioka, commonly called Mandibuka, grows faster and ripens fooner than any other, and affords the best farinha; it thrives best in fandy and hot grounds. But that kind which is most generally used is called Mandiikparata, and grows indifferently in all grounds. The farinha is prepared thus : the root after it is taken out of the ground is purged from its outward rind by a knife, and washed in fair water; then the end of the root is held close to a wheel of about four or five foot diameter, which being covered round the edges with a copper or tin plate full of fharp fmall holes, not unlike a nutmeg-grater, and the wheel being turned round continually, grates the faid root into fmall particles, which fall into a trough underneath. The wheel is by the Brazilians called Ibecem Babaca, and by the Portuguefe, Roda de farinha, or the flour-wheel; the trough the Brazilians call Mukaba, and the Portuguefe, Koche de rater Mandihoka. But the poorer fort are fain to be contented with a hand-grater, called Tapiti. The root thus grated is put into a bag, made of the rinds of trees, about four inches wide, called by the Portuguese, Espremondouro de Mandihoka. This bag with the root is put into a prefs, and all the juice preffed out, (it having a venomous quality) which is by the Brazilians called Manipoera, or Munipuera, and by the Portuguefe, Agoa de Mandihoka, i. e. the water of Mandihoka. The next thing to be done is to beat the root through a fieve, called by the Brazilians, Urupema; and then to lay it upon a copper-plate, or earthen pan, over the fire, and to ftir it continually with a wooden spoon or spattle till it be quite dry. This pan or veffel the Brazilians call Vimovipaba, and the flice Vipucuitaba. The farinha, before it be quite dry, is called by the Brazilians, Vitinga, and by the Portuguese, Farinha Relada; but when it is completely dried and fit for keeping, the Brazilians call it Viata or Viccia, and the Portuguefe, Farinha Seca, or dry meal; or Farinha de Guerra, war-meal, becaufe it is most used in time of war. For the more it is dried the better it keeps, but never keeps good above a year, the leaft moifture being apt to taint it ; which is the reafon, that both the Portuguese and we, in imitation of the Brazilians, make bifcuits of it upon a grate iron, with hot coals underneath, for the magazines.

The juice Manipuera, which is preffed out of the root mandioka, put into a veffel, gets in two hours time a white fettlement at the bottom, called by the Brazilians, Tipioja, Tipiaka, and Tipiabika; this dried, affords a very white meal, called Tipiocui, which, baked into cakes as before, called by them Tipiacika, tafte as well as wheaten bread. This juice is alfo boiled to pap, and eaten, and ferves likewife inftead of ftarch or pafte. The Portuguefe take this pap, mix it with fugar, rice, and orange-flower-water, which they make into a conferve of a delicious tafte; they call it Marmelada de Mandihoka. The juice Mandiga or Manipuera is of a fweetifh tafte, which is the reafon the beafts covet it, but commonly die foon after they have drank of it, it being pernicious, nay mortal, both to man and beaft. If the juice be kept twice twenty-four hours, it produces worms, called by the Brazilians Tapucu; yet it has been found by experience, that this juice lofes its pernicious quality after it has

ftood

ftood twenty-four hours, there being many of the Brazilians who boil and drink it without any harm. The root mandioka, is likewife immediately after it is taken out of the ground, fliced in pieces, and laid in fresh water for four or five days; when it begins to be foft it is called Puba, or Mandiopuba, and Mandiopubo. This the wild Brazilians inhabiting the deferts and woods, roaft in the afhes and eat; becaufe it is done without much trouble. The fame mandiopuba, toasted before the fire, is called Kaarima, which being afterwards beat to powder with a wooden peftle in a mortar, they call Kaarimaciu; of this they make a pap with boiling water, which, feafoned with fome Brazilian pepper, or Nhambi flowers, affords a very good difh, efpecially with the addition of fome fifh or meat, when it is called Minguipitinga by the Brazilians, who look upon it as one of their best dainties. It is also very wholesome, for this Kaarima, and the flower Tipiaka, boiled in orange-flower-water and fugar, to the confiftency of a fyrup, affords a very good antidote. They make also a kind of ftarch of the flower called Kaarima, which they called Mingaupomonga; as likewife very fine cakes, by mixing it with water, butter and fugar. There is a kind of meal prepared from the dregs of the mandioka or mandiopuba root, thus fteeped in water, called by the Brazilians, Vipuba, and Viabiruru, and by the Portuguese, Farinha Fresca, or fresh flour, and Farinha d'Agoa, or water-flour. It is very well tasted, but will not keep above twenty-four hours. But if you make it up with water into balls and rolls, and let them dry in the fun, they will keep good for a confiderable time; these they call Viapua and Miapeteka. The Tapoyers, and almost all the other Brazilians, prepare it thus, and afterwards mix it with another meal called Viata, which affords it a more agreeable tafte.

The mandioka root is likewife prepared thus; after it has been cleanfed, and cut in thin flices, they beat it with a wooden peftle, and fqueeze the juice out with their hands only, which being dried, they call Tina and Mixakuruba; another way of preparing the mandioka root is, to cut it into pieces of about two fingers long, and two inches thick, which, without being fqueezed, is expofed to the fun, and afterwards beat to powder in a wooden mortar, called by the Brazilians, Tipirati, by the Portuguefe, Farinha de Mandioka Crua, or the flour of raw mandioka; the pieces before they are beaten to powder are very white, and may be ufed inftead of chalk. Out of this flour they make very good white bread and bifcuits, called Maipeta, the laft of which are chiefly ufed in the camp, becaufe they will keep a great while.

Out of the root Aipimakaxera, the Brazilians boil a certain pleafant liquor not unlike our whey, called by them Kavimakaxera. The fame root, chewed and mixed with water, furnifhes them with another liquor they call Kaon Karaxu. The cakes made from the flour of this root, laid in a cafk with water, till it ferments together, affords them likewife a fort of ftrong and very good beer.

All thefe different kinds of mandioka roots, if they be eaten frefh, prove mortal to mankind, except that called Aipimakaxera, which roafted, may be eaten without danger, and is of a good tafte. But all forts of beafts, both wild and tame ones, do not only feed upon the faid roots and leaves, without the leaft hurt, but alfo grow fat with them, notwithftanding that the juice of both is mortiferous as well to men as beafts. The negroes and Brazilians bruife the leaves of the mandiiba in a wooden mortar, which being fpoiled, they put oil or butter over it, and eat it as we do our fpinage; this is fometimes done by the Portuguefe likewife, and the Dutch, who make a kind of fallad of the fame leaves. The Brazilians prefer the bread made of the mandioka root before ours, but it is not fo natural to the Europeans, it being, if ufed in a great quantity, pernicious to the nerves and ftomach, and corrupts the blood. About three bufhels of this meal (at the rate of two gilders per bufhel) will fuffice a ftrong labouring man for a whole month, and a piece of ground planted with this root, produces four times the quantity, as if it had been fown with wheat. There is a certain kind of mandioka root called Pitinga by the Brazilians, the flour of which cleanfes and heals old ulcers. This root is likewife found in the ifle of St. Thomas, and in those of Hispaniola, Cuba, and others thereabouts, and in most parts of the continent of America; the inhabitants of which call it Yuka and Kaffave, and those of Mexico, Quauhkamoth, and the bread which is made of the flour, Kazabis, Kazabi, or Kakavi. The mandioka root is originally the natural product of Brazil, and from thence transplanted into other parts of America and Africk. Its flour furnishes all the inhabitants of Brazil, as well the Portuguefe and Dutch, as the natives and negroes, with bread, which next to wheat is the beft of all, fo that our foldiers would rather chufe to have their allowance in farinha, than wheaten bread out of the magazines. Since the war in 1645, the price of the farinha was rifen to three or four gilders per bushel, which, as it tended to the utter destruction of the sugar-mills, so by special orders from the great council of the Dutch Brazil, all the inhabitants of the open country were enjoined, under a fevere penalty, to plant a certain quantity of mandioka yearly, in proportion to their abilities, by which means the price of the farinha was fo confiderably abated, that three bufhels were fold for two fhillings ready money, at the Receif, and for lefs in the country.

Brazil produces a certain herb called Kaaeo by the Brazilians, by the Europeans in Latin, *herba viva*, becaufe it feems to fhrink when you touch it, and fo it does likewife about fun-fet; its feed has been transmitted into Europe, where it grows to its full perfection.

The Kalabaffes are a kind of pompions, their rind, if dried, being fo thick and ftrong, as to ferve for materials for cups, porringers, and fuch like utenfils. But what is most furprifing, is, that they always grow of a different fhape, fome being long, others round, others oval, fome thick before, others at the end. They bloffom and bear fruit once a month, the bloffom being yellow mixed with green; the pulp is white at first, but turns to a violet colour; they are of a tolerable pleafant taste, but very unwholefome, by reason they are too aftringent.

The tree called Imakaru by the Brazilians, is of a middle fize, its trunk round and its bark grey, covered with fmall thiftles of the fame colour. Its branches fprout forth on the top, with broad leaves of an oval figure, edged likewife with fmall thiftles There is also another kind of Imakaru, much larger than the former, of thorns. called Kakabu by the Brazilians, and Kardon by the Portuguefe. This fprouts forth first of all in the form of a large octangular leaf, upon which grows crosswife many thorns; this produces other leaves of the fame kind, each being three, nay fometimes fix foot long, and of the thickness of a man's arm. By degrees the first leaf turns into a woody fubstance, of a greenish colour, but somewhat spungy; those leaves that grow next to this stem are instead of branches, which produce other leaves. The stem bears only one large white flower, the fruit of which is of an oval figure, and of about twice the bigness of a hen's egg, of a dark brown colour, and fit for use. This tree grows to a great height. There is also another kind of Imakaru, being altogether the fame with the former in respect of its largeness, blossom and fruit, except that its leaves are of a triangular figure.

What the Brazilians call Pako Kaatinga, the Portuguefe commonly call Canodo Mato, or wild reed or canes. The ftem or ftalk is like that of other canes, about an inch thick, containing a white marrow or pith, of a fweetifh tafte, on which grow leaves

leaves of eight or nine inches long, and three inches broad, fhaped like a tongue, fmooth and pale, green on one and covered with a white woolly fubftance on the other fide. The fruit of which is not unlike a pine-apple, about ten inches long, growing on the top of the ftem; it is divided into feveral partitions, which, opening by degrees, a pale grey flower appears betwixt each, containing underneath twenty or more grains of a black fhining feed. The ftalk chewed draws the rheum from the head, and breaks the ftone in the bladder. It is looked upon as an excellent remedy againft the involuntary emiffion of the feed throughout Brazil, and cures it in eight days time.

All over Brazil, but efpecially in the ifle of Itamarika, grows a certain tree called Kasjui or Kasjou, bearing a fruit of the fame name. Its leaves are dark-green, broad and round, interfperfed with many fmall veins. It bears two different bloffoms and fruits. The white bloffom which appears in the lower branches produce a juicy fpungy fruit like an apple, of a very cooling and aftringent quality; but the red bloffom on the top a kind of chefnut. The Brazilians draw no fmall advantage from this tree; out of the apples they make a very good cyder called by them Kasjouwy, which is fourifh, but if mixed with fugar, makes it as pleafant as Rhenifh wine, and has this excellency, that though it foon feizes the head, yet it paffes off without any harm. The other fruit they eat like as we do our chefnuts.

Among the products of the Weft and Eaft-Indies is a tree called Papay by the Javanefe and Dutch, and Pinoguacu or Mamoeira by the Americans; and fometimes entitled with the name of the melon-tree by our people, by reafon of the refemblance of its fruit to our melons. This tree is of two different kinds, to wit, the male and female. It grows and perifhes again in a fhort time, its trunk being fo fpungy that it may be cut as eafy as a cabbage-ftalk; the leaves it bears are very large and broad, not unlike our vine-leaves, growing on long ftalks round the top of the tree, and covering the fruit, which hangs in a knot, and is green at the firft, but turns yellow at laft, refembling in fhape a pear, but of the bignefs of our fmall melons, unto which its pulp refembles both in colour and tafte, when come to maturity, but whilft they are green, they are boiled with meat, and give it a tart tafte.

The red-pepper, known by the name of Brazil-pepper, and called Chili Lada by the Brazilians, grows on knotty stalks of about five or fix foot high; the rind being a dark-green, diftinguished with white rings, from whence shoot forth small crooked branches of a hand's breadth in length, bearing a fmall white flower, which produces a green hufk, and turns red by degrees as it ripens, with a certain feed within it, being as hot and biting upon the tongue as the common brown-pepper, and fo does the hufk, In the East Indies they preferve it, and call it Aetzar, and use it raw in their fish fauces. In Brazil, they cut two or three of these husks, whilst they are green, in flices, and mix them with oil and vinegar, or fome lemon juice, to acuate their appetite, but it is too hot for those that are not used to it, which is allayed by a good quantity of falt. This kind of pepper grows likewife in the East-Indies, in the island of Java, in Bengal, and feveral other places. I have feen it also in some of our gardens in Holland, There is another fhrub which grows frequently in the East Indies, not unlike this in shape and bigness, which bears a yellow flower; it is called Halika Kabus by the Arabians or Alkekengi, and fufficiently known in these parts. The flower produces a small bladder which contains the fruit and feed ; they are not fo big as ours. The Indians and Chinese mix it with a certain fruit called by them Poma d'Oro, Tamatas by the Portuguese, and Melansana by the Italians; they also eat it with Chili Lada, or Brazilian pepper. The Portuguese cut the Poma d'Oro and the husk of the Brazilian pepper in thin flices, which being mixed with oil and vinegar, they eat as fallad, and look upon

862

upon it as a proper remedy to cut the rough phlegm of the flomach, a diftemper very common in those parts. The Brazilians, as well as the Dutch, chew this pepper for the fame purpose, but it is very burning upon the tongue.

The fugar-canes or reeds, called by the Brazilians Viba, are the product both of the West and East Indies, but grow in great plenty throughout all Brazil, but especially in the captainship of Pernambuko. They are of two different kinds, one bearing small, the other larger leaves. The last, which is accounted the best, sprouts up into a long ftem of the thickness of a child's arm, the leaves growing all on the top in a cluster, being of an oval figure, and a dark-blue colour. The rind is diftinguished by certain joints or knots; the other kind bears fmall leaves from the top to the bottom. The fugar-canes are propagated from their fmall fprouts, which being put in the ground like our vines, grow up to the height of twelve foot, if they are planted in good foil, and are kept free from weeds. Six months after they have been planted, a brown feed appears on the top; then it is fit to be cut; for if they ftand longer in the ground their juice diminishes, dries up, and turns sour. The juice, if taken immediately after it is drawn, caufes a loofenefs. The low grounds are much more convenient for the planting of fugar-reeds than the hills, efpecially near the river fide, where the banks are overflown by the ftream. There are a certain kind of winged worms, called Guirapeakoka by the Brazilians, and Pao de Galinha by the Portuguefe, which are great enemies to the fugar-canes, efpecially in moift grounds, where they gnaw and confume the The fugar, which is the product of these canes, is not procured without a roots. great deal of toil and labour, in which, for the most part, are employed flaves, under the tuition of certain overfeers appointed by the mafters of the fugar-mills, who were for the most part Portuguese, the Dutch being hitherto not arrived to the utmost perfection in that art. In the captainship of Pernambuko, many fine Ingenhos or fugarmills, with their adjacent plantations, were erected for this purpofe, amounting, in all, to above one hundred in number, and the labourers, negroes, and other African flaves thereunto belonging, to near forty thousand. The whole yearly product of fugar of the Dutch Brazil is computed to be betwixt two hundred and two hundred and fifty thoufand chefts.

In the year 1642, one Gillin Venant brought fome indigo-feed from the American iflands into Brazil, who having certain lands affigned him near the fmall river Mercera, and being provided with all other conveniences by the fpecial command of the great council, erected feveral plantations for the producing of Aniel or indigo: but it being found by experience, that the pifmires confumed moft of the leaves, the faid Mr. Venant, by employing many labourers and negroes, to deftroy thefe pifmires with burning and digging, at laft fo well cleared the ground, that the indigo came to its full perfection, feveral patterns of which were fent into Holland. Mr. Venant having made an agreement with Mr. Chriftopher Eyerfhettel to inftruct him in the moft neceffary points relating to the coagulating the indigo, he was treating with the great council concerning certain grounds for the planting of indigo, fo that there was a fair profpect of bringing this defign to a confiderable perfection here, if the fame had not been prevented by the inteftine war.

The wild aniel, which grows in Brazil in great plenty, has a great refemblance to the true indigo in outward appearance, but affords no good colours. Some pretend to have feen alfo a kind of wild cochineal in Brazil, and the ground would produce good flore of cotton, but that the inhabitants draw much more profit from the fugarplantations.

3

Some

Some ginger is likewife planted in Brazil, but not in fuch quantities as to be tranfported into other parts, no more than the Mechoaconna, China, and fome other medicinal roots; and the Herba de Cubra or Herba de Noffa Senhora, which is looked upon as an infallible remedy againft the gravel; and the root called Paquoquanha, which is the univerfal medicine of the Brazilians. There are alfo many transplanted hither from other parts, as ginger, tobacco, rice, cotton, Turkey wheat, aniel, or indigo, and the fugar-reeds were first of all transported by the Portuguese from the Canary Islands. The fruits in daily use among the inhabitants, are Ananas, Bananas, Mangaba, Akaju, Arakou great and fmall, Guajaba, divers kinds of Murukuja, Ibapiranga, Mazaxanduba, Akaja, Aratiku, Guitakori, Biringela, Mamaon, Cocca-nuts, and feveral forts of Indian figs. The roots chiefly in use, are the Batatas, Nhambi and Umbi, and the Indian acorns, called Tembi, which are of a delicious tafte.

The whole country of Brazil is extremely fertile and pleafant, being watered by many rivers and standing waters, most of which arise from the hills, and pass through spacious plains, the last of which are clayey and marshy grounds (called Vergeas by the Portuguele), which produce all forts of fruit, but especially sugar-canes, in great plenty. Their meadows and pafture-grounds do not appear fo pleafant in the fummer as in the rainy feafon, when they are very green; wheat and rye grow foon rank here, which is occafioned partly by the nature of the foil, and partly by the heat of the fun; to prevent which, they never let their grounds lie fallow, and manure them with fand instead of dung. The fame must be observed with all other foreign feeds here, that require to be kept a confiderable time under-ground. In February and March (which is the rainy and winter-feafon of this climate), they fow their feeds, and that towards evening, not by day-time, or about midnight. They take great care not to plant any thing too deep under-ground; for whatever is planted beyond the fun-beams feldom produces any fruit, which our people have learned to their coft. There is a remarkable difference betwixt the feeds and fruits which are produced on the hills, and those of the marshy grounds, as to their time of ripening; though the cocoa and palm-trees are transplanted here without the least regard to their age, bigness, or the feafon, and grow very well. Most of their own trees and fhrubs bear flowers and fruit throughout the whole year, fo that, at one and the fame time, you enjoy the benefit of the fpring, fummer, and winter; the like is observable in the vines, citron, lemon, and other trees, brought by the Portuguese from Angola into Brazil, and in feveral roots, pot-herbs, and other fruits, transplanted thither by the Dutch. Those who covet ripe grapes throughout the whole year, do only prune their vines at divers times, which produce a fine grape, and a wine as fweet as molaffes. The worft is, that they are much infefted by the pifmires, which fuck all the juice, and leave nothing but the hufks to the owners; feveral other forts of trees have been transplanted thither from Holland, which thrive extremely, and bear very good fruit.

The ftanding waters of Brazil are, for the moft part, covered on the furface with green fhrubs and herbs, that they appear rather like land than water, and feed both land and water-fowl. At the entrance of moft of their rivers (where you meet with vaft quantities of oyfters and crabs), the country is fo overflocked with a certain kind of a tree called Guaparaba, or Mangle, by the Brazilians, that they render it impaffable for travellers. In fhort, the whole Brazil is well flored with trees, fhrubs, and ufeful woods, there being fcarce a place, either in the valleys or rifing grounds, which are clayey, or among the hills, which do not produce fomething that is ufeful; and that in fuch plenty, that the Portuguefe, after their firft arrival here, were forced to cut their way through thefe trees with

864

with incredible pains and charge. The hills furnish also great store of wood, which is of a very good fcent, and is used by dyers; as for instance the Brazil wood, which is from hence transported into Europe.

The ftem or trunk of this tree is knotty, of a very agreeable fcent, and fometimes two or three fathoms thick : its leaves are dark-green, and fmall, thorny at the end, and grow on fmall stalks; the bark, which is about three inches thick, is generally taken from the trunk, before it is fitted for fale: it fprouts from its own root, and produces neither bloffom nor fruit. Most of these trees grow about ten or twelve leagues from the fea-fide, where they cut them down, take off the bark, and carry them upon waggons to the fea-fhore, from whence they are transported into Europe for the use of the dyers chiefly; the Brazilians call this tree for its excellency's fake, Ibirapitanga. After the Dutch had conquered part of Brazil, they found great flore of this wood ready cut and fitted for use by the Portuguese, who fold it to the Dutch company; fince which time it was cut down promifcuoufly by the Portuguefe as well as the Dutch, and fuch vast quantities of it were transported in 1646 and 1647, that the members of the great council of the Dutch Brazil, Mr. Henry Hamel, Bullestraet and Kodde, being made fenfible of the destructive methods that were made use of in cutting this wood, which must in time have tended to the utter extirpation of these trees, did by their proclamation regulate these abuses. They have another kind of very fine wood in Brazil, called by the Portuguese, Pao Santo, as likewise those called Gitayba, Vio Wood, Massaranduba, cedar, and divers other woods fit for cabinet-work. The tree called Tataiba by the Portuguele, the wood of which the Portuguele call Pao Amaretto, affords a yellow colour for the dyers. The bark of the tree Araiba is of an afh colour, but boiled in water gives a red tincture. The tree Jakauranda, or Jaturiba, or the white-cedar, as well as feveral other trees, furnish the inhabitants with materials for building, being very The Brazilians make also matches and a kind of hemp out of the hard and durable. bark of fome trees.

The most barren places of Brazil do produce a certain kind of trees without leaves, which they call Timbo^{*}or Tibo; out of these they make hoops, by reason of their flexibility, and the bark ferves the ship-carpenters instead of hemp.

The Brazilians light their fires by firiking two pieces of wood, of the trees Karaguata Guacu and Imbaiba, together, as we do with our flint-flones and iron. The firft is a tree of an admirable nature : its flem grows fourteen or fifteen foot high, which being come to its full perfection, bears yellow flowers on the top, and abundance of large, long and thick leaves. Out of the flem they make flicks to hang their mattraffes on, the leaves afford the fifhermen fluff for yarn to make nets of; and out of the leaves iffues a certain unctuous liquor, which ferves inflead of foap. The trees and woods of Brazil are never feen to be covered all over with leaves at a time; but whill fome caft their leaves, you fee others bring forth new ones; nay, fometimes one tree is half covered with leaves, and bare on the other fide. Brazil likewife abounds in fhrubs and reeds, fome of which creep along the grounds, whilft others twift themfelves up to the top of the higheft trees, which affords a very agreeable fpectacle at a diftance, and a pleafing fhadow to men and beafts, tired with the heat, hunting, or any other exercife.

Among other fruits, Brazil produces very fine oranges of divers kinds; the other vegetables, which, befides the mandioka root, ferve for the fuftenance of the inhabitants, are rice, millet, Patatas, Ananas, Bananas, melons, pompions, water-melons, cucumbers, beans, figs, Bakovas, Marakuja, Mangavas, Arataku, Ape, cabbages, raddifh, lettuce, purflane, parfley, chervel, carrots, &c.

VOL. XIV.

Nothing

Nothing is fo much in request among the Brazilians, as the Akaju, a kind of wild apple, which furnishes them both with food and drink, being very juicy; fo that this tree feems by kind nature to have been planted here for the peculiar comfort of the inhabitants : it fpreads its branches round about in a great compass, but does not grow to that height as many other trees in this country: its wood, which is very folid, is very fit for the building of ships, from whence issues a very clear gum in the summer-season. Its leaves, which are red, refemble those of our walnut-trees, especially when they first fprout forth in the fpring, but are of a much finer fcent, which they never lofe but by being diftilled. The bloffom is a flower confifting of five fmall leaves, which grow to the number of about a hundred in one cluster; each of these flowers has a stalk, with a fmall head in the middle. At their first coming out, which is in September, they are very white, but turn foon after to a rofe colour; they are very odoriferous, and fill all the circumjacent grounds with their agreeable fmell. This tree bears a double fruit, viz. an apple, and a chefnut : the apple is of an oval figure, very juicy ; its pulp fpongy, full of kernels, and of a tartish taste. The juice taints linen with a certain colour, fuch as we call iron-molds, which is never to be taken out, but returns as often as thefe trees ftand in bloffoms; it is of a whitifh colour after it is preffed out, and tartifh, but changes both its colour and tafte by fermentation, and becomes very ftrong. The rind of the apple, which is very thin, is white mixed with red. The chefnut, which grows on the top of the apple in the fhape of a lamb's kidney, is covered with a thin fkin, over which grows a thick afh-coloured fhell, full of a hot, fharp and burning oil, which bites the tongue; to correct which, they roaft the chefnut in the afhes, break the shell with a hammer, and eat the pith or kernel, which taftes better than a common chefnut, and will keep good for feveral years. The Brazilians are fo fond of this fruit, that they often fight for it; then they encamp among thefe trees, and remove not till they have confumed all thereabouts, unlefs they are forced thereunto by the enemy. They number the years of their ages by this tree, becaufe it bears fruit but once a year, which ripens towards the latter end of December or in January, there being none to be found on the trees after February in Pernambuko. About the time the fun returns back from the tropick of Capricorn, it commonly rains in Brazil, which the inhabitants call the rains of Akaju, for, if the fame happens to be moderate, they promife themfelves great plenty of this fruit. The chefnuts are hot in the fecond degree; if eaten raw with wine and falt, they tafte like walnuts, but if roafted or preferved with fugar, they are of a delicious tafte. The oil which is taken out of the fhell, is an excellent remedy against the hair-worm; it is hot in the third and fourth degree, and frequently applied to cancers and other malignant ulcers. The gum, powdered and taken in a convenient vehicle, opens the obstructions of the womb. The juice of the apple furnishes them with good cyder.

There are many forts of palm-trees to be met with in Brazil, fome of which grow wild, fome are planted and cultivated by the inhabitants. Among the first the palmtree called Pindava by the Brazilians, which grows very tall, claims the preference, of which there are whole woods to be feen in the open country. In the more remote and unfrequented places, grows a certain palm-tree called Karanatham and Anachekaira by the Brazilians, and by an Arabick word among the Portuguefe, Tamar, or date, which this fruit refembles. The tree grows as high as a common date-tree, its wood is red and very folid, but of no great ufe. The bark is grey, which from the ground upwards to a certain part of the tree is diffinguifhed by many fcales, which are largeft at

thę

86**6**

the bottom, and fmall by degrees, till about the middle of the tree they quite difappear; thefe fcales being nothing elfe but the remnants of the branches, which fall off by degrees, as the tree grows higher; and continue only towards the top, fpread round about the ftem, like the African date-tree, but much finer. Each of these branches is about two or three foot long, flat on two fides, and covered with fmall thorns; they grow to a vaft thickness. At the end of each branch grows one fingle leaf, which is very large and green, plaited like a fan, and about the middle divided into feveral other leaves, like those of the common date-tree; each of these last is about two foot long. Betwixt those branches, on which grow the leaves, fpring forth other branches of four or five foot in length, and these again are full of other white sprouts, which flowers, with three pale yellow leaves; these produce a fruit of the bigness of an olive, which is green, bitter, and not eatable, but turn black when they ripen, which is in February. The Brazilians call this fruit Tirade, and eat it raw; but our people never took any fancy to it. With the leaves they cover their huts, and make bafkets of them. The palm-tree called Pindava by the Brazilians, has inftead of the bark a white and rough wooden fubftance, which contains a fpongy fulphureous fubstance, out of which the Brazilians prepare a ftrong lee. This tree is for the reft but of fmall ufe, being rather efteemed for ornament's fake, by reafon of its height and fine fpreading branches, which however furnish the inhabitants with leaves to cover their huts, and to make baskets of; the Portuguese plant them near their walks and harbours, and round their churches. The leaves of this tree do not hang downwards like those of the cocoa-tree, but stand upright. Just by these leaves fprout certain branches, on which hang bunches of flowers, which produce the fruit, refembling in shape and bigness one of our largest hen-eggs, being sharp at the end, and fastened to the bunch on the other like the pine-apple. The outfide is of a green yellow colour, inclining to a chefnut; being composed of a hairy fubstance like that of the cocoa-nuts, but not near fo thick, fcarce exceeding in thickness two eggshells. Under this shell is an infipid faffron yellow pulp, which, however, is used by the negroes, who eat it with farinha. Within this pulp is a hard nut, of an oval figure, not unlike the cocoa-nut, of the fame thickness, but without holes; it contains a pith or kernel, as white and big as a walnut, but is not near fo fweet as the cocoa-nut; they are eaten both by the natives and strangers, who are furnished with them throughout the whole year, and called by the Brazilians, Inajamiri, i. e. the fmall cocoa-nut. The kernels of these nuts furnish them likewise with a white cooling oil, which is used instead of our oil of rofes, and when fresh drawn mixed among their fallads, but when decayed, in their lamps. The shell affords an oil of the same nature, but not altogether so cooling. Out of the top of the tree flows a fine and odoriferous gum, uled here instead of gum-arabic; they alfo pick a certain pith or marrow out of the top, which has a tafte like our walnuts, and, when eaten with bread and falt, is accounted very nourifhing.

There also grow cocoa-trees in Brazil, called by the natives Inajaguacuiba, and the fruit Inajaguacu. They are very different from the juft-now-mentioned Pindava-tree, their trunk or ftem being feldom ftraight, but commonly crooked, fometimes from feven to fourteen foot thick, and fifty foot high; it is without branches, having only fifteen or twenty leaves round the top, each of fifteen foot long. They have also good flore of the common date-trees both male and female. The vaft quantity of pifmires wherewith Brazil abounds, are great enemies to all the products of their grounds, which they endeavour to deftroy by fire and water; it is further to be obferved, that fome fruits as well as creatures, which are accounted venomous in Europe, are commonly eaten in Brazil; as, on the other hand, certain things are poilonous there, which are not in Europe. For they have a kind of frogs, and fome fiftes, which are extremely poilonous; $5 \ 8 \ 2$

poifonous; whereas a certain fort of great pifmires and adders, toads, worms, and wild rats, are eaten by the natives, without any harm.

The most universal food of the Brazilians, is the flour made of the mandioka-root, called by them Vi, and Farinha de Mandioka by the Portuguefe, as has been shewn more at large before. They feed alfo upon the flefh of feveral wild beafts and birds, crabs, craw-fishes, fruits, herbage; their meat, whether boiled or roasted, they eat half raw. They boil in earthen-pots, called Kamu, which they make themfelves. Their flesh they roast thus; they dig a hole in the ground, the bottom of which they cover with leaves of trees, and upon them lay meat to be roafted, which being covered with the fame leaves, they throw fand or earth upon them. Upon this they light a good fire, which they continue till they think it sufficiently roasted. If they hit it right, it eats very well, exceeding in goodness all other roasted meats; they call it Biaribi. Their fishes, whether roasted or boiled, they eat with Inquitaya, that is, falt and pepper. They boil their crabs or craw-fifhes with falt, and eat them with inquitaya. Small fifthes they wrap in leaves, and roaft them in the afhes. They take the flour of the mandioka root with their three hindermost fingers of the right-hand, and fo throw it into the mouth; in the fame manner they do with beans, and fuch like things; they eat often, both by day and night, they having no fet times for their meals, without the leaft noife, or any drink, which they referve till after they have done. They feldom use any spoons, but instead of that their fingers, or some oyster-shell or other ferves their turn. The flesh of feveral wild beasts is much in esteem among the Brazilians; as for inftance, that of the great and leffer wild boars; they have a bunch like a camel on their backs, and are very good food, as well as the flesh of the river pigs, called Kapiverres by the Portuguefe, which is of a very agreeable tafte.

The most general and most wholefome liquor used among the Brazilians, is their river or fountain-water, which, by reason of its coolness, is a great refreshment to such as are tired by the heat, or the fatigues of other exercises; this is chiefly to be understrong of their spring-water, which, though used here in great quantities, never causes any griping in the guts, or other inconveniences in the bowels, but, on the contrary, occasions a good appetite, and is soon evacuated by sweating.

The waters of the rivers Paray and Paratybi, are accounted a good remedy against the ftone and gout, which is the reafon that many arrive to the age of above one hundred years, who drink nothing but those waters, and are never troubled with any of those distempers; for those who are advanced in age are as nice in the different tastes of those waters as the Europeans in their wines; and they look upon those as indifcreet who use the waters without diffinction. For, fince most of their fprings arise among the high eastern hills, they receive no addition either from the fnows or any metallic bodies, and, being well digested and purged from their dregs by the heat of the funbeams, they are very clear and wholefome; though it must be confessed, that in the winter-months, fome waters, by reafon of the rains, are not fine and cool as during the fummer-feafon. The negroes make fometimes a nafty mixture of black-fugar and water only, without the leaft fermentation, which they call Garapa; this, as it is very cheap, fo both men and women fit at it for twenty-four hours together, fpending their time in drinking, finging, and dancing, but feldom quarrel, unless they have conceived fome jealoufy of one another. Sometimes they add to it fome leaves of the Akaju-tree, which, by reafon of their hot quality, make it the more heady. The Portuguese and Dutch frequently make a kind of forbette, of water, fugar, and lemons. Others pour water upon certain herbs; others put a lemon only in water. But befides thefe, the Brazilians know how to make wines, or cyder, out of feveral roots and fruits, which they 10 drink ٩.4

drink at their merry-meetings; especially of the Bakovas, Ananas, Mangaba, Janipaba, Karaguata, &c. For though the vines here bear grapes three times a year, neverthelefs are they not fufficient to furnish them with wine. They make a kind of cyder, called by them Kooi, of the apple Akaju; thefe they ftamp in a wooden mortar and fqueeze the juice out with their hands, which after it is fettled they ftrain; it appears at first like milk, but turns to a pale colour in a few days; its taste is tartish, and apt to feize the head if drank in any quantity; after fome time it turns four, and makes very good vinegar. The wine or liquor called by the Brazilians Aipy, is made two different ways: first, the flices of the root Aipimakakara, a kind of mandioka, are chewed by old women till they are as fluid as a pap, which they call Karaku; this they put in a pot, and boil it with a good quantity of water, ftirring it continually till they think it fit for expression, which done, they call it Kaviaraku, and drink it luke-warm. Or elfe they take the fame root purged and fliced in thin pieces, which they flamp and boil with water as before, which produces a whitifh liquor, not unlike our butter-milk or whey; they drink it likewife warm, its tafte being agreeable enough; they call it Kacimakaxera, though both kinds are generally comprehended under the name of Aipy. The liquor called Pakoby is made out of the fruit of the tree Pakobete. What the Portuguese call Vinho da Millo, is a liquor called Abaty by the Brazilians, and made of barley and Turkey wheat, called maize by the Indians; the liquor Nandi has alfo derived its name from that excellent fruit called Nana of Ananas, being the ftrongeft of all their wines or cyders. There is another fort of liquor called Vinho da Batatas by the Portuguese, because it is made of the root Batatas: the natives call it Jetici. Thus the liquors called Beeutingui and Tipiaci, are both made out of the farinha of the mandioka root, viz. of the Beju and Tepioja.

The Brazilians are also great admirers of French or Rhenish brandy, called by them Kacitata, and fwallow it very greedily as often as they can come at it. They are no lefs fond of tobacco, the herb of which they call Petima, and the leaves Petimaoba. After they have dried the leaves in the air, they lay them before the fire, to render them the more fit for cutting. They fmoke in pipes made of the fhell of the nut Pindoba, or of the Urukuruiba, Jocara, Aqua, or fuch like; to wit, they cut a hole in one end of the shell, take out the kernel, and, after they have polished them, put a wooden pipe or piece of reed in the hole. The Tapoyers use very large pipes made of stone, wood, or clay, the holes of which are so big, that they contain a handful of tobacco at a time. Sometimes the Brazilians make use of our European pipes, called by them Amrupetunbuaba, and Broken Katunbaba by the Portuguefe, and Katgebouw by the Dutch. Whenever the Tapoyers, especially those inhabiting the villages, defcended from the Tapoyers called Kariri, prepare the liquors Akavi and Aipy, it is done at the fame time; then a day being appointed for a general merry-meeting, they meet early in the morning at the first house of the village they belong to, where they confume most of the liquor, and make themselves merry with dancing; this done, they go to the next house, where they play the fame game, and fo from house to house, till nothing be left or they can drink no longer. When they find themfelves overcharged with liquor, they fpew, and fall to drinking again ; and thus, he who can fpew and drink most, is accounted the bravest fellow of the company.

Of the coaft of Brazil.

On the north-welt coaft of Brazil are feveral confiderable falt-pits : that near the houfe called the Defert, is about three or four leagues diffant from the river Aguarama, of which one branch extends to the eaft, and difcharges its water in this falt-pit with a fpring-tide, which is here commonly with the new moon. It is about five hundred and fifty paces from

from the fea-fhore, and receives no other water but from the river Aguarama. There is no bay or harbour near it, but only a flat fandy bottom for about half a league diftance from the fhore, where you may anchor at three fathom deep. The land-wind which conftantly blows on this coaft, commonly ceafes towards evening, fo that the veffels take the opportunity of the night to load falt. This falt-pit produces every month a certain quantity of falt, provided they be careful to fhut their fluices as foon as the fame is filled with water, for elfe they are in danger of lofing what they had got before, by the next high-tide. To the eaft of this falt-pit are the famous rocks called Baxos, which at low-water may be feen from thence ; they extend about three leagues deep in the fea, but do not begin till about a league from the fhore, betwixt which and the rocks there is a paffage, where you have ten foot depth at low-water. It ebbs here with the loweft tide about eight foot, and a weft-fouth-weft wind raifes the water to the higheft.

About five or fix leagues to the weft of the houfe called the Defert, is the great faltpit Karwaratama, which receiving its water from the fea, and being detained by fluices, produces very good falt in three weeks' time. Five leagues further to the weft is the river Maritouva, the fecond in rank in thofe weftern parts, but has not above twelve foot water at high-tide. On its eaft point, not above half a league within the mouth, is a very convenient falt-pit: thefe falt-pits are computed to be manageable with the affiftance only of ten or twelve negroes, ten chriftians, and about thirty Brazilians, and to afford two thoufand tuns of falt per annum, which may be transported from thence into the other parts of the Dutch Brazil in star, as likewife in Siara, near the river Wapanien, are likewife feveral Salinas or falt-pits.

The chief traffic of Brazil confifts in fugar, Brazil-wood, and fuch like; as alfo in tobacco, hides, preferves, ginger, and cotton, which grows wild here; fome indigo was likewife planted there before my departure; but among thefe, the fugar and Brazilwood are ftaple commodities. For fince the tobacco began to be transported into Holland from the American islands, the planting of it was neglected in Brazil, where labourers' wages being exceflive high, they could draw much more profit from the fugar, of which, according to computation, betwixt twenty and twenty-five thousand chefts were yearly made only in the fugar-mills of the Dutch Brazil, if the harvest proves very good.

The inhabitants of Brazil may at prefent be divided into free-born fubjects and flaves; and these again confist of divers nations, both natives and foreigners. The free inhabitants of Brazil were the Dutch, Portuguese, and Brazilians, the last, the natives of the country. But the Portuguese did not only furpass all the rest, at least ten to one in number, during my abode in Brazil, but also were in possession of all the sugar-mills and lands, except what was possessed by a very few Dutch, who had applied themfelves to fugar-planting, but were for the most part ruined by the intestine war, being forced to leave all behind them in the country: befides those of the free inhabitants, who made it their bufinefs to manure the grounds, there were many merchants, factors, and handicrafts-men : the merchants fold their commodities generally with vaft profit, and would have questionless been rich men, had they not vended their goods upon credit to the Portuguese, who were resolved never to pay them, as the event has fuffi-The handicrafts-men were able to get three, four, five, nay, fix ciently fhewn. gilders a day, fo that many returned very rich to Holland. Those that kept publichouses and chandler-shops were likewife great gainers here, and carried off abundance of ready money. The officers in the company's fervice whether civil or military, were likewife

870

likewife punctually paid, which made many who had lived in the country before the beginning of the civil war, and had ferved the company before, take fervice again, who were all entertained according to their refpective qualities and former flations.

Among the free inhabitants of Brazil that were not in the company's fervice, the Jews were the most confiderable in number, who had transplanted themselves thither from Holland. They had a vast traffic beyond all the rest; they purchased fugar-mills and built stately houses in the Receif. They were all traders, which would have been of great confequence to the Dutch Brazil, had they kept themselves within the due bounds of traffic.

The flaves of Dutch Brazil were either negroes or natives of the country; the laft of which were either bought in Maranhaon being prifoners of war, or from the Tapoyers, who likewife had made them captives, and otherwife, according to their cuftom, would have put them to death. For it being refolved immediately, at the firft entrance of the Dutch in Brazil, that none of the natives fhould be made flaves (except they were either bought from the Tapoyers or brought from Maranhaon) the Brazilians were fettled in certain villages to enjoy their own liberty under certain limitations, and permiffion was given them to affift the Portuguefe in the management of their mills and grounds, for certain wages appointed for that purpofe; by which means many Alicas or villages were filled with Brazilians in Parayba and Rio Grande, who during the time of our government enjoyed the fweets of a perfect liberty.

Valt numbers of negroes of divers nations were entertained in the Receif, and the open country, for the manuring of the ground, and working in the fugar-mills of the Portuguese, which could not be done without them, by reason of the extremity of the heat of the climate, and the incredible toils they are fain to undergo; fo that in my time near forty thousand negroes were employed in the fugar-mills betwixt Rio Grande and St. Francisco. Most of these negroes are brought hither from the kingdoms of Congo, Angola, and Guinea; a black fhining skin, flat nose, thick lips, and fhort-curled hair, is their chief beauty. The luftiest and most laborious used in time of good trade to be fold in Brazil for feventy, eighty, or one hundred pieces of eight, nay, fometimes for one thousand four hundred or one thousand five hundred gilders, but these understood something more than ordinary : but when trade began to decay, they were fold for forty pieces of eight. There was fcarce a Hollander of any fubftance but what had feveral of these flaves. They are most miferably and beastly treated by the Portuguese, though at the fame time it must be confessed that it is absolutely neceffary they should be kept under a strict discipline; for they are full of rogueries, fuperftitious to the higheft degree, and forcerers : they would often pretend to tell us what ships were at sea from Holland for Brazil, though they were yet on the other fide of the line, and how to recover ftolen goods. I remember I happened once to be at a friend's house of mine, when I faw an old negro enter the kitchen, who came thither to cure a negro-flave of his illnefs, which he told us was occafioned by witchcraft. He made the patient rife from his chair, and taking a piece of wood from the fire-hearth, he ordered him to lick three times with his tongue that end which was burning-hot with the glowing coals. The fame end of the wood he afterwards extinguished in a bason of water, and rubbed the coals in it, till it turned as black as ink. This he ordered the fick negro to drink off at a draught, which he did accordingly, and was immediately feifed with a flight griping in the guts. This done he rubbed both his fides, and taking hold with his hand of a piece of flesh and fat above the hip, he made an incifion there with a knife he pulled out of his pocket, of two inches deep, out of which he drew a bundle of hair and rags, with a little of the

the black water that was left he washed the wound, which foon after was healed, and the patient cured. They are very dexterous at fwimming and diving, and will fetch a fingle piece of eight from the bottom of the fea, where it is very deep. They are also excellent fishermen, and get a great deal of money by it. They tie three or four great pieces of wood together, this they manage with one oar, and upon it go a good way into the fea, where they catch great quantities of fifh with their hooks, and fo return. It happened in my time, that a certain negro, who was very expert in fifting, was fold three times in a little while; this he took fo much to heart, that the next time he went thus out a fifting, he tied a flone to his leg and drowned himfelf. Another negro having conceived a hatred against his master cut his throat, cut out his tongue, and made a houfe of office of his mouth, according to his own confession; he was broken alive upon the wheel, which he endured with an incredible obstinacy. A negro woman was brought to bed in my time of a child, the hair and fkin of which were not black, but red. I faw alfo a young lad born from negro parents, whofe fkin was white, and his hair and eye-brows the like, but curled, with a flat nofe like the other negroes. Sometimes I have feen old negroes with long grey beards and hair, which looks very fine.

The natives of Brazil confifts of divers nations, diftinguished by their proper names, to wit, the Tubinambos, Tobajaras, Petiguaras, and Tapuijas, or Tapuyers, or Tapoy-The three first use one and the fame language, and differ only in the dialect; ers. but the last are subdivided into feveral nations, differing both in manners and tongue. The Brazilian men, which lived among us and the Portuguese, are middle-fized, ftrong and well-made, with broad shoulders. They have black eyes, a wide mouth, with black curled hair, and a flat nofe; the last of which is not natural to them, but the parents, looking upon it as a great beauty, fqueeze their children's nofes flat, whilft they are very young. They paint their bodies, and fome likewife their faces with divers colours; they have generally no hair about their mouth, though fome have black beards. Their women are likewife of a middle ftature, well limbed, and not ill-featured; they have likewife a black hair, but are not born black, but by the heat of the fun-beams acquire by degrees a yellow brown colour. The Brazilians come foon to maturity, and arrive to a great age, and that without diftempers; they alfo feldom become grey, which is likewife obfervable in many European inhabitants here, who come to the age of one hundred or one hundred and twenty years. This must be chiefly attributed to the temperature of the climate, which is fuch, that in former times many Spaniards that laboured under fome lingering diftemper, whether in Spain or the East Indies, used to come to Brazil to partake of the benefit of that excellent air and water; it is true, most of the children of foreigners are troubled with lingering fickneffes, fo that fcarce one in three arrives to a ftate of manhood; but this must not be attributed to the air, but rather to the bad nourishment. Few cripples or crooked people are to be met with among the Brazilians, they being generally very ftraight and nimble, which is the more admirable, because they never do their children up in fwathling cloaths, except their feet, looking upon it as unwholefome.

Before the Dutch got footing in Brazil, the Portuguese had made all the natives their flaves, and looked upon it as the greatest piece of policy quite to extirpate them, which they did so effectually, that whereas about one hundred years ago, the captainships of Rio Grande alone could raise one hundred thousand fighting men, scarce three hundred were to be met with in 1645 to 1646, which had created a mortal hatred in the Brazilians against the Portuguese; though it must also be confessed, that the late war and some epidemical distempers did sweep away many of the natives.

The

The remainders of them lived in certain Aldens or villages affigned them for that purpose, where they had their plantations; befides which they ferved the Portuguese in their fugar-mills for a certain monthly pay, which furnished them with clothes and other neceffaries. Their huts are made only of wooden stalks, covered with palm-tree leaves. They cannot endure the yoke of flavery, nor any toil, efpecially the Tapoyers; they live very quietly among one another, unlefs they get drunk, when they fometimes fing and dance day and night. Drunkenness is a vice belonging to both fexes here, of which they are fo fond, as to be past remedy, though this occasions often quarrels and other enormous vices among them. They are likewife much addicted to dancing, which they call Guau; they have feveral ways of dancing, one of which is called Urukapi; they commonly fing whilst they are dancing. The children divert themfelves with divers forts of games, one is called Kurupirara, another Guaibipaie, and a third Guaibiquaibibuku. They will fleep fometimes a whole day and night, and would not ftir then if they did not want victuals. Near their hammocks they keep a fire day and night, in the day to drefs their victuals, in the night to allay the rawnels of the air, which here is colder than in most parts of Europe, because day and night is almost of an equal length here throughout the year.

The inland Brazilians of both fexes go quite naked, without the leaft covering. But those inhabiting nearer to the fea-fhore, who converse with the Dutch and Portuguese, wear only a fhirt of linen or calico; though, in my time, fome of the chiefeft among them began to take a pride to clothe themfelves after the European manner. The wife conffantly follows her hufband wherever he goes, even in the war. He carries nothing but his arms, but the poor woman is loaden like a mule or fumpter-horfe. For befides a great basket which is tied to her back (called by them Patigua), she has another upon her head, with all the houfehold ftuff in it, or a great bafket with flour; befides which, feveral other fmaller veffels hang on both fides, wherewith they take up water for their drinking. The child is carried in a piece of calico, which is fastened to her, and hangs down from her right fhoulder. It lies there, with its legs wide open, one being ftretched acrofs the mother's belly, the other over her fhoulder. After all this, fhe carries a parrot or ape in one hand, and leads a dog in a ftring with the other. Thus they proceed on their journey, without any farther provision, except a fmall quantity of farinha; the hedge or open fields ferve inftead of inns, which furnish them with neceffary food, as the rivers and fprings with drink; and fo does the tree called Karageata, which contains always fome rain-water within the hollownefs of its leaves, to the great relief of travellers, who, in fome barren places, do often not meet with a river or fpring for twelve leagues together. Towards night they hang their hammocks on trees, or elfe fasten them to stalks neatly; they make a fire to dress their victuals; and against the rain defend themselves with palm-tree leaves. When they are at home, the hufband goes commonly in the morning abroad with his bow and arrow, to fhoot fome wild beaft, or catch birds, or elfe to the fea-fide, or next river a fifting, whilft the women are employed in the plantations; fome women go abroad with their husbands, and carry home the prey. The wild-beasts are caught by them in a different manner; fome they kill with arrows, others they catch in pits dug for that purpose, and covered with the leaves of trees, under which is hidden some carrion, the fcent of which draws them to the pit ; this they call Petaku. They make alfo certain wooden traps, and use divers other ways of catching the wild beafts, each of which they diftinguish by their proper names. To catch birds they use three forts of fnares or nets, called by them Jukana; the first fort catches the birds by the feet, this they call Jukanabiprara; the fecond entangles them by the neck, which they call Jukana. 5 T VOL. XIV.

873

Jukanajuprara; the third enfnares their bodies, called by them Jukanapitereba. They kill the fifhes with arrows, or catch them with fifhing-hooks, their baits being commonly worms, crabs, or fome fmall fifhes. They bait the water where they intend to fifh, with the leaves of Japikai, or with Timpotiana, Tinguy, or with Tinguiri; fometimes with the fruit called Kururuape, the root Magui, or the bark of the tree Anda, which make the fifh fwim on the furface of the water like dead, when they take them with a kind of a fieve, called by them Urupema, made of cane or reed, which they eall Uruguiboandipia. Their fea-fifh they catch with iron hooks, the bait being fome carrion; they go a good way into the fea, only upon three pieces of wood faftened together, which they call Igapeda, and the Portuguefe, Jangada; the wood is commonly of the tree Apiba.

The Brazilians are not burthened with much household stuff, their hammocks being their chiefest care in this kind; they call them Ini, are wrought of cotton like network, of about fix or feven foot long, and four broad. When they are going to fleep, they fasten them either to two beams of their huts, or elfe in the open air to two trees, and fome diftance from the ground, for fear of fome obnoxious creatures, and to avoid the peftiferous exhalations of the earth. The Tapoyers, called Kariri, have very large hammocks, of twelve or fourteen foot long, which contain four perfons at a time. The Portuguese women make fome very fine hammocks, wrought with divers figures in them. In lieu of difhes and cups they use the Kalabaffek, cut in the middle, which are painted without with a certain red colour, called Uruku, and within with black. Their cans, cups, and mugs, are likewife Kalabaffes of divers kinds, called Kuite, Jaroba, and Kribuka. One of the biggeft of thefe kalabaffes hold thirty or thirty-five quarts; this the Brazilians call Kuyaba, but when cut through the middle it is called Kuipeba. The poorer fort make certain knives they call Ituque, of ftone, as alfo of cane, which they call Taquoaquia, but the better fort use Dutch knives. Their baskets they make of palm-tree leaves, they call them Pátigua; they have also fome made of reed or cane, these are with one general name called Karamemoa. They make alfo large broad bafkets of reeds and branches twifted together : these they call Panaku, and are chiefly used for the carrying of the mandioka root. In their journeys they always make use of the patigua, but the panaku is used by the flaves and negroes in the Receif for the conveniency of carriage.

The arms of the Brazilians are only bows, arrows, and wooden clubs. Their bows, which they call Guirapara and Virapara, are made of very hard wood, called Guirapariba and Virapariba: the bow-ftrings are made of cotton twifted, and by them called Guirapakuma; the darts they call Uba, and are made of wild cane. The points of these darts are either of wood hardened, or of fish teeth called Jacru, or of bones or cane well sharpened; fome have feveral points, others but one.

Being not in the leaft acquainted with arithmetic, they compute the number of their years and age by the chefnuts which grow on the fruit Akaju, which chefnuts they call Akaguakaya, as likewife Akajuti and Itamabara, of which they lay one by every year, this tree producing fruit but once each feafon, viz. in December and January. They begin the computation of their years with the rife of a certain ftar, called by them Taku, or the Rain-ftar, which is always there in May; they alfo call the year by the fame name.

The most barbarous of the Brazilians inhabiting the inland countries fcarce know any thing of religion, or an Almighty Being. They have fome knowledge remaining of a general deluge, it being their opinion, that the whole race of mankind were extirpated by a general deluge, except one man and his own fifter, who being with child before,

875

before, they by degrees re-peopled the world. They know not what God is, nay, they have no word expreffing the fame, unlefs it be Tuba, which fignifies as much as fomething most excellent above the reft; thus they call the thunder Tubakununga, i.e. a noife made by the Supreme Excellency, for Akununga implies as much as a noife. They are unacquainted with heaven or hell, though they have a tradition among them, that the fouls do not die with the bodies, but that they are either transplanted into devils or fpirits, or elfe enjoy a great deal of pleafure with dancing and finging in fome pleafant fields, which they fay are behind the mountains. These fields are enjoyed by all the brave men and women, who have killed and eaten many of their enemies; but fuch as have been idle, and never did any thing of moment, are tortured by the devil, unto whom they give many names, viz. Anhanga, Jurupari, Kurupari, Taguaiba, Temoti, Taubimama. They have, however, fome fort of priefts among them, whole bufinels is to facrifice, and to foretel things to come; thele are especially confulted when they are to undertake a war or journey; they call them Paye and Pey. They dread fpirits to the higheft degree; they call them Kuripira, Taguai, Macachara, Anhanga, Jurapari, and Marangigona, though under different fignifications: for kuripira implies as much as the god of the mind or heart; macachara, the god or patron of travellers; jurupari and anhanga fignify the devil; marangigona implies as much as the manes or remainders of the foul after death, which are fo much dreaded by the Brazilians, that fome of them, upon an imaginary apparition of them, have been ftruck with fudden death. They do not perform any worfhip or ceremony to those fpirits, except that fome pretend to appeale their wrath by certain prefents they fasten to certain stakes fixed in the ground for that purpose. Some of the Brazilians acknowledge the thunder for the Supreme Being, others the Leffer Bear in the firmament, others fome other ftars. The Potiguaras, a nation among the Brazilians, are accounted fuch forcerers, that they bewitch their enemies even to death : they call this manner of witchcraft Anbamombikoab. The Brazilians that lived among the Portuguefe and Dutch, did in fome meafure follow the Christian doctrine, but fo coldly, that few, when they come to an advanced age, fhew much zeal for it; becaufe the fundamental articles of our faith are not eafily imprinted in them, unlefs in their tender years, and when they are remote from their parents. However, feveral of the Dutch minifters, viz. Mr. Doreflaer, and after him Mr. Thomas Kemp, have had good fuccefs in converting many of the Brazilians in the Aldeas or villages where they preached, the last of these two being well versed in the Brazilian tongue. Neither were Dionysius Bifcareta, an honeft old Caftilian, and Johannes Apricius, lefs remifs in performing their duty to inftruct these infidels. There were likewise three Dutch school-masters among them, who taught their young people to read and to write, but thefe were forced to leave their aldeas or villages during the last intestine commotions raifed by the Portuguefe.

Many diftempers which are common in Europe are unknown in Brazil: they ufe nothing but fimple remedies, and laugh at our compositions. They are very dextrous in applying their remedies, effectally their antidotes: they draw blood by fuction with horn-cups, by scarification, or opening a vein; instead of a lancet they use the tooth of a lamprey, called by them Kakaon, without which nobody ftirs abroad. So foon as any one of their acquaintance is fallen ill, they all meet, each offering his remedy, which he has found good by his own experience: then they begin to cut and flice the most musculous parts of the body, either with the thorns of the tree Karnaiba, or with fifnes teeth, till they have drawn as much blood as they think fit, and for that purpose fuck the wounds with their mouths, by which means they pretend to draw all ill humours humours from the affected part. Vomiting they procure by means of the leaves karnaiba, which being twifted together, they force down the patient's throat. When all these pretended remedies prove ineffectual, they proceed to no others; but after fome confultations, quite despairing of his recovery, knock him on the head with their clubs, looking upon it more glorious to be thus bravely delivered from their misery, than to expect death till their last gasp. They exercise as much barbarity upon the dead carcafles of their friends as of their enemies; upon the first out of love, against the last out of revenge; for they tear them to pieces with their teeth, and eat the flesh like a dainty bit.

The Brazilian women are extremely fruitful, have very eafy labours, and rarely mifcarry: for no fooner is a woman delivered, but up fhe gets to the next river, and without any farther help waftes herfelf there: in the meanwhile the hufband keeps the bed for the first twenty-four hours, and is made as much of as if he had been lately brought to bed. The mothers lament the death of their infants with howling and crying for three or four days.

They receive their friends after a long journey with open arms and tears, and beating their foreheads against their breasts, in remembrance of the missfortunes they have undergone during their absence. Though the Brazilians were always supposed to be descended from the race of men-eaters, yet by their conversation with us and other nations, many of them have laid associate their barbarity, and are become as affable and civilized as most of the European nations.

The Tapovers inhabit the inland country of Brazil to the weft of these countries in the poffeffion of the Portuguese and Dutch, betwixt Rio Grande and the river Siara, as far as Rio St. Francifco. They are divided into feveral nations, diftinguished both by their language and names: for the Tapoyers bordering upon the utmost confines of Pernambuko, are called Kariri, under their king Cerioukejou; the next to them the Karirivafu, whofe king was Karopoto; then the Kariryou, and fo farther the Tararyou; the last of which were best known unto us; Janduy or John Duwy being their king; though fome of them lived under the jurifdiction of one Karakara. Divers were governed by other kings, viz. Prityaba, Arigpaygn, Wahafewajug, Tfering, and Dremenge. Those under king John Duwy inhabit to the west beyond Rio Grande, but change their habitations pretty often : about November, December, and January, when the fruit Kajou begins to ripen, they come towards the fea-fide, becaufe little of it is to be met with in the inland countries. The Tapoyers are very tall and ftrong of body, exceeding both the Brazilians and Dutch both in ftrength and tallnefs by the head and fhoulders. They are of a dark brown colour, black hair, which hangs all over their shoulders, they only shaving it on the forehead as far as to the ears. Some are shaved according to the European fashion; the rest of their bodies they keep without hair, even without eye-brows. Their kings and great men are diftinguished from the vulgar by the hair of their heads and their nails; the first, their kings, were shaved in the shape of a crown, and have very long nails on their thumbs; but the king's relations or other officers of note, wear long nails on all their fingers, except their thumbs; for long nails is accounted a peculiar ornament among them. The Tapoyers are very ftrong; prince Maurice being one time in a humour to try their ftrength and skill in fighting with a wild bull, caufed one to be brought within his ward court, which was furrounded with palifadoes, in order to engage two Tapoyers appointed for that purpose. There was a great concourse of people to fee this spectacle, when on a sudden two Tapoyers (the reft with their wives being only fpectators) came in ftark naked, without any other arms but their bows and arrows. The bull faw them no fooner

enter,

enter, but he made towards them, who being extremely nimble, avoided the ftrokes he made at them with great dexterity, and in the meanwhile fo galled his flanks with their arrows, that the beaft roared most terribly, and being all in a foam, fet upon them with all his vigour, which they avoided by retiring every foot behind a tree that ftood in the middle of the court, and from thence continued to pierce his fides with their darts, till finding the beaft begin to languish by the loss of blood, one of the Tapoyers got upon his back, and laying hold of his horns, threw him upon the ground, and being feconded by his comrade, they both killed the bull, roafted him underground with a fire above it, according to their custom, and feasted upon their meat, with the other Tapoyers there prefent.

The Tapoyers of both fexes, from the king to the common fellow, go quite naked, only that the men hide their privities, by tying the yard in a little bag or net made of the bark of trees; this they close up with a fmall ribbon called Takoaynhaa; upon occafion they untie it, and are more cautious in expofing their privities than fome of the Europeans: in the fame manner do the reft of the Brazilians inhabiting the inland countries. The women of the Tapoyers cover their privities only with a handful of herbs, or a fmall branch of a tree, with the leaves on them: this they thruft barely under a fmall cord or rope which is fastened round their middle like girdles: in the fame manner they cover their backs, but fo carelefsly, that both before and behind, great part of both is exposed to view; they change it every day. The men wear also a kind of garland made of the feathers of the bird Guara or Kaninde, upon their heads, from which certain feathers of the tail of the bird Arara, or Kamud, hang down behind upon the back; fome only tie a cotton ftring round their hands, in which fome red or blue feathers are faftened behind; this they call Akanbuaçaba. They have alfo cloaks made of cotton thread, and woven like a net; in each of the holes they flick a red feather of the bird Guara, and intermix them with black, green, and yellow feathers of the birds Aakukara, Kazinde, and Arara, which lie as clofe together as fifh fcales: there is a kind of cap on the infide of this cloak, which with the reft covers the head, fhoulders, and the body, fomewhat below the middle, fo that it is worn both for ornament and conveniency's fake, it being proof against the rain; they call these cloaks in their tongue Guara Abuku. They also fasten certain combs of birds with wild honey to their foreheads, these they call Aguana.

If their fathers or mothers die, they pull every hair out of their heads; they have holes in their ears fo big, that you may thruft a finger into them; in this they wear either a bone of an ape called Nambipaya, or elfe a piece of wood, wrapt up in cotton thread. The men have holes in their under-lips, in which they wear either a crystal. fmaragd, or jafper, of the bigness of a hazel-nut: this stone they call Metara, and if it be green or blue, Metarobi; but they are most fond of the green ones: they have alfo holes in their cheeks on each fide of the mouth; in these the married men wear a piece of wood of the bigness and thickness of a good goofe-quill: fometimes they wear a stone in it called Tembekoareta : in the holes of their nostrils, some have also fuch like flicks of wood, which they call Apiyata: their bodies are all over painted with a certain juice of brown colour, fqueezed out of the apple Janipapa; this is even ufed among the women and children. Befides this, they flick feathers of divers colours with wild-honey or mastick to the skin of their bodies, which make them appear at a diftance like large birds; this they call Akamongui. Thus they adorn their arms with garlands made of red and yellow feathers of feveral birds, called Aguamiranga; fometimes they mix corals among them, which they call Arakoaya. They make

make alfo a kind of bracelets of the rind of the fruit Aguay; thefe they wear round their legs, and make a noife when they are dancing. Their fhoes are made of the bark Kuragua, and call them Miapakabas. Some nations of the Tapoyers use no bows or arrows, but throw their darts with their hands, but the Kariri have bows. Their clubs are made of very hard wood, are broad on the top, and full of teeth or bones, well fharpened at the end. Round the handle they wind a piece of calico, or fome other stuff, and at the end a bush of feathers of the tail of the bird Arara; fuch another bush is fastened round the middle; they call them Atirabebe and Jatirabebe. Their trumpets, which they Kanguenka, are made of men's bones; but those called Nhumbugaku, which are much larger, are of horn; they have also another fort made of cane, called Meumbrapara. The Tapoyers are not fo good foldiers as the reft of the Brazilians, for upon any fmart encounter they truft to their feet, and run away with incredible swiftness. They neither fow nor plant, not as much as the mandioka root, their common food being fruits, roots, herbs, and wild beafts, and fometimes wild honey, which they take out of the hollow trees. Among all other roots they are extremely fond of a certain kind of wild mandioka root, which rifes up to the height of a fmall tree. Its ftem and leaves refemble the other mandioka root, but it is not near fo good; the inland Brazilians call it Cuguaçuremia, but those inhabiting near the fea-fhore Cuacumandiiba.

They eat also men's flesh; for if a woman happens to miscarry, they eat the child immediately, alledging that they cannot beftow a better grave upon it than the belly, from whence it came. The Tapoyers lead a kind of vagabond life, like fome of the Arabians, though they always remain within their certain bounds, within the compass of which they change their habitations according to the different feafons of the year; they dwell for the most part among the woods, and live upon hunting, in which perhaps they excel all other nations; for they will fhoot a bird flying with their arrows. So foon as a woman has conceived, the abitains from her hufband; after the is brought to bed, the goes into the next wood, where fhe cuts the child's navel ftring, with a fhell, boils it afterwards with the after-burthen, and eats them both. She washes herfelf and the child every morning and evening, neither does her hufband keep her company, as long as fhe gives fuck, unlefs he has but one wife. If a woman be difcovered to have had an unlawful commerce with another man, her husband turns her away, but if they are catched in the act, he may kill them both. The mothers take extraordinary care that the nuptials of their daughters are not confummated until after they have had their monthly times, which they give notice of to their phyficians, and thefe to the king, who then gives them licence to go to bed with the bridegroom, who pays his acknowledgement to her mother, for the care she has taken of her daughter. If a young maiden be marriageable, and yet not courted by any, the mother paints her with fome red colour about the eyes, and thus carries her to the king, who orders her to fit down near him upon a carpet, and blows the fmoak of tobacco in her face *. For the reft of the Tapoyers, are the worft of all the other Brazilians, being ignorant of any thing that relates to God or religion; neither will they receive any inftruction of that kind. They have certain priefts or rather forcerers, who pretend to foretel things to come, and to raife fpirits, which they fay appear to them in the fhape of a fly, or any fuch like infect : when these spirits difappear, the women make most horrible cries and lamentations, in which confists the main point of their devotion : they avoid night-journeys, for fear of ferpents and other venomous creatures, neither will they fet on a journey until the dew be dried up by the

* A very indelicate paffage is omitted.

fun-

fun-beams. Several nations of the Tapoyers, efpecially those under king John Duwy, lived always in a good correspondence with the Dutch, unto whom they afforded at divers times confiderable affistance; though they did not fubmit to their jurifdiction, but were governed by their own kings. King John Duwy had fixty children by fifty wives, though fometimes he had not above fourteen wives at a time; these Tapoyers having a mortal hatred to the Portuguese, used to kill them wherever they could meet with them. And thus much may fuffice concerning the manners, way of living, cloaths, &c. of the natives of Brazil; I will now proceed to give you an account of my voyage back into Holland.

۰

Being fenfible, as I told you before, that things grew worfe and worfe every day with us here, I with much ado got leave to depart, and accordingly the 23d of July 1649, I went aboard the fhip called the Union, manned with eighty failors, under the command of Captain Albert Jants, a native of Groningen. We fet fail the fame day in company of the Blue Eagle, and a yacht called the Brazilian. We left the city of Olinda to the fouth-west in the evening; the 25th we were under 3° 6' with a north-north-east course; we failed that day about twenty-eight leagues. The next day we passed the line, with very fair weather and wind; we continued our courfe without any remarkable accident until the first of August, when about noon we found ourselves under 9° 46', having failed twenty-nine leagues in the last twenty-four hours. The fame evening we faw the first time the north pole star, after we had passed the line. The 2d of August we failed twenty-three leagues with a fresh gale, and found ourfelves under 11° 13'. We continued this our courfe with a fair wind, until the 16th of August, when we were becalmed; we did not advance above fixty leagues that day; being under 26° we found it exceeding hot. The 20th of August we had but a flender southeast wind; we found ourfelves under 29° 45'; we were fo much troubled with heat, for want of the cool winds, that the knives in the cabin were fo hot, that nobody could hold them in his bare hands, nor any one could touch the deck of the fhip with his hands or feet. We continued our courfe thus until the 29th, when being under 38° 46', we made about eight leagues that day. The 3d of September, being under the 40° 18', we efpied a fail, which we found to be a veffel bound for Virginia. Towards evening we were forced to ftay fome time for the Brazilian yacht, fhe having loft one of her mafts. The next following day in the morning we difcovered the ifland of Corfu, whither we directed our courfe.

Corfu and Floris are two of the nine iflands the Dutch commonly call the Flemming Iflands. The biggeft is Tercera, being about fixteen leagues in compass. It is very rocky, but fruitful, producing a confiderable quantity of oxen, and abounding in Canary and other birds. Here is a fpring that turns wood into ftone, and feveral hot-fprings, in which you may boil an egg. The ground feems to be full of concavities, which is the reafon of the many earthquakes here, which overturn and deftroy houses, men and beafts. The ifland called the Peake has a rock which reaches to the very clouds, and which, as fome fuppofe, may be parallelled for its height to the peake of the Canary Island itself. Betwixt the coast of Brazil and the faid islands, the compass bears due fouth and north. We were gone eight degrees farther to the weft, than we intended. About noon we found ourfelves under 40° 34'. We continued our courfe without any remarkable accident, until the 16th of September, when we supposed ourfelves to be not far from land, which we difcovered the fame evening to the north-north-east of us. The 17th we were becalmed, and catched more fifh than we were able to eat. The 18th we discovered the Isle of Wight to the north of us, whereabouts one of our ships was separated from us; not long after we faw the point of Dover. The 19th we passed

by Dunkirk and Oftend with a brifk gale, and about noon fafely arrived in the road of Fluffingen. I got immediately afhore, and after having refreshed myfelf for five days, I went to Middleburgh, where I likewife continued five days. From thence I continued my journey over Dort, Rotterdam, Delft and Harlem, to the famous city of Amsterdam, from whence I undertook this West-India voyage 1640. From Amsterdam I went to Zwell, the birth-place of my father John Nieuhoff, and fo to Benthem, my native country, where I met with my parents in good health, after fo many fatigues of a tedious voyage; whilst I was at Benthem my father died 1651, the 15th of May, in the eighty-fifth year of his age, being lamented by all, by reason of his good qualifications.

1.

Some troublefome people laid the lofs of the Dutch Brazil at the door of the members of the great council, viz. Henry Hamel, Adrian Bulleftraet and Peter Jande Bas, who left Brazil 1647. It was alledged that the before-mentioned contracts made with the Portuguefe had given them great opportunity of a revolt; for which it was faid the faid members had received great fums of money; but it being evident that the fucceeding members of the great council having taken cognifance of that affair before their departure, November 6, 1646, and in March 1647, they were fully cleared of thefe accufations, the fame having been tranfacted by fpecial orders of the council of Nineteen in Holland; befides, that the revolts which were about the fame time in agitation in Angola, Africa, and the ifland of Ceylon in the Eaft-Indies, where no fuch contracts were made, do fufficiently teffify that the foundation of this inteftine war was laid in Portugal, long before the contracts were fet on foot. What is more furprifing is, how the Portuguefe, confidering we were pretty well provided with forts and garrifons, durft think of fuch an attempt; but the reafon is plain, for what they wanted in ftrength or otherwife, they were fupplied with from the Bahia.

The motives that induced the Portuguese to this revolt, were, the recovery of their liberty, the difference of their language and manners from ours, but efpecially of religion, which our people had endeavoured to establish in Brazil; these, with some other concurring circumftances, fuch as our prefent weakness, and the disposition the ftates were in at that time, to be fairly rid of Brazil, gave them fufficient encouragement for this attempt. It has been the opinion of fome, that the first sparks of this rebellion might foon have been quenched, by feizing fome of the heads of the Portuguefe faction; but it being apparent from the records, that nothing was left unattempted upon that account, though without any confiderable fuccess, the fame cannot be imputed to the neglect of the government; the true reafons of the lofs of Brazil were the flender garrifon, and the inconfiderable number of Dutch inhabiting there; nothing being more obvious, than that a conquered country must be maintained, either by a fufficient military force, or ftrong colonies; the last of which was the constant practice of the ancient Romans, who, befides this, backed them with good armies to keep the conquered nations in obedience. Another way of establishing themselves in a conquered country, though a very barbarous one, was introduced by the Spaniards and Portuguese in America, who, by deftroying the ancient inhabitants, and planting colonies of their own, faved themfelves the charge of keeping many forts and garrifons for their defence. Neither of these was fufficiently observed by the Dutch, after their conquest of the Dutch Brazil; for, according to their agreement made with the Portuguese, the last were left in the entire and quiet possession of all the fugar-mills, plantations, and grounds thereunto belonging, whereby the Dutch fubjects were, in a manner, excluded from getting any confiderable footing in the open country, efpecially, fince fuch of the fugar-mills as happened to fall into the company's hands, by forfeiture or otherwife, were fold promiscuoufly to both nations, and commonly at fuch exceffive rates, that the Dutch

Dutch durst feldom venture upon them; the taxes laid upon every thing belonging to the fugar-mills, and upon the fugar itfelf, being fo great, that little profit was to be reaped from thence, unlefs the fugar fold at a very dear rate; whereas, on the contrary, we ought, after the example of the Spaniards, to have endeavoured to draw our fubjects into Brazil, by the granting of confiderable immunities of honour and other advantages. The military force of the Dutch in Brazil, was likewife not duly regarded ; for whereas according to a just estimate made in 1641, by Count Maurice, 7,076 men were absolutely requisite to maintain the Dutch garrifons there, the States of Holland, inftead of following his directions, did, after the conclusion of the ten years' truce with Portugal, order the great council of the Dutch Brazil to reduce their forces there to eighteen companies of one hundred and fifty men each, and, though feveral remonstrances were made upon that head to the contrary, the truth of which was verified by the event ; yet the fuccours fent from Holland arrived fo flowly, that after my departure things grew worfe and worfe every day, and the Dutch had loft all their ftrong holds 1054. For the Portuguese began to blow up the Receif by sea, with fixteen fhips, and to befiege it by land 1653, in December, with fuch fuccefs, that our people being conftrained by hunger, and the garrifon refufing to fight, were forced to furrender the place with all its circumjacent forts to the enemy; fince which time the Portuguele have remained in the entire poffession of Brazil; the fame being confirmed to them by the peace made the 6th of August 1660, betwixt Portugal and the States of the United Provinces, in which, among others, thefe following points were agreed upon :-

That the Crown of Portugal shall be obliged to pay to the States the fum of eighty tuns of gold, either in ready money or fugar, tobacco, or falt, or elfe affign the faid money upon the Portuguese customs.

That the places taken on each fide fhould remain to those who were then in posseffion of them.

And that a free trade fhould be allowed to the Dutch in Portugal, Africa, and Brazil, without paying any more cuftoms than the native Portuguefe.

END OF VOL. XIV.

Strahan and Prefton, Printers-Street, London.
